This curriculum guide is the third in a three-volume series of instructional materials for competency-based graphic arts instruction. Each publication is designed to include the technical content and tasks necessary for a student to be employed in an entry-level graphic arts occupation. Introductory materials include an instructional/task analysis that correlates job training with related information for this course; a list of tools, equipment, and materials; and a list of 26 references. Each of the seven instructional units includes some or all of these basic components: performance objectives; suggested activities for teachers and students; information sheets; assignment sheets; job sheets; visual aids; tests; and answer keys. Units are planned for more than one lesson or class period. Unit topics include offset press systems; offset inks and dampening chemistry; offset press operating procedures; preventive maintenance and troubleshooting; job ticket and cost awareness; calculating paper cutting; and binding and finishing. Foreword

The Mid-America Vocational Curriculum Consortium (MAVCC) was organized for the purpose of developing competency-based instructional materials. All member states participate in establishing annual development priorities, and the need for curriculum in graphic arts truly reflects regional needs.

Graphic Arts. The Press and Finishing Processes is the third in the three volume series. Each publication is designed to include the technical content and tasks necessary for a student to be employed in an entry-level graphic arts occupation. Additional instructional materials have been developed for Graphic Arts: Orientation, Composition and Paste-Up and Graphic Arts: Process Camera, Stripping, and Platemaking.

This publication is a revision of Graphic Arts III. The revision is in response to the need to update the material.

The success of this publication is due to (1) teacher response that has helped place the MAVCC format in the forefront in competency-based instructional materials and (2) the capabilities of the people who worked on its development. The technical writers, committee representatives, and curriculum specialists brought with them technical expertise and experience related to the classroom and to the trade.

As with any MAVCC publication, the teacher must take the instructional materials and (1) localize to fit community and industry needs, (2) personalize to meet each student’s learning style and needs, and (3) supplement to meet individual teaching styles, to incorporate new innovations, and to expand the instructional materials. Every effort has been made to make Graphic Arts. The Press and Finishing Processes basic, readable, and by all means usable. If there is anything we can do to help make this publication become more useful to you, please let us know.

Sylvia Clark, Chairwoman

Acknowledgements

Appreciation is extended to those individuals who contributed their time and talent to the development of Graphic Arts: The Press and Finishing Processes.

The contents of this publication were planned and reviewed by the following members of the Mid-America Vocational Curriculum Consortium graphic arts revision committee.

Vanessa Book  Executive Printing  Kansas City, Missouri
Harold Case  Frontier Printers  Stillwater, Oklahoma
Tommy Dunagan  Impression by Dunagan  Natchitoches, Louisiana
Roger Feickert  Mid States Printing  Aberdene, South Dakota
Elroy Frank  University of Nebraska - Lincoln  Lincoln, Nebraska
Larry Hamlin  East Texas State University  Commerce, Texas
Joe Seifert  Richtman Printing  Fargo, North Dakota
Gary Warren  Maynard Printing  Des Moines, Iowa

Special recognition is given to the authors of MAVCC's Graphic Arts. Book Three upon which this revision is based. Their names are Karim Frayollahi, Gary Ogle, William Reed, and Kenneth Woodcock.

Thanks are also extended to Noel Wilcoxson and to Duane Foster of the Oklahoma Department of Vocational-Technical Education print shop, to Robert Thomas and Glen Witteman of Brauderick Printery, to Bob Ford of the Journal Record Publishing Company, and to Bud Roland of North Star Ink for their assistance and support in revising this publication.

Special appreciation is extended to employees of the Graphics Division of the Oklahoma Department of Vocational-Technical Education for artwork, paste-up, phototypesetting and printing of this text.

Thanks are also extended to the following companies who provided reference materials and artwork for this publication:

A.B. Dick, Chicago, Illinois
AM Multigraphics, Mt. Prospect, Illinois
The Challenge Machinery Company, Grand Haven, Michigan
Graphic Arts Technical Foundation, Pittsburgh, Pennsylvania
Heidelberg Offset, Heidelberg, West Germany
3M Company, St. Paul, Minnesota

Final thank yous go to Sue Feasley for her assistance with the editing and development of this publication and to Jane Huston for her assistance in coordinating this project.
Use of this Publication

Instructional Units

Graphic Arts. The Press and Finishing Processes contains seven units of instruction. Each instructional unit includes some or all of the basic components of a unit of instruction, performance objectives, suggested activities for teachers and students, information sheets, assignment sheets, job sheets, visual aids, tests, and answers to the tests. Units are planned for more than one lesson or class period of instruction.

Careful study of each instructional unit by the teacher will help to determine:

A. The amount of material that can be covered in each class period.

B. The skills which must be demonstrated
   1. Supplies needed
   2. Equipment needed
   3. Amount of practice needed
   4. Amount of class time needed for demonstrations

C. Supplementary materials such as pamphlets or videotapes that must be ordered

D. Resource people who must be contacted

Objectives

Each unit of instruction is based on performance objectives. These objectives state the goals of the course, thus providing a sense of direction and accomplishment for the student.

Performance objectives are stated in two forms. Unit objectives, stating the outcome expected of each student after completion of the unit of instruction; and specific objectives, stating the student performance necessary to reach the unit objective.

Since the objectives of the unit provide direction for the teaching-learning process, it is important for the teacher and students to have a common understanding of the intent of the objectives. A limited number of performance terms have been used in the objectives for this curriculum to assist in promoting the effectiveness of the communication among all individuals using the materials.

Reading of the objectives by the student should be followed by a class discussion to answer any questions concerning performance requirements for each instructional unit.

Teachers should feel free to add objectives which will fit the material to the needs of the students and community. When teachers add objectives, they should remember to supply the needed information, assignment and/or job sheets, and criterion tests.
Suggested Activities for the Instructor

Each unit of instruction has a suggested activities sheet outlining steps to follow in accomplishing specific objectives. Duties of instructors will vary according to the particular unit, however, for best use of the material they should include the following. Provide students with objective sheet, information sheet, assignment sheets, and job sheets, preview videotapes, make transparencies, and arrange for resource materials and people, discuss unit and specific objectives and information sheet, give test. Teachers are encouraged to use any additional instructional activities and teaching methods to aid students in accomplishing the objectives.

Information Sheets

Information sheets provide content essential for meeting the cognitive (knowledge) objectives in the unit. The teacher will find that the information sheets serve as an excellent guide for presenting the background knowledge necessary to develop the skill specified in the unit objective.

Students should read the information sheets before the information is discussed in class. Students may take additional notes on the information sheets.

Transparency Masters

Transparency masters provide information in a special way. The students may see as well as hear the material being presented, thus reinforcing the learning process. Transparencies may present new information or they may reinforce information presented in the information sheets. They are particularly effective when identification is necessary.

Transparencies should be made and placed in the notebook where they will be immediately available for use. Transparencies direct the class's attention to the topic of discussion. They should be left on the screen only when topics shown are under discussion.

Assignment Sheets

Assignment sheets give direction to study and furnish practice for paper and pencil activities to develop the knowledge which is a necessary prerequisite to skill development. These may be given to the student for completion in class or used for homework assignments. Answer sheets are provided which may be used by the student and/or teacher for checking student progress.

Job Sheets

Job sheets are an important segment of each unit. The instructor should be able to demonstrate the skills outlined in the job sheets. Procedures outlined in the job sheets give direction to the skill being taught and allow both student and teacher to check student progress toward the accomplishment of the skill. Job sheets provide a ready outline for students to follow if they have missed a demonstration. Job sheets also furnish potential employers with a picture of the skills being taught and the performances which might reasonably be expected from a person who has had this training.

Practical Tests

Practical tests provide the instructor with an evaluation instrument for each of the job sheets.
Test and Evaluation

Paper-pencil and performance tests have been constructed to measure student achievement of each objective listed in the unit of instruction. Individual test items may be pulled out and used as a short test to determine student achievement of a particular objective. This kind of testing may be used as a daily quiz and will help the teacher spot difficulties being encountered by students in their efforts to accomplish the unit objective. Test items for objectives added by the teacher should be constructed and added to the test.

Test Answers

Test answers are provided for each unit. These may be used by the teacher and/or student for checking student achievement of the objectives.

UNIT OBJECTIVE

After completion of this unit, the student should have a working knowledge of the basic theory of offset printing and be able to identify the basic systems and various component, of a typical sheet fed offset press. Competencies will be demonstrated by completing the job sheet and the unit tests with a minimum score of 85 percent.

SPECIFIC OBJECTIVES

After completion of this unit, the student should be able to:

1. Match terms related to offset press systems with their correct definitions.
2. State the basic theory of offset printing.
3. Identify the basic systems of a typical sheet fed offset press.
4. Match the basic systems of a typical sheet fed offset press with their functions.
5. Identify the components of the feeder system of a typical offset press.
6. Match components of the feeder system with their functions.
7. Match the types of feeder systems used on offset presses with their operations.
8. Identify the components of the register system of a typical offset press.
9. Match components of the register system with their functions.
10. Name the two types of register systems used on sheet fed offset presses.
11. Identify the components of the cylinder system in a typical offset press.
12. Match components of the cylinder system with their functions.
14. Identify the components of the inking system of a typical offset press.
15. Identify the components of the dampening system of a typical offset press.
16. Match components of the inking/dampening system with their functions.
17. Distinguish between the two types of dampening systems.
18. Identify the components of the delivery system of a typical offset press.
OBJECTIVE SHEET

19. Match components of the delivery system with their functions.

20. Match types of delivery systems with their descriptions.

21. Demonstrate the ability to test the basic theory of offset printing. (Job Sheet #1)
OFFSET PRESS SYSTEMS
UNIT I

SUGGESTED ACTIVITIES

A. Obtain additional materials and/or invite resource people to class to supplement/reinforce information provided in this unit of instruction.

(NOTE: This activity should be completed prior to the teaching of this unit.)

B. Make transparencies from the transparency masters included with this unit.

C. Provide students with objective sheet.

D. Discuss unit and specific objectives.

E. Provide students with information sheet.

F. Discuss information sheet.

(NOTE: Use the transparencies to enhance the information as needed.)

G. Provide students with job sheet.

H. Discuss and demonstrate the procedure outlined in the job sheet.

I. Integrate the following activities throughout the teaching of this unit:

   1. Demonstrate various components and systems of the offset press using your classroom or local job-shop press as an example.

   2. Demonstrate offset press systems by printing a job at slow speed.

   3. Invite manufacturers, industry representatives and printing professionals to give demonstrations and/or describe products, equipment and processes.

   4. Ask students to visit a print shop and prepare a report on the presses and systems observe.

   5. Meet individually with students to evaluate their progress through this unit of instruction, and indicate to them possible areas for improvement.

J. Give test.

K. Evaluate test.

L. Reteach if necessary.
SUGGESTED ACTIVITIES

RESOURCES USED IN DEVELOPING THIS UNIT

SUGGESTED SUPPLEMENTAL MATERIAL

Slides — Presswork and Bindery (5032). 51 color, 35mm slides, 1986.

OFFSET PRESS SYSTEMS
UNIT I

INFORMATION SHEET

I. Terms and definitions

A. Delivery — The operation of an offset press in controlling the paper after the image is printed

B. Fountain solution — A chemical mixture applied to the nonimage areas of an offset plate to repel ink

C. Ink — A substance applied to the image areas of an offset plate for transfer to the blanket and then to the paper

D. Offset — In modern lithography, the procedure of transferring a right-reading image (plate cylinder) to an intermediate carrier (blanket cylinder) where it becomes wrong reading, then transferring that image to a receiver (paper stock) where it again becomes right reading

E. Offset press — A piece of printing equipment which holds a roll or stack of paper, controls that paper through the process of imprinting an image on its surface, and delivers the paper to a stack or roll for further processing

F. Offset printing — The process of printing from a flat surface with the image and nonimage areas separated by chemistry

(NOTE: Offset printing is also known as lithography, offset lithography, photo lithography, photo offset lithography and photo offset.)

G. Register — To print the image in the exact same position on each sheet of paper

H. Register board — A flat surface on which the sheet of paper is positioned between the feeder and cylinder systems

I. Vacuum — Suction created through the sucker tube(s) by a vacuum pump intake
II. Basic theory of offset printing — The chemical principle that grease (ink) and water (dampening solution) do not readily mix

OFFSET PLATE

Dampened area remains ink free.

Inked image accepts more ink.

Blanket

Printed Sheet

(Note: If a completed offset plate is dampened evenly with water, the water will be repelled by the greasy inked image — the water will actually run away. If ink is applied to the same plate, the greasy inked image will accept more ink, but the dampened clear area of the plate will remain ink free. If, however, ink is applied to a completed offset plate not previously dampened with water, the entire surface will accept the ink.)

III. Basic systems of a typical sheet fed offset press (Transparency 1)
IV. Functions of the basic systems of a typical sheet fed offset press

A. Feeder system — Controls the feeding of paper stock, either from a roll or as a single sheet from a stack

B. Register system — Controls the positioning of the paper being fed through the press so the image will print in the exact same position on each sheet

C. Cylinder system — A set of three cylinders (or their equivalent) which control the transfer of the image from the offset plate to the paper being fed through the press

D. Inking system — A reservoir (fountain) of ink and related rollers which control ink distribution to the image areas of the offset plate

E. Dampening system — A reservoir (fountain) of dampening solution and related rollers which control dampening solution distribution to the nonimage areas of the offset plate

(Note: Another name for the dampening system is water system.)

F. Delivery system — Controls the paper after the image is printed by stacking or rewinding as a roll to facilitate further processing

V. Components of the feeder system of a typical offset press (Transparency 2)
INFORMATION SHEET

VI. Functions of components of the feeder system

A. Feed table — Holds a stack or pile of paper in position for feeding into the press

B. Paper guides (front, back and side) — Position the sheets that are stacked on the feed table by holding the paper on the sides and at the leading and trailing edges in exact position for entering the press

C. Double sheet detector — A device which gauges the thickness of the paper before it is fed into the register system and provides a means of stopping or deflecting the paper if two or more sheets are picked up by the sucker tube(s)

D. Sheet separator — Small, thin, narrow, flexible metal finger which is positioned against the leading edge of the paper pile and has the tip end bent to fit over the top of the leading edge about 1/4"; it aids in the feeding of one sheet at a time by separating top sheet from a second or more sheets, which remain on top of the pile

E. Vacuum sucker tube — A moveable tube through which a vacuum pump draws air causing a sheet of paper to be drawn into contact with the tube, which then moves the sheet into the press

F. Air blast nozzle — Blows air from the discharge side of a vacuum pump through one or more tubes into the edges of the top few sheets of paper on the feed table to control sheet separation for pickup of a single sheet by the sucker tube(s)

G. Pull out roller — A free turning roller which rotates in contact with a gear driven roller to pull the sheet of paper from the sucker tube(s) and deliver it to the register system
INFORMATION SHEET

H. Pile height regulator — A device which automatically controls the height at which the pile of paper will be maintained for continuous feeding into the press.

VII. Types of feeder systems

A. Sheet feed — Each sheet is picked up at the gripper edge after the trailing edge of the previous sheet moves past the sucker tubes.

   (NOTE: Small table top presses use a friction roller feed system.)

B. Stream feed

   1. Each sheet is picked up at the trailing edge and pushed underneath the previous sheet.

   2. Pick up of the next sheet can be made immediately as the trailing edge moves toward the register system.

   3. Several overlapping sheets will be in position on the register board at one time.

C. Roll or web feed — The paper is mounted as a roll on the feeder system and can be delivered from the press as single sheets or rewound as a roll.

VIII. Components of the register system of a typical offset press (Transparency 3)
IX. Functions of components of the register system

A. Feed roller — A free turning roller which moves in and out of contact with a gear-driven roller during each revolution of the press to move the sheet of paper from its register board position into the cylinder grippers.

B. Paper stops — A set of guides to stop the forward motion of the sheet of paper so it may be positioned by the side guides.

(NOTE: The paper stops are also called drop guides.)

C. Conveyor tapes — A set of tapes or tracks which lie flat on the register board, and rotate around the board to move the paper through the register system.

D. Jogger side guide — Positions paper to correctly enter feed roller; adjusts to width of paper.

E. Sheet hold down strip — A thin, narrow flexible strip of metal the length of the register board which lies on top of a sheet of paper with a conveyor tape underneath to prevent sheet buckle.

F. Control wheel — Adjusts the tension on the sheet hold down strip.

G. Fixed side guide — Maintains paper in position to enter feed roller.

X. Types of register systems used on sheet fed offset presses

A. Register board

(NOTE: The sheet is positioned by push or pull guides and on some models is delivered to the cylinder system by register swing grippers.)

B. Feeder/buckle

(NOTE: The register is controlled laterally by positioning the sheet on the feed table; vertically, the image register is controlled by adjusting the buckle caused by overfeeding of the sheet into the open cylinder grippers and holding that buckle until the grippers close.)
XI. **Components of the cylinder system of a typical offset press** (Transparency 4)

![Diagram of Cylinder System]

XII. **Functions of components of the cylinder system**

A. Plate cylinder — The part of an offset press which holds the offset plate.

B. Tail clamp — The part of a plate cylinder which holds the trailing edge of the offset plate to secure its position on the cylinder.

   (NOTE: The tail clamp is also known as the *trailing edge clamp*.)

C. Head clamp — The part of a plate cylinder which grips with pressure or holds
E. Blanket clamps — The parts of the blanket cylinder which hold the blanket secure in position and around the cylinder

F. Blanket cylinder — The part of an offset press which contains a rubber blanket to receive the image from the plate

G. Blanket — A thick sheet of rubber laminated to a backing sheet (usually canvas) that fits on the surface of the blanket cylinder

H. Impression cylinder — The part of an offset press which applies pressure for image transfer to the paper

I. Sheet grippers — Several metal fingers attached to a shaft on the impression cylinder which grip the leading edge of the sheet of paper as it passes through the cylinder system

XIII. Offset press cylinder arrangements (Transparencies 5 and 6)

(NOTE: The cylinder systems of offset presses have different arrangements with 2, 3, 4, or more cylinders; the equivalents of the plate, blanket and impression cylinders are present in all arrangements.)
XIV. Components of the inking system of a typical offset press (Transparency 7)
XV. Components of the dampening system of a typical offset press (Transparency 8)

- Fountain Solution
- Water Fountain Roller
- Water Ductor Roller
- Water Vibrator Roller
- Water Form Roller

XVI. Functions of components of the inking/dampening system

A. Fountain roller — The roller which rotates in the ink and water fountains respectively to distribute ink and water to each of the systems

B. Fountain — A tray reservoir which holds a supply of ink or water (fountain solution)

C. Ductor roller — The intermediate roller which carries ink or water from the respective fountain roller to each system

D. Distributor roller — Gear driven or free turning roller which rotates on its axis in contact with other rollers to aid in even distribution of water and ink in the respective systems

E. Idler roller — A free turning roller which contacts other ink rollers to aid in ink distribution
F. **Vibrator roller** — A hard surface free-turning (or powered) roller which moves back and forth on its axis while rotating in contact with other rollers in the ink or water system to evenly distribute the ink or water.

(Note: In various regions of the U.S., the vibrator roller is also called the oscillating or waver roller.)

G. **Form roller** — The ink and/or dampening roller which makes contact with the offset plate while it is attached to the plate cylinder.

**XVII. Types of dampening systems** (Transparency 9)

(Note: Different press manufacturers use detailed variations to accomplish dampening with these types of systems and call them by trade names such as Dahlgren, Harris-Cottrell, Micro-Flow, Didde Glaser, A.B. Dick, Aquamatic, and others.)

A. **Conventional**
   1. Separate ink and water fountains
   2. Separate ink and water form rollers contacting the plate
   3. Covered rollers
      a. Molleton
      b. Parchment
      c. Paper or cloth sleeve
   4. Noncovered rollers (barebacks)

B. **Integrated**
   1. Separate ink and water fountains
   2. Common ink and water form roller(s) contacting the plate
   3. Noncovered rollers

(Note: Various designs of integrated dampening systems may be encountered in the field depending upon the manufacturer of individual presses. Many appear considerably different in numbers and arrangements of rollers, but all share the above common traits.)

Tray Delivery and Delivered

XIX. Functions of components of the delivery system

A. Ejector rollers — Rollers which aid in removing the sheet of paper from the impression cylinder and delivering it to the receiving unit

B. Receiving tray — A tray with positioning guides which receives the sheet from the cylinder system and holds the paper in a straight stack

(NOTE: The quantity capacity of the tray is about 500 sheets of 20-pound bond.)

C. Stripping finger — Metal finger which is positioned close to the surface of the impression cylinder which prevents the sheet of paper from following the cylinder rotation after the sheet is released to the delivery system

D. Delivery gripper bars — A set of gripper fingers mounted on two parallel chains which rotate to pick up the sheet of paper from the cylinder grippers and deliver it to a receiving tray or stacking unit

E. Delivery cylinder — Delivers sheet of paper to stack in receiving tray

F. Delivery gripper chains — Revolving chains with mounted gripper bars which transfer the sheet of paper from the cylinder system to a receiving table

G. Receding stacker — A receiving table attached to the offset press which automatically lowers as sheets of paper are delivered to it

XX. Types of delivery systems on a typical sheet fed offset press

A. Tray — Paper is delivered to a receiving tray which must be emptied frequently

(NOTE: Tray delivery is also known as chute delivery.)
INFORMATION SHEET

B. Chute with receding stacker — Paper is delivered and positioned on a table which lowers automatically.

C. Chain — Paper is delivered by gripper bars revolving on chains to a table which lowers automatically, allowing many sheets to be stacked.

(NOTE: Some small presses with chain delivery systems do not have a receding stacker.)

D. Roll or web — Paper fed from a roll is rewound after printing.

Tray Delivery

Chain Delivery with Receding Stacker
A. Tools and materials
1. Developed offset plate
2. Two cotton pads
3. Small portion of offset press ink
4. Container of fountain solution or water
5. Clean-up solvents
6. Preservatives

B. Procedure
1. Lay plate on table with image up.
2. Thoroughly dampen one cotton pad with fountain solution or water and thoroughly dampen entire surface of offset plate.
3. Dampen remaining cotton pad with ink.
4. Spread an even layer of ink across face of dampened offset plate.
5. Note what areas of plate accept the ink and what areas remain clear.
6. Clean and gum plate.
7. Clean work area and return tools and materials to proper storage area.

C. Write a short report using the results of this activity and your knowledge from class notes, lectures, and resource materials.
1. Explain what took place when the ink was applied to the dampened offset plate.
2. Explain what might have happened if the ink had been applied to a dry plate.
3. On a printing job, what might be the result of a malfunctioning dampening system?
OFFSET PRESS SYSTEMS
UNIT I

PRACTICAL TEST #1 — TEST BASIC
THEORY OF OFFSET PRINTING

Student’s Name ___________________________ Date _____________________
Evaluator’s Name _________________________ Attempt No. ____________

Instructions: When you are ready to perform this task, ask your instructor to observe the
procedure and complete this form. All items listed under "Process Evaluation" must
receive a "Yes" for you to receive an acceptable performance evaluation.

PROCESS EVALUATION

(EVALUATOR NOTE: Place a check mark in the "Yes" or "No" blanks to designate whether or not the student has
satisfactorily achieved each step in this procedure. If the student is unable to achieve this competency, have the student
review the materials and try again.)

The student:                      YES     NO

1. Thoroughly dampened plate with fountain solution or water.      _____    _____
2. Spread even layer of ink across face of plate.                   _____    _____
3. Noted what areas of plate accepted/rejected ink.                 _____    _____
4. Cleaned and gummed plate.                                       _____    _____
5. Cleaned work area and returned tools and materials to proper storage.  _____    _____

EVALUATOR’S COMMENTS: ____________________________________________

_________________________________________________________________

_________________________________________________________________
PRACTICAL TEST #1

PRODUCT EVALUATION

(EVALUATOR NOTE. Rate the student on the following criteria. If the student is unable to demonstrate mastery, student materials should be reviewed and another product must be submitted for evaluation. See suggested performance evaluation keys below.)

Option A

4 — Skilled — Can perform job with no additional training.
3 — Moderately skilled — Has performed job during training program; limited additional training may be required.
2 — Limited skill — Has performed job during training program; additional training is required to develop skill.
1 — Unskilled — Is familiar with process, but is unable to perform job.

Option B

Yes — Can perform job with no additional training.
No — Is unable to perform job satisfactorily.

Criteria: 

Rating:

Accurately noted results of test.

Cleaned plate and work area.

Satisfactorily completed report.

REPORT EVALUATION

Student report should include mention of basic theory of offset printing — that oil and water do not mix — and that the greasy ink was accepted by image area of plate and was repelled by the water on the non-image area. Also, student response should include explanation that ink applied to an offset plate not previously dampened would result in ink adhering to both non-image as well as image areas of the plate. And, student response should indicate if dampening system for some reason was disabled, the result would be an offset plate (and printed paper stock) smeared or predominantly covered with ink.

EVALUATOR’S COMMENTS:

OFFSET PRESS SYSTEMS
UNIT I

TEST

Name __________________________ Score _______________________

1. Match the terms on the right relating to offset press systems with their correct definitions.

_____ a. In modern lithography, the procedure of transferring a right-reading image (plate cylinder) to an intermediate carrier (blanket cylinder) where it becomes wrong reading, then transferring that image to a receiver (paper stock) where it again becomes right reading

_____ b. To print the image in the exact same position on each sheet of paper

_____ c. The operation of an offset press in controlling the paper after the image is printed

_____ d. Suction created through the sucker tube(s) by a vacuum pump intake

_____ e. A flat surface on which the sheet of paper is positioned between the feeder and cylinder systems

_____ f. A chemical mixture applied to the nonimage areas of an offset plate to repel ink

_____ g. The process of printing from a flat surface with the image and nonimage areas separated by chemistry

_____ h. A substance applied to the image areas of an offset plate for transfer to the blanket and then to the paper

_____ i. A piece of printing equipment which holds a roll or stack of paper, controls that paper through the process of imprinting an image on its surface, and delivers the paper to a stack or roll for further processing

1. Delivery
2. Fountain solution
3. Ink
4. Offset
5. Offset press
6. Offset printing
7. Register
8. Register board
9. Vacuum
2. State the basic theory of offset printing.

3. Identify the basic systems of a typical sheet fed offset press.

4. Match the basic systems of a typical sheet fed offset press with their functions.

   a. _____________  d. _______________
   b. _______________  e. _______________
   c. _______________  f. _______________

   a. Controls the feeding of paper stock, either from a roll or as a single sheet from a stack
   1. Inking system
   2. Feeder system
   b. Controls the positioning of the paper being fed through the press so that the image will print in the exact same position on each sheet
   3. Delivery system
   4. Dampening system
   c. Controls the paper after the image is printed by stacking or rewinding as a roll to facilitate further processing
   5. Cylinder system
   6. Register system
4. d. A set of three cylinders (or their equivalent) which control the transfer of the image from the offset plate to the paper being fed through the press.

e. A reservoir (fountain) of ink and related rollers which control ink distribution to the image areas of the offset plate.

f. A reservoir (fountain) of dampening solution and related rollers which control its distribution to the nonimage areas of the offset plate.

5. Identify the components of the feeder system of a typical offset press.

TEST

6. Match components of the feeder system on the right with their functions.

_____ a. A free turning roller which rotates in contact with a gear driven roller to pull the sheet of paper from the sucker tube(s) and deliver it to the register system

_____ b. Air from the discharge side of a vacuum pump that is blown through one or more tubes into the edges of the top few sheets of paper on the feed table to control sheet separation for pickup of a single sheet by the sucker tube(s)

_____ c. Small, thin, narrow, flexible metal finger which is positioned against the leading edge of the paper pile and has the tip end bent to fit over the top of the leading edge about 1/4"; it aids in the feeding of one sheet at a time by separating top sheet from a second or more sheets, which remain on top of the pile

_____ d. A device which automatically controls the height at which the pile of paper will be maintained for continuous feeding into the press

_____ e. Holds a stack or pile of paper in position for feeding into the press

_____ f. A moveable tube through which a vacuum pump draws air causing a sheet of paper to be drawn into contact with the tube, which then moves the sheet into the press

_____ g. A device which gauges the thickness of the paper before it is fed into the register system and provides a means of stopping or deflecting the paper if two or more sheets are picked up by the sucker tube(s)

_____ h. Position the sheets that are stacked on the feed table by holding the paper on the sides and at the leading and trailing edges in exact position for entering the press

1. Double sheet detector
2. Feed table
3. Paper guides
4. Sheet separator
5. Vacuum sucker tube
6. Air blast nozzle
7. Pull out roller
8. Pile height regulator
7. Match the types of feeder systems used on offset presses on the right with their operations.

(NOTE: Answers may be used more than once.)

_____a. Each sheet is picked up at the trailing edge and pushed underneath the previous sheet.

_____b. Pick up of the next sheet can be made immediately as the trailing edge moves toward the register system.

_____c. Each sheet is picked up at the gripper edge after the trailing edge of the previous sheet moves past the sucker tubes.

_____d. Several overlapping sheets will be in position on the register board at one time.

_____e. The paper is mounted as a roll on the feeder system and can be delivered from the press as single sheets or rewound as a roll.

8. Identify the components of the register system of a typical offset press. Write the answers in the blanks on the next page.

TEST

16. Match components of the inking/dampening system with their functions.

______a. A tray reservoir which holds a supply of ink or water (fountain solution)
______b. The roller which rotates in the ink and water fountains respectively to distribute ink and water to each of the systems
______c. Gear driven or free turning roller which rotates on its axis in contact with other rollers to aid in even distribution of water and ink in the respective systems
______d. The ink and/or dampening roller which makes contact with the offset plate while it is attached to the plate cylinder
______e. A free turning roller which contacts other ink rollers to aid in ink distribution
______f. The intermediate roller which carries ink or water from the respective fountain roller to each system
______g. A hard surface free-turning roller which moves back and forth on its axis while rotating in contact with other rollers in the ink or water system to evenly distribute the ink or water

17. Distinguish between the two types of dampening systems by placing a "C" before descriptions of conventional systems and an "I" before descriptions of integrated systems.

(NOTE: Both systems may apply to one description.)

______a. Noncovered rollers
______b. Common ink and water form roller(s) contacting the plate
______c. Molleton covered rollers
______d. Paper or cloth sleeve covered rollers
______e. Separate ink and water form rollers contacting the plate
______f. Separate ink and water fountains
______g. Parchment covered rollers
18. Identify the components of the delivery system of a typical offset press.

9. Match components of the delivery system with their functions.

_____ a. A tray with positioning guides which receives the sheet from the cylinder system and holds the paper in a straight stack

_____ b. A set of gripper fingers mounted on two parallel chains which rotate to pick up the sheet of paper from the cylinder grippers and deliver it to a receiving tray or stacking unit

_____ c. Revolving chains with mounted gripper bars which transfer the sheet of paper from the cylinder system to a receiving table

_____ d. Metal finger which is positioned close to the surface of the impression cylinder which prevents the sheet of paper from following the cylinder rotation after the sheet is released to the delivery system

1. Ejector rollers
2. Receiving tray
3. Stripping finger
4. Delivery gripper bars
5. Delivery cylinder
6. Delivery gripper chains
7. Receding stacker
TEST

_____e. Rollers which aid in removing the sheet of paper from the impression cylinder and delivering it to the receiving unit

_____f. A receiving table attached to the offset press which automatically lowers as sheets of paper are delivered to it

_____g. Delivers sheet of paper to stack in receiving tray

20. Match the types of delivery systems on the right with their descriptions.

_____a. Paper fed from a roll is rewound after printing.

_____b. Paper is delivered to a receiving tray which must be emptied frequently.

_____c. Paper is delivered by gripper bars revolving on chains to a table which lowers automatically, allowing many sheets to be stacked.

_____d. Paper is delivered and positioned on a table which lowers automatically.

1. Tray

OFFSET INKS AND DAMPENING CHEMISTRY
UNIT II

UNIT OBJECTIVE

After completion of this unit, the student should be able to select ink and mix PMS ink colors for an offset sheet fed press job. Competencies will be demonstrated by completing the assignment sheets, job sheets, and the unit tests with a minimum score of 85 percent.

