The lack of U.S. students' knowledge of history and geography has been portrayed on television and in the newspapers as a national problem. California's public schools are taking significant steps to ensure that all students have a well developed understanding of their society and the world. This guide for parents answers some of the most commonly asked questions about the 1987 California History-Social Science Framework (for K-12) and suggests concrete ways in which parents can help their children succeed in school. A literature list for parents and children (K-12) is included. (DB)
The Changing History–Social Science Curriculum

A Booklet for Parents

Prepared under the direction of the
Curriculum, Instruction, and Assessment Division,
Francie Alexander, Director

and the
History–Social Science and Visual and Performing Arts Unit
Diane Brooks, Administrator
The Changing History-Social Science Curriculum: A Booklet for Parents was prepared under the direction of the Department of Education's Curriculum, Instruction, and Assessment Division, History-Social Science and Visual and Performing Arts Unit.

The principal writer was Diane Ravitch, Professor of History, Teachers College, Columbia University.

The booklet was edited for publication by Maria Reynoso of the Bureau of Publications, working in conjunction with Diane Brooks of the History-Social Science and Visual and Performing Arts Unit, and it was prepared for photo-offset production by bureau staff members.

The document, which was developed in part with Chapter 2 (ECIA) funds, was published by the California Department of Education, 721 Capitol Mall, Sacramento, California (mailing address: P.O. Box 944272, Sacramento, CA 94244-2720). It was printed by the Office of State Printing and distributed under the provisions of the Library Distribution Act and Government Code Section 11096.

A Message to Parents from California’s State Superintendent of Public Instruction

You have probably seen stories on television and in the newspapers about a national problem—American students’ lack of knowledge of history and geography. This is a national problem. However, California’s public schools are taking significant steps to ensure that all students have a well-developed understanding of their society and the world. In 1987, the State Board of Education adopted a new *History–Social Science Framework* that provides for more time for history and geography. The framework establishes the content to be studied in every grade from kindergarten through grade twelve. This parental guide answers some of the most commonly asked curriculum questions and suggests some concrete ways in which parents can help their children succeed in school.

As adults, you and I recognize from our own experiences how important a knowledge of history and geography is for understanding the world. Those of us who grew up in the United States are likely to have vivid recollections of the civil rights movement, the changes that technology has made in Americans’ lives, and the ways that the Vietnam War affected our culture. Those born in other countries are aware of the impact of war, political upheavals, and economic dislocation on the life of a nation and its people. Our children know about such things only by studying the past.

We want students in California’s public schools to understand the rights and responsibilities of citizens in a democratic society; to reflect on the sources of conflict and cooperation among people; to appreciate the importance of ethical behavior and human rights; and to recognize how democratic institutions evolved, how they are preserved, and how they may be jeopardized. We want them to learn the democratic values embedded in the Constitution and to respect the rule of law. These ideas are some of the major aspects of the new history–social science curriculum.

As you will see in this parental guide, we have high expectations for all students. All students will learn about the most significant events, trends, ideas, and people in American and world history. By learning more about the American past, our students will be better prepared to be active citizens. By learning about the history of other nations, such as those in Asia,
Africa, Europe, and the Americas, they will have a deeper understanding of the aspirations and problems of the rest of the world.

Your children will live in the twenty-first century. The rapid advance of communications, technology, and international economic ties assures that life will be even more complex in the future. When students understand the past, they will be better prepared to solve problems, make thoughtful decisions in the present, and face the challenges of the future.

HISTORY...
A JOURNEY THROUGH TIME
Why History–Social Science?

By studying history–social science, young people can play a part in improving society.

Everything that happens in the present and future has its origins in the past. The more informed we are, the better equipped we are to understand new problems, situations, and trends. While our children cannot possibly learn everything there is to know about the past, they can learn enough to make sense of the changes that take place in their lives and in the world. By studying history and the social sciences, young people can get a good understanding of how our society functions, how we select our leaders, how our laws and political system work, how our economy works, how individuals can make a difference, and how they can play a part in improving our society and meeting the challenges that lie ahead.

