This document contains an annotated list of novels and short stories written in English or available in translation that teachers can use to help students at the secondary and college levels think critically about the world of work. The categories by which they are organized are as follows: agriculture, business, career (choices, paths, and obstacles), customer relations, discrimination (racial, gender, and so on), entrepreneurship, ethics (the effect of work on the ethical fabric of society), international business, management, marketing, performance (evaluation of the quality of a person's work on society), technology and how it affects the workplace, unions, the value of work, women and work, working conditions, work relations (how one gets along with coworkers and supervisors), and work skills. The document begins with a discussion of the following topics: literature and the curriculum, why study work? why look at work through the lens of literature? the adolescent and work literature, and suggestions for using literature in the classroom. A list of 29 references concludes this section. Annotations follow for 13 anthologies, 105 novels, and 69 short stories. The document concludes with references for 72 teaching resources and 33 titles about work that can provide a background for the discussion of an author's insights on the work setting. (CML)

INTRODUCTION

Literature and the Curriculum

Efforts to integrate vocational and academic education have focused on how to adapt academic programs more closely to the needs of students in vocational programs, or how to modify vocational programs to include what are generally conceived of as the more rigorous demands of traditional academic subjects, or both. Of the integration programs that are aimed at making academic courses more vocationally relevant, most have been geared to modifying the contents of science or mathematics classes.¹ There have also been a few efforts to adjust humanities courses to vocational needs, principally in courses relating history to the development of technology, and applied English courses that cover work-related writing and thinking skills. However, except for a few cases, these efforts have generally neglected the use of literature as an agent of curriculum integration (Grubb, Davis, Lum, Philal, & Morgaine, 1991).

One of the exceptions is the reading textbook developed for high school by Prentice Hall of Canada, Language at Work, that includes mainly Canadian fiction, poetry, and nonfiction related to the subject of work (Gough & Tickner, 1987). Another exception is the Applied Communication curriculum developed by the Agency for Instructional Technology (1988). That curriculum includes resource sections of literary works of all genres related to major topics in the curriculum (i.e., following and giving directions, evaluating performance, and so on). Later, the departments of education of states like Iowa and South Carolina assembled larger lists of literature teachers could use that were based on topics derived from the Applied Communication curriculum (James, 1988; South Carolina State Department of Education, 1989). South Carolina also produced several lessons modeled on Applied Communication modules that integrated works of English literature with themes in that curriculum for the senior year. In addition to these English curriculum efforts, a few instructors, particularly several in community colleges, have initiated their own forms of integration by creating humanities courses—mainly dealing with science and technology—with work-related themes. In some of these courses instructors have students

read literary materials that correspond to relevant work themes (Grubb & Kraskouskas, 1992).2

Like the efforts to integrate vocational and academic subjects, literature itself has been a relative latecomer to the curriculum. In the late nineteenth century, it competed for a place with older pedagogic traditions like rhetoric and oratory. Thus, works of literature were considered "classic" because they were mainly used as models for composition and oratory (Probst, 1988, p. 195). Furthermore, a specialization of literature to "imaginative works" had already occurred with the Romantic reaction to industrial capitalism; thus, literature was conceived of as a challenge to utilitarianism (N. Coles, 1986, p. 665). However, in this century, literature came to be regarded as an indispensable part of the curriculum, with a relatively stable body of Western works becoming an almost immutable canon.

More recently, much controversy has arisen concerning the definition of a "classic" and the inclusion of other types of literature, especially ethnic and women's literature, into the traditional English course. In addition, from time to time critics have pointed out that literature in the English curriculum should be revitalized both for academic and nonacademic students (Probst, 1988; Rosenblatt, 1938/1983); that there should be a greater balance in texts (Applebee, 1990); and that it should reflect not only ethnic and gender themes, but also a greater breadth of experience, in particular an experience as common as work (N. Coles, 1985; Hornbostel, 1986; Klaus, 1985; O'Rourke, 1977; Schilb, 1986). The point of these critics is that if literature encompasses life, the literature curriculum should also incorporate work.

Why Study Work?

