African Studies; Casa Studies; *Comparative Education; Developing Nations; Educational Development; *Educational Policy; Educational Research; Elementary Secondary Education; Foreign Countries; Higher Education; International Programs; Primary Education; Vocational Education

This paper reviews a number of educational policy statements in East African countries, on issues ranging from combining education with production at the primary level to the financing of higher education. An assessment is made as to how successful the policies have been in achieving their original intention. The paper's conclusion is that policy outcomes fall far short of matching expectations, mainly because of insufficient, or the absence of, implementation. The reason most educational policies are not implemented is that they are vaguely stated and the financing implications are not always worked out. Another reason for failure is that the content of a policy is based on an empirically unsustained theoretical relationship between instruments and outcomes. The paper makes a plea for the formulation of more concrete, feasible and implementable policies based on documented cause-effect relationships. (Author/DB)

BIBLIOGRAPHY .................................................... 22
1. INTRODUCTION

"Educational policy" is perhaps the contemporary equivalent of what twenty years ago was known as "educational planning." Whatever it is, and no matter how many other disguises it takes (such as "educational reform"), practically every country in the world has at one time or another proclaimed the intention of making decisions that affect some aspect of schooling in society. It is in this wider sense that the term educational policy is used in this essay.

Of course educational policy is proclaimed or a school reform is enacted, not for their own sake, but in order to serve a particular purpose. The purpose can be pedagogical, political, economic, or any combination of other good causes according to the judgement of that impersonal entity often referred to as "the policy maker."

What has been the record of educational policy making in developing countries? Were intended reforms implemented in the first place, and if they were, did they have their expected effect? If not, why not? This paper attempts to give an answer to such complex questions by concentrating on one world region, Africa, and on a handful of typical attempted reforms that span the full educational ladder.
2. THE POLICIES

Educational policy statements are found in a variety of official documents such as:

a) Political statements or manifestos, e.g., Nyerere's most famous *Education for Self Reliance*, The Workers Party of Ethiopia *Programme*, or Swaziland's *Imbokodvo National Manifesto*;

b) Reports of special commissions, e.g., Zambia's "Lockwood Report," or Ethiopia's 1971 *Education Sector Review*;

c) The country's educational plan, often embedded in the country's Development Plan, e.g., *Education*, in Botswana's *National Development Plan 1979-85*, or Uganda's *Ten Year Development Plan, 1981-1990*;

d) Ministry of Education Acts, Orders or Circulars, e.g., Lesotho's "National University Act, 1975."

e) Reports of international agencies, e.g., UNESCO's 1961 *Outline of a Plan for African Educational Development* (better known as the "Aidis Ababa Conference").

Policy statements in the above documents typically refer to the following:

a) Primary Education: Increasing coverage, improving teaching quality, combining education with production, teaching in local languages;

b) Secondary Education: Increasing coverage, diversifying the curriculum, improving links with employment;

c) Vocational Education: Meeting manpower requirements, providing the skills needed by a modernizing economy;

---

1pp. 99-132
d) Higher Education: Indigenizing higher civil service, meeting high level manpower needs;

e) Overall: Promoting cultural needs, serving political ideology, education financing and system regulation.

Let us follow the above taxonomy and document for a number of countries the exact formulation of policies, as stated in the official documents and, where possible, the outcome of such policies.

**Primary Education Policies**

**Increased Coverage**

Such policy intention is encountered in practically every country in the region, from independence to date. For example, one resolution of the Addis Ababa Conference was that "All African States" should aim at achieving universal primary education (UPE) within a maximum of 20 years." In Swaziland, "The ultimate goal is to achieve universal free primary education for every child." In Lesotho, "Every ... Mosotho child should complete a seven-year primary course."

