ABSTRACT

This report presents an overview and a preliminary analysis of the legislative decisions made during 1990 for the 1991 fiscal year on state tax appropriations for higher education in the 50 states. The data are aggregated from a monthly research report of state tax appropriations for operating expenses of higher education. Following an introduction a retrospective of 1991 discusses nationwide gains, 2-year gains among the states, and the "megastates" (i.e., those heavily populated states that annually appropriate more than one billion dollars for higher education); a regional view of fiscal year 1991 is also provided. An analysis of trends in state higher education support looks at regional and revenue variations among the states, state support to student financial aid, community colleges and principal state universities, and state budgeting concerns. There is also a comparison of higher education finance measures. A table ranks the states for appropriations per capita and per \$1,000 personal income. A section "What the Figures Are Intended To Mean" provides a framework for the collection and presentation of data. The bulk of the publication consists of tables of data for each state, each table presenting appropriations to individual higher education institutions including appropriations for scholarships and sums destined for higher education but appropriated to some other state agency for miscellaneous types of support to institutions or to students. For each table there is column for 1991 and a column for the previous fiscal year. (JB)

Microcomputer disks of the appropriations data are available from the Center for Higher Education, 331 DeGarmo Hall, Illinois State University, Normal, IL 61761. The data are in tabulation form for each state for each fiscal year since FY1979 to FY1990, inclusive. The software program used is LOTUS 1-2-3, Release 2.01. Price: \$25.00 (prepayment, preferred). For more information in this regard, please telephone Gwen Pruyne 309/ 438-5405.

STATE SUPPORT OF HIGHER EDUCATION: A RETROSPECTIVE OF FY1991

by Edward R. Hines

The Grapevine Data Base

This publication is the 31st consecutive report of state tax appropriations for the operating expenses of higher education in the 50 states. It continues the "longitudinal study of state tax support of higher education in the United States," begun in 1958 by M. M. Chambers at the University of Michigan. In 1960, the National Association of State Universities and Land-Grant Colleges (NASULGC) published the first volume in this series, and NASULGC has published this report annually since that time. The purpose of this introduction is to explain the nature of the report and the data which are presented herein. While consistency over time is one of the hallmarks of these data, there have been some additions and changes in recent years.

These figures reflect legislative decisions in the 50 states about state tax appropriations for the operating expenses of colleges and universities. These state tax appropriations data are reported by a network of state government and higher education officials in each of the states and are published three times during the year. Initially, the figures are compiled as soon as possible after legislative decisions are made and appear in the publication, Grapevine, the monthly research report edited by Edward R. Hines and published by the Center for Higher Education at Illinois State University. These state tax appropriations data then are published in somewhat abbreviated form in an October issue of The Chronicle of Higher Education. In addition, the Chronicle publishes two-year and ten-year percentage changes in both current and constant dollars. Until 1986, the Chronicle also published state tax appropriations per capita with state rankings and state tax appropriations per \$1000 of personal income with state rankings. Beginning in 1988, the per capita and per \$1000 of personal income figures and rankings have been published in Grapevine, usually in the December issue. These state tax appropriations data, finally, are published in complete form early in the calendar year by NASULGC.

The distinguishing features of these state tax appropriations data are enumerated in "What the Figures Are Intended to Mean," on page 15. These data have five predominant characteristics. First, only one source of revenue is represented, and that is state tax appropriations for colleges and universities. Admittedly the largest revenue source in the public sector and an important revenue source in the private sector, state tax funds are one among numerous sources of revenue for higher education. Other revenue sources include local tax appropriations which are of special importance to community colleges in a number of states. Student tuition and fees are important revenue sources; and, during the 1980s, became a controversial topic because of the extent to which it appeared as if student tuition was being used to supplant state taxes and general revenue funds as growth in state tax sources slowed considerably.

A second predominant characteristic of these data is that they represent appropriations and not actual expenditures. These appropriations are made by state legislatures and provide the funds from which expenditures are made. In some states, there is a point at which it becomes difficult to separate appropriations from expenditures. However, to the extent possible, Grapevine and this report contain only appropriations.

