This booklet comprises the sixth grade component of a series of curriculum guides on fire and burn prevention. Designed to meet the age-specific needs of sixth grade students, its objectives include: (1) developing a comprehensive understanding of fire physics, (2) evaluating electrical hazards and how to respond to those hazards, and (3) continuing study of first aid for burns. Texas essential elements of instruction that may appropriately be integrated with the fire prevention curriculum are listed. The booklet's three sections provide lesson plans, teacher materials, and student materials. The five lessons are: "Physics of Fire, Almost Like Magic"; "Electricity"; "Home Safety"; "Fire Response"; and "Burn Response." Each lesson plan includes objectives; a list of materials; and suggestions for a focus activity, presentation of content, guided and independent practice, reteaching, enrichment, and closure. A pretest/posttest is provided, along with activity sheets to be photocopied. A scope and sequence chart covering kindergarten through high school is also presented. (JDD)
Fire Safety for Texans

Fire and Burn Prevention
Curriculum Guide Developed by
Texas Commission on Fire Protection

Sixth Grade

Fire Safety Power
Dear Educator:

The Texas Commission on Fire Protection is pleased to provide this curriculum guide to facilitate the teaching of fire prevention. To understand why instruction in fire prevention must be matched to the developmental needs of students, please read the Introduction section beginning on Page 3. This introduction also tells how fire prevention education can be coordinated with the instructional requirements of Texas schools.

We welcome your comments and suggestions. Please telephone or write to share your successes and questions with our staff. Also, we invite you to request guides for other grade levels and additional copies of this booklet by clipping and returning the form below.

Your involvement in fire prevention education will be appreciated by your students and your entire community.

Sincerely,

Anne Easterling
Program Administrator
Fire Prevention Education

**Notes:**
- The table lists various subjects and grade levels.
- Each subject is followed by specific topics or concepts.
- The table is designed to show a progression of knowledge from lower grades to higher grades.
- The table includes notes on specific topics such as "agents of weathering, erosion, and deposition."
Introduction
Introduction

Why teach fire and burn prevention?

Each year during the past decade, about 300 Texans have died in fires. The Texas Commission on Fire Protection is committed to reducing this alarming statistic.Analysis of fire statistics shows that the vast majority of fires — and the resulting fire deaths — could have been prevented. Regrettably, most people do not know or practice even simple actions that can prevent fires and burns.

The Texas Commission on Fire Protection believes the key to reducing fires and fire deaths is education. Fire safety education has traditionally been concentrated in elementary school observances of Fire Prevention Week. While these observances can produce effective results, thoughtful analysis of the fire problem and fire safety educational programs shows that a more comprehensive, age-appropriate approach to fire safety education can multiply its benefits.

Recognizing the limits of classroom instruction time, the Texas Commission on Fire Protection has examined the Texas essential elements of instruction to determine the most appropriate topics with which to integrate fire prevention and fire safety. Teachers from across the state have provided feedback on topics appropriate for each grade level, kindergarten through high school.

The result of this extensive research is "Fire Safety for Texans," a series of curriculum guides teaching fire and burn prevention. Each grade-level program has been coordinated with essential elements in that grade and with the unique specific fire safety needs of that age group. The lesson plans have been field tested in classrooms across the state. On average, students who have been taught using these materials score 26 percent higher than students in control groups.

As you use this guide, you and teachers in other grade levels will be part of a continuum of fire safety education spanning all grades. The Texas Commission on Fire Protection believes this continuum will help created a generation of Texans who will be fire-safety aware. In turn, all Texans can benefit from a decrease in the number of needless fire deaths and an increase in safer homes and work sites — a benefit we all deserve.

This Booklet

This booklet, "Fire Safety Power," is specifically designed for sixth-grade students. The following sections give specific information on the essential elements applicable to fire and burn prevention and on the age-specific needs of sixth-grade students related to fires and burns. You will also find additional information on the format and materials found in this booklet.

This booklet has three sections:

- **Lesson Plans.** This section includes all steps in the lesson cycle.
- **Teacher Materials.** This section includes all teaching aids and tests.
- **Student Materials — Duplicating Masters.** This section includes master copies of materials to be used by students.

🌟 General Objectives: To develop a comprehensive understanding of fire physics

To evaluate electrical hazards and how to respond to those hazards

To continue study of first aid for burns

**Essential Elements:** The student will be provided opportunities to:

- §75.25 (g) 2D. observe phenomena and apply knowledge of theories, facts, and concepts from the life, earth, and physical sciences.
- §75.25 (g) 4B. name and describe objects, organisms, and events from the environment.
- §75.25 (g) 4E. record data and interpret the arrangement of data on graphs, tables, and other visuals.
- §75.25 (g) 6D. form and state generalizations about similarities and differences among observed objects, organisms, events, and phenomena.
- §75.25 (g) 7B. relate classroom objects, science principles and activities to daily life.
- §75.26 (g) 1F. identify factors, including peer pressure, that contribute to ... tobacco ... abuse and methods of prevention.
- §75.26 (g) 1H. recognize hazards in the environment, and employ knowledge and skills needed to avoid injury and to prevent accidents.
- §75.26 (g) 2C. recognize the health of the family depends upon contributions of each of its members.
- §75.26 (g) 2D. identify basic emergency treatment.
- §75.26 (g) 3A. relate the system of health services provided by government to the health needs of people.
- §75.29 (g) 7A. make and interpret time lines.

