This document contains a brief bibliography of peer-reviewed literature, with abstracts, on adult children. It is one of 12 bibliographies on aging prepared by the National Agricultural Library for its "Pathfinders" series of publications. Topics covered by the other 11 bibliographies include aging parents, dementia and Alzheimer's disease in the elderly (written for educators), dementia and Alzheimer's disease in the elderly (written for consumers), family caregiving, family support networks, grandparenting, humor in later life, intergenerational relationships, living arrangements in later life, pets and the elderly, and sibling relationships in adulthood. This bibliography on adult children contains citations for 15 books and articles for researchers and educators, and 6 books and articles for consumers. It concludes with a list of organizations that readers may contact for further assistance. (NB)
This PATHFINDER has been prepared to help researchers, educators and consumers better understand roles and relationships of adult children with aging parents in today's families.

RESEARCHER/EDUCATOR

Based on attachment theory, a path model is constructed. Adult children's feelings of attachment lead to their attachment behaviors, and in turn to their present helping behaviors, and the commitment to provide future help to their elderly parents. Results from adult children and elderly mothers indicate that present helping behaviors, attachment behaviors, and feelings of attachment have the strongest influence on adult children's commitment to provide future help.

This research investigates whether Anglo and Mexican-American adult children behave and feel differently toward their aging parents. Results suggest that there are no differences in the way males and females behave and feel toward their mothers and fathers. However, the Mexican-American respondents live closer to their aging parents than Anglo respondents. Ethnic group differences are found in feelings of attachment for fathers, but not for mothers.

This PATHFINDER lists significant resources that are judged to be accurate, readable and available. Opinions expressed in the publication do not reflect views of the United States Department of Agriculture.

Dominant themes representing the relationships of older parents and their adult children are discussed. Themes pertaining to roles and responsibilities, parent-child interaction, individual well-being, relationship quality, and caregiving by adult children are discussed within the context of societal age structure changes.

Personal interviews are conducted to identify factors contributing to mother's satisfaction with filial relationships. Satisfaction with filial relationship is found to be related primarily to satisfaction with quality of contact with children, and secondarily to children's potential filial behavior and mother's satisfaction with quantity of contact with children. This research suggests that perceived inequities in what either the parent or child contribute to the relationship results in dissatisfaction.

The author undertakes a task of filling a gap in the family violence literature-a study of the etiology of elder abuse in which the perpetrators, the filial caregivers, are the subjects of the study. The small sample size limits the ability to generalize from the findings, but the value of the book is in the questions it raises, not in the questions it answers.
The purpose of this study is to identify factors which relate to the anxiety level of middle-aged adult children in regard to their relationships with their aged parents. Results indicate that variables significantly related to anxiety include: perceived status of mother's success as a parent, personal feelings about one's own aging, number of times mother was hospitalized, number of times father was hospitalized, subject being only child, expectations that life would change if a parent moved in with the subject, and perceived status of father's physical health.

This study identifies the following parental role transitions: divorce, grandparenthood, retirement, and widowhood. The adult children identify the need for information on communication skills, normal and abnormal aging, and available community resources. Subjects clearly prefer obtaining information through regular meetings of professional organizations and social service clubs, journals and magazines, and public television and radio for ease of fit into their busy schedules.

In a field study, adult children from maritally disrupted situations and also from intact marriages are asked about their own and their siblings' help to parents. Adult children in maritally disrupted situations give about the same amount of help as siblings, while those with intact marriages give more help than siblings. The rise in the frequency of marital disruption makes well planned sibling-shared helping more important.

This article reports results of an attempt to measure social supports provided by adult children to their elderly parents. The development of this measure and its assessment are designed to address several limitations of existing measures.

Family crises such as institutionalization and death can create disruptions in older parent-adult child relationships. Most families manage to adjust. A variety of strategies for families in which hostile and negative feelings threaten the happiness of one or both generations are discussed.

This study indicates that adult children are returning home in increasing numbers because of unemployment and financial need. More subtle factors such as dependence, protection needs, and parental happiness appear to be involved in long-term stays in the parental household.