Third, these appropriations are reported by campuses and include appropriations for state coordinating or governing boards as well as appropriations for selected statewide programs which may be administered by the state coordinating or governing board, by a state scholarship agency, or by private or independent institutions (as long as the source of funds is state taxes). In a number of instances, sums actually appropriated to agencies other than higher education are included if the sums are destined for higher education, such as employee fringe benefit increases, medical and health education, and research.

A fourth characteristic of these data is that they do not include appropriations for debt service and for capital outlays of all types. Admittedly, the interest in building construction and facilities has increased greatly in recent years because of the ever-growing deterioration in the physical plants on college and university campuses, but Grapevine figures exclude capital appropriations.

A final characteristic of these data is that, beginning in 1987 in this volume and beginning in 1989 in Grapevine, revisions to the original appropriations are included. They are included most frequently in the column of data for the preceding fiscal year, which appears beside the column of current fiscal year appropriations. In the state tabulations, an "(R)" following the FY1989-90 heading indicates that revisions have been made for that year. Increasingly during the 1980s, revisions to the initial legislative appropriations were made either by state legislatures or by governors. Revisions can include reductions, which may be termed rescissions, reversions, or amounts withheld; data revisions also can reflect enhancements, additions, and supplements to the original legislative decision for higher education. The publications cycle requires that any revisions which are received by Grapevine by October 1st can appear in the October issue of the Chronicle, and revisions which are received by Grapevine by November 1st can appear in the NASULGC publication. Revisions received after these dates are held over until the following year.

The effect of these characteristics makes the publication of these data timely, accurate, and comprehensive. The data are timely because they are published as soon as possible after the legislative decisions are made. The data are accurate because of the inclusion of revisions which have occurred increasingly in the states. The data are comprehensive and reflect total state tax effort for higher education. The data only begin to approach being comparable. Comparability is not "claimed" because of the unique budgeting practices in the states which may make certain categories of data unique to a selected state and not generalizable across all states. Indeed, it is not possible to reflect both total state tax effort and comparability in one data set. Other data, collected and published later in the year, are available in other national reports which include the following: National Comparison of Financial Support for Higher Education by Jacquelyn Johnson of the Higher Education Coordinating Board, 917 Lakeridge Way, M.S. GV-11, Olympia, Washington 98504; State Profiles: Financing Public Higher Education by Kent Halstead of Research Associates, 2805 Klinge Road, N.W., Washington, D.C. 20008; and State Higher Education Profiles by the Center for Education Statistics, U.S. Department of Education, Washington, D.C. 20208.

Predominate Features in State Support for FY1991

Three predominate features identify trends in state higher education support for FY1991. First, over \$40 billion dollars were appropriated by the states to higher education, and this was the first time that this amount nationwide exceeded \$40 billion. Second, the dollar gain from FY1990 to FY1991 (\$1.5 billion) was equal to the dollar gain reported in 1984 and 1987, and was the second smallest since 1980. Only in FY1983, following a nationwide recession, was the dollar gain for higher education smaller in amount (\$1.3 billion). The third identifying characteristic for FY1991 was the percentage of gain which, in one-year and two-year percentage gains, was the smallest since Grapovine statistics began to be collected in 1958-59. From FY1990 to FY1991, there was only a 3.7% gain, and from FY1989 to FY1991 there was only a 11.6% gain.

Nationwide Gains

Table 1, Figure 1 (page 10), the 50-state summary table and the map (pages 13 and 14) present a statistical view of state higher education support. This year, FY1991, was the first time on record that state support for higher education did not double in magnitude over the ten-year period; there was a billion dollars less than a doubling in support from FY1981 (\$20.9 billion) to FY1991 (\$40.9 billion).

In dollars, the gain from FY1990 to FY1991 was one of the lowest experienced in recent years. However, since 1980, there have been five years where the dollar gains for higher education were less than 2.0 billion, in 1981, 1983, 1984, 1987, and the current year. Only in FY1983 was the dollar gain (1.3 billion) less than that experienced in FY1991, although the dollar gain in FY1984 and FY1987 equaled the dollar gain in FY1991.