Work is an intrinsic part of human existence: Most people will spend much of their lives as workers. Over thirty percent of the average person's normal waking experience is related to work outside the home; this is in addition to the time needed to do chores and housework. Furthermore, an individual's identity is often defined by the work he or she

---

2 Many schools across the country, especially community colleges and universities, have developed these types of courses (e.g., "Introduction to Humanities: Working in America" (Kirkwood Community College, Cedar Rapids, Iowa); "Odyssey: Humanistic Technology for the 21st Century" (Hudson Valley Community College, Troy, New York); and "Science and Technology as Themes of Literature" (Northeast State Technical College, Blountville, Tennessee).
does. Accordingly, because of the role of work in daily life, it is important to understand its function in society and the individual's relationship to it.

Work is interesting. Work is a curse. It is also a celebration of usefulness, a help to others, the accumulation of wealth, the proof of conformity, the cause as well as result of consumerism, the reason for rebellion, the foundation of the family, a sign of alienation, a manifestation of the city/country conflict, and many other things (Holt, 1989). Work, no matter what its merits or demerits, is something everyone experiences in one form or another. It can at times seem meaningless, but most people feel fortunate to be working. It can be one of the most exhilarating experiences of life.

Events at work encompass the full range of human emotion—courage, honor, loyalty, ambition, love, pain, and greed. In addition, many great ideas have come from encounters with work—not merely from time spent in family life or at leisure. Furthermore, the daily work of the ordinary citizen is a much more commonly understood experience for the individual than that of the lives of politicians and aristocrats often highlighted in social studies classes; it is highly unlikely, for example, that a person will become a president or a king, but it is more likely that a person will become a worker. By reading about labor conditions and people in ordinary jobs, one can better understand the rise of unions and other social and political movements and the background of work-related legislative acts (Holt, 1989).

Why Look at Work Through the Lens of Literature?

Businesses often complain that their workers are not able to read and communicate at appropriate levels and lack various higher-order capacities (Grubb & Krakouskas, 1992, p. 40). Through studying literature, students can gain new insights into work habits, language and communications skills, interpersonal skills, and problem solving—skills that many business leaders consider just as important as technical skills.

Reading literature is an excellent way to develop critical thinking and also a powerful tool for learning about values and character, showing, for instance, the difference between ambition and greed, loyalty and servitude, liberty and license. "Literature . . . is a comment on nature and life in the interest of a more intense and just appreciation of the
meanings present in experience" (Dewey, 1916, p. 99). It has the power to capture the intensity of experience—as with romance or pain, work can conjure powerful scenes and feelings. Thus, literature permits the reader to enter into the lives and work of other individuals, to observe representative and relevant experiences.

Through literature, one can learn about work life from another person's point of view: "Literature plays an important part in developing awareness of the commonness of the human drama. What an impact a work has when the reader finds in it a fellow sufferer, one who obviously knows 'what it is like'!" (Burton, 1970, p. 10). Studying work literature can give new insights into what is significant about human life, the ability to empathize with others through the development of an understanding of human needs and problems. "Readers make meanings. To do so they use their knowledge of the world and cues supplied by the text" (Early, 1988, p. 32). The more palpable the connection between the story of a piece of literature and the reader's experience—like work, love, pain—the better the chance it will be understood, or at least what the reader imagines his experience will be (R. Coles, 1989, p. 120).

Literature can also be used to teach about historical events, whether it is the rise of the factory system in New England, the struggles of the "Okies" during the Great Depression, or the development of corporate business culture in post-World War II America. Literature affords the opportunity to gain a greater understanding of the contributions of the working people who built this world and acquire more knowledge of the struggles endured by workers in securing their rights (Holt, 1989). Literature in this way reflects historical materials as a mirror. It represents an author's point of view at a moment in history (e.g., Upton Sinclair's criticism of slaughterhouse conditions in The Jungle and Sinclair Lewis's insight into American business in Babbitt), but it also analyzes the events. "Literature contributes to the social vision and moral development . . . in the growth of sensibility and exercise of imaginative alternatives" (Nelms, 1988, p. 214). Readers of Steinbeck's Grapes of Wrath may find, for example, that there were a number of obstacles to the formation of worker unions in Dust Bowl era California. As Rosenblatt (1938/1983) states, what is particularly important is [the] discovery that various groups within our society hold up diverse images of success, and that there are kinds of work despised or ignored by [one's] own group that others considered socially valuable . . . the craftsmen, the technologists, the artists, the scientists, the scholars offer personal goals and systems of value often strongly in contrast
to those represented by the dominant image of the successful businessman. (p. 194)

