ABSTRACT

In this position statement, professional technical education is defined as a blend of technology, work skills, and academic subjects to prepare all students for a lifetime of successful learning, working, and living. This document presents a call to action, a framework for action, and a list of the participants and resources for such action, developed for Lane County, Oregon. In Part I, the vision for students and the systems to participate in a global economy are described. This part includes information on laying a foundation for change in the county and creating a work force development strategy. Part II presents a guide for action. It includes the following: recommendations for planning; ideas on empowering people to lead and to change; information on determining outcomes, standards, and measures; suggestions for establishing an integrated network of education, business, and community and a communication network; and advice on acknowledging and facilitating the process of change. The third part of the report lists the members of the various Lane County committees who have adopted the vision and a list of 22 reports, papers, and legislation, 11 periodicals, 5 books, 8 audiotapes and videotapes, and 7 other resources. THE VISION

CALL TO ACTION

With characteristic pioneering spirit, Oregon has forged to the head of the movement for the reform of professional technical education. In the 1991 legislative session, while many were still debating the possibilities and complexities of education reform, our legislature took a stand. The Oregon Workforce Quality Act created the Workforce Quality Council, a single body to look at the myriad of employment, training and educational programs in the state. Oregon's Education Act for the 21st Century pledged to create the best educated and trained workforce in America by the year 2000 and equal to any in the world by 2010.

On its surface, the argument for reform makes good sense. But those of us who are immersed in the intricacies of individual districts, schools, classes and students may be skeptical of the simplistic interpretations we are offered. We know there will be resistance to reorganization and to change unless the rationale is clearly articulated. We know that reasoned change is going to require the reallocation of time and resources, and sensitivity to local concerns. Above all, we know that constructive change will demand the active cooperation of educators, administrators, parents, students, business and community leaders.

With this publication, we ask you to join us in making education reform work for Lane County. We are a group of educators, business people and community representatives committed to a better future for our students. We invite you to share our vision and our enthusiasm for a countywide professional technical education reform movement.

In the first section, we offer you our visions — a vision for our students, and a vision for a seamless system of education that can take us productively into the 21st century. We urge citizens at all levels to embrace these visions as new guideposts in restructuring professional technical education.

In the second section, we present a Framework for Action, a compendium of expectations, ideas and concerns offered by Lane County educators, business people, students and parents. We encourage those involved in planning and implementation to seriously consider this advice.

When applied with long-term focus and commitment, education reform offers a sound response to the economic challenges we are facing in America and in Lane County. We look forward to working with you on this important mission.

PARTICIPATING IN A GLOBAL ECONOMY

In our new global economy, where telecommunications and air transportation have removed geographic barriers to international trade, America must keep pace with international competitors. As other countries take advantage of technological advancements to improve their productivity, American industry will need a workforce that is prepared to do the same.

The high-skill, high-wage jobs of the future will demand good basic academic skills and the ability to apply those skills to the working world through problem solving and decision making. They will demand higher individual productivity and a stronger career focus. For our education system, the challenge is to turn out students who are more work-ready, whose 12-plus years in the education system are directed toward individualized, defined skills and preferences and an eventual career track, either professional or technical.

In order for Lane County to produce a more prepared workforce, we must reassess our local economy and the jobs that will be available when our students enter the job market. Clearly, we no longer simply have a "timber economy." A more diverse business base is emerging in Lane County. Between 1964 and 1991, timber jobs dropped from 27 to 7 percent of Lane County employment. In that same period, non-timber manufacturing jobs rose from 5 to 9 percent of the county's employment. But the largest percentage of jobs in Lane County — nearly 83 percent in 1991 — are in the service sector.

The service sector is generally portrayed as the low-wage, low-skill sector of our economy. In fact, many service sector industries offer good wages for skilled workers. These jobs require academic and reasoning skills, the ability to master new technologies, a good work ethic and appropriate workplace behavior. Professional technical education reform will give us the tools to build these skills in the future workforce, encouraging more growth in the high-wage service sector.

As we target our students toward the jobs that will build Lane County's economy, we also have to improve our strategies for keeping them in school.