SPECIFIC OBJECTIVES

After completion of this unit, the student should be able to:

1. Match terms related to offset inks and dampening solutions with their correct definitions.
2. Select true statements concerning the main ingredients of offset inks.
3. Name three ink manufacturing procedures which benefit the user.
4. Match types of ink to their descriptions.
5. List three conditions influencing the printing performance of offset inks.
6. Name three ink properties which affect the printing quality of offset inks.
7. Select rules for ink care and storage.
8. State the purpose of offset dampening solutions.
9. Match dampening solution ingredients with their functions.
10. Name the two methods of measuring pH.
11. State the generally acceptable range of pH for a fountain solution.
12. Select the effects of using alcohol or alcohol substitutes in a fountain solution.
13. Discuss the importance of ink-water balance.
14. Conduct an ink cabinet inventory. (Assignment Sheet #1)
15. Conduct an inventory of offset press dampening chemistry. (Assignment Sheet #2)
16. Demonstrate the ability to:
   a. Mix dampening solution and test for pH. (Job Sheet #1)
   b. Mix PMS colors and conduct and evaluate an ink draw-down or smear. (Job Sheet #2)
   c. Mix two colors of ink to produce a third color. (Job Sheet #3)
OFFSET INKS AND DAMPENING CHEMISTRY

UNIT II

SUGGESTED ACTIVITIES

A. Obtain additional materials and/or invite resource people to class to supplement/reinforce information provided in this unit of instruction.

(Note: This activity should be completed prior to the teaching of this unit.)

B. Make transparency from the transparency master included with this unit.

C. Provide students with objective sheet.

D. Discuss unit and specific objectives.

E. Provide students with information and assignment sheets.

F. Discuss information and assignment sheets.

(Note: Use the transparency to enhance the information as needed.)

G. Provide students with job sheets.

H. Discuss and demonstrate the procedures outlined in the job sheets.

I. Integrate the following activities throughout the teaching of this unit:

1. Discuss the Pantone Matching System and provide students with a color formula guide.

(Note: If mixing colors of inks is to be included in the curriculum, it is recommended that a PMS mixing kit be acquired from an ink manufacturer and that manufacturer’s instructions be followed.)

2. Demonstrate effects of coated and uncoated papers with a given ink.

3. Invite press and ink manufacturers’ representatives to demonstrate their products.

4. Meet individually with students to evaluate their progress through this unit of instruction, and indicate to them possible areas for improvement.

J. Give test.

K. Evaluate test.

L. Reteach if necessary.

REFERENCES USED IN WRITING THIS UNIT

SUGGESTED ACTIVITIES

SUGGESTED SUPPLEMENTAL RESOURCES

OFFSET INKS AND DAMPENING CHEMISTRY
UNIT II

INFORMATION SHEET

I. Terms and definitions

A. Draw-down—A test procedure by which two or more small quantities of ink are placed on a test sheet of paper and spread uniformly with an ink knife or spatula in parallel stripes to determine color strength, opacity and general appearance.

B. Drier—Any substance added to ink to speed drying.

C. Extender—A colorless substance mixed with ink to increase its covering power.

D. Fugitive—A tendency to lose color or fade when exposed to sunlight for long periods.

E. Lakes—Ink body colors which are not particularly strong.

F. Length—Ability of ink to flow and form long or short filaments.

G. Metallic inks—Inks containing finely ground metallic powder, such as aluminum and bronze, which are used to provide silver and gold colors.

H. Opacity—The hiding or covering quality of ink.

I. Permanence (fastness)—A property of nonfading regardless of exposure to strong light or passage of time.

J. pH—A symbol for the strength of acid or alkali in any solution, represented on a scale from 0-14 with 7 as neutral, 0 as acid and 14 as alkaline.

(Courtesy Graphic Arts Technical Foundation)

K. Pigments—The coloring materials in ink

L. PMS (Pantone Matching System)—A standardized, nearly universally accepted matching system for mixing inks to produce given colors

M. Relative humidity—The amount of water vapor in the air compared to the greatest amount possible at the same temperature

N. Resin—Natural organic substance from plants which is not soluble in water

O. Resistant—Manufactured to withstand the action of such factors as gases, chemicals, heat and moisture

P. Tack—The stickiness of the ink

Q. Toners—Strong ink body colors with highly concentrated pigments

R. Translucence—The varying quality of an ink between opacity and transparency

S. Transparency—The characteristic of an ink that allows images beneath it to show through

T. Varnish—A thin, protective coating which is printed like ink on the paper stock; also used as an additive to vary ink properties

U. Vehicle—The bulk of the body of an ink

V. Viscosity—The resistance of ink to flow

W. Water colors—Colors which produce flat effects

(NOTE: Water colors contain no varnish.)
II. Main ingredients of offset inks

A. Vehicle—Forms the bulk of the body of ink; carries the pigment and binds the ink to the material being printed
   1. Types of vehicles
      a. Varnish (linseed oil)
      b. Synthetic oils (dehydrated castor oil, epoxy oil, alkyd oil)
      c. Resins
      d. Solvents (petroleum or vegetable oil-based compounds)
   2. Factors determining vehicle selection
      a. Purpose of ink
      b. Printing process being used
      c. Kind of paper
      d. Methods of ink drying (Transparency 1)
         1. Absorption
         2. Oxidation and polymerization
         3. Resin-solvent (evaporation)
         4. Moisture-set (precipitation)
         5. Resin-oil (absorption and oxidation)
         6. Coldset (cooling)

B. Pigments—The coloring materials
   1. Black pigments are primarily carbon produced by burning petroleum products.
   2. White pigments
      a. Opaque whites are used as colorants.
      b. Transparent whites are used as extenders.
   3. Colored pigments are mostly synthetic; produced by processing chemicals to make dyes.

(Note: Colors that fade in sunlight are called fugitive. Colors that resist fading are said to have permanence. Colors that withstand the action of gases, chemicals, heat and moisture are called resistant.)
INFORMATION SHEET

C. Modifiers—Driers, waxes, lubricants, gums, starches, extenders, varnishes and/or wetting agents which affect the drying of ink

(NOTE: Small amounts of one or more modifiers may be added by a press operator in order for the ink to work and dry properly under existing production conditions. Compounds [and their use] for this purpose should be recommended by the manufacturer of the specific ink, however.)

1. Greases aid in ink setting and ink lubrication.
2. Thin oils and solvents reduce tack.
3. Wetting agents help the vehicle to cover the pigment particles.
4. Antioxidants slow surface drying.
5. Deodorants eliminate odors of oils and...ers.
6. Perfumes impart fragrance to ink.

III. Ink manufacturing procedures which benefit the user

(NOTE: Inks are manufactured with specific characteristics for each printing process. Offset inks are made specifically for use on offset presses. These inks must withstand constant contact with dampening solution without emulsifying [breaking down in water], thus, letterpress inks should never be used on an offset press.)

A. Ink is mixed in batches and carefully weighed.

(NOTE: The mixing equipment is cleaned thoroughly after each batch and the process begins all over again. Records are kept on lists of ingredients and batch numbers. Any problem with ink at the press can be solved more quickly by the manufacturer if the batch number is known. Many times in troubleshooting, a press problem may be distinguished from an ink problem by use of ink from a different batch.)

B. Ink is tested at the factory under actual printing conditions.

C. Packaging varies for convenient use and storage.

(NOTE: Ink is sold and stored in tubes, cans, drums, tank trucks and railroad tank cars.)

IV. Types of Ink

A. Heat-set inks—Used on high speed presses with heating devices

B. Quick-set inks—Dry by penetration and oxidation

C. Gloss inks—Exhibit minimum penetration into paper surface

D. News inks—Dry by absorption on high speed presses

E. Metallic inks—Contain metal powders suspended in a vehicle
INFORMATION SHEET

F. Magnetic inks—Contain iron-bearing pigments which can be magnetized

G. Process inks—Have special colors (magenta, cyan, yellow), transparency, and drying characteristics

(NOTE: In four-color press work, inks and their drying characteristics have to be selected on the basis of the order in which they are placed on the paper.)

H. Rubber base inks—Dry quickly on most stock, but dry slowly on ink rollers

V. Conditions influencing the printing performance of offset inks

A. Type of press being used
B. Speed of press
C. Stock surface being printed

VI. Ink properties which affect the printing quality of offset inks

A. Color (pigments)

(NOTE: Mass-tone refers to ink color, undertone is the background color, tinting strength is the color intensity, and opacity or transparency is the ability to cover. Since inks are never completely opaque or transparent, they appear in varying degrees of translucency.)

B. Body (consistency, viscosity)
C. Ability to dry (absorption, evaporation, oxidation)

VII. Rules for ink care and storage

A. Do not reuse ink after removal from ink fountain.
B. Keep ink surface level when removing ink from can.
C. Keep covers on all containers when not in use.
D. Store inks in enclosed metal cabinet away from excessive temperatures and light.
E. Keep outside surfaces of cans and tubes free of ink spills, smears and stains.
F. Observe shelf life recommendations of manufacturer.

(NOTE. Mixing colors of inks requires special tools and attention if colors are to be specific and repeatable. The Pantone Matching System [PMS] is nearly universally accepted and achieves these goals. To mix ink at the press with any predictability and without a mixing system requires some knowledge of the results of mixing primary colors to achieve another color or get a lighter or darker shade or tint. For best results only ink manufactured for mixing should be used. Generally, stronger colors [toners] should be added to weaker colors [lakes]. Mixing should be done on a hard, smooth surface using an ink knife or spatula to blend colors.)
INFORMATION SHEET

VIII. The purpose of offset dampening solutions—To keep the nonimage area of a well-processed offset plate clean

IX. Dampening solution ingredients and their functions

A. Water—The main ingredient which provides the moisture to keep the nonimage areas clean

(NOTE: The desensitized film which holds water on the nonimage areas of the plate usually breaks down or wears off gradually. Water alone will not rebuild the desensitized film, so chemicals are added to the water.)

B. Gum—The main desensitizing agent in the fountain solution; absorbed to the nonimage areas where it replaces the water-holding desensitized film worn off the plate during the press run

(NOTE: The gum is usually gum arabic or cellulose gum.)

C. Acid—Improves the adherence of the gum to the nonimage area of the plate

(NOTE: Generally a pH between 4.0 and 5.0 is satisfactory. Increasing the acid does not keep the nonprinting area clean, but it tends to break down color of ink, causes ink to emulsify, causes ink roller stripping, retards ink drying and reduces the life of the plate image.)

D. Chemical salts (ammonium dichromate)—Keep the acid in the fountain solution from reacting chemically with the metal of the plate and prevent stripping of the metal ink rollers

E. Buffers (nitrate salts)—Stabilize the pH of a fountain solution

(NOTE: It is important that the solution contain the minimum amount of gum and acid needed to keep the plate running clean.)

F. Premixed solutions—Fountain solution chemicals premixed and packaged by manufacturers for specific presses and printing projects

(NOTE: Consult your press operator's manual before purchasing or using these products.)

X. Methods of measuring pH (acidity or alkalinity)

A. pH paper test strips

(NOTE: Test strips are impregnated with organic chemical compounds which change color when immersed in a solution. The color change is compared with a pH color chart which gives the pH value. These strips and color charts are available from a number of manufacturers.)
B. Electronic pH meter

(NOTE: An electronic meter gives a pH reading by a pointer on a scale or by a digital readout when the electrode is immersed in a solution.)

XI. Generally acceptable pH range for a fountain solution—Depends on the ink and paper being used; generally, a solution with a pH between 4.0 and 5.0 is satisfactory

(NOTE: Check pH of the fountain solution periodically.)

XII. Effects of using alcohol or alcohol substitutes in a fountain solution

(NOTE: Although many manuals and press operators continue to concern themselves with isopropyl alcohol in fountain solutions, the industry is rapidly moving away from its use because of increasingly stringent rules and regulations from the Occupational Safety and Health Administration and other government agencies. Because of the movement of the industry to alcohol substitutes, this manual will address itself to such preparations’ effects on fountain solutions, but the student is advised to be aware of the fact that alcohol is disappearing from the press room.)
INFORMATION SHEET

A. Thinner film of solution on plate
B. Less solution on plate
   1. Less dimensional change in sheet
   2. Ink drying usually faster
C. Reduces droplet formation in ink
   (NOTE: "Snowflaky" problems are minimized.)
D. Better definition between printing and nonprinting areas
E. Balanced ink-water running condition achieved more rapidly

XIII. Importance of ink-water balance

A. Key to quality printing
B. The basic rule for proper adjustment of ink-water balance is to run the
   minimum amount of ink which will give full color to the job and the minimum
   amount of water to keep the plate clean
   (NOTE: Water and ink balance through a press run is one of the most
   important skills a press operator can possess. The proper knowledge and
   ability in this area will overcome the temptation to resort to fountain solution
   additives, excessive spray powder on the delivery system, etc., to produce
   quality results.)
C. Should be controlled to meet the needs of the plate
D. Proper control demands accurate analysis of problems as they occur
   (NOTE: Some symptoms at first appear the same even though they come
   from different causes. If the operator is knowledgeable enough to maintain
   the proper ink-water balance, troubleshooting can begin outside the ink and
   dampening system.)
E. Excessive water causes problems
   1. Water collecting at trailing edge of plate or blanket
   2. Wash marks in solids extending back from the leading edge of a plate
   3. "Snowflaky" printing
   4. Emulsification of ink and water on roller plate or blanket
F. Insufficient water causes problems
   1. Closing up of shadow dots in halftones (plugging)
INFORMATION SHEET

2. Depositing of ink in nonimage areas of plate (catch-up or scumming)

(NOTE: For best results with any chemistry in the press room, name brand products should be matched and manufacturers’ recommendations followed. Stock fountain concentrates usually work well when mixed as specified, but no assumptions should be made for trouble free operations.)
Methods of Ink Drying

Absorption
Nondrying oils penetrate the paper and dry as they are absorbed.

Oxidation
The vehicle absorbs oxygen from the air and becomes solid.

Polymerization
Oxygen sets up a reaction that turns small molecules into a gel, then into large molecules that harden.

Resin-Solvent
The combination resin-solvent vehicle releases the solvent causing the resin to dry; process can be speeded by heating.

Moisture-Set
A glycol-resin vehicle is sprayed with water or steam; glycol mixes with water and is absorbed by the paper and the resin precipitates as a solid film.

Resin-Oil
A combination of absorption and oxidation provides quick setting.

Coldset
A wax and resin vehicle is heated, then becomes solid as heat is radiated away from the vehicle as it cools.
OFFSET INKS AND DAMPENING CHEMISTRY
UNIT II

ASSIGNMENT SHEET #1—CONDUCT AN INK CABINET INVENTORY

Directions: Make an inventory list of all inks and additives in the ink storage area of your school print shop.

1. Divide the list by name brands.
2. Divide the name brand lists by color.
3. List ink additives separately.
4. To the right of each additive listed, describe its use (see instructor if necessary).
5. Turn in results to your instructor.
OFFSET INKS AND DAMPENING CHEMISTRY
UNIT II

ASSIGNMENT SHEET #2—CONDUCT AN INVENTORY OF OFFSET PRESS DAMPENING CHEMISTRY

Directions. Make an inventory list of all chemicals used to prepare fountain solution for all presses in the shop.

1. To the right of each chemical name, write the purpose of the chemical.

2. List the different mixing ratios used for each chemical if applicable (see instructor if necessary).
   
   EXAMPLES: 1:30, 1:15, 1:7

3. Turn in results to your instructor.
ANSWERS TO ASSIGNMENT SHEETS

Assignment Sheet #1

The student should submit a complete list of all inks and additives in the storage area of the school shop. The list should contain brand names by color, and additives with their uses.

Assignment Sheet #2

The student should submit a complete list of chemicals used to prepare fountain solution for all presses in the shop, including chemical purpose and mixing ratios.
OFFSET INKS AND DAMPENING CHEMISTRY
UNIT II

JOB SHEET #1—MIX DAMPENING SOLUTION AND TEST FOR pH

A. Tools and materials
   1. Premixed fountain solution ingredients (or ingredients for mixing prescribed fountain solution) and containers for mixing (provided by instructor)
   2. Distilled or deionized water (provided by instructor)
   3. pH testing strips or electronic pH meter
   4. Paper to record results
   5. Pencil or pen

B. Procedure
   1. Mix fountain solution ingredients and distilled or deionized water according to manufacturer’s or instructor’s directions.
   2. Insert test strips (Figure 1) or meter electrode (Figure 2) into mixed solution.

FIGURE 1
3. Determine pH by comparing the test strips to pH chart or reading meter.
4. Record the pH value.
5. Turn in results to instructor.
6. Clean containers, mixing area and tools.
OFFSET INKS AND DAMPENING CHEMISTRY
UNIT II

JOB SHEET #2—MIX PMS COLORS AND CONDUCT
AND EVALUATE AN INK DRAW-DOWN OR SMEAR

A. Tools and materials
   1. PMS color formula guide
   2. Sufficient quantities of Pantone Yellow C basic color ink, Pantone Transparent White ink, and Pantone 101C ink for activity (provided by instructor)
   3. Draw-down paper strips with opaque strip (provided by instructor)
   4. Ink knife or spatula
   5. Mixing containers
   6. Ink scale
   7. Pencil or pen

B. Procedure
   1. Weigh proper quantities of Pantone Yellow C and Pantone Transparent White ink (according to weight measures of scale and color formula guide ratios for Pantone 101C) and mix thoroughly (to the satisfaction of the instructor).
   2. Using a spatula or ink knife, deposit a small quantity of Pantone 101C near the top of a draw-down strip (Figure 1).  

   FIGURE 1

   3. Clean the tool thoroughly.
4. Using the same technique, deposit a like-size quantity of the mixture of Pantone Yellow C and Pantone Transparent White ink adjacent to the Pantone 101C sample on the draw-down strip.

5. Clean the tool thoroughly.

6. Using the spatula or ink knife, in one stroke, draw both samples down across the opaque strip of the draw-down sheet until the ink is dissipated.

7. Compare the factory-produced 101C with the classroom mixed example of 101C for color strength, opacity and general appearance on the paper surface of the draw-down strip.

8. Sign name to draw-down sheet and turn in completed project to instructor.

9. Clean containers, mixing area and tools.
OFFSET INKS AND DAMPENING CHEMISTRY
UNIT II

JOB SHEET #3—MIX TWO COLORS OF INK
TO PRODUCE A THIRD COLOR

A. Tools and materials
   1. PMS color formula guide
   2. Sufficient quantities of Pantone Yellow C ink and Pantone Process Blue C ink for activity (provided by instructor)
   3. Ink knife or spatula
   4. Mixing containers and tools
   5. Draw-down paper strips
   6. Ink scale

B. Procedure
   1. Weigh proper quantities of Pantone Yellow C ink and Pantone Process Blue C ink (according to weight measure of scale and color formula guide ratios for Pantone 368C—a green).
   2. Using mixing tools, mix the two inks thoroughly (to the instructor’s satisfaction).
   3. Conduct an ink drawn-down with the mixture.
   4. Compare the results with the example of Pantone 368C in the color formula guide.
   5. Discuss results with instructor.
   6. Clean mixing area, containers and tools.

PRACTICAL TEST #1 — MIX DAMPENING SOLUTION AND TEST FOR pH

Student’s Name ___________________________ Date ___________________________
Evaluator’s Name ___________________________ Attempt No. ______________________

Instructions: When you are ready to perform this task, ask your instructor to observe the procedure and complete this form. All items listed under “Process Evaluation” must receive a “Yes” for you to receive an acceptable performance evaluation.

PROCESS EVALUATION

(EVALUATOR NOTE. Place a check mark in the “Yes” or “No” blanks to designate whether or not the student has satisfactorily achieved each step in this procedure. If the student is unable to achieve this competency, have the student review the materials and try again.)

The student:
1. Mixed fountain solution according to instructions. _______ _______
2. Determined pH readings. _______ _______
3. Recorded pH value. _______ _______
4. Turned in results to instructor. _______ _______
5. Cleaned work area and tools. _______ _______

EVALUATOR’S COMMENTS: ________________________________
PRACTICAL TEST #1

PRODUCT EVALUATION

(EVALUATOR NOTE. Rate the student on the following criteria. If the student is unable to demonstrate mastery, student materials should be reviewed and another product must be submitted for evaluation. See suggested performance evaluation keys below.)

Option A

4 — Skilled — Can perform job with no additional training.
3 — Moderately skilled — Has performed job during training program; limited additional training may be required.
2 — Limited skill — Has performed job during training program; additional training is required to develop skill.
1 — Unskilled — Is familiar with process, but is unable to perform job.

Option B

Yes — Can perform job with no additional training.
No — Is unable to perform job satisfactorily.

Criteria: ____________________________________________________________

Rating: _____________________________________________________________

Fountain solution properly mixed according to instructions.

pH value determined and accurately noted.

EVALUATOR’S COMMENTS: ____________________________________________

**Gill-95**
A colorless substance mixed with ink to increase its covering power

Any substance added to ink to speed drying

A thin, protective coating which is printed like ink on the paper stock; also used as an additive to vary ink properties

The varying quality of an ink between opacity and transparency

A standardized matching system for mixing inks

The coloring materials in ink

The bulk of the body of an ink

A test procedure for comparing two or more inks for color strength, opacity and general appearance

Select true statements concerning the main ingredients of offset inks by placing an "X" by the true statements.

Synthetic oils are types of vehicles which form the body bulk of the ink.

White pigments are primarily carbon produced by burning petroleum products.

Colored pigments are mostly synthetic produced by processing chemicals to make dyes.

Thin oils and solvents reduce tack.

Some types of modifiers are driers, waxes, and gums.

Name three ink manufacturing procedures that benefit the user.

____________________

____________________

____________________
4. Match the types of ink on the right to their descriptions by placing the numbers in the appropriate blanks.

   a. Used on high speed presses with heating devices  1. Quick-set inks
   b. Dry by penetration and oxidation  2. News inks
   c. Exhibit minimum penetration into paper surface  3. Metallic inks
   d. Dry by absorption on high speed presses  4. Magnetic inks
   e. Contain metal powders suspended in a vehicle  5. Heat-set inks
   f. Contain iron-bearing pigments that can be magnetized  6. Gloss inks
   g. Have special colors, transparency, and drying characteristics  7. Rubber base inks
   h. Dry quickly on most stock, but dry slowly on ink rollers  8. Process inks

5. List three conditions influencing the printing performance of offset inks.
   a. 
   b. 
   c. 

6. Name three ink properties which affect the printing quality of offset inks.
   a. 
   b. 
   c. 

7. Select rules for ink care and storage by placing an "X" in the appropriate blanks.
   a. Keep covers on all containers when not in use.
   b. Reuse ink after it has been removed from the ink fountain.
   c. Store inks in open metal cabinet in very cool room.
   d. Keep ink surface level when removing ink from can.
TEST

8. State the purpose of offse: dampening solutions. 

9. Match the dampening solution ingredients on the right with their functions.

   a. The main ingredient which provides the moisture to keep the nonimage areas clean
   1. Chemical salts

   b. The main desensitizing agent in the fountain solution; absorbed to the nonimage areas where it replaces the water-holding desensitized film worn off the plate during the press run
   2. Acid

   c. Improves the adherence of gum to the nonimage area of the plate
   3. Water

   d. Keep the acid in the fountain solution from reacting chemically with the metal of the plate and prevent stripping of the metal ink rollers
   4. Buffers

   e. Stabilize the pH of a fountain solution
   5. Gum

   f. Fountain solution chemicals premixed and packaged by manufacturers for specific presses
   6. Premixed solutions

10. Name the two methods of measuring pH.

    a. 

    b. 

11. State the generally acceptable pH range for a fountain solution.

    

12. Select effects of using alcohol or alcohol substitutes in a fountain solution by placing an "X" in the appropriate blanks.

    a. Increases droplet formation in ink
    
    b. Less dimensional change in sheet
    
    c. Ink drying usually faster
    
    d. Balanced ink-water running condition achieved more slowly
    
    e. More solution on plate
13. Discuss the importance of ink-water balance by listing three points related to the topic.
   a. 
   b. 
   c. 

   (NOTE: If the following activities have not been accomplished prior to the test, ask your instructor when they should be completed.)

14. Conduct an ink cabinet inventory. (Assignment Sheet #1)

15. Conduct an inventory of offset press dampening chemistry. (Assignment Sheet #2)

16. Demonstrate the ability to:
   a. Mix dampening solution and test for pH. (Job Sheet #1)
   b. Mix PMS colors and conduct and evaluate an ink draw-down or smear. (Job Sheet #2)
   c. Mix two colors of ink to produce a third color. (Job Sheet #3)

7. a, d

8. The purpose of offset dampening solutions—To keep the nonimage area of a well-
   processed offset plate clean

9. a. 3
   b. 5
   c. 2
   d. 1
   e. 4
   f. 6

10. a. pH paper test strips
    b. Electronic pH meter
11. Depends on the ink and paper being used, generally, a solution with a pH between 4.0 and 5.0 is satisfactory

12. b, c

13. Any three of the following:
   a. Key to quality printing
   b. The basic rule for proper adjustment of ink-water balance is to run the minimum amount of ink which will give full color to the job and the minimum amount of water to keep plate clean
   c. Should be controlled to meet the needs of the plate
   d. Proper control demands accurate analysis of problems as they occur
   e. Excessive water causes problems
   f. Insufficient water causes problems

14. & 15. Evaluated to the satisfaction of the instructor

16. Performance skills evaluated to the satisfaction of the instructor
OFFSET PRESS OPERATING PROCEDURES
UNIT III

UNIT OBJECTIVE

After completion of this unit the student should be able to set up sheet and image control systems of an offset press and print a number of printing assignments. Competencies will be demonstrated by completing assignment sheet, job sheets and the unit tests with a minimum score of 85 percent.

SPECIFIC OBJECTIVES

After completion of this unit the student should be able to:

1. Match terms related to offset press operating procedures with their correct definitions.
2. Select true statements concerning essential safety precautions.
3. List two reasons why efficient press operation is important.
4. Select offset press operator control functions.
5. Match typical operator control features with the press systems in which they are located.
6. Arrange in order steps in the sequence of paper movement through a typical offset press.
7. Compare control features of offset presses. (Assignment Sheet #1)
8. Demonstrate the ability to:
   a. Set up the sheet control systems. (Job Sheet #1)
   b. Set up the image control systems. (Job Sheet #2)
   c. Operate an offset press from setup of systems through printed sheet delivery. (Job Sheet #3)
   d. Perform a color wash on an offset press. (Job Sheet #4)
   e. Print envelopes. (Job Sheet #5)
   f. Change press from envelopes to letterhead. (Job Sheet #6)
   g. Print a two-color job. (Job Sheet #7)
   h. Print a work-and-turn. (Job Sheet #8)
OBJECTIVE SHEET

i. Print halftones and screen tints. (Job Sheet #9)

j. Print solids. (Job Sheet #10)

k. Perform perforation and scoring. (Job Sheet #11)
OFFSET PRESS OPERATING PROCEDURES

UNIT III

SUGGESTED ACTIVITIES

A. Obtain additional materials and/or invite resource people to class to supplement/reinforce information provided in this unit of instruction.

(NOTE: This activity should be completed prior to the teaching of this unit.)

B. Make transparency from the transparency master included with this unit.

C. Provide students with objective sheet.

D. Discuss unit and specific objectives.

E. Provide students with information and assignment sheets.

F. Discuss information and assignment sheets.

(NOTE: Use the transparency to enhance the information as needed.)

G. Provide students with job sheets.

H. Discuss and demonstrate the procedures outlined in the job sheets.

I. Integrate the following activities throughout the teaching of this unit:

1. Invite a representative from a printing firm or press manufacturing company to discuss features of various presses.

2. Obtain manuals for several different presses and compare operating controls with the class.

3. Meet individually with students to evaluate their progress through this unit of instruction, and indicate to them possible areas for improvement.

J. Give test.

K. Evaluate test.

L. Reteach if necessary.

RESOURCES USED IN DEVELOPING THIS UNIT

SUGGESTED ACTIVITIES

OFFSET PRESS OPERATING PROCEDURES
UNIT III

INFORMATION SHEET

(NOTE. This unit is developed on the premise that all types of offset presses possess the same basic systems which serve the same basic functions, have the same basic controls and produce the same basic end product, therefore, the basic operation procedures are similar for all types of offset presses.)

I. Terms and definitions

A. Blanket wash—A petroleum base solvent prepared for washing rubber offset blankets and rollers; used for general press clean up

B. Etch—A solution that conditions the nonimage area of an offset plate to make it more water receptive

C. Feed table extensions—Moveable metal plates which attach at right angles to the feed table surface to extend its height and allow open space to accommodate the side and back paper guides when the feed table is at top position

D. Handwheel—A wheel on the operator's side of a press which allows the operator to turn the press through its cycle by hand

E. Night latch—A position of slight separation of the rollers in the ink and dampening systems used when the press is not operated for a period of time to prevent flat stripes from forming on roller surfaces

F. Paper bail—A thin, narrow, long metal strip attached to the delivery system which aids in controlling the delivery of a sheet to the receiving tray

G. Setoff—A condition caused by wet ink from the image on the surface of one sheet rubbing off onto the next sheet in contact with the image

II. Essential safety precautions

A. Tie back long hair.

B. Avoid or bind up loose clothing.

C. Remove jewelry such as bracelets, watches, rings, and necklaces before operating a press.

D. Keep dust cover and safety guards in place for operation.

E. Stop the press when:
   1. Using tools for adjustments.

   (NOTE: Always remove tools from press.)
INFORMATION SHEET

2. Making hand adjustments on moving parts.
3. Wiping or cleaning with a rag.
4. Lubricating any part.
5. Clearing paper jams.

F. Limit use of press to one designated operator at any one time.
G. Receive specific permission or assignment before press is operated.
H. Fold rags for cleaning rather than wadding in hand.
I. Place dirty rags in a metal container.
J. Read operator's manual before operating press.
K. Keep press work area free of trash and clutter.
L. Inspect and turn press with the handwheel at least one revolution before starting drive motor.
M. Make sure electrical connections are in full contact and free of frayed or broken insulation.
N. Ventilate fumes from the press area.
O. Store flammable liquids in designated, protected area.

III. Reasons why efficient press operation is important
A. No income is received unless printed sheets are delivered from the press.
B. Reduced profit potential results from inefficient use of time, equipment, and materials.

IV. Offset press operator control functions
A. Control paper
   1. Feed
   2. Register
   3. Deliver
B. Control ink to plate image area
C. Control dampening solution to plate nonimage area
INFORMATION SHEET

D. Control image transfer quality
   1. Plate to blanket
   2. Blanket to paper

E. Control press wash-up

F. Maintain safe and orderly work area

G. Complete job order records for press operation

V. Typical operator control features of offset press systems

A. Feeder system
   1. Feed table raise/lower crank
   2. Paper feed guides
   3. Stack height regulator
   4. Vacuum control
   5. Air blast (blower) control
   6. Sheet separators
   7. Pull-out roller pressure
   8. Double sheet detector

B. Register system
   1. Sheet control wheels
   2. Sheet hold down strips
   3. Side register guides (including jogger)
   4. Paper stops
   5. Feed roller pressure
   6. Feed roller timing

C. Cylinder system
   1. Handwheel
   2. Plate position
INFORMATION SHEET

3. Plate to blanket pressure
4. Blanket to impression cylinder pressure
5. Vertical image position

D. Dampening system
1. Fountain solution (mixing)
2. Water feed control lever
3. Water form roller on/off control
4. Water doctor roller on/off control

(NOTE: Some small presses feature a single lever control which allows the operator to contact water rollers to plate, contact ink rollers to plate, transfer image to the blanket cylinder and start feeder system with the movement of one lever.)