Some contemporary critics hold that "Literature . . . serves a social purpose. It serves to integrate the reader into culture, inviting him to define himself against a background of cultural expectations and to modify that background" (Probst, 1988, p. 249). Literature, when seen in this light, can help with the transition from academic to work life for a more total human development. Through it "dry economic theories are given flesh and blood literary explorations" (Prindle, 1989, p. xii). It can, furthermore, help develop a stronger corporate citizenship by promoting a sensitivity to the needs and desires of others in a work setting.

The Adolescent and Work Literature

Critical have pointed out that the typical secondary school English literature curricula lacks appeal to many students (Probst, 1988, p. 114). Most contain a majority of works from the classic canon. Junior and senior high school literature programs are still often organized historically and not thematically. In contrast, high school years are a time of orienting oneself to the central goals and purposes of one's life. "[An adolescent] is concerned about relations with peers . . . the gradual assumption of responsibilities. He wants to understand work, love, hate, war, death, vengeance" (p. 4). Hence, a literature curriculum that does not include a substantial number of works that relate directly to work may be less interesting and relevant to students now and in the future.

It is rare that a student has not had a summer job or done baby-sitting or chores for pay: "Students are simultaneously observers, beneficiaries, victims of their parent's work lives, continually assessing the merits and drawbacks of their work choices, their moods after a work day" (Hoffman, 1990, p. 56). Most are eager to recount their own experiences with bosses or customers. Jobs to them are boring, exciting, oppressive, heroic, difficult, and satisfying. They can already begin to realize that work can transform lives by imbuing them with significance and meaning—or conversely, it can be a drag.

Furthermore, high school students are often already preoccupied with their own work futures. Youths are pressured by adults and peers to declare future professions based on woefully inadequate information—few have a sense of the day-to-day experiences that
lie behind even the most familiar jobs (Hoffman, 1990, p. 55): "Most secondary students
will not become professional literary scholars . . . they will more likely drive cabs, wait on
tables, sell real estate, [or] work in office" (Probst, 1988, p. 3).

Adolescents are developing independence from parents and other authority figures.
They are struggling with the almost universal concerns of growing up and accepting adult
roles. Reading literature can provide an opportunity for adolescents to exercise
independent response and critical judgment. Work literature often deals seriously with
these recurring themes.

Students in general and vocational tracks are assigned less literature in school than
students in the academic track (Ravitch & Finn, 1987, p. 171). Perhaps it is time to
reverse that trend, but also change what students in all classes read—from works that
concentrate on personal life to those that relate the experience of the individual at work and
in other social contexts. In some states students are "expected to read provocative works"
(California State Department of Education, 1987, p. 8). These could include works giving
a more balanced view of labor and labor leaders and business people. The main purpose is
to choose literature that strikes a responsive chord in students, offering substance that
relates to what they have experienced and will experience, to keep interest alive (Probst,
1988, p. 5).

About the Bibliography

The main purpose of the bibliography is to offer a fairly comprehensive list of
novels and short stories written in English or available in translation that teachers can use to
help students at the secondary and college level think critically about the world of work.
The works included in this bibliography articulate the lives of men and women who run the
machines, plow the fields, sign the contracts, sew the clothes, and work the assembly
lines. It is hoped that these stories will be enjoyable, informative, thought provoking, and
maybe even a little unsettling. Some stories focus on the laudable side of work, while
others criticize or satirize the more unpleasant or burdensome aspects—"I hate my job,"
"I'm the only human being in this place," and so on. Some works represent efforts to defy
what they see as a conspiracy on the part of business and government to dehumanize or to
characterize business people as Babbitts or unlettered Philistines (Holt, 1989). Others attempt to right a perceived prejudice against labor and labor leaders.

The bibliographic entries contain the original publication date as well as a citation for editions published that were available mainly through the use of the University of California library system. These editions do not represent the only publication source for many of these works.