Unless we raise our expectations to world-class levels — and then meet them — our standard of living and quality of life may suffer in the years ahead as we lose ground to determined competitors around the globe. The workers of tomorrow are in our classrooms today.

Oregon Benchmarks

A 1987 Lane County study showed the dramatic correlation between years of education and income: while high school dropouts in our community were earning an average of \$761 per month, graduates were earning \$1,135. One year of vocational training raised the average to \$1,417; an associate degree to \$1,630. Professional technical education reform, with its focus on making school more relevant to the world of work, will help us encourage continuing education.

To achieve our vision, interaction between local schools, vocational training programs and employers will be critical. Our new professional technical educational system will help us create a bridge from school to a high-performance workplace, by encouraging activities and outcomes that connect what students learn in school with the world outside. As we create a workforce skilled for the needs of the workplace, we will be able to attract high-paying, high-performance employers to strengthen Lane County's economic base.

LAYING A FOUNDATION FOR CHANGE IN LANE COUNTY —

For change to take place effectively in any system, it must be slow and methodical. We must give due respect to history, then move forward to blend

Without reform, the gap between the haves and the have-nots will widen, our stature in the world market place will diminish, there will be unrest and a breakdown in social structures.

With reform, education becomes a community responsibility, and the outcome benefits the entire community.

State Official

those techniques that have worked, abandon those that have not, and build enthusiasm for what can be.

In Lane County, we have two 21st Century Schools that can share their experience with professional technical education reform. Willamette High School and Cottage Grove High School have begun to implement many of the directives of Oregon's Education Act for the 21st Century: block scheduling, structured

work experience, Total Quality Management, youth apprenticeship, cooperative learning, applied academics and Certificates of Initial and Advanced Mastery.

Other schools and districts throughout the county are offering a variety of applied programs in principles of technology, math, communications, bio/chemistry and materials science. The majority of our high schools are offering professional technical education courses in which students can begin

a career path and continue it through Lane Community College, with a high probability of being employed at grade fourteen. Lane Community College is also retraining many adults whose skills are no longer suitable for the workplace.

As organizations work independently to pilot reform efforts, a regional strategy for professional technical education reform is already underway. For several years, Lane County groups — including the Regional Workforce Quality Committee, the Professional Technical Education Consortium and the Process Model Group — have been discussing local priorities and guidelines for a countywide educational strategy. Representatives from all levels of education have been actively involved.

As we begin planning reform in our own schools and districts, we can look to these leaders for counsel on the challenges and opportunities ahead.

Our training and retraining efforts in public and private education, apprenticeship, vocational and trade schools must reflect our county's emerging economy — engineering, biotechnology, light manufacturing, marketing, computer technologies and value added industries.

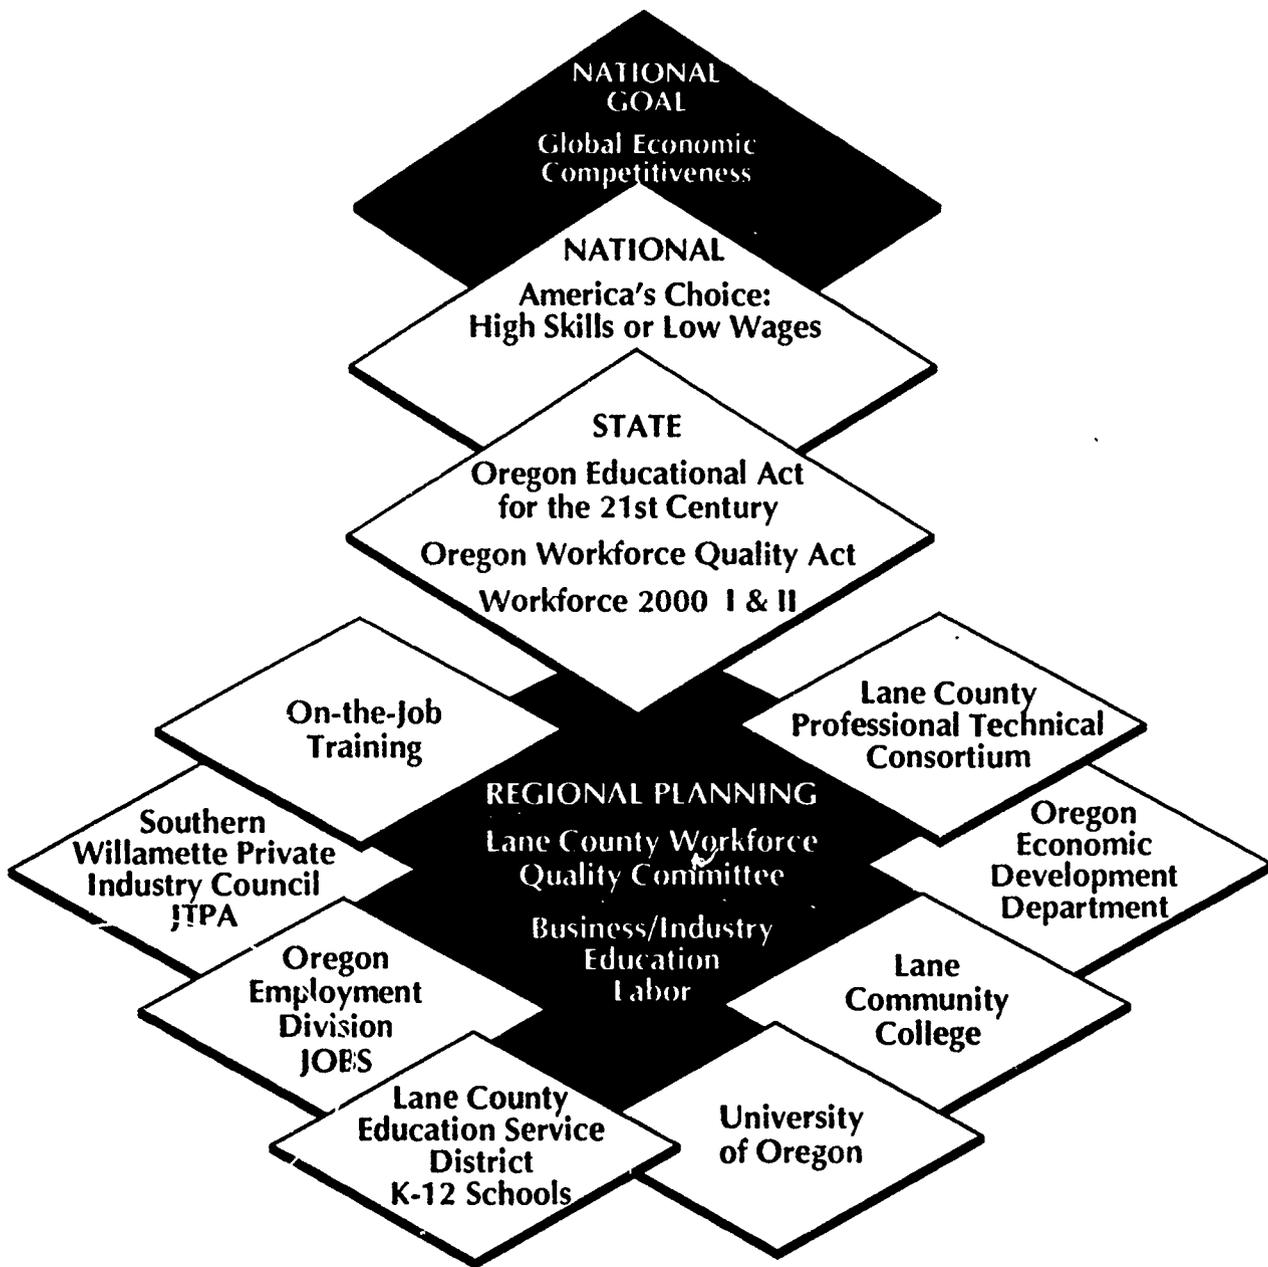

Superintendent

CREATING AN INTEGRATED WORKFORCE DEVELOPMENT STRATEGY FOR LANE COUNTY

Our new approach to professional technical education reform must begin with the acknowledgement that it cannot be accomplished by educators alone. We need commitment from nearly every sector of our community. We must collaborate in new ways, from planning to resource allocation to program implementation. It's also worthwhile to understand the roots of reform in America and our response here in Lane County.

THE VISION

THE REFORM MOVEMENT

This is our opportunity to create new coalitions in order to accomplish a common vision. We encourage those involved in local and regional planning efforts to:

- Include broad representation in the planning.
- Embrace the vision for professional technical education in Lane County.
- Identify and understand each others' local and regional plans, programs, resources, strengths and limitations.
- Assess current efforts with a focus on finding new ways to collaborate.
- Develop local and regional strategies for allocation and reallocation of resources to meet goals for professional technical education.

Our goal is a seamless education system — a system accessible to all students, that will prepare them to be productive, motivated participants in tomorrow's workforce. This system encompasses the entire educational experience for students from kindergarten through primary, middle school and high school, programs for students with special needs, community college,

trade and vocational schools, apprenticeship programs and higher education.

This is a whole new concept of education for teachers. We will be empowering kids to think for themselves, to make their own decisions — and with that comes the ability to critique their own experiences in and out of the classroom.

In this seamless system, professional technical education will provide a continuum of services from entry into public school through the community colleges and into the workplace. It assumes a lifetime learning approach and includes retraining for workers who wish to change career directions.

Teacher

We're off to a good start. Lane County's professional technical education strategy is in alignment with general economic

development plans. The Regional Workforce Quality Committee is working to enhance collaboration between employment, training and education programs. Primary and secondary educators are involved. Lane Community College has been an active partner in workforce issues for some time, and the University of Oregon sees an important role for itself in the broad planning effort.

Now, we need to broaden that involvement. We urge you to learn all you can about professional technical education reform, develop your own priorities and ideas, and join us in accomplishing the visions that follow.

The ground rule must be that we have a completely open forum. We will cherish each idea and give recognition to people with differing opinions.

Corporate CEO

A VISION FOR ALL STUDENTS

That all students will have the opportunity to realize their unique potential — in work, family and community — to become productive members of society.

- That students will begin learning about career opportunities in elementary school, and begin creating their personal plans in middle school to explore specific career and community interests.
- That students' plans will be supported by an integrated network of education, business and community organizations that nurtures, teaches and guides them in their pursuits.
- That programs will represent a break from stereotyped gender influences and females will seek careers in all technical fields in increasing numbers.
- That students will participate in a blended curriculum of professional, technical, academic and cultural activities that prepares them for a lifetime of successful learning and working.

Anticipated outcomes are that every student will...

- ...be treated as an individual.
- ...be offered problem-solving and decision-making skills that will lead to a productive life.
- ...have learning opportunities that connect to work and community.
- ...be actively involved in decisions affecting him or her.
- ...have a safe and secure learning environment.
- ...have a sense of working for the common good.
- ...gain self-esteem.
- ...be guided by a mentor and mentor younger students.
- ...go at his or her own pace.
- ...be eager to take risks, not be afraid to fail.
- ...become a successful worker and citizen.
- ...learn flexibility, be able to adjust to change.
- ...understand the economy, job opportunities and what it takes to earn a living.
- ...have strong basic skills and work ethic.
- ...be able to articulate his or her own goals and options.
- ...have tools for lifelong learning.
- ...have a portfolio that reflects his or her interests and aptitudes.
- ...see school as a resource and know where to go for answers.
- ...be accountable for his or her own successes and failures.

A VISION FOR THE NEW SYSTEM

That Lane County develop a seamless professional technical education system encompassing kindergarten through higher education that will:

- Emphasize values and traits deemed vital for success in a competitive workforce.
- Promote higher order thinking and group problem-solving skills.
- Enhance opportunities for making informed career choices in a technological society.
- Understand and contribute to the economic foundation of our global society.
- Integrate and apply academic and technical skills.
- Demonstrate the relationship among community, education and the world of work.
- Be accessible to all students including those with special needs, minorities, gifted students, those with disabilities and students at risk.

Anticipated outcomes are that the system will...

- ...involve business in a significant role by identifying necessary competencies, offering work experience and producing job openings.
- ...identify and address the needs of people with disabilities.
- ...combine core subjects with applied career counseling.
- ...maintain district independence.
- ...be seamless, with a set of outcomes that are measurable and agreed upon by all levels of education.
- ...provide education dictated by the needs and capabilities of the student.
- ...use cultural differences as a resource that reflects our global economy.
- ...include all partners in assessment, planning and resource allocation.
- ...encourage collaboration and regional programs.
- ...encourage increased involvement of students, parents and community in designing new programs.
- ...allow teachers to enlarge the scope of their disciplines and work in teams.

Thank you for investing the time to learn more about the vision for our students and for Lane County's professional technical education system.

Each of us sees this vision through the filters of our own experience — our family, our ethnicity, our community, our education, our career, our shared empowerment. Many of us have been working on professional technical education issues for years . . . we are newly committed to this vision.

Whether you are a student, parent, educator, business person or community leader, your ideas, beliefs and commitment can make the difference in realizing this vision for our county.

If you are involved in planning and implementing change in our schools, we invite you to read the following section. It contains the expectations, creative ideas and concerns of educators at all levels, business people, labor representatives, students and parents. We encourage you to consider their insights as you plan new professional technical education efforts.

We invite you to join us as we prepare our children for the 21st century. Together, we can make a difference for the generations to follow.

A FRAMEWORK FOR ACTION

RECOMMENDATIONS FOR PLANNING

As groups and individuals met to create our vision, we wanted to draw on the years of experience and advice that many in Lane County bring to professional technical education reform efforts. We interviewed more than thirty individuals, among them administrators, teachers, students, parents, business, labor and community representatives.

Individually, they shared their visions for our students and for professional technical education for Lane County. They offered their expectations, ideas and concerns. We offer them to you in the following pages as a resource for your local and regional planning efforts.

Taken together, the Vision and Framework for Action provide a strategy for individual school buildings and school districts and communities to strengthen opportunities for each student to be prepared for full participation in the world of work.

Local control and innovation in planning and implementing new directions is essential. Now, we have new opportunities to become part of a regional strategy, a countywide vision for teaching students and training workers.

We invite you to share the wisdom of your colleagues and, as you meet with others to plan for change, consider the five planning recommendations they have offered.

- EMPOWER PEOPLE TO LEAD, TO PARTICIPATE, TO CHANGE
- DETERMINE OUTCOMES, STANDARDS AND MEASURES
- ESTABLISH AN INTEGRATED NETWORK OF EDUCATION, BUSINESS AND COMMUNITY
- CREATE A COMMUNICATION NETWORK
- ACKNOWLEDGE THE PROCESS OF CHANGE

EMPOWER PEOPLE TO LEAD, TO PARTICIPATE, TO CHANGE

This vision requires a different kind of leadership. If the people in key positions are controllers, not much will happen. We need to empower people, support and facilitate them, then just lie back and watch the innovation occur! Administrator

EXPECTATIONS

- That the vision will be embraced by educators at all levels and by entire communities throughout Lane County.
- That local and regional planning be developed with consideration of alignment with the regional plan of the Lane County Professional Technical Education Consortium and the Regional Workforce Quality Committee.
- That planning efforts specify ways for everyone interested to become involved.
- That planning efforts and those involved will respect the diversity of communities, their approaches and their hesitations.
- That students, educators, business people, labor leaders, parents, grandparents and community leaders will be invited to participate in meaningful ways.
- That facilities, communications and programs are accessible to all students.
- That students will feel respected and involved in the decisions being made that will affect their lives.
- That administrators are creative with their time and resources and allow teachers to do the same.
- That managers and supervisors will be willing to empower those at all levels of education to lead.
- That a spirit of cooperation, not competition, prevail throughout the county in the planning and implementation of new endeavors.

IDEAS

- Acknowledge and applaud the development of site-based committees in each district and use them as much as possible as the hub for information and planning.
- Empower teachers by giving them time to learn more — about our global economy, new technologies, local business needs and community interests.
- Provide time for key people to pursue changes and experiment with new activities. Recognize and reward those who do.
- Establish business connections for teachers to access.
- Empower parents by inviting and encouraging them into classrooms to share work experiences and act as mentors.
- Create a network of messengers for change. Include students, parents, teachers, business people and offer them the information and opportunities to participate.
- Involve parents and whole families in individual students' plans.
- Encourage schools to assist each other in reaching their goals.
- Empower parents by informing them about educational options for their children.

CONCERNS

- Assure that all people who need to be involved are included in the planning process.
- A few will lead — others will be “forced” to follow.
- Perception that plans are already made and resources allotted.

DETERMINE OUTCOMES, STANDARDS AND MEASURES

Outcome-based education gives students the opportunity to master things as they go — be successful in small bites. By the time they leave the system, they have both the tools and the self-esteem to learn specific skills they need in their chosen workplace. And they have a good attitude about learning, so that they can adapt to changes as the workplace changes. Superintendent

EXPECTATIONS

- That opportunities for all students — young, old, minority, disabled, gifted, at-risk — will be offered.
- That students participate actively in determining outcomes, standards and measures for what they learn and how their education relates to work, family and community.
- That outcomes address personal values of dignity, equity, self-esteem, responsibility, confidence and accountability.
- That outcomes are realized through a balance of classroom time, special projects, work opportunities, mentorships.
- That each student has a plan with specific goals and a mentor to guide him or her.
- That students, teachers and administrators are willing to experiment with new activities, classes and directions and provide honest feedback that will lead to abandoning what doesn't work and fine tuning what does.

IDEAS

- Agree on resources to use as the basis for planning discussions.
- Commit to the long term study of outcomes and their application to the workplace.
- Encourage each student to keep a journal of interests, explorations and experiences to help them track success toward their goals and outcome measures.

- Create an educational continuum with multiple drop off and reentry points.
- Create a combination of specific and general outcomes that can be used countywide.
- Integrate academic and technical skills through applied cognitive and theoretical learning.
- Create a basic set of outcomes and expect students to participate in selecting and creating some of their own.
- Create outcomes and measures that acknowledge the need to look beyond Lane County and prepare students for the global job market.
- Use a process for continuous quality improvement.

CONCERNS _____

- Are the needs of large and small businesses different enough in Lane County to address them separately?
- How can we assure the blending of academic and applied approaches to get to our outcomes?
- How do our outcomes need to fit with what is happening on a state level?
- How do the outcomes connect with college entrance requirements?

It's critical that our kids learn perseverance and accountability. I think the CIM program is good for this... they will learn, then be tested and IF they succeed, be able to go on. If they can slide through school, we'll just teach them that they can slide through life — it will be a rude awakening when they realize they can't.

Parent

ESTABLISH AN INTEGRATED NETWORK OF EDUCATION, BUSINESS AND COMMUNITY

The highest priority is to clearly identify the specific needs of the student and the employer, and to refine our systems continually as those needs change.

Administrator

EXPECTATIONS

- That professional technical education reform be treated as but one important piece in the broader vision of education reform — from kindergarten through higher education and the range of options in between — and that those involved are sensitive to the impacts on all levels.
- That efforts increase to leverage and consolidate funding among agencies.
- That we create a seamless and flexible system of education for students to move at their own pace, with individual goals.
- That we create increased opportunities for educators at all levels to meet and strategize options for students.
- That there be collaborative staff and curriculum development . . . from kindergarten through higher education.
- That teachers and business people spend time together and learn from each other to create meaningful work-related activities for students.
- That the interest and needs of business and industry be integrated into all curriculum planning.
- That businesses allocate time and resources necessary to invest in the vision for Lane County students.
- That support services be offered and accessible to students who need them so all students can participate.
- That service clubs and other community-based organizations commit to the vision and find ways to participate.
- That schools coordinate curriculum and reform activities so students can transfer with minimal disruption in their program.

IDEAS

- Launch community efforts to educate and inform Lane County businesses about professional technical education reform and the vital roles large and small business can play.
- Target businesses for partnership efforts through Chambers of Commerce, trade and small business organizations.
- Broaden business participation from advisory roles to active and meaningful participation.
- Encourage service clubs throughout Lane County to commit to the vision and specific roles for members.
- Assure that higher education is attuned and sensitive to the needs of business and the schools to train in needed curriculum development skills.
- Create a clearinghouse for schools, businesses and community groups to access information about local planning efforts, challenges and successes experienced by schools throughout the county.
- Assess the myriad of organizations, boards, committees and initiatives for professional technical education reform in Lane County and consider streamlining the current structure.
- Optimize the use of electronic communication and instructional technology.