In history–social science classes, students learn the behaviors and values that are essential to democratic societies. They learn to discuss and debate, think critically about issues, share and take turns, and respect those with different opinions. They can see in classroom activities as well as in historical examples that democratic governments require citizens who are willing to take responsibility, to lead, and to follow.

As we move toward the twenty-first century, it is clear that we cannot ignore the political, economic, and social problems of the rest of the world. We are trading partners with many other nations, and we must understand their histories and cultures in order to be good partners. We have global rivalries with some nations, and we

Students learn the behaviors and values essential to democratic societies.

Our nation depends on an educated and intelligent citizenry.
Students learn democracies' strengths and weaknesses. Students will become better citizens.

must understand their histories and cultures in order to avoid misunderstandings and war. Our well-being as a nation and our ability to build a stable peace greatly depend on the citizenry's intelligence and educated understanding.

In addition, education in history—social science should strengthen our students' understanding of and commitment to democratic principles. Children should grow to understand the precious, fragile nature of democracies. We want them to know democracies' strengths and weaknesses and that one of the greatest strengths is a democratic society's ability to criticize itself when it has made a mistake. As a society, we believe in a democratic government, and we want our children to know why. We want them to understand the price that has been paid over the years to achieve our strong system of justice and the importance of continuing to strengthen our commitment to basic human rights. Ultimately, our democratic traditions rest on knowledgeable and informed citizens. If citizens cease to care or understand, then our system will be in jeopardy.

We recommend this new history—social science curriculum because we think that it will help students become better citizens; learn about the difficult struggles to establish justice, equality, and freedom; understand the basic economic facts of life; heighten their sensitivity to ethical issues; encourage them to get along with others from different cultures and backgrounds; and become aware of men and women across the globe who have transformed the world we live in by their ideas and actions.

We are very proud of this new venture. Our curriculum has attracted attention and
commendations from educators across the country. We hope you will want to read the *History–Social Science Framework for California Public Schools, Kindergarten Through Grade Twelve* and learn more about what your children will be studying in the years ahead.
Questions and Answers About the *History–Social Science Framework*

**What is a framework?**

A framework describes *what* will be taught to all students from kindergarten through the twelfth grade (the curriculum), and it describes the content of the course. It is a guide used by teachers and administrators to help them plan and coordinate what they will teach. It informs textbook publishers about the kinds of textbooks needed in schools. A framework also makes suggestions on *how* to teach the curriculum.

**What is the purpose of the History–Social Science Framework?**

The framework has four basic purposes:

*First*, it establishes a common curriculum in history and the social sciences for all children in the state. Teachers may choose to present the curriculum in a variety of ways. Indeed, they are encouraged to be innovative in their teaching methods. However, all students should encounter the same rich program of studies.

*Second*, it provides a guide so that all students in the state will receive an educational experience of comparable quality. For example, this framework calls for all children to receive three full years of world history. Without a state framework, some districts could offer less and others more.

*Third*, it ensures that students who move from one school to another within the state will not repeat the work of previous years, since the course content in all districts in the state will be similar.

*Fourth*, it creates a sequence of studies. Beginning in kindergarten, students build on
their work and knowledge from previous years. Teachers will know what students have learned in earlier grades and what content was included in each year.

What will children study?

In the primary years, kindergarten through third grade, students begin to learn about the larger world they inhabit. They will learn the social behavior that is the basis of good citizenship in both the classroom and the community. They will begin to understand geographic and economic relationships as they examine their local communities and the ways in which they depend on others to supply their needs for food and shelter. They will meet great heroes from a variety of cultures as they read about men and women who have made differences. Their studies and activities will introduce them to the national symbols, holidays, songs, and stories that bind a nation.

In the fourth grade, they will study the history and geography of California, from pre-Columbian times—when it was home to large numbers of American Indians—to the present—when migration and immigration have made the state a dynamic cultural mix and technology has changed the way people work and live.