The annotations are of two kind. First, up to three major work-related subjects are listed as they apply to the contents of each work. Second, this is followed by a short description, usually about the plot, that further explains each story's connection to the world of work. The subjects listed represent some of the major work-related topics contained in these literary pieces and are not exclusive, for many of these works cover multiple aspects of the work experience. The following is a list of the subjects used in this bibliography:

- Agriculture
- Business
- Career (career choices, paths, and obstacles)
- Customer Relations (how service is rendered to customers and clients)
- Discrimination (race, gender, and so on)
- Entrepreneurship (starting work on one's own)
- Ethics (affect of work on ethical fabric of society)
- International Business
- Management
- Marketing
- Performance (evaluation of the quality of a person's work)
- Technology (how technology affects the workplace)
- Unions
- Value of Work (the reasons why one works, its human worth)
Women and Work

- Working Conditions (mainly the physical environment)
- Work Relations (how one gets along with coworkers and supervisors)
- Work Skills (what is needed or lacking to be an effective worker)

No bibliographic list of this type, of course, can ever be considered complete, for the more one looks the more one discovers the rich diversity of literature. As for the selection of these works, the overriding criterion is whether work plays a significant part in the development of the plot or the characters, even though the work activities may also be tightly interwoven with other psychological, social, and cultural elements of life.

Another major criterion of this bibliography is to provide a large range of work experiences—particularly in areas that interested vocational educators—industry, business, agriculture, and home and health care. Thus, work as experienced by the characters in these stories covers a wide range from that of homemakers to space-age technologists, from blue-collar workers to white-collars ones, from street messengers and peasants to corporate executives. For the most part, work in these stories is paid employment, but the bibliography also contains stories of homemakers and other workers who receive no direct compensation.

Again for the sake of variety, some care has been taken to include works by women writers, writers of ethnic minorities, and writers from other continents (available in English) that pertain to work experiences. In regard to women writers, the existence of several anthologies devoted to their work has made the task of identification easier than ever before. As can be seen from the literature, the major roles women have performed in fiction are (1) farm work (an overwhelming number), (2) jobs that are extensions of their nurturing roles like nursing and teaching, (3) factory work—especially in the early textile mills (these offered the first major industrial jobs for women), and (4) housework (though women are rarely protagonists if they are solely homemakers) (Hornbostel, 1986).

The prominence of agrarian literature—which constitutes the majority of the world corpus of literary pieces in the world about work—in the development of American culture cannot be overestimated. It has spawned such important concepts as an ideal society of independent property owners, and the cultivation of the soil as instilling honor,
self-reliance, courage, moral integrity, sense of family, and hospitality (Inge, 1969). However, on account of limitations of space, only a relatively small selection of representative works is included.

Likewise, this bibliographic list contains few works by "working-class" writers—the Chartist novelists of the 1840s, the socialist novelists of the 1880s through the 1920s, the "proletarian" writers of the 1930s, the working-class "angry young men" of the late 1950s and early 1960s, and current worker-writers. Again, time constraints and the sheer number of such works preclude a coherent listing at this time. For more information about these it is best to consult such studies as Klaus (1985) and N. Coles (1986).

Novels in this list are primarily about work and the major characters' reactions to it. There are, however, a few examples where the main story does not directly concern work, but work does act prominently in a chapter or section of a work. The paint factory chapters of Ralph Ellison's *The Invisible Man* and the introductory chapter, "The Custom House," of Nathaniel Hawthorne's *The Scarlet Letter* are good examples. The reason for including such works is to point out that many pieces of literature, even those of the canon, hold important observations about work that could be included in designing the curriculum.

In addition, care has also been taken to include works that cover a range of reading levels. Several of these fictional works are labeled "easy reading." These represent, in general, contributions from the realm of adolescent novels.

**Classroom Use**

There are few examples of curriculum material designed to teach the literature of work. Hence, teachers may have to develop their own plans using books and bibliographies and other materials at hand. One possibility is to structure a course to revolve around the theme of work and its many facets—personal, social, and economic. For example, when studying a major work such as Herman Melville's *Moby Dick*, students could explore the whole work—how the parts (like recruiting the crew and the details of life aboard ship) fit into the major theme (obsession with revenge for a perceived evil) and the book as a whole. After all, Melville conceived of his work as a whole, not merely as the simple story of a man versus a whale.
In dealing with these and other works, instructors should require students to look at the world of work critically—to examine and pose questions about the nature and politics of work, its necessity, its rewards, and its pitfalls. For instance, in George Orwell's *Animal Farm*, students may at first be sympathetic to the cause of the animals against a farmer who exploits them so he can gain the maximum profit. However, students eventually learn further on in the work that applications of the socialist-like society the animals devise are difficult (O'Neill, 1985).