The one-year and two-year percentage gains revealed that both the one-year percentage gain from FY1990 to FY1991 and the two-year percentage gain from FY1989 to FY1991 were the lowest on record, a 3.7% one-year gain and a 11.6% two-year gain. During the previous decade (FY1981 to FY1991), there was only one other year when the one-year percentage gain was less than five percent (4.8% in 1987). There were two years, however, when the two-year percentage gain was 12% or less (1988 and 1984). It should be noted that revisions were made in the original appropriations figures for FY1984 and FY1988 which raised the national two-year percentage gains by a small amount. Should an increase in total appropriations occur for FY1991, the two-year percentage gain could increase by a small amount.

Table 1

Fiscal Years	1981*	1982*	1983*	1984*	1985*	1986*	1987*	1988*	1989*	1990	1991
Billions of Dollars	20.9	23.1	24.4	25.9	28.4	30.7	32.2	34.4	36.6	39.4	40.9
1-Yr Gain (\$billions)	1.7	2.2	1.3	1.5	2.5	2.3	1.5	2.2	2.2	2.8	1.5
1-Yr Gain (Percent)	9.6	10.1	5.6	5.9	9.7	8.0	4.8	6.8	6.3	7.6	3.7
2-yr Gain (Percent)	22.9	20.7	16.3	11.8	16.2	18.8	13.1	12.0	13.5	14.3	11.6

*Data for these fiscal years have not been revised from earlier reports.

Recent Trends in Two-Year Gains

Table 2 displays three groupings of states, according to whether or not there was a two-year percentage gain in FY1991 which was greater (an increase) or smaller (a decrease) than the two-year percentage gain reported for that state in FY1990. It is possible to observe trends over time by utilizing this table, which has been included in these "Retrospective Reports" since 1988. A summary of this chart for each year, going back to 1988, is shown in Table 3. It is clear that the trend observed in 1989 and in 1990--of an increasing number of states making gains in supporting higher education--was not continued in FY1991. This year, the trend virtually duplicates the pattern observed in 1988, as shown in Table 3, with only 17 states showing a percentage increase in two-year gains from the previous year, and in FY1991 26 states experiencing a decrease in two-year percentage gain for higher education from the previous year. FY1991 turned out to be an "off year" for higher education, much as 1988 was a year when far fewer states were able to make two-year percentage gains over the previous fiscal year.

Of the 17 states reporting an increasing two-year percentage gain from FY1990 to FY1991, two experienced "double-digit" gains including 15 points in Louisiana and 13 points in Idaho. In the remaining 15 states, there were "single-digit" gains.

Table 2

17 States with Increasing 2-Year Gains, FY90 to FY91			26 States with Decreasing 2-Year Gains, FY90 to FY91		
State	FY90*	FY91	State	FY90*	FY91

North Dakota	12	12	West Virginia	6	4
Washington	17	17			
Wyoming	4	4			

*Unrevised from last year's report, with the exception of the FY1990 figure for North Dakota.

Table 3

Fiscal Year	1988	1989	1990	1991
Increasing	17	26	31	17
Decreasing	28	20	15	26
Identical	5	4	4	7

However, in the 26 states where there were decreases in two-year percentage gains from FY1990 to FY1991, six states experienced double-digit declines. There were declines of 19 points in New Jersey, 16 points in Mississippi and Virginia, 14 points in Rhode Island, 11 points in Massachusetts, and 10 points in New Hampshire. There were 20 other states with declines. In FY1991, seven states experienced identical gains from FY1990 to FY1991, and five of the seven were above the national average percentage gain of 11.6%.

The Megastates

The "Megastates of America," using a term coined by Neal Pierce in a book of the same title, refers to states which are highly populated, industrialized, and with relatively large higher education systems. The number of megastates, each of which annually appropriates more than one billion dollars for higher education, has grown from nine such states in FY1986 to 12 states in FY1991. This number is nearly one-quarter of the 50 states.

Of the 12 megastates, six reported two-year percentage gains which were greater than the national average of 11.6% (Illinois, Minnesota, Ohio, Texas, California, Pennsylvania); North Carolina had a two-year percentage gain equal to the national average; and five states were below the national average (Florida, Michigan, Virginia, New York, and New Jersey). Viewed in another light, however, four of the 12 states appeared in the top two quartiles of states, using two-year percentage gains (Illinois, Minnesota, Ohio, Texas), and the remaining eight states had two-year percentage gains which were in the bottom two quartiles.