**Science Content:** Content from the sciences that shall be emphasized at the grade level shall include:
Physical Science

3.1 Energy ... kinds of energy ... sources of energy ... transformation of energy from one form to another.

3.4 Electricity and magnetism: charges, circuits, properties, electromagnetism, etc.

Background: Age Profile

Stage of industry vs. inferiority, which means the child needs to stay constructively busy. Because many differences in abilities are becoming more evident, comparisons among children should be avoided.

Areas of development include neuromuscular and social. The child is developing many new physical skills, both gross and fine motor skills. He is making a social move from the home into peer groups and school. He is developing his own self-attitudes and seeks significant human relationships.

Operating under the morality of cooperation, the child sees rules as mutual agreements made by those affected and involved in the situation. She tends to obey rules out of respect. The child can understand causes and consequences of actions.

The child is capable of concrete operations, which means he can solve a variety of problems using concrete objects, and may be capable of formal operations, in which concrete objects are no longer needed for problem solving. He must be active in the instructional process, and activities and materials must be relevant to the child's life or environment. Instruction will be more effective if it involves both the affective and cognitive domains.

The sixth-grader is interested in social, occupational and civic matters. She is becoming able to move from the simple to complex, concrete to abstract, undifferentiated to differentiated, discrete to organized.

Fire and Burn Hazards

Curiosity about fires — playing with matches and lighters, candles, fireplace, heaters, other locations where the child can observe a flame; overconfidence in dealing with fires.

Scalds — cooking; tap water; hot foods, especially heated sweet foods.

Appliances — cooking at stoves or with microwave ovens, especially unsupervised; overconfidence in using appliances, such as irons, toasters, etc.

Clothing ignition — playing with matches; flammable clothing and costumes; walking or sleeping too close to heater or other open flame; knowing how to reduce injury.

Outdoor hazards — campfires and barbecues; mini-bikes and lawn mowers; fireworks; high-tension wires.

Other — flammable liquids; fires caused by parents' smoking; injury from smoke and fire gases; knowing how to escape from fire.

Teacher's Note on Materials: Illustrations and activity sheets in this booklet are intended to serve as masters. Photocopy, then use the photocopy as directed.

Pre-Test and Post-Test: Administer the pre-test prior to the first lesson and the post-test after the final lesson.

Teacher's Note on Closure Activities: Some activities included in the closure phase of the lesson cycle may be effectively used in the next lesson's focus activity.

Key To Icons: The following icons can be used to easily identify activities in the lesson plans:

- Lesson objectives
- Focus and closure
- Creative group activity, including role playing
- Lecture
- Group problem-solving activity
- Answering questions
- Guest presenter
- Investigation or research
- Creative writing activity
- Cut-and-paste activity
- Group discussion
- Drawing, artwork or illustration
LESSON ONE:  

Physics Of Fire, Almost Like Magic

Goal: To examine the complete fire tetrahedron and to apply knowledge of flammables and combustibles to product safety

Objectives: The student will:
- describe fourth element of fire, uninhibited chemical reactions  *25(g)4B, **3.1
- lists types of heat and fuel to define classes of fire  *25(g)2D, **3.1
- describes three types of fire extinguishers  *26(g)1H

Materials: Pre-tests (p. 15); fire tetrahedron, assembled as illustrated (p. 16); "The Basics Of Fire and Fire Safety," reproduced on overhead transparency or poster P. 17); "The ABCs of Fire Extinguishers" classification activity (p. 33) "Overpower The Fire" independent practice activity (p. 34); answer keys (p. 27).

Focus: Administer pre-test.

Present tetrahedron. Have students describe how it is different from fire triangle usually presented (four faces, fourth element).

Introduce unit on fire safety by telling students that although fire sometimes seem magical, technical advances and greater knowledge of fire have given people greater power in controlling and putting out fires. Present general objectives:
- To develop a comprehensive understanding of fire physics
- To evaluate electrical hazards and how to respond to those hazards
- To continue study of first aid for burns

Outline lesson objectives (paragraph above).

Presentation Of Content: Display "The Basics Of Fire and Fire Safety" on poster or overhead projector. Have students read the definition of fire and describe the differences between an object before it is burned and after it has been burned. Discuss the four elements of fire and basic principles of preventing or putting out a fire.

Direct student attention to "Types of Fires." Have students read and discuss the three types of fuel, encouraging them to use Type A, B or C to identify the three fuel types. Have students add other items to each list.

Tell students that knowing the type of fuel is essential in knowing how to put out the fire. Have students discuss ways they would put out a Type A fire. (Spraying water on the fire, rolling to put out a clothing fire.) Ask how they would put out a Type B or C fire. (They will probably be able to name putting a lid on a pan to put out a cooking grease fire or turning off the electricity for an appliance fire, but will not be able to identify others except using fire extinguishers.) Tell students that fire extinguishers using chemicals have been developed to safely and effectively fight fires.

Guided Practice: Distribute "The ABCs of Fire Extinguishers" classification activity. Point out the fuel types chart at the top and the illustration of the fire extinguisher. Tell students that all fire extinguishers are labeled with one or more letters, A, B, C and/or D. Read note about Type D fires. Also note the shapes around each letter, which is another identifying aid. Examine any fire extinguishers in the room.