E. Inking system
1. Ink fountain adjusting screws
2. Ink feed lever
3. Ink form roller on/off control
4. Ink doctor roller on/off control

F. Delivery system
1. Ejector unit for tray and receding stacker
   a. Rollers
   b. Rings
2. Paper turning wheels for chain delivery
3. Stacker raise/lower crank
4. Stacker lowering speed control
5. Paper delivery guides (including jogger)

VI. Sequence of paper movement through a typical offset press (Transparency 1)
A. Paper is placed on feed table.
B. Feed table raises automatically.
INFORMATION SHEET

C. Sheet separators and air blowers separate sheets.
D. Sucker tube lifts paper, moving it to pullout rollers.
E. Pullout rollers move sheet to register board.
F. Double sheet detector prevents more than one sheet from going to register system at a time.
G. Several moving tapes carry paper along register board.
H. Balls and metal strips hold paper down on tapes.
I. Stop fingers move up and down to halt sheet for register to side position and for timing of feed into cylinder grippers.
J. Feed rollers move sheet into cylinder grippers.
K. Cylinder grippers grip sheet and guide it between impression and blanket cylinders
L. Image transfers to paper from blanket by pressure from the impression cylinder.
M. After holding the sheet for less than one revolution, the cylinder grippers open.
N. Strippers separate the paper from the impression cylinder.
   (NOTE: On chain delivery systems the paper is transferred from cylinder grippers to chain grippers at this point.)
O. Ejector wheels guide the paper into receiving tray or stacker.
P. Receiving tray or table (jogger) holds finished sheets.
Sequence of Paper Movement Through a Typical Offset Press

1. Paper is placed on feed table.
2. Feed table raises automatically.
3. Sheet separators and air blowers separate sheets.
4. Sucker tube lifts paper, moving it to pull out rollers.
5. Pull out rollers move sheet to register board.
6. Double sheet detector prevents more than one sheet from going to register system at a time.
7. Several moving tapes carry paper along register board.
8. Balls and metal straps hold paper down on tapes.
9. Stop fingers move up and down to halt sheet for register to side position and for timing of feed into cylinder grippers.
10. Feed rollers move sheet into cylinder grippers.
11. Cylinder grippers grip sheet and guide it between impression and blanket cylinders.
12. Image transfers to paper from blanket by pressure from the impression cylinder.
13. After holding the sheet for less than one revolution the cylinder grippers open.
14. Strippers separate the paper from the impression cylinder. (NOTE: on chain delivery systems the paper is transferred from cylinder grippers to chain grippers at this point.)
15. Ejector wheels guide the paper into receiving tray or stacker.
16. Receiving tray or table (jogger) holds finished sheets.
OFFSET PRESS OPERATING PROCEDURES
UNIT III

ASSIGNMENT SHEET #1—COMPARE CONTROL FEATURES OF OFFSET PRESSES

Directions. Compare the control features of several small presses. Go to school shop area, visit printing firms or departments, or use the pictures of the small presses included with this assignment.

1. Make a list of similar control features found on all presses compared.
   (NOTE: Manufacturers sometimes apply different names for similar features.)
2. List control features that are unique to each press.
3. Turn the lists in to the instructor.
ASSIGNMENT SHEET #1

A. B. Dick Model 360

1. Aquamatic Night Latch Handle
2. Aquamatic Control
3. Fountain Solution Trough
4. Operation Control Lever
5. Master Cylinder
6. Vertical Copy Adjusting Lock
7. Blanket Cylinder
8. Copy Counter
9. Paper Feed Lever
10. Table Release
11. Paper Stack Height Adjustment
12. Feed Table
13. Paper Guide Crank
14. Paper Elevator Crank
15. Vacuum Control
16. Air Control
17. Buckle Control
18. Receiving Tray
19. Speed Control
20. Motor Drive and Vacuum Pump Switches
21. Handwheel
22. Form Roller Control Knobs
23. Ink Fountain Roller Knob
24. Aquamatic Lock-Out Latch

Assignment Sheet #1

The student should compare control features on various presses, either in the shop or illustrated, and submit a list of control features common to all presses they compared, as well as a list of unique control features found on each of the presses.
OFFSET PRESS OPERATING PROCEDURES
UNIT III

JOB SHEET #1—SET UP THE SHEET CONTROL SYSTEMS

A. Tools and materials
   1. Standard tools for specific press being set up
   2. Paper stock, 8½" x 11"
   3. Operator’s manual for specific press being used

B. Procedure

   (CAUTION: Do not make adjustments on press while it is running.)

   1. Check with instructor before beginning this job sheet.
   2. Set up feeder system.
      a. Position front guides for width of paper to be fed so sheet is centered sideways on the feed board.
      b. Set feed table extensions to support paper pile.
         (NOTE: Folding the sheet in half twice will divide it into fourths. Place the feed table extensions, the sheet separators, and the sucker tubes approximately at the 1/4 and 3/4 points. See Figure 1.)
   c. Place the support board for the paper pile on top of the feed table extensions.

   (CAUTION: Be sure the support board does not protrude. It should not hit the paper guides as the feed table reaches its top position.)
d. Move the sheet separators to the 1/4 and 3/4 points (as determined by folding the sheet twice) of the gripper edge of the stock being run.

(NOTE: Some small presses have fixed position sheet separators.)

e. Place stock to be run on the feed table support board.

f. Raise feed table so top of pile is near the top feed position.

g. Position the feeder side guides to touch the paper pile.

(NOTE: Make sure the sheets are square against the front guides.)

h. Place back paper guide to hold sheets in position against front guides.

(NOTE: The back guide must not bind the sheets.)

i. Move sucker tube(s) to a position in line with the sheet separators.

(NOTE: Some small presses have fixed position sucker tube sockets so the sucker tubes may be moved to alternate positions.)

j. Slide pullout rollers to position near sucker tubes.

k. Set stack height for weight of stock being fed.

1) Turn press on.

2) Allow stack to feed to pre-set height.

3) Turn press off.

4) Turn handwheel until sucker tubes are in the down position.

5) Observe the distance from the bottom of the sucker tube to the top of the stack.

1) 1/8" space is recommended for light weight stocks (16 pound or 20 pound bond or lighter).

2) 1/16" space is recommended for heavier weight paper.

3) Touch is recommended for heavier card and cover stock.

6) Adjust stack height regulator to change distance between sucker tube and stack if needed.

7) Lower paper pile slightly by using hand crank if stack height regulator setting is changed.

8) Repeat steps k1 through k6 until desired setting is obtained.
JOB SHEET #1

1. Adjust the air blast to separate the top six or eight sheets when the sucker tubes are in the up and forward position and the stack is at top position.

m. Adjust the vacuum to pick up only one sheet.
   (NOTE: A final setting of vacuum cannot be completed until the press is set up for register and delivery and sheets are fed continuously.)

n. Adjust double sheet detector.
   (NOTE: Small presses which feed directly into the cylinder grippers from the feed table do not normally have a double sheet detector.)
   1) Fold a narrow strip of the stock to be fed so that one end protrudes about an inch.
   2) Slide that folded strip under the detector and adjust for the passing of one sheet and the stopping or deflecting of two or more sheets.

o. Check pullout roller pressure.
   1) Insert a sheet of stock to be run between the pullout rollers.
   2) Pull the sheet from between the rollers by hand.
   (NOTE: A steady resistance should be noted as the paper slides from between the rollers.)

3. Set up the register system.
   (NOTE: Some small presses do not have a register board; registration is controlled by the sheet position on the feed table and the amount of sheet buckle as the paper is fed directly into the cylinder grippers.)
   a. Turn handwheel until the jogger guide moves to its inward position.
   b. Move jogger guide to the desired final sheet position.
   c. Place a sheet of paper from stock to be run on the register board against the jogger side guide and front paper stops.
   d. Position the movable, fixed position side guide to hold sheet in place.
   e. Move conveyor tapes to carry the sheet flat and for best travel of the paper.
   f. Place paper hold down strips over conveyor tapes close to outer edges of sheets and side guides.
JOB SHEET #1

g. Set paper control wheels or balls to aid in movement, positioning and retaining of the sheet for movement into the cylinder grippers.

(NOTE: Running one or more wheels just off the trailing edge of the sheet at the paper stop position will prevent any bounce and will help hold each sheet in exact position.)

h. Adjust feed roller pressure if thickness of stock varies from previously run sheet.

(NOTE: Check with instructor, then see operator's manual for specific press being set up.)

4. Set up the delivery system.

a. Tray delivery

1) Position the receiving tray guides so sheet will be jogged as it is received and held in a straight stack.

2) Position ejector rollers to run close to the side edges of the sheet if possible.

(NOTE: If ejector rollers must pass through an image area for proper sheet delivery they must be coated [dampened] continuously to prevent streaking; check with instructor.)

3) Move ejector rings to control any troublesome curl in the delivered sheets.

(NOTE: To prevent paper jams, sheets must be removed frequently after press run begins; most receiving rays will hold a ream of 500 sheets of light weight paper, i.e., up to 20 pound bond.)

4) Move the paper bail to aid in receiving and stacking the delivered sheets.

b. Chute delivery with receding stacker

1) Position receiving table guides so sheet will be jogged as it is received and held in a straight stack.

2) Set the ejector rollers to run as close to the side edges of the sheet as possible.

(NOTE: If ejector rollers must pass through an image area for proper sheet delivery they must be coated or dampened continuously to prevent streaking; check with instructor.)

3) Move ejector rings to control any troublesome curl in the delivered sheets.
JOB SHEET #1

4) Raise delivery table to highest point.

5) Allow 100-150 sheets to be delivered before engaging the stacker lowering mechanism.

(NOTE: Large quantities of stock may be stacked before stock must be removed from the delivery table; to prevent ink from the image on the front of the stacked sheets from setting off onto the backs of the sheets, stock should be removed in whatever quantities are necessary.)

c. Chain delivery

1) Position paper turning guides or wheels for width of stock.

(NOTE: Sometimes the turning guides will streak a heavily inked image area, so they should be positioned accordingly.)

2) Raise the delivery table to the highest point.

3) Move paper guides and joggers to straighten and hold the delivered sheets.

4) Allow 100-150 sheets to be delivered before engaging the delivery table lowering device.

(NOTE: Since large quantities of stock may be stacked before stock must be removed from delivery table, notice should be taken to prevent ink from the image on the front of the stacked sheets from setting off onto the backs of the sheets; stock should be removed in whatever quantities are necessary.)

5. Return tools and materials to proper storage.
OFFSET PRESS OPERATING PROCEDURES
UNIT III

JOB SHEET #2—SET UP THE IMAGE CONTROL SYSTEMS

A. Tools and materials
   1. Standard tools for specific press being set up
   2. Ink (specified by instructor)
   3. Fountain solution (specified by instructor)
   4. Offset plate
   5. Shop towel (rags)
   6. Operator's manual for specific press being set up

B. Procedure
   1. Check with instructor before beginning this job sheet.
   2. Set up inking system.
      a. Replace rollers which have been removed from press.
      b. Turn off all night latches.
      c. Turn off ink form rollers.
      d. Add limited quantity of ink to ink fountain.
         (NOTE: The type of ink used will be determined by the type of equipment, the type of water system, the type of stock, and other requirements; see job order or talk to the instructor.)
      e. Contact ink ductor roller to ink fountain roller.
      f. Rotate ink fountain roller while adjusting the ink fountain screws until an even flow of ink is obtained between the ink fountain and ductor rollers.
      g. Place single lever control in appropriate position.
         (NOTE: The single lever control is usually in the "off" or "neutral" position during the inking procedure.)
      h. Turn on press.
      i. Turn on ink feed.
      j. Run ink to system until an even velvety appearance shows on all ink rollers.
k. Turn off ink feed.

(NOTE: After initial inking, the quantity of ink fed to the system will depend on that required to cover the image area of the plate.)

l. Turn off press.

3. Set up dampening system.
   a. Replace rollers which have been removed from press.
   b. Mix fountain solution.
      (NOTE: Basic dampening chemistry is covered in Unit II. See instructor for specific usage.)
   c. Add fountain solution to water fountain.
      (NOTE: On small presses with integrated ink and water systems, only the water feed setting needs to be made after water is put in the fountain.)
   d. Contact water ductor roller to water fountain roller.
   e. Rotate water fountain roller until ductor roller is soaked with fountain solution.
   f. Turn on press.
   g. Turn on water feed.
   h. Run press until water form roller cover is damp.
      (NOTE: Water form roller cover should not be wet enough to squeeze visible moisture from its surface.)
   i. Refer to instruction manual or instructor for initial dampening procedure for "bare back" water rollers.

4. Set up the cylinder system.
   a. Clean plate cylinder surface if needed.
      (NOTE: On presses where the plate does not cover the full cylinder surface, the surface should be kept water-receptive by cleaning and applying plate etch.)
   b. Move plate cylinder head clamp to a square, centered position.
JOB SHEET #2

c. Clean impression cylinder surface if needed.
   (NOTE: The impression cylinder surface should be kept as ink-repellent as possible.)
d. Clean blanket surface with blanket wash.
e. Wipe blanket surface dry.
f. Attach plate to plate cylinder.
   (NOTE: Plate must be clean and coated with preservative.)
   1) Place gripper edge of plate in head clamp or on its pins.
   2) Rotate press by hand as plate is pulled around cylinder to attach tail clamp.
      (NOTE: Plate should fit parallel to edge of plate cylinder and be held taut around cylinder surface.)
g. Clean impression cylinder surface if needed.

5. Return tools and materials to proper storage.
OFFSET PRESS OPERATING PROCEDURES
UNIT III

JOB SHEET #3—OPERATE AN OFFSET PRESS FROM SET UP OF SYSTEMS THROUGH PRINTED SHEET DELIVERY

(NOTE. The application of this job sheet may be made to include the following variations to afford student experience with. 1. different types of plates. paper, electrostatic, photo direct, and metal, 2. varying types of stock: onionskin, bond, coated book, uncoated book, text, index, cover, card, carbonless, gum label, adhesive backed label, envelopes, and others, 3. different sizes of stock from minimum to maximum for a specific press, 4. printing one, two, three, or four colors of ink, 5. variety of ink coverage requirements: uniform, light, heavy, varying, halftones or solids, 6. different image position requirements. loose register, tight register, print front and back, work-and-turn, work-and-tumble, and others the instructor may include.)

A. Tools and materials
   1. Standard tools for specific press being set up
   2. Paper stock (size specified by instructor)
   3. Ink (specified by instructor)
   4. Fountain solution (specified by instructor)
   5. Offset plate
   6. Shop towels (rags)
   7. Cotton pads
   8. Blanket wash
   9. Plate etch

B. Procedure
   1. Check with instructor before beginning this job sheet.
   2. Set up sheet control systems (see Job Sheet #1).
   3. Set up image control systems (see Job Sheet #2).
   4. Load stock to be run on feed table.
   5. Position image on sheet being run to job specifications and set cylinder pressures.

      (NOTE: This procedure is called "make ready.")

   a. Premoisten plate.
b. Turn on press.
c. Turn on water form roller.
d. Turn on ink form rollers.
e. Make image impression from plate to blanket.
   (NOTE: Contact for three or four revolutions is usually enough.)
f. Turn on air and vacuum.
g. Turn on feed lever.
   (NOTE: Some small presses start feeding paper when vacuum is turned on.)
h. Allow two sheets to feed.
i. Turn off feed lever.
   (NOTE: Some small presses stop feeding only when vacuum is turned off.)
j. Turn off air and vacuum.
k. Turn off ink form rollers.
l. Turn off water form rollers.
   (NOTE: On small presses with integrated ink and water systems there is no separate water form roller.)
m. Turn off press.
n. Check position of image.
   1) For squareness
   2) Vertically (relative to gripper edge of sheet)
   3) Horizontally (relative to side guide edge of sheet)
o. Change image position as required.
   1) Squareness
      a) Release plate tail clamp, then angle plate around cylinder by adjusting angle of head clamp, then reinsert tail clamp.
      b) For presses with adjustable drop guides, the sheet angle position may be changed by moving these guides.
JOB SHEET #3

2)  Vertical—Adjust plate or blanket cylinder setting using vertical image position control knob.

3)  Horizontal—Move paper on feed table and/or register board side to side.

p.  Clean and dry blanket.

q.  Repeat steps 5n through 5p until image is in position as specified by job order.

   (NOTE: Observe image on blanket first. Image should be sharp with good ink coverage.)

   a.  Plate to blanket

   b.  Blanket to paper

   (NOTE: If the thickness of the plate being used is different from the previous plate, then plate to blanket pressure setting must be changed. If a lighter or heavier stock is being fed than the previous sheet, then the pressure setting from blanket to impression cylinder will need to be changed.)

7.  Change cylinder pressures as required.

   a.  Plate to blanket (see operator's manual).

   b.  Blanket to impression cylinder (see operator's manual).

   a.  Set sheet counter to 0.

   b.  Repeat steps 5a through 5g to begin run.

   c.  Turn on ink feed.

   d.  Reset ink fountain for ink flow to meet image requirements as press run progresses and maintain ink supply in fountain.

   e.  Remove paper from receiving tray or stacker as required.

   (NOTE: Because of the condition of set off or delivery difficulties, some stocks must be removed more frequently in smaller quantities.)

   f.  Maintain fountain solution level in fountain and monitor distribution to plate.
g. Remove a printed sheet from the delivery system periodically for inspection.

   (NOTE: Do not stop press.)

h. Make necessary adjustments to maintain image position and quality, and to control paper feed and delivery throughout the press run.

i. Follow steps 5i through 5m at the end of the press run.

j. Remove last of printed sheets from delivery system.

k. Remove plate.

l. Clean plate (front and back).

m. Prepare plate for storage by applying gum to image side(s).

n. Clean plate cylinder and coat with plate etch.

o. Clean and dry blanket.

p. Clean impression cylinder.

9. Return tools and materials to proper storage.
OFFSET PRESS OPERATING PROCEDURES
UNIT III

JOB SHEET #4—PERFORM A COLOR WASH ON AN OFFSET PRESS

A. Tools and materials
   1. Standard tools for specific press being washed up
   2. Blanket wash
   3. Cleanup mats or wash up attachment
   4. Shop towels (rags)
   5. Ink knife
   6. Cotton pads
   7. Plate cleaner
   8. Plate etch

B. Procedure
   (NOTE: Ink and water rollers in integrated systems will clean up together with
   cleanup mat or washup attachment, bare back water rollers must be cleaned
   separately from ink rollers.)
   1. Check with instructor before beginning this job sheet.
      (NOTE: If press has been left in night latch position, night latches must be
      turned off.)
   2. Clean water system first.
      a. Remove fountain bottle.
      b. Drain water from fountain.
      c. Remove covered water form roller.
   3. Remove ink from ink fountain.
      a. Use ink knife, being careful not to scratch ink fountain roller.
      b. Use two 2-inch (approximate) strips the width of the ink fountain blade
         cut from used cleanup mats or other card stock.
         1) Slide one cardboard strip against the fountain blade under the ink
            until it touches the fountain roller.
JOB SHEET #4

2) Slide the second cardboard strip against the fountain roller surface through the ink until it touches the first cardboard strip.

3) Lightly squeeze the two cardboard strips together and lift the ink out of the fountain.

(NOTE: Lift the ink out slowly while folding the ends of the card strips toward each other to prevent dripping ink on press or floor.)

c. Discard ink by carefully folding it inside several sheets of old stock.

4. Clean ink fountain unit.
   a. By removing from press
      1) Remove fountain from press.
      2) Clean ink fountain with blanket wash.
      3) Clean ink fountain roller and ink ductor roller.
         a) Rotate the press by turning handwheel to contact ink fountain and ductor rollers.
         b) Turn rollers together and clean with blanket wash.
         c) Remove ductor roller.
         d) Clean ends of both rollers.
   b. By leaving on press
      1) Place cotton pads soaked with blanket wash on fountain blade against fountain roller.
      2) Turn on ink feed to highest setting.
      3) Finish press wash up procedure through step 16.
      4) Remove ink fountain.
      5) Clean ink fountain.
      6) Clean ends of ink fountain roller and ductor roller.
      7) Proceed with press wash up procedures (steps 17-25).

5. Attach cleanup mat.
   a. Insert one end of mat in the head clamp like an offset plate.
b. Attach tail clamp.

c. Do not tighten tail clamp screws.

   (NOTE: If a wash up attachment is used for cleaning the rollers, the procedure will depend on the type of attachment; check with the operator's manual or the instructor.)

6. Turn on press.

7. Slow the press to slowest speed.

8. Check on/off position of ink form rollers.

   a. With single lever control, form rollers should be in the "on" position and lever in "neutral" or "off" position.
   
   b. Without single lever control, form rollers should be in the "off" position.

9. Apply small quantity of blanket wash to the top ink rollers.

10. Place ink form rollers against cleanup mat.

   a. With single lever, move lever to ink position.
   
   b. Without single lever, move form roller knobs to "on" position.

11. Add blanket wash in small quantity as ink and blanket wash are absorbed by cleanup mat.

12. Repeat step 11 until cleanup mat is near saturation.

13. Move ink form rollers from against cleanup mat.

   a. With single lever, move lever to "off" or "neutral" position.
   
   b. Without single lever, move form roller knobs to "off" position.

   (NOTE: Form rollers should not be turned off until sufficient blanket wash is absorbed from rollers to prevent dripping when press is stopped.)

14. Turn off press.

15. Remove cleanup mat.

   (NOTE: Cleanup mats may be used once on each side but must be allowed to dry in between.)
JOB SHEET #4

16. Repeat steps 5 through 15 until ink rollers appear clean.

(NOTE: If a dark ink has just been run and the next job calls for a light ink, it may be necessary to charge the ink fountain with a small quantity of the light ink to be run and ink up the press just as if the job were to be printed at this time. This will allow solvents in the light ink to react with any traces of the previous dark ink and bring them to the printing surface to be cleaned as per steps 5 through 15. This seemingly wasteful practice can save a press operator the embarrassment of the light ink "changing colors" during a run as the dark ink comes to the surface during the heat and agitation of printing. Once the light ink has been run, the press can again be cleaned as per steps 5 through 15, and by removing any ink rollers from the press and manually washing them with clean rags and solvent.)

17. Clean ends of all rollers.

18. Wipe all rollers with blanket wash, then dry.

(NOTE: Sometimes rollers need to be removed from the press for proper wiping.)

19. Clean plate cylinder with water base cleaner, then apply film of plate etch.

20. Clean blanket with blanket wash, then dry.

21. Clean impression cylinder with waterbase cleaner, then apply film of plate etch.

22. Replace all rollers which have been removed from press.

23. Replace ink fountain.

   a. Place all controls in "off" position.
   b. Separate roller surfaces.

25. Clean ink from side frames, side covers, control levers and knobs, and floor around and under press.

26. Return tools and materials to proper storage.
OFFSET PRESS OPERATING PROCEDURES
UNIT III

JOB SHEET #5—PRINT ENVELOPES

A. Tools and materials

1. Standard tools for specific press being set up
2. Envelope stock (specified by instructor)
3. Ink (specified by instructor)
4. Fountain solution (specified by instructor)
5. Offset plate
6. Shop towels (rags)
7. Cotton pads
8. Blanket wash
9. Plate etch

B. Procedure

1. Check with instructor before beginning this job sheet.
2. Set up sheet control systems (see Job Sheet #1).
3. Set up image control systems (see Job Sheet #2).
4. Adjust feed table to envelope stock.
5. Load stock to be run on feed table.
6. Position image on sheet being run to job specifications and set cylinder pressure to accommodate extra thickness of envelope stock.
7. Adjust delivery system for length of stock.
   (NOTE: This procedure is called "make ready.")
8. Begin printing.
   a. Premoisten plate.
   b. Turn on press.
   c. Turn on water form roller.
   d. Turn on ink form roller.
JOB SHEET #5

e. Make image impression from plate to blanket.
   (NOTE: Contact for three or four revolutions is usually enough. Check for brightness of image and complete transfer from plate.)

f. Turn on air and vacuum.

g. Turn on feed lever.
   (NOTE: Some small presses begin feeding when vacuum is turned on.)

h. Allow several sheets to be printed.

i. Turn off feed lever.

j. Adjust air and vacuum to accommodate envelope stock.

k. Adjust double sheet detector to accommodate envelope stock.
   (NOTE: One quick way to check double sheet detector is to fold stock nearly in half, manually feed single thickness into double sheet detector, then finally the folded "extra" portion. When the double thickness reaches the detector, it should trip.)

l. Turn off air and vacuum.

m. Turn off ink form rollers.

n. Turn off water form rollers.
   (NOTE: On small presses with integrated ink and water systems, there is no separate water form roller.)

o. Turn off press.

p. Check image.
   1) For squareness
   2) Vertically (relative to gripper edge of stock)
   3) Horizontally (relative to side guide edge of stock)
   4) Proofread image.
      (NOTE: The press operator is the final quality control point of the printing process.)
JOB SHEET #5

q. Change image position as required.
   1) Squareness
      a) Release plate tail clamp, then angle plate around cylinder by adjusting angle of head clamp, then reinsert tail clamp.
      b) For presses with adjustable drop guides, the sheet angle position may be changed by moving these guides.
   2) Vertical—Adjust plate or blanket cylinder setting using vertical image position control.
   3) Horizontal—Move paper on feed table and/or register board side to side.

r. Clean and dry blanket.

s. Repeat steps 8g through 8q until image is in position as specified by the job order.

   (NOTE: Observe image on blanket first. Image should be sharp with good ink coverage.)
   a. Plate to blanket
   b. Blanket to paper

10. Change cylinder pressure as required.
    a. Plate to blanket (see operator's manual).
    b. Blanket to impression cylinder (see operator's manual).

    a. Set sheet counter to 0.
    b. Repeat steps 8a through 8g to begin run.
    c. Reset ink fountain flow to meet image requirements as press run progresses, and maintain ink supply in fountain.
    d. Remove paper from receiving tray or stacker as required.
e. Be alert to setoff and adjust spray powders accordingly.

   (NOTE: Spray powders are not meant to absorb or blot ink. They are intended only to be used as a bearing surface between sheets to maintain an ever-so-small clearance between just-printed surfaces of stock in the delivery tray and stock arriving from the press. Spray powder should not be apparent from the nozzles of the applicator. If it is, there is too much powder being run. Some stocks must be removed more frequently from the delivery pile or in smaller lifts than others.)

f. Maintain fountain solution level in fountain and monitor distribution to plate.

g. Remove a printed sheet from the delivery system periodically for inspection.

   (NOTE: Do not stop press.)

h. Make necessary adjustments to maintain image position and quality and to control paper feed and delivery throughout the press run.

i. Repeat steps 8i and 8l through 8o at the end of the press run.

j. Remove last of printed sheets from the delivery system.

k. Remove plate.

l. Clean plate (front and back).

m. Prepare plate for storage by applying gum to image side(s).

n. Clean plate cylinder and coat plate with etch.

o. Clean and dry blanket.

p. Clean impression cylinder.

12. Return tools and equipment to proper storage.
OFFSET PRESS OPERATING PROCEDURES
UNIT III

JOB SHEET #6—CHANGE PRESS FROM ENVELOPES TO LETTERHEAD

(NOTE: This job sheet was developed to be accomplished immediately after Job Sheet #5 with the press set up for the previous envelope job.)

A. Tools and materials
   1. Standard tools for specific press being set up
   2. Paper stock (specified by instructor)
   3. Ink (specified by instructor)
   4. Fountain solution (specified by instructor)
   5. Offset plate
   6. Shop towels (rags)
   7. Cotton pads
   8. Blanket wash
   9. Plate etch

B. Procedure
   1. Check with instructor before beginning this job sheet.
   2. Adjust feed table to accommodate stock.
   3. Load stock to be run on feed table.
   4. Mount plate.
   5. Mount blanket.
   6. Position image on sheet being run to job specifications and set cylinder pressure to accommodate different blanket from envelope job.
   7. Adjust delivery system for length of stock.
   8. Begin printing.
      a. Premoisten plate.
      b. Turn on press.
      c. Turn on water form 'roller.
d. Turn on ink form roller.
e. Make image impression from plate to blanket.
   (NOTE: Contact for three or four revolutions is usually enough. Check for brightness of image and complete transfer from plate.)
f. Turn on air and vacuum.
g. Turn on feed lever.
   (NOTE: Some small presses begin feeding when vacuum is turned on.)
h. Allow several sheets to be printed.
i. Turn off feed lever.
j. Adjust air and vacuum to accommodate paper stock.
k. Adjust double sheet detector to accommodate single sheet letterhead stock.
   (NOTE: One quick way to check double sheet detector is to fold stock nearly in half, manually feed single thickness into double sheet detector, then finally the folded "extra" portion. When the double thickness reaches the detector, it should trip.)
l. Turn off air and vacuum.
m. Turn off ink form rollers.
n. Turn off water form rollers.
   (NOTE: On small presses with integrated ink and water systems, there is no separate water form roller.)
o. Turn off press.
p. Check in age.
   1) For squareness
   2) Vertically (relative to gripper edge of stock)
   3) Horizontally (relative to side guide edge of stock)
   4) Proofread image.
   (NOTE: The press operator is the final quality control point of the printing process.)
JOB SHEET #6

q. Change image position as required.

1) Squareness
   a) Release plate tail clamp, then angle plate around cylinder by adjusting angle of head clamp, then reinsert tail clamp.
   b) For presses with adjustable drop guides, the sheet angle position may be changed by moving these guides.

2) Vertical—Adjust plate or blanket cylinder setting using vertical image position control.

3) Horizontal—Move paper on feed table and/or register board side to side.

r. Clean and dry blanket.

s. Repeat steps 8g through 8r until image is in position as specified by the job order.

   (NOTE: Observe image on blanket first. Image should be sharp with good ink coverage.)
   a. Plate to blanket
   b. Blanket to paper

10. Change cylinder pressure as required.
   a. Plate to blanket (see operator's manual).
   b. Blanket to impression cylinder (see operator's manual).

   a. Set sheet counter to 0.
   b. Repeat steps 8a through 8g to begin run.
   c. Reset ink fountain flow to meet image requirements as press run progresses, and maintain ink supply in fountain.
   d. Remove paper from receiving tray or stacker as required.
e. Be alert to setoff and adjust spray powders accordingly.
   (NOTE: Spray powders are not meant to absorb or blot ink. They are intended only to be used as a bearing surface between sheets to maintain an ever-so-small clearance between just-printed surfaces of stock in the delivery tray and stock arriving from the press. Spray powder should not be apparent from the nozzles of the applicator. If it is, there is too much powder being run. Some stocks must be removed more frequently from the delivery pile or in smaller lifts than others.)

f. Maintain fountain solution level in fountain and monitor distribution to plate.

g. Remove a printed sheet from the delivery system periodically for inspection.
   (NOTE: Do not stop press.)

h. Make necessary adjustments to maintain image position and quality and to control paper feed and delivery throughout the press run.

i. Repeat steps 8i and 8l through 8o at the end of the press run.

j. Remove last of printed sheets from the delivery system.

k. Remove plate.

l. Clean plate (front and back).

m. Prepare plate for storage by applying gum to image side(s).

n. Clean plate cylinder and coat plate with etch.

o. Clean and dry blanket.

p. Clean impression cylinder.

12. Return tools and equipment to proper storage.
OFFSET PRESS OPERATING PROCEDURES
UNIT III

JOB SHEET #7—PRINT A TWO-COLOR JOB

(NOTE. This unit assumes student has accomplished Job Sheet #4—Perform a Color Wash on an Offset Press.)

A. Tools and materials
   1. Standard tools for specific press being set up
   2. Paper stock (specified by instructor)
   3. Inks (specified by instructor)
   4. Fountain solution (specified by instructor)
   5. Offset plates (provided by instructor)
   6. Offset blankets (provided by instructor)
   7. Shop towels (rags)
   8. Cotton pads
   9. Blanket wash
   10. Plate etch

B. Procedure
   1. Check with instructor before beginning this job sheet.
   2. Set up sheet control systems (see Job Sheet #1).
   3. Set up image control systems (see Job Sheet #2).
   4. Adjust feed table to accommodate stock.
   5. Load stock to be run on feed table.
   6. Position image on sheet being run to job specifications.
   7. Adjust delivery system for length of stock.
   8. Begin printing.
      a. Premoisten plate.
      b. Turn on press.
      c. Turn on water form roller.
JOB SHEET #7

d. Turn on ink form roller.

e. Make image impression from plate to blanket.