A Regional View of FY1991

It is possible to arrange the 50 states according to their geographic location (quadrants) and according to the quartiles arranged in rank order of descending two-year percentage gains. Table 4 displays the states using quadrants and quartiles. Geographic quadrants were formed by dividing the United States into four relatively even regions by locating a national "center point" at the northeast corner of Missouri. The Mississippi River divides East from West, and the Ohio River and southern border of Pennsylvania divide Northeast from Southeast. Alaska is placed with the Northwest and Hawaii is placed with the Southwest. The Northwest has 11 states, the Southwest has 13, the Northeast has 14, and the Southeast has 12 states. The quartile grouping of states, based upon descending two-year percentage gains, may have varying numbers of states in a quartile in any one year due to the natural dividing lines between state groupings at specific percentage amounts. In this analysis for FY1991, 11 states were in the top quartile (19% to 35%), 13 states were in the second quartile (14% to 18%), 12 states were in the third quartile (10% to 13%), and 14 states were in the bottom quartile (- 20 to +9%).

In the top quartile of 11 states, only Nevada reported a two-year percentage gain of more than 30%, ten states had gains of 19% to 30%, 14 states ranged from 13% to 18%, and six states clustered at 12%. There were five states at 11%, and the remaining 14 states experienced either single-digit or negative gains from FY1989 to FY1991.

By combining the quartile grouping with geographic quadrants, observations can be made along regional lines. In the Northeast, only two states appeared in the top quartile while six states were in the bottom quartile. Similarly, only a single Southeastern state appeared in the top quartile while four Southeastern states were in the bottom quartile. Of the 14 Northeastern states, nine were in the bottom half and, of the 12 Southeastern states, eight were in the bottom half. The states west of the Mississippi River generally revealed a different and more positive pattern. In the Northwest, seven of 11 states were in the top half with four states in the top quartile. In the Southwest, eight of 13 states were in the top half and four were in the top quartile. Only two of 11 Northwest states were in the bottom quartile and only two states in the Southwest appeared in the bottom quartile.

Table 4

Analysis of Trends in State Support for FY1991

The purpose of this analysis is to begin to identify and to explain the trends and variations in support of higher education among the states. The discussion focuses on differences in revenue capacity and in the willingness of lawmakers to support higher education. Further explanation includes differences among states in support for student financial aid, state support to community colleges, and state support of principal state universities.

Regional Variations. In 1988, this author observed that: "FY1987 and FY1988 were characterized by clear economic resurgence in New England, a strong performance of coastal states, and severe economic difficulties in the Southcentral and Northern Plains regions." No longer does that observation apply, but, in fact, one might make nearly the opposite observation, based on state support for higher education in FY1991. Unlike earlier comparisons of the "Sunbelt versus the Rustbelt," or the "Northeast versus the Southwest," for FY1991 the observation would be "East versus West," although, admittedly, it is easy to gloss over differences within regions which may be as large and important as differences among regions. Nonetheless, some regional observations can be made.

It is clear that many states east of the Mississippi River experienced considerable difficulties in either maintaining or increasing their support for higher education in FY1991, as compared to previous years. With respect to the 14 Northeastern states, two states appeared in the top quartile (Illinois and Maine), yet the evidently strong performance of Illinois is mitigated by its 22% being a two-year percentage gain. In the single year from FY1990 to FY1991, Illinois' percentage gain was one percent; therefore, a two-year percentage gain masks a more negative reality. Shifting Illinois into the lowest quartile, for instance, would result in one-half of the 14 Northeastern states being in the bottom quartile. Of these seven states, four are in New England with Vermont in the third quartile. Thus, of the six New England states, only Maine is in the top half. A majority are in the bottom quartile. Similarly, Maryland is the only Southeast state in the top quartile; eight of the 12 Southeast states are in the bottom half.