Point out that the most common types of extinguishers available for home use are Type A, Type BC (effective for both Types B and C) and Type ABC (effective for all three). Have students hypothesize on what each type might contain. (Type A only is usually water; Type BC, carbon dioxide or dry chemical to smother the fire; Type ABC, another dry chemical to smother and cool the fire.)

Have students read each item in the chart. then circle the type of extinguisher needed and write whether the fire was probably cooled or smothered. Reinforce awareness that two or more types of fuel are commonly involved in one fire.

Independent Practice: Distribute "Overpower The Fire" activity. Have students identify each item and answer the questions. Encourage them to recognize that an ABC extinguisher has a variety of applications.

Reteaching: Copy the pattern for the fire tetrahedron and have students construct their own.
Have students make lists of sources of all elements and attach to the appropriate sides. Note that uninhibited chemical reactions will have no additional labels.

**Enrichment:** Have students research the fourth type of fuel — flammable metals. Have them prepare reports or illustrations that show how metal fires differ from other types of fires.

**Closure:** Review "Overpower The Fire" activity, if appropriate. Select objects in the classroom and have students tell the type of fire and type of extinguisher to use. Note any items with flammable liquid labels.

Introduce next lesson by telling students that their study of "Fire Safety Power" will focus on the power of electricity.

---

**LESSON TWO:**

**Electricity**

**Goal:** To examine the relative risks of electrical appliances, including high-tension wires, and to relate the risks of electrical heating to other alternative heating methods.

**Objectives:** The student will:

- describe why electricity and electrical appliances are fire and burn hazards, relating amount of energy used by various appliances to their risk *(25g)6D, **3.4*
- describe dangers of high tension wires *(26j)1H, **3.4*

**Materials:** "Electrical Objects," transferred on poster or overhead transparency (p. 18); "Electricity Is ..." background information, transferred on poster or overhead transparency (p. 19); "Heat Equals Danger" analysis activity sheet (p. 35); "Higher Heat" analysis and classification activity sheet (p. 36); answer keys (p. 27-28). Option: electric light, electric heater and electric clock, other appliances if desired; display UNPLUGGED with cords securely tied.

**Focus:** Review Lesson One concepts: the fourth element of fire; three classes of fire and fire extinguishers. Explain that this lesson will focus on the third class of fires — electrical fires.

Display illustrations of electrical objects on poster or overhead (or display light, heater and clock UNPLUGGED).

Have students describe how they are similar. (All use electricity)

Tell students that this lesson will focus on electrical power and its relation to fire safety. Outline lesson objectives (paragraph above).

**Presentation Of Content:** Display "Electricity Is..." on poster or overhead projector. Read definition of electricity. Review basic electricity knowledge, including the fact that the flow of electrons creates power or energy that causes electrical and electronic appliances to operate. (NOTE: This information relates to science instruction on electricity.)

Discuss table titled "Electricity is used to." Have students list additional examples of each use of electricity.

NOTE: This lesson does not address the issues of heat created by electronic "switching" devices such as computers and semiconductors. More traditional appliances, such as those listed, are much more common fire hazards.

Discuss table titled "How does this relate to fire safety?" If using sample appliances, read the wattages listed on the light bulb, heater and clock.

**Guided Practice:** Distribute "Heat Equals Danger" analysis activity sheet, noting the background information. Divide class into groups of three or four students. Have groups read each item in the list and select the correct words. Encourage students to refer to the background information if necessary.

**Independent Practice:** Direct student attention to "Higher Heat" analysis and classification activity. Have students compare the two items and answer the questions. Point out the IMPORTANT note at the bottom of the page.

**Reteaching:** Have students research the wattages of home appliances. Have them prepare a list of the appliances and wattages and arrange from lowest to highest wattage. Relate the listing to relative fire risk.

NOTE: Tell students to conduct home research with help from parents or other adults.

**Enrichment:** Have students research the wattages of home appliances. Have them arrange the items in
pairs and conduct an analysis similar to the "Higher Heat" activity.

**Closure:** Display the illustrations of electrical objects using in the Focus activity. Briefly review the purpose of high-tension wires. Have students tell which of the three remaining appliances uses the most and least amounts of electricity, then tell which one is most likely to start a fire. (Most electricity is used by heater, least by clock. Heater is most likely to start a fire.) Review "Higher Heat" activity, if appropriate.

Introduce the next lesson by telling students that their next lesson on "Fire Safety Power" will focus on one of the most powerful tools in being prepared for a fire.

**LESSON THREE:**

**Home Safety**

**Goal:** To apply knowledge by planning for safety at home

**Objectives:** The student will:
- draw map of home to scale to show smoke detector placement and home exit plan *25(g)7b, 26(g)1h,2c
- analyze prepared maps of other locations to show appropriate detector placement *26(g)1h,2c
- develop holiday checklist that applies fire safety rules *25(g)7b, 26(g)1h,2c

**Materials:** Student desks, tables and/or masking tape to make a floor plan outline; "Smoke Alarm" and "Smoke" role-playing labels (p. 20); "Are These Homes Prepared?" analysis activity sheets (p. 37); "A Powerful Plan For Home Safety" planning and research activity sheets (p. 38); answer keys (p. 28).