(NOTE: Contact for three or four revolutions is usually enough. Check for brightness of image and complete transfer from plate.)

f. Turn on air and vacuum.

g. Turn on feed lever.

(NOTE: Some small presses begin feeding when vacuum is turned on.)

h. Allow several sheets to be printed.

i. Turn off feed lever.

j. Adjust air and vacuum to accommodate paper stock.

k. Adjust double sheet detector to accommodate envelope stock.

(NOTE: One quick way to check double sheet detector is to fold stock nearly in half, manually feed single thickness into double sheet detector, then finally the folded "extra" portion. When the double thickness reaches the detector, it should trip.)

l. Turn off air and vacuum.

m. Turn off ink form rollers.

n. Turn off water form rollers.

(NOTE: On small presses with integrated ink and water systems, there is no separate water form roller.)

o. Turn off press.

p. Check image.

1) For squareness

2) Vertically (relative to gripper edge of stock)

3) Horizontally (relative to side guide edge of stock)

4) Proofread image.

(NOTE: The press operator is the final quality control point of the printing process.)
JOB SHEET #7

q. Change image position as required.

1) Squarenness
   a) Release plate tail clamp, then angle plate around cylinder by adjusting angle of head clamp, then reinsert tail clamp.
   b) For presses with adjustable drop guides, the sheet angle position may be changed by moving these guides.

2) Vertical—Adjust plate or blanket cylinder setting using vertical image position control.

3) Horizontal—Move paper on feed table and/or register board side to side.

r. Clean and dry blanket.

s. Repeat steps 8g through 8r until image is in position as specified by the job order.

   (NOTE: Observe image on blanket first. Image should be sharp with good ink coverage. Also, use a magnifying glass to check dot structure of halftones and screen tints on printed sheet. Dots should be round. If they are oval or skewed, excessive cylinder pressure is indicated.)
   a. Plate to blanket
   b. Blanket to paper

10. Change cylinder pressure as required.
    a. Plate to blanket (see operator's manual)
    b. Blanket to impression cylinder (see operator's manual)

    a. Set sheet counter to 0.
    b. Repeat steps 8a through 8g to begin run.
    c. Reset ink fountain flow to meet image requirements as press run progresses, and maintain ink supply in fountain.
    d. Run a number of extra sheets to compensate for wastage possible in handling and second color run.
   (NOTE: Ask your instructor what formula to use in determining overrun for this purpose.)
e. Remove paper from receiving tray or stacker as required and place on a drying rack for later use.

f. Be alert to setoff and adjust spray powders accordingly.

(NOTE: Spray powders are not meant to absorb or blot ink. They are intended only to be used as a bearing surface between sheets to maintain an ever-so-small clearance between just-printed surfaces of stock in the delivery tray and stock arriving from the press. Spray powder should not be apparent from the nozzles of the applicator. If it is, there is too much powder being run. Some stocks must be removed more frequently from the delivery pile or in smaller lifts than others.)

g. Maintain fountain solution level in fountain and monitor distribution to plate.

h. Remove a printed sheet from the delivery system periodically for inspection.

(NOTE: Do not stop press.)

i. Make necessary adjustments to maintain image position and quality and to control paper feed and delivery throughout the press run.

j. Repeat steps 8i and 8l through 8o at the end of the press run.

k. Remove last of printed sheets from the delivery system.

l. Remove plate.

m. Clean plate (front and back).

n. Prepare plate for storage by applying gum to image side(s).

o. Clean plate cylinder and coat plate with etch.

p. Clean and dry blanket.

q. Clean impression cylinder.

12. Perform color wash (see Job Sheet #4).

13. Load ink fountain with specified second color ink.

14. Mount plate with second color image.
15. Follow steps 2 through 11 for second run.
   
   (NOTE: Printing a two-color job requires the utmost skill in maintaining exact register of both printing impressions. Care must be taken in all steps to ensure images are printed in exactly the position they are intended. This requires care in make ready, care in printing, and monitoring the job throughout the press run.)

16. Return tools and equipment to proper storage.
OFFSET PRESS OPERATING PROCEDURES
UNIT III

JOB SHEET #8—PRINT A WORK-AND-TURN

A. Tools and materials
   1. Standard tools for specific press being set up
   2. Paper stock (specified by instructor)
   3. Inks (specified by instructor)
   4. Fountain solution (specified by instructor)
   5. Offset plate (provided by instructor)
   6. Shop towels (rags)
   7. Cotton pads
   8. Blanket wash
   9. Plate etch

B. Procedure
   1. Check with instructor before beginning this job sheet.
   2. Set up sheet control systems (see Job Sheet #1).
   3. Set up image control systems (see Job Sheet #2).
   4. Adjust feed table to accommodate stock.
   5. Load stock to be run on feed table.
   6. Position image on sheet being run to job specifications and set cylinder pressure to accommodate stock.
   7. Adjust delivery system for length of stock.
   8. Begin printing job.
      a. Premoisten plate.
      b. Turn on press.
      c. Turn on water form roller.
d. Turn on ink form roller.

e. Make image impression from plate to blanket.
   (NOTE: Contact for three or four revolutions is usually enough. Check
   for brightness of image and complete transfer from plate.)

f. Turn on air and vacuum.

g. Turn on feed lever.
   (NOTE: Some small presses begin feeding when vacuum is turned on.)

h. Allow several sheets to be printed.

i. Turn off feed lever.

j. Adjust air and vacuum to accommodate paper stock.

k. Adjust double sheet detector to accommodate envelope stock.
   (NOTE: One quick way to check double sheet detector is to fold stock
   nearly in half, manually feed single thickness into double sheet detector,
   then finally the folded "extra" portion. When the double thickness
   reaches the detector, it should trip.)

l. Turn off air and vacuum.

m. Turn off ink form rollers.

n. Turn off water form rollers.
   (NOTE: On small presses with integrated ink and water systems, there
   is no separate water form roller.)

u. Turn off press.

p. Check image.
   1) For squareness
   2) Vertically (relative to gripper edge of stock)
   3) Horizontally (relative to side guide edge of stock)
   4) Proofread image.

   (NOTE: The press operator is the final quality control point of the
   printing process.)
JOE SHEET #8

q. Change image position as required.

1) Squareness
   a) Release plate tail clamp, then angle plate around cylinder by adjusting angle of head clamp, then reset tail clamp.
   b) For presses with adjustable drop guides, the sheet angle position may be changed by moving these guides.

2) Vertical—Adjust plate or blanket cylinder setting using vertical image position control.

3) Horizontal—Move paper on feed table and/or register board side to side.

r. Clean and dry blanket.

s. Repeat steps 8g through 8r until image is in position as specified by the job order.

   (NOTE: Observe image on blanket first. Image should be sharp with good ink coverage.)
   a. Plate to blanket
   b. Blanket to paper

10. Change cylinder pressure as required.
    a. Plate to blanket (see operator's manual).
    b. Blanket to impression cylinder (see operator's manual).

11. Complete press run allowing for extra impressions in case of spoilage in second run.
    a. Set sheet counter to 0.
    b. Repeat steps 8a through 8g to begin run.
    c. Reset ink fountain flow to meet image requirements as press run progresses, and maintain ink supply in fountain.
    d. Remove paper from receiving tray or stacker as required.
JOB SHEET #8

e. Be alert to setoff and adjust spray powders accordingly.

(NOTE: Spray powders are not meant to absorb or blot ink. They are intended only to be used as a bearing surface between sheets to maintain an ever-so-small clearance between just-printed surfaces of stock in the delivery tray and stock arriving from the press. Spray powder should not be apparent from the nozzles of the applicator. If it is, there is too much powder being run. Some stocks must be removed more frequently from the delivery pile or in smaller lifts than others.)

f. Maintain fountain solution level in fountain and monitor distribution to plate.

g. Remove a printed sheet from the delivery system periodically for inspection.

(NOTE: Do not stop press.)

h. Make necessary adjustments to maintain image position and quality and to control paper feed and delivery throughout the press run.

i. Repeat steps 8i and 8l through 8o at the end of the press run.

j. Remove last of printed sheets from the delivery system.

k. Turn printed sheets over (side to side) and place them on the feed table for second run on press.

l. Adjust side guide on feeder table and press to accommodate second run on the back of previously printed sheets.

m. Repeat steps 8a through 8g to make second run.

(NOTE: Be certain to check image placement and register throughout second run.)

n. Repeat steps 8i and 8l through 8o to end of run.

o. Remove plate.

p. Clean plate (front and back).

q. Prepare plate for storage by applying gum to image side(s).

r. Clean plate cylinder and coat plate with etch.

s. Clean and dry blanket.

t. Clean impression cylinder.

12. Return tools and equipment to proper storage.

UNIT III

JOB SHEET #9—PRINT HALFTONES & SCREEN TINTS

A. Tools and materials
   1. Standard tools for specific press being set up
   2. Paper stock (specified by instructor)
   3. Ink (specified by instructor)
   4. Fountain solution (specified by instructor)
   5. Offset plate (provided by instructor)
   6. Shop towels (rags)
   7. Cotton pads
   8. Blanket wash
   9. Plate etch

B. Procedure
   1. Check with instructor before beginning this job sheet.
   2. Set up sheet control systems (see Job Sheet #1).
   3. Set up image control systems (see Job Sheet #2).
   4. Adjust feed table to accommodate stock.
   5. Load stock to be run on feed table.
   6. Position image on sheet being run to job specifications and set cylinder pressure to accommodate stock.
   7. Adjust delivery system for length of stock.
   8. Begin printing.
      a. Premoisten plate.
      b. Turn on press.
      c. Turn on water form roller.
d. Turn on ink form roller.

e. Make image impression from plate to blanket.

   (NOTE: Contact for three or four revolutions is usually enough. Check for brightness of image and complete transfer from plate.)

f. Turn on air and vacuum.

g. Turn on feed lever.

   (NOTE: Some small presses begin feeding when vacuum is turned on.)

h. Allow several sheets to be printed.

i. Turn off feed lever.

j. Adjust air and vacuum to accommodate stock.

k. Adjust double sheet detector to accommodate stock.

   (NOTE: One quick way to check double sheet detector is to fold stock nearly in half, manually feed single thickness into double sheet detector, then finally the folded "extra" portion. When the double thickness reaches the detector, it should trip.)

l. Turn off air and vacuum.

m. Turn off ink form rollers:

n. Turn off water form rollers.

   (NOTE: On small presses with integrated ink and water systems, there is no separate water form roller.)

o. Turn off press.

p. Check image.

   1) For squareness

   2) Vertically (relative to gripper edge of stock)

   3) Horizontally (relative to side guide edge of stock)

   4) Proofread image

   (NOTE: The press operator is the final quality control point of the printing process.)
JOB SHEET #9

q. Change image position as required.

1) Squareness
   a) Release plate tail clamp, then angle plate around cylinder by adjusting angle of head clamp, then reinsert tail clamp.
   b) For presses with adjustable drop guides, the sheet angle position may be changed by moving these guides.

2) Vertical—Adjust plate or blanket cylinder setting using vertical image position control.

3) Horizontal—Move paper on feed table and/or register board side to side.

r. Clean and dry blanket.

s. Repeat steps 8g through 8r until image is in position as specified by the job order.

   (NOTE: Use a magnifying glass to check dot structure of halftones and screen tints on printed sheet. Dots should be round. If they are oval or otherwise skewed, cylinder pressure is too great. Also, be certain enough ink is being transferred for a bright image and full coverage in the dot pattern. At this point, some printers compare a printed sheet with the original negative on a light table to evaluate their printing quality.)

   a. Plate to blanket
   b. Blanket to paper

10. Change cylinder pressure as required.

    (NOTE: This step is critical to halftone and screen tint printing.)

    a. Plate to blanket (see operator's manual).
    b. Blanket to impression cylinder (see operator's manual).

    a. Set sheet counter to 0.
    b. Repeat steps 8a through 8g to begin run.
    c. Reset ink fountain flow to meet image requirements as press run progresses, and maintain ink supply in fountain.
    d. Remove paper from receiving tray or stacker as required.
JOB SHEET #9

NOTE: Watch delivery stack and monitor printed sheets to be certain just-printed sheets are not smearing the dot structure of sheets already in the delivery pile.

e. Be alert to setoff and adjust spray powders accordingly.

NOTE: Spray powders are not meant to absorb or blot ink. They are intended only to be used as a bearing surface between sheets to maintain an ever-so-small clearance between just-printed surfaces of stock in the delivery tray and stock arriving from the press. Spray powder should not be apparent from the nozzles of the applicator. If it is, there is too much powder being run. Some stocks must be removed more frequently from the delivery pile or in smaller lifts than others.

f. Maintain fountain solution level in fountain and monitor distribution to plate.

g. Remove a printed sheet from the delivery system periodically for inspection.

NOTE: Do not stop press.

h. Make necessary adjustments to maintain image position and quality and to control paper feed and delivery throughout the press run.

i. Repeat steps 8i and 8l through 8o at the end of the press run.

j. Remove last of printed sheets from the delivery system.

k. Remove plate.

l. Clean plate (front and back).

m. Prepare plate for storage by applying gum to image side(s).

n. Clean plate cylinder and coat plate with etch.

o. Clean and dry blanket.

p. Clean impression cylinder.

12. Return tools and equipment to proper storage.
OFFSET PRESS OPERATING PROCEDURES
UNIT III

JOB SHEET #10—PRINT SOLIDS

A. Tools and materials
   1. Standard tools for specific press being set up
   2. Paper stock (specified by instructor)
   3. Ink (specified by instructor)
   4. Fountain solution (specified by instructor)
   5. Offset plate (provided by instructor)
   6. Shop towels (rags)
   7. Cotton pads
   8. Blanket wash
   9. Plate etch

B. Procedure
   1. Check with instructor before beginning this job sheet.
   2. Set up sheet control systems (see Job Sheet #1).
   3. Set up image control systems (see Job Sheet #2).
   4. Adjust feed table to accommodate stock.
   5. Load stock to be run on feed table.
   6. Position image on sheet being run to job specifications and set cylinder pressure to accommodate stock.
   7. Adjust delivery system for length of stock and potential curling of heavily-inked stock.
      (NOTE: Chain delivery is almost essential for printing solids on duplicator type presses. Without chain delivery to pull stock and tacky coating of ink away from the cylinder, ring or wheel extractors are hard pressed to perform the job.)
   8. Begin printing.
      a. Premoisten plate.
      b. Turn on press.
c. Turn on water form roller.

d. Turn on ink form roller.

e. Make image impression from plate to blanket.

   (NOTE: Contact for three or four revolutions is usually enough. Check for brightness of image and complete transfer from plate.)

f. Turn on air and vacuum.

g. Turn on feed lever.

   (NOTE: Some small presses begin feeding when vacuum is turned on.)

h. Allow several sheets to be printed.

i. Turn off feed lever.

j. Adjust air and vacuum to accommodate paper stock.

k. Adjust double sheet detector to accommodate envelope stock.

   (NOTE: One quick way to check double sheet detector is to fold stock nearly in half, manually feed single thickness into double sheet detector, then finally the folded "extra" portion. When the double thickness reaches the detector, it should trip.)

l. Turn off air and vacuum.

m. Turn off ink form rollers.

n. Turn off water form rollers.

   (NOTE: On small presses with integrated ink and water systems, there is no separate water form roller.)

o. Turn off press.

p. Check image.

   1) For squareness

   2) Vertically (relative to gripper edge of stock)

   3) Horizontally (relative to side guide edge of stock)

   4) Proofread image.

   (NOTE: The press operator is the final quality control point of the printing process.)
JOB SHEET #10

q. Change image position as required.

1) Squareness
   a) Release plate tail clamp, then angle plate around cylinder by adjusting angle of head clamp, then reinsert tail clamp.
   b) For presses with adjustable drop guides, the sheet angle position may be changed by moving these guides.

2) Vertical—Adjust plate or blanket cylinder setting using vertical image position control.

3) Horizontal—Move paper on feed table and/or register board side to side.

r. Clean and dry blanket.

s. Repeat steps 8g through 8r until image is in position as specified by the job order.

   (NOTE: Check for full, even coverage in the solids, watching for any signs of streaking or problems in the delivery system.)
   a. Plate to blanket
   b. Blanket to paper

10. Change cylinder pressure as required.
    a. Plate to blanket (see operator's manual).
    b. Blanket to impression cylinder (see operator's manual).

11. Adjust ink feed as necessary to produce specified results in solids.
    (NOTE: Many times a printing job requiring solids also will require the addition of reducers, anti-piling agents, anti-static agents and driers to the ink fountain. Check with your instructor concerning the need for these preparations.)

    a. Set sheet counter to 0.
    b. Repeat steps 8a through 8g to begin run.
    c. Reset ink fountain flow to meet image requirements as press run progresses, and maintain ink supply in fountain.
d. Remove paper from receiving tray or stacker as required.
   (NOTE: With heavy coat of tacky ink necessary in printing solids, the operator must keep close watch on delivered sheets to correct problems as they develop.)

e. Be alert to setoff and adjust spray powders accordingly.
   (NOTE: Spray powders are not meant to absorb or blot ink. They are intended only to be used as a bearing surface between sheets to maintain an ever-so-small clearance between just-printed surfaces of stock in the delivery tray and stock arriving from the press. Spray powder should not be apparent from the nozzles of the applicator. If it is, there is too much powder being run. Excessive spray powders used in a job with solid ink coverage can show up as white spots and piling on the finished sheet. Because of the amount of ink used in solids and delivery difficulties, stock should be removed frequently in small lifts and spread out in a well-ventilated drying area.)

f. Maintain fountain solution level in fountain and monitor distribution to plate.

g. Remove a printed sheet from the delivery system periodically for inspection.
   (NOTE: Do not stop press.)

h. Make necessary adjustments to maintain image position and quality and to control paper feed and delivery throughout the press run.

i. Repeat steps 8i and 8l through 8o at the end of the press run.

j. Remove last of printed sheets from the delivery system.

k. Remove plate.

l. Clean plate (front and back).

m. Prepare plate for storage by applying gum to image side(s).

n. Clean plate cylinder and coat plate with etch.

o. Clean and dry blanket.

p. Clean impression cylinder.

13. Return tools and equipment to proper storage.
OFFSET PRESS OPERATING PROCEDURES
UNIT III

JOB SHEET #11—PERFORM PERFORATION AND SCORING

A. Tools and materials

1. Standard tools for specific press being set up
2. Paper stock (specified by instructor)
3. Ink (specified by instructor)
4. Fountain solution (specified by instructor)
5. Offset plate exposed for job to be scored or perforated
6. Blanket (provided by instructor)
   (NOTE: This operation will ruin the blanket for further use.)
7. Adhesive perforation and scoring material such as Lith-O-Perf
8. Shop towels (rags)
9. Cotton pads
10. Blanket wash
11. Plate etch

B. Procedure

1. Check with instructor before beginning this job sheet.
2. Set up sheet control systems (see Job Sheet #1).
3. Set up image control systems (see Job Sheet #2).
5. Make coarse adjustment of cylinder pressure to accommodate addition of adhesive perforation and scoring material.
6. Premoisten plate.
7. Turn on press.
8. Turn on water form roller.
9. Turn on ink form roller.
JOB SHEET #11

10. Make image impression from plate to blanket to evaluate inking and plate position.

   (NOTE: Contact for three or four revolutions is usually enough.)

11. Turn off ink form roller.

12. Turn off water form roller.

13. Turn off press.

14. Attach commercial adhesive scoring and perforation material to impression cylinder.
   a. Remove paper backing.
   b. Carefully attach perforation or scoring material (whichever is specified in job ticket) to impression cylinder by pressing into position by hand and running fingers along length of material to seat it to the cylinder.

   (NOTE: In some cases, adhesive perforation and scoring material will have to be seated firmly with a small hammer. In all cases, however, follow the manufacturer's directions for installation.)

15. Turn on ink form roller.

16. Turn on water form roller.

17. Turn on press.

18. Turn on air and vacuum.

19. Turn on feed lever; allow several sheets to be fed.

20. Turn off feed lever.

21. Turn off ink form roller.

22. Turn off water form roller.

23. Turn off air and vacuum.

24. Turn off press.

25. Examine printed sheets to determine if image and perforation and scoring material are properly positioned; adjust as necessary.

26. Adjust blanket to impression cylinder pressure as necessary to assure even perforation or scoring.

27. Turn on ink form rollers.
28. Turn on water form rollers.
29. Turn on press.
30. Turn on air and vacuum.
31. Adjust air and vacuum to accommodate paper stock.
32. Adjust double sheet detector to accommodate stock.
33. Complete press run.
   a. Reset ink fountain flow to meet image requirements as press run progresses, and maintain ink supply in fountain.
   b. Remove paper from receiving tray or stacker as required.
   c. Maintain fountain solution level in fountain and monitor distribution to plate.
   d. Remove a printed sheet from the delivery system periodically for inspection of image and perforation and/or scoring.
   e. Make necessary adjustments to maintain image position and quality, and to control paper feed and delivery throughout the press run.
34. Follow steps 20 through 24 to end the press run.
35. Remove last of printed sheets from the delivery system.
36. Remove perforation and scoring material from impression cylinder.
37. Remove blanket and discard.
   (NOTE: During the perforation and/or scoring, the blanket has been providing a resilient back pressure for the cutting operation. This wear ruins the blanket for future use unless it will be run again with this same plate and job specification. Because of this expense, many shops maintain a perforating and scoring machine, or are equipped with a letter press which can run a perf and score head.)
38. Remove plate.
39. Clean plate (front and back).
40. Prepare plate for storage by applying gum to image side(s).
41. Clean plate cylinder and coat plate with etch.
42. Clean impression cylinder.
43. Return tools and equipment to proper storage.

PRACTICAL TEST #1—SET UP THE SHEET CONTROL SYSTEMS

Student’s Name __________________________ Date ______________________
Evaluator's Name ________________________ Attempt #. ______________

Instructions: When you are ready to perform this task, ask your instructor to observe the
procedure and complete this form. All items listed under "Process Evaluation" must receive a "yes" for you to receive an acceptable performance evaluation.

PROCESS EVALUATION

(EVALUATOR NOTE. Place a check mark in the “Yes” or “No” blanks to designate whether or not the student has satisfactorily achieved each step in this procedure. If the student is unable to achieve this competency, have the student review the materials and try again.)

The student:  

1. Checked with instructor before starting job sheet.  
2. Set up feeder system.  
3. Set up register system.  
4. Set up delivery system.

EVALUATOR’S COMMENTS: ____________________________________________

Yes No
PRACTICAL TEST #1

PRODUCT EVALUATION

(EVALUATOR NOTE. Rate the student on the following criteria. If the student is unable to demonstrate mastery, student materials should be reviewed and another product must be submitted for evaluation. See suggested performance evaluation keys below.)

Option A

4 — Skilled — Can perform job with no additional training.
3 — Moderately skilled — Has performed job during training program; limited additional training may be required.
2 — Limited skill — Has performed job during training program; additional training is required to develop skill.
1 — Unskilled — Is familiar with process, but is unable to perform job.

Option B

Yes — Can perform job with no additional training.
No — Is unable to perform job satisfactorily.

Criteria: ______________________________________  Rating: ______

Feeder system set up according to instructions.
__________________________________________________________

Register system set up according to instructions.
__________________________________________________________

Delivery system set up according to instructions.

OFFSET PRESS OPERATING PROCEDURES
UNIT III

TEST

Name ___________________________ Score ________________________

1. Match the terms related to offset press operating procedures on the right with their correct definitions.

   ____a. Movable metal plates which attach at right angles to the feed table surface to extend its height and allow open space to accommodate the side and back paper guides when the feed table is at top position

   1. Paper bail

   2. Night latch

   3. Feed table extensions

   ____b. A wheel on the operator’s side of a press which allows the operator to turn the press through its cycle by hand

   4. Handwheel

   5. Blanket wash

   ____c. A thin, narrow, long metal strip attached to the delivery system which aids in controlling the delivery of a sheet to the receiving tray

   6. Setoff

   7. Etch

   ____d. A position of slight separation of the rollers in the ink and dampening systems used when the press is not operated for a period of time to prevent flat stripes from forming on roller surfaces

   ____e. A condition caused by wet ink from the image on the surface of one sheet rubbing off onto the next sheet in contact with the image

   ____f. A petroleum base solvent prepared for washing rubber offset blankets and rollers; used for general press clean up

   ____g. A solution that conditions the nonimage area of an offset plate to make it more water receptive

2. Select true statements concerning essential safety precautions by placing an "X" in the appropriate blanks.

   ____a. Tie back long hair.

   ____b. Avoid or bind up loose clothing.
c. Remove jewelry such as bracelets, watches, rings and necklaces before operating a press.

d. Keep dust cover and safety guards in place for operation.

e. Stop the press when using tools for adjustments, making hand adjustments on moving parts, wiping or cleaning with a rag, lubricating any part, clearing paper jams, or leaving press area.

f. Limit use of press to one designated operator at any one time.

g. Receive specific permission or assignment before press is operated.

h. Wad rags for cleaning rather than folding in hand.

i. Place dirty rags in a cardboard trash box.

j. Read operator’s manual while press is running.

k. Keep press work area free of trash and clutter.

l. Inspect and turn press with the handwheel at least one revolution before starting drive motor.

m. Make sure electrical connections are in full contact and free of frayed or broken insulation.

n. Ventilate fumes from the press area.

o. Store flammable liquids wherever there is room for them.

3. List two reasons why efficient press operation is important.

a. 

b. 

4. Select offset press operator control functions by placing an “X” in the appropriate blanks.

a. Control ink to plate image area

b. Control dampening solution to plate image area

c. Complete job order records for press operation

d. Control press wash-up

e. Maintain safe and orderly work area
5. Match typical operator control features with the press systems in which they are located by placing the number of the system on the right in front of the appropriate features.

(Note: Answers will be used more than once.)

1. Feeder system
2. Register system
3. Delivery system
4. Cylinder system
5. Inking system
6. Dampening system

---

- **a.** Feed roller timing
- **b.** Paper delivery guides
- **c.** Double sheet detector
- **d.** Vertical image position
- **e.** Ink form roller on/off control
- **f.** Water form roller on/off control
- **g.** Feed table raise/lower crank
- **h.** Sheet control wheels
- **i.** Ejector unit for tray and receding stacker
- **j.** Handwheel
- **k.** Fountain solution
- **l.** Ink fountain adjusting screws
- **m.** Water feed control lever
- **n.** Paper turning wheels for chain delivery
- **o.** Paper feed guides
- **p.** Sheet hold down strips
- **q.** Stack height regulator
- **r.** Plate position
- **s.** Pull-out roller pressure
- **t.** Side register guides
- **u.** Stacker raise/lower crank
- **v.** Vacuum control
- **w.** Ink feed lever
TEST

x. Blanket to impression cylinder pressure
y. Paper stops
z. Sheet separators
aa. Stacker lowering speed control
bb. Feed roller pressure
c. Plate to blanket pressure
dd. Air blast (blower) control
e. Water ductor roller on/off control
ff. Ink ductor roller on/off control

6. Arrange in order steps in the sequence of paper movement through a typical offset press by writing a "1" for the first step, a "2" for the second step, and so on, using the diagram as a guide.

--- Diagram ---

a. Pullout rollers move sheet to register board.
b. Cylinder grippers grip sheet and guide it between impression and blanket cylinders.
c. Receiving tray or table holds finished sheets.
d. Paper is placed on feed table.

200
TEST

____e. Several moving tapes carry paper along register board.
____f. Strippers separate the paper from the impression cylinder.
____g. Stop fingers move up and down to halt sheet for register to side position and for timing of feed into cylinder grippers.
____h. Sucker tube lifts paper, moving it to pullout rollers.
____i. After holding the sheet for less than one revolution, the cylinder grippers open.
____j. Feed table raises automatically.
____k. Image transfers to paper from blanket by pressure from the impression cylinder.
____l. Ejector wheels guide the paper into receiving tray or stacker.
____m. Sheet separators and air blowers separate sheets.
____n. Balls and metal strips hold paper down on tapes.
____o. Feed rollers move sheet into cylinder grippers.
____p. Double sheet detector prevents more than one sheet from going to register system at a time.

(NOTE: If the following activities have not been accomplished prior to the test, ask your instructor when they should be completed.)

7. Compare control features of offset presses. (Assignment Sheet #1)

8. Demonstrate the ability to:
   a. Set up the sheet control systems. (Job Sheet #1)
   b. Set up the image control systems. (Job Sheet #2)
   c. Operate an offset press from setup of systems through printed sheet delivery. (Job Sheet #3)
   d. Perform a color wash on an offset press. (Job Sheet #4)
   e. Print envelopes. (Job Sheet #5)
   f. Change press from envelopes to letterhead. (Job Sheet #6)
   g. Print a two-color job. (Job Sheet #7)
   h. Print a work-and-turn. (Job Sheet #8)
i. Print halftones and screen tints. (Job Sheet #9)
j. Print solids. (Job Sheet #10)
k. Perform perforation and scoring. (Job Sheet #11)
OFFSET PRESS OPERATING PROCEDURES
UNIT III

ANSWERS TO TEST

1. a. 3  
   b. 4  
   c. 1  
   d. 2  
   e. 6

2. a, b, c, d, e, f, g, k, l, m, n

3. a. No income is received unless printed sheets are delivered from the press.  
   b. Reduced profit potential results from inefficient use of time, equipment, and materials.

4. a, c, d, e

5. a. 2  
   b. 3  
   c. 1  
   d. 4  
   e. 5  
   f. 6

   p. 6

7. Evaluated to the satisfaction of the instructor

8. Performance skills evaluated to the satisfaction of the instructor
PREVENTIVE MAINTENANCE AND TROUBLESHOOTING

UNIT IV

UNIT OBJECTIVE

After completion of this unit, the student should be able to troubleshoot basic press problems and to conduct required daily, weekly and monthly preventive maintenance on a sheet-fed offset press. Competencies will be demonstrated by completing the assignment sheets, job sheets and the unit tests with a minimum score of 85 percent.

SPECIFIC OBJECTIVES

After completion of this unit, the student should be able to:

1. Match terms related to preventive maintenance and troubleshooting with the correct definitions.
2. List advantages of a routine, thorough preventive maintenance program.
3. Name the areas of work in a preventive maintenance program.
4. Match preventive maintenance schedules with their description.
5. Select true statements concerning requirements for a preventive maintenance schedule in chart form.
6. Select true statements concerning preventive maintenance procedures for daily cleanup.
7. List preventive maintenance procedures for weekly cleanup.
8. List preventive maintenance procedures for monthly cleanup.
9. Select correct procedures for daily, weekly, and monthly lubrication.
10. Complete a list of daily and weekly adjustment procedures.
11. List monthly adjustment requirements.
12. Arrange in order the steps in making an ink form roller check.
13. Identify ink stripe configurations.
14. Arrange in order the sequence of troubleshooting technique.
15. List categories of press troubles.
16. Distinguish between types of emulsification.
17. Describe the technique for avoiding emulsification.
OBJECTIVE SHEET

18. Select from a list conditions that create ink drying problems.
19. Match common ink troubles on the press with their descriptions.
20. List guidelines for evaluating good print quality.
21. Match print quality problems with their causes.
22. Use a troubleshooting guide to find the best solution to an ink and dampening problem. (Assignment Sheet #1)
23. Use a troubleshooting guide to find the best solution to a paper stock problem. (Assignment Sheet #2)
24. Use a troubleshooting guide to find the best solution to a process problem. (Assignment Sheet #3)
25. Use a troubleshooting guide to find the best solution to a mechanical problem. (Assignment Sheet #4)
26. Determine lubrication requirements for a specific press. (Assignment Sheet #5)
27. Set up a preventive maintenance schedule in chart form. (Assignment Sheet #6)
28. Take an inventory of spare parts. (Assignment Sheet #7)
29. Demonstrate the ability to:
   a. Adjust dampener rollers to plate cylinder. (Job Sheet #1)
   b. Adjust ink form rollers to plate cylinder. (Job Sheet #2)
   c. Adjust plate cylinder to blanket cylinder. (Job Sheet #3)
   d. Adjust blanket cylinder to impression cylinder. (Job Sheet #4)
   e. Change a molleton cover. (Job Sheet #5)
   f. Degrease plate and impression cylinders. (Job Sheet #6)
   g. Deglaze ink rollers and blanket. (Job Sheet #7)
   h. Change blanket. (Job Sheet #8)
   i. Backflush vacuum pump. (Job Sheet #9)
PREVENTIVE MAINTENANCE AND TROUBLESHOOTING
UNIT IV

SUGGESTED ACTIVITIES

A. Obtain additional materials and/or invite resource people to class to supplement/reinforce information provided in this unit of instruction.