Conversely, of the 24 states west of the Mississippi River, one-third (eight states) appeared in the top quartile and only half that number (four states) were in the bottom quartile. The Northern Plains states (Minnesota, South Dakota), the central farm states (Nebraska, Kansas, Missouri), and the South Central states (Louisiana, Texas, Oklahoma) did well as did the western states of New Mexico, Nevada, and Idaho.

Revenue Variations. Many variables affect whether or not states are able to support higher education. None is more critical than "ability" and "willingness." Ability to support a public service, such as higher education, is interpreted as the fiscal capacity of a state to support higher education, defined here as "state revenue capacity" and measured by the percentage of change in the state's general revenue fund from one year to the next. Of equal importance is the willingness of state legislators and governors to provide actual appropriations, defined here as "lawmaker willingness" and measured by the percentage increase in overall state tax appropriations from one year to the next. Finally, and more specifically, actual higher education effort is defined as the percentage increase in state tax appropriations over the most recent two-year period as measured by current Grapevine data.

These three variables are operationalized in Table 5. State revenue capacity is defined by data from a summer survey of legislative fiscal officers by the National Conference of State Legislatures (NCSL). As contained in Table 5, state revenue capacity is based on the projected growth rate in state general fund revenue from FY1990 to FY1991. Lawmaker willingness is an estimate by legislative fiscal officers of the extent of growth in total state appropriations from FY1990 to FY1991. State higher education effort is derived from the actual state tax appropriations provided by each state to Grapevine as soon as possible after legislative decisions on higher education were made.

The states shown in Table 5 were those which showed either the highest or the lowest percentage gains in state tax appropriations from FY1989 to FY1991. There were 10 states in each grouping. The high group had a 24.6% mean two-year gain for higher education while the low grouping had a -.6% two-year gain for higher education. In total state appropriations, the high and low states demonstrated a 9.8% gain and a 4.0% gain, respectively. Similarly, in state revenue capacity, there was an 8.5% gain for the high group and a 6.9% gain for the low group. The states making greater higher education effort clearly were those having a greater revenue capacity as well as a willingness to support statewide services, in general.

Also shown in Table 5 are the means for state revenue capacity, lawmaker willingness, and higher education effort for the most recent five years. Interestingly, in revenue capacity, the difference between the highest and lowest state groupings has narrowed from 7.7 points in FY1987 to 1.6 points in FY1991. This indicates that there are smaller differences between top and bottom state groupings in revenue capacity over time. There is less of a difference in states' "ability to pay" between the high and low states, indicating that the availability of revenue has been diminishing, generally. Comparatively, in state tax appropriations increases over the five years, there are consistent differences between the high and low states. The differences diminish moderately over time, but there is a comparatively larger difference between the high and low state groupings. This indicates that, despite the fact that states are in the position of having less revenue which is available to be appropriated to such areas as higher education, they still make as strong an effort as possible in making overall appropriations, however, the states' effort to support higher education is inconsistent. Some states receive very little increase in state tax support; indeed, in three of the five most recent years, the bottom group of states has demonstrated a decline in state support, as shown by a negative figure for these states.

Table 5

States	TOP TEN TWO-YEAR GAINERS			States	BOTTOM TEN TWO-YEAR GAINERS		
	General Fund Increase ¹	State Approp Increase ¹	Higher Education Increase ²		General Fund Increase ¹	State Approp Increase ¹	Higher Education Increase ²

²Grapevine

State Support for Student Financial Aid. State tax appropriations data, as reported in Grapevine, are intended to be used for aggregate analysis at the state level. More specific line items, such as state support of state scholarship programs, are not intended to be analyzed utilizing Grapevine data. At the same time, in the reports submitted by states to Grapevine, it is possible to identify a specific item for student financial aid where states reported student aid separately. In the data for FY1991, there were 36 states where student aid was identified as a separate item. The reader is cautioned that this cannot be interpreted to mean that there are only 36 states where state resources are used for student aid. In these 36 states, there was a 30.8% two-year gain in student financial aid programs. This figure is nearly three times that of the national average of 11.6% two-year gain in state tax support for higher education. In 24 of the 36 states, there was a greater percentage gain in student aid, than there was a percentage gain in total higher education support in each state. Conversely, in only 12 states there were smaller percentage gains in state student aid, compared to total higher education support in each state.