**Reteaching:** "Are These Homes Prepared?" activity sheet (p. 38) with smoke alarm placements deleted.

**Focus:** Briefly review review types of electrical hazards. Emphasize that preventing a fire is the most desirable way to avoid fire damage; however, if a fire does occur, every home should be prepared by having a smoke alarm and an emergency exit plan.

Ask for three ideas on the purpose of a smoke alarm and emergency exit plan. Record and retain for Closure activity. Outline lesson objectives (paragraph above).

**Presentation Of Content:** Have student desks and tables arranged in an outline of a home floor plan, or use masking tape to mark an outline of a home floor plan. **SUGGESTION:** Use the one-bedroom apartment floor plan from "Are These Homes Prepared?" sheet as a guide. Additional bedrooms might be added.

Have students sit on floor in groups in "rooms" of house. Give each group three minutes to make a hypothesis (based on prior knowledge and analysis of smoke movement and floor plan) on where a smoke alarm should be placed. If necessary, remind students that the largest number of fires that cause deaths occur at night when people are sleeping. They can be allowed to have more than one alarm.

When groups have their hypotheses, assign persons from each group as "Smoke Alarm(s)" and "Smoke" and distribute role-playing labels. Use one group to demonstrate a "test" of their hypothesis using the following steps.

1. Position "Smoke Alarm(s)" as the group suggested.
2. Have "Smoke" act out movement toward people sleeping in bedroom(s) from one or more of the following:
   - A fire that starts from a careless smoker sleeping on the sofa.
   - A fire that starts from a heater in a bedroom.
   - A fire that starts from unattended cooking in the kitchen.
3. Have "Smoke Alarm(s)" make warning sound when "Smoke" tries to pass.
4. Help students determine if their placement of smoke alarm(s) was the best possible.
5. Discuss what would happen if it were a two story building.

Using student suggestions, write a list of criteria for placing smoke alarms. Be sure the list includes:
- At least one alarm outside each sleeping area.
- At least one alarm on each level or story.
- Do not place in kitchen or high-humidity area (bath, sauna) to prevent nuisance alarms and damage to alarm.
- Optional: Place an additional alarm in each bedroom or any room in which someone might sleep.
• Optional: Interconnect all alarms so that if one goes off, all alarms sound. (Point out that these are usually part of a whole-house security system.)

Then have each group review their original hypotheses and test their theories using “Smoke Alarm(s)” and “Smoke” role playing.

**Guided Practice:** Distribute “Are These Homes Prepared?” Have students examine each drawing and determine if the alarms are appropriately placed. Have them put an X on each misplaced alarm and draw in needed locations. Have them draw in two emergency exits from each room.

**Independent Practice:** Distribute “A Powerful Plan For Home Safety.” Instruct students to draw maps of their homes to scale using the provided grid, marking locations of smoke alarms and two emergency routes from each room. NOTE: Distribute two pages to students who live in two-story homes. Have them study the master holiday checklist and select five holiday safety rules that address hazards they feel they should address in their home.

**Reteaching:** Reproduce the prepared maps from “Are These Homes Prepared?” without the smoke alarm locations. Have students mark where they think detectors should be placed for minimum and maximum coverage. Have them explain their choices.

**Enrichment:** Have students prepare letters to parents and/or family members about the value smoke alarms and planned emergency exit plans.

Have students share their checklists on holiday safety with family members by preparing illustrations or posters.

**Closure:** Display maps of home smoke alarm locations and home exit plans. Have students share what they discovered and how their families responded to this activity. Compare their three ideas from the Focus activity to what they learned about smoke alarms. Introduce next lesson by telling students that they will look more closely at why learning about a fire as quickly as possible (which smoke alarms help do) is so important.

**LESSON FOUR:**

**Fire Response**

**Goal:** To examine various aspects of responding to fire and burns

**Objectives:** The student will:

- prepares time line in response to fire sighting and reporting *25*(g)4E, *29*(g)7A
- explains why to report smoke or suspected fire promptly *25*(g)6D, *26*(g)1H
- describe professionals involved in emergency response and burn care *26*(g)3A

**Materials:** “Time Line Of Class” and “Time Line Overlay” illustrations (p. 21-22), transferred to overhead transparency; “Seconds Count” overhead transparencies (p. 23-24); “Seconds Count” activity sheets (p. 39-40); “A Time Line For Safety” problem-solving activity (p. 41); answer keys (p. 28-29).

**Focus:** Display “Time Line of Class” illustration. Ask students if a fire starts in a shorter or longer time. Add “Fire Time Line Overlay.” Have students share their reaction to the differences.

Tell students that reacting quickly and appropriately saves lives in a fire. Emphasize that planning and practicing can make it easier to act quickly in an emergency. Add that fire departments and medical professionals have also planned for helping people in the community when fires or burns occur. Outline lesson objectives (paragraph above).

**Presentation Of Content:** Using “Fire Time Line Overlay,” discuss the kinds of actions that are required in responding to a fire. (Someone becomes aware of the fire, someone notifies the fire department, the fire department responds by coming to the fire, fire fighters put out the fire.) Discuss what would happen if any of the actions is not done or is done too slowly. (The home cannot be saved, anyone who might be hurt cannot be saved, the fire could spread to other houses, etc.)
Ask students if planning what to do in a fire emergency would make the reactions faster or slower. (Faster) Have students explain why. (In an emergency, people tend to think irrationally, not logically. Planning ahead helps you choose a correct action while you can think properly. Students may find it helpful to compare planning for a fire emergency to studying for a test or rehearsing for a play.)