Although the Addis Ababa conference proposed a 71 percent participation rate in primary education by 1971, by 1974 Ethiopia had only achieved a rate of 18 percent. An attempt in Ethiopia to set less ambitious targets for the expansion of primary education -- the Minimum Formation Education, a result of the 1972 Education Sector Review -- which could last as little as one year and be terminal for most students, was rejected, mainly by the teachers. According to some, it has contributed to the 1974 revolution. Also in Ethiopia, a

6Ibid.
major Literacy Campaign was launched in 1979 to eradicate illiteracy by 1987. Today, the illiteracy rate in Ethiopia is on the order of 45 percent.7

In Zambia, the 1962 National United Independence Party's (UNIP) "Educational Manifesto" promised compulsory primary education up to the age of 15. Although, considerable progress was made over the next two decades in terms of increased coverage, the 1985 UNIP's "Policies for the Decade 1985-95" reemphasized compulsory, but not free education to grade 9 (i.e. to the end of junior secondary).8

In Uganda, the situation today is one of "increasing illiteracy."9 And in Lesotho, "... although access to primary education is open to all, UPE has not been achieved."10

Rapid population growth is often blamed for the non- implementation of UPE in African countries. In Zambia, for example, when UPE was espoused in the early sixties the population growth rate was of the order of 2 percent. By 1985 it stood at 3.4 percent. "If ... the Zambian government insists on its goal of universal basic education (grades 1-9) for all, 1.74 million additional school places would have to be added to the current 1.3 million by the year 2000. ... This is clearly a daunting task given that education will have to compete with other social services for increasingly dwindling national revenues."11

Quality Improvement

Of course, beyond coverage, many African states set a goal to improve the quality of education children receive. Emphasis has been on: teacher training, construction of schools, student/teacher ratio. For example, in Zambia's First Development Plan (1966-70) the objective was to improve primary education by means of expanding teacher training.12

8Achola, 1990
9Odaet, 1990
10Thelehani, 1990
11Achola, 1990
12ibid.
The 1963 Report of the Uganda Education Commission (paragraph 27) stated that "The task... is not just to provide more primary schools but to provide better primary education". Yet in Uganda today there is a "high dropout rate at almost every level of the educational system." Training Colleges should be filled to capacity." Teachers' salaries must not be allowed to fall below the general level of salaries... to arrest the drift into other occupations." The raising of the teaching quality of Training Colleges is a high priority."

In Swaziland, the Second Development Plan (1972-1978) set the objective "to raise the quality of education by reducing the high incidence of dropout and repeaters." One way to do this, was to reduce the student-teacher ratio from 45:1 to 36:1 within the planning period. This indeed happened, although none of the expected effect followed: "Despite the reduction in the pupil-teacher ratio... instead of the normal 7 years to produce a primary school graduate, it took 12.6 years in 1981... The number of repeaters went up over the plan period... by nearly 50 percent... There was no improvement in the overall pass rate SPCE during the plan period (Swaziland Primary Certificate Examination)."

In Lesotho, "In spite of... programs... geared to produce large numbers of teachers.... there is a chronic shortage of teachers... worse in the sciences. The latest is the brain drain in South Africa where salaries are very high." "The pushout rate is high. Only 14 percent of primary school graduates enter secondary education." Also, "... there is an apparent decline in the quality of education, like bad examination results."
After several years of emphasizing the improvement of the quality of education in Ethiopia, it is recognized that "... it has not been easy to raise the quality of education in a significant manner...." 21

In Botswana, "... the quality of primary education has fallen short of people's expectations..." 22 In 1979 ... 36% of [primary school] classes were without a classroom of their own. 23

In Tanzania "there is a big shortage of teachers.... By April 1982, primary schools in the country had a shortage of 34.94 percent of the required number of teachers." 24

Combining Education With Production

The impetus for such policy change came from the push for "relevance" in education. The Plan for Action 25 clearly stated "That the following measures be adopted for absorbing the surplus of unsilled manpower: (a) that primary education be given a practical bias." 26 But in Tanzania, pursuant to Education for Self-Reliance, the Third Five Year Development Plan states that "Work is to be more integrated with theoretical subjects." 27

