This brief describes political challenges to systemic reform and explores the conditions under which coherent policy-making might occur. A focus is the role of states in achieving policy integration. The first section describes political challenges to systemic reform, which include a lack of consensus on student standards, a focus on inputs and processes, and a lack of coordinated policies. Four impediments to policy coordination are discussed in the next section—a fragmented organizational structure, the focus on political elections, policy overload, and government specialization. The third section describes Kentucky's Prichard Committee for Academic Excellence and the South Carolina Business-Education Subcommittee. The first is a large volunteer citizen's organization and the second is a small leadership group with statutory authority. Both groups: (1) represent a variety of constituencies; (2) act as mechanisms for the incorporation of business interests into larger reform coalitions; (3) serve as training grounds for leadership; (4) act as reporters and monitors of reform; and (5) act as vehicles for dissemination of information to a national audience. (LMI)
Politics and Systemic Education Reform

by Susan Fuhrman
As many as 45 states are involved in a reform movement focusing on ambitious student standards, coordinated policies and support for school-level change. This has been labelled “systemic reform” (e.g., Smith and O’Day 1991). But the idea is greeted by many political observers with skepticism. How can we expect such a rational approach—definition of student learning expectations and the purposeful integration of key policies—from a system that has long made policies incrementally and in a disjointed fashion? (See Lindblom 1959; Wildavsky 1974.)

While many obstacles to systemic reform do exist, some promising efforts indicate that policymakers can enact ambitious goals and support them with coherent, coordinated policies. This brief describes political challenges to systemic reform and explores the conditions under which coherent policymaking might occur. It includes excerpts from “The Politics of Coherence,” in Fuhrman, ed. Designing Coherent Education Policy: Improving the System (San Francisco: Jossey-Bass 1993). It also draws on two background cases of political structures designed to support education reform: “South Carolina’s Business-Education Subcommittee” by Diane Massell and “Kentucky’s Prichard Committee” by Jacob Adams.

**Political Challenges Facing Systemic School Reform**

The concept of systemic school reform, as used in this brief, focuses on the establishment of ambitious expectations for all students. Standards would be set at a high-level, requiring deep understanding of subject matter and sophisticated reasoning ability. Curriculum frameworks laying out important topics and understandings would be the foundation for student assessment, instructional materials, teacher licensing and staff development. In that manner, key policies would send coherent messages about instruction (Cohen and Spillane 1993).

The purpose of a more coherent policy system would be to support and sustain school-based change. To provide schools more flexibility in meeting the needs of their students, higher levels of governance would focus on defining and developing accountability for results and would remove constraints on school practice. Schools would determine the instructional strategies most likely to foster student achievement of outcome goals (Smith and O’Day 1991; CPRE 1991).

All levels of governance—local school districts, states and the federal government—might work to define standards and coordinate key policy instruments. Many districts and states are already making such efforts. And, with the active support of the Clinton Administration, voluntary national standards are

Susan H. Fuhrman is professor of educational theory, policy and administration at Rutgers, The State University of New Jersey. She also serves as director of the Consortium for Policy Research in Education.

Dr. Fuhrman is the author of numerous articles, research reports and monographs on education policy and finance. Dr. Fuhrman was a consultant to the Ford Foundation’s program on educational management and finance for 10 years and served as vice-president of the school board in Westfield, New Jersey.
being developed in key subjects. Considerations about the politics of systemic reform are therefore relevant to several levels of government. However, this brief focuses primarily on the role of states, since they have both constitutional responsibility for education and the jurisdiction over both pre-collegiate and higher education necessary to achieve policy integration. Conceptions of systemic reform include two important ideas: societal decision about student standards and coordination of important policy instruments. Yet these ideas face several challenges.

**Student Standards**

The systemic reform strategy suggests that a decision be made about challenging core expectations for student learning. Right now schools and districts often defer to textbook publishers' Tables of Contents for decisions about which topics to include in curricula and let standardized testing define the skills children should learn. Often, neither texts nor tests encourage a focus on high-level skills (Tyson Bernstein 1988; Archbald and Newmann 1988). In fact, in the absence of explicit consensus about outcomes, the system puts a de facto emphasis on low-level skills which are familiar and relatively easy to teach.

