Classification; Definitions; Educational Change; Educational Trends; Higher Education; Institutional Mission; Institutional Role; Liberal Arts; Private Colleges; Professional Education; Role of Education; Trend Analysis

Educational and economic criteria were developed to define a liberal arts college, and this definition was applied to the list of Liberal Arts I and Liberal Arts II colleges in the Carnegie Foundation classification. Educationally, liberal arts colleges were defined by the following criteria: they award the bachelor of arts degree; are residential; enroll full-time students in the age range of 18 to 24; and limit the number of majors to roughly 20 in the arts, humanities, languages, social sciences, and physical sciences. They rarely enroll more than 2,500 students, and they provide a pre-professional education. Economically, liberal arts colleges have comparable revenue and cost structures, with economic struggles being a function of their offering a curriculum that does not cater to students' concerns with the job market. Using these criteria, the list of 540 institutions classified as liberal arts was narrowed to 212. The paper concludes that the liberal arts college is disappearing, and another type of institution—the professional college—is taking its place. A list of the 212 liberal arts colleges meeting the criteria is provided. (JDD)
ARE WE LOSING OUR LIBERAL ARTS COLLEGES?

by David W. Breneman
ARE WE LOSING
OUR LIBERAL ARTS
COLLEGES?

by David W. Breneman

In the course of doing research for a book on the future of private liberal arts colleges, I made a startling discovery. While I began with the belief that there were roughly 600 such institutions in this country, I have concluded that, given a reasonable definition of a liberal arts college, we have only about 200 of them left.

My discovery was as simple as it was disturbing: The liberal arts college as we know it is disappearing from the landscape, and another type of institution—the professional college—is taking its place. Furthermore, I believe that most educators are not aware of this "sea change," nor have we begun to debate its significance.

I think it's time for that debate to begin.

A Unique Mission

Among the nation's 3,400 colleges and universities, only the liberal arts colleges are distinguished by a mission of providing four-year baccalaureate education exclusively, in a setting that emphasizes and rewards good teaching above all else.

These colleges tend to enroll small numbers of students; they emphasize liberal education over professional training. They are the source of a disproportionate number of graduates who go on to earn doctorates and to pursue academic careers.

Their "privateness" means that certain values—religious and oth-
erwise—can inform their mission in ways not possible at state institutions, while their small size makes possible a sense of community among students, faculty, and staff that can rarely be achieved in larger settings.

The diversity of American higher education, one of its oft-noted and much-valued attributes, will be much reduced if these small private colleges are unable to sustain themselves and their mission because of changing economic circumstances.

Defining Terms

What is my definition of a liberal arts college? In reality, when I began my research, I gave relatively little thought to the group of colleges to be included, for I planned to use the Carnegie Foundation classification of Liberal Arts I and II colleges.

These categories include primarily undergraduate colleges. Liberal Arts I colleges award more than half of their degrees in the arts and sciences. The Liberal Arts II colleges are less selective and include a group that award fewer than half of their degrees in the arts and sciences but are too small to be considered what Carnegie describes as "Comprehensive."

I was intrigued, then, when William Bowen, president of the Mellon Foundation, mentioned that his work with the Carnegie classification had convinced him that the Liberal Arts II category was exceedingly heterogeneous, with many of these colleges looking more like "comprehensive" institutions than liberal arts colleges. Indeed, in Bowen's recent book, written with Julie Ann Sosa, Prospects for Faculty in the Arts & Sciences, the authors combined the Liberal Arts II category with the Comprehensive II category to form a new group they labeled "Other Four-Year Institutions."

Subsequent reading and numerous conversations convinced me that I would have to develop my own definition and list of colleges.

There were really two distinct problems. First, a careful review of Carnegie's Liberal Arts II group convinced me that there were several colleges in that classification that rightly belonged in any study of liberal arts colleges. Second, there were some institutions in the Liberal Arts I category that seemed not to belong; they offered graduate and professional degrees—they were small universities.

After further thought it soon became apparent that liberal arts

Liberal Arts Colleges: An Endangered Species?

In deciding on what characterizes a liberal arts college, I followed the Carnegie Foundation’s classification of Liberal Arts I and II colleges, supplemented with academic and financial criteria.

On the academic side, I divided degrees awarded into liberal arts and professional fields; I kept any college that awarded at least 40 percent of its degrees in liberal arts. This weak criterion eliminated more than 300 Liberal Arts II colleges.

I used a financial criterion for Liberal Arts I colleges, excluding colleges that offered significant graduate or professional programs. I wanted comparability of financial statements (revenues and expenditures), although a law school or an M.B.A. program may so alter the tone of an otherwise undergraduate college. I eliminated about ten Liberal Arts I colleges by this financial criterion.

colleges might be characterized in two ways: by their educational ideals and by their economic structure. Educationally, these colleges award the bachelor of arts degree, are residential, enroll full-time students in the age range of 18 to 24, and limit the number of majors to roughly twenty in the arts, humanities, languages, social sciences, and physical sciences. They rarely enroll more than 2,500 students; most enroll between 800 and 1,800.

The kind of education they provide might be described as preprofessional: Many students enroll in graduate or professional programs upon graduation, but the college itself offers virtually no undergraduate professional education.

Economically, liberal arts colleges have comparable revenue and cost structures. Their common economic struggle is partly a function of their offering a curriculum that does not cater to current student concerns with the job market. While remaining true to an educational ideal, liberal arts colleges must compete with universities that provide many more courses and majors, as well as a vast array of professional degrees in fields such as business, engineering, architecture, nursing, and education.

And while it is easy to understand the pressure on colleges to shift away from offering liberal arts toward offering professional training, it is all the more important to appreciate the financial constraints of liberal arts colleges that have not taken that way out.