In Zimbabwe we the Government also adopted the philosophy of education with production "... to make school experiences meaningful and worthwhile in terms of real life activities outside the school campus." 28 But "The problem... was that most of the teachers did not understand the philosophy of education with production.... Rather they saw it in terms of... activities associated with

21The Workers Party of Ethiopia, Programme, 1979, p.96
23Botswana National Development Plan, 1985-91, p.126
25UNESCO, 1961b, p.21
26For at least two notable exceptions to this rule, the 1963 Uganda Education Commission (paragraph 47) states: "Agriculture is not a suitable subject for primary schools." Also in Kenya, "... we do not recommend the inclusion of a specifically vocational element in the primary course." (Kenya, Report of the National Committee on Educational Objectives and Policies, paragraph 27).
28Mutumbuka, Education Minister, 1984, as cited by Maravanyika, 1986, p.27
vocationalism long rejected by Blacks during the colonial era.... The schools... failed to attract staff with the appropriate qualifications for meaningful practical skills teaching. To date, education with production is more of a slogan than a meaningful educational philosophy....

In Lesotho also, 'The school system has definitely failed to produce... persons ready to be involved in rural and manual work....' Practical subjects are regarded by learners and parents as second rate in the educational scene. Incidentally, the introduction of practical subjects is an attempt to make education relevant.'

In Zambia, '... production training should be a compulsory subject which shall form an integral part of the curriculum.' "The president issued a decree that... all educational institutions would combine education with productive activity. The... aims were to foster in pupils and students respect and love for manual work. The program has had only marginal impact on the students.... Academic education which paves the way for entry into the university attracts the most able students and subsequently offers the best rewards in terms of social standing...."

Secondary Education Policies

With some progress achieved in primary education, it was the next stage of education that naturally received attention: 'The urgent need for expansion of secondary education is emphasized.' But in Swaziland, the government decided in 1975 that 'secondary system expansion was to be determined by manpower requirements,' and so did, earlier on, Tanzania. In all African countries, the expansion of secondary education had to be linked, one way or

35Magagula 1990
another, to the world of work. E.g. "Education will be made more relevant to the world of work...."36

Curriculum Diversification

This has been the equivalent of combining education with production at the secondary level: "To meet the demands of ...African social and economic life...is the need to expand the curriculum at the second level in the direction of more technical and vocational education. Such programmes are necessary to provide the skilled and semi-professional manpower essential for economic growth."37 "The concept of 'secondary education' should be broadened to include practical training and to provide outlets into the production side of industry and agriculture."38 All the existing trade schools should be closed or transformed into the new type of secondary school with a vocational bias.39 "A Workshop...is a necessary part of the equipment of any secondary school...."40

In Tanzania, "secondary education vocationalization is to be realized so that each secondary school leaver will have a skill useful to the economy."41 "The general aim of education is terminal and aims at equipping the pupils with skills...To achieve this, secondary education is diversified and vocationalized into commercial, technical, agricultural and home economics biases."42 However, a recent evaluation of the diversification policy in Tanzania revealed that it failed to achieve the above objectives, e.g., one year after graduation in agriculture, only 12 percent of the agricultural bias graduates were employed in agriculture, and only 5 percent followed further...

studies related to agriculture. And "... many employers do not recognize the level of competence in skills acquired... in the diversified schools." Also in Kenya, a tracer study in industrial school graduates did not reveal any employment advantage over a control group of academic secondary school graduates.

Better Links to Employment

The Addis Ababa Plan for Action recommended that the first step in the educational planning process should be "... an estimation of forward manpower requirements under the dual system of occupational and educational classification... undertaken by each country with the help of Unesco." Most countries followed the recommendation. E.g., in Kenya, "From the manpower figures we calculate a... requirement of Form I entries of 66,000..., but... believing that this is an underestimate... we approve to provide facilities for about 87,000 pupils...."