   (NOTE: This activity should be complete prior to the teaching of this unit.)

B. Make transparencies from the transparency masters included with this unit.

C. Provide students with objective sheet.

D. Discuss unit and specific objectives.

E. Provide students with information sheets, assignment sheets, and handouts.

F. Discuss information and assignment sheets.

   (NOTE: Use the transparencies to enhance the information as needed.)

G. Provide students with job sheets.

H. Discuss and demonstrate the procedures outlined in the job sheets.

I. Integrate the following activities throughout the teaching of this unit:

   1. Invite resource people to demonstrate troubleshooting procedures and adjustments on various pieces of equipment.

   2. Stress care in handling any cleaning solvents and chemicals.

   3. Meet individually with students to evaluate their progress through this unit of instruction, and indicate to them possible areas for improvement.

J. Give test.

K. Evaluate test.

L. Reteach if necessary.

RESOURCES USED IN DEVELOPING THIS UNIT

SUGGESTED ACTIVITIES

I. Terms and definitions

A. Blanket powder—A powder used to protect the surface of a rubber offset blanket during storage and to aid in maintaining the blanket's resilience.

B. Chalking—Ink on the paper turning dry and powdery.

C. Deglazer—A cleaner used to dissolve dried ink, solvent and gum deposits from the surfaces of press rollers and blanket.

D. Degreaser—A cleaner used to remove oil and grease residue from the plate and impression cylinder surfaces.

E. Emulsification—A mixing of ink and fountain solution affecting the separation of image and nonimage areas of the offset plate.

F. Ink glaze—A thin layer of hardened ink, fountain solution, and blanket wash which forms on press rollers and blankets.

G. Misting—Ink flying into atmosphere as fine mist, especially at high temperature and speed.

H. Paper glaze—A thin layer of tiny particles of clay, sizing, lint, and other paper components that forms on the press rollers and blanket.

I. Picking—Ink tearing away part of the paper coating as the sheet is printed; this appears as black spots in the blank areas of the printed sheet and white spots in the solid areas.

J. Piling—Ink building up on rollers, plate, and/or blanket.

K. Preventive maintenance—The performance of routine inspection, cleaning, adjusting, lubrication, and minor repairs which aid in preventing major equipment failure and process troubles.

L. Pumice powder—Powdered volcanic rock used for cleaning and scouring surfaces which must be free of oil residue.

M. Scumming—Plate picking up ink in the clear areas and transferring it to the clear area of the sheet.

N. Sensitized roller—A rubber ink roller that will not hold ink on its surface because of fountain solution, etch, and other chemicals dried in the pores.

O. Set-off—Ink transferred from the front surface of a sheet to the back surface of the sheet above in the delivery pile.
INFORMATION SHEET

P. Tinting—Emulsified ink suspended in the fountain solution on the plate surface appearing as a uniform tint on printed sheet

Q. Toning—Ink adhering to nonimage area of plate and transferring to printed sheet because of lack of dampening

R. Trapping—Ink drying so that succeeding colors will not adhere properly

S. Troubleshooting—The process of analyzing problems to determine probable causes and applying possible solutions until a problem is solved

T. Water misible cleaner—A cleaner that mixes with water to remove water soluble particles from press rollers, blanket, and cylinders

II. Advantages of a routine, thorough preventive maintenance program

(Note: One of the most important functions of a press operator is to keep the press running as trouble free as possible; equipment dealers who troubleshoot and repair presses emphasize that many common problems could be prevented merely by following a routine, thorough cleaning procedure.)

A. Prevents time loss due to press breakdown

B. Lengthens life of rollers and blanket

C. Aids in delivering a clean product

D. Prevents excessive wear on moving parts

E. Insures longer periods of trouble-free press operation

F. Increases production

G. Insures good image transfer

H. Provides opportunity to locate and correct potential problems on a scheduled basis rather than during a production breakdown

I. Helps operator to be aware of potential problems

J. Helps operator to become more familiar with press mechanical functions

K. Helps operator to identify and correct troubles

L. Presents an impressive, organized work station for view by the employer, customers, or visitors

III. Areas of work in a preventive maintenance program

A. Cleaning equipment and work area

B. Lubricating equipment
INFORMATION SHEET

C. Adjusting operator controllable settings on equipment

IV. Preventive maintenance schedules

A. Daily—The regular cleaning that takes place after a day’s run; the most important of the preventive maintenance schedules

B. Weekly—Usually takes place at the end of the work week; designed for blanket rotation or protection of other press elements while the press is not in use

(Note: This also includes biweekly maintenance.)

C. Monthly—Supplements daily and weekly cleaning and includes a complete cleaning of the total press from the top to the floor

V. Requirements for a preventive maintenance schedule in chart form (Transparency 1)

A. A preventive maintenance chart should include the three categories of work: cleaning, lubricating, and adjusting.

B. Each category should have columns for listing the time when work should be done: daily, weekly/bi-weekly, or monthly.

C. Each maintenance activity on the chart should have a block for marking the date when maintenance was performed.

D. The operator’s manual and other manufacturer’s guides should be referenced for lubrication and adjustments.

E. The back side of the PM chart should provide space to log the date problems occur, what the problems are, and how the problems are solved.

(Note: The PM schedule presented in TM 1 is a suggested format; in an actual working situation or in the classroom, the format may have to be modified to meet the needs of specific equipment in the workplace.)

VI. Preventive maintenance procedures for daily cleanup

(CAUTION: When press is under operation for automatic cleaning, all safety precautions should be observed; when manual cleaning takes place, the power plug should be removed from its receptacle and only one operator should be at the press.)

A. Ink system

1. Use the blanket wash normally used for cleaning the blanket during the press run to clean ink rollers.

2. Remove ink and follow cleanup procedure for all parts of the inking system.
INFORMATION SHEET

B. Dampening system

(NOTE: At best, molleton covers or sleeves will pick up some ink from the plate, but do not allow this ink to dry on roller surface.)

1. Wipe ink particles from roller cover using a cotton pad dampened with fountain solution, or

2. Remove covered rollers from press and loosen ink with blanket wash, then flush blanket wash from cover with running water.

3. Remove excess moisture from cover by rolling the roller with open palms on top of paper towels on a flat surface.

4. Clean metal dampening rollers with plate cleaner or a water miscible cleaner or pumice powder and water to remove all ink, oil, or residue that repels water.

5. A coating of gum arabic solution may be applied to metal rollers after cleaning.

6. Change dampening roller cover if enough ink has been trapped on the surface to form an ink glaze that appears shiny.

(NOTE: On presses with integrated ink and water systems, there are no molleton covered rollers; if water fountain roller runs coated with ink, then dampening rollers will be cleaned by running in contact with ink rollers; if water fountain roller runs free of ink coating, then water fountain and ductor rollers must be cleaned separately from ink rollers.)

C. Cylinders

1. Use plate cleaner or nonabrasive water miscible cleaner on plate cylinder, then coat with plate etch.

2. Thoroughly clean blanket with blanket wash and water, then clean blanket cylinder ends and dry blanket.

3. Wipe ink from surface of impression cylinder with plate etch, or remove ink with blanket wash or deglazer, then clean with plate cleaner, degreaser, or water miscible cleaner, then coat with etch.

D. Press

1. Use a shop towel dampened with blanket wash.

2. Wipe ink, paper lint, dust, and oil from side covers, side frames, support bars, cam shafts, and gear shafts.
INFORMATION SHEET

E. Work station
   1. Clean work table surface.
   2. Clean chemical shelf; wipe containers.
   3. Place dirty shop towels in safety can.
   4. Place all waste paper in trash can.
   5. Arrange work station in orderly manner.

VII. Preventive maintenance procedures for weekly cleanup
A. Deglaze ink rollers and offset blanket.
B. Change blanket if rotation plan is followed.
C. Desensitize noncovered dampening rollers.
D. Degrease plate and impression cylinder surfaces.
   (NOTE: If blankets are not rotated, a good practice is to remove the blanket after cleaning, coat it with blanket powder, and leave it off the press over the weekend.)
E. Clean inx ductor cam truck or follower.
F. Clean plate clamps.
G. Clean delivery stripping rollers and rings or chain delivery clamps and paper turning wheels.
H. Wipe oil and dirt off floor area under press.
I. Clean and/or wash vacuum pump filters according to operator's manual.
   (NOTE: Procedure may be necessary daily if fluffy or dusty paper is being run.)

VIII. Preventive maintenance procedures for monthly cleanup
A. Unplug the power supply.
B. Remove all safety and dust covers.
C. Begin at the top of the press and work to the bottom of the press to remove all paper lint and dust from the total press.
   (CAUTION: Use an air compressor when one is available, but be sure to wear eye protection when a compressor is used.)
D. Clean oil, ink, paper particles, and dirt from vacuum and drive motors, side frames, cams, gears, levers, shafts, cylinder ends, and all hard-to-reach areas of the press.

E. Flush press vacuum pump with a mixture of solvent and oil.

(CAUTION: Most modern press designs use a carbon-vane vacuum pump which requires no backflushing. In fact, operator manuals for these presses strongly warn against using solvent and oil mixtures, which can severely damage such pumps. Carbon-vane pumps need only a periodic, usually weekly, cleaning of air filters. Always be certain to follow your press manufacturer's specifications for vacuum pump maintenance to avoid costly mistakes.)

F. Clean vacuum and air blast filters, hoses, and air passages.

G. Clean upper and lower paper pull-out rollers or forwarding rollers.

H. Clean upper and lower paper feed rollers.

IX. Procedures for daily, weekly and monthly lubrication

(NOTE. Parts should be lubricated after cleaning procedures are completed.)

A. Unplug the power supply; never lubricate a press while it is running.

B. Use lubricants recommended by the manufacturer; do not use motor oil for machine lubrication.

(NOTE: Filling a reservoir may require a quantity of lubricant, but in all other cases use lubricant sparingly because too much lubricant may cause more problems than too little lubricant.)

C. Lubricate all friction points of exposed fast turning parts daily; the best time is just before beginning the day's run.

D. Lubricate all friction points of all exposed moving parts weekly.

E. Monthly lubrication should follow monthly cleanup before covers are replaced.

F. Lubricate all friction points monthly as designated by manufacturer's lubrication chart.

(NOTE: The manufacturer may not list all of the areas needing lubrication, so the operator should observe and lubricate all points of friction.)

G. Fill vacuum pump oil bottle to designated level each month.

(NOTE. Be certain to check manufacturer's maintenance specifications for lubrication and lubricants. Some presses use a central, pressurized lubrication system which meets the needs of the vacuum pump. Severe damage can result if manufacturer's recommendations are not followed.)
X. Daily and weekly adjustment procedures

(CAUTION: Do not make adjustments without specific permission from your instructor; then refer to operator's manual, maintenance manual, or your instructor for settings.)

A. Student should not make adjustments until approved as an operator by the instructor.

B. Adjustments should be made as necessary to make-ready for each job order and should be made at will as needed.

(NOTE: Routine operator adjustments may require the operator to square image on sheet, move image side to side, raise or lower image vertically, increase or decrease ink flow, increase or decrease water flow, feeder set-up, delivery set-up, register board set-up, air blast, vacuum, set-off powder and impression cylinder pressure.)

C. Weekly adjustment should be those necessary to troubleshoot and solve problems.

XII. Monthly adjustment requirements

A. Make an ink form roller check.

B. Adjust dampener rollers to plate cylinder.

(NOTE: Procedures for adjustments on various presses are outlined in Job Sheet #1.)

C. Adjust ink form rollers to plate cylinder.

(NOTE: Procedures for adjustments on various presses are outlined in Job Sheet #2.)

D. Adjust plate cylinder to blanket cylinder.

(NOTE: Procedures for adjustments on various presses are outlined in Job Sheet #3.)

E. Adjust blanket cylinder to impression cylinder.

(NOTE: Procedures for adjustments on various presses are outlined in Job Sheet #4.)
XII. Steps in making an ink form roller check

(NOTE: To assure proper ink laydown and prevent plate wear, a check should be made of the ink form roller pressure on the plate cylinder; this procedure is applicable to most situations.)

A. Ink up the press.
B. Gently drop the ink form rollers to the plate, then lift them.
C. Turn the handwheel to bring the plate around for inspection.
D. Uniform stripes of ink 1/8" to 3/16" wide indicate proper adjustment.
E. Irregular ink stripes indicate either uneven settings or worn rollers, and adjustments should be made to correct the problem.

XIII. Ink stripe configurations and their significance

A. Ideal setting—Uniform ink stripe 1/8" to 3/16" wide indicates proper adjustment.

B. Roller worn at ends—Caused by form roller being set too tightly to oscillator roller; correct by resetting rollers or replacing them if desired setting cannot be obtained.

C. Low area in center—Indicates improper grinding or improper manufacture and should be replaced.

D. Roller swollen at ends—Results from continuously setting roller too tightly and should be replaced.
E. Setting uneven - Too heavy on one end and too light on the other end; adjust rollers.

XIV. Sequence of troubleshooting technique
A. Make no assumptions.
B. Look for the simple cause and the simple solution.
   (NOTE: The solution may be as simple as plugging in the power cord.)
C. Identify specific symptoms of the problem.
D. List the probable causes.
E. List possible solutions for each cause.
   (NOTE: Refer to operator's or maintenance manuals.)
   (CAUTION: Adjustments should be made only with the power off and with the approval of your instructor.)

XV. Categories of press troubles
A. Operator
   (NOTE: The majority of problems are operator caused; they occur because of lack of knowledge, neglect, or carelessness.)
B. Chemistry and ink
C. Paper stock
D. Image transfer process
E. Mechanical

XVI. Types of emulsification
A. Excess water in ink - Causes ink to pile on rollers, plate and/or blanket producing a grayed image on sheet
   (NOTE: Small amounts of water mixing into ink during the run normally cause little harm.)
B. Excess ink in water - Produces overall tint in background area on the printed sheet
INFORMATION SHEET

XVII. Technique for avoiding emulsification—Run the minimum amount of ink to give the job full color and the minimum amount of dampening solution to keep the plate clean.

XVIII. Conditions that create ink drying problems

A. Relative humidity
B. Too much moisture run on the press
C. pH of fountain solution
   (NOTE: As pH value drops below 4.0, drying time increases significantly until a pH of 2.0 would take approximately 4 times the drying time on a typical offset paper.)
D. Type of printing paper (absorbency)
E. pH of printing paper
   (NOTE: The pH of the paper stock becomes significant when the relative humidity is above 60%, especially on coated stock. Inks dry normally on uncoated papers having pH values above 4.5.)
F. Lack of oxygen
   (NOTE: When running heavy solids, there may not be enough oxygen between sheets on the delivery pile to facilitate drying.)
G. Temperature

XIX. Common ink problems on the press

A. Set-off—Ink is transferred from the front surface of one sheet to the back surface of the sheet above in the delivery pile.
B. Chalking—Ink on the paper turns dry and powdery.
C. Trapping—Ink dries so that succeeding colors will not adhere properly.
D. Tinting—Emulsified ink suspended in the fountain solution on the plate surface appears as a uniform tint on the printed sheet.
E. Scumming—Plate picks up ink in the clear areas and transfers it to the clear areas of the sheet.
F. Piling—Ink builds up or piles on rollers, plate, and/or blanket.
G. Picking—Ink tears away parts of the paper coating as the sheet is printed; these appear as black spots in the blank areas of the printed sheet and white spots in the solid areas.
H. Misting—Ink flies into the atmosphere as fine mist, especially at high temperature and speed.

I. Toning—Ink adheres to non-image area of plate because of lack of dampening and transfers to printed sheet.

XX. Guidelines for evaluating good print quality (Transparency 2)

(NOTE: The following is adapted from materials published by the 3M Company.)

A. Crisp, dark lines and solids
B. A clean background
C. Clean halftones, screens, and reverses
D. Good registration
E. Each sheet dried completely

XXI. Print quality problems and their causes

(NOTE: The following is adapted from materials published by the 3M Company.)

A. Scumming—Background dirty because of too much ink, not enough moisture, dirty dampener roll covers, or dampener covers tied too tightly on ends (Transparency 3)
B. Gray, washed out—Not enough ink, too much moisture, wrong color of ink, incorrect dampener form roller pressure, incorrect plate-to-blanket pressure, or incorrect impression-to-blanket pressure (Transparency 4)
C. Gray, washed out dirty background—Glazed ink rollers, glazed blanket, too much ink form roller pressure, or too much dampener form roller pressure (Transparency 5)
D. Copy too dark—Too much ink, too much impression-to-blanket pressure, not enough plate-to-blanket pressure, or too many revolutions on blanket without paper going through causing build up on blanket (Transparency 6)
E. Uneven printing—Incorrect ink distribution, glazed rollers, incorrect dampener form roller parallel pressure, poor paper surface, incorrect ink form roller parallel pressure, incorrect plate-to-blanket parallel pressure, incorrect impression-to-blanket parallel pressure, or dirty impression cylinder (Transparency 7)
F. Double image (blurred copy)—Loose blanket, too much ink and fountain solution, not enough plate-to-blanket pressure, loose plate, or incorrect impression-to-blanket pressure (Transparency 8)
G. Weak spots (spotty copy)—Incorrect plate-to-blanket pressure, incorrect impression-to-blanket pressure, low spots in blanket, tacky ink, tacky blanket, dirty impression cylinder, or blind image on plate caused by dried gum or too strong fountain solution (Transparency 9)

H. Image breakdown during run—Too much dampening form roller pressure, too much ink form roller pressure, too much plate to blanket pressure, fountain solution too strong, or end play in form rollers (Transparency 10)

I. Streaking—Incorrect ink form roller pressure, incorrect dampener form roller pressure, incorrect plate-to-blanket pressure, incorrect impression-to-blanket pressure, improper ink, or loose blanket (Transparency 11)

J. Improper register—Loose blanket, side guides not set properly, paper not cut straight, or cam band not set (Transparency 12)

K. No image at all—Not enough ink roller form pressure, not enough plate-to-blanket pressure, not enough impression-to-blanket pressure, too much moisture, glazed blanket, or glazed ink rolls (Transparency 13)

L. Paper curling in receiver—Too much moisture or a curl in the paper (Transparency 14)

M. Paper nicking on edge—Paper stop fingers too high, feed rollers not set properly, or paper hitting back stop in receiver too hard (Transparency 15)

N. Paper missing grippers—Stop fingers incorrectly set or feed rollers out of adjustment (Transparency 16)

O. Paper wrinkling—Too much moisture, paper damp, too much pressure between blanket and impression cylinder, or register board not set properly (Transparency 17)
# Handout #1—Troubleshooting Guide for Ink and Dampening Problems

(Note: The following is adapted from material published by the 3M Company.)

<table>
<thead>
<tr>
<th>Problem</th>
<th>Cause</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Ink Set-Off in Delivery Pile</td>
<td>Too much ink on paper</td>
<td>Readjust ink settings.</td>
</tr>
<tr>
<td></td>
<td>Too much acid in fountain solution</td>
<td>A low pH retards drying. Test pH of solution. If not between 3.8 and 5.5, adjust accordingly.</td>
</tr>
<tr>
<td></td>
<td>Wrong ink for stock</td>
<td>Contact ink supplier.</td>
</tr>
<tr>
<td></td>
<td>Not enough drier in ink</td>
<td>Increase drier content. Contact ink supplier for correct drier.</td>
</tr>
<tr>
<td></td>
<td>Paper coating of poor quality</td>
<td>Use paper of better quality.</td>
</tr>
<tr>
<td></td>
<td>Ink too stiff, causing absorption problems</td>
<td>Add light varnish to ink.</td>
</tr>
<tr>
<td></td>
<td>Delivery pile too high</td>
<td>Reduce lift height.</td>
</tr>
<tr>
<td></td>
<td>Pressman bends paper pile when removing from press</td>
<td>Use skid under pile and lift paper by skid load only.</td>
</tr>
<tr>
<td></td>
<td>Pressroom humidity high</td>
<td>Close windows, increase room temperature.</td>
</tr>
<tr>
<td></td>
<td>Running with too much water</td>
<td>Run with minimum ink and water.</td>
</tr>
<tr>
<td></td>
<td>Static in the delivery pile attracting sheets to each other</td>
<td>Increase pressroom humidity. Pre-condition paper to pressroom conditions. Use a tinsel static eliminator across delivery areas so paper contacts it. Use commercial static eliminators.</td>
</tr>
<tr>
<td></td>
<td>Not enough or improper spray powder</td>
<td>Increase amount of spray powder or increase the particle size of spray powder.</td>
</tr>
<tr>
<td>PROBLEM</td>
<td>CAUSE</td>
<td>SOLUTION</td>
</tr>
<tr>
<td>----------------------</td>
<td>----------------------------------------------------------------------</td>
<td>----------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Ink Chalking</td>
<td>Ink vehicle absorbed by paper before ink has time to set properly on paper surface</td>
<td>Add a binding base to control absorption by paper.</td>
</tr>
<tr>
<td></td>
<td>Not enough drier in ink</td>
<td>Add drier to ink. Check with ink supplier for correct drier.</td>
</tr>
<tr>
<td></td>
<td>Job printed with wrong ink for stock used</td>
<td>Over-print with varnish.</td>
</tr>
<tr>
<td>Ink Trapping</td>
<td>Ink dries hard before next color</td>
<td>Run all colors as quickly as possible without risking ink set-off.</td>
</tr>
<tr>
<td></td>
<td>ink tack incorrect</td>
<td>Consult ink supplier.</td>
</tr>
<tr>
<td></td>
<td>Wrong drier used on first color down</td>
<td>Use different drier on first color. Consult ink supplier.</td>
</tr>
<tr>
<td>Tinting/Catch Up</td>
<td>Emulsified ink suspended in the fountain solution appears as a uniform tint on the printed sheet</td>
<td>Smear small amount of ink on glass. Place several drops of fountain concentrate on ink. Rub together with finger. If two mix readily, the ink is faulty. Wash-up and replace ink.</td>
</tr>
<tr>
<td></td>
<td>Alkaline or proteinous paper, causing ink emulsification</td>
<td>Adjust fountain pH to needs of paper. Check paper; change if necessary.</td>
</tr>
<tr>
<td></td>
<td>Fountain solution</td>
<td>If pH is above 6.0, tinting can result. Readjust pH of fountain. Allow dampeners to become completely wet before printing.</td>
</tr>
<tr>
<td>PROBLEM</td>
<td>CAUSE</td>
<td>SOLUTION</td>
</tr>
<tr>
<td>---------</td>
<td>-------</td>
<td>----------</td>
</tr>
<tr>
<td>Tinting/ Catch Up (cont'd)</td>
<td>Excessive ink</td>
<td>Reduce ink level and allow adequate time for adjustment to take full effect.</td>
</tr>
<tr>
<td>Poor (weak) varnish ink</td>
<td></td>
<td>Replace with better ink.</td>
</tr>
<tr>
<td>Breakdown of pigment particles in the ink</td>
<td></td>
<td>Ink may be at fault. Notify the ink manufacturer. May need reformulated ink.</td>
</tr>
<tr>
<td>Acid getting into ink from an improperly washed-out plate</td>
<td></td>
<td>Wash up press. Replace ink. Reprocess the plate.</td>
</tr>
<tr>
<td>Scumming or Tinting</td>
<td>Plate or press condition</td>
<td>&quot;Wet hone&quot; plate in problem area. If honed area continues to take ink, the problem is tinting caused by an inking problem on the press. If area stays clean it is scumming caused by plate sensitivity.</td>
</tr>
<tr>
<td>Scumming</td>
<td>Sensitive plate</td>
<td>Desensitize.</td>
</tr>
<tr>
<td>Highly bichromated fountain solution</td>
<td></td>
<td>Check solution and re-mix if necessary.</td>
</tr>
<tr>
<td>Plate exposed to light after fountain solution allowed to dry on it</td>
<td></td>
<td>Desensitize or re-make plate.</td>
</tr>
<tr>
<td>Excessive printing pressure could indirectly cause scum</td>
<td></td>
<td>Check cylinder pressures, adjust as needed.</td>
</tr>
<tr>
<td>Paper or ink causing plate sensitivity</td>
<td></td>
<td>Check out paper and ink.</td>
</tr>
<tr>
<td>Negative plate improperly desensitized or lightstruck</td>
<td></td>
<td>Desensitize or re-make plate.</td>
</tr>
<tr>
<td>Positive plate underexposed; water on plate during developing/fixing; improperly desensitized</td>
<td></td>
<td>Re-make plate.</td>
</tr>
<tr>
<td>Ink form roller setting</td>
<td></td>
<td>Check ink form roller setting to the vibrator roller and to the plate. The vibrator roller should drive the ink form roller and not the plate.</td>
</tr>
<tr>
<td>PROBLEM</td>
<td>CAUSE</td>
<td>SOLUTION</td>
</tr>
<tr>
<td>---------</td>
<td>-------</td>
<td>----------</td>
</tr>
<tr>
<td>Scumming (cont'd)</td>
<td>Fountain solution too weak or improperly mixed</td>
<td>Increase strength or remix.</td>
</tr>
<tr>
<td></td>
<td>Ink sensitizing plate background beyond image area</td>
<td>Densensitize with plate cleaner-conditioner.</td>
</tr>
<tr>
<td></td>
<td>Glazed offset blanket</td>
<td>Clean all gum, spray, paper sizing, etc. from blanket with deglazer and pumice.</td>
</tr>
<tr>
<td></td>
<td>Low alcohol content</td>
<td>Bring to correct concentration.</td>
</tr>
<tr>
<td>Ink Piling on Rollers</td>
<td>Too much water</td>
<td>Check to adjust all dampener settings.</td>
</tr>
<tr>
<td></td>
<td>Ink too short</td>
<td>Add longer varnish.</td>
</tr>
<tr>
<td></td>
<td>Coating from paper</td>
<td>Use another stock.</td>
</tr>
<tr>
<td>Toning</td>
<td>Out of fountain solution.</td>
<td>Add fountain solution.</td>
</tr>
<tr>
<td></td>
<td>Dampening form roller pressure too light</td>
<td>Increase pressure.</td>
</tr>
<tr>
<td></td>
<td>Too little fountain solution being run</td>
<td>Increase quantity.</td>
</tr>
<tr>
<td></td>
<td>Dampening form roller cover dirty</td>
<td>Clean cover. Change cover.</td>
</tr>
<tr>
<td>Picking and Hickies (defects in printed image caused by dried ink, dirt or paper fibers on plate and blanket)</td>
<td>Worn or cracked rollers deposit tiny particles of dry ink onto plate</td>
<td>Remove from press and clean thoroughly. Regrind or replace if necessary.</td>
</tr>
<tr>
<td></td>
<td>Lint, gum, dried ink skin, etc., in ink fountain</td>
<td>Use lintless dampeners. Clean inking system; use fresh ink.</td>
</tr>
<tr>
<td></td>
<td>Dirt or dust on paper</td>
<td>Fan sheets thoroughly. Wipe edges of paper load with glycerin. Vacuum load edges. Be sure slitter knife in paper cutter is sharp. Be sure stock was back-trimmed (cut with correct edge of knife). Inspect sheet cleaning equipment.</td>
</tr>
<tr>
<td></td>
<td>Weak paper surface</td>
<td>Use ink and paper suited to each other.</td>
</tr>
<tr>
<td>PROBLEM</td>
<td>CAUSE</td>
<td>SOLUTION</td>
</tr>
<tr>
<td>---------</td>
<td>-------</td>
<td>----------</td>
</tr>
<tr>
<td>Picking and Hickies (cont'd)</td>
<td>Dirty plate</td>
<td>Wash plate before resuming the run. Visually check to be sure no specks or particles are still clinging to its surface.</td>
</tr>
<tr>
<td></td>
<td>Tacky blanket</td>
<td>Wash blanket. Apply sulfur powder.</td>
</tr>
<tr>
<td></td>
<td>High ink tack</td>
<td>Reduce tack slightly. Do not use more than 1/2 oz. reducer per lb. of ink. Do not allow press to stand idle too long allowing tack of ink to increase. Add varnish or lubricant to non-printing areas of rollers.</td>
</tr>
<tr>
<td></td>
<td>Excessive blanket to impression pressure</td>
<td>Decrease pressure between the blanket and impression cylinders.</td>
</tr>
<tr>
<td></td>
<td>High press speed</td>
<td>Reduce press speed.</td>
</tr>
<tr>
<td></td>
<td>Excess water reaching stock</td>
<td>Run with minimum water.</td>
</tr>
<tr>
<td></td>
<td>Heavy form</td>
<td>Run light forms first.</td>
</tr>
<tr>
<td>Ink Misting (flies into atmosphere as fine mist)</td>
<td>Ink too soft</td>
<td>Add heavier varnish to ink.</td>
</tr>
<tr>
<td></td>
<td>Ink rollers are nicked or out-of-round</td>
<td>Inspect all rollers and replace defective ones.</td>
</tr>
<tr>
<td></td>
<td>Too much ink</td>
<td>Reduce ink fountain settings.</td>
</tr>
<tr>
<td></td>
<td>If dots appear on press parts, ink is too thin</td>
<td>Add mixing white and heavy varnish. Use a heavier ink.</td>
</tr>
<tr>
<td></td>
<td>If little ink lines appear on press parts, ink is too thick</td>
<td>Add thin varnish.</td>
</tr>
<tr>
<td></td>
<td>Ink rollers set too tightly</td>
<td>Re-set ink rollers.</td>
</tr>
<tr>
<td></td>
<td>Ink rollers too hard</td>
<td>Replace rollers.</td>
</tr>
<tr>
<td></td>
<td>Ink rollers swollen</td>
<td>Use a more volatile press wash. Reset the rollers.</td>
</tr>
<tr>
<td></td>
<td>Ink rollers too soft</td>
<td>Replace the rollers.</td>
</tr>
<tr>
<td>PROBLEM</td>
<td>CAUSE</td>
<td>SOLUTION</td>
</tr>
<tr>
<td>-------------------------------</td>
<td>------------------------</td>
<td>--------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Ink Roller Stripping (rollers do not accept ink)</td>
<td>Fountain solution too acid</td>
<td>Test pH of solution. If it is not between 3.5 and 5.5, adjust accordingly.</td>
</tr>
<tr>
<td>Glazed form roller</td>
<td></td>
<td>Remove from press and deglaze and pumice. Rinse thoroughly.</td>
</tr>
<tr>
<td>Too much water being run</td>
<td></td>
<td>Cut back water at fountain.</td>
</tr>
<tr>
<td>Desensitized metal vibrator rollers</td>
<td></td>
<td>Clean rollers, copperize, wash thoroughly. Then reink rollers and wash again before using.</td>

### Handout #2 - Troubleshooting Guide for Paper Stock Problems

(Note: The following is adapted from material published by the 3M Company.)