In the fifth grade, students will study U.S. history and geography, with special emphasis on the exciting story of the settling and founding of the new nation. They will learn about Indian tribes, explorers, settlers, slavery, Puritans, Pilgrims, pioneers, the American Revolution, and the westward movement. They will learn about leaders like George Washington, Benjamin Franklin, and Thomas Jefferson.
In the sixth grade, students will learn about the history and geography of ancient civilizations. They will study the early societies of the Near East and Africa, the ancient Hebrew civilization, Greece, Rome, and the classical civilizations of India and China. Students will learn about everyday life, art and architecture, the tools that ancient peoples used, the myths they developed to explain the natural world, and the great ideas that ancient civilizations developed.

In the seventh grade, students will continue to study world history and geography from approximately A.D. 500 to 1789. This will take them from the fall of Rome to the spread of Islam. They will learn about the Mayan, Incan, and Aztec civilizations. They will examine life in China, Japan, and Europe, and they will take a close look at the Renaissance, Reformation, and scientific revolution in Europe.

In the eighth grade, students will again study U.S. history and geography. Students will concentrate on the tumultuous years from the framing of the Constitution to World War I. Students will also learn about the special characteristics of the West, the South, and the Northeast; about the many reform movements that swept the nation, such as those for the abolition of slavery, for women’s rights, and for public education; and about the Civil War and the spread of the industrial revolution.

In the ninth grade, students will select elective courses in history/social science, such as California history, geography, comparative world religions, anthropology, psychology, sociology, women’s studies, ethnic studies, or law-related education. Elective courses give students an opportu-
nity to explore in greater depth problems or issues that interest them.

In the tenth grade, they will study modern world history from about 1789 to the present. They will learn about imperialism and colonialism in India, the causes and consequences of World War I, totalitarianism in Nazi Germany and Stalinist Russia, and World War II. A feature of this year's courses is a study of nationalism in the world today, which will introduce students to problems and issues in Asia, Africa, the Middle East, and Latin America.

In the eleventh grade, students will focus on the United States in the twentieth century. They will learn about the Progressive Era, the Jazz Age, the Great Depression, the two world wars, the cold war, the civil rights movement, and the wars in Korea and Vietnam. They will learn how the principles of the Constitution have affected the development of American society, and they will analyze the major economic and social problems that confront the United States today.

In the twelfth grade, students will spend the first semester closely examining the institutions of American government and comparing them to other governmental institutions in the world today. They will discuss the principles of American democracy and the privileges and responsibilities of citizens in a democracy, including the importance of registering to vote at the age of eighteen years. In the second semester, students will study the basic concepts of economics. This will help them understand the economic problems and institutions of the United States and other countries.
What Is Different About the New History–Social Science Curriculum?

It emphasizes history and geography.

In every grade, students will learn that events occurred in a particular time and place, and they will always be challenged to ask: Why? Why now? Why here? History is like a jigsaw puzzle or a detective story in which not all the answers are known. History can be fascinating to students when they find out why things happened, when, and where; they learn about the ideas that caused wars, revolutions, and crusades and about the men and women who made differences.

It encourages the integration of the humanities, social sciences, and literature with the teaching of history.

It encourages teachers to integrate the humanities and social sciences into the study of history and geography. To understand any society, whether it is the United States today or an ancient civilization, one should know how the society was ruled (politics), what groups were part of the society (sociology), and how people worked and produced goods (economics). In order to have a better sense of the society and to be able to imagine what it was like to be alive then, students should examine the society's art, music, drama, dance, literature, architecture, technology, religion, sports, and daily life.

It encourages teachers to integrate literature with the teaching of history. Students will read journals and diaries of pioneers in order to understand frontier life, the great myths and legends of each civilization, the
The social studies curriculum is enriched in kindergarten through third grade.

Students are required to study world history for three years.

It emphasizes the rights and freedom of individuals.

The curriculum recognizes the diverse cultural heritages that make up the United States.

words spoken or written by significant men and women, and novels and biographies that help them see events through the eyes of those who were there.