Attention should be given to open discussion about the merits and demerits of the author's interpretation of the work reality, about that of the author's contemporaries, and about what historical insight has contributed. One should be critical of a Babbitt but also be able to see what positive lessons can be drawn from the piece of fiction (e.g., the importance of integrity in business dealings) for work and life.

Moreover, writing about work and the lives of real people usually requires a realistic style. These stories and other types of work literature often contain language of their experience, which may at times be quite raw and explicit (Hoffman, 1990, p. 55). Discussion of these pieces of fiction should then focus on the living and working conditions of the characters and traits that enable them to endure adversity and relish personal triumphs.

One should be fairly attentive in selecting works that balance a number of factors about both the author and characters: gender, ethnic/cultural background, socioeconomic status, political/religious perspective, geographic location, and historical period. The following are some examples of combinations of works that teachers could consider:

- For a high school unit focusing on literature and technology, an instructor could select from among these works:
  
  Asimov, *I, Robot*
  Brontë, *Shirley, A Tale*
  Brown, "Virus"
  Morris, *Motor City*
  Norris, *Octopus; a tale of California*
  Vonnegut, *Player Piano*
For a high school short story unit focusing on international working conditions, an instructor could select from among these works:

Baranskaia, *A Week Like Any Other*
Calvino, *Marcovaldo: Or Seasons in the Snow*
Chavez, "Last of the Menu Girls"
Conroy, *The Weed King and Other Stories*
Hayama, "Letter Found in a Cement Barrel"
Matshoba, "A Glimpse of Slavery"
Narayan, *Malgudi Days*
O'Rourke, "The Maggot Principle"
Yokomitsu, "The Machine"
Zimpel, "Foundry Foreman"

For a one-semester community college course focusing on literature and unions, an instructor could select from among these works:

Bimba, *Molly MaGuire*
Conroy, *The Disinherited*
Fast, *Power*
Kobayashi, *Cannery Boat*
Sinclair, *The Jungle*
Stead, "The Azhdanov Tailors"
Steinbeck, "The Raid"
Ward, *Red Baker*

For a one-semester community college course focusing on literature and migrant workers, an instructor could select from among these works:

Anaya, *Heart of Aztlan*
Barrio, *The Plum Plum Pickers*
Bell, *Out of This Furnace*
Olsen, *Yonnondio: From the Thirties*
Steinbeck, *Grapes of Wrath*
For a one-semester four-year college course in women's literature focusing on work novels, an instructor could select from among these works:

Bullard, *Comrade Yetta*
Canfield, *The Home-Maker*
Cather, *My Antonia*
Glasgow, *Barren Ground*
Jewett, *A Country Doctor*
Kelley, *Weeds*
Peattie, *The Precipice*
Phelps, *The Silent Partner*
Savage, *Factory Girl*

Finally, the annotated bibliography is followed by a teaching resource section that includes books and articles that can provide assistance for the teaching of literature that is related to work. The first section covers studies of work literature and how this type and other types of nontraditional literature can be incorporated in the English classroom and curriculum. The second section contains selected titles on the subject of work. These latter works provide a background for the discussion of an author's insights on the work setting.
REFERENCES

NOVELS AND SHORT STORIES ABOUT WORK:
AN ANNOTATED BIBLIOGRAPHY

These bibliographic citations do not necessarily represent the only publisher of these works.

Anthologies

Working conditions/customer relations/work relations: Drivers of San Francisco's transportation system have created stories about their occupation—its humor and drama.

Women and work/value of work: The third section of this anthology contains short stories, poetry, and drama that deal with women working in or outside the house.

Working conditions/work relations/work skills: This anthology contains selections of Canadian fiction, nonfiction, and poetry related to adolescents and the world of work.

Women and work: This collection includes fiction and poetry about women in the world of work.

Work relations/working conditions/customer relations: This book contains stories and poems that identify and categorize the effects an organization might have on its employees and clients. It is intended for use by students of administration.