<table>
<thead>
<tr>
<th>Problem</th>
<th>Cause</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Paper Curling</td>
<td>Too much water</td>
<td>Run with minimum water.</td>
</tr>
<tr>
<td></td>
<td>Paper not properly conditioned</td>
<td>Condition paper to pressroom conditions.</td>
</tr>
<tr>
<td></td>
<td>Room humidity not constant</td>
<td>Install proper controls.</td>
</tr>
<tr>
<td></td>
<td>Heavy copy at end of form</td>
<td>Reverse plate if possible.</td>
</tr>
<tr>
<td></td>
<td>High ink tack</td>
<td>Reduce tack of ink with reducing varnish</td>
</tr>
<tr>
<td></td>
<td>Excess blanket to impression cylinder pressure</td>
<td>Reduce impression setting.</td>
</tr>
<tr>
<td>Paper Rolls into Delivery Tray</td>
<td>Short grain stock</td>
<td>Set ejector rollers and rings. Slow press. Change to long grain.</td>
</tr>
<tr>
<td></td>
<td>Ejector rollers and rings not set properly</td>
<td>Set ejector rollers near edges of sheet with rings just outside rollers.</td>
</tr>
<tr>
<td>Sheet Wrinkle (gripper edge to trailing edge)</td>
<td>Excess blanket to impression cylinder pressure</td>
<td>Reduce pressure.</td>
</tr>
<tr>
<td></td>
<td>Excess or uneven feed roll pressure</td>
<td>Reduce pressure.</td>
</tr>
<tr>
<td></td>
<td>Excess sheet edge moisture; unwrapped stock left in high humidity area</td>
<td>Allow paper stock to adjust to room humidity. Open packages of stock and use immediately.</td>
</tr>
<tr>
<td></td>
<td>Sheet not fed correctly</td>
<td>Check stack height, sheet guides, air blast and vacuum.</td>
</tr>
<tr>
<td>Sheet Lead Edge Corner Folded</td>
<td>Stack height on feeder not correct (usually too low)</td>
<td>Set stack height to sucker feet for weight of stock being fed.</td>
</tr>
<tr>
<td></td>
<td>Sheets not square on feed table</td>
<td>Adjust paper guides to hold sheet square to front plate.</td>
</tr>
<tr>
<td></td>
<td>Pullout rollers set too close to sheet edge</td>
<td>Move pullout rollers toward center of sheet.</td>
</tr>
<tr>
<td></td>
<td>Paper not square in register position</td>
<td>Set side register guides to hold sheet square.</td>
</tr>
<tr>
<td></td>
<td>Uneven feed roll pressure</td>
<td>Check pressure, adjust for equal pressure end to end.</td>
</tr>
<tr>
<td>PROBLEM</td>
<td>CAUSE</td>
<td>SOLUTION</td>
</tr>
<tr>
<td>-------------------------</td>
<td>------------------------------------------------------</td>
<td>--------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Paper Nicking on Lead Edge</td>
<td>Paper stop fingers too high</td>
<td>Adjust fingers to clear as feed roller touches paper.</td>
</tr>
<tr>
<td></td>
<td>Feed roller not timed correctly (contacting paper before stop fingers move)</td>
<td>Adjust cam to retard feed roller.</td>
</tr>
<tr>
<td></td>
<td>Too much feed roller pressure</td>
<td>Reduce feed roller pressure.</td>
</tr>
<tr>
<td></td>
<td>Paper hitting back stop in receiver too hard</td>
<td>Set paper bail to slow sheet travel. Make sure paper strikes back stop squarely.</td>
</tr>
<tr>
<td></td>
<td>Chain delivery grippers not timed correctly with impression cylinder</td>
<td>Set gripper opening on each chain bar, then set chain timing with cylinder.</td>
</tr>
</tbody>
</table>
### Handout #3 — Troubleshooting Guide for Process (Image Transfer) Problems

(Note: The following is adapted from material published by the 3M Company.)

<table>
<thead>
<tr>
<th>Problem</th>
<th>Cause</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Plate Inks up Solid</td>
<td>No fountain solution</td>
<td>Add fountain solution.</td>
</tr>
<tr>
<td></td>
<td>Dampening form roller not on</td>
<td>Turn roller on.</td>
</tr>
<tr>
<td></td>
<td>Dampening form roller not adjusted properly (too little pressure)</td>
<td>Adjust dampening form roller.</td>
</tr>
<tr>
<td></td>
<td>Obstruction holding dampening form roller off plate</td>
<td>Remove or correct obstruction.</td>
</tr>
<tr>
<td>Plate Will Not Take Ink in Image Area (blind plate)</td>
<td>Gum not removed from plate surface</td>
<td>Remove gum.</td>

Back Side of Chart
Guidelines for Evaluating Good Print Quality

Crisp, dark lines and solids • A clean background • Clean halftones, screens and reverses • Good registration • Each sheet dried completely •
Scumming

Too much ink • Not enough moisture • Dirty dampener roll covers • Dampener covers tied too tightly on ends •
Gray, Washed Out

Not enough ink • Too much moisture • Wrong color of ink • Incorrect dampener form roller pressure • Incorrect plate-to-blanket pressure • Incorrect impression-to-blanket pressure •
Gray, Washed Out Dirty Background

Glazed ink rollers • Glazed blanket • Too much ink form roller pressure • Too much dampener form roller pressure •
Copy Too Dark

Too much ink • Too much impression-to-blanket pressure • Not enough plate-to-blanket pressure • Too many revolutions on blanket without paper going through (buildup on blanket) •
Uneven Printing

Incorrect ink distribution • Glazed rollers • Incorrect dampener form roller parallel pressure • Poor paper (surface of paper) • Incorrect ink form roller parallel pressure • Incorrect plate-to-blanket parallel pressure • Incorrect impression-to-blanket parallel pressure • Dirty impression cylinder
Double Image or Blurred Copy

Loose Blanket • Too much ink and fountain solution • Not enough plate-to-blanket pressure • Loose plate • Incorrect impression-to-blanket pressure •
Weak Spots or Spotty Copy

Incorrect plate-to-blanket pressure • Incorrect impression-to-blanket pressure • Low spots in blanket • Tacky ink • Tacky blanket • Dirty impression cylinder • "Blind" image on plate caused by dried gum or too strong fountain solution •
Image Breakdown During Run

Too much dampener form roller pressure • Too much ink form roller pressure • Too much plate-to-blanket pressure • Fountain solution too strong • End play in form rollers •
Streaking

Incorrect ink form roller pressure • Incorrect dampener form roller pressure • Incorrect plate-to-blanket pressure • Improper ink • Loose blanket •
Improper Register

Loose blanket • Side guides not set properly • Paper not cut straight • Cam band not set •
No Image At All

Not enough ink roller form pressure • Not enough plate-to-blanket pressure • Not enough impression-to-blanket pressure • Too much moisture • Glazed blanket • Glazed ink rollers •
Paper Curling in Receiver

Too much moisture • Curl in paper •
Paper Nicking on Edge

Paper stop fingers too high • Feed rollers not set properly • Paper hitting back stop in receiver too hard •
Paper Missing Grippers

Stop fingers incorrectly set • Feed rollers out of adjustment •
Paper Wrinkling

Too much moisture • Paper damp • Too much pressure between blanket and impression cylinder • Register board not set properly •
ASSIGNMENT SHEET #1—USE A TROUBLESHOOTING GUIDE TO FIND THE BEST SOLUTION TO AN INK AND DAMPENING PROBLEM

Directions: Your instructor will provide you with a view of a transparency (TM 3) or a handout example of a printing job containing an ink and dampening problem. Use the Troubleshooting Guide for Ink and Dampening Problems (Handout #1) to complete the following information:

1. Identify the printing condition of the example by name.

2. List at least six possible problems in the ink and dampening system which would cause the results seen in the example, and give possible solutions to these problems. Record your answers in the following chart.

<table>
<thead>
<tr>
<th>Possible Problems</th>
<th>Possible Solutions</th>
</tr>
</thead>

ASSIGNMENT SHEET #2—USE A TROUBLESHOOTING GUIDE TO FIND THE BEST SOLUTION TO A PAPER STOCK PROBLEM

Directions: Your instructor will provide you with a view of a transparency (TM 14) or a handout example of a printing job containing a paper stock problem. Use the Troubleshooting Guide for Paper Stock Problems (Handout #2) to complete the following information:

1. Identify the printing condition of the example by name.

2. List at least six possible problems with paper stock which would cause the results seen in the example, and give possible solutions to these problems. Record your answers in the following chart.

<table>
<thead>
<tr>
<th>Possible Problems</th>
<th>Possible Solutions</th>
</tr>

PREVENTIVE MAINTENANCE AND TROUBLESHOOTING
UNIT IV

ASSIGNMENT SHEET #3—USE A TROUBLESHOOTING GUIDE TO FIND THE BEST SOLUTION TO A PROCESS PROBLEM

Directions: Your instructor will provide you with a view of a transparency (TM 9) or a handout example of a printing job containing a process problem. Use the Troubleshooting Guide for Process (Image Transfer) Problems (Handout #3) to complete the following information:

1. Identify the printing condition of the example by name.

2. List at least six possible problems with process (image transfer) which would cause the results seen in the example, and give possible solutions to these problems. Record your answers in the following chart.

<table>
<thead>
<tr>
<th>Possible Problems</th>
<th>Possible Solutions</th>

PREVENTIVE MAINTENANCE AND TROUBLESHOOTING
UNIT IV

ASSIGNMENT SHEET #4—USE A TROUBLESHOOTING GUIDE TO FIND THE BEST SOLUTION TO A MECHANICAL PROBLEM

Directions: Your instructor will provide you with a press adjusted so as not to allow paper to feed. Use the Troubleshooting Guide for Mechanical Problems (Handout #4) to complete the following steps:

1. Locate and identify the problem—do not correct it.

2. Write down the problem and possible solution and turn in your answer to the instructor.

________________________________________________________________________

________________________________________________________________________

________________________________________________________________________

________________________________________________________________________
ASSIGNMENT SHEET #5—DETERMINE LUBRICATION REQUIREMENTS FOR A SPECIFIC PRESS

Directions: Your instructor will provide you with a manufacturer's manual and a lubrication chart for a specific press; from this information, and with your instructor's guidance, complete the following information:

A. List daily lubrication points.
B. List weekly/bi-weekly lubrication points.
C. List monthly lubrication points.

(NOTE: Retain your list for use in completing Assignment Sheet #6.)
PREVENTIVE MAINTENANCE AND TROUBLESHOOTING
UNIT IV

ASSIGNMENT SHEET #6—SET UP A PREVENTIVE MAINTENANCE
SCHEDULE IN CHART FORM

Directions: Use the suggested format in TM 1 as a guide and set up a preventive
maintenance schedule in chart form for a specific piece of equipment as selected by your
instructor and a specific list of items to be checked as assigned by your instructor.
Information obtained for Assignment Sheet #5 may be used if your instructor so directs.
PREVENTIVE MAINTENANCE AND TROUBLESHOOTING
UNIT IV

ASSIGNMENT SHEET #7—TAKE AN INVENTORY OF SPARE PARTS

Directions. Your instructor will assign you a press and a collection of spare parts. Identify the parts, count them and make a list of what and how many items you have. Turn in your list to the instructor.

PRESS:

ANSWERS TO ASSIGNMENT SHEETS

Assignment Sheet #1

(NOTE: Suggested answers are based on Transparency 3.)

1. Scumming

2. Any six of the following problems and solutions:

<table>
<thead>
<tr>
<th>Possible Problems</th>
<th>Possible Solutions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Sensitive plate</td>
<td>Desensitize.</td>
</tr>
<tr>
<td>Highly bichromated fountain solution</td>
<td>Check solution and re-mix if necessary.</td>
</tr>
<tr>
<td>Plate exposed to light after fountain solution allowed to dry on it</td>
<td>Desensitize or re-make plate.</td>
</tr>
<tr>
<td>Excessive printing pressure could indirectly cause scum</td>
<td>Check cylinder pressures, adjust as needed.</td>
</tr>
<tr>
<td>Paper or ink causing plate sensitivity</td>
<td>Check out paper and ink.</td>
</tr>
<tr>
<td>Negative plate improperly desensitized or lightstruck</td>
<td>Desensitize or re-make plate.</td>
</tr>
<tr>
<td>Positive plate underexposed; water on plate during developing/fixing; improperly desensitized</td>
<td>Re-make plate.</td>
</tr>
<tr>
<td>Ink form roller setting</td>
<td>Check ink form roller setting to the vibrator roller and to the plate. The vibrator roller should drive the ink form roller and not the plate.</td>
</tr>
<tr>
<td>Fountain solution too weak or improperly mixed.</td>
<td>Increase strength or remix.</td>
</tr>
<tr>
<td>Ink sensitizing plate background beyond image area</td>
<td>Desensitize with plate cleaner-conditioner.</td>
</tr>
<tr>
<td>Glazed offset blanket</td>
<td>Clean all gum, spray, paper sizing, etc. from blanket with deglazer and pumice.</td>
</tr>
<tr>
<td>Low alcohol content</td>
<td>Bring to correct concentration.</td>
</tr>
</tbody>
</table>
ANSWERS TO ASSIGNMENT SHEETS

Assignment Sheet #2

(NOTE: Suggested answers are based on Transparency 14.)

1. Paper curling

2. 

<table>
<thead>
<tr>
<th>Possible Problems</th>
<th>Possible Solutions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Too much water</td>
<td>Run with minimum water.</td>
</tr>
<tr>
<td>Paper not properly conditioned</td>
<td>Condition paper to pressroom conditions.</td>
</tr>
<tr>
<td>Room humidity not constant</td>
<td>Install proper controls.</td>
</tr>
<tr>
<td>Heavy copy at end of form</td>
<td>Reverse plate if possible.</td>
</tr>
<tr>
<td>High ink tack</td>
<td>Reduce tack of ink with reducing varnish.</td>
</tr>
<tr>
<td>Excess blanket to impression cylinder pressure</td>
<td>Reduce impression setting.</td>
</tr>
</tbody>
</table>
Assignment Sheet #3

(NOTE: Suggested answers are based on Transparency 9.)

1. Weak or open areas in printed image.

2. Possible Problems | Possible Solutions
--- | ---
Plate worn | Redevelop plate. Make new plate.
Plate to blanket cylinder pressure too light | Increase pressure.
Blanket to impression cylinder pressure too light | Increase pressure.
Damaged blanket | Apply blanket fix to swell area. Remove blanket and roll out damaged area. Change blanket.
Paper particle buildup on blanket | Clean blanket with blanket wash and water miscible cleaner.
Irregular stock surface | Increase blanket to impression cylinder pressure. Change stock.
### Answers to Assignment Sheets

#### Assignment Sheet #4

<table>
<thead>
<tr>
<th>Possible Problems</th>
<th>Possible Solutions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Vacuum pump not on</td>
<td>Turn switch on. Repair loose or broken wires. Replace switch.</td>
</tr>
<tr>
<td>No vacuum or air blast (pump drive motor on)</td>
<td>Check pump drive belt (replace if broken).</td>
</tr>
<tr>
<td>No vacuum or air blast at feeder (pump is on)</td>
<td>Repair or replace broken or leaking hose. Loosen sticking pump vanes (flush with mixture of oil and solvent).</td>
</tr>
<tr>
<td>Feeder lever not operative</td>
<td>Replace loose or broken spring. Tighten loose screws.</td>
</tr>
<tr>
<td>Paper stack too high or too low</td>
<td>Check feed table release. Set stack height for stock being fed. Correct stack height feelers.</td>
</tr>
<tr>
<td>Paper guides too tight</td>
<td>Set guides to touch sheet edges but not bind.</td>
</tr>
<tr>
<td>Sucker feet worn</td>
<td>Replace rubber feet.</td>
</tr>
<tr>
<td>Sucker tubes open</td>
<td>Close off tubes not in use.</td>
</tr>
</tbody>
</table>

The student should locate the specific problem and offer a written solution.

#### Assignment Sheet #5

The student should list all daily, weekly, bi-weekly, and monthly lubrication points for the specific press being used.

#### Assignment Sheet #6

The chart should be set up as in Transparency 1 and contain all information gathered in Assignment Sheet #5 or other items of your choice.

#### Assignment Sheet #7

The student should give part name and how many there are for the press assigned.
PREVENTIVE MAINTENANCE AND TROUBLESHOOTING
UNIT IV

JOB SHEET #1—ADJUST DAMPENER ROLLERS TO PLATE CYLINDER

A. Tools and equipment
1. 1-inch wide strips of 20-lb bond paper or two .005 3M dampening gauges
2. Screwdriver
3. Allen wrench, if required
4. Box end wrench or adjustable wrench
5. Adjustment wrench, if required
6. Operator and/or maintenance manual for selected duplicator

B. Procedure (Figure 1)

FIGURE 1

1. Mount a plate on the plate cylinder.
2. Place two 1-inch-wide strips of 20-lb bond paper or two .005 3M dampening gauges between the roller and the plate.
3. Put the roller in the ON position and slowly pull on the strips.
4. Determine if the pull on the strips is uneven; this means the roller is not parallel with the plate cylinder.

(NOTE: It is important to have equal pressure at all points between the dampening roller and the plate cylinder; depending on the duplicator or duplicators available, your instructor may direct you to complete all or some of the procedures outlined or use the procedures as guidelines for a selected duplicator; these procedures are adapted from materials published by the 3M Company.)
5. Determine if the pull on the strips is too heavy or too easy; this means the overall pressure between the roller and plate cylinder must be adjusted.

6. Adjust the dampener rollers on an ATF Chief 15 or Chief 17 with the following procedure (Figure 2):
   a. Loosen locking nut (a).
   b. Turn the dampener form roller adjusting screw (b) clockwise if the test strip is too tight or counterclockwise if too loose.
   c. Tighten locking nut (a).
   d. Repeat the paper test to make sure that the proper amount of adjustment has been made.

   FIGURE 2

(Courtesy American Type Founders, Inc.)

7. Adjust the dampener rollers on a Multilith 1250 Offset only with the guidance of your instructor or Multigraphics service representative (Figure 3):
8. Adjust the gap between the aquamatic oscillator and the aquamatic ductor roller on an A.B. Dick 360 only under the careful guidance of your instructor or watch the procedure as it is performed by an A.B. Dick service representative (Figure 4).
9. Adjust the upper and lower form dampening rollers on the Heidelberg GTO with the following procedure (Figure 5):

FIGURE 5

(Courtesy Heidelberg Offset)

a. Adjust the upper form dampening roller to the plate by the adjusting screw (No. 7) only while the press is running. The setting is correct when only a slight "roller bounce" is felt through the screwdriver when the roller passes over the plate cylinder gap.

(NOTE: Heidelberg recommends using the long screwdriver delivered with the press as the proper tool for this procedure.)

b. Adjust the lower form dampening roller to the plate by the adjusting screw (No. 8), using the same procedure as with the upper form dampening roller.
10. Adjust the pressure between the dampening form roller and the plate cylinder on the Itek 3985 with the following procedure (Figure 6):

**FIGURE 6**

![Image of Itek 3985](Figure 6)

(Courtesy A.B. Dick)

a. Set operating lever to bring dampening form roller into contact with the plate.

b. Check pressure with paper strips.

c. Adjust accordingly with adjustment knobs (1) on both operator and nonoperator sides of press. Turning knobs in counterclockwise direction will increase pressure.

11. Clean work area; return tools and equipment to proper storage.
A. Tools and equipment
   1. Screwdriver
   2. Allen wrench, if required
   3. Box end wrench or adjustable wrench
   4. Adjustment wrench, if required
   5. Operator and/or maintenance manual for selected duplicator

B. Procedure (Figure 1)

   (NOTE: A properly adjusted machine is indicated when an ink roller check gives uniform parallel stripes of ink; irregular stripes indicate either uneven settings or worn rollers; depending on the duplicator or duplicators available, your instructor may direct you to complete all or some of the following procedures or use the procedures as guidelines for a selected duplicator; these procedures are adapted from materials published by the 3M Company.)
1. Adjust the ink form rollers on an ATF Chief 15 or Chief 17 with the following procedures (Figure 2):
   a. Loosen ink form roller lock screw (a) on the side requiring adjustment.
   b. Turn the ink form roller adjusting screw (b) clockwise to decrease the width of the stripe or counterclockwise to increase the width of the stripe.
      (NOTE: Make adjustment on both operator and nonoperator sides of machine.)
   c. Tighten lock screw.

   FIGURE 2

   ![Diagram of ink form rollers and screw locations]
   (Courtesy American Type Founders, Inc.)

2. Adjustments to the ink form rollers on Multilith 1250 Offset should only be made by a Multigraphics service representative (Figure 3):
3. Adjust the ink form rollers on an A.B. Dick 360 with the following procedures (Figure 4):

a. Loosen lock screws (a) on both sides and adjust screws (b) as necessary.

b. Upper ink form roller ink stripe should be 1/8" wide.
   1) Turn screw (b) on operator side of machine in clockwise direction to increase width of stripe.
   2) Turn screw (b) on the nonoperator side of the machine in a counterclockwise direction to increase width of stripe.

c. Lower ink form roller ink stripe should be 5/32" wide.
   1) If lower roller is same size as upper roller, adjust same as steps b1 and b2.
   2) If lower roller is larger than upper roller
      1) Turn screw (b) counterclockwise on operator side of the machine to increase width of stripe.
      2) Turn screw (b) clockwise on nonoperator side of the machine to increase width of stripe.
4. Adjust the ink form rollers on the Heidelberg GTO with the following procedure:

(NOTE. The adjustment of each ink form roller is combined in one adjusting mechanism at each side of the press.)

a. Adjust ink form roller Number 1 to the plate on the feeder side of the press with the countersunk screw (5) marked by a white ring (Figure 5).

b. Adjust ink form roller Number 2 with countersunk adjusting screw (6) on the feeder side of the press (Figure 5).

d. Tighten lock screws.

FIGURE 4
c. Adjust ink form rollers Number 3 and Number 4 from the delivery side of the press with adjustment screws (7) and (8) respectively (Figure 6).
5. Adjust ink form rollers on the Itek 975 (or Ryobi 3200) with the following procedure (Figures 7 and 8):

FIGURE 7

(Courtesy A.B. Dick)
JOB SHEET #2

FIGURE 8

(Courtesy A.B. Dick)

a. Using a T-wrench, loosen locknuts (1).

b. Adjust pressure by turning the pressure adjustment nuts (2).
   (NOTE: There are two pressure adjustments on both the operator and nonoperator sides of the press.)

c. Turn the pressure adjustment nuts in the direction marked on the nuts to increase the pressure.
6. Adjust ink form roller pressure on the Itek 3985 with the following procedure (Figure 9):

FIGURE 9

![Diagram of ink form roller pressure adjustments](image)

(Courtesy A.B. Dick)

a. Loosen locknuts (1), (2), and (3) and turn the pressure adjustment nuts to increase or decrease pressure.

(NOTE: Pressure adjustments 1, 2, 3 correspond to Number 1, 2, and 3 ink form rollers, and are located on both the operator and nonoperator sides of the press.)

b. Turn the adjustment nut in the direction of the arrow marked on the nut to increase pressure.

7. Clean work area; return tools and equipment to proper storage.
JOB SHEET #3—ADJUST PLATE CYLINDER TO BLANKET CYLINDER

A. Tools and equipment
   1. Screwdriver
   2. Allen wrench, if required
   3. Adjustment wrench, if required
   4. Operator and/or maintenance manual for selected duplicator

B. Procedure (Figure 1)

FIGURE 1

(NOTE: Some of the basic procedures for adjusting plate cylinder to blanket cylinder are common to several duplicators; depending on the duplicator or duplicators available, your instructor may direct you to complete all or some of the following procedures or use the procedures as guidelines for a selected duplicator; these procedures are adapted from materials published by the 3M Company.)

1. Perform ink stripe checks.
2. Complete adjustments as required.
3. Turn the duplicator on and ink up the rest of the plate.
4. Check to make sure the entire plate is covered, not just the image area; this would not give a proper plate-to-blanket check.

5. Do not turn on the dampener rollers.

6. Turn the duplicator off and then gently lower the plate cylinder to the blanket and raise it immediately.

7. Rotate the blanket cylinder by the handwheel and inspect the ink stripe (should be 1/8" wide).

   (NOTE: The ink stripe should be uniform in width; if it is not, refer to operator manual or maintenance manual for cylinder parallel adjustment or ask instructor to assist.)

8. Adjust the plate cylinder on an ATF Chief 15 or Chief 17 with the following procedure (Figure 2):
   
   a. Loosen the locking screw (a).
   
   b. Turn the plate-to-blanket impression adjusting screw (b) clockwise to increase the width of the stripe or counterclockwise to decrease the width.
   
   c. Tighten locking screw (a).

FIGURE 2
3. Adjust the plate cylinder on a Multilith 1250 Offset with the following procedure (Figure 3):
   a. Loosen lock bolt (a) with a T-wrench.
   b. Move single lever control to left to increase pressure, or to the right to decrease pressure.
   c. Tighten lock bolt (a).

10. Adjust the plate cylinder on an A.B. Dick 360 only under the careful guidance of your instructor or watch the procedure as it is performed by an A.B. Dick service representative (Figure 4):
JOB SHEET #3

11. Adjust plate-to-blanket cylinder pressure on Heidelberg GTO by use of paper underlays.

(NOTE: Plate and blanket cylinders on the Heidelberg GTO run with constant bearer-to-bearer pressure which can be adjusted for differing stock thicknesses by use of paper underlays run beneath the blanket. When a .006-inch offset plate is used with the press' .075-inch offset blanket, a .043-inch underlay blanket and a .002-inch paper underlay, the pressure will be correct for nearly all jobs. If more pressure is required, additional underlays will be required.)

12. Adjust the plate pressure on the Itek 3985 with the following procedure (Figure 5):

FIGURE 5

(Courtesy A.B. Dick)

a. Measure plate thickness with a micrometer.

b. Using manufacturer's specifications and long screwdriver, set plate pressure dial on operator side of press to match the plate thickness.

13. Clean work area; return tools and equipment to proper storage.
PREVENTIVE MAINTENANCE AND TROUBLESHOOTING
UNIT IV

JOB SHEET #4—ADJUST BLANKET CYLINDER
TO IMPRESSION CYLINDER

A. Tools and equipment
   1. Screwdriver
   2. Allen wrench, if required
   3. Adjustment wrench, if required
   4. Operator and/or maintenance manual for selected duplicator

B. Procedure (Figure 1)

FIGURE 1

(NOTE: Improper blanket cylinder to impression cylinder pressure may result in damaged blankets and poor quality copy, and running heavier than normal stock also requires blanket cylinder to impression cylinder adjustment; depending on the duplicator or duplicators available, your instructor may direct you to complete some or all of the following procedures or use the procedures as guidelines for a selected duplicator; these procedures are adapted from materials published by the 3M Company.)
1. Adjust the blanket cylinder on an ATF Chief 15 or Chief 17 with the following procedure (Figure 2):
   a. Loosen locking screw (a).
   b. Turn the impression adjusting screw (b) toward you until the print obtained is very light.
   c. Turn the adjusting screw (b) back away from you until the desired impression on the paper is obtained.
   d. Tighten locking screw (a).

FIGURE 2

(Courtesy American Type Founders, Inc.)

2. Adjust the blanket cylinder on Multilith 1250 Offset with the following procedure (Figure 3):
   a. Slide open cover.
   b. Loosen clamp screw (a) with T-wrench.
   c. Turn micrometer adjusting screw (b) clockwise to decrease pressure and counterclockwise to increase pressure.
   d. Tighten clamp screw.
   e. Close the cover.
3. Adjust the blanket cylinder on an A.B. Dick 360 with the following procedure (Figure 4):

a. Insert allen wrench into the control dial opening.

b. Turn the dial to the lower numbers to increase pressure and to the higher numbers to decrease pressure.

FIGURE 4

(Courtesy A.B. Dick)
4. Adjust the pressure between the blanket and impression cylinder on the Heidelberg GTO with the following procedure (Figure 5):

FIGURE 5

(Courtesy Heidelberg Offset)

a. Adjust by using knurled hand discs (3) on drive and operation side of press.

b. Settings are shown on graduated scales (4).

c. Using operator's manual and knowledge of paper thickness, set both graduated scales to the proper setting by turning the knurled hand discs (3).

5. Adjust the blanket to impression pressure on the Itek 975 or the Ryobi 3200 with the following procedure (Figure 6):
a. Set the automatic pressure device to AUTO. The blanket to impression cylinder pressure is controlled by springs.

b. To use fixed impression pressure, set the dial to the paper thickness (in millimeters).

6. Adjust the blanket to impression cylinder pressure on the Itek 3985 with the following procedure (Figure 7):

FIGURE 7
JOB SHEET #4

a. Measure paper thickness (in millimeters).

b. Adjust impression pressure adjustment dial on operation side of press to match paper thickness.

7. Clean work area; return tools and equipment to proper storage.
PREVENTIVE MAINTENANCE AND TROUBLESHOOTING
UNIT IV

JOB SHEET #5—CHANGE A MOLLETON COVER

A. Tools and equipment
   1. New molleton cover
   2. Installation sleeve
   3. Talcum or blanket powder
   4. Blanket wash
   5. Roller conditioner-cleaner
   6. Paper as required

B. Procedure
   1. Remove roller from press.
   2. Split cover for easy removal from roller.
      (CAUTION: Do not cut roller surface.)
   3. Clean surface thoroughly with blanket wash and with water and roller conditioner-cleaner to remove all ink and gum.
   4. Complete the change according to one of the following procedures:
      a. If installation sleeve is available:
         1) Slide cover over sleeve.
         2) Insert roller inside sleeve.
         3) Hold end of cover on end of roller as sleeve is removed.
      b. If no installation sleeve is available:
         1) Coat roller with blanket or talcum powder.
         2) Prepare a piece of paper 1½ times the length of the roller and wide enough to wrap around the roller two times.
         3) Coat the paper with blanket or talcum powder.
         4) Wrap the paper loosely around the roller, leaving 1/3 the length of the roller exposed.
JOB SHEET #5

5) Slide the cover over the rolled paper onto the roller until the cover just overlaps the exposed end of the roller.

6) Grasp the cover and roller on the exposed end and pull the rolled paper from between the cover and roller.

5. Secure cover by pulling draw strings to overlap cover ends over roller ends.

6. Soak new cover with fountain solution.

7. Remove excess moisture from cover by rolling with open palms on top of paper towels on a flat surface.

8. Clean work area; return tools and equipment to proper storage.
PREVENTIVE MAINTENANCE AND TROUBLESHOOTING
UNIT IV

JOB SHEET #6—DEGREASE PLATE AND IMPRESSION CYLINDERS

A. Tools and equipment
   1. Chrome cylinder cleaner
   2. Degreaser
   3. Clean cotton pads
   4. Plate etch

B. Procedure
   1. Wipe the entire surface of the cylinder being cleaned with chrome cylinder cleaner or degreaser, using a saturated cotton pad.
   2. Apply three coats to the cylinder and rub each coat vigorously.
   3. Wash chrome cylinder cleaner or degreaser off, using a clean cotton pad saturated with water.
   4. Wipe dry.
   5. Wipe the entire surface of the cylinder with a clean cotton pad saturated with etch.
   6. Remove excess etch with a clean, dry cotton pad.
   (CAUTION: Cleaners may cause skin irritation; avoid prolonged skin contact and wash hands with soap and a generous quantity of water after using a cleaner.)
   7. Clean work area; return tools and equipment to proper storage.
PREVENTIVE MAINTENANCE AND TROUBLESHOOTING
UNIT IV

JOB SHEET #7—DEGLAZE INK ROLLERS AND BLANKET

A. Tools and equipment
   1. Deglazer
   2. Blanket powder
   3. Roller conditioner-cleaner
   4. Water miscible cleaner
   5. Household abrasive cleaner
   6. Shop towels

B. Procedure
   (CAUTION: Deglazer and roller conditioner-cleaner are highly flammable. Keep them away from heat or open flame. These solvents can also cause skin irritation, so after using them wash hands immediately with soap and a generous quantity of water.)
   1. Apply deglazer on both surfaces to be cleaned; be sure to use only a deglazer recommended by manufacturer or supplier.
   2. Follow deglazer with an ink roller conditioner to clean water soluble particles from rollers and blanket as recommended by manufacturer or supplier.
   3. Clean rollers with roller cleaner and blanket wash to remove active ingredients in the deglazer.
   4. Apply blanket powder to the blanket surface, and if an abrasive cleaner is applied, thoroughly rinse the rollers with water until all traces of the cleaner are gone.
   (NOTE: To get maximum life from blankets, it is recommended that they be rotated each week, conditioned with blanket powder, and allowed to rest a week before being put back in service. When repeated cleaning of the blanket is necessary, changing the blanket daily is recommended. Blankets on or off the cylinder should be kept away from heat and sunlight, and when they are stored, it should be in a dark, cool place out of direct sunlight and protected from dirt and damage.)
   5. Clean work area; return tools and equipment to proper storage.
UNIT IV

JOB SHEET #8—CHANGE BLANKET

A. Tools and equipment
   1. Allen wrench or specific tool recommended by manufacturer
   2. New or spare blanket
   3. Cleaner
   4. Deglazer
   5. Blanket powder
   6. Shop towels
   7. Cotton pads

B. Procedure
   1. Unplug power supply to the press.
   2. Clean blanket thoroughly using a standard deglazing procedure.
   3. Remove blanket from cylinder by releasing blanket clamps.
   4. Clean blanket cylinder surface and clamps.
   5. Remove bars, if blanket is attached to cylinder by bars.
   6. Clean bars and attach them to the new blanket.
   7. Wipe surface of old blanket dry.
   8. Apply a liberal quantity of blanket powder to a cotton pad and gently pat the entire surface of the old blanket, adding additional blanket powder to the cotton pad as required.
   9. Rub the powder gently into the entire blanket surface.
   10. Make sure the backing is clean and dry, then roll the old blanket with the rubber side in.