State Support to Community Colleges. State tax support to community and public two-year colleges is an important source of revenue. In recent years, this report has identified that on a national basis percentage gains in support to community colleges usually are one or two percentage points greater than state higher education support in each state. FY1991 was no exception; two-year percentage gains in state tax support of community colleges were more than five points greater than total higher education support in each state. In 41 of the states, it was possible to identify specific amounts indicating state appropriations to community colleges. There was a 16.8% two-year percentage gain for community colleges, compared to an 11.6% national average two-year percentage gain for higher education. Furthermore, in 26 of the 41 states the percentage gains in state support of community colleges were greater than the two-year percentage gains to higher education in each state. In only 14 states were the percentage gains to community colleges smaller than the percentage gains to higher education in each state. In one state, the percentage gain in community college support was equal to the percentage gain to higher education.

State Support of Principal State Universities. Readers are cautioned that it is not the purpose of state tax appropriations data, as published in Grapevine, to isolate discrete items for comparative analysis. Yet, in the FY1991 data, another feature "stood out" and preliminary comment may be warranted. The principal state universities are those major research universities which may serve as the "flagships" of the respective state higher education systems. These institutions often but not always include the land-grant universities. In recent years, it has been common for these principal state universities to receive an appropriations amount which brings their two-year percentage gains to a level equal to or exceeding the percentage gains in higher education support in each state. This year, in FY1991, a different pattern emerged where the two-year percentage gains in support to principal state universities were often less than the percentage gains in higher education support in each state. Principal state universities were identified in 47 states. In those 47 states, there was an average 11.47% two-year gain in support of the principal state universities. This amount is very close to the national average of 11.6% two-year gain.

Yet, in 32 of the 47 states, two-year percentage gains experienced by principal state universities were smaller than the two-year percentage gains experienced by the states. In only nine states were the two-year percentage gains by principal state universities greater than the percentage gains by the states. In six states, there was an identical two-year percentage gain by the principal state universities and by the states. It appears, for instance, that in FY1991 support to areas such as the state college system, student aid, or the community college system, was enriched. There is no reason to believe, and these data do not support, any observation about a decision not to fund principal state universities to the level that they had been funded in

recent years. Yet, it can be observed that the percentage gains in state support to these research universities, compared to gains in state support to state colleges, were a bit lower this year.

State Budgeting Concerns. Changes in the original legislative appropriations occurred in a relatively larger number of states, causing revisions in the original figures submitted to Grapevine. In a number of instances, these were "last-minute" changes submitted by telephone or fax to Grapevine just prior to publication in The Chronicle of Higher Education in October. The magnitude and the number of these changes give rise to a hypothesis about there being uncertainty in the state budgeting process for higher education, perhaps reflecting larger fiscal and economic concerns in the states. These concerns, given the instability in the financial and global markets as this report is written in October 1990, may be associated with greater uncertainty in state budgeting for higher education than has been experienced in recent years.

Summary

In summary, this report has dealt with state tax appropriations for the operating expenses for higher education for FY1991. It was observed that there had been a marked change in state higher education support from FY1990 to FY1991 with the current year witnessing lower two-year percentage gains for higher education, and a regional pattern characterized by fiscal problems in the East and relatively stronger support for higher education in the West. In addition, there was a stronger pattern of state support for student financial aid, as measured by two-year percentage gains, than had been observed in recent years. There was a stronger pattern of state support to community colleges than experienced by individual states. While state support of principal state universities is comparable in percentages of gain to total higher education support in each state, there was a majority of states where actual percentage gains in support to research universities were a bit less than percentage gains experienced by individual states. Finally, the instability in national and global financial markets gives rise to concerns and uncertainties about the process of state budgeting for higher education.

Comparative Higher Education Finance Measures

Comparative higher education finance measures are used widely by researchers and analysts in making comparisons among states in effort for higher education. Two of the more commonly used such measures are appropriations per capita and per \$1,000 of personal income. These two measures are displayed on the following page.

For 15 years, these measures were published by The Chronicle of Higher Education, along with the state tax appropriations data which appear in monthly issues of Grapevine. Beginning in 1987, these measures were no longer published in the Chronicle. They appear in a mid-winter issue of Grapevine, as well as being included in this volume.