Furthermore, because clear direction is lacking, the system has no authentic means of judging its progress and no substantive base for resource allocation decisions (Odden 1991). Formulas or traditional expenditure patterns typically drive the allocation of spending increases and cuts. Resources are seldom distributed based on explicit decisions about how money should be used. The system has not yet determined how to use resources effectively in part because the system has yet to determine the outcomes to be effectively achieved (Odden and Massy 1992).

Policymakers have avoided central—for example, state-level—determination of outcome expectations by summoning up the hallowed educational tradition of local control. In fact, deep conflicts over the purposes of education have made policymakers wary of opening goal discussions (Tyack 1976; 1992). In our increasingly diverse society, there are many differences of opinion about what should constitute a core body of content learned by all students. By letting content expectations devolve to the district or school, policymakers can evade such difficult decisions. Furthermore, if, as some analysts assert, society's interest in education lies primarily in credentialing in a way that preserves economic and social inequities, there is little reason to bother with content expectations. Others argue that because knowledge is constructed by individuals in specific contexts, it would be counterproductive to specify knowledge expectations for an entire society, no matter how worthy the expectations.

In the past, educators rarely challenged the status quo—the absence of policy-level outcome expectations. In fact, many have argued strongly against this type of "policy interference" (e.g., Wise 1979; McNeil 1986). For one thing, they were highly skeptical that policymakers could develop standards that were ambitious and challenging with respect to student achievement. Politically determined standards are typically not challenging; rather they tend to be minimal in nature. And, in the absence of consensus about results, standards focus on inputs and processess. These can be criticized for constraining professional judgement and necessary school flexibility.

**Coordinated Policies**

The systemic reform strategy also proposes that a series of key policies should be aligned with outcome expectations. It suggests departing from the current practice of fashioning a separate program to address each educational problem because the individual projects, no matter how uniquely worthy, seldom reinforce one another and frequently send different, even conflicting, messages to schools. For example, most current teacher certification and evaluation requirements stress generic skills rather than ability to teach the subject-matter content students must know. Programs for students with special needs pull them away from the mainstream curriculum, fragmenting not only their education, but the work of teachers and administrators. Staff development frequently consists of one-shot workshops on "hot" topics that are unrelated to each other or to the fundamental instructional and pedagogical issues teachers face daily.

The rationality of integrated policy based on deliberate goals is at once the appeal and the Achilles' heel of systemic reform. Consensual decision and policy coordination have seemed beyond the capacity of our political system. In fact, it is arguable that our political system functions so as to deliberately thwart decisiveness and coordination.
Impediments to Consensus and Coordination

At least four characteristics of the political system contribute to incoherent policymaking: the fragmented organizational structure; the focus on elections; policy overload; and specialization.

Fragmented System

First, the fragmentation of our political system makes it very difficult for policymakers to coordinate with one another or to develop consensus across all parts. Separate branches of government that check and balance one another exist at each level of government. Each part operates according to its own schedules and rules, its members swayed by incentives related to institutional membership and maintenance rather than the functioning of the entire system. Opportunities to work with policymakers in other institutions do not naturally occur or may require facilitation through the creation of new institutions, further increasing the structural complexity of government.

Educational governance is particularly complex (Cohen 1982). Not only are there three levels of government (federal, state and local) making education policy, but also there are separate structures (e.g., state boards of education) at each level that date from the Progressive era emphasis on isolating education from partisan politics.

Focus on Elections

A second characteristic of our system that thwarts rational policymaking is the emphasis placed on campaigning and election. The “electoral connection,” a priority on re-election above policy or institutional improvement goals, is probably most apparent in Congress where livelihood and career depends on staying in. However, as state legislatures become more full-time, and thus more composed of career politicians, “the permanent campaign” is also becoming more characteristic of most state houses (Salmore and Salmore 1990; Rosenthal 1989). Executive branch elected officials face similar imperatives.