It enriches the social studies curriculum in kindergarten through third grade with the introduction of biographies, myths, legends, and historical stories. These studies will prepare children better for the upper grades by giving them a rich historical foundation.

It requires that all students study three years of world history. California is the first state in the nation to place so strong an emphasis on world history. The world becomes a smaller place every day, and we cannot afford to graduate students who are ignorant about the other major civilizations in the world.

It emphasizes the importance of democratic values and human rights. One of the great themes of modern history has been the development of governmental institutions to protect the rights and freedoms of individuals. Students will learn how to participate in government and civic agencies so that they can strengthen democratic institutions in their own communities.

It recognizes the multicultural character of American society and alerts students to intergroup relationships in other societies. The curriculum stresses that the United States is a nation composed of many different groups and cultures. It teaches respect for diverse cultural heritages. A major focus in the study of national and world history is to understand why groups clash and under what circumstances they live in harmony.
Parents will see a variety of learning activities and teaching methods when they visit their children's schools.

It acknowledges the importance of religious ideas in national and world history. In American history, students will learn about the role of religious organizations in the civil rights movement and other reforms. In world history, they will examine the ethical ideas of Christianity, Judaism, Islam, Buddhism, Confucianism, and Hinduism. They will also learn how religious conflicts have sometimes provoked wars and prejudices.

It examines ethical ideas and their consequences. Students studying history need to understand the conditions that produce a good society, one which protects individual dignity, as well as to understand how governments sometimes oppress their own citizens and tyrannize others.

The new curriculum does not mandate how teachers will teach. It encourages teachers to use a wide variety of methods in teaching history–social science. The framework is a guide to what should be taught, not how it should be taught. Teachers may use debates, plays, computers, writing activities, cooperative or group activities, and any other approaches that will help children understand the past as a living reality.

We hope that parents will see history–social science being taught daily. We expect that parents will see their children actively participating in the classroom in a variety of interesting and lively activities—for instance, performances, role playing, simulations, discussions, mock trials, and student projects.
Children can be more successful in school if parents do the following:

- Read their textbooks and reports.
- Review their group projects.
- Visit their classrooms.
- Meet their teachers.
- Ask teachers about their children's progress.
- Ask their children to talk about what they do in class and what they are learning.

Discuss issues and events of the past and present.

- Share family history with their children.
- Tell children about their own memories of important events.
- Talk about current events with children.
- Encourage them to watch television programs about important historical topics and current events.
- Try to discuss current events from different points of view. Help children think about causes (Why did it happen?) and consequences (What might happen now?).

Be good role models for their children.

- Read newspapers and news magazines for informed judgments.
- Give children books about important people and historical events. (At the end of this parental guide, there is a list of publications that support the learning of history-social science.)
- Help children locate places, countries, and regions on maps or globes and discuss with them why people have settled there and how they live.
- When taking trips, let children follow the routes on maps. Discuss how people live,
Inquire about homework and give ideas on finding local resources.

- Discuss their homework assignments.
- Encourage children to talk with family members, neighbors, and friends about current events.
- Help children find out how to get information for school projects from local historical societies, museums, and civic or governmental offices.
Looking Toward the Twenty-first Century

Students will be better equipped to face issues and situations as adults.

History and geography influence the shape of the future. A solid grasp of these disciplines, from both national and world perspectives, will enable students to comprehend better the issues and situations they will face as adults. The development of a safer, stronger nation and world depends on a well-informed citizenry that values the priceless heritage of freedom and knows the impact of history. President Harry S Truman once remarked that one cannot be a good citizen without knowing history. Knowledge resulting from the history-social science curriculum will help develop young people who care about the quality of life in their communities, nation, and world. Consequently, students will be motivated to preserve and participate in the democratic process. Students will be better equipped to differentiate between what is important and not important and will work to solve or resolve problems more intelligently than if the curriculum had been only casual or piecemeal.

The History-Social Science Framework for California Public Schools, Kindergarten Through Grade Twelve is available from the State Department of Education for $6 plus sales tax for those living in California. Copies may be ordered by writing to:
