The purpose of this survey was to gather baseline information about beliefs and attitudes of principals and teachers related to early childhood education, especially those beliefs and attitudes about issues related to the development of Kentucky's primary schools. Surveys were distributed to all elementary principals and teachers in the state's public schools. A total of 6,929 surveys were returned. Both principals and teachers responded to 21 questions concerning ungraded primary schools, learning activities, and primary education in general. Data concerning the answers to these questions is presented by respondent categories (teachers or principals) and geographic region (central, eastern, northern, and western). Three conclusions are drawn from the survey data: (1) principals and teachers support the use of developmentally appropriate educational practices; (2) they are optimistic about reforms and are willing to commit themselves to a positive course; and (3) there is a general consensus among educators about what is important in educating young children. (MDM)
In the late spring of 1991, the Center for the Collaborative Advancement of the Teaching Profession at the University of Louisville School of Education conducted a statewide survey. The purpose of the survey was to gather baseline information about beliefs and attitudes of principals and teachers related to early childhood education, in particular issues related to the development of Kentucky's Primary Schools. Surveys were distributed to all elementary principals and teachers in Kentucky's public schools. A total of 6929 surveys were returned. The following information was derived from those surveys. Requests for further information and questions should be directed to Dr. Hovda or Abbie Karr at the University of Louisville (502-588-6411).

SURVEY: THE KENTUCKY PRIMARY SCHOOL PROGRAM

Several important observations can be made from the data from the survey:

(1) There is a strong connection between the concepts that define the Primary School program and what educators in Kentucky already believe about educating young children. One critical attribute of Kentucky's Primary School program is the use of developmentally appropriate educational practices. These include:

- Integrated curriculum
- Active child involvement and interactive/flexible groupings and re-groupings
- Use of manipulatives and multi-sensory activities
- Balance of teacher-directed and child-initiated activities
- Varied instructional strategies and approaches such as cooperative learning, peer coaching, projects, learning centers, whole language...

58% of principals and teachers in Kentucky believe that children learn better through integrated units rather than subjects that are taught separately and 25% are open to the idea of integrated curriculum.

71% of educators believe that primary children learn best through active involvement rather than independent seatwork.

86% of those surveyed believe that children learn best from activities and materials that are concrete, real, and relevant to children.

82% believe that primary age learn best through active exploration and interaction with other children, adults, and materials.
Kentucky educators are optimistic about reforms and are willing to commit themselves to a positive course.

63% of principals surveyed support the change from graded to ungraded primary and 29% are open to the idea. 44% of primary teachers surveyed support the change and 35% are open to the idea.

92.2% of principals surveyed committed themselves to making the ungraded primary successful in their schools. 85.5% of teachers surveyed committed themselves...

71% of teachers surveyed believe that they can be effective teachers in an ungraded primary school program and 73% think that their school can develop an effective and successful program.

61% of teachers and principals are optimistic about potential benefits of the ungraded primary school program for young children and 23% are open to the possibilities.

There is a general consensus among educators in Kentucky about what is important in educating young children. A majority of primary teachers and principals agree that:

* the primary curriculum should provide for all areas of a child's development: physical, emotional, social, and cognitive
* primary age children learn best from learning activities and materials that are concrete, real, and relevant to children
* primary age children learn best through active exploration and interaction with other children, adults, and materials
* primary children learn better through integrated thematic units than by studying subjects separately
* primary children learn best through active involvement rather than independent seatwork
* the primary years are the most critical ones for developing a strong self-concept
COMMON CONCERNS OF KENTUCKY EDUCATORS

Professional Development

"I am concerned about the lack of teacher training and the lack of planning time with other staff members."

"We need a great deal of training and planning time before starting the program. It will be a success if teachers feel informed and prepared."

"I would like the opportunity to observe an ungraded primary and talk to those teachers involved."

"My greatest concern is that such an important change as primary school was thrust upon educators who most likely embrace the concept but feel terribly unqualified and untrained to make this most important change."

Materials

"...having access to enough appropriate materials and manipulatives."

"This cannot be implemented successfully without adequate resources--aides, furniture, facilities, materials, books."

Evaluation

"I am concerned about appropriate assessment for primary schools."

"...changes in evaluation of teachers as well as students."

"...What will we assess and how? How will we be consistent and fair? How will parents respond to new types of evaluation."

Transition to the 4th grade

"There needs to be a district-wide list of skills for all children to exit the ungraded primary and to enter the 4th grade."

"Will teacher/parent expectations at the 4th grade level match experiences and skills of the children coming out of primary schools?"
Support from parents

"We need parent meetings periodically to keep them informed and prevent unnecessary worry and criticism."

"...communicating the Primary School concept to parents."

Compensation

"An enormous amount of additional (and unpaid) time will be required to put together a good, cohesive program."

"Teachers and staff need non-school time with compensation to plan for this change."

ADDITIONAL COMMENTS

"I look forward to working and collaborating with other teachers to meet the children's needs and to trying a new way."

"We have experienced a very successful year as an ungraded primary team. Our beliefs are firmly rooted in the program."

"Our primary multi-age team works very well to insure success for all students of all abilities. We're moving forward."

"I'm excited about the horizon for classroom environments becoming positive places of learning."
I believe ...

... the primary curriculum should provide for all areas of a child's development: physical, emotional, social, and cognitive.

... primary age children learn best through active exploration and interaction with other children, adult, and materials.
I believe ...

... primary children learn best from learning activities and materials that are concrete, real, and relevant.

... primary children learn better by studying each subject separately rather than through integrated thematic units.