Have students describe what might have been done to create a different outcome in the time line. (Not smoking, putting out the cigarette with water then putting it in a trash can; having a smoke alarm that might warn of the fire before it grows too large; checking ash trays before leaving house; using larger ash trays on table instead of couch arm.) Emphasize that most fires in the home can be prevented by "planning to be safe."

**Guided Practice:** Display "Seconds Count" illustration and distribute "Seconds Count" problem-solving activity. Explain that the various time lines show several situations concerning fire. Review each time line and discuss the people involved and the actions that each person did.

Direct student attention to "Professionals At Work." Guide students in matching the fire service and hospital professionals to the job descriptions. Discuss how each person might be specially trained and prepared for their jobs.

**Independent Practice:** Distribute "A Time Line For Safety" problem-solving activity sheet. Have students prepare the time line as directed, then list the professionals in their time lines.

**Reteaching:** Review Time Lines 1 and 2 from "Second Count." Have students act out the scenarios in real time to develop a sense of the passage of time. Discuss how the time required to carry out an action is shortened by being prepared and practicing. Compare to knowing a friend's telephone to having to look up the telephone number in the directory.

**Enrichment:** Have students prepare time lines of their own creation. Include other variables, such as a fire in a store, fire involving a senior citizen or handicapped person, fire in a school that has fire drills compared to a school that does not conduct fire drills. Encourage them to explore variables in the way people might respond in each situation.

**Closure:** Ask students to stand, then sit down when they think that one minute has passed. Stop the demonstration a few seconds after the one-minute mark. Add that one minute is all it takes for a fire to consume a room. Ask students to share their opinions on why fast response for a fire is necessary.

Review the various jobs of the fire service and emergency medical personnel. Emphasize that the students' roles in having a safe home environment is as important as any of those jobs.

Introduce next lesson by telling students that the final lesson will focus on the various types of burns that might be seen by the medical professionals discussed in this lesson.

---

**LESSON FIVE:**

**Burn Response**

**Goal:** To examine various aspects of responding to fire and burns

**Objectives:** The student will:
- classify six types of burns by causes (contact, UV, chemical, etc.) (26g2D)
- describe special first aid actions for burns other than contact burns (26g2D)

**Materials:** "Burns: Causes and Treatment" overhead transparency (p. 25); "A Guide To Burns" activity sheets (p. 42); "Warning: Burn Danger" activity sheets (p. 43); post-tests (p. 26); answer keys (p. 26-28).

**Focus:** Review main ideas of the previous lesson, reinforcing the importance of responding quickly to fire and burn emergencies.

Teacher: "Fast responses to burn injuries are very important. Most of us know how to "cool a bum," which works well for most burns. But did you know that there are some types of burns that require other kinds of response? This lesson will give you information to help respond the major types of burns."

Outline lesson objectives (paragraph above).

**Presentation Of Content:** Display "Burns: Causes and Treatment" overhead transparency. Have
students read and discuss the three major causes of burns — thermal, chemical and electrical.

Read and discuss the different types of burn treatment.
Emphasize that different types of burn require different types of initial treatment.

Guided Practice: Distribute "A Guide To Burns."
Divide students into small groups. In groups, have students read each item and discuss the type and proper care of each.
Discuss when it would be appropriate to call for emergency medical service (9-1-1 in most Texas communities).

Independent Practice: Distribute "Warning: Burn Danger" activity sheets. Point out that proper emergency treatment of burns depends on being prepared. Have students prepare warning labels or signs that could be placed on burn hazards. Instruct students to check the item or product, then prepare the label or sign.

Reteaching: Invite an emergency medical technician to present information on primary burn care.

Enrichment: Have students research the Shriners Burn Institute or the critical burn care hospital nearest to your community.
Invite a burn-care professional to visit the class. Encourage the guest to discuss burn prevention. (Note: Advise the guest on whether you wish to see photographs of severe burns. The students may be disturbed by some photographs.)

Closure: Have students present the labels and signs prepared in the Independent Practice activity. Share reactions to their work, and ask students to comment on those that might influence them to be more careful with burn hazards.
Ask students to tell what more impressed them during the study of "Fire Safety Power." Review major points on fire tetrahedron, electricity safety and types of fires.
Administer post-test.
Teacher Supplemental Materials
Name

SIXTH GRADE: Fire Safety Power

PRE-TEST

Read each question, then write the best answer.

1. Fires are classified by letters, A, B and C. Tell the correct type of fire by writing the letter A, B or C in the blank.
   - electrical appliances or wiring
   - wood and paper
   - flammable liquids, such as gasoline or cooking oil

2. Why should you report a fire immediately?

3. The three general types of fire extinguishers are: ____________, ____________, and ____________.

4. You are not sure if a bottle of cleaner is a flammable liquid that might catch fire. How can you easily tell if the cleaner is a flammable liquid?

5. Four elements are needed to create a fire and keep it burning. Three of these are heat, oxygen and fuel. The fourth is:

6. List THREE professional jobs that are involved in responding to fire emergencies and providing care for burns:
   1. ____________
   2. ____________
   3. ____________

6. On the map, draw a circle in each place that a smoke alarm should be located. Then draw lines to show a fire exit plan.