Agriculture/working conditions/value of work: This anthology is a collection of fiction, nonfiction, and poetry related to agrarian life and work.

Business/work relations: This book contains selections of contemporary fiction, poetry, and nonfiction related to work in the business world.

Working conditions/work relations: This anthology specializes in fiction about work by leading contemporary writers.

International business/work relations: This collection of translations contains short stories describing business in a Japanese and international context.

Women and work: This collection comprises short stories related to the life and work of women.

Value of work/women and work: This collection devotes one section to the literature of work.

Working conditions/work relations: Selected for a high school audience, this collection contains fiction and poetry about workers.

Working conditions/women and work/customer relations: In this collection, letter carriers write stories about life and work.

Novels

Discrimination/working conditions: A country man migrates to a large South African industrial city to work in the coal mines.

Women and work/working conditions/work relations: This story clearly shows how the mid-nineteenth century woman was limited to the domestic sphere and menial, underpaid jobs.

Alger, Horatio, Jr. (1869). Mark, the match boy; or, Richard Hunter's ward. Boston, MA: Loring.*

*Value of work/work skills/ethics: These and most of the scores of other Alger stories (Victor Lane, *The young secretary; Dan, the newsboy; Mark Mason's victory: or The trials and triumphs of a telegraph boy; Silas Snobden's office boy;* and so on) concern the rise of young people from poverty in nineteenth century New York to middle-class wealth through hard work and perseverance. (Easy reading)*

Working conditions/unions/discrimination: Mexican immigrants struggle to establish themselves in the Southwest while working for the railroad.

Working conditions/technology: This story examines the direct engagement of people, machines, and materials in a steel town.

Value of work/work skills/discrimination: After getting out of the army, an African American helps some Catholic nuns build a church.

Working conditions/unions/discrimination: This novel recounts the lives and work of Mexican migrants and criticizes agribusiness that imports these workers.

Working conditions/discrimination/technology: This story relates the saga of Slovak steelworkers as they drive toward successful unionization in western Pennsylvania. It also describes working conditions of African-American migrant workers.

Technology/working conditions: A man awakens from a one-hundred-year sleep to discover a society that enjoys full employment and social harmony. The novel criticizes industrialization at the end of the nineteenth century.

Unions/work relations: Coal miners struggle against mine owners for better working conditions.

Work skills/working conditions: A young girl learns clockmaking in medieval Europe. The work deals with social change and the rise of cities. (Easy reading)

Work relations/ethics: This futuristic work depicts a "fireman" whose job once was to destroy books and the information in them who ends up seeking to preserve information.

Working conditions/customer relations/discrimination: This novel describes the author's experiences as a new teacher.

Technology/unions: The background to this love story is the effort of a textile manufacturer to install new machinery and the reaction of workers in nineteenth century England.

Value of work/agriculture: A Chinese peasant struggles to establish a family farm in pre-World War II China.

Women and work/unions/working conditions: A young woman strives to organize labor in the New York garment industry. This work was originally published under the pseudonym Albert Edwards.

Women and work/value of work/agriculture: A woman faces the challenges of working on a farm and then in a city. The main emphasis of this novel is on goal-setting and persistence.

Value of work/agriculture/working conditions: Immigrants struggle to make a farm homestead on the prairie.

Work skills/work relations: Scientists cooperate in a life-and-death struggle to identify a deadly disease.

Performance: A young chief on a steamer makes a tragic work-related mistake that haunts him the rest of his life.

Performance: This story deals with the evaluation of a ship caption's performance during his first command.

Working conditions/unions: This story describes the life of workers during the Depression and a slow awakening of class consciousness.

Ethics/entrepreneurship: This novel recounts the trials and triumphs of selling chocolate to raise money for a school.

Working conditions/ethics: Working at an animal shelter was a great summer job until a worker discovers that the owner sells dogs to a laboratory for experiments.

Work relations: Jim needed a summer job to help his mom pay the bills. The house painting job seemed perfect until conflicts erupted with a coworker.

Work relations: This realistic account illustrates the importance of effective communication with coworkers on board a merchant ship.

Value of work/work relations/working conditions: This short novel is concerned about the consequences of failing to communicate well with coworkers, employees, and other people.
