Agricultural Laborers; *Community Resources; Elementary Secondary Education; *Emergency Programs; *Farm Labor; Government Role; Migrants; *Natural Disasters; Philanthropic Foundations; *Program Development; *Social Services; Training

*Disaster Planning; Federal Emergency Management Agency

This guide assists service providers in developing a comprehensive plan for aiding farmworkers during federally declared disasters, undeclared emergencies, and other crises that affect the agricultural industry. The first section outlines general characteristics of the farmworker population and describes how farmworkers have been overlooked during disaster relief efforts in the past. The second section explains the role of government and how disaster aid is allocated during presidentially declared and undeclared disasters. This section also introduces the four phases of comprehensive emergency management used by the Federal Emergency Management Agency and state emergency plans. The third section outlines the development of a plan, including researching the community, coordinating with other agencies, sharing information about resources, determining whether resources meet needs, and annexing the plan to the state emergency operations plan. Also included are ideas for in-staff training and an assessment tool for assessing farmworker damage. The next section includes forms and instructions for evaluating service strengths and weaknesses. The last section lists names and addresses of contacts and resources for social workers, teachers, and others who work with migrant farmworkers. Included are descriptions of federal disaster programs for farmworkers and a listing of state resources and foundation resources. Includes a glossary. (LP)
Migrant workers

Children are 40 miles by dirt road from the nearest school, where temporary office trailers have been set up in the cafeteria. Hernandez, a migrant worker, has no idea when he will receive his next paycheck. Many nearby fields are still dry, but the drought has thrown the entire economy of the Gila River into disarray, because bridges to Interstate 8 have been closed.

Developing a Farmworker Disaster Plan

A Guide for Service Providers

Migrant farmhands, flooded out of the Midwest, will return with little money and many needs.

Texas — Heavy rains in mid-month have slowed the canola harvest in this West Texas county, leaving migrant workers unable to work and with unbearable living conditions. We will never come here again, said Nora Valenzuela, who lives with her two children, 8-year-old Line and 13-year-old Mary, who have been living in a one-room apartment since they came waiting for work. She said the apartment didn't even have hot water.

Introduction

"Hope in every sphere of life is a privilege that attaches to action. No action, no hope."
Peter Levi, British Professor of Poetry

Over the past decade, the Association of Farmworker Opportunity Programs (AFOP) has been initiating action to improve disaster assistance for farmworkers. By gathering data on the scores of natural disasters that hit agriculture and testifying before Congress, AFOP informs national leaders and the public about the debilitating effects disasters can have on farmworkers and on the organizations that serve them.

Disasters that hit during peak harvesting seasons may wipe out a year's worth of earnings for a migrant or seasonal farmworker family, who can be left with no income, no food, no place to live, and no way to return home. When these crises occur, farmworker service providers can easily find themselves ill-equipped to meet the myriad of farmworker needs. In addition, farmworkers' needs are not specifically mentioned in many of the state emergency operations plans, and services for them are consequently unorganized.

Developing a Farmworker Disaster Plan was created to empower service providers to take strategic action before a disaster occurs. With a comprehensive plan in place, you will know what will need to be done, how it will be done, who will do it, and where to look for resources. You will also be able to gather enough information to incorporate the essence of your farmworker disaster plan into your state's emergency operations plan. Also, by including a farmworker annex into your state's emergency operations plan, you will provide a vital link between farmworkers and the local, state, and federal relief agencies.

Why Do Farmworkers Need a Plan? outlines general characteristics of the farmworker population and also describes how they have been left out of disaster-relief efforts in the past.

Who Responds to Disasters? explains the role of local, state and federal government and describes how disaster aid is allocated during a presidentially declared and undeclared disaster. This section also introduces the four phases
of comprehensive emergency management used in FEMA and state emergency operations plans. These phases will also form the basis of your disaster plan.

**How to Develop Your Plan** guides you through the process of developing both your plan and an annex to your state emergency operations plan. The process is broken down into five steps: Research Your Community, Coordinate, Share Your Resources, Do Your Resources Meet the Needs, and Put Your Plan into Annex Form. We’ve also included an Essential Elements Checklist for your plan, some ideas for in-staff training, and a tool for conducting a farmworker damage assessment.

The **Additional Forms** section has camera-ready copies of three forms we developed to help your workgroup determine service strengths and weaknesses. We have also included in this section a *Farmworker Damage Assessment Form*.

**Contacts and Resources** provides a wealth of available contacts and resources that should help you when you create and implement your plan. Federal farmworker disaster assistance programs, community resources, and foundation resources provide you with lists of federal and state agencies and foundations.

**Glossary** section defines acronyms and other commonly-used terms to help orient you to FEMA’s disaster vocabulary.

**Contributing Documents** lists sources that were used to create this guide.

Throughout this guide, we used the term “disaster” as a catch-all expression when describing not only federally declared disasters, but also undeclared emergencies and crises. However, FEMA and state emergency agencies distinguish between a declared disaster (with the president’s declaration), an undeclared emergency (without the president’s declaration), natural disasters, and technological disasters. We hope that the glossary section will help to clarify some of these differences.

*Developing a Farmworker Disaster Plan: A Guide for Service Providers* could not have been completed without a generous grant from the U.S. Department of Health and Human Services, Administration for Children and Families’ Office of Community Services. We hope that this guide will be a valuable tool for service providers as they continue to serve migrant and seasonal farmworkers.

*Diane Mull*, Executive Director, AFOP
*Beth Outterson*, Nutrition and Health Project Manager, AFOP
*Gay Moore*, Project Assistant, AFOP
Why Do Farmworkers Need a Plan?

+++

Farmworkers are a very hard-to-serve population because of their mobility, isolation, limited education and transferable skills, working poor status, and lack of labor standard protections. Often, they are ill-served by federal and state assistance efforts. This section provides some general information about who farmworkers are and gives examples of when the basic needs of farmworkers were not met during disasters.

Who Are Migrant and Seasonal Farmworkers?

The U.S. Department of Health and Human Services found in a 1990 study that 4.1 million farmworkers and their families lived in the U.S. and Puerto Rico from 1987 through 1989. Migrant farmworkers are hired each season to harvest crops. They regularly travel every 4 to 5 months to other regions to find work, and live in temporary housing or labor camps. Seasonal farmworkers also harvest crops, but do not travel. They may work in agriculture only during harvest time, and may work in other capacities for the remainder of the year. They usually live in homes rather than in labor camps.

In “normal” times, the strain of daily life for farmworkers is difficult physically as well as economically. Working long hours during the peak

In a 1993 survey conducted by AFOP, farmworkers service providers listed obstacles that inhibited farmworker access to nutrition and education services. These same problems worsen during disasters.

- lack of funding
- food pantries that do not have culturally appropriate foods
- overworked staff
- language and cultural barriers between public agency staff and farmworkers
- insufficient outreach to camps
- inadequate food storage
- lack of grower or crewleader cooperation
- farmworker fear of legal problems
- farmworker misinformation about programs and resources
- farmworker lack of transportation
- poorly located WIC, Food Stamp, and other assistance offices
- lengthy public application forms
- Governor’s refusal to use federal disaster assistance to save migrants in their states.
agricultural season, they often earn below minimum wage because the season lasts for a short period of time. For migrant farmworkers, there can be a lag of several days or weeks between jobs as they travel from one state to another in search of work. Uncertainty only accentuates their hardships. When disasters strike, farmworkers can be left without jobs and income to support their families for the balance of the year. Farmworkers in 49 states are not eligible for unemployment compensation. They are only eligible for disaster unemployment if they can prove that they were employed on a farm that was affected by the disaster. Because farmworkers have so few labor protections and no fringe benefits, no work means no income to pay for food, housing, health care and transportation to find alternative work.

The effects of disasters upon migrant and seasonal farmworkers vary. Seasonal farmworkers often bear the greater long-term impact, since they do not travel to other areas to obtain work, and live year-round on what they make from one season’s worth of work. For seasonal workers, a disaster in the peak of the season could require immediate and longer-term assistance not provided under most disaster assistance programs. However, since seasonal workers have adapted to their community, they do not face the same isolation or alienation that migrant workers do. Because migrant workers tend to be more socially, culturally and geographically isolated, they can be more difficult to locate and serve. Local residents, if they are aware that farmworkers exist in their area, may be suspicious of them and unable to communicate because of language differences. Service providers have found that these suspicions can lead to misunderstandings during disasters.

Among both migrant and seasonal farmworkers, countless thousands have gone hungry in past disasters because no prior plan was in place to identify farmworkers as a needy group and address their needs. State and local agencies, both public and private, must coordinate their efforts to ensure that farmworkers’ needs are not forgotten.

Farmworkers in Past Disasters

Disasters which affect only farmworkers tend to be caused by both natural circumstances and economic crises. Mass lay-offs due to farm closings may be caused by a disaster or by an unrelated economic downturn. These disasters are more silent than community-wide disasters but can be just as economically debilitating. Although farmworkers’ lives may not be in immediate danger, they will be out of work and without unemployment compensation, creating a major economic strain for them and the agencies that serve them.

When disasters affect farmworkers, not only are farmworker service providers in that state strained, but also their counterparts in the states to which the farmworkers will be traveling. Disaster assistance generally does not follow the victims, but instead goes to the area where the disaster occurred. Mass lay-offs
Why Do Farmworkers Need a Plan?

ciaused by a declared disaster often force migrant farmworkers to leave ahead of schedule to find work in another state. Because of this displacement, organizations in other states also have to contend with disaster effects but without the benefit of any disaster aid.

During the Midwest floods of 1993, for example, thousands of farmworkers were stranded with no money to travel on or return to homes in Texas. Service providers in the flooded areas exhausted their non-disaster resources and had to scrounge for donations while hoping for federal dollars. Many feared that by the time federal funding arrived for the Midwestern states, most farmworkers would have already returned to their homes in Texas. Unfortunately, no federal dollars came for farmworker victims in the Midwest.

Meanwhile, Texas felt the brunt of the crisis, as farmworkers eventually straggled back south with little or no earnings. Service monies cannot be appropriated to states where a disaster did not occur, some farmworkers waited in the northern states before realizing that no relief would be coming anytime soon. Congress appropriated funds for the 1993 summer floods in August. However, USDA chose not to allocate any of the available $20 million of funds allowable to serve farmworkers.

The Midwest floods were not the first time farmworkers did not receive any aid. In 1992, migrant farmworkers who suffered from the effects of Hurricane Andrew were denied assistance because they were not legal residents. For seasonal workers, assistance was not provided until well past the period of critical need. These cases prove that service providers must respond quickly to disaster victims' needs and not totally rely on outside assistance.

In the aftermath of Hurricane Hugo in 1989, FEMA and the Red Cross worked together to provide basic assistance to disaster victims left homeless. Migrant farmworkers who rented a place to stay were given temporary shelter, while other migrant workers who had stayed at labor camps were categorized as homeless and were not offered additional shelter, although many of the camps were destroyed.