Because impressions on constituents take priority, politicians seek ways to distinguish themselves from their colleagues rather than avenues to cooperate in group decisions. They deal in what Mayhew (1974, 54-59) calls “particularized benefits,” pork-barrel projects or other “goodies” which particularly help their own constituencies and are clearly traceable to their originators. They fashion unique, discrete, “sexy” policies to which they can attach their name.

A second consequence of the preeminence of elections is the circumvention of controversial and difficult issues which can upset elements of the electorate. Finally, because of the emphasis on election, politicians are attracted to the type of policies that are most easily used as campaign issues: simple, easily explained policies that can be featured in a “sound bite.” Policies with immediate effects and clear benefits are simpler to explain than longer term efforts with more diverse or remote benefits. Subtlety can lose out to flashiness; careful developmental efforts can lose out to quick pushes that have less chance of success because the developmental groundwork was lacking.

Policy Overload

A third characteristic of the system that thwarts coordination is an overload with policy issues. Over the last decade most states made policy on a number of important education issues—like teacher salaries or the nature of student assessment—for the first time. These subjects had generally been left to local educators in the past. But, although states expanded their policy purview, local districts did not constrict their own activities in response. Local districts made more policy as well (Fuhrman and Elmore 1990). When so much is on the plate, each item can get less attention. And, the sheer volume increases the likelihood that policies will tumble out, without any necessary connection to a long-range strategy or to one another.

Specialization

A traditional strategy for managing the complexity that comes with too much work is specialization. It reflects not only the expansion of the governmental role but also the emphasis on election. Specialization creates more arenas in which politicians can claim credit and impress voters. Consequently legislative committees and subcommittees multiply and narrow their jurisdictions; special boards and commissions are created; new agencies are established. For example, in 16 states, at least one legislative chamber has separate committees for higher education and for elementary and secondary education. In 5 of those states, each house has separate committees for the levels of education.

However, specialization contributes to the fragmentation of the system. Policies are crafted by experts with increasingly narrow perspectives and experts in a particular sub-field have few incentives to consider how their actions will affect other specialized sub-fields. While bills often contain multiple provisions crossing many sub-areas of policy, they
are typically omnibus in nature, containing collections of discrete programs rather than integrated approaches to policy problems.

Opportunities for More Coherent Policymaking

Despite the serious challenges facing systemic reform, recent activities in a number of states suggest that policymakers can establish ambitious goals and reinforce them with coordinated policies. Certain factors and conditions seem to support these efforts.

Pending further study of the politics of reform efforts, it appears that the following are central to the development of systemic reform strategies: strong leadership around a clear vision of reform; processes that promote public and professional involvement; and the support of the federal government, national groups and professional and policymaker associations.

Leadership can come from a variety of sources. For example, the Kentucky legislature can be credited with enacting, and sticking with, the state’s ambitious reform; processes that promote public and professional involvement; and the support of the federal government, national groups and professional and policymaker associations.

Leadership can come from a variety of sources. For example, the Kentucky legislature can be credited with enacting, and sticking with, the state’s ambitious reform; processes that promote public and professional involvement; and the support of the federal government, national groups and professional and policymaker associations.

Public and professional involvement can be promoted by standards-setting processes that involve citizens and professionals in various stages of standards development and review. Broader support can nurture and buffer fragile political efforts that try to bridge traditional divisions and overcome short-term blinders in service of coherent policymaking.

Finally, the federal government and national associations of policymakers and professionals are actively promoting systemic reform, helping to reinforce the commitment of state policymakers. The federal government assists states with systemic reform through efforts like the National Science Foundation’s Statewide Systemic Initiatives Program. It also supports disciplinary associations that are developing national standards in key subjects that can be used by states in their own reforms.

Groups such as the National Governors’ Association, the Council of Chief State School Officers, the National Conference of State Legislatures, and the Education Commission of the States assist policymakers with the difficult design and implementation tasks associated with reform. They also validate the work of policymakers within their states by giving them national publicity and reinforcement (Fuhrman and Masse 1992; Massell 1994; Massell and Fuhrman 1994; Massell and Kirst 1994; Fuhrman and Elmore 1994).

An interesting development is the willingness of state policymakers to experiment with new structures, such as long-term commissions which in turn offer avenues for the maintenance of coherent reform over time. They address the problems of fragmentation, overemphasis on election, policy overload and specialization by uniting representatives across fragmented policy arenas and outliving changes in political leadership. Such structures promote consensus on a reform agenda that mitigates against political tendencies to veer off in new directions.

Two entities that are frequently cited—Kentucky’s Prichard Committee and the South Carolina Business-Education Subcommittee—are profiled in the sidebar on page 5. These bodies, the first a volunteer citizen’s organization with almost 100 members and the second a 20-member leadership group with statutory reform-related authority, illustrate how such structures can work to support reform. They perform at least five important functions that grant them great influence in shaping and sustaining reform efforts.

Both the Prichard Committee and the Business-Education Subcommittee represent a variety of constituencies.

This enables them to provide effective advocacy for reform and to link diverse interests. Because their memberships bridge institutions, levels of governance, political parties, and the private and public sectors, they are viewed as credible voices for children. They are not driven by electoral politics nor are they responsive to narrow constituencies.

Early success in mobilizing citizen participation and support for reform helped establish the “voice of the people” reputations of both groups. In 1984, shortly after it incorporated as a private, nonprofit citizens group, the Prichard Committee organized a televised statewide town forum which involved 20,000 Kentucky citizens and contributed to the governor’s call for a special legislative session on education. The SC Subcommittee is a joint working committee of two larger groups formed in 1983 by then Governor Richard Riley; their efforts to generate broad-based grassroots support led to the Education Improvement Act (EIA) of 1984,
an accompanying sales tax increase, and a network of 26,000 people who can still be called on to support education.

Second, both groups are mechanisms for the incorporation of business interests into larger reform coalitions.

Prior to EIA, business had never before rallied to support an increase in the sales tax for education in South Carolina. In the years since, the Subcommittee has been a strong voice for maintaining the state’s financial commitment to reform. A few years ago, the Prichard Committee formed the Partnership for Kentucky School Reform with the state Business Roundtable specifically to “maintain solidarity for the implementation of the Kentucky Education Reform Act (KERA)” (Prichard Committee 1992, 6). The Partnership was launched with $1.5 million from key Kentucky corporations.

In these states, unlike others, there is no doubt that business supports education, no separate “business” agendas, no concerns that business leaders pursue policy initiatives primarily because they distrust educators and want them controlled. Instead business leaders are key participants in crafting, negotiating, supporting, selling and sustaining reform efforts. Their inclusion widens reform support and helps to buffer reforms from the vagaries of political change.

Third, Prichard and the Subcommittee serve as training grounds for leadership, both within education and more generally.

The current governor and lieutenant governor of Kentucky are former Prichard members; its membership list is frequently used by officials seeking nominees for boards, commissions and the like. Several long-term citizen members of the SC Subcommittee have become key participants in diverse education-related activities throughout the state.

Citizens Unite to Support Reform

The Prichard Committee for Academic Excellence

This is a non-profit, volunteer group composed of 95 private citizens, including former governors, business leaders, civic activists, parents and professionals. Membership is not open to statewide elected officeholders or candidates or professional educators (except K-12 classroom teachers).

Prichard began as a governmental committee charged with studying the longerterm needs of postsecondary education. In 1983 it became a private, nonprofit organization and turned its focus to K-12 education. It developed reform recommendations, publishing major reports demonstrating the need for reform, arguing for coordinated reform policies and suggesting specific reform approaches; organized citizen and business support; and assisted the legal and political processes that spawned the 1990 Kentucky Education Reform Act (KERA).