CONCERNS

- The business community's commitment to education reform is unclear.
- We need to help businesses see education reform as a profitable investment for all business in Lane County.
- Issues of turf continue to prevail. Who will get what? Will some organizations, positions, efforts become obsolete?
- We need to be sure to address the apprenticeship programs and how they fit with the reform agenda.
- All major partners need to see reform efforts as a collective agenda — everyone investing will bring profitable results for all.

CREATE A COMMUNICATION NETWORK

Our first priority is a communication network. We have so many groups working to a similar end, if we don't share, we're doomed to failure. We need a process that brings the community together cooperatively. Superintendent

EXPECTATIONS

- That an identity will be created for the vision that all partners can embrace, support and be proud of.
- That the identity and invitations to become involved will bring new players and innovative ideas to the effort.
- That we will acknowledge and applaud current reform efforts as a strong beginning to realizing the vision.
- That Lane County's vision for professional technical education will be broadcast and accessible in every corner of the county.
- That a new image of professional technical education as vital for all students will emerge.
- That as plans are developed, people are empowered and change occurs, the good news is disseminated throughout the county.
- That questions will be answered, uncertainties dealt with and information offered for those critical to realizing the vision.

IDEAS

- Create a communication network to gather and disseminate information about planning, implementation efforts and progress.
- Provide clear, concise, jargon-free information on a regular basis through effective and inclusive networks.
- Create a resource base of ideas, projects, articles, speakers and solutions for schools, businesses and community organizations to use.
- Encourage Lane County media to donate space, time and print to publicizing efforts toward achieving the vision.
- Encourage community groups and service clubs to publicize and participate in the vision.
- Offer information to the legislature on reform plans and successes as they deliberate funding for education reform.

CONCERNS

- There are so many organizations, people and efforts involved in the reform efforts — the movement seems disjointed now.
- Marketing and public relations are often low priority items.

Including representation of minority groups in all critical decision-making groups will assure that we tap our cultural diversity as the rich resource it is.

Business Leader

ACKNOWLEDGE THE PROCESS OF CHANGE

We've hung our hearts on new ideas before that didn't happen.

This time we really need to focus on the purpose and the process.

Principal

EXPECTATIONS _____

- That all those needed to achieve our vision will receive the information they need to be convinced that change is necessary and imminent.
- That the reasons for change and potential results are articulated in ways that are easy to for those hesitating to accept.
- That those implementing change are encouraged, supported and acknowledged for their role.
- That those who feel threatened will have their questions answered, will be respected, their viewpoints included and valued.
- That turf will be put aside for a commitment to the greater good.
- That changes already occurring will provide the impetus for more change.

IDEAS _____

- Acknowledge that change is a continuous process, that is harder for some.
- Take time to celebrate programs and efforts being "retired" before launching new ones.
- Create open, accessible and inclusive processes for communications and decision-making.
- Acknowledge the reallocation of time and resources necessary to move our vision to action.
- Acknowledge the different levels of change necessary for professional technical education reform — from schools to institutional levels.

- Address the impact of change in all areas — rural and urban, large and small districts.
- Create forums to address issues of change. Deal openly and honestly with people's fears, hesitations and questions.
- Encourage people to plan for change regardless of perceived barriers. Planning costs little and can often lead to creative solutions.
- Be honest about the realities of what can be done without further funding and what can be done by reallocating time and current resources.
- Listen and be attentive to any and all concerns as valid and worthy of a response.

CONCERNS

- Issues of turf and trust are major concerns.
- Will I lose my power, my position? Is there a place for me in this new movement? Will I be up to the task to change?
- If state level reform initiatives and organizations lose momentum or don't receive funding, this too will pass.
- This looks like just another fad.
- It will be hard to take this all seriously until there is some money allocated to it.

We've made this major division in education — between workforce-oriented kids and college-oriented kids. But in reality, everybody's going to be in the workforce. So we need a blend in education that makes it more pertinent to both groups.