Farmers, on the other hand, can more easily receive help through federal disaster loan and grant programs. Unlike many other insurance customers, farmers receive a direct federal subsidy to take preventive measures before a disaster strikes. However, those migrant and seasonal farmworkers, who the farmers hire to
harvest their crops and who are more economically vulnerable, receive little assistance or relief. Federal and state agencies assume that when farmers are assisted, funds will automatically trickle down to the farmworkers. As service providers know, farmworkers usually do not benefit from farm assistance.

During the 1988 Midwest drought, hundreds of unemployed farmworkers wandered through the region looking for work, uninformed on the severity of the drought. Unable to find more than a few days’ work, they ran out of money and were stranded at emergency shelters and along the highways. While farmers automatically received $3.9 billion in federal assistance, it took the combined efforts of farmworker organizations and a few sympathetic farmers to provide the emergency assistance necessary for stranded farmworkers to return home.

These are just a few of the disasters that have occurred during the past ten years. Countless other undeclared emergencies have devastated and destabilized the earning potential of those farmworkers affected. These past crises exemplify how farmworkers’ needs were neglected, and a disaster plan for them would have been invaluable. These situations justify the need for a unified force of community agencies working together and pooling their resources to help farmworkers before, during and after disasters. With a disaster plan, service providers can play an important role in highlighting the impact that disasters have on farmworkers and by linking farmworkers with disaster-related services.
Who Responds to Disasters?

When a disaster occurs, elements of the community must work together to help the victims and repair the damage. Depending on the magnitude and severity of the disaster, all three levels of government coordinate services and resources according to federal, state, and local guidelines. The following section identifies the roles of each level of government during times of disaster.

The Role of Local Government

Government at the local level, (city, town, or other designation) is the first line of disaster response. The various branches of local government act upon guidelines outlined in the local emergency operations plan. These plans typically have three parts: a basic plan, functional annexes, and hazard-specific appendices. If a disaster plan for farmworkers already exists, it would be found in the functional annex section.

When a disaster or emergency is imminent, local government agencies warn the public through radio and television messages. If governmental officials, such as the mayor or county commissioner, decide the disaster is severe enough, they then may choose to establish an emergency operations center (EOC). The EOC is the nerve center of local emergency response efforts for local governmental personnel.

From the center, government officials dispatch emergency personnel, such as police, fire, health and medical officials, in addition to needed equipment and supplies. In the case of a major disaster, the local government must ensure that the general population and special population groups, such as farmworkers, are evacuated. The local government must also provide temporary shelter and other life support to disaster victims.

The local government also evaluates response efforts through regular tests and exercises. It must train public officials, emergency response personnel, and the public on various aspects of emergency management, such as protective measures, emergency concepts, and other skills.
Why Do Farmworkers Need a Plan?

The Flow of Disaster Assistance

Local Government
Emergency Management Programs provide:
- public information and warning
- evacuation and shelter
- emergency training

If the need is beyond the capability of the county, the mayor or commissioner requests help from the state.

Governor declares county a disaster

Governor does not declare county a disaster

State Government
State Emergency Management Programs and state agencies provide:
- additional funding
- additional resources
- technical assistance

If the need is beyond the capability of the state, the governor requests a federal disaster declaration from the president.

President declares state a disaster

President does not declare state a disaster

Federal Government
The Federal Emergency Management Agency (FEMA) provides
- additional funding
- additional resources
- additional technical assistance

Local Agencies and Farmworker Field Offices

State Agencies

Private, Non-Governmental Organizations

Other Federal Agencies
The Role of State Government

States can provide additional services and help supplement local efforts when the disaster needs outstrip local government capabilities. State agencies respond according to the guidelines of the state EOP.

The state EOP provides the blueprint of disaster relief activities before, during, and after a disaster strikes. State EOPs address the needs of the general population, and do not focus on special populations, such as farmworkers. However, some state plans feature separate annexes of specialized plans serving certain populations or simply refer the reader to the Department of Health and Social Services for more information. Currently, there is little description of interagency efforts to address farmworkers, or how they link with local and state government operations. States can play a role in improving service to farmworkers by including farmworker needs as an annex in their state plan.

When gathering information about disaster programs, you may want to contact your state emergency program manager who may know about disaster assistance programs in your state.

The Role of the Federal Government

After the president has signed a disaster declaration, the Federal Emergency Management Agency (FEMA) gains control of all disaster response and recovery efforts, and mobilizes state emergency management offices. FEMA also provides supplemental federal aid programs to individuals and to community and state organizations.

Direct disaster assistance from FEMA falls into two broad categories—public assistance and individual assistance. FEMA administers individual assistance through Disaster Application Centers which are opened after a disaster occurs. Individual assistance programs offer temporary housing, low interest loans and grants. Residency and citizenship requirements may restrict migrant and seasonal farmworkers from applying to these programs. FEMA offers public assistance programs to communities, states, and non-governmental organizations who provide disaster relief services. Public assistance programs are usually administered through the Disaster Field Office, which is similar to the Emergency Operations Center, except that it includes federal assistance control operations.
Because FEMA has a high-profile role during disasters, communities tend to have high expectations of FEMA’s assistance and services. A 1993 Government Accounting Office report mentioned that FEMA has been criticized in the past for its inability to adequately assess damage, provide needed food and shelter, and finance disaster prevention activities. However, FEMA was originally created to only supplement local efforts when the needs of disaster victims outstrip the resources of the community.

Farmworkers more often end up being categorized by FEMA programs as homeless, because their needs don’t fit the kinds of programs available. Consequently, disaster funding may be provided in areas of lower priority for farmworkers, rather than vouchers for food, transportation and other more immediate needs. FEMA programs are geared to local residents who are able to recuperate from disaster losses after FEMA provides temporary restoration of basic survival needs.

Short term assistance from FEMA can provide mass feeding, relocation, food and shelter, as it does for other disaster victims. However, because of the mobile lifestyle of migrant farmworkers, the immediate needs of farmworkers do not diminish; they continue. FEMA does not have any type of assistance program which compensates farmworkers for the percentage of annual income that was lost due to a disaster. This is because farmworkers are seasonally employed, and the disaster may occur during the peak of the season when they earn the largest percentage of their annual income. FEMA’s programs are geared toward serving individuals who are employed year-round, not seasonally employed workers.

Neither does FEMA have an incentive program for a farmer to keep unaffected labor camps open. FEMA programs such as Disaster Unemployment Assistance cannot relieve problems of most farmworkers, and as a result, many remain unserved. To be eligible for DUA, applicants must be considered employed at the time of the disaster. Farmworkers who recently arrived in an area, or who were en route to get work and arrived late and were waiting for work, would not be eligible for DUA.

Farmworkers have expressed concerns about the delay in learning whether their applications for assistance have been approved or denied. If a person is not approved, they are not informed at the time of application and must wait for a response. Some farmworkers have stated that they have waited up to 60 days. This waiting period is often problematic for farmworkers, because they may not have access to resources other residents have.

Because farmworkers live in camps or rental housing, showing proof of address and damage as required can be difficult. Any damage to property must be shown to be caused by the disaster, after which time a FEMA damage assessor decides whether the assistance is warranted. It is the farmer or
landlord who generally gets the assistance for damage to property, even though farmworkers may have lost all personal possessions. Since FEMA is more "brick and mortar" oriented, reconstruction and repair of buildings and property get priority for assistance over other losses.

FEMA disaster assistance cannot be authorized until a disaster is declared by the president. Before a request for federal assistance is sent to the president, however, the regional FEMA office must approve the request. If they feel that the request is unusual or not warranted, they may hold the request indefinitely for verification. During this period, until a disaster is declared, communities cannot count on federal assistance. Rather, they must look to non-governmental organizations.

The Role of Non-Governmental Organizations (NGOs)

Non-governmental organizations, including private and not for profit organizations, have a certain amount of flexibility during disasters when working with the local, state and federal levels. When a disaster is declared, non-governmental organizations can coordinate their services with governmental agencies and can also provide direct services on their own, without having to go through bureaucratic channels. When a disaster is not declared and less federal assistance is available, non-governmental organizations, which usually have the most resources to help farmworkers, are able to coordinate relief efforts themselves.

One well-known non-governmental organization, the American Red Cross, is federally chartered to coordinate the disaster response efforts of voluntary organizations during declared and undeclared emergencies. During declared disasters, the Red Cross is the official liaison between FEMA and volunteer organizations. Because it also is funded through donations, the Red Cross can act independently of FEMA and assist during undeclared emergencies.

The Flow of Disaster Assistance

When a disaster takes place, a chain of command takes effect which can involve local, state, and federal levels of government. If local government cannot meet its disaster needs, the mayor can call on the governor to make additional assistance available. At this point, the governor relinquishes control to the state. State operations are handled out of the EOC. If the damage is too widespread to be controlled by state and local resources, the state
governor can issue a request, through FEMA, that the president declare federal disaster. The FEMA regional director evaluates the damage and makes a recommendation to the president.

If the president signs a disaster declaration, then FEMA gains administrative control of all disaster relief efforts (as authorized by the Disaster Relief Act of 1974, otherwise known as the Stafford Act). FEMA employees travel to the affected areas, oversee relief efforts, and open up one or more Disaster Field offices (DFOs). DFOs are the same as the state's EOC except that the DFOs include state and local as well as federal control headquarters. The use of the same facility allows for greater coordination between federal, state and local governments.

At this time, Disaster Application Centers are also set up, which is where disaster victims can apply for federal, state, and local assistance. Additional public and private assistance programs also become available to states, non-governmental organizations, and disaster victims. Applications for federal assistance by these organizations are made at the DFO.

The Role of the Emergency Program Manager

The emergency program manager, sometimes called the state coordinating officer, serves as the state-level FEMA representative who oversees all response and recovery activities during a declared disaster. The emergency program manager also makes sure that the state and local disaster plans are implemented smoothly and helps coordinates the activities of public and private agencies.

Before a disaster strikes, the emergency program manager makes an inventory of all available resources from the private sector to ensure that they are sufficient to carry out disaster relief efforts. The emergency program manager also analyzes the potential effects of hazards, leads public education efforts about these hazards, and ensures that all response programs are in place.

As the key FEMA representative in your state, the emergency program manager is an important resource, and should be closely involved in helping you develop a farmworker disaster plan and farmworker annex.

The Four Phases of Comprehensive Emergency Management

FEMA and state disaster plans are organized into the four phases of comprehensive emergency management: mitigation, preparedness, response, and recovery. In order to develop a plan that works effectively with state and national relief efforts, you must be familiar with these terms in order to structure your own plan in a similar way. You should also contact your state...
emergency management office to receive a copy of your state’s disaster plan and to find out more about your state and local disaster procedures.

**Mitigation phase** includes activities that help to reduce the risk of damage and injury to the community if a disaster occurs. For farmworkers this can involve a great amount of coordinating, planning and advocacy.

**Preparedness phase** includes activities and programs that help you gear up for imminent disaster. They are in place prior to an emergency and will make it easier to respond after an emergency or disaster occurs. For farmworkers, these activities include training and practice drills.

**Response phase** includes activities and programs to address the immediate and short-term effects at the beginning of an emergency or disaster. These activities and programs help to reduce damage and speed recovery. Response activities should only be attempted by FEMA agents and other specially-trained authorities. Activities include warning, evacuating victims and lifesaving.

**Recovery phase** includes activities that help to restore the community to normal, or near normal. Short-term recovery assesses damage and returns essential systems and services (electricity, food and water supplies) to prior operating levels. Long-term recovery activities (rebuilding and training) may continue for many years.

Recovery activities allow service providers to reflect on the effectiveness of their plan, and think about what actions worked and what actions did not. By reflecting on past events, this helps to anticipate future needs. This allows the service providers to bring the emergency management process back into the mitigation phase. In this way, a new cycle begins.

How To Develop Your Plan

Disaster assistance for farmworkers, as AFOP has documented during the past ten years, does not automatically flow from state or federal levels to farmworkers unless the needs are identified and justified, and brought to state or national attention. Whether or not state or federal assistance becomes available, local farmworker service agencies need to act if farmworker disaster needs are to be met. In order for your agency's actions to be efficient and effective, you must plan in advance of a disaster. This advanced planning must involve all community service providers who will, either directly or indirectly, serve farmworkers in need.

A disaster plan states what will be done, who will do it and when. It shows how various agencies and organizations will mobilize to prepare for, respond to and recover from a disaster or crisis situation. Every community's plan will be different, according to the needs of the farmworkers and the surrounding community, the resources available, and the type of disaster.

The following steps will help you to better know your local community and work with other agencies to develop a plan.

1. Research Your Community
2. Coordinate With Other Agencies
3. Share Information About Your Resources
4. Do Your Resources Meet the Needs?
5. Put Your Plan into Annex Form
How the Disaster Planning Process Works

1. Concerned service provider researches community's past disasters and decides to call together a farmworker disaster workgroup of community organizations.

2. Workgroup meets, elects a leader, and decides to create a farmworker disaster plan.

3. Members complete a Farmworker Disaster Assistance Resource Sheet and return it to workgroup leader.

4. Workgroup leader transfers information from the Farmworker Disaster Assistance Resource Sheet to Service and Resource Tally Sheet. Workgroup leader sends copies of completed sheets to workgroup members for next meeting.

5. Workgroup meets, completes Responsibility Matrix, assigns primary leadership roles to one organization in each major service category. Organizations in major service categories break off into subgroups.

6. Subgroups meet and devise their own subgroup service strategies.

7. Workgroup reconvenes. Subgroup leaders present their service strategies. Workgroup evaluates the strategies as they contribute to a composite plan.

8. Workgroup leader and other members use subgroup service strategies to create a farmworker annex to the state plan.
1. Research Your Community

Knowing how your community copes with disasters is the first step in developing your plan. You should learn what disasters have affected your community and how your community reacted. Check to see if a county or state plan is in place and if it addresses farmworkers’ needs. Also, find the names of key contacts who you think should be involved in creating a farmworker disaster plan. Here are some questions that need to be answered while you research your community:

1. Research past disasters in your area.

- What types of disasters have occurred in the past? Make a list of all past disasters and include the date, disaster type, the level of community damage, and how farmworkers were affected. You may have to speculate on how farmworkers were impacted, as this information may not be available.

- How many farmworkers were affected in each of those disasters?

- What type of assistance was given to farmworkers? Who provided the assistance and for how long?

- What were the strengths and weaknesses of the relief efforts?

- Were seasonal farmworkers treated the same or differently from the migrant farmworkers?

2. Get a copy of your county and state Emergency Operations Plans (EOP) from your state emergency management office.

- What are the potential disasters that could impact your area and affect farmworkers, such as floods, droughts, and freezes?

- How does your state plan direct the activities of service organizations during disaster relief? Your state emergency manager should have more information.
3. Develop a list of contacts and organizations that would be interested in meeting with you.

- What organizations provide direct relief to farmworkers?
- Is there a governor’s council or interagency task force on farmworkers already in existence? If so, try to attend their meetings and get them involved with a disaster plan workgroup.
- Does your area have a chapter of VOAD (Voluntary Organizations Active in Disasters)? If so, find out how to become a member. Their national Washington, DC office is listed in the “Resources in Your Community” section of this guide.

4. Find out what local, state, and federal programs could provide disaster assistance to farmworkers.

- What local programs could assist farmworkers? Research programs, such as food pantries, utility programs, temporary shelters, emergency medical organizations, and the National Guard and find the types of services they provide. Your local emergency manager should have some information about these programs.
- What state programs could assist farmworkers? Again, your local emergency manager should have some information, but you may also want to contact the Office of Emergency Services, Employment Development Department, Department of Economic Opportunity, and Department of Social Services. Find out what services and resources they offer.
- What federal programs could assist farmworkers? You can begin your research by reviewing the “Federal Farmworker Disaster Assistance” section in this guide. Determine if new sources of services and resources could be mobilized for your community.

5. Know your political representatives and inform them about how farmworkers are impacted during disasters.

- Who are your city, county, state, and federal representatives?
- Do your representatives know about the farmworkers in your area? Send them an information packet about how disasters impacted farmworkers, in the past, what assistance they received or didn’t receive, and what additional assistance is needed.
2. Coordinate With Other Agencies

Now that you have more information about your community and the state disaster plan, the next step is to meet with other service providers, form a disaster plan workgroup, and use the information that you have learned.

The purpose of this disaster workgroup is to develop and implement a farmworker disaster plan. The workgroup must first decide if a disaster plan for farmworkers is needed. If the group does decide to develop a plan, they should try to meet regularly before, during, and after the plan has been completed. Your community plan will be a working document that will need to be regularly evaluated and updated. The following steps will help you prepare for and lead a series of disaster workgroup meetings.

Because the first meeting is the most critical, we have specified which activities must be covered in that meeting. Subsequent meetings should be carried out according to the pace of your workgroup.

1. Plan a series of disaster workgroup meetings.

Plan to invite all key individuals and organizations who work with farmworkers in your community. For more ideas of who to invite in your state, refer to the “Resources in Your Community” section in this guide. Also plan to invite local growers, community leaders, and the state emergency manager.

- In your invitation letter, include an agenda, a copy of this guide, and ask each agency representative to be prepared to discuss the programs they provide to farmworkers. Ask them to bring suggestions about ways to increase funding to address disasters.

- To prepare for the meeting, find a large room and bring a sign-up sheet. An easel with a large pad of paper and markers might be useful, too.

- If possible, set up the chairs and tables in the meeting room in a conference or hollow square style so all the participants can see each other.
How To Develop Your Plan

- You may want to plan a teambuilding activity, so that the people in your group can feel comfortable working together. You should at least ask each person give their name, tell about any disaster experience, and describe the programs their organization offers.

- Coordinate schedules so you can have the greatest level of participation. Allow enough time to adequately discuss the issue, and start on time.

2. Discuss farmworker needs.

If you do not work with farmworkers directly, plan to have a farmworker service provider to speak about farmworkers and the services that are in demand. Also, find out more about the following subjects before the next meeting:

- Describe the farmworkers in your community: languages, ethnic groups, seasonal and migrant populations (include peak agricultural work months), estimated number of individuals, living conditions, and locations in your community.

- How do farmworkers access services? Is transportation a problem?

- Brainstorm about the needs of farmworkers during a "normal" season. How do their needs change after a disaster? How must services change

3. Discuss the need for a plan.

As a member of the workgroup, each representative should understand that they will be expected to contribute information about their organizations and commit their organization to provide services. As a group, you will need to discuss if a farmworker disaster plan is needed for your community. While you are discussing this, consider the following questions:

- What were your findings from your earlier research on your community?

- How often do disasters occur in your area?

- Have farmworkers’ disaster needs been met in your area?

- What is the role of federal, state and local government in disaster assistance? Plan to have a representative from your state emergency management agency attend the first meeting to explain the details.

- Brief participants on your county and state Emergency Operations Plans, so that all are aware of the operation procedures when a
disaster affects the entire community. Discuss the importance of including an annex for farmworkers in your state's plan.

- What is the role of the private, non-governmental organizations?
- What can be done to improve disaster assistance for farmworkers?
- Does the group think a disaster plan is necessary for farmworkers in your area?
- Elect a workgroup leader to run the meetings.
3. Share Information About Your Resources

Knowledge about the already existing programs and resources that organizations have within the disaster workgroup is key in developing your plan. Each organization must have a clear idea of each of their programs. Each organization representative must get clearance from organization supervisors to present their information to the group and to commit to some extent the use of their services during times of disaster.

This guide includes three forms that will help you determine the range of available emergency resources: the Disaster Assistance Resources Sheet, the Services and Resource Tally Sheet, and the Responsibility Matrix Sheet. It is important to fill them out in this order, because information from the Disaster Assistance Resources Sheet will be used to complete the other two forms. A sample of each form is included in this section while more blank copies are included in the “Forms” section near the end of the guide.

- The Disaster Assistance Resources Sheet should be completed by each organization,
- The Service and Resource Tally Sheet should be completed by the workgroup leader, and
- The Responsibility Matrix Sheets should be completed by entire workgroup.

Workgroup leaders should also be aware of the important role of the major service category featured on all three sheets. These broad service categories enable you to easily group common programs together so the workgroup can evaluate community strengths and weaknesses. In addition, programs and services listed under each of these categories will later form subgroups. Each subgroup will coordinate to create their own service strategy and will contribute to the overall workgroup plan.

1. Complete a Disaster Assistance Resources Sheet.

Once completed, this form will list programs and services that the organizations in your workgroup can provide for farmworkers and for a relief effort during a disaster. We suggest that you mail several copies of the Disaster Assistance Resources Sheet to workgroup members and have them return them to you as soon as possible before your next meeting (when the workgroup will complete the Responsibility Matrix Sheet). Make a special effort to get input from growers regarding available farm labor housing.
Instructions for the Disaster Assistance Resource Sheet

1. **Name Of Contact Person.** Be sure to include your home and work telephone numbers.

2. **Programs and Services for Farmworkers and their Families.**
   a. **Program name.** Write the name of each program that your organization provides (or can provide) for farmworkers during times of disaster.
   
   b. **Services you provide.** Describe briefly the type of assistance your organization can provide, such as financial, goods or other supportive services.
   
   c. **Program eligibility requirements.** Note what the basic eligibility requirements are and if documentation is needed.
   
   d. **Where farmworkers get services.** Write the location, including street address, of the service distribution center. Please note if alternate or mobile locations are possible.
   
   e. **Limitations of your program.** Describe any limit to the amount of services you can provide. If there is a time-limit on service provision or other restrictions, note it in this section.
   
   f. **Average wait.** Note the time a farmworker has to wait after applying for this program before he/she receives the service.
   
   g. **When can you start this program.** Write “immediate” if you currently run this program and provide this service. If the program is not available now, write the date of when it does become available. Also, note if your program stalls only after a certain amount of time following the disaster.
   
   h. **Major service category.** Please note the service category that your program or service would more closely correspond to. If your program or service does not fall under one of the following categories, let the workgroup leader know and list your suggested service category title.

**If a program is available only in major disasters, indicate average interval between disaster and start of intake; if a program is ongoing, write "immediate."

**Average interval between intake and delivery (days, weeks, etc.)
2. Complete a Service and Resource Tally Sheet.

The Service and Resource Tally Sheet re-grouops your program information which draws directly from the Disaster Assistance Resource Sheet into the major service categories.

To complete a Service and Resource Tally Sheet, the workgroup leader will need to gather completed Disaster Assistance Resource Sheets from workgroup members and transfer the information. You will need at least one sheet for each of the 14 major service categories outlined in the previous section. If workgroup members noted that a program or service did not fall into one of these categories, you may want to create a new category or combine existing categories.

You will want to form a subgroup of the disaster workgroup to focus on each major service category.

3. Complete a Responsibility Matrix Sheet

This final form, completed by the workgroup, designates subgroup leaders by assigning "primary" and "supportive" roles within each major service category. The representatives from "primary" organizations become the subgroup leaders. They will be responsible for leading the coordination efforts in each subgroup and presenting their subgroup work strategy to the workgroup. Subgroup leaders also become the main subgroup contacts and organizers during disasters. Supportive members help create, coordinate, and implement the subgroup strategy.

To prepare for this meeting, the workgroup leader will need to make 4 copies of the Responsibility Matrix Sheets—one for each emergency management phase—to be completed by each workgroup member during a meeting. If you added any major service categories while you were completing your Service and Resource Tally Sheet, you may want to include them now. Also, the workgroup leader will need to distribute copies of each of the Service and Resource Tally Sheets so that members can see which organizations are in each subgroup.

</tr>
</tbody>
</table>
Instructions for the Responsibility Matrix Sheet

All workgroup members should receive four copies of the Responsibility Matrix Sheet for each of the emergency management phases: mitigation, preparedness, response, and recovery. Workgroup members should also receive copies the Service and Resource Tally Sheet for each of the major service categories. For each category, the workgroup should decide which organization will be the subgroup leader ("primary") and which will be regular subgroup members ("supportive").

There should be only one "primary" organization per subgroup. For example, the nutrition subgroup will consist of many varied organizations, such as foodbanks, meals-on-wheels, migrant health centers, churches and the local WIC program. Perhaps for example, the local foodbank is chosen by the subgroup to become the "primary" agency, which makes it the leader and contact organization for ensuring that nutrition-related tasks are delineated in the plan, and carried out if a disaster should occur.

1. Check the list of service providers on the left side of the sheet. Add, delete, or change names as appropriate for your community.

2. The 14 major service categories for disaster assistance are listed across the top of the sheet. Make sure that all the major services are covered.

3. When workgroup members decide which organizations will have "primary" roles and which will have "supportive roles", write a "P" for primary or an "S" for supportive in the appropriate squares.

4. Repeat these steps for each of the four phases.

5. Analyze and evaluate what you see. Are there any gaps?

4. Break into Subgroups

Once the workgroup decides who the primary organizations and subgroup leaders are, then the subgroup should plan to meet on their own and create a subgroup service strategy. Completed strategies will be presented to the workgroup and reviewed as one element of the total plan. The subgroup strategies should be organized into the four emergency management phases, listing subgroup objectives and the tasks needed to meet those objectives.

(P = Primary  S = Support)
When reviewing the four phases, the subgroup may find that the service strengths lie in the mitigation, preparedness, and recovery phases, rather than the response phase. Remember that during a declared disaster, Red Cross and FEMA will be leading all response efforts. Also, keep in mind that well-planned mitigation and preparedness phases usually mean a smoother recovery phase. Try to think of the four phases as a continuing cycle, with recovery and mitigation phases overlapping.

Some organizations may have programs in more than one subgroup. In these instances, heads of those organizations should appoint a staffmember who works closely on the specific program to represent their organization in the subgroup.

When creating a strategy, the subgroup should consider the following items:

- Organize the services of your group according to the four phases: mitigation, preparedness, response, and recovery. Note that during a declared disaster that FEMA and Red Cross will coordinate all recovery efforts. To review these phases, refer back to the “Who Responds to Disasters” section.

- Define further the primary and supportive roles in terms of your major service category. Who will be the subgroup contact when a disaster strikes? Will you need a phone chain to alert subgroup members? Should there be an alternate for the subgroup leader?

- Factor in time limitations and eligibility requirements. Will these factors affect your coordination efforts?

- Present your final strategy, written out, to the workgroup. The subgroup may choose to condense their strategy into a series of charts for each of the phases, stating the primary objectives, the task that needs to be done to reach each objective, who will be responsible for carrying out the task, any limitations to the program, and any other information the workgroup feels is important.
4. Do Your Resources Meet the Needs?

The workgroup should plan to meet again so that the subgroup leaders can present each of their service strategies. Ideally, copies of these strategies should be mailed to workgroup members before the next meeting. With all of these subgroup strategies in hand, the workgroup should evaluate how the strategies work together as a collective plan and determine if there are any service gaps.

To help the workgroup evaluate the strategies as a collective plan, this section features some general questions that the workgroup should consider. The second section lists some suggestions from service providers who have been through disasters.

Following this workgroup meeting, subgroups may choose to meet again to re-evaluate their service strategy.

Evaluate What Services the Workgroup Can Offer

Have both the subgroups and workgroups compare the services they provide with the needs farmworkers would have during disasters.

• Are the collective resources in the community sufficient to meet farmworkers’ need in normal times? Are there enough resources to meet farmworkers’ needs before, during, and after a disaster? How can organizations pool resources?

• Create a wish list of resources that would bolster existing services. How can you obtain funding for those items on your wish list?

• Have you exhausted all sources of state, federal, or local funding?

• What local funding sources could send aid quickly? Prepare background information in advance of proposal deadlines and update your background information regularly.

• If you receive federal funding, you may have to wait several months to receive supplemental aid during disasters. How can you meet the immediate needs in the meantime?
In past disasters, farmworkers have complained that some providers and volunteers did not respect differences in language and culture. What can be done to avoid future misunderstandings? How does this relate to the role of volunteers, including volunteers in uniforms?

Review “Lessons Learned”

The following list compiles suggestions, organized by each of the phases, that were given by service providers who have recently been through disasters. The workgroup and subgroups may want to keep these “lessons learned” in mind as they review their plan and strategies.

Mitigation Phase

- Have a clear and detailed understanding about farmworkers, knowing which months they live in the community, and where they are located. Include maps of labor camp locations, and address of each. Also list the number of the nearest phone.

- List potential hazards in your community, and how vulnerable farmworkers are to each. What kind of disasters affect only farmworkers?

- Empower farmworkers by providing training on how to protect themselves during a disaster and what resources may be available to help afterwards.

- Assess the quality of farmworker housing. How much wind and flooding can certain structures, such as mobile homes, and buildings in labor camps, withstand? How can you reduce flood damage or hurricane damage? To what extent can you weatherize farmworker housing?

- Advocate for legislation to improve farmworker health and housing.

- Talk with growers about safe and adequate housing for farmworkers.

- Think about employment and training possibilities for displaced farmworkers.

- Fundraise within your organization(s) and in the community. Start a fun run or a disaster fund to benefit farmworkers.

- Train college students or other community volunteers to do outreach or provide transportation to and from labor camps.
How to Develop Your Plan

- Establish contacts with newspapers, TV, and radio stations so that you will know who to contact in a disaster. Create and distribute a press kit.

- Decide what is the most effective media to reach farmworkers, and develop contacts at those specific radio stations, TV stations, or newspapers.

- Learn more about how the state and federal emergency management systems work. Arrange to have your state emergency manager brief your group.

- Talk to leaders in other states to develop mutual aid pacts to pool resources across county and state lines.

- Have each organization designate a disaster coordinator who can temporarily leave their normal duties at any time to focus on disaster activities.

- Try to pre-arrange a financial contract with companies and growers which will ensure that those who become unemployed as a result of the disaster will continue to have a means of employment.

- Make a phone chain, and agree on a time and place to meet if lines are down during a disaster.

- Find out what equipment and supplies might be needed for farmworker-related disasters. What is available and what could be donated in advance? Such items would include flashlights, batteries, cellular phones, health kits with soap, towels, and toothpaste.

Preparedness Phase

- Alert community agencies to be prepared for a possible crisis situation.

- Determine who will locate, transport and evacuate farmworkers if necessary. Where will they be housed?

- Work with the emergency manager to designate a public building for a Disaster Assistance Center for farmworkers. Inform farmworkers of the location.

- Simplify intake forms to save time and paperwork. Remember to get the funding source's prior approval.

- Ask for volunteers to go to labor camps and alert farmworkers of what to do, where to get medical care, apply for assistance, get food, and what radio/TV stations they should listen to for special directions.
How to Develop Your Plan

- Find out who will be the first at the Disaster Assistance Center to provide services, such as food and clothing distribution, transportation, medical services, unemployment assistance, eligibility determination for program participation, and translation services.

- Talk with federal, state, and local agencies to determine their regulations and eligibility requirements for various farmworker programs.

- Recruit and train people to be self-sufficient volunteers. It is much easier for providers when groups arrive organized with their own food, shelter, and transportation.

- Develop an internal disaster plan for your agency or office so that co-workers know what role they would play. Ask employees to develop family emergency preparedness plans.

Response Phase

- In a declared disaster, organizations may be asked by FEMA or the Red Cross to assist in various ways. In an undeclared disaster, you will have to depend more on your collective resources.

- Set up Disaster Assistance Centers and shelters, with an emergency manager for declared disasters.

- Start a journal of daily events, and save newspaper articles about the disaster. Document everything. It will be useful not only for funding, but to learn from, so that preparing for the next disaster will be smoother. Take photos of the damage—they can be invaluable (black and white is preferable).

- Assess damage to farmworkers, including which counties, number of people affected, damage to crops, and housing. Find out who has done damage assessment in the past, probably the state emergency manager or Cooperative Extension agent. You may need to design a farmworker damage assessment survey. Refer to the “Farmworker Damage Assessment” section for more ideas.

- Transport farmworkers for assistance. Evacuate and relocate them as necessary.

- Help farmworkers apply for unemployment assistance, food stamps, temporary food assistance, and other government services.

- Supply food and medical assistance to farmworkers (refer to foodbanks, health centers).
How to Develop Your Plan

- Notify the media, including local radio, TV stations and newspapers. Develop press releases with the damage assessment information and copies of your photos.

- Solicit donations, for such items as food and clothes, from the community. Request specific items you need.

- Receive and distribute cash and in-kind donations.

- Write grant proposals for funding from federal, state, and private sources.

- Create an “unmet needs” committee or an electronic bulletin board to advise the public of farmworker needs. This helps avoid duplication of services.

- Be visible in response efforts. Wear bright colors or t-shirts with an agency logo.

- Meet with staff regularly, and include mental health professionals for part of this. Watch for signs of stress such as: substance abuse, child abuse, spouse abuse, and weight gain among disaster victims and providers.

- Note that most of the primary response activities in a life-threatening disaster will be carried out by the FEMA, Red Cross, local fire department, police department, rescue squad and emergency medical services.

Recovery Phase

- Update assessment of damage to crops and housing. Estimate the extent and length of income loss for farmworkers.

- Continue certain relief programs, such as housing, and food assistance until farmworkers are relocated, trained and placed into alternative jobs. Hire youth to clean up debris using funds from the Department of Labor’s Disaster Assistance Program under Title II of JTPA. Contact your state governor's office for more information.

- Hold a workgroup meeting to discuss and evaluate your efforts in the disaster.
4. Find out if any farmworkers will be leaving your areas to do farmwork in other states. Find out if they will be eligible for any assistance in the affected state. Notify farmworker programs in these states where the farmworkers will be traveling. Several national directories of farmworker service providers exist, including JTPA §402, migrant health, migrant head start, and migrant education.

4. Conduct training of farmworkers that will help to empower them to handle emergencies or other disasters in the future.
5. Put Your Plan into Annex Form

Now that the disaster workgroup and subgroups have met and evaluated how the strategies work together as a collective plan, the workgroup leader has enough information to develop an annex to the state emergency operations plan. This annex will have to be approved by the state emergency management agency (SEMA) before it can be included in the state plan. Also, keep in mind that your approved annex will only be used if a disaster has been declared. During undeclared disasters, you will have to rely on your own plan.

While state emergency operations plans outline general procedures, annexes describe specific functions in more detail and do not repeat any information that is already included in the state plan. Your state emergency operations manager can help tremendously with this. Refer to your state emergency operations plan for examples of annexes. Most state EOPs include annexes on communication, warning, public information, health and medical services, and evacuation. Damage assessment, farmworker relocation and other farmworker-specific functions could be included as separate annexes. Tasks should be carried out in cooperation with the state and local emergency response efforts.

The annex to the state plan is usually written in the same format as the state emergency operations plan. Formats do vary, however, from state to state. You will need to contact your state emergency management agency (SEMA) representative for some guidance. We have included a general outline that most states use for their own emergency plan. Each annex should include the first nine elements:

A. Introductory Material,
B. Statement of Purpose,
C. Situations and Assumptions,
D. Concept of Operations,
E. Assignment of Responsibilities,
F. Administration and Logistics,
G. Plan Development and Maintenance,
H. Legal Authority,
I. Definitions, and
J. Functional Annexes (same format as the basic plan).
How to Develop Your Plan

A. Introductory Material

1. Promulgation Document. This document consists of a letter signed by the governor, mayor, or the director of the state emergency management office. The letter is included in a state plan to make the plan official and shows the governor's endorsement of its activities. This may not be necessary for annexes in all states, as requirements vary from state to state.

2. Foreword. The foreword describes the planning process, the emergency management goals, and the emergency management plan. The foreword also acknowledges contributors to the planning process.

3. Table of Contents.

4. Hazard Analysis. This analysis lists possible hazards in your community, and should already be included in your state emergency management plan.

5. Instructions on Plan Use. The instructions give an overview of the annex.
   a. Audience. Describe who the annex is for (farmworkers) in general terms.
   b. Distribution. Include a list of people who should receive and review the plan as it is being developed. A chart that records when updates were made should also be included.
   c. Expectations. Note the anticipated responses of officials receiving a copy of the plan.

B. Purpose.

The purpose states how the goals of the annex will fit into the overall plan.

C. Situation And Assumptions.

This section outlines the role each organization plays. Create an imaginary, but plausible emergency situation, and highlight the roles of each organization. (Refer to the subgroup strategies.)

D. Concept of Operations.

This section briefly describes each organization's tasks and how they will all work together during the four emergency management phases. (Refer to the subgroup strategies.)
E. Assignment of Responsibilities.

This section outlines who plays a primary role or supportive role in the four disaster phases. The four Responsibility Matrix sheets cover this information. Refer to the subgroup strategies.

F. Administration and Logistics.

This section addresses resource management, general support requirements, and availability of services. Refer to the Disaster Assistance Resource Sheets and the Service and Resource Tally Sheets.

G. Plan Development and Maintenance.

This section describes the planning process, the participants involved in that process, and the interaction expected between planning levels. Identify those people who will develop the plan and assign planning responsibilities. Also include who will coordinate the total planning effort, and how the plan will be updated. (Refer to the subgroup strategies.)

H. Legal Authority.

This section must give the legal basis for emergency operations and activities, by including any organizational statutes, local ordinances, executive orders, regulations and formal agreements that pertain to farmworkers and emergencies. If farmworkers are not included in some of these laws, discuss the implications.

I. Definitions.

This glossary section gives the meanings of terms used in the annex.
6. Essential Elements of Your Disaster Plan

If you and your workgroup were not able to do all of the previous steps to create a complete farmworker disaster plan, we suggest that you make sure you can at least account for the following items:

- Accurate maps and directions to labor camps/residences of farmworkers, number of farmworkers living at each, phone numbers where farmworkers can be reached, and languages spoken. Include statement of how farmworkers will be informed of an impending disaster.

- Name of a contact person(s) from each organization who will be responsible for needed services.

- Name of person(s) who will contact the media to report on the event and to provide documentation for local, state, and federal assistance. Keep an ongoing status report to keep the public sensitized to the issue. Include the names of radio stations that agree to make announcements in languages, other than English, that farmworkers speak.

- A phone chain, linking the workgroup and subgroups, to ensure that everyone is contacted.

- List of organizations that should be notified in the case of a farmworker disaster. This list should include organizations that can provide translators, drivers, and other volunteers.

- Completed Disaster Assistance Resources Sheets.

- Completed Service and Resource Tally Sheets.

- Four completed Responsibility Matrix Sheets.
7. Follow Up and Ideas for Training

The Importance of Follow-Up

Your plan and annex are unique to the needs in your area, and should reflect any changes that occur in your community. After the major part of your plan is completed, it will be important for your workgroup (or at least the subgroups and the subgroup leaders) to continue meeting regularly. The service strategies should be updated and re-evaluated annually.

Pay special attention to federal programs, especially some federal disaster programs which may decrease or eliminate provisions for nonstate residents and undocumented workers. Additional farmworker information, including camps which have newly opened or closed or the changing ethnic populations of farmworkers from season to season, should be also be noted. Keep up to date by reading national newspapers and subscribing to publications that discuss farmworkers issues, such as the *AFOP Washington Newsline* newsletter.

Ideas for Training

In order to improve and expand the range of services that workgroup members can offer, we have included some staff training aides, including a sample presentation for farmworker emergency preparedness training and a sample farmworker disaster assistance form. We have also included a list of additional disaster training ideas for staff.

1. Farmworker Emergency Preparedness Training

Migrant workers are often located in remote labor camps and do not know what to do or where to go in case a disaster strikes. By training staff to inform farmworkers about available services, complications could be averted later on. The following is a brief outline that a trainer may wish to use when discussing emergency preparedness with farmworkers:

A. An introduction,
B. A discussion of laws regarding their housing, employment, health and safety,
C. The services that are available,
D. How farmworkers can empower themselves and their families, and
E. Summary and conclusion.
How to Develop Your Plan

Make sure that you first clear this information with the grower and contractor before going to the camp. Encourage the grower to participate in the discussion.

A. Introduction

- What is a disaster to you? Some are devastating and happen with little warning, like floods and hurricanes. Others occur more slowly, like droughts and freezes, where the effects are not so visible.

- Do disasters affect farmworkers any differently than the rest of the community?

- Discuss past disasters farmworkers have experienced. What assistance did they receive? How long before things were normal again? How long was it before they could raise enough money to travel to another region?

- Describe the local region and the types of disasters the area has experienced recently. Explain how farmworkers were affected and what was done about it.

- Explain that you want to help increase everyone's awareness about the possibility of a disaster.

B. What the law provides for farmworkers

- What are the state laws regarding individual and family assistance?

- If farmworkers had to relocate because of a disaster, what help would they receive?

- What are the residency requirements to receive assistance?

- Explain why farmworkers do not receive compensation from their employer if a disaster caused them to stop working.

C. Services available to farmworkers

- A list of services should be posted on the wall in the camps, including the local community health center, migrant head start center, migrant education program, farmworker employment and training agency, legal action program and food banks which assist farmworkers during the normal season.

- Discuss why farmworkers may need to wait several weeks or months for compensation or substantial assistance after a crisis period has passed.
How to Develop Your Plan

How to Develop Your Plan

- Emphasize the importance of documenting all wages. This will help to prove income so that they can receive compensation if there is a disaster. If they were employed at the time of the disaster and can show proof, they may be eligible for disaster unemployment assistance.

- Discuss what assistance they can receive if they are not citizens or legal U.S. residents.

D. How farmworkers can prepare for disasters

Farmworkers can empower themselves and their families by planning. No one can prevent a drought, freeze, flood or hurricane, but knowledge is a great weapon. Knowing where to go at a moment's notice will save valuable time.

- Identify a farmworker with a car who would be willing to volunteer to drive others to safety in case of an emergency.

- Use practice drills with farmworkers so they will know how to quickly evacuate their house or camp.

- Discuss what a Disaster Assistance Center provides, and which radio stations to listen to for instructions on where to go.

- Encourage them not to be hesitant with firemen, medics, rescue teams and other uniformed officials during disasters. Farmworkers should not hide from these people who have come to help save their lives.

E. Summary and conclusion

Many things about disasters cannot be controlled. But if we inform ourselves now, we can be better prepared. Whether or not a disaster strikes, you should know what community services are available and where they are located.

2. Other Training Ideas

There are many other types of training that could benefit service organizations during disasters. You may want to create your own training ideas list according to your needs. We have included some ideas to get you started:

- How to learn more about emergency management. The Emergency Management Institute offers free home study courses in emergency management. They can be reached at 16825 South Seton Avenue, Emmitsburg, Maryland 21727. Their telephone number is (800) 238-3358.
How to work with the media and conduct a public relations campaign. Learn how to write effective press releases and coordinate media efforts in ways that best way reach farmworkers.

How to conduct inter-agency peer exchange training. Invite service providers who have participated or organized disaster efforts to speak about past experiences, such as setting up a disaster assistance center, working with volunteers, distributing food, and meeting health care needs.

How to conduct disaster practice drills.

How to recruit and train volunteers.

How to write proposals for funding.

How to manage donations.

How to become certified in Cardiopulmonary Resuscitation (CPR).

How to meet nutritional needs of farmworkers by obtaining and distributing culturally appropriate foods to farmworkers.

How to treat people with severe stress.

How to improve group dynamics and teamwork.