Currently, the Committee monitors and supports reform implementation. With funding from corporations and foundations and a staff of 17 people, the Committee is pursuing the following activities:

- Informing the general public about provisions of the reform act and its implementation through summaries, reports, the media, primers, training of local affiliates and the like.
- Enlisting, training and supporting citizens through Community Committees on Educational Reform. Community Committees in each district are intended to inform the public, recruit and train school site council candidates, develop local leadership and monitor local implementation progress.
- Promoting and supporting parent participation in school-based decision making through training and information.
- Monitoring, evaluating and reporting state progress on KERA. Activities include training Committee members and other affiliates for monitoring tasks, creating a state-level checklist of implementation activities, publicizing open meetings, and supporting and disseminating studies of reform. Prichard plans annual reports to the state on implementation progress.
- Reporting to the nation on KERA progress, through dissemination and media relations.

The South Carolina Business-Education Subcommittee

This is a joint subcommittee of two large blue-ribbon committees which were active in promoting the 1984 Education Improvement Act (EIA). EIA authorized the Subcommittee and charged it with reviewing program regulations to assure conformity to EIA; reviewing evaluations and assessments of progress produced by the state agency and other oversight bodies; and making recommendations for the future. Recommendations are to encompass educational needs in the state and current reform policies needing updating.

The 20-member Subcommittee (10 civic/business members; 6 educators and 4 legislators, by statute) has a small staff and appropriation. It produces an annual report evaluating EIA progress and widely distributes shorter updates. The reports draw on other monitoring and evaluation activities as well as the Subcommittee’s own sense of issues requiring attention, needs for finetuning and recommendations for improvement.

Members take commitment to reform along with them to their new activities and responsibilities, enhancing the likelihood that reform direction will be sustained over time and supported by an
ever-broadening group of influen-
tials.

Fourth, the reporting and
monitoring functions of
these groups, keep public
attention focused on reform.
Both groups regularly inform
citizens about implementation
progress and effects and con-
tually remind them that the re-
forms will take time to bear full
fruit.

Faithful implementation is en-
couraged by regular reporting on
progress. Policymakers have
means other than new policy
initiatives to show their dedica-
tion to education improvement;
they can participate in the activi-
ties of these groups and comment
on their reports of reform pro-
gress. As a consequence, these
states are likely to experience
fewer shifts in emphasis and less
proliferation of projects. Reform
direction is more likely to be
maintained over time. For exam-
ple, the EIA remained intact
while the Subcommittee examined
its progress yearly; many of the
Subcommittee's recommendations
for fine-tuning were then incor-
porated into the 1989 Target 2000
reform. Because oversight was
occurring, the later reform was
deliberately built on and designed
to improve the first, not de-
veloped in the absence of knowledge
about the effectiveness of existing
policy, as many reforms are.

Finally, both groups are
vehicles for sharing
state reform efforts with a
multi-state audience and for
channelling national expertise
to state policymakers.

The Prichard Committee has a
national advisory panel to guide it
in establishing monitoring prior-
ities and to offer advice regarding
best practice in key reform areas.
It disseminates information about
Kentucky reform to national
media and audiences. It also
convened a meeting of national
researchers and participated in
designing an independent evalu-
ation of KERA. Similarly, the SC
Subcommittee's EIA Update has
reached a wide audience, and
South Carolina reform has re-
ceived extensive national media
coverage. The national reinforce-
ment helps cement in-state sup-
port for reform.

The success of the Prichard and
South Carolina committees is
evident in their influence. Both
have served to generate ideas that
have been incorporated into
policy; the Kentucky Education
Reform Act (KERA) and Target
2000 include many of their recom-
Tabtions. More inform-
ally, their members serve as
sounding boards for policy-
makers.

