BACKGROUND

The public library has played a historic role in serving the nation's youth. In the early 1900s, Ann Carol Moore began developing children's services at New York Public Library based on her observation of the needs of young people in New York City. Children's and young adults' services at NYPL and other urban centers grew from the
simple provision of library materials and bibliographic instruction to the provision of
recreational programming, clubs, browsing rooms and lounges (Braverman, 1979).

Current trends are again influencing youth services in libraries. Economic and social
conditions have increased the need for child care services and created the
phenomenon of the so-called "latchkey child"--the school-aged child who has no parent
or guardian at home after school hours and has no alternative care arrangement
(Services to Children Committee, 1988). It is not surprising that great numbers of
children are in the public library unattended after school, on school holidays, and during
emergency closing days such as snow days. What role do public libraries have to play
in providing safe shelter for the nation's children? Where does the library's responsibility
to community needs end? Who will provide the after-school services to children if the
public library closes its doors?

LIBRARY REACTIONS

Some libraries see the increasing number of children as an opportunity to improve youth
services. Film showings, book discussion groups, and homework assistance programs
are some of the creative solutions being implemented by public libraries around the
country (Dowd, March-April 1989). Greenville (SC) County Library elicited the
cooperation of many social service agencies to develop a program teaching
self-sufficiency skills to latchkey children. After one year of LSCA (Library Services and
Construction Act) funding, the program is now fully funded by the library itself
(Chepesiuk, 1987). Vivian Wynn, branch manager of the Mayfield (OH) Regional Public
Library sees the after-school group as enabling public library staff to maintain contact
with youth and to present this captive audience with attractive materials and programs

Other libraries are facing philosophical, economic, and legal dilemmas associated with
libraries showed that "while librarians perceived that unattended children provide
libraries with an opportunity to develop new methods of effectively serving children, the
majority also reported adverse situations, such as inappropriate behaviors, patron
complaints, delays in closing the library due to unattended children, and lack of seating"
(Dowd, March-April 1989, p. 102). Some libraries cope by providing security guards or
childcare services (Dowd, March-April 1989). At the Geauga West Library (Chesterland,
OH), money from vending machines used by children after school pays for a substitute
teacher to act as a monitor (Rome, 1990). Police officers drop in unannounced at the
Middlefield (OH) Public Library (Rome, 1990), and prohibiting unattended children is a
solution employed in places such as Flagstaff, Arizona and Iowa City, Iowa (DeCandido,

EXAMINING THE PROBLEM OF LATCHKEYS IN
LIBRARIES
In 1988, the Services to Children Committee of the Public Library Association (PLA) published ""Latchkey Children' in the Public Library: A Position Paper." This paper was an attempt to gather information about latchkey children in libraries and to make recommendations for public library policy. However, addressing the needs of this special population is complicated by the difficulty in classifying young library users. As the report notes, there are many reasons children go to the library (Services to Children Committee, 1988):
* because they like libraries and library materials, and libraries can meet some of their homework or recreational needs;
* because they live near a library and go there rather than be alone at home;
* because they have been told to use the library as a safe place when a parent or guardian is not available.

It is virtually impossible to distinguish the true latchkey child from any other youthful library user, and the laws of confidentiality and privacy prohibit intrusive behavior by staff (Rome, 1990). In addition to the so-called "latchkey children," there are children who are brought to the library by a parent or guardian and then are left while the parent or guardian uses another part of the library or leaves to go elsewhere.

Some librarians believe that labeling children is unimportant and that all children should have equal access to service regardless of their status. Furthermore, some believe that serving unattended children is advantageous because there are no parental restrictions on materials or information (Dowd, March-April 1989). While protecting these rights, however, the security and safety of children are often at risk. The public library is not the safe haven envisioned by many parents, and staff should not act "in loco parentis." "People think of the library as a safe place," says Mona Stevenson, Assistant Director of the Warren-Trumbull County Public Library (Warren, OH), "but we've had incidents ranging from flashing to purse snatching. We get the same kind of people you would get at a mall--and most people wouldn't leave their children unattended in that environment" (Rome, 1990, p. 36).

**SETTING POLICY**

Concerns about liability and child safety have led many libraries to develop policies (Mueller, 1987). However, less than one-third of 91 libraries surveyed had a written policy specifying procedures for dealing with unattended children or defining acceptable behavior (Dowd, July 1989). Furthermore, it was found that libraries tended to write policies only after experiencing some problem, rather than proactively (Dowd, March-April 1989). In the case of injury to a child while on library property, the lack of
written policy jeopardizes staff, children, and the library's administration. Inadequate staffing and building design often make it difficult to monitor children, exacerbating the safety problem (Dowd, July 1989). Policy can promote consistency in the way staff handle problems which may, in turn, reduce the disruptive or problem behavior. The PLA report also stresses the need for policy, but it cautions that policies should not be written to "absolve the library of any responsibility for children on their own" (Services to Children Committee, 1988). It calls for a policy that gives clear procedures to staff but insists that these policies and procedures must be part of the library's overall effort to work within its community and that staff training be a major component. Dowd (July 1989) also recommends a combination of written policy, staff training, and community involvement to reach a workable solution to the library-latchkey situation.

Herbert White (1990) believes that the latchkey problem should not be assumed by libraries. He cites the PLA work as evidence that librarians tend to trivialize themselves by failing to define a role:

Is the library's role the provision of shelter? It is if we simply assume that we do for anyone what they came to have us do, that any professional decision-making by librarians is really incidental to a changing set of circumstances we do not control. (p. 105)

**CONCLUSION: THE LIBRARY ROLE**

As each public library comes to understand its role in its unique community, there will be a clear focus on where it stands relevant to social dilemmas. By developing a mission statement and defining a role, a library chooses its direction and can develop programs and policies accordingly. Library professionals must be part of a network of policymakers investigating solutions to problems such as latchkey children. The library has an important role to play in providing information about the latchkey problem, in bringing forth literature on community solutions throughout the United States, and in continuing a strong tradition in children's services including after-school programs. Cross-over to latchkey projects may occur when a large library provides space for an outside agency to run an after-school program or for a day care center to schedule regular visits to the library. The public library will also need policies to deal with disruptive and unattended children. However, whether the library should provide services to latchkeys beyond standard user services--free access to information, dissemination of varied materials, and public programs that are rooted in library resources--will continue to be debated.