How to do farmworker damage assessment.
8. Damage Assessment Training

One of the main obstacles to farmworkers receiving aid is the lack of data showing disaster-related damage and lost income. Normally, few people know how to do damage assessment, and they are usually overworked and sometimes unavailable during a disaster. Do not wait until a disaster occurs to think about damage assessment! Gathering information about crop yields and farmworker populations during the mitigation phase can save you much valuable time later on. Here are a few suggestions to get timely farmworker damage assessment:

- Find out which organizations conduct crop and property damage assessment for community-wide disasters. For more information, contact the local emergency management agency and cooperative extension office.

- Invite a speaker to address your group on methods used for assessments of disasters of various magnitudes and severity.

- Determine who will be the contact person(s) for collecting damage assessment information after a disaster occurs.

- Find out where you can get the requested information.

- After a disaster strikes, collect newspaper articles and other printed information about the disaster. These can provide you with more information about the disaster’s impact on farmworkers.

Complete a Damage Assessment Form.

The Damage Assessment Form is a sample tool that can help you conduct your farmworker damage assessment. An additional copy of the form is included in the “Forms” section. Once you have completed this form, you should have a fairly comprehensive view of the challenge that your disaster workgroup and subgroups must face.
Instructions for Completing the Damage Assessment Form

1. **General Information.** Write the name of your organization, location of the disaster, date of disaster, type of disaster, name of contact person, with home and office address and telephone number.

2. **Affected Counties.** In each major block, write the name of each county affected by the disaster.

3. **Crop damage.** Identify crops affected, the number of acres affected, and percentage of crops lost. Ask local agriculture experts for assistance in obtaining estimates. Before the disaster, find out where crop statistics are reported so that you can establish a baseline of information in advance.

4. **Dollar amount of damage.** Ask local agricultural experts for estimates.

5. **Number of affected migrant workers.** Estimate or ask local farmworker experts.

6. **Number of affected seasonal workers.** Estimate or ask local farmworker experts.

7. **Estimated number of farmworkers to relocate.** Estimate or ask local farmworker experts.

8. **Anticipated duration of mass unemployment.** How long do you predict that farmworkers will be without work?

9. **Average income lost per farmworker.** Gathering prevailing wage and agricultural work duration information in advance will help you or other farmworker experts project a realistic figure.

10. **Types of farmworker needs.** Use as much space as you need in this section to describe the needs of farmworkers as a result of the disaster (housing, transportation, food, etc). List priority needs first. Ask farmworkers to help identify and prioritize their needs.

11. As soon as you have completed this form, make sure to inform the local press. Quickly send a copy to relevant state and federal organizations. Because AFOP works on farmworker disaster issues and assistance nationally, we request that you please send a copy to AFOP as well.

</tr>
</thead>
</table>

*If a program is available only in major disasters, indicate average interval between disaster and start of intake; if a program is ongoing, write "immediate."

**Average interval between intake and delivery (days, weeks, etc.)
Instructions for the Disaster Assistance Resource Sheet

1. **Name Of Contact Person.** Be sure to include your home and work telephone numbers.

2. **Programs and Services for Farmworkers and their Families.**
   a. **Program name.** Write the name of each program that your organization provides (or can provide) for farmworkers during times of disaster.
   
   b. **Services you provide.** Describe briefly the type of assistance your organization can provide, such as financial, goods or other supportive services.
   
   c. **Program eligibility requirements.** Note what the basic eligibility requirements are and if documentation is needed.
   
   d. **Where farmworkers get services.** Write the location, including street address, of the service distribution center. Please note if alternate or mobile locations are possible.
   
   e. **Limitations of your program.** Describe any limit to the amount of services you can provide. If there is a time-limit on service provision or other restrictions, note it in this section.
   
   f. **Average wait.** Note the time a farmworker has to wait after applying for this program before he/she receives the service.
   
   g. **When can you start this program.** Write “ongoing” if you currently run this program and provide this service. If the program is not available now, write the date of when it does become available. Also, note if your program starts only after a certain amount of time following the disaster.

   h. **Major service category.** Please note the closest service category that your program or service would correspond to. If your program or service does not fall under one of these categories, let the workgroup leader know and list your suggested service category title.
<table>

</table>
Instructions for the Service and Resource Tally Sheet.

The Service and Resource Tally Sheet re-groups your program information that draws directly from the Disaster Assistance Resource Sheet into the major service categories.

To complete a Service and Resource Tally Sheet, the workgroup leader will need to gather completed Disaster Assistance Resource Sheets from workgroup members and transfer the information. You will need at least one sheet for each of the 14 major service categories outlined in the previous section. If workgroup members noted that a program or service did not fall into one of these categories, you may want to create a new category or combine existing categories.

You will want to form a subgroup of the disaster workgroup to focus on each major service category.

(P = Primary  S = Support)
**Instructions for the Responsibility Matrix Sheet**

All workgroup members should receive four copies of the *Responsibility Matrix Sheet* for each of the emergency management phases: mitigation, preparedness, response, and recovery. Workgroup members should also receive copies of the *Service and Resource Tally Sheet* for each of the major service categories. For each category, the workgroup should decide which organization will be the subgroup leader ("primary") and which will be regular subgroup members ("supportive").

There should be only one "primary" organization per subgroup. For example, the nutrition subgroup will consist of many varied organizations, such as foodbanks, meals-on-wheels, JTPA §402 programs, migrant health centers, churches and local WIC and foodbank programs. Perhaps for example, the local foodbank is chosen by the subgroup to become the "primary" agency, which makes it the leader and contact organization for ensuring that nutrition-related tasks are delineated in the plan, and carried out if a disaster should occur.

1. **Check the list of service providers** on the left side of the sheet. Add, delete, or change names as appropriate for your community.

2. The **14 major service categories for disaster assistance** are listed across the top of the sheet. Make sure that all of the major services are covered.

3. When workgroup members decide which organizations will have "primary" roles and which will have "supportive roles", **write a "P" for primary or an "S" for supportive in the appropriate squares.**

4. **Repeat these steps** for each of the four phases.

5. **Analyze and evaluate** what you see. Are there any gaps?

Instructions for Completing the Damage Assessment Form

1. **General information.** Write the name of your organization, location of the disaster, date of disaster, type of disaster, name of contact person, with home and office address and telephone number.

2. **Affected Counties.** In each major block, write the name of each county affected by the disaster.

3. **Crop damage.** Identify crops affected, the number of acres affected, and percentage of crops lost. Ask local agriculture experts for assistance in obtaining estimates. Before the disaster, find out where crop statistics are reported so that you can establish a baseline of information in advance.

4. **Dollar amount of damage.** Ask local agricultural experts for estimates.

5. **Number of affected migrant workers.** Estimate or ask local farmworker experts.

6. **Number of affected seasonal workers.** Estimate or ask local farmworker experts.

7. **Estimated number of farmworkers to relocate.** Estimate or ask local farmworker experts.

8. **Anticipated duration of mass unemployment.** How long do you predict that farmworkers will be without work?

9. **Average income lost per farmworker.** Gathering prevailing wage and agricultural work duration information in advance will help you or other farmworker experts project a realistic figure.

10. **Types of farmworker needs.** Use as much space as you need in this section to describe the needs of farmworkers as a result of the disaster (housing, transportation, food, etc). List priority needs first. Ask farmworkers to help identify and prioritize their needs.

11. As soon as you have completed this form, make sure to inform the local press. Quickly send a copy to relevant state and federal organizations. Because AFOP works on farmworker disaster issues and assistance nationally, we request that you please send a copy to AFOP as well.
Contacts and Resources

The following section provides three lists which should be useful when developing a farmworker disaster plan: Federal Disaster Assistance for Farmworkers, Community Resources, and Foundation Resources.
Federal Disaster Assistance for Farmworkers

FEDERAL EMERGENCY MANAGEMENT AGENCY (FEMA)
FEMA Department of Disaster Assistance Programs
Associate Director
500 C Street, SW
Washington, DC 20472
(202) 646-3615 or (800) 462-9029
Disaster Assistance Hotline: (800) 525-0321

Individual and Family Grant Program
This state-administered program covers costs of disaster victims who are uninsured and cannot be served by other disaster assistance programs. States reimburse 25 percent of the grant costs while FEMA reimburses the remaining 75 percent. Eligible applicants must have first applied to the Small Business Administration for a loan. These applicants who have been refused a loan by SBA will be automatically referred to this program.

Disaster Unemployment Assistance
Nonresident workers who were employed, were promised employment or have a history of working on the same farm in the disaster area are eligible to receive unemployment benefits and re-employment services. Farmworkers, farm and ranch owners, self-employed workers and other who do not receive unemployment insurance are eligible to receive aid if they meet the criteria previously mentioned. However, applicants must first register with the state employment services office before they can receive program benefits. This program is administered by the Department of Labor, although FEMA remains the responsible agency.

Disaster Housing Assistance Program
This FEMA-run program reimburses declared disaster victims for short-term and extended-term lodgings, home repair, mortgage and rental costs. Eligibility varies depending on the type of assistance needed. In general, eligible applicants must have lived in their house or apartment before the disaster occurred. Damage to homes and displacement of families must have been caused by the disaster. FEMA will ask applicants to provide records of expenses and proof of occupancy or ownership.

Crisis Counseling Assistance and Training Program
States can receive funding to provide training and services to people suffering from mental illness due to declared disaster. Both immediate services and regular program services are available. Services include outreach, education, diagnosis and counseling. Eligible applicants must either be area residents or in the area at the time of the disaster. Applicants must also either have a history of mental illness or benefit by the program services.

Disaster Legal Services
The Young Lawyers Division of the American Bar Association provides free legal services for victims of declared disasters. Legal advice is limited to cases in which the settlement is awarded by the court and there is no fee. Such cases include landlord or tenant problems, assistance with home pair contracts or counseling on mortgage foreclosure. Eligible applicants are low-income people who, because of a declared disaster, cannot meet their legal needs.
Cora Brown Fund
The Cora Brown Fund is a special discretionary account that can only be used in exceptional circumstances when monies from the Individual and Family Grant Programs have been depleted. If there has been no home property damage due to a disaster, then this fund can not be accessed. For example, in 1991, California’s Office of Emergency Services found that since freeze victims were ineligible to receive Individual and Family Grants, they were also ineligible to receive Cora Brown funds.

Public Assistance Programs
State and local governments and private voluntary organizations can apply for federal disaster assistance within 30 days of the disaster. Assistance may be approved for a variety of projects, including measures to ensure public safety, emergency measures necessary to save lives, clearance of debris, protection of property and measures to lessen or avert the threat of a catastrophe. An eligible recipient may receive a small project grant for each project where the federal estimate of costs for an individual project is less than $36,500. Payment of the federal share will be made by the state immediately following approval, and will not be less than 75% of the approved estimate of eligible costs. For projects approved over $36,000, federal funding will equal the federal share of the actual eligible costs documented by a grantee and payment will be in the form of advances or reimbursement. Other forms of federal assistance under this category include Community Disaster Loans from FEMA to communities that may suffer a substantial loss of tax and other revenues.