The groups do not go unchal-
lenged, however. Prichard is not
uniformly lauded by practitioners
and has been at odds with the
school boards association over the
roles of school-site councils. To
smooth these relationships, the
Committee participates in an
Education Coalition of major
state education organizations
designed to present a unified
position on education legislation.
The Business-Education Subcom-
mittee is currently experiencing
some instability related to shifts
in its leadership and to an in-
creasingly complex and partisan
political environment, suggesting
efforts to bridge changes in
leadership are problematic. In
addition, both the Kentucky and
South Carolina groups raise
questions about whether new
consensus-building structures—
formal or volunteer—facilitate the
work of existing structures or
become routes for bypassing or
duplicating their work. As Mo-
rone (1990) argues, such entities
can make government temporarily
more responsive; but over time
they may add to rather than
lessen the complexity and
impenetrability of the policy
process.

Despite these questions, the
Prichard Committee and the
Business-Education Subcom-
mittee provide many lessons about the
role of constituency-bridging
groups in building and sustaining
support for reform. In at least six
other states, non-profit organiza-
tions located outside of state
bureaucracy are taking the lead
for reforms supported by the
National Science Foundation's
Statewide Systemic Initiatives
Program. Participants indicate
that locating leadership in a new
organization permits broader par-
ticipation, unites diverse interests,
avoids red tape, and enables them
to hire staff at higher salaries
than offered by state government
(Corcoran 1993).

Conclusion

Because the political system
seems incapable of coherent ap-
proaches and sustained direction,
many argue that politics should
be abandoned altogether—by sub-
jecting schools to market control
or by removing policies so that
schools can improve themselves
unfettered.

However, the abandonment of
policy does not offer hope of
widespread improvement because
schools are not able to sustain
self-generated change. Nor is
school-by-school change likely to
spread to all schools. The system
must offer support. Current
systemic reform efforts suggest
that states are willing to experi-
ment with more coherent ap-
proaches to policy that might
offer support for school improve-
ment. Perhaps systemic reform's
recent popularity reflects its
political appeal as a basis for
unifying those interested in edu-
The notion of more ambitious standards, coherent policy in support of those standards, and restructured governance reach across traditional lines of division, providing a platform for unification. The idea that higher-level policy should focus on results rather than school process appeals both to policymakers concerned about accountability and to practitioners who want to keep policymakers out of decisions about their practice.

Similarly, the idea that consensus about results should focus on a streamlined core body of knowledge and skills attracts educators who wish to leave determination of detailed curricula to the school and foster the ability of schools to meet the needs of diverse student bodies. State curriculum frameworks and reinforcing policies could provide a protective structure that would undergird strategies for parental choice and other approaches to decentralizing school governance. To the extent that systemic reform ideas form a platform for uniting diverse reform constituencies they take on political power.

The ideas that exert the greatest influence are those that balance political forces, finding ways to enlist existing interests as well as to open up new opportunities. Systemic reform has many of the properties of so-called “public ideas” (Moore 1988; Reich 1988). It challenges “society to perceive and deal with a problem differently” (Moore 1988, 83) by changing the terms of the education reform debate. The new entities states are establishing as arenas for reform discussion illustrate that constituency-bridging ideas and structures may go hand in hand.

The Consortium for Policy Research in Education

**CPRE Policy Briefs** are published occasionally by the Consortium for Policy Research in Education. The Consortium operates two separate, but interconnected research centers: The Policy Center and The Finance Center. CPRE is funded by the U.S. Department of Education’s Office of Educational Research. The Policy Center of CPRE is supported by grant #OERI-R117G1007; the Finance Center of CPRE is supported by grant #OERI-R117G10039.

Members of CPRE are Rutgers, The State University of New Jersey; University of Wisconsin-Madison; Harvard University; Stanford University; and the University of Michigan.

The CPRE Policy and Finance Centers are part of a nationwide network of university-based research and development centers whose mission is to strengthen the performance of American students by providing useful and sound information. The research agenda for both Centers is built around three goals:

- To focus research on policies that foster *high levels of learning for all students*, regardless of social or economic background.
- To conduct research that will lead to *more coherence of state and local policies* that promote student learning.
- To study how policies *respond to diversity* in the needs of students, schools, postsecondary institutions, and states; and to learn more about the *connections between student outcomes and resource patterns* in schools and postsecondary academic departments.