Ethiopia introduced a system of comprehensive secondary schools in 1962 "designed to meet the...middle-level manpower demand in technical and commercial fields... [but] by 1969 the system was found to be defective... When tools stand idle for two to six years or more." In spite of the manpower orientation of development plans in Ethiopia, as early as 1973 shortages and surpluses were reported for key occupations. By 1981 the situation had become worse.

In Uganda, also, in spite of a long tradition with manpower planning, there is a "widening gap between the educational program. offered in schools... and the actual openings available... in the employment market." And in

50 ibid.
51 Odaet, 1990
Botswana, "Manpower shortages persist, and the country remains over dependent on the skills of expatriates."

It should be noted that fifteen years ago Jolly an Colclough (1972) surveyed over thirty manpower plans in Africa and concluded these "...manpower plans... inadequately served the planners." Yet in many African countries today, such plans continue to be elaborated.

Vocational Education Policies

Vocationalism had a long tradition in Africa. The already mentioned 1961 recommendations of UNESCO's Plan for Action were echoed in the policy documents of many countries. In Swaziland, for example, "...the content of education must be work-oriented from the primary to the highest levels." Also, Swaziland's Second Development Plan (1973-78) sets the objective "to reorient the curricula at both primary and secondary levels so as to... enable school leavers to move naturally into employment sectors." "A permanent machinery should be established to ensure an adequate link between the supply and demand for trained manpower on the one hand, and to relate school curriculum to national employment prospects on the other. A comprehensive National Manpower Survey should be conducted to identify manpower requirements at all levels and feed back the information to the school system."

In Zambia, "The main method of providing technical education in institutes under the Department of Technical Education and Vocational Training should be... full-time pre-employment training in contrast to the apprenticeship method."

In spite of such manpower orientation, unemployment is still very high in Africa today, while there are severe scarcity in some skills. In Zambia for

example, "estimates range between 1 and 1.5 million unemployed... school leavers. ... The government has responded by trying to popularize the agricultural sector.... The... efforts have, however, produced marginal success because of a strong negative attitude towards farming.... Distaste for manual work on the land is deeply rooted in Zambia...."58 And in spite of the early emphasis on vocational secondary schools in Ethiopia, "many more students went to academic secondary schools... many more opportunities were offered in academic secondary schools than in vocational ones."59 And "It is quite clear that the manpower planning exercise in Tanzania has been counterproductive, leading to a worsening of the fit between the supply of and demand for high- and medium-level workers...."60

Higher Education Policies

These have been dominated by attempts to meet high level manpower needs or to Africanize higher civil service. For example, "The ... University ... will be strengthened to meet future skilled manpower requirements in those disciplines for which the manpower study... shows it to be necessary."61 Or, "To expand facilities for tertiary education in order to meet the manpower requirements of both public and private sectors,"62 and "to provide technical skills through education and training to meet the high level manpower requirements for the economy."63

But in spite of such orientation, severe shortages are reported in some fields in Africa today, while there are surpluses in others.64 And although Zambia has completed Zambianization almost completely within the administration, "the country has continued to rely on expatriates to fill many technical and professional jobs."65

64 Hinchliffe, 1986
65 Achola, 1990
Other Policies

Beyond the above set of policies referring to the respective levels of education, a host of other policies were formulated to serve various objectives that cut across levels.