SMALL BUSINESS ADMINISTRATION (SBA)
SBA Disaster Assistance
Office of the Administrator
409 Third Street SW
Washington, DC 20416
(202) 205-6734

Economic Injury Disaster Loan Program
This program provides loans to small nonfarm businesses, including small agricultural cooperatives, nurseries and greenhouses, and helps individuals repair or replace damaged property. Individual applicants must first register and interview with FEMA which then determines if the applicant can repay the loan. If the loan cannot be repaid, then FEMA refers the applicant to the Individual and Family Grant Program. If the loan can be repaid, the applicant must give written proof. Applicants do not have to be U.S. citizens to receive assistance from this program.

Home/ Personal Property Disaster Loans
These loans are awarded to homeowners or renters to replace or repair personal property. Loans cover costs for uninsured, SBA-verified losses, but can also be used toward the prevention of future damage.

U.S. DEPARTMENT OF AGRICULTURE
Office of Administration, Room 5014s
U.S. Department of Agriculture
14th and Independence Avenues, S.W.
Washington, DC 20250
(202) 720-4323

Farmers Home Administration (FmHA)
Emergency Loan Program.
Business property owners can apply for funding from FmHA to provide low-rent housing for seasonal farmworkers. Landowners must have had a 30 percent crop loss over 8 months. Low-income rental assistance, covering 30 percent of
the rent, can only be awarded to low-income area residents.

**Emergency Assistance Grants for Low Income Migrant and Seasonal Farmworkers.** Available during declared disasters, this program awards up to $20 million to private and nonprofit farmworker organizations that provide emergency services to migrant and seasonal farmworkers. Eligible farmworkers include those who have lost income, lost their job or must return to their homebase state because no work is available. Farmworkers can receive food, clothing, housing, medical services, relocation services, transportation services, child care, training, re-training and employment services. The Secretary of Agriculture determines when these federal funds will be released and what services need to be provided.

(703) 305-2286

**Food Stamp Program (FSP)**
The FSP is the cornerstone of the USDA food assistance programs. Initiated as a pilot program in 1961 and made permanent in 1964, the program issues monthly allotments of coupons which are redeemable at retail food stores. Eligibility and allotments are based on household size and income, assets, housing costs, work requirements and other factors. Benefits are based on the Thrifty Food Plan, a hypothetical market basket of foods for a nutritious diet, the cost of which is derived from a survey of actual food prices. The federal government shares with the states administrative expenses and the operating cost of state employment and training programs. Food stamp program recipients must be legal U.S. citizens.

**The Disaster Food Stamp Program.**
This program is run the same as the regular food stamp program, except that it focuses on the effects of the disaster on individuals. Emergency food stamps are awarded to people whose home, located in the declared disaster area, was either heavily damaged or destroyed. Eligible applicants must have lost their job or income because of the disaster. Applicants who already receive regular food stamps are also eligible. Applicants must show bring personal identification and proof of where they live. In the past, the citizenship requirement has been waived for this program, but this policy may be overturned.

**Child and Adult Care Food Program**
This program provides cash and commodities to child and adult care centers and family day care homes. At these centers, eligibility and reimbursement criteria for free and reduced-price meals are the same as those for the National School Lunch and Breakfast Programs. At day care facilities, all meals are free, but the reimbursements are lower and are limited to two meals and one snack per day.

**Commodity Distribution to Charitable Institutions**
Commodities are provided to not-for-profit, charitable institutions that regularly serve meals to the needy. Such charitable institutions include homes for the elderly, hospitals, soup kitchens, food banks, meals-on-wheels programs and summer camps and orphanages that do not participate in any federal child nutrition program.
Commodity Supplemental Food Program (CSFP)
A direct food distribution program with a target population similar to the WIC (Women, Infants, and Children) program, CSFP often operates in areas where there is no WIC program. If there is a local WIC program, recipients may not participate in both WIC and CSFP. As in WIC, food packages are tailored to the nutritional needs of participants. In addition to the regularly authorized commodities, participants may receive additional food from agricultural surpluses as a bonus. States may also serve elderly people through CSFP if they have caseload slots that are not being taken by women, infants and children.

The Emergency Food Assistance Program (TEFAP)
Formerly known as the Temporary Food Assistance Program, TEFAP was begun in 1983 to reduce inventories and storage costs of surplus food by setting up a distribution network to needy households. However, in 1994, funding for TEFAP was reduced to cover administrative costs, forcing local organizations to rely on their own funds to obtain and distribute food.

Food Distribution Program on Indian Reservations and the Trust Territories
This program provides food to Pacific Islanders and to Native American families who live on or near Indian reservations. Also known as the Needy Family Program, this is the oldest FNS program, dating back to the Depression of the 1930s. The Needy Family Program was the main form of food assistance until the Food Stamp Program was expanded in the early 1970s. Today’s Food Distribution Program is administered by states and tribal organizations. Participants may choose from month to month whether they will participate in the Food Stamp Program or the food distribution program.

National School Lunch Program (NSLP)
The NSLP provides cash and commodity foods to not-for-profit food services in elementary and secondary schools and in residential child care centers. Low-income students may qualify to receive their meals free or at a reduced price, and cash payments are made to states on the basis of the number of meals served in the free, reduced-price or paid categories. Entitlement commodities are provided by law at a per-meal rate. Additional, or bonus, commodities are provided as available through USDA’s agricultural price support or surplus removal programs.

Nutrition Assistance Program (Puerto Rico and Northern Marianas)
The Food Stamp Program in Puerto Rico and the Northern Marianas was replaced in 1982 by a block grant program. The two territories now provide cash and coupons to participants rather than food stamps or food distribution. The grant can also be used to fund up to 50 percent of administrative expenses or to fund special projects related to food production and distribution.

Program for the Elderly
This program provides cash and commodity foods for meals for senior citizens. Food is served in senior citizen centers or delivered by meals-on-wheels programs.

School Breakfast Program
As in the school lunch program, low-income children may qualify to receive school breakfast free or at a reduced price, and states are reimbursed according to the number of meals served in each category. Additional funding may be available for severe-need schools, where at least forty percent of meals are served free or at a reduced price. The school breakfast program is not as widely offered as the
Contacts and Resources

school lunch program, and is more likely to operate in schools where economic need is greater.

**Special Milk Program (SMP)**

Expansion of the school lunch and breakfast programs, which includes milk, has led to a substantial reduction in the SMP since its peak in the late 1960s. Participation is now restricted to schools, summer camps and child care institutions that have no other federal child nutrition program, or to kindergarten children who attend half-day sessions and have no access to meal programs provided by the schools. Low-income children may qualify to receive their milk free.

**Special Supplemental Meal Program for Women, Infants, and Children (WIC)**

WIC's goal is to improve the health of pregnant, breastfeeding and post-partum women, infants and children up to five years old, by providing supplemental foods, nutrition education and access to health services. Eligibility is determined by income and nutritional risk as determined by a health professional. Participants receive vouchers that can be redeemed at retail food stores for specified foods that research has shown are frequently lacking in the diet of low-income mothers and children. The program has been effective in improving the health of pregnant women, new mothers and their infants. A recent study showed that women who participated in the program during their pregnancies had lower Medicaid costs for themselves and their babies than did women who did not participate. Each dollar spent in prenatal WIC benefits was found to be more than offset by Medicaid savings during the first sixty days after birth.

**Summer Food Service Program (SFSP)**

SFSP is designed to provide food service to children in needy areas where at least half the children come from families with incomes below 185 percent of poverty during summer vacation. All meals are served free, but are limited to lunch and either breakfast or a snack. The meal service must be sponsored by public or private not-for-profit school food authorities or residential camps, or by state and local government.

**Disaster Housing Assistance Program**

FEMA awards assistance to any family or individual whose house has been made uninhabitable by a disaster. These grants can be used to pay the costs of temporary housing or essential repairs.

**U.S. DEPARTMENT OF DEFENSE**

Contact through your State Emergency Management Office.

**Surplus Commodities Procurement Program**

This program provides surplus military meals to victims of a declared disaster. However, this program can only be accessed once FEMA has given its recommendation. Food is usually distributed through federal emergency food programs and through the Second Harvest Food Bank network.

(202) 260-1406

**Impact Aid Program**

The Impact Aid Program helps educational agencies pay for increased operating expenses and lost revenue caused by a declared disaster. This fiscal relief can last up to 5 years, and will fund the following...
disaster-related expenses: additional school transportation, longer school operating hours, additional food, costs for educating additional students whose schools were destroyed and compensation for decreased property values.

Community Services Block Grant Program
USDA allocates funds to the states that in turn distribute funds to Community Action Agencies, state and territorial CSBG offices and tribes and tribal organizations. Grantees provide a range of services to low-income individuals and households. Services include employment, education, housing, nutrition, health and emergency.

Migrant and Seasonal Farmworker Program
This Community Services Program provides services to migrant and seasonal farmworkers, including crises-nutritional relief, emergency health and social services, home repair, home rehabilitation, and employment. It is nationally competed each year.

Migrant Health Program
A national network of migrant health centers, funded by the Public Health Service Act, provides primary health care services to migrant and seasonal farmworkers. Services include diagnostic, therapeutic, preventative and emergency care.

Low Income Home Energy Assistance Program (LIHEAP)
This block program helps support low-income households who cannot pay for their home energy costs. Grantees are either states, territories or Indian Tribes. Grantees create a plan outlining levels of assistance and household eligibility. Up to 15 percent of funds can be used for energy crises services, such as home weatherization or other energy-related home repair.

U.S. DEPARTMENT OF LABOR
Division of Migrant and Seasonal Farmworker Programs
Office of Special Target Programs
200 Constitution Avenue, NW
Room N-4641
Washington, DC 20210
(202) 535-0500

Migrant and Seasonal Farmworker Program
This federally-administered program, funded through the Job Training Partnership Act, Title IV, §402, provides a variety of services for migrant and seasonal farmworkers during normal times, but can also provide some services during disasters. Grantees are in every state except Alaska, and are also found in Puerto Rico. Although the program focuses on training and job placement services, supportive services include transportation, personal and financial counseling, health care, child care, temporary shelter, meals and legal assistance. Currently, up to 15 percent of grant funds can be used for supportive services, but often these funds barely meet the need when there is no declared disaster.

Economic Dislocated Worker Adjustment Assistance (EDWAA) Program
The EDWAA program, funded through Title III of the Job Training Partnership Act, provides employment and training assistance to workers who have lost their jobs, regardless of reason. Local JTPA
Contacts and Resources

programs administer the EDWAA and provide such services as job counseling, occupational and remedial training, placement, job search and relocation. EDWAA also can be used to fund additional supportive services, such as child care and transportation. A separate grant program, the National Reserve Grant Program, provides assistance to disaster-related mass lay-offs. Often, the employment offered is for disaster clean-up.