7. List two guidelines for placing smoke alarms:
   1. ____________
   2. ____________

8. List six causes of burns.
   1. ____________
   2. ____________
   3. ____________
   4. ____________
   5. ____________
   6. ____________

Circle True or False.

10. High-tension wires (outdoor power lines) are more dangerous than electric outlets in your home. True False

12. The chance of an electrical appliance catching fire is related to the amount of electricity that the appliance uses. True False

13. All burns are generally the same, so there is no difference in how you treat different burns. True False

Teacher: Use with Lesson One, Page 7. Duplicate for student use.
Fire Tetrahedron
Model for Illustration

Teacher: Use with Lesson One, Page 7. Copy and assemble as shown. Mount on tagboard and color before assembling, if desired.
The Basics Of Fire and Fire Safety
Background Information

A chemical process that converts one product (the fuel) to other products (including gases that contain carbon and hydrogen) in the presence of oxygen and heat.

We usually say fire has three elements:

However, to start the process of combustion — and to keep the fire going — a fourth element is needed. Fire experts call this fourth element:

This means that nothing is being done to stop the interaction of the fuel, heat and oxygen that is producing the fire.

Do something to inhibit, or stop, the interaction of fuel, heat and oxygen, and the fire is stopped.

What will inhibit the interaction of fuel, heat and oxygen?

◨ Taking away the heat
  Example: cooling with water ⬇️

◨ Taking away the oxygen
  Example: smothering the grease fire in a cooking pan by covering with a lid.

Teacher: Use with Lesson One, Page 7. Copy on poster or overhead transparency.
Electrical Objects

Teacher: Use with Lesson Two, Page 8. Transfer to poster or overhead transparency.
Electricity is the flow of electrons through simple materials and devices.

The flow of electrons creates **POWER** or **ENERGY** that causes electric appliances to operate.

Electricity is used to:

- Produce heat: toaster, heater, stove, dryer
- Turn motors: clock, fan, timer, washing machine
- Produce light: light bulb, television, video display terminal (VDT)
- Turn switches on and off: computers, calculators

**How does this relate to fire safety?**

If an electrical appliance produces more **HEAT** OR produces might **LIGHT** OR turns a motor **FASTER**, the appliance uses more **electricity** and is more likely to cause a fire.

**HINT:** The wattage of an appliance is one indicator of how much electricity the appliance uses. The higher the number, the more electricity it uses.
Role-Playing Labels

Smoke Alarm

Smoke Alarm

Smoke Alarm

SMOKE

Teacher: Use with Lesson Three, Page 9. Make copies for each group, and cut apart.
Begin class, check roll.

Begin lesson.

Finish lesson and begin assignment.

Turn in assignment and read library book.

Begin next class.

Leave for next class.

End of day.
Fire Time Line Overlay

9:00
Cigarette drops from ashtray on couch to trash can.

9:05

9:10
Couch is on fire.

9:17
9:27
9:30
The entire house is on fire. Neighbor sees fire and calls fire department.

Fire department arrives with three engines, ladder truck and 20 persons.

Fire fighters begin putting out the fire.

Entire living room bursts into flames.

10:00
The fire is out. Firefighters begin clean up. Fire investigators begin their examination of the fire scene.

10:30
Firefighters begin clean up. Fire investigators begin their examination of the fire scene.

31
Seconds Count
Problem-Solving Activity

**Time Line 1**

Briefly tell what happened

What could one person do to change the story?

How many minutes did it take the fire department to arrive after the neighbor called?

**Time Line 2**

Briefly tell what happened

How many minutes did the fire department waste answering the false alarm?

**Time Line 3**

Briefly tell what happened

Do you think that a fire would have started if the business owner had not made the changes the fire inspector suggested?

Why?

Teacher: Use with Lesson Four, Page 10. Transfer to overhead transparency or poster.
Seconds Count (continued)
Problem-Solving Activity

Time Line 4

Briefly tell what happened ____________________________

What could have happened if the neighbor didn't see the fire and report it quickly? ____________________________

How many minutes did the fire department spend at this fire? ____________________________

Professionals At Work

Read the following descriptions of fire service and medical professionals, then match with the titles below and complete the sentences.

A. fire inspector
B. emergency medical technician
C. fire prevention officer
D. burn care specialists
E. fire fighter
F. fire investigator

1. This professional's primary job is to put out fires. He or she might also ____________________________

2. This professional's primary job is to help people prevent fires. He or she might teach fire safety at schools or help inspect buildings for fire hazards. ____________________________

3. This professional treats medical emergencies where the accident occurs. At a fire, he or she might treat a person for burns or for breathing in dangerous smoke and gases. He or she might also treat ____________________________

4. This professional's primary job is to carefully look at buildings for things that might cause fires. He or she tells how to correct problems so that a fire may be prevented. Some buildings that this person might inspect are ____________________________

5. This professional looks closely at the scene of the fire to determine how the fire was started and how it developed and spread. He or she is frequently involved in identifying fires that have been started on purpose. ____________________________

6. These professionals provide advanced types of medical care for people who have been burned. Their jobs include safely cleaning and treating large burns to prevent infections; replacing badly burned skin with skin grafts; and using physical therapy to exercise muscles that have been damaged. We usually call these professionals by these titles: ____________________________

Teacher: Use with Lesson Four, Page 10. Transfer to overhead transparency or poster.
Burns: Causes and Treatment

Burns from fires are only one type of burns. Medical experts group burns in three general categories, with six specific causes.