   (NOTE: Placing a sheet of plain, clean paper over the rubber before rolling will further protect the blanket surface.)
   11. Place old blanket in its original carton so that when stored it will be in a horizontal position.
   12. Attach new blanket to cylinder in reverse order of removal.
13. Adjust new blanket so that tension is applied uniformly across the entire width and length of the blanket.

(NOTE: Over-tightening will cause the blanket surface to become uneven, and if the blanket is too loose, copy quality will suffer, usually causing a ghost image on finished copy; always follow the manufacturer's recommendations for blanket installation.)

14. After running a few hundred copies, retighten blanket at trailing edge.

15. Clean work area; return tools and equipment to proper storage.
A. Tools and equipment
   1. Adjustable wrench
   2. Press operator's manual
   3. Container of solvent and oil mixture (provided by instructor)

B. Procedure

(CAUTION: Many presses are currently equipped with carbon-vane pumps which require no backflushing. Be certain your press is not equipped with one of these newer pumps before proceeding with backflushing operation. Backflushing a carbon-vane pump can cause major damage to its internal parts.)

1. Using operator's manual and instructor's guidance, follow steps to disconnect air and vacuum lines from pump.

2. Follow operator's manual instructions to inject flushing mixture into and out of the pump.

3. Reconnect air and vacuum lines.

4. Wipe pump and pump surroundings to clean any spilled solvent/oil mixture.

5. Fill pump oil reservoir according to manufacturer's specifications.

6. With instructor's guidance, run press to test pump and integrity of vacuum lines and connections.

7. Mark date of pump service on maintenance log.

8. Clean work area; return tools and equipment to proper storage.

UNIT IV

PRACTICAL TEST #1—ADJUST DAMPENER ROLLERS
TO PLATE CYLINDER

Student’s Name ____________________________ Date __________________
Evaluator’s Name __________________________ Attempt No. __________

Instructions: When you are ready to perform this task, ask your instructor to observe the
procedure and complete this form. All items listed under "Process Evaluation" must
receive a "yes" for you to receive an acceptable performance evaluation.

PROCESS EVALUATION

(EVALUATOR NOTE: Place a check mark in the "Yes" or "No" blanks to designate whether or not the student has
satisfactorily achieved each step in this procedure. If the student is unable to achieve this competency, have the student
review the materials and try again.)

The student: Yes No
1. Mounted plate on the plate cylinder. ________ ________
2. Placed 1-inch wide strips of 20-lb bond or
two dampening gauges between roller and plate. ________ ________
3. Pulled strips through rollers. ________ ________
4. Checked strip for evenness. ________ ________
5. Adjusted press accordingly. ________ ________

EVALUATOR’S COMMENTS: __________________________________________
PRACTICAL TEST #1

PRODUCT EVALUATION

(EVALUATOR NOTE. Rate the student on the following criteria. If the student is unable to demonstrate mastery, student materials should be reviewed and another product must be submitted for evaluation. See suggested performance evaluation keys below.)

Option A

4 — Skilled — Can perform job with no additional training.
3 — Moderately skilled — Has performed job during training program; limited additional training may be required.
2 — Limited skill — Has performed job during training program; additional training is required to develop skill.
1 — Unskilled — Is familiar with process, but is unable to perform job.

Option B

Yes — Can perform job with no additional training.
No — Is unable to perform job satisfactorily.

Criteria: Rating:

Dampener rollers to plate cylinder adjusted to proper pressure according to operator’s manual.

EVALUATOR’S COMMENTS:

PRACTICAL TEST #9

PRODUCT EVALUATION

(EVALUATOR NOTE. Rate the student on the following criteria. If the student is unable to demonstrate mastery, student materials should be reviewed and another product must be submitted for evaluation. See suggested performance evaluation keys below.)

Option A

4 — Skilled — Can perform job with no additional training.
3 — Moderately skilled — Has performed job during training program; limited additional training may be required.
2 — Limited skill — Has performed job during training program; additional training is required to develop skill.
1 — Unskilled — Is familiar with process, but is unable to perform job.

Option B

Yes — Can perform job with no additional training.
No — Is unable to perform job satisfactorily.

Criteria: ____________________________ Rating: __________

Vacuum lines disconnected and pump correctly backflushed according to operator's manual.

Vacuum lines reattached correctly and pump checked for proper operation.

Date of service marked on maintenance record.

EVALUATOR'S COMMENTS: ____________________________
PREVENTIVE MAINTENANCE AND TROUBLESHOOTING
UNIT IV

TEST

Name ___________________________ Score __________________

1. Match the terms related to preventive maintenance and troubleshooting on the right with their correct definitions.

___a. The performance of routine inspection, cleaning, adjusting, lubrication, and minor repairs which aid in preventing major equipment failure and process troubles

___b. Powdered volcanic rock used for cleaning and scouring surfaces which must be free of oil residue

___c. A cleaner used to dissolve dried ink, solvent, and gum deposits from the surfaces of press rollers and blanket

___d. A cleaner used to remove oil and grease residue from the plate and impression cylinder surfaces

___e. A cleaner that mixes with water to remove water soluble particles from press rollers, blanket, and cylinder

___f. A thin layer of hardened ink, fountain solution, and blanket wash which forms on press rollers and blanket

___g. A thin layer of tiny particles of clay, sizing, lint, and other paper components that forms on the press rollers and blanket

___h. A powder used to protect the surface of a rubber offset blanket during storage and to aid in maintaining the blanket's resilience

___i. A rubber ink roller that will not hold ink on its surface because of fountain solution, etch, and other chemicals dried in the pores

1. Piling
2. Troubleshooting
3. Ink glaze
4. Sensitized roller
5. Pumice powder
6. Toning
7. Emulsification
8. Deglazer
9. Misting
10. Preventive maintenance
11. Degreaser
12. Trapping
13. Water miscible cleaner
14. Picking
15. Blanket powder
16. Set-off
17. Scumming
18. Tinting
19. Chalking
20. Paper glaze
The process of analyzing problems to determine probable causes and applying possible solutions until a problem is solved.

A mixing of ink and fountain solution affecting the separation of image and nonimage areas of the offset plate.

Ink transferred from the front surface of one sheet to the back surface of the sheet above in the delivery pile.

Ink on the paper turning dry and powdery.

Ink drying so that succeeding colors will not adhere properly.

Emulsified ink suspended in the fountain solution on the plate surface appearing as a uniform tint on the printed sheet.

Plate picking up ink in the clear areas and transferring to the clear area of the sheet.

Ink building up on rollers, plate, and/or blanket.

Ink tearing away part of the paper coating as the sheet is printed; this appears as black spots in the blank areas of the printed sheet and white spots in the solid areas.

Ink flying into atmosphere as fine mist, especially at high temperature and speed.

Ink adhering to nonimage area of plate and transferring to printed sheet because of lack of dampening.
2. List seven advantages of a routine, thorough preventive maintenance program.
   a. 
   b. 
   c. 
   d. 
   e. 
   f. 
   g. 

3. Name the three areas of work in a preventive maintenance program.
   a. 
   b. 
   c. 

4. Match the preventive maintenance schedules on the right their descriptions.
   a. The regular cleaning that takes place after a day's run; the most important of the preventive maintenance schedules 
   \[1. \text{Weekly} \]
   \[2. \text{Monthly} \]
   \[3. \text{Daily} \]
   b. Usually takes place at the end of the work week; designed for blanket rotation or protection of other press elements while the press is not in use 
   c. Supplements daily and weekly cleaning and includes a complete cleaning of the total press from the top to the floor

5. Select true statements concerning requirements for a preventive maintenance schedule in chart form by placing an "X" in the appropriate blanks.
   a. A preventive maintenance chart should include the three categories of work: cleaning, lubricating, and adjusting.
   b. Each category should have columns for listing the time when work should be done: daily, weekly/bi-weekly, or monthly.
   c. Each maintenance activity on the chart should have a block for marking the date when maintenance was performed.
The operator's manual and other manufacturer's guides should be referenced for lubrication and adjustments.

The back side of the PM chart should provide space to log the date problems occur, what the problems are, and how the problems are solved.

Select true statements concerning preventive maintenance procedures for daily cleanup by placing an "X" in the appropriate blanks.

**Ink system**

- Use the blanket wash normally used for cleaning the blanket during the press run to clean ink rollers.
- Clean only parts that seem to need cleaning.

**Dampening system**

- Wipe ink particles from roller cover using a cotton pad dampened with fountain solution.
- Remove covered rollers from press and loosen ink with blanket wash, then flush blanket wash from cover with running water.
- Remove excess moisture from cover by rolling the roller with open palms on top of used rags on a flat surface.
- Clean metal dampening rollers with plate cleaner or a water miscible cleaner or pumice powder and water to remove all ink, oil, or residue that repels water.
- A coating of blanket wash may be applied to metal rollers after cleaning.
- Change dampening roller cover if enough ink has been trapped on the surface to form an ink glaze that appears shiny.

**Cylinders**

- Use plate cleaner or nonabrasive water miscible cleaner on plate cylinder, then coat with plate etch.
- Thoroughly clean blanket with blanket wash and water, then clean blanket cylinder ends and dry blanket.
- Wipe ink from surface of impression cylinder with plate etch, or remove ink with blanket wash or deglazer, than clean with plate cleaner, degreaser, or water miscible cleaner, then coat with etch.
TEST

Press

I. Use a shop towel dampened with water.

m. Wipe ink, paper lint, dust, and oil from side covers, side frames, support bars, cam shafts, and gear shafts.

Work station

n. Clean work table surface.

o. Clean chemical shelf; wipe containers.

p. Place dirty shop towels in safety can.

q. Place all waste paper somewhere out of the way.

r. Arrange work station in orderly manner.

7. List six preventive maintenance procedures for weekly cleanup.

a. 

b. 

c. 

d. 

e. 

f. 

8. List five preventive maintenance procedures for monthly cleanup.

a. 

b. 

c. 

d. 

e. 
9. Select correct procedures for daily, weekly, and monthly lubrication by placing an "X" beside statements that apply.

   a. Unplug the power supply; never lubricate a press while it is running.
   b. Use whatever lubricants are available.
   c. The best time for daily lubrication is at the end of the day's run.
   d. All friction points of all exposed moving parts should be lubricated weekly.
   e. Monthly lubrication should follow monthly cleanup before covers are replaced.

10. Complete the following list of daily and weekly adjustment procedures.

   a. ____________________________________________
   b. Adjustments should be made as necessary to make-ready for each job order and should be made at will as needed.
   c. Weekly adjustments should be those necessary to troubleshoot and solve problems.

11. List three monthly adjustment requirements.

   a. ____________________________________________
   b. ____________________________________________
   c. ____________________________________________

12. Arrange in order the steps in making an ink form roller check by writing a "1" for the first step, a "2" for the second step, and so on.

   a. Uniform stripes of ink 1/8" to 3/16" wide indicate proper adjustment.
   b. Irregular ink stripes indicate either uneven settings or worn rollers, and adjustments should be made to correct the problem.
   c. Ink up the press.
   d. Gently drop the ink form rollers to the plate, then lift them.
   e. Turn the handwheel to bring the plate around for inspection.
13. Identify the ink stripe configurations illustrated by matching them with the definitions on the right.

   a. 
   b. 
   c. 
   d. 
   e. 

   1. Setting uneven
   2. Ideal setting
   3. Roller swollen at ends
   4. Low area in center
   5. Roller worn at ends

14. Arrange in order the sequence of troubleshooting technique by writing a "1" for the first step, a "2" for the second step, and so on.

   a. Identify specific symptoms of the problem.
   b. List the probable causes.
   c. List possible solutions for each cause.
   d. Make no assumptions.
   e. Look for the simple cause and the simple solution.

15. List four categories of press troubles.

   a. ____________________________
   b. ____________________________
   c. ____________________________
   d. ____________________________
TEST

16. Distinguish between the two types of emulsification by placing an "X" beside the statement that reflects what happens when there is excess water in ink.
   ____a. Causes ink to pile on rollers, plate and/or blanket producing a grayed image on sheet
   ____b. Produces overall tint in background area on the printed sheet

17. Describe the technique for avoiding emulsification.

18. Select from the following list conditions creating ink drying problems by placing an "X" in the appropriate blanks.
   ____a. Relative humidity
   ____b. Not enough moisture run on the press
   ____c. pH of fountain solution
   ____d. Type of printing paper
   ____e. pH of printing paper
   ____f. Too much oxygen
   ____g. Temperature

19. Match common ink problems on the press with their descriptions.
    ____a. Ink is transferred from the front surface of one sheet to the back surface of the sheet above in the delivery pile.  
       1. Piling
       2. Misting
       3. Scumming
       4. Chalking
       5. Toning
       6. Picking
       7. Tinting
       8. Set-off
       9. Trapping
    ____b. Ink on the paper turns dry and powdery.
    ____c. Ink dries so that succeeding colors will not adhere properly.
    ____d. Emulsified ink suspended in the fountain solution on the plate surface appears as a uniform tint on the printed sheet.
    ____e. Plate picks up ink in the clear areas and transfers it to the clear areas of the sheet.
TEST

f. Ink builds up or piles on rollers, plates, and/or blanket.

g. Ink tears away parts of the paper coating as the sheet is printed; these appear as black spots in the blank areas of the printed sheet and white spots in the solid areas.

h. Ink flies into the atmosphere as fine mist, especially at high temperature and speed.

i. Ink adheres to nonimage area of plate because of lack of dampening and transfers to printed sheet.

20. List four guidelines for evaluating good print quality.

a. ____________________________

b. ____________________________

c. ____________________________

d. ____________________________

21. Match print quality problems with their causes.

a. Background dirty because of too much ink, not enough moisture, dirty dampen-ner roll covers, or dampener covers tied too tightly on ends

b. Not enough ink, too much moisture, wrong color of ink, incorrect dampener form roller pressure, incorrect plate-to-blanket pressure, or incorrect impression-to-blanket pressure

c. Glazed ink rollers, glazed blanket, too much ink form roller pressure, or too much dampener form roller pressure

d. Too much ink, too much impression-to-blanket pressure, not enough plate-to-blanket pressure, or too many revolutions on blanket without paper going through causing buildup on blanket

1. Gray, washed out dirty background

2. Gray, washed out

3. Image breakdown during run

4. Paper curling in receiver

5. Scumming

6. Weak spots

7. Double image

8. Streaking

9. No image at all
Incorrect ink distribution, glazed rollers, incorrect dampener form roller parallel pressure, poor paper surface, incorrect ink form roller parallel pressure, incorrect plate-to-blanket parallel pressure, incorrect impression-to-blanket parallel pressure, or dirty impression cylinder

Loose blanket, too much ink and fountain solution, not enough plate-to-blanket pressure, loose plate, or incorrect impression-to-blanket pressure

Incorrect plate-to-blanket pressure, incorrect impression-to-blanket pressure, low spots in blanket, tacky ink, tacky blanket, dirty impression cylinder, or blind image on plate caused by dried gum or too strong fountain solution

Too much dampening form roller pressure, too much ink form roller pressure, too much plate-to-blanket pressure, fountain solution too strong, or end play in form rollers

Incorrect ink form roller pressure, incorrect dampener form roller pressure, incorrect plate-to-blanket pressure, incorrect impression-to-blanket pressure, improper ink, or loose blanket

Loose blanket, side guides not set properly, paper not cut straight, or cam band not set

Not enough ink roller form pressure, not enough plate-to-blanket pressure, not enough impression-to-blanket pressure, too much moisture, glazed blanket, or glazed ink rollers

Too much moisture or a curl in the paper

Paper stop fingers too high, feed rollers not set properly, or paper hitting back stop in receiver too hard

Copy too dark

Paper missing grippers

Paper nicking on edge

Paper wrinkling

Uneven printing

Improper register
TEST

n. Stop fingers incorrectly set or feed rollers out of adjustment

o. Too much moisture, paper damp, too much pressure between blanket and impression cylinder, or register board not set properly

(NOTE: If the following activities have not been accomplished prior to the test, ask your instructor when they should be completed.)

22. Use a troubleshooting guide to find the best solution to an ink and dampening problem. (Assignment Sheet #1)

23. Use a troubleshooting guide to find the best solution to a paper stock problem. (Assignment Sheet #2)

24. Use a troubleshooting guide to find the best solution to a process problem. (Assignment Sheet #3)

25. Use a troubleshooting guide to find the best solution to a mechanical problem. (Assignment Sheet #4)

26. Determine lubrication requirements for a specific press. (Assignment Sheet #5)

27. Set up a preventive maintenance schedule in chart form. (Assignment Sheet #6)

28. Take an inventory of spare parts. (Assignment Sheet #7)

29. Demonstrate the ability to:
   a. Adjust dampener rollers to plate cylinder. (Job Sheet #1)
   b. Adjust ink form rollers to plate cylinder. (Job Sheet #2)
   c. Adjust plate cylinder to blanket cylinder. (Job Sheet #3)
   d. Adjust blanket cylinder to impression cylinder. (Job Sheet #4)
   e. Change a molleton cover. (Job Sheet #5)
   f. Degrease plate and impression cylinders. (Job Sheet #6)
   g. Deglaze ink rollers and blanket. (Job Sheet #7)
   h. Change blanket. (Job Sheet #8)
   i. Backflush vacuum pump. (Job Sheet #9)
ANSWERS TO TEST

1. a. 10  f. 3  k. 7  p. 17  b. 5  g. 20  l. 16  q. 1  c. 8  h. 15  m. 19  r. 14  d. 11  i. 4  n. 12  s. 9  e. 13  j. 2  o. 18  t. 6

2. Any seven of the following:
   a. Prevents time loss due to press breakdown
   b. Lengthens life of rollers and blanket
   c. Aids in delivering a clean product
   d. Prevents excessive wear on moving parts
   e. Insures longer periods of trouble-free press operation
   f. Increases production
   g. Insures good image transfer
   h. Provides opportunity to locate and correct potential problems on a scheduled basis rather than during a production breakdown
   i. Helps operator to be aware of potential problems
   j. Helps operator to become more familiar with press mechanical functions
   k. Helps operator to identify and correct troubles
   l. Presents an impressive, organized work station for view by the employer, customers, or visitors

3. a. Cleaning equipment and work area
   b. Lubricating equipment
   c. Adjusting operator controllable settings on equipment

4. a. 3  
   b. 1  
   c. 2

5. a, b, c, d, e

6. a, c, d, f, h, i, j, k, m, n, o, p, r
ANSWERS TO TEST

7. Any six of the following:
   a. Deglaze ink rollers and offset blanket.
   b. Change blanket if rotation plan is followed.
   c. Desensitize noncovered dampening rollers.
   d. Degrease plate and impression cylinder surfaces.
   e. Clean ink doctor cam truck or follower.
   f. Clean plate clamps.
   g. Clean delivery stripping rollers and rings or chain delivery clamps and paper turning wheels.
   h. Wipe oil and dirt off floor area under press.
   i. Clean and/or wash vacuum pump filters according to operator's manual.

8. Any five of the following:
   a. Unplug the power supply.
   b. Remove all safety and dust covers.
   c. Begin at the top of the press and work to the bottom of the press to remove all paper lint and dust from the total press.
   d. Clean oil, ink, paper particles, and dirt from vacuum and drive motors, side frames, cams, gears, levers, shafts, cylinder ends, and all hard-to-reach areas of the press.
   e. Flush press vacuum pump with a mixture of solvent and oil.
   f. Clean vacuum and air blast filters, hoses, and air passages.
   g. Clean upper and lower paper pull-out rollers or forwarding rollers.
   h. Clean upper and lower paper feed rollers.

9. a, d, e

10. a. Student should not make adjustments until approved as an operator by the instructor.

11. Any three of the following:
   a. Make an ink form roller check.
   b. Adjust dampener rollers to plate cylinder.
   c. Adjust ink form rollers to plate cylinder.
   d. Adjust plate cylinder to blanket cylinder.
   e. Adjust blanket cylinder to impression cylinder.

12. a. 4
     b. 5
     c. 1
     d. 2
     e. 3

13. a. 2
     b. 5
     c. 4
     d. 3
     e. 1
ANSWERS TO TEST

14. a. 3  
b. 4  
c. 5  
d. 1  
e. 2

15. a. Operator  
b. Chemistry and ink  
c. Paper stock  
d. Image transfer process  
e. Mechanical

16. a

17. Run the minimum amount of ink to give the job full color and the minimum amount of dampening solution to keep the plate clean.

18. a, c, d, e, g

19. a. 8  
b. 4  
c. 9  
d. 7  
e. .  
f. 1  
g. 6  
h. 2  
i. 5

20. Any four of the following:  
a. Crisp, dark lines and solids  
b. A clean background  
c. Clean halftones, screens, and reverses  
d. Good registration  
e. Each sheet dried completely

21. a. 5  
b. 2  
c. 1  
d. 10  
e. 14  
f. 7  
g. 6  
h. 3

n. 11  
o. 13

22.-28. Evaluated to the satisfaction of the instructor

29. Performance skills evaluated to the satisfaction of the instructor
UNIT OBJECTIVE

After completion of this unit, the student should be able to determine printing job costs, and be familiar with how a job ticket is used to conduct a printing job from start to finish. Competencies will be demonstrated by completing the assignment sheet and the unit test with a minimum score of 85 percent.

SPECIFIC OBJECTIVES

After completion of this unit, the student should be able to:

1. Match terms related to cost awareness with their correct definitions.
2. List fixed and variable costs of a printing job.
3. List cost items to consider when giving an estimate on a printing job.
4. Select from a list cost awareness factors for a successful printing business.
5. Select proper practices for waste management in the printing shop.
6. State the definition of a job ticket.
7. List the components of a job ticket.
8. Select true statements concerning printing trade customs.
9. Estimate costs of printing jobs. (Assignment Sheet #1)
JOB TICKET AND COST AWARENESS
UNIT V

SUGGESTED ACTIVITIES

A. Obtain additional materials and/or invite resource people to class to supplement/reinforce information provided in this unit of instruction.

(NOTE: This activity should be completed prior to the teaching of this unit.)

B. Make transparencies from the transparency masters included with this unit.

C. Provide students with objective sheet.

D. Discuss unit and specific objectives.

E. Provide students with information and assignment sheets.

F. Discuss information and assignment sheets.

(NOTE: Use the transparencies to enhance the information as needed.)

G. Integrate the following activities throughout the teaching of this unit:
   1. Collect sample job tickets from local print shops.
   2. Complete a job ticket for a shop printing project.
   3. Invite local printers to address the class on cost awareness, waste management, pricing, and overall costs of doing business.
   4. Meet individually with students to evaluate their progress through this unit of instruction, and indicate to them possible areas for improvement.

H. Give test.

I. Evaluate test.

J. Reteach if necessary.

RESOURCES USED IN DEVELOPING THIS UNIT

SUGGESTED ACTIVITIES

SUGGESTED SUPPLEMENTAL MATERIAL

JOB TICKET AND COST AWARENESS
UNIT V

INFORMATION SHEET

I. Terms and Definitions

A. Estimate—A detailed statement of all costs and charges related to a printing job

B. Fixed cost—Any cost that does not change with production volume, such as rent or utilities

C. Gross profit—The amount of revenue left after direct printing costs have been paid

D. Invoice—The bill for the customer's printing job

E. Labor—That part of the cost which is an hourly wage rate paid to employees working on the job

F. Markup—A predetermined percentage added to the job price to recover combined expenses and profit

G. Materials—The consumable items required for the printing job, such as paper, ink, plates, etc.

H. Net profit—The amount of revenue left after all costs, fixed and variable, have been paid

I. Quotation—The actual selling price of the printing job, quoted and recorded

J. Variable cost—Any cost that increases or decreases directly with production volume, such as paper, ink and film

II. Fixed and variable costs of a printing job

A. Fixed costs

1. Insurance

2. Advertising

3. Taxes

4. Building rental

5. Utilities

6. Maintenance
INFORMATION SHEET

B. Variable costs
   1. Labor
   2. Paper
   3. Ink
   4. Plates
   5. Film

III. Cost items to consider when giving an estimate on a printing job
     (Transparencies 1 and 2)
     A. Composition
     B. Line negatives
     C. Halftone negatives
     D. Plates
     E. Press runs
     F. Ink
     G. Bindery charges
     H. Paper stock
     I. Labor

IV. Cost awareness factors for a successful printing business
     A. Net profit
        (NOTE: Net profit is the key to success and survival of a business.)
     B. Markup
        (NOTE: Markup should be designed to produce the required net profit.)
     C. Wages and salaries
     D. Cost of equipment (depreciated annually)
     E. Sales
     F. Production quality
     G. Waste management
V. Waste management practices

A. Recycling

1. Save plates and negatives for silver and aluminum reclamation.
2. Save hole punch waste for paper recycling.
3. Pad trim waste for scratch pads or sell for recycling.

E. Shop planning

1. Plan bulk paper cuts carefully to avoid waste.
2. Schedule press runs to take advantage of setup and press wash time.

(NO: Common wisdom and experience have taught us waste is expensive, and can quickly eat into net profits. For years, for instance, it could have been said correctly that buying bulk paper and cutting it to fit various jobs—being careful to use as much of the paper as possible without waste—was the most efficient use of paper inputs.

Technology, however, can change even the most basic around rules. For instance, the increasing popularity of office copy machines has created a tremendous demand for 8½ x 11 copy paper bound in reams. With this demand has come volume production and a corresponding drop in prices because of efficiency of manufacturing large quantities of the paper.

One printer recently gave the example of a customer ordering 8,000 6x9 sheets of scratch paper, for which he had bulk paper that could have been cut with NO waste. The price he had to charge would have been TEN TIMES as much as using 8,000 sheets of 8½x11 copy paper and wasting part of the top and side of each sheet!

This is not an endorsement of waste, but it is an example of why the astute printer must be aware of all costs and alternatives. The market place continues to change and so do the people who stay in business! Know your costs and use that knowledge to your benefit.)

VI. Job ticket—The formal, written specification sheet which serves as a blueprint for the printing job and follows a job from order taking to delivery

(NO: A good job ticket should carry all the information necessary for the various stations of the shop to complete their work and move the job from pre-press stages through the bindery and on to customer delivery. In many shops, a job ticket consists of a manila envelope to contain raw and set type, photos, halftones, negatives, samples of the job from previous printing and any other instructions or materials needed to complete the job.)

VII. Components of a job ticket (Transparencies 3-5)

A. Customer's name
B. Customer's address
INFORMATION SHEET

C. Customer's telephone number
D. Customer representative (or individual to be shown proof)
E. Date promised
F. Sample of job (if previously printed)
   1. Record of date of previous printing
   2. Quantity printed
   3. Price quotations for various quantities
   4. Stock used
      a. Who cut
      b. How many sheets used
G. Current price quotation
H. Stock to be used
I. Ink to be used
J. Finishing and binding requirements
   1. Binding
   2. Collating
   3. Drilling
   4. Padding
   5. Stitching
   6. Wrapping
K. Time spent at each station
   (NOTE: Many shops require that each production station from pre-press through the bindery make notations of time charged to each job. Some shops base charges solely on total time spent, some use such notations to compare to a standardized price list such as Franklin Offset Price List, and some smaller shops do not use time charges at all, but charge according to knowledge of labor, fixed costs and materials.)
L. Layout sheet or dummy for multi-page jobs
M. Typesetting specifications (if any)
INFORMATION SHEET

N. Photo and darkroom instructions
   a. Page placement
   b. Proportional sizing for art or copy blocks

O. Press requirements
   a. Ink colors
   b. Scoring or perforation

P. Delivery instructions
   (NOTE: At the completion of a job, the job ticket may instruct bindery personnel to separate and attach 10 to 12 samples of the job to file for future reference.)

VIII. Printing trade customs

A. Orders—Regular orders cannot be cancelled unless an agreement to cover the printer's loss has been made.

B. Experimental work—Experimental work will carry a charge.
   EXAMPLES: Sketches, drawings, composition, plates

C. Sketches, dummies, negatives, and plates—Remain exclusive property of printer unless otherwise agreed to in writing.

D. Alterations—Changes made by the customer will carry an additional charge.

E. Approval of proofs—Printer is not responsible for errors if work is completed with customer's approval.

F. Press proofs—An extra charge will be made if a delay on the press results from awaiting customer's approval of press proofs.

G. Color proofing—Because of differences in equipment and conditions, a reasonable variation in color between color proof and the completed job shall constitute an acceptable delivery.

H. Quantities—Overruns or underruns of up to 10% shall constitute an acceptable delivery; excess or deficiency shall be charged or credited to the customer.

I. Customer's property—Customer shall be charged for handling and storing personal paper stock or printed matter held over thirty days; all property is stored at customer's risk.

J. Delivery—Unless otherwise specified, price is quoted on a single shipment, F.O.B. customer's local place of business; estimates are based on continuous and uninterrupted delivery of completed order.
INFORMATION SHEET

K. Terms—Net cash within thirty days unless otherwise specified; claims must be made within five days of receipt of goods.

L. Delays in delivery—All agreements are contingent upon fires, strikes, accidents, wars, floods, or other causes beyond printer's control.

M. Paper stock furnished by customer—All paper stock shall be properly packaged, free of dirt, tears, and be of proper specifications; if not, delays in production shall be charged to the customer.

(NOTE: The above customs are examples of what one may observe in the printing trade; different printers may add to or amend these customs.)

JOB TICKET AND COST AWARENESS
UNIT V

ASSIGNMENT SHEET #1—ESTIMATE COSTS
OF PRINTING JOBS

Directions: Using the Franklin Offset Catalog provided by the instructor or the material costs in Transparency 2, calculate the shop prices of the jobs below.

1. Calculate the total charge of 2,000 simple letterheads, 8½ x 11, white 60 lb. Scott offset, one color ink.

Answer: $

2. Calculate the total charge of 5,000 handbills (circulars), 6 x 9, medium quality, black ink on white 60 lb. offset.

Answer: $

354
Assignment Sheet #1

1. $34.25 (Based on costs for paper, simple composition, film price and plate price given in Transparency Master 2.)

2. $77.50 (Based on costs for 8½ x 11 paper, simple composition, film price and plate price given in Transparency Master 2.)
## JOB TICKET AND COST AWARENESS

</tr>
</tbody>
</table>

2. List three fixed costs and three variable costs of a printing job.

a. Fixed costs

1) ___________________________________________________________
2) ___________________________________________________________
3) ___________________________________________________________

b. Variable costs

1) ___________________________________________________________
2) ___________________________________________________________
3) ___________________________________________________________
b. Variable costs
   1) ____________________________
   2) ____________________________
   3) ____________________________

3. List six cost items to consider when giving an estimate on a printing job.
   a. ____________________________
   b. ____________________________
   c. ____________________________
   d. ____________________________
   e. ____________________________
   f. ____________________________

4. Select from a list cost awareness factors for a successful printing business by placing an "X" in each appropriate blank.
   _____a. Net Profit
   _____b. Production quality
   _____c. Advertising
   _____d. Wages and salaries
   _____e. Cost of equipment
   _____f. High prices
   _____g. Waste management

5. Select proper practices for waste management in the printing shop by placing an "X" in each appropriate blank.
   _____a. Throw away useless trim waste.
   _____b. Save plates and negatives for silver and aluminum reclamation.
   _____c. Schedule press runs randomly.
   _____d. Plan bulk paper cuts carefully to avoid waste.
6. State the definition of a job ticket.