Re-Employment Act of 1994
This proposal was introduced in the Clinton Administration's FY 1995 budget, and as of this printing, has not yet been considered by Congress. This proposal would replace the Job Training Partnership Act, Title III EDWAA program which has provided very limited and sporadic disaster employment assistance to farmworkers. Clinton's proposal would consolidate six programs serving dislocated workers: Economic Dislocation and Worker Assistance, Trade Adjustment Assistance, NAFTA Bridge Program, Clean Air Employment Transition, Defense Diversification, and Defense Conversion Adjustment. Dislocated workers would be able to access these services by going to a "One Stop" Career Center administered by each state. The proposal states that the new program would be phased in during FY 1995 and fully implemented by FY 2000.

When assembling this list of potential funding sources, we tried to feature organizations that have emergency relief funds available to community, non-profit organizations. We have also edited the list to include foundations that have been sympathetic to social service organizations in the past. We suggest that you contact these foundations to obtain more information about their grant program and to get the name of a current contact before sending a proposal.

Most of the information in this list was taken from the Taft Foundation Reporter available from the Taft Group, 12300 Twinbrook Parkway, Suite 450, Rockville, MD 20852, ph: 301/816-0210.

Beazley Foundation

Major Priorities: education, community service, and religious welfare

Geographic Scope: primarily Virginia

Average Grant: $515,785

Contact: President, Beazley Foundation, 3720 Brighton Street, Portsmouth, VA 23707, ph: 804/393-1605.

This glossary serves as an easy reference for terms, acronyms and definitions used throughout this guide. We also are providing you with terms and acronyms that are used by FEMA and may be found within your state's state emergency operations plan. For ease of reference, have included terms and acronyms are listed in alphabetical order.

**AFOP.** Association of Farmworker Opportunity Programs is the national federation of organizations in 49 states and Puerto Rico that provide employment, training and supportive services for migrant and seasonal farmworkers. AFOP has studied the impact that disasters and other emergencies have had on farmworkers in the U.S. over the past ten years.

**ARC.** American Red Cross is a national non-governmental organization which acts as a liaison between FEMA and local agencies in serving medical and other needs of disaster victims. It has offices in most communities, and can assist in both declared and undeclared disasters.

**Authorities Review** is a detailed examination of laws and regulations applicable to emergency management in a community, which is found in state plans.

**CAA.** Community Action Agencies, also known as CAP agencies, provide a range of social services for farmworkers. They are funded by the Department of Health and Human Services' Community Services Block Grants.

**CEM.** Comprehensive Emergency Management is the federal method of chronologically grouping disaster activities into four phases: mitigation, preparedness, response and recovery.

**COE.** U.S. Army Corps of Engineers can be called upon by FEMA to help with disaster response and recovery efforts.

**Community Resources** include people, organizations, programs, equipment and funds that can be used to alleviate suffering caused by disasters.

**CSBG.** Community Services Block Grants are federal funds available at the state level for community service programs. Some states have established a CSBG set-aside for farmworkers, although the majority have not.
Glossary

**CPC.** Civil Preparedness Guides are FEMA publications that give information about civil preparedness and emergency management program activities.

**CSP.** Community Shelter Plans provide disaster guidelines to local agencies.

**DAC.** A Disaster Application Center is a one-stop center for disaster victims to apply for individual assistance from various state and federal agencies, as well as private groups. The Florida Department of Education’s Adult Migrant Program produced a document on the DACs they set up for farmworkers following Hurricane Andrew. See the “Community Resources” section for their address.

**DAE.** Disaster Assistance Employees are FEMA employees who assist local areas affected by disasters.

**Disaster** is a dangerous event whose control exceeds the capability of any single agency or service, such as the fire department or police. In legal terms, a disaster requires resources beyond those available locally.

**DFO.** Disaster Field Office is an administrative office established at the scene of a presidentially declared disaster.

**DOD.** U.S. Department of Defense supports a Surplus Commodities Procurement Program, which supplies surplus military meals to disaster victims.

**DOE.** U.S. Department of Education administers the Impact Aid Program during times of disaster.

**DOL.** U.S. Department of Labor federally administers the Migrant and Seasonal Farmworker Program, which funds not for profit and state agencies to provide employment and training services to migrant and seasonal farmworkers, and the Economic Dislocated Worker Adjustment Assistance program.

**DSC.** Disaster Service Center is a facility where disaster victims can receive assistance with their application preparation.

**EBS.** Emergency Broadcast System is a communication and warning system set up by the federal government to broadcast emergency messages via radio and TV stations.

**Emergency** is a dangerous event less severe than a disaster, which can be controlled within the scope of local resources, and where no request for state or federal assistance was not made.
Emergency Management is a system of analysis, planning and decision making to mitigate, prepare for, respond to and recover from the effects of all hazards. The goal of emergency management is to save lives, prevent injuries, and protect property and the environment if an emergency occurs.

Emergency Program Manager is the individual who has the day-to-day responsibility for emergency management programs and coordination of all emergency-related activities.

Emergency Support Services, or emergency operating forces, are found within local government and respond to emergencies 24 hours a day. These services include law enforcement, fire, rescue and public works.

EOC. Emergency Operations Center, the nerve center of all information and direction, is set up immediately following a declared disaster. These centers can be run by local or state government, or by FEMA. FEMA sets up these centers immediately following a federally declared disaster. However, in the near future, the EOCs will be replaced by the Disaster Field Office, where all local, state and federal programs will be managed. This will be the locations where organizations can apply for public assistance.

EOP. Emergency Operations Plan, or a disaster plan, outlines what needs to be done to prepare for and recover from a disaster or an emergency. States and communities each have their own plans that generally follow FEMA's disaster guidelines. These plans also have annexes that detail the special needs of special populations, such as farmworkers.

ETA. Employment and Training Administration, found within DOL, oversees the JTPA §402 Migrant and Seasonal Farmworker Program and the Title III program.

FACT Act. The Federal Agriculture Commerce and Trade Act of 1990, §2281, authorizes the Secretary of Agriculture to spend up to $20 million to provide disaster assistance to farmworkers. This act is also referred to as the 1990 Farm Bill.

Farmworker Rest Centers are community-run, one-stop centers for farmworkers which serve as temporary shelters and application assistance centers. Only two of these model centers exist—one in Hope, Arkansas and the other in Liberty, Ohio.

FEMA. The Federal Emergency Management Agency coordinates government disaster response activities following a federally declared disaster.

FmHA. Farmers Home Administration, administered by USDA, has an emergency loan program that provides low-rent housing to migrant and seasonal farmworkers.
**Funding Analysis** is the review of funding and funding sources for emergency management activities.

**Hazard** is a dangerous event or circumstance that has the potential to lead to an emergency or disaster.

**Hazard Identification** is the review of locations and conditions associated with hazards in a particular area.

**Hazard Probability**, featured as a chart in state EOPs, lists possible hazards and the probability of their occurrence in the future. FEMA uses this information to set disaster planning priorities.

**HHS.** U.S. Department of Health and Human Services, administers the Community Services Block Grant program which is allocated to states and Community Action Agencies. HHS also funds the migrant health program and the migrant head start program. HHS administers the Low-Income Energy Assistance Program (LIHEAP) which supports the fuel costs of low-income households.

**IA.** Individual Assistance is a category of programs administered by FEMA which provides loans and grants to disaster victims. FEMA’s Individual and Family Grant Program is an example of this type of assistance.

**IEMS.** Integrated Emergency Management System puts the emergency management process into action; it integrates all available resources for the full range of hazards and functions related to the four phases of emergency management.

**IFGP.** Individual and Family Grant Program (IFGP) is administered by FEMA and provides relief assistance to disaster victims following a presidentially declared disaster. An individual or family can receive a grant for up to $5000.

**Impact Aid Program** is a DOE-administered program which helps educational agencies pay for increased operating expenses and lost revenue caused by a disaster.

**Job Training Partnership Act, Title III, Economic Dislocated Worker Adjustment Assistance Program**, administered by DOL, provides funding to governors in states to respond to job loss due to plant closings and disasters. Applications for these funds must be filed through the governor’s designated state agency administering such funds.

**Job Training Partnership Act, Title IV, §402**, administered by DOL, provides employment and training services to migrant and seasonal farmworkers. AFOP’s member organizations are grantees who receive these federal funds.
Mitigation is the first of the four phases of comprehensive emergency management. Mitigation activities reduce the risk of damage and injury to the community if a disaster occurs.

Natural Disaster is a disaster caused by a natural event such as a drought, flood, hurricane, landslide, blizzard, tornado, sleet, hail, freeze, earthquake or crop blight.

NGO. A non-governmental organization is any private-run organization, including profit or not for profit organizations.

NWS. National Weather Service is an agency that informs the public about severe weather.

PA. Public Assistance is a program administered by FEMA to provide partial funding for damaged publicly-owned facilities during a presidentially declared disaster.

Preparedness is the second of the four phases of comprehensive emergency management. Preparedness activities and programs, when in place prior to an emergency, will make it easier to respond after an emergency or disaster occurs.

PVO. Private voluntary organizations include service organizations, such as the Salvation Army, United Way and the American Red Cross.

Recovery is the last of the four phases of comprehensive emergency management. Recovery activities restore the community to a normal, or near normal state. Short term recovery includes damage assessment and the return of essential systems and services (such as electricity, food and water supply) to prior operating level. Long term recovery activities, such as rebuilding and training, may continue for many years.

Resource Inventory is an analysis of the resources a community can call upon in the event of an emergency. This would be comparable to the information you will have after you complete the three forms in your farmworker plan.

Response is the third of the four phases of comprehensive emergency management. Response phase activities and programs address the short term effects at the beginning of a declared disaster or emergency. Response activities should only be done by FEMA agents and other authorities who are specially trained. Activities include warning, evacuating victims and lifesaving.

SCO. State Coordinating Officer is appointed by the governor, usually the director of FEMA, to coordinate all state agencies in disaster relief operations.
SM. A Shelter Manager is the specially-trained manager of shelters during an emergency or disaster.

SOP. Standard Operating Procedure is the procedure described in the state emergency operations plan to implement disaster-related activities.

SAO. Shelter System Officer is a local official who maintains a shelter system and trains shelter managers.

Technological Disaster is a disaster caused by humans, including dam failures, fire, internal disturbances (such as strikes and riots), hazardous material accidents, and energy shortages.

USDA. U.S. Department of Agriculture. This federal agency administers a variety of food programs that can be used during disasters, including Disaster Food Stamp Program, Commodity Distribution to Charitable Institutions and the Commodity Supplemental Food Program. These programs are managed by the Food and Nutrition Service. USDA also oversees the Farmer’s Home Administration.

VOAD. Volunteer Organizations Active in Disasters is a national organization which promotes improved mitigation and response efforts among not for profit organizations.
Contributing Documents

The following publications were of great assistance in the development of this document:

*Disaster Relief for Farmworkers (Draft)* Michael Jones, Proteus Training and Employment, Visalia, CA.

*Introduction to Emergency Management.* FEMA (S #230, Fema).

Letter from USDA Secretary Mike Espy to the Honorable Ed Pastor stating why funds from USDA §2281 of the FACT Act were not made available to farmworkers affected by the 1993 Midwest floods (dated October 4, 1993).