National Unity

For example, "the purpose of education is to produce an enlightened and participant citizenry.... The policy...is that all education should ...inculcate love for the land, loyalty to King and country, self-respect, self-discipline, respect for the law accompanied by the highest degree of knowledge and the building of character."66

Also teaching in local language has been a common policy for cultural unity, e.g. "Kiswahili should be the main vehicle for literacy work...."67 or, in Zambia, "... the widespread use of English as a medium of instruction... has promoted a sense of national unity.... The national motto of 'One Zambia, One Nation' could hardly make sense without a unifying language...."68 But in Lesotho, "Officially the medium of instruction is Sesotho until the 4th grade.... In reality a mixture of languages may go on.... This is partly blamed for the low standard in English...."69

Political Ideology

In Tanzania, soon after the Arushad Declaration on Socialism and Self-Reliance, Nyerere issued a major paper on Education for Self-Reliance (ESR). [For a superb analysis of ESR see Morrison, 1976, chapter 11.] This paper became the basis of all major educational changes in the country, implemented by the 1969 Education Act.70 The 1974 Musoma Resolution urged '... that

66Kenya, Report of the National Committee, 1964, paragraph 104
67Kenya, Report of the National Committee, 1964, paragraph. 104
68Achola 1990
69Telehani, 1990
70Tanzania Education Ministry of Education 1980, p.3
education be integrated with work," in order to develop "in each citizen ... an Ujamaa or socialist outlook."\footnote{Tanzania Ministry of Education 1980, p.3}

In Ethiopia, Proclamation No. 11 of 1974 setting out the objectives of the Development Campaign states as one of its objectives "to rid the people of self-seeking individualism and instill in them a spirit of cooperativeness for the common good."\footnote{Ganit Gazeta, No. 10, 25 November 1974, p.41} "The Minister of Education shall... ensure that the educational curriculum is prepared on the basis of Hebretnesebeawinet (socialism)."\footnote{Ganit Gazeta, No. 29, 26 August 1977, article 11}

According to the Zimbabwe Minister of Education "The curriculum in our education system should be seen and considered as a vehicle towards the establishment of a socialist society."\footnote{Mutumbuka 1984, as cited by Maravanyika, 1990} Yet "... educational policies in Zimbabwe appear to be adversely influenced by an inherent dichotomy in the country's ideological orientation. On the one hand are the politicians bent on introducing Marxist-Leninist ideology which is unfamiliar to most people..., and on the other hand is the more ... entrenched capitalist infrastructure bequeathed by the colonial administration. This is more familiar and people are prepared to take a chance with it as they see others around them who have succeeded by it.... The majority of Blacks appear to be interested in the kind of education they had been denied than on something new and unfamiliar."\footnote{Maravanyika, 1990}

Financing

Although every educational reform must have substantial financial implications, this issue is only rarely addressed. Or if it is addressed, it is relegated for further study or to third parties. For example, it is a mistake to think that the ambitious program set out in the 1961 UNESCO Addis Ababa Conference did not consider the financing aspect of the program. However, it delegated it to third parties. The conference: "Invites UNESCO to approach the competent international organizations, governments and public and..."
private institutions capable of providing large-scale assistance with the request that they contribute to the financing of such programs recommended by the African countries concerned. 76

In the Plan for Action that followed the conference it was stated that, "It must be possible to finance both the recurring and non-recurring costs of education ... from loans as well as taxation. 77 And later, "That an increase in national education budgets requires use of new financial sources, both public and private, national and foreign, material and human." 78

According to the Uganda Ten Year Development Plan, "An education tax will be introduced to augment the resource base of educational institutions.... Public, parastatal and private organizations will be encouraged to provide a training fund that will finance training...." 79

It is interesting to note changes in the financing policy of schools, even within a few years. For example in Swaziland, the First Development Plan (1969-73) states that primary and secondary education should be free. In the Second (1973-78) Development Plan, however, the word "free" is dropped. 80 In Botswana, "... a proportion of the costs will be shared by the community...." 81

In Tanzania, the 1982 Presidential Commission on Education watered down the earlier strict manpower forecasting criterion for the expansion of secondary education: "Both the 'Social Demand' and 'Manpower Needs' approaches will be used in development plans...." 82 "Parents of pupils attending secondary schools will now be required to contribute towards part of the cost for their children's education...." 83 Thus, in January 1985 a fee [of 1600 shillings per year] was imposed, which is equivalent to two months' salary of a clerk.

76 UNESCO, 1961a, chapter 8, Resolution No. 1
77 UNESCO, 1961b, p.10
78 UNESCO 1961, Plan, p.20
80 Magagula, 1990
81 Botswana, 1984
82 Tanzania Ministry of Education 1984 p. 10
83 Tanzania Ministry of Education, 1984, p. 17
Yet, in spite of such efforts, the financing of the recurrent cost of educational investment is the main constraint to further expansion or improvement of the system's quality in African countries, as well as elsewhere. 84

Regulation

All African states have chosen to regulate non-government educational institutions in the name of quality control, equity or political ideology. For example, "The control of education lies with the government of Swaziland whether it concerns state schools, subsidized schools or private undertakings." 85 Or, "Independent technical and commercial colleges should be carefully controlled and high standards encouraged by a system of recognition as efficient." 86

In 1975, the Provisional Military Administrative Council abolished private schools in Ethiopia at the stroke of a pen: "Private schools are hereby transferred to public ownership." 87

Yet even in a socialist country like Tanzania, over 40 percent of the enrollment in secondary schools in 1979 was in private institutions. 88 In fact in Tanzania the share of secondary enrollments in private schools has nearly doubled between 1970 and 1983, 24 and 44 percent, respectively. 89

3. COMPARATIVE LESSONS

Are there any generalizations that can be drawn from the above examples of educational policy objectives and outcomes in a handful of African countries? Looking at the past record of educational policy making in Africa, (and possibly elsewhere), there are three main reasons why an intention or a reform may ex post not materialize or be seen as failure:

a) The intended policy was never implemented in the first place;

b) Even if an attempt at implementation was made, it failed to be completed or achieve a minimum critical mass so as to have an impact;

c) Although the policy was implemented, it did not have the intended effect.

Sub-reasons for failure within each of the above categories are as follows:

No implementation:

a) The policy intention was too vague, e.g. "the quality of education should be improved;"

b) The intention was lip service or a political statement, e.g., "there will be free education for all."

Partial implementation:

a) Neglect of a prerequisite factor, e.g., feasibility of financing;

b) Social rejection, e.g. vocational schools boycotted by parents.
Implementation but no effect:

a) Policy based on invalid theoretic-I model, e.g., basing educational expansion on manpower requirements;

b) Policy based on insufficient information/evidence, e.g. not knowing the exact number of teachers on the payroll in the first place.

Of course the definition of success or failure is a subjective matter. And the vague formulation of policy objectives makes evaluation even more difficult. To me, at least, announcing a policy and exciting people's expectations on an outcome that everyone knows at the outset is doomed, is a failure. To put it differently, impossibility of implementation, or even partial implementation, is a negative signal for the validity of any policy.

As an example let us revisit the report of the Conference of African States on the Development of Education in Africa 90 that set the following targets for the 1961-1980 period:

a) Primary education shall be universal, compulsory and free;

b) Education at the second level shall be provided to 30 percent of those who complete primary education;

c) Higher education shall be provided ... to 20 percent of those who complete secondary education;

d) The improvement of the quality of African schools and universities shall be a constant aim.

It does not take a thorough investigation to conclude that none of the good intentions put forward in this, and many other documents, have not been achieved. It is true that a lot of progress has been made in African education in the last twenty years, especially regarding increased coverage.91 Yet the

results are nowhere near the expectations. Table 1 shows how the Addis Adaba quantitative plans compare to the realizations.