Caution must be exercised in utilizing and interpreting these two comparative measures, because they use only state tax appropriations as a single revenue source. While state tax appropriations are the largest revenue source in the public sector and are an important revenue source in the private sector, a more complete analysis needs to incorporate more sources of revenue. These would include local taxes, student tuition, and non-tax sources.

Nonetheless, with the approval of the Grapevine Advisory Committee and with this cautionary note, these measures are included as a service to readers.

Acknowledgments

The contributions of many individuals go into the production of these summary documents and Grapevine each month. The producers of state tax appropriations data include a network of "correspondents" in the 50 states, and their willing and consistent efforts provide a solid foundation for Grapevine.

The Advisory Committee, formed in 1984, includes those persons whose names appear below. The Advisory Committee meets annually during the In-service Education Program of the State Higher Education Finance Officers. These experts have provided invaluable technical and policy advice which has enabled Grapevine to maintain its original purpose of providing timely data while being improved significantly in accuracy in recent years.

This volume is the 31st consecutive annual report published by the Office of Communications Services at the National Association of State Universities and Land-Grant Colleges. Their continued interest and assistance are appreciated very much.

Especial appreciation goes to Sheryl Samuelson for her attention to many details in the production of this document. To Gwen B. Pruyne, Managing Editor, the heartfelt thanks of Grapevine readers, as well as myself, are extended.

Edward R. Hines, Ph.D.
Grapevine Editor
Professor of Education Administration
Illinois State University
Normal, IL 61761

PERCENTAGES OF TWO-YEAR GAINS IN APPROPRIATIONS OF STATE TAX FUNDS FOR ANNUAL OPERATING EXPENSES OF HIGHER EDUCATION IN THE FIFTY STATES, FISCAL 1991 OVER FISCAL 1989

Map by Illinois State University Graphics

WHAT THE FIGURES ARE INTENDED TO MEAN

The ground rules used to achieve an approach to uniformity of reporting are enumerated below. Diversities of practices among the 50 states make it impossible to eliminate all inconsistencies and to accomplish absolute comparability among states and among institutions. We emphasize that comparisons are of limited usefulness but have value if correctly interpreted.

1. Report only appropriations; not actual expenditures.
2. Report only sums appropriated for annual operating expenses.
3. For the state tax appropriations in complex universities, set out separately the sums appropriated for (or allocated to) the main campuses, branch campuses, and medical centers (even if on the main campus). The medical center item should include operation of colleges of medicine, dentistry, pharmacy, nursing, and teaching hospitals, either lumped as one sum or set out separately as preferred.
4. Include:
 - o sums appropriated for state aid to local public community colleges and for operation of state-supported community colleges, and for vocational-technical two-year colleges or institutes which are predominantly for high school graduates and adult students.
 - o sums appropriated to statewide coordinating boards or governing boards, either for board expenses or for allocation by the board to other institutions or both.
 - o sums appropriated for state scholarships or other student financial aids.
 - o sums destined for higher education, but appropriated to some other state agency. Examples: funds intended for faculty fringe benefits may be appropriated to the State Treasurer and disbursed by that office; certain funds for medical and health education may be appropriated to the state department of health and disbursed from that department. Sometimes these sums have to be estimated because the exact amount disbursed cannot be known until after the end of the fiscal period.
 - o appropriations directed to private institutions of higher education at all levels.
5. Exclude:
 - o appropriations for capital outlays and debt service.
 - o appropriations of sums derived from federal sources, student fees, auxiliary enterprises, and other non-tax sources.

INDIANA (Continued from the preceding page)

*Acronym for Indiana U-Purdue U at Indianapolis, which includes professional schools and other units of Indiana U, and some academic programs of Purdue U.

**Some programs formerly listed here have been transferred to IUPUI health division.

***Statewide multi-media communications network, providing services to both public and private institutions.

+Dual campus of Indiana U and Purdue U.

++Includes \$2 million for the Academy for Math, Science and Arts for FY1991.

+++A two-year community college now largely supported by the state, but partly by the county where it is located.