The first four are generally classified thermal burns. Thermal burns are caused by high heat.

- **Flame**: caused by fire, most frequently clothing on fire.
- **Contact**: caused by contacting, or touching, a hot object.
- **Scald**: caused by hot liquids.
- **U-V Rays**: (Ultra-violet rays) caused by the sun or sunlamps.

The other two types of burns are:

- **Chemical**: caused when the skin contacts a hazardous material, such as battery acid, drain cleaners, and some flammable liquids.
- **Electrical**: caused when the body directly contacts electrical energy (electrical current).

Emergency treatment for each begins differently:

For thermal burns: Remove from the source of heat and cool with cool water. ♦
(This helps even with sunburn.)

For chemical burns: Usually flush with water ♦ for 20 minutes or more. ⚠
Remove contaminated clothing. ♧
(Some dry or powdered chemicals must be brushed off. Read the product label.)

For electrical burns: Turn off the electricity before touching the patient. Pull the plug or turn off the electrical power at the source.

The next steps apply to all kind of burns.

- ♦ Check breathing.
- ♦ Stop bleeding.
- ♦ Cover the burn with clean bandage or cloth.
- ♦ For major burns, ☢ call 9-1-1 or local emergency medical services or get the patient to a doctor's office or emergency room.

Teacher: Use with Lesson Five, Page 11. Transfer to overhead transparency.
Read each question, then write the best answer.

1. Fires are classified by letters, A, B and C. Tell the correct type of fire by writing the letter A, B or C in the blank.
   - electrical appliances or wiring
   - wood and paper
   - flammable liquids, such as gasoline or cooking oil

2. Why should you report a fire immediately?

3. The three general types of fire extinguishers are:
   ___________ and ___________.

4. You are not sure if a bottle of cleaner is a flammable liquid that might catch fire. How can you easily tell if the cleaner is a flammable liquid?

5. Four elements are needed to create a fire and keep it burning. Three of these are heat, oxygen and fuel. The fourth is:

6. List THREE professional jobs that are involved in responding to fire emergencies and providing care for burns:
   1. ___________
   2. ___________
   3. ___________

7. List two guidelines for placing smoke alarms.
   1. ___________
   2. ___________

8. List six causes of burns.
   1. ___________
   2. ___________
   3. ___________
   4. ___________
   5. ___________
   6. ___________

9. Circle True or False.
   10. High-tension wires (outdoor power lines) are more dangerous than electric outlets in your home. True False
   12. The chance of an electrical appliance catching fire is related to the amount of electricity that the appliance uses. True False
   13. All burns are generally the same, so there is no difference in how you treat different burns. True False

**ANSWER KEY-2**

**Higher Heat**

Choose which the object that is more likely to cause a fire, then write the reason.

<table>
<thead>
<tr>
<th>Object</th>
<th>Why it is more likely to cause a fire</th>
</tr>
</thead>
<tbody>
<tr>
<td>Small light</td>
<td>It produces more light.</td>
</tr>
<tr>
<td>Flash light</td>
<td>It burns a motor more quickly.</td>
</tr>
<tr>
<td>High-tension wire</td>
<td>It produces more heat because it carries more electricity.</td>
</tr>
</tbody>
</table>

Accept reasonable answers.

**BONUS:** Make a chart of what the people you surveyed said were the causes of home fires. Make a chart of the places you investigated and their strategies. What were the most popular? Do you think these things are more likely to happen here? Why?

Accept reasonable answers.

**A Powerful Plan For Home Safety**

1. Draw a map of your home to show the location of each smoke detector with a solid circle. Draw in other places where smoke detectors should be installed with open circles. Then draw two lines to show which room you would enter from each smoke detector. Draw a line on the map that shows the location of each smoke detector.

Accept reasonable answers.

**Second Count**

1. Count how many minutes did the fire department answer the bell. Then write the number.

Accept reasonable answers.

**Are These Homes Prepared?**

1. Look at these homes. Are smoke alarms located where they should be? If not, draw where they should be located. Then, draw in two fire emergency exits from each room.

Accept reasonable answers.

Name

Seconds Count (continued)

Problem-Solving Activity

Time Line 4

A Guide To Burns

Great Classification Activity

Read each example, then check the type of burn. Describe special test and actions for each.

What type of burn?

What to look for or other actions should be done?

A burn that involves the eye, nose, mouth, and ears is a burn.

Check nose, mouth, and ears for burns.

Some burns are severe in a mechanical sense when they are not severe in a thermal sense. A burn is a burn is a burn.

A burn that involves a young child is a burn. Check nose, mouth, and ears for burns.

NOTE: Most flammable liquids are labeled with a warning message.

Types of Fire Extinguishers

Some fire extinguishers are made to put out more than one type of fire. These are examples of fire extinguishers sold for use at home or work:

Type A: Water to cool
Type BC: Carbon dioxide or chemical to smother
Type ABC: Another type of chemical to smother and cool

Classification Activity

Circle the type of extinguisher needed to put out a fire involving the object. Write whether the fire was probably cooled or smothered.

Heat Equals Danger
Analysis Activity

Electricity is the flow of electrons through simple materials and devices.

- The flow of electrons creates **power or energy** that causes electric appliances to operate.
- The flow of electrons also creates **heat**.