Selection and Elimination

Although it was not possible to adhere slavishly to the educational and economic criteria in making my selections, the criteria did provide boundaries that narrowed the original group of nearly 600 institutions to slightly more than 200. As such, the list should give us pause about the changes
taking place in higher education. (The list also has implications for publications such as U.S. News & World Report, which use the Carnegie classifications for their annual rankings of college quality.)

As liberal arts colleges evolve in response to economic pressures, they lose their distinctive purpose. We should be thankful that 200 of these colleges remain, and be vigilant that their number does not decline further.

The list in the box (opposite) presents my selection of 212 liberal arts colleges, organized by state and by Carnegie Foundation classification. Of the 140 private Liberal Arts I colleges included in the 1987 Carnegie classification, I have retained 129; of the 400 private Liberal Arts II colleges, I have retained 83. (As another index of change, it is worth noting that the 1970 Carnegie classification listed 144 private Liberal Arts I colleges and 545 private Liberal Arts II colleges.)

Clearly most of my changes were in the Liberal Arts II category, but before turning to that group, a few words are in order about the Liberal Arts I category.

**Liberal Arts I.** In general, the colleges I excluded from this category are those that might be thought of as “liberal arts plus”—essentially small universities. To give a few examples, Drew University has a seminary and offers several doctoral programs; Willamette University has both law and MBA programs; Lewis and Clark enrolls several hundred graduate students in several fields of study; Bucknell has a range of programs that go well beyond the liberal arts, including a broad array of engineering majors; Hamilton has a law school and a graduate program in liberal arts.

In addition to these Liberal Arts I colleges that I have excluded, there are several private institutions that Carnegie classifies in its Comprehensive category that

think of themselves primarily as liberal arts colleges, for example, Rollins, the University of Redlands, the University of Richmond, and Whittier. While these institutions are not liberal arts colleges by my definition, the "comprehensive" label also seems in error; it overstates the case. The Carnegie Foundation might well consider a new category in its next revision to cover these small universities.

**Liberal Arts II.** But what of the more than 300 Liberal Arts II colleges that I have excluded from my study? In general, I think of them as "liberal arts minus," in the sense that they are essentially small professional colleges. They have few liberal arts majors, but usually have a liberal arts core and tradition. The acid test that I applied in excluding colleges in this category was the percentage of degrees awarded in non-liberal arts fields.

With help from the National Center for Higher Education Management Systems, in Boulder, Colorado, I arrayed each college's undergraduate degrees awarded in 1985-1986, by liberal arts and professional fields, with "professional" defined to include business, engineering, education, nursing, computer science, and agriculture. The colleges were then ranked ordered by the percentage of professional degrees they awarded. I eliminated any college that awarded more than 60 percent of its degrees in professional fields. In other words, if a college awarded as little as 40 percent of its degrees in the liberal arts, I kept it on the Liberal Arts II list. Only 83 of 400 colleges met even that low measure.

The more than 300 colleges, which by Carnegie definition have fewer than 1,500 students enrolled, cannot plausibly be labeled "comprehensive" but should instead be viewed as small professional colleges. Again, a new category is needed in the next Carnegie revision.

It should be noted that I also ran these degree statistics for the Liberal Arts I colleges, and a very different pattern emerged. Twenty-six of the colleges awarded no professional degrees, and thirty-one more awarded less than 10 percent. Among those that awarded 25 to 40 percent of their degrees in professional fields, business and education accounted for most of the numbers. (Six of the Liberal Arts I colleges actually broke my 60 percent criterion on professional degrees—Carroll, Thomas More, Wartburg, Rockford, Mount St. Vincent, and MacMurray.)

**Useful Information**

Even within the presumably homogeneous category of Liberal Arts I colleges, therefore, tremendous variety exists in the nature of subjects studied, and I would argue that these statistics should be made available to students and parents shopping for colleges.

In Michigan, for example, where I am most familiar with competition and admission overlap, the four colleges that many students and parents see as similar—Alma, Albion, Hope, and Kalamazoo—have the following percentages of professional degrees awarded: Alma-36 percent; Albion-41 percent; Hope-47 percent; and Kalamazoo-2 percent.

I believe that these differences are every bit as significant, perhaps even more so, than comparisons of average SAT or ACT scores.

Based on numerous campus visits I have made in recent years, I can attest that these curricular differences do affect the campus atmosphere, the sense of community, the sense of shared values. Where a separate business or engineering faculty exists, for example, tensions arise over everything from salary differentials among faculty members to the sense of what is valued and stressed in presenting the college to the "outside world." The sense of shared values and high morale that a good, small college usually has is often lacking on campuses that have added professional programs.

**A Sector in Peril**

My conclusion from this interesting, but unexpected, part of my research is that the liberal arts college is in much greater peril than I thought it was, but not because it is failing financially and closing its doors.

Instead, it is surviving, but only by changing and becoming something else—for want of a better term, a small professional college.

Furthermore, I do not know the time pattern of these changes, i.e., how many colleges shifted their curricular emphases within the last ten to fifteen years. A separate study examining the recent history of this sector would be most worthwhile, including the forces that have brought about change.

Perhaps there is no "good" alternative for many of these colleges as they struggle to survive in a rapidly changing marketplace. Because of their valuable and unique characteristics, though, it will be a serious loss to the nation if this erosion continues among the 212 liberal arts colleges that have survived.

**Notes**

3. For the best discussion of this educational ideal with which I am familiar, see Loren Pope, *Looking Beyond the Ivy League* (Penguin, 1980). Pope, director of the College Placement Bureau, has worked for years in helping families make informed college choices. I share the educational judgments that he advances in his book, and I think he would agree broadly with the distinctions among colleges that I am making, although I have not discussed the subject with him.