Presented at a scientific meeting of the Boston Society for Gerontologic Psychiatry, this article maintains that the quality of adult daughters' and their mothers' relationship has greater impact on the well-being of the adult child than it has on the elderly parent. The author states that more adequate understanding of the importance of sons as well as daughters' relationships with their elderly mothers is needed because of increased longevity, prevalence of chronic diseases, smaller families and concern about men's nurturance.

In this study, data analysis indicates that the presence of adult children has no effect on elderly parents' marital conflict, even when age, educational attainment, health, and gender are controlled. An analysis of data on respondents sharing a residence with an adult child shows that marital conflict is strongly related to the frequency of parent-child conflict.

The following contributions can be drawn from this exploratory research: (1) structural characteristics of families affect the way responsibility is divided; (2) affectional solidarity is not related consistently to the division of responsibility for any of the types of help examined; (3) there is no relationship between the way responsibility is divided and perceptions of how adequately either the physical or emotional needs of parents are being met; and (4) the members of the same family do not share perceptions of how responsibility is divided in their families.

This study examines the effects of intergenerational occupational mobility on relationships between elderly parents and their adult children. One consistent finding is that, with one exception, mobility influences feelings and perceptions but not behavior. Mobility is unrelated to visiting and the level of household assistance provided by children to older parents. The one behavioral exception—the diminished involvement of downwardly mobile sons in social interactions with their parents—may reflect the parents' desire to be or to appear to be less involved with the child. The enhanced affection of downwardly mobile sons for their parents may follow from their attachment to parents for a sense of preserved status in the face of a socioeconomic slide.

This paperback is about energy and attitude on the part of adult children. It covers creating a personal profile, creating a financial file, plugging into networks, taking preventive measurements, securing safety and welfare and looking at housing options. A section is devoted to juggling obligations.

A psychiatrist explains how unresolved negative feelings toward parents can create anger and dissatisfaction with other persons in life. Adult children pay a large price for a poor relationship with parents. The best way to resolve conflicts is to be more receptive and less reactive. It is also essential to resolve guilt over a negative relationship with a deceased parent.

This bulletin focuses on adult children who return to the family home to live. It includes sections on "Who Are Adult Children Living At Home?," "Why Are Adult Children Living at Home," "How Do Nesters and Re-Roosters Affect Elderly Parents?," "What Are the Danger Signals in a Full Nest?," "How Does Nesting and Re-Roosting Affect the Home?," and "What Are Some Positive Strategies for Full Nests?"

This article is a compassionate look at the issues that arise when an elderly driver must put safety before pride. A course of action available to anyone is to notify the Department of Motor Vehicles that a particular driver is a public hazard. The person will then be called in to take a driving test. This situation can cause a family rift that may be difficult to overcome.

Theory and practice are blended in this book that is designed to be used by both professionals and families. Many practical tools such as a medical bill accounting sheet, a guide for delegating tasks among family members, a checklist for comparing retirement homes, and a chart for keeping track of progress with rehabilitation exercises are included.

Topics covered include strategies, skills and support for communicating with older relatives about difficult issues like failing health, legal and financial matters, and family relations.

This PATHFINDER resulted from the author's research at the National Agricultural Library while on sabbatical leave from the University of Maryland during the summer and fall of 1989. Using database searches of AGRICOLA, Psycinfo, Social SciSearch, ERIC, Family Resources, and Dissertation Abstracts International, relevant references were reviewed and annotated. It is authored by:

**Billie H. Frazier, Ph.D., Certified Family Life Educator, Associate Professor, Human Development Specialist, The University of Maryland Cooperative Extension Service, College Park, Maryland

Reviewers: Dr. Barbara W. Davis, Associate Professor, Adult Development and Aging Specialist, The Pennsylvania State University, University Park, PA, and Dr. Leon H. Rottman, Extension Specialist, Human Development, University of Nebraska, Lincoln, NE.

Technical Support: Kathleen C. Hayes and Sandra L. Facinoli, Technical Information Specialists, National Agricultural Library, United States Department of Agriculture
