Early childhood educators need to devote energy and commitment to resisting inappropriate practices for children. Policies such as using readiness testing, holding younger children out of school, or raising entrance age are at best short-term solutions, and at worst, harm children and contribute to inappropriate expectations.

All children deserve the best education possible, and schools and teachers must be accountable for providing high quality instruction and recognizing and adapting instruction when children fail to learn. But the use of standardized test scores as the predominant indicator of accountability is ill-avoided. There is increasing evidence that when test scores take on too much political importance in schools, scores can go up without an actual increase in student learning (Shepard, 1989). We need alternative strategies that ensure excellence, equity, and accountability. Here are some suggestions to help guide educators in making decisions.

MAKING DECISIONS ABOUT ENTRANCE AND PLACEMENT

Avoid use of standardized tests for entry to school or promotion in primary grades. Establish a uniform kindergarten entrance age whereby most children attending kindergarten are 5 years old and most first graders are 6. Accept children for school on the basis of their chronological age and legal right to enter.

Use valid developmental screening tests as a first step in identifying children who may need further diagnosis of a health, learning, or developmental handicap (Meisels, 1985).

Use valid standardized tests as one of many sources of information needed for a complete diagnosis of a child's special needs or the cause of a child's problem, and appropriate intervention and remediation strategies (Meisels, 1987).

EVALUATING PROGRAMS' ACCOMPLISHMENT OF GOALS

Avoid use of standardized achievement testing of all children until at least third grade. When standardized achievement test scores are used in third grade as accountability measures and for comparisons of schools and districts, don't test all children; rather, use sampling to obtain the same results. This is cost effective and does not label individual children. Conduct the test in the fall of the year to prevent teaching to the test and evaluating teachers with test scores.

Develop alternative assessment instruments and procedures that can be used instead of standardized tests. These include oral tapes of children's stories or reading progress and portfolios of students' writing and artwork. Recognize that currently available standardized tests provide very limited measures of school and student success and
become invalid if children are drilled on questions that are just like the test items.

Increase the use of systematic observation of teacher and student performance, and documentation of sources of evidence of children's progress for use in curriculum planning, evaluation, and reporting to parents. Increase the use of measures that assess children's strengths and deficits.

PLANNING AND INDIVIDUALIZING CURRICULUM AND INSTRUCTION

Use developmentally appropriate teaching methods to individualize instruction. For example, when children work in learning centers or in small groups on projects, ensure that the teacher is free to work with individual children and use techniques such as peer tutoring, coaching, and individual progress that use group heterogeneity as an instructional asset.

Clarify the terminology used to describe inappropriate practices. While in some ways an escalated curriculum expects too much and is too fast for the age group, in other ways it expects too little. Emphasis on drill and practice and worksheet-dictated curriculum is "shockingly unstimulating to children and fails to extend their thinking" (NASBE, 1988, p. 4). Young children can engage in problem solving before they know addition and in sophisticated reasoning and questioning about stories before they can decode words, provided that opportunities are provided in ways that are meaningful to children's level of understanding (Peterson, 1989).

PROMOTING APPROPRIATE POLICIES

Encourage concerned parents to join together and complain about inappropriate practices and policies. When children's rights are violated by testing abuses, vocal parents are the most effective agents of change.

Enhance collegiality within schools and all sectors of the early childhood profession.

Encourage teachers and administrators to join professional early childhood organizations.

Use the many valuable tools available to advocate appropriate practices in all early childhood programs. Some of the position statements that strongly support sound practices for young children are:

CONCLUSION

The early childhood profession must first increase its degree of consensus about these issues, then act with one voice to influence policy. The next step in the early childhood profession's process of articulating standards for appropriate practice is the development of guidelines for appropriate curriculum content and assessment in the early childhood unit, prekindergarten through third grade. The National Association for the Education of Young Children (NAEYC), in collaboration with the National Association of Early Childhood Specialists in State Departments of Education and other national organizations and experts, is working on this project. (Guidelines for appropriate content and assessment in the early childhood unit, prekindergarten through third grade, will be available from NAEYC in 1991.)