7. List six major components of a job ticket, other than the customer's name, address and telephone number.
   a. 
   b. 
   c. 
   d. 
   e. 
   f. 

8. Select true statements concerning printing trade customs by placing an "X" in each appropriate blank.
   ___a. Printer is not responsible for errors if work is completed with customer's approval.
   ___b. An extra charge will be made if a delay on the press results from awaiting customer's approval of press proofs.
   ___c. Experimental work shall be done free of charge.
   ___d. Overruns or underruns of up to 10% shall be charged or credited to the customer.
   ___e. Terms shall be net cash within thirty days unless otherwise specified, and claims must be made within five days of receipt of goods.
   ___f. All agreements are contingent upon fires, strikes, accidents, wars, floods, or other causes beyond the printer's control.
   ___g. There shall be no variation in color between color proofs and the completed job.
   ___h. Changes made by the customer shall be made free of charge.
   ___i. All sketches, dummies, negatives, and plates shall be returned to the customer after work is completed.
TEST

j. Regular orders cannot be cancelled unless an agreement to cover the printer's loss has been made.

k. Customer shall be charged for handling and storing personal paper stock or printed matter held over thirty days.

(NOTE: If the following activity has not been accomplished prior to the test, ask your instructor when it should be completed.)

9. Estimate costs of printing jobs. (Assignment Sheet #1)
ANSWERS TO TEST

1. a. 3  f. 1
   b. 6  g. 8
   c. 5  h. 4
   d. 2  i. 9
   e. 10 j. 7

2. Answer should include any three of the following in each group:
   a. Fixed Costs
      1) Insurance
      2) Advertising
      3) Taxes
      4) Building rental
      5) Utilities
      6) Maintenance
   b. Variable Costs
      1) Labor
      2) Paper
      3) Ink
      4) Plates
      5) Film

3. Any six of the following:
   a. Composition
   b. Line negatives
   c. Halftone negatives
   d. Plates
   e. Press runs
   f. Ink
   g. Bindery charges
   h. Paper stock
   i. Labor

4. a, b, d, e, g

5. b, d

6. A job ticket is the formal written specification sheet which serves as a blueprint for the printing job and follows a job from order taking to delivery.
ANSWERS TO TEST

7. Any six of the following:
   
a. Customer representative
b. Date promised
c. Sample of job
d. Current price quotation
e. Stock to be used
f. Ink to be used
g. Finishing and binding requirements
h. Time spent at each station
i. Layout sheet or dummy for multi-page jobs
j. Typesetting specifications
k. Photo and darkroom instructions
l. Press requirements
m. Delivery instructions

8. a, b, d, e, f, j, k

9. Evaluated to the satisfaction of the instructor
CALCULATING PAPER CUTTING
UNIT VI

UNIT OBJECTIVE

After completion of this unit, the student should be able to calculate the most efficient method of cutting paper for a given job and accomplish the cutting in a safe manner. Competencies will be demonstrated by completing the assignment sheets, job sheet, and the unit tests with a minimum score of 85 percent.

SPECIFIC OBJECTIVES

After completion of this unit, the student should be able to:

1. Match terms related to calculating paper cutting with their correct definitions.
2. Select true statements concerning safety rules for operating a paper cutter.
3. State the purpose of jogging paper before cutting.
4. List the two types of paper cutters.
5. Describe two techniques for cutting carbonless paper.
6. State the formula for cutting paper stock.
7. State the formula for determining the number of sheets to be cut for a printing job.
8. State the formulas for making a combination cut.
9. Use the formula for cutting paper stock. (Assignment Sheet #1)
10. Use the formula to determine how many sheets will be required. (Assignment Sheet #2)
11. Calculate a combination cut using stock cutting formula. (Assignment Sheet #3)
12. Draw a cutting diagram. (Assignment Sheet #4)
13. Demonstrate the ability to cut carbonless paper. (Job Sheet #1)
CALCULATING PAPER CUTTING
UNIT VI

SUGGESTED ACTIVITIES

A. Obtain additional materials and/or invite resource people to class to supplement/reinforce information provided in this unit of instruction.

(NOTE: This activity should be completed prior to the teaching of this unit.)

B. Make transparency from the transparency master included with this unit.

C. Provide students with objective sheet.

D. Discuss unit and specific objectives.

E. Provide students with information and assignment sheets.

F. Discuss information and assignment sheets.

(NOTE: Use the transparency to enhance the information as needed.)

G. Provide students with job sheet.

H. Discuss and demonstrate the procedure outlined in the job sheet.

I. Integrate the following activities throughout the teaching of this unit:
   1. Discuss with students how paper weight and texture affect cutting.
   2. Demonstrate hand jogging procedure in class, then have students demonstrate hand jogging.
   3. Demonstrate safety rules for operating paper cutters.
   4. Have students trim a three-sided book, if possible.
   5. Contact the Graphic Arts Technical Foundation, 4615 Forbes Avenue, Pittsburgh, PA 15213-3796, to obtain a list of possible supplemental resources.
   6. Meet individually with students to evaluate their progress through this unit of instruction, and indicate to them possible areas for improvement.

J. Give test.

K. Evaluate test.

L. Reteach if necessary.

SUGGESTED SUPPLEMENTAL RESOURCES

A and B available from:

Graphic Arts Technical Foundation
4615 Forbes Avenue
Pittsburgh, PA 15213-3796
CALCULATING PAPER CUTTING
UNIT VI

INFORMATION SHEET

I. Terms and definitions

A. Carbonless paper—Paper coated or impregnated with chemicals to yield an
   image when pressure is applied

B. Combination cut—Second cut, made in stock cutting, when grain direction is
   not a factor, and additional pieces can be cut from the waste of the first cut

C. Cutting diagram—Proportional drawing which maps the most cost-efficient
   method of cutting sheets for a given job

D. Jogging—Handling of sheets to make a neat, evenly piled stack (done by hand
   or mechanically with a vibrating jogging table)

E. Jogging boards—Wooden tools or blocks used to move or adjust lifts of paper
   on paper cutter so as to avoid accidentally placing hands or fingers in the way
   of the cutting blade

F. Lift—Stack of paper being cut or handled

G. Mechanical jogging table—Device used to vibrate sheets into neat lifts

(Courtesy of The Challenge Machinery Co.)
INFORMATION SHEET

H. Piece—Job-size portion cut from the full-size sheet

I. Spoilage allowance—Percentage of extra sheets added to the total job for replacing sciled, damaged or misprinted sheets and for samples to run when setting up the press

J. Trim cut—Cut that allows for actual outside dimensions of a piece of printed matter to be cut after printing is completed

II. Safety rules for operating a paper cutter

A. Check the safety bolt and brake action on powered cutters before each work session.

B. Never disable two-hand controls.

C. Never reach under the knife to remove scrap or straighten a lift—use jogging boards.

D. Never attempt to catch a falling stack of cut stock during the cutting cycle—use a backup board.

E. Keep the cutter and surrounding floor area free of tools, paper, and shop towels.

F. Avoid distractions while operating the cutter.

G. Helpers and other shop personnel must stand clear of the cutter during cutting cycles.

H. All knives and cutting sticks are to be changed according to machine’s operating manual.

I. Keep all spare knives bolted to mounting boards.

J. Always turn off power to cutter before leaving the machine unattended.

III. Purpose of jogging paper before cutting—to ensure that all sheets of paper are cut the same size
IV. Types of paper cutters

A. Hand-lever paper cutter
   (NOTE: Hand-lever paper cutters are becoming obsolete.)

B. Electric or electro-hydraulic power cutter
   (NOTE: Modern paper cutters feature hydraulic clamping and cutting with computerized memory systems.)

(Courtesy of The Challenge Machinery Co.)

V. Techniques for cutting carbonless paper (Transparency 1)

(NO; E. Because carbonless paper is coated or impregnated with chemicals to allow imaging when sharp pressure is applied, careful handling during the printing, binding and finishing processes must be ensured. A paper cutter’s clamp exerts enough force to spoil carbonless paper unless techniques are used to prevent imaging.)
INFORMATION SHEET

A. Use a wood block and sponge buffer.

Clamp

Sponge Rubber

Paper  Wood Block  Cutter Bed

B. Cut two or more lifts at one time.

Clamp

Paper  Cutter Bed

VI. Formula for cutting paper stock—

\[
\frac{\text{Dimensions of Sheet}}{\text{Dimensions of Piece to be Cut}} = \text{Number of Pieces Cut from Sheet}
\]

EXAMPLE: How many 8½ x 11 pieces can be cut from a 17 x 22 sheet?

a. \[
\frac{17 \times 22}{8\frac{1}{2} \times 11} = \text{Dimensions of Sheet} \quad \text{Dimensions of Piece}
\]

b. Divide vertically 8½ into 17 = 2

c. Divide 11 into 22 = 2

d. Multiply the two answers from steps b and c

Answer: 2 x 2 = 4
VII. Formula for determining number of sheets to be cut for a printing job—

\[
\frac{\text{Desired Number of Pieces}}{\text{Number of Pieces Obtained from One Sheet}} = \text{Total Number of Sheets Needed}
\]

EXAMPLE: How many 17 x 22 sheets will be needed to cut 1,000 pieces 8½ x 11?

a. \[
\frac{1000}{4} = 250
\]

b. Divide 4 into 1,000 = 250

Answer: 250 sheets will need to be cut to produce 1,000 pieces.

(NOTE: An extra sheet must be cut any time there is a remainder when dividing number of pieces into number of sheets.)

VIII. Formulas for making a combination cut—

(NOTE: A combination cut is made when additional pieces can be cut from the waste of the first cut, and when grain direction is not a factor.)

A. \[
\frac{\text{Dimension of Sheet}}{\text{Dimensions of Piece to be Cut}} = \text{Number of Pieces Cut from Sheet}
\]

B. After measuring waste, calculate

\[
\frac{\text{Waste Portion}}{\text{Dimension of Piece to be Cut}} = \text{Number of Pieces Obtained}
\]

EXAMPLE: How many 6 x 9 pieces can be cut from one 23 x 35 sheet?

Cut a. \[
\frac{23 \times 35}{6 \times 9} = \frac{3 \times 3}{9} = 9
\]

\[
\begin{array}{ccc}
9 & 9 & 9 \\
6 & 1 & 2 & 3 \\
6 & 4 & 5 & 6 \\
6 & 7 & 8 & 9 \\
\hline
35
\end{array}
\]
INFORMATION SHEET

\[
\frac{8 \times 23}{6 \times 9} = \frac{1 \times 2}{1 \times 2} = 2
\]

\[
9 + 2 = 11 \text{ Pieces from Two Cuts}
\]

Cut a. \[
\frac{23 \times 35}{9 \times 6} = \frac{2 \times 5}{1 \times 2} = 10 \text{ Pieces}
\]

(Note: One of the waste portions in cut a is large enough to accommodate one of the dimensions of the piece size, 6 x 9. Thus, dividing 6 x 9 into the waste portion, 8 x 23, we find that two more pieces can be obtained for a total of 11 pieces. If grain direction were a factor, cut b producing 10 pieces would have been the best cut.)
Cutting Carbonless Paper
(Techniques to Avoid Unwanted Imaging)

Cutting two or more lifts at one time will reduce pressure that can cause unwanted imaging.

Using a wood block and sponge rubber will prevent excessive pressure that can cause imaging.
1. Directions: Using the formula for cutting paper stock, determine how many 6 x 9 pieces can be cut from a 25 x 38 sheet. Show two answers and draw the cutting diagram for the best of the two.

a. ______________________

b. _______________ __________

c. Diagram of best:
2. Using the formula when sheet size has fractions, determine how many 4 x 6 pieces can be cut from a 22\(\frac{1}{2}\) x 28\(\frac{1}{2}\) sheet and show cutting diagram.

(Note: When fractions are part of only the sheet size, this fraction simply becomes part of the waste, and need not be calculated.)

a. Number of pieces = ______________________

b. Diagram:

3. Using the formula when piece size has fractions, find the largest number of 2\(\frac{1}{2}\) x 5\(\frac{1}{2}\) pieces that can be cut from a 23 x 25 sheet.

(Note: When piece size has fractions, convert to decimals and calculate.)

Number of pieces = ______________________
CALCULATING PAPER CUTTING
UNIT VI

ASSIGNMENT SHEET #2—USE THE FORMULA TO DETERMINE HOW MANY SHEETS WILL BE REQUIRED

Directions: Use the formula to determine how many sheets will be required in the following:

1. First determine how many 3½ x 5½ pieces can be cut from a sheet 22 x 28.

Answer: _______________________

2. Now determine how many sheets will need to be cut to produce 1000 pieces.

Answer: _______________________

374
CALCULATING PAPER CUTTING
UNIT VI

ASSIGNMENT SHEET #3—CALCULATE COMBINATION CUT 
USING STOCK CUTTING FORMULA

Directions: Find out how many 4 x 6 pieces can be cut from a 23 x 35 sheet. Draw cutting diagrams for both cuts and determine how many additional pieces can be cut from waste of first cut, assuming grain direction is not a factor.

1. Number of pieces = ____________

2. Cutting diagrams:
   a. 
   b. 

3. Additional number of pieces = ______________
DRAW A CUTTING DIAGRAM

Directions: Using a sheet of 20½ x 24¾ index stock, a T-square, a ruler or pica line gauge, and a No. 2 pencil, draw a cutting diagram.

1. Determine how many 4 x 6 pieces can be cut from the 20½ x 24¾ sheet.

Answer: ____________________

2. Draw the exact cutting diagram on the 20½ x 24¾ sheet, showing where each cut will be made.

3. Number the pieces to be obtained on the diagram.

UNIT VI  

JOB SHEET #1—CUT CARBONLESS PAPER  

A. Tools and materials  
1. Supply of carbonless paper sheets (provided by instructor)  
2. Paper cutter  
3. Wood block  
4. Sponge rubber buffer  

B. Procedure  
1. Jog paper.  
2. Using jogging boards, position carbonless paper against back guide of paper cutter and left side housing.  
3. Place wooden block adjacent to lift and cover both with sponge rubber buffer.  
   (NOTE: Take care to keep buffer out of the knife's path.)  
4. Adjust clamp to hold lift firmly beneath sponge rubber buffer.  
5. Turn cutter power "ON".  
6. Following safety rules, make the cut.  
7. Remove lift, block and sponge rubber buffer from cutter.  
8. Turn cutter power "OFF".  
9. Examine cut lift with instructor and discuss results.  
10. Clean cutter area of waste paper made in cut.  
11. Return tools and materials to proper storage.

EVALUATOR'S COMMENTS: ____________________________________________
PRACTICAL TEST #1

PRODUCT EVALUATION

(EVALUATOR NOTE: Rate the student on the following criteria. If the student is unable to demonstrate mastery, student materials should be reviewed and another product must be submitted for evaluation. See suggested performance evaluation keys below.)

Option A

4 — Skilled — Can perform job with no additional training.
3 — Moderately skilled — Has performed job during training program; limited additional training may be required.
2 — Limited skill — Has performed job during training program; additional training is required to develop skill.
1 — Unskilled — Is familiar with process, but is unable to perform job.

Option B

Yes — Can perform job with no additional training.
No — Is unable to perform job satisfactorily.

Criteria: __________________________________________ Rating: ______________________

Accurate, clean cut achieved. ______________________________________________________

No imaging present on cut paper. ___________________________________________________

EVALUATOR'S COMMENTS: ________________________________________________________
CALCULATING PAPER CUTTING
UNIT VI

TEST

Name ___________________________ Score __________________

1. Match the terms on the right with their correct definitions.

____a. Cut that allows for actual outside dimensions of a piece of printed matter to be cut after printing is completed

1. Carbonless paper

2. Combination cut

____b. Percentage of extra sheets added to the total job for replacing soiled, damaged or misprinted sheets and for samples to run when setting up the press

3. Cutting diagram

4. Jogging

5. Jogging boards

____c. Paper coated or impregnated with chemicals to yield an image when pressure is applied

6. Lift

7. Mechanical jogging table

____d. Second cut, made in stock cutting, when grain direction is not a factor, and additional pieces can be cut from the waste of the first cut

8. Piece

9. Spoilage allowance

____e. Job-size portion cut from the full-size sheet

10. Trim cut

____f. Device used to vibrate sheets into neat lifts

____g. Proportional drawing which maps the most cost-efficient method of cutting sheets for a given job

____h. Handling of sheets to make a neat, evenly piled stack

____i. Wooden tools or blocks used to move or adjust lifts of paper on paper cutter so as to avoid accidentally placing hands or fingers in the way of the cutting blade

____j. Stack of paper being cut or handled

383
2. Select true statements concerning safety rules for operating a paper cutter by placing an "X" in the blank next to each true statement.

   ___a. Check the safety bolt and brake action on powered cutters periodically.
   ___h. Never disable two-hand controls.
   ___c. Never reach under the knife to remove scrap or straighten a lift.
   ___d. Attempt to catch a falling stack of cut stock during the cutting cycle if a backup board is not in use.
   ___e. Keep the cutter and surrounding floor area free of tools, paper, and shop towels.
   ___f. Avoid distractions while operating the cutter.
   ___g. Helpers and other shop personnel must stand near the cutter during cutting cycles.
   ___h. All knives and cutting sticks are to be changed according to machine’s operating manual.
   ___i. Keep all spare knives bolted to mounting boards.
   ___j. Always turn off power to cutter before leaving the machine unattended.

3. State the purpose of jogging paper before cutting.

   __________________________________________

4. List the two types of paper cutters.

   a. __________________________________________
   b. __________________________________________

5. Describe two techniques for cutting carbonless paper.

   a. __________________________________________
   b. __________________________________________
6. State the formula for cutting paper stock.

7. State the formula for determining the number of sheets to be cut for a printing job.

8. State the formulas for making a combination cut.

(NOTE: If the following activities have not been accomplished prior to the test, ask your instructor when they should be completed.)

9. Use the formula for cutting paper stock. (Assignment Sheet #1)

10. Use the formula to determine how many sheets will be required. (Assignment Sheet #2)

11. Calculate a combination cut using stock cutting formula. (Assignment Sheet #3)
12. Draw a cutting diagram. (Assignment Sheet #4)
13. Demonstrate the ability to cut carbonless paper. (Job Sheet #1)
CALCULATING PAPER CUTTING
JNIT VI

ANSWERS TO TEST

1. a. 10 b. 9 c. 1 d. 2 e. 8 f. 7 g. 3 h. 4 i. 5 j. 6

2. b, c, e, f, h, i, j

3. To ensure that all sheets of paper are cut the same size

4. a. Hand-lever paper cutter b. Electric or electro-hydraulic paper cutter

5. a. Use a wood block and sponge buffer. b. Cut two or more lifts at one time.

6. \[
\frac{\text{Dimensions of Sheet}}{\text{Dimension of Piece to be Cut}} = \text{Number of Pieces Cut from Sheet}
\]

7. \[
\frac{\text{Desired Number of Pieces}}{\text{Number of Pieces Obtained from One Sheet}} = \text{Total Number of Sheets Needed}
\]

8. a. \[
\frac{\text{Dimensions of Sheet}}{\text{Dimension of Piece to be Cut}} = \text{Number of Pieces Cut from Sheet}
\]

b. \[
\frac{\text{Waste Portion}}{\text{Dimension of Piece to be Cut}} = \text{Number of Pieces Obtained}
\]

9-12. Evaluated to the satisfaction of the instructor

13. Performance skills evaluated to the satisfaction of the instructor
UNIT OBJECTIVE

After completion of this unit, the student should know the basic binding and finishing techniques and be able to accomplish basic binding and finishing tasks such as folding, padding, drilling and stitching jobs in the shop. Competencies will be demonstrated by completing the job sheets and the unit tests with a minimum score of 85 percent.

SPECIFIC OBJECTIVES

After completion of this unit, the student should be able to:

1. Match terms related to binding and finishing with their correct definitions.
2. Select true statements concerning binding techniques.
3. List major folding styles.
4. List processes associated with finishing activities.
5. Demonstrate the ability to:

   a. Pad 20-pound stock. (Job Sheet #1)
   b. Pad carbonless paper. (Job Sheet #2)
   c. Drill paper stock for a 3-ring binder. (Job Sheet #3)
   d. Fold paper using a folding machine. (Job Sheet #4)
   e. Hand fold, collate, and staple a booklet. (Job Sheet #5)
   f. Score a job. (Job Sheet #6)
BINDING AND FINISHING
UNIT VII

SUGGESTED ACTIVITIES

A. Obtain additional materials and/or invite resource people to class to supplement/reinforce information provided in this unit of instruction.

(NOTE: This activity should be completed prior to the teaching of this unit.)

B. Make transparency from the transparency master included with this unit.

C. Provide students with objective sheet.

D. Discuss unit and specific objectives.

E. Provide students with information sheets.

F. Discuss information sheets.

(NOTE: Use the transparency to enhance the information as needed.)

G. Provide students with job sheets.

H. Discuss and demonstrate the procedures outlined in the job sheets.

I. Integrate the following activities throughout the teaching of this unit:

1. Take a field trip to a local shop to observe binding and finishing operations in action.

2. Invite a local printer or bindery worker to address the class concerning job specifications, customer relations, customer service and meeting customer needs.

3. Meet individually with students to evaluate their progress through this unit of instruction, and indicate to them possible areas for improvement.

J. Give test.

K. Evaluate test.

L. Reteach if necessary.

RESOURCES USED IN DEVELOPING THIS UNIT

I. Terms and definitions

A. **Binding**—Securing pages together by means of wire, thread, adhesive, plastic, etc.

B. **Collating**—Gathering, arranging in order and checking several sheets to make a book

C. **Finishing**—Final bindery work, such as die cutting, embossing, blocking, foil stamping, laminating or varnishing

D. **Inserting**—Placing one signature, sheet, or folded sheet inside another

E. **Jogging**—Vibrating paper by machine or by hand to make sure all sheets line up evenly at the edges

F. **Marrying sets**—Joining collated sets when number of pages exceeds collator capacity

G. **Padding**—Binding a booklet or multi-page job using an adhesive padding compound

H. **Perforating**—Partially cutting a sheet in a broken line so it can easily be torn away

**EXAMPLES:** Ticket stubs; postage stamps

I. **Scoring**—Creasing a sheet mechanically or manually to enable it to fold easily

J. **Stitching**—Binding pages of a book together using wire stitches or staples

K. **Tipping**—Applying a small amount of adhesive to the edge of a sheet so it can be attached to another

L. **Trimming**—Cutting the edges of a bound book to make them even

(NOTE: This is the last major operation in book binding.)

II. Binding techniques

A. **Adhesive binding**

1. Used when less durable, inexpensive binding is preferred, such as in paperback book assembly

2. In simplest form called padding
INFORMATION SHEET

B. Edition binding
   1. Consists of several signatures sewn together with thread, reinforced with glue and mounted between end sheets and hard covers
   2. Used when books are expected to undergo hard use and need extra protection and strength
   3. Top quality books are given extra support by adding a muslin backing cloth over the glue

C. Looseleaf binding—Gathering and punching for placement in a reusable binder
   EXAMPLE: 3-ring binder

D. Perfect binding—Consists of sawing signatures at the folded edge, applying flexible glue to the rough back edge and attaching cover while glue is wet
   (NOTE: Some high-quality periodicals such as National Geographic use this method of binding without staples.)

E. Plastic binding—Sheets are punched with rectangular slots and held in place by a plastic "comb"
   EXAMPLES: Technical manuals and other publications which open flat and allow easy removal of binder to add or change pages

F. Stitching
   1. Side stitching—Placing wire staples or stitches through sides of sheet to bind into book form
   2. Saddle stitching—Placing wire staples or stitches through the folded, gathered sheets to bind into book form
      (NOTE: Many inexpensive pamphlets, brochures, club cook books and school directories use side stitching, while saddle stitching is a popular binding technique found on many magazines.)
III. Major paper folding styles (Transparency 1)

A. Accordion fold
B. Broadside fold
C. French fold
D. Gate fold
E. Letter fold
F. Map fold
IV. Processes associated with finishing activities

A. Embossing—Pressing sheet between two dies, one raised and one lowered, to form a raised (embossed) image

B. Flocking—Forcing tiny fibers into a wet ink image to add an unusual texture to image area

C. Foil stamping—An embossing process by which a sheet of metallic foil is pressed against paper stock using an electrically-heated brass die to stamp a metallic image in the shape of the die

D. Laminating—Applying a protective plastic coating over the finished piece

E. Varnishing—Applying a protective varnish coating over the finished piece

BINDING AND FINISHING
UNIT VII

JOB SHEET #1—PAD 20-POUND STOCK

A. Tools and materials
1. 100 sheets of scrap 20-lb. stock (to be provided by instructor)
2. 2 pieces of chipboard (provided by instructor)
3. Padding compound
4. Padding brush
5. Jogger
6. Padding press

B. Procedure
1. Trim paper and chipboard to same size.
2. Count 50 sheets of 20-lb., and insert chipboard divider, then count another 50 sheets and insert second divider.
3. Place entire stack into jogger, turn on jogger until all sheet and divider edges are even.
4. Place stack in padding press with top edge of sheets lined up with front edge of padding press.
5. Place clamp or weight on stack and lock in place.
6. Using brush, apply thin even coat of padding compound to exposed edge; brush from the middle of sheet to outside edges.
7. Allow sufficient drying time, then apply second coat, heavier than first.
8. When dry, remove from press and turn in to instructor for evaluation.
9. Clean work area; return tools and materials to proper storage.
BINDING AND FINISHING
UNIT VII

JOB SHEET #2—PAD CARBONLESS PAPER

A. Tools and materials
   1. 25 two-part sets of carbonless paper (provided by instructor)
   2. Padding press
   3. Jogger
   4. Padding brush
   5. Padding compound (for carbonless paper)

B. Procedure
   1. Place paper in jogger and jog until edges are even.
   2. Place stack in padding press and line top edge with front of padding press.
   3. Put clamp or weight on stack and lock in place.
   4. Using brush, apply several soaking coats of padding compound to exposed edge, brushing from middle out.
   5. Allow sufficient drying time, feeling edge with fingers, until completely dry.
   6. Take stack out of padding press and, holding opposite edge from padded end, fan apart with hand.
      (NOTE: Sets should stick together, but each set should be free from the adjoining sets.)
   7. Turn in to instructor for evaluation.
   8. Clean work area; return tools and materials to proper storage.
BINDING AND FINISHING
UNIT VII

JOB SHEET #3—DRILL PAPER STOCK FOR A 3-RING BINDER

A. Tools and materials
   1. Paper drill
   2. Twenty-five sheets of 8½ x 11 paper (provided by instructor)
   3. Punched or marked guide for 3-ring binder

B. Procedure
   1. Set back stop on paper drill for depth of holes on inside edge of sheet.
   2. Set guide stops on paper drill, using marked or punched guide for 3-ring binder, to set distance between holes.
   3. Jog sheets to be drilled and position on paper drill for first hole.
   4. Set left side guide and make first hole.
   5. Reset left side guide and line up with back stop setting for second hole.
   6. Drill second hole.
   7. Reset left side guide and line up with back stop setting for third hole.
   8. Drill third hole.
   9. Turn in sheets to instructor for evaluation
   10. Clean work area; return tools and materials to proper storage.
A. Tools and materials
   1. Shop folding machine
   2. 20 sheets of 8½ x 11 paper (provided by instructor)

B. Procedure
   1. After instructions by instructor on operation and adjustment of folder, set bars as according to machine instructions for a simple 4-page fold.
   2. Load five sheets of paper into the folder bank.
   3. With the instructor’s permission, turn on power to folder, and run the five sheets.
   4. Turn off folder.
   5. Submit five folded sheets to instructor for evaluation.
   6. Repeat steps 1 through 5 for 6-page fold, 6-page accordion fold, and 8-page accordion fold (depending upon the capabilities of folding machine).
   7. Clean work area; return tools and materials to proper storage.
BINDING AND FINISHING
UNIT VII

JOB SHEET #5—HAND FOLD, COLLATE AND STAPLE A BOOKLET

A. Tools and materials
   1. Multi-page printing job to be assembled and stapled (side stitched or saddle stitched) as a booklet
   2. Stapler, manually or electrically operated
   3. Jogging machine

B. Procedure
   1. Being mindful of page numbers and order, hand fold each form to be used in booklet.
   2. Assemble (collate) forms in numerical page order and jog until even.
   3. Set staple machine for side stitch or saddle stitch (depending upon preference of the instructor and capabilities of the machine).
   4. Individually place booklets into stapler and insert staples according to instructor's directions.
   5. Stack finished booklets neatly and turn in to instructor for evaluation.
   6. Clean work area; return tools and materials to proper storage.
A. Tools and materials
   1. 20 sheets of medium to heavy stock (provided by instructor)
   2. Offset press equipped with scoring head, or scoring machine

B. Procedure
   1. In the case of press-mounted scoring head, set according to instructor's directions for your particular press run. In the case of a separate scoring machine, adjust to paper size and scoring position required.
   2. With instructor's permission, make press run, or pass the job through the scoring machine.
   3. Turn off power to press or scoring machine.
   4. Turn in sheets to instructor for evaluation.
   5. Clean work area; return tools and materials to proper storage.

_____
PRACTICAL TEST #1

PRODUCT EVALUATION

(EVALUATOR NOTE. Rate the student on the following criteria. If the student is unable to demonstrate mastery, student materials should be reviewed and another product must be submitted for evaluation. See suggested performance evaluation keys below.)

Option A

4 — Skilled — Can perform job with no additional training.
3 — Moderately skilled — Has performed job during training program; limited additional training may be required.
2 — Limited skill — Has performed job during training program; additional training is required to develop skill.
1 — Unskilled — Is familiar with process, but is unable to perform job.

Option B

Yes — Can perform job with no additional training.
No — Is unable to perform job satisfactorily.

Criteria: Rating:

Paper evenly trimmed.

Padding compound evenly and neatly applied.

   c. Adhesive binding is used for less expensive books.
   d. Top quality books use a form of adhesive binding.
   e. In perfect binding, the back or folded edge of the book is sawed off and glued.
   f. A brittle glue is used to attach the cover in perfect binding.
   g. In plastic binding, rectangular slots are punched in the sheets.
   h. Pages cannot be added or changed in plastic bound books.
   i. The ring binder is an example of looseleaf binding.

3. List four major paper folding styles.
   a. ____________________________
   b. ____________________________
   c. ____________________________
   d. ____________________________

4. List four processes associated with finishing activities.
   a. ____________________________
   b. ____________________________
   c. ____________________________
   d. ____________________________

(NOTE. If the following activities have not been accomplished prior to the test, ask your instructor when they should be completed.)
5. Demonstrate the ability to:
   a. Pad 20-pound stock. (Job Sheet #1)
   b. Pad carbonless paper. (Job Sheet #2)
   c. Drill paper stock for a 3-ring binder. (Job Sheet #3)
   d. Fold paper using a folding machine. (Job Sheet #4)
   e. Hand fold, collate and staple a booklet. (Job Sheet #5)
   f. Score a job. (Job Sheet #6)
BINDING AND FINISHING
UNIT VII

ANSWERS TO TEST

1. a. 3  e. 7  i. 8
   b. 6  f. 2  j. 5
   c. 10  g. 1  k. 4
   d. 11  h. 9  l. 12

2. a, b, c, e, g, i

3. Any four of the following:
   a. Accordion fold
   b. Gate fold
   c. Letter fold
   d. Map fold
   e. French fold
   f. Broadside fold

4. Any four of the following:
   a. Foil stamping
   b. Embossing
   c. Laminating
   d. Varnishing
   e. Flocking

5. Performance skills evaluated to the satisfaction of the instructor.