Col. 4 = [(Col. 2 - Col. 3)/Col. 2] x 100

The above averages of course hide the situation in individual countries, e.g., the primary enrollment ratio in the semi-arid low-income countries was only 28 percent in 1980, and 35 percent in Ethiopia in the same year. 92 Why such record? The degree of success or effect of a given policy is a product of two probabilities: that the policy has been implemented in the first place and, second, that it yields the intended effect:

\[
\text{POLICY EFFECT} = \text{PROB implementation} \times \text{PROB effect}
\]

In at least one African country, "More has been achieved in enunciating new policy statements or in perfecting change in rhetoric than

92Bellew, 1986
in implementing or institutionalizing change.\textsuperscript{93} This statement must apply to others since Craig (1986) in reviewing 153 educational policies in Sub-Saharan Africa, came to the conclusion that only a handful were implemented (Craig, Table 5). The rarely implemented policies mostly referred to educational expansion and the Harambee schools.

\begin{table}[h]
\centering
\caption{The Record of Policy Implementation}
\begin{tabular}{lll}
\hline
Degree of Implementation & Number of cases & \\ 
\hline
Unclear & 28 & 18 \\
None or little & 113 & 74 \\
Mostly & 7 & 5 \\
Fully & 5 & 3 \\
\hline
Total & 153 & 100 \\
\hline
\end{tabular}
\end{table}

Of course there were moments of brilliance or pragmatism, but these are exceptions rather than the rule. For example, "The problems of agricultural education are not primarily educational, but are bound up with economic and social problems over which the Ministry of Education has no control."\textsuperscript{94} Or, "some aspects of the educational reform would be implemented while others can only be implemented over a period of time, bearing in mind changing circumstances and constraints."\textsuperscript{95} And rarely have

\textsuperscript{93}Maravanyika, 1990
\textsuperscript{94}Uganda Education Commission, 1963, paragraph 107
\textsuperscript{95}Zambia, Ministry of Education 1977, chapter 17, paragraphs 2 and 3
performance criteria been set: "Successful agricultural education depends largely on visible evidence of successful farming."96

Most often, instead, there have been ambitious statements, such as: "Educational reforms should seek to improve quality without sacrificing quantity."97 Or, "To provide increasing employment opportunities aimed at eliminating unemployment and underemployment in the country; and to insure absorption of trained manpower in appropriate positions."98

It is often said that educational reform alone is not possible without parallel transformations in society.99 Yet countries that have adopted holistic social transformations, and placed education within such transformations (e.g. Tanzania since 1967 and Ethiopia since 1974) do not appear to have shown major success relative to other countries that have adopted in isolation some of the same policies. "Ethiopia was probably the first independent African country south of the Sahara to introduce comprehensive development planning... As the evidence has shown, there was little systematic effort made to translate plans into action."100

Unrealistic policies naturally lead to reversals, even within only one year. In Zambia, for example, in 1975 a radical educational reform was announced (Education for Development, 1976). In 1977, another document, Education Reform: Proposals and Recommendations, reversed the 1976 policies.101

4. CONCLUDING REMARKS

The above record gives a very pessimistic outlook regarding the success of educational reforms that are proposed today. In order to avoid past pitfalls, the following conditions should be met in formulating educational policies:

a) A policy statement should be concrete and feasible in terms of objectives, including a timetable, source of financing of its implementation, and institution responsible, e.g., "the net primary enrollment ratio in rural district X will increase from 30 to 50 percent by 1995, financed by a 2 percent tax on beer;"

b) The substance of a policy should be based on research-proved cause and effect relationships -- not goodwill or intuition. For example, this should exclude expanding the educational system according to manpower needs, or forcing students to enroll in types of schools and curricula for which the rewards in society are modest.

Unfortunately, concreteness cannot be easily observed in political statements, and the intuitive power of "I know what the country needs" is much stronger than whatever research results demonstrate. It is for this reason that ambitious but rarely implemented and non-effective policy statements, such as those in the above anthology, will continue to be with us in the foreseeable future. Perhaps the safest course of action for the policy maker would be to abstain from educational policy fireworks, and concentrate on the documentation of cause and effect relationships -- the only activity, in my opinion, that can lead to successful school reforms.