**Electricity** is used to:
- Produce heat
- Produce light
- Turn motors
- Turn switches on and off

If an electrical appliance

produces more heat OR produces more light OR turns a motor faster

the appliance uses more electricity and is more likely to cause a fire

HINT: The wattage of an appliance is one indicator of how much electricity the appliance uses. The higher the number, the more electricity it uses.

<table>
<thead>
<tr>
<th>HOUSE APPLIANCES</th>
<th>SPECIAL PROBLEMS</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>1.</strong> A clock uses less electricity BECAUSE it turns a motor <strong>SLOWLY / QUICKLY.</strong></td>
<td><strong>5.</strong> High-tension wires — the wires on tall poles that bring electricity to our homes and other buildings — carry very large amounts of electricity.</td>
</tr>
<tr>
<td>SO ... it is <strong>MORE / LESS</strong> likely to start a fire.</td>
<td>BECAUSE a high-tension wire has a large amount of electricity, it can produce <strong>MORE / LESS</strong> heat and is <strong>MORE / LESS</strong> likely to start a fire.</td>
</tr>
<tr>
<td><strong>2.</strong> A fan uses <strong>MORE / LESS</strong> electricity BECAUSE it turns a motor <strong>SLOWLY / QUICKLY.</strong></td>
<td><strong>6.</strong> A hair dryer uses more electricity BECAUSE it produces <strong>MORE / LESS</strong> heat <strong>AND</strong> it turns a motor (the fan) <strong>SLOWLY / QUICKLY.</strong></td>
</tr>
<tr>
<td>SO ... it is <strong>MORE / LESS</strong> likely to start a fire.</td>
<td><strong>SO ... it is</strong> <strong>MORE / LESS</strong> likely to start a fire.</td>
</tr>
</tbody>
</table>

**Household Appliances**

1. A clock uses less electricity because it turns a motor slowly / quickly. **So ... it is more / less likely to start a fire.**

2. A fan uses more / less electricity because it turns a motor slowly / quickly. **So ... it is more / less likely to start a fire.**

3. A flashlight uses less electricity (compared to a reading light) because it produces more / less light. **So ... it is more / less likely to start a fire.**

4. A cooking stove uses more electricity because it produces more / less heat. **So ... it is more / less likely to start a fire.**

5. High-tension wires — the wires on tall poles that bring electricity to our homes and other buildings — carry very large amounts of electricity. **Because a high-tension wire has a large amount of electricity, it can produce more / less heat and is more / less likely to start a fire.**

6. A hair dryer uses more electricity because it produces more / less heat and is more / less likely to start a fire. **And it turns a motor (the fan) slowly / quickly.**

HINT: The wattage of an appliance is one indicator of how much electricity the appliance uses. The higher the number, the more electricity it uses.
**Higher Heat**
Analysis and Classification Activity

Look at each pair of objects. Decide which one is more likely to cause a fire, then write the reason:
- It produces more heat
- It produces more light
- It turns a motor faster
- A combination (name which ones)

Circle the object that is more likely to cause a fire

<table>
<thead>
<tr>
<th>Circle the object that is more likely to cause a fire</th>
<th>Why is it more likely to cause a fire?</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. small light</td>
<td></td>
</tr>
<tr>
<td>2. clock</td>
<td></td>
</tr>
<tr>
<td>3. flash light</td>
<td></td>
</tr>
<tr>
<td>4. high-tension wires</td>
<td></td>
</tr>
<tr>
<td>5. household extension cord</td>
<td></td>
</tr>
<tr>
<td>MAKE UP YOUR OWN!</td>
<td></td>
</tr>
</tbody>
</table>

**BONUS:** With an adult's help, look for the wattage labels on appliances at home. Make a list of the appliances you investigated and their wattages. Which ones use the most electricity? Do you think this means they are more likely to cause fires? Why?
Are These Homes Prepared?
Analysis Activity

Look at these homes. Are smoke alarms located where they should be?
X Put an X on a smoke alarm if it is not located in an appropriate location.

One-bedroom apartment

Home for a large family

Draw in smoke alarms that should be added:
Use solid circles ● to show smoke alarms that are needed for minimum coverage.
Use open circles ○ to show other smoke alarms that would give extra coverage.

Then, draw in two fire emergency exit routes from each room.

Write two general rules for locating smoke alarms.

1. 

2.

A Powerful Plan For Home Safety
Planning Activity

\[ \text{Draw a map of your home to scale. Mark the location of each smoke alarm with a solid circle } \bigcirc. \text{ Draw in other locations where smoke alarms would be helpful with open circles } \bigcirc. \text{ Then draw two fire emergency exit ways from each room.} \]

Help keep your family safe during the holidays. Hundreds of people die and are injured in fires during holiday celebrations each year. Read the following guidelines for holiday safety. Pick five rules for holiday fire safety that you feel could affect your family, and write your list on the back or a separate page.

- Never leave cooking unattended, such as putting a turkey in the oven to roast all night or while shopping.
- Don't overload extension cords with Christmas lights. Follow directions on the package.
- Never leave menorah candles or other holiday candles unattended. Use glass covers around candles.
- Celebrate New Year's Eve with games instead of fireworks.
- Turn off and unplug Christmas lights while sleeping or away from home.
- Celebrate Independence Day with a neighborhood parade instead of fireworks.
- On camping vacations or holidays, never leave campfires or cooking fires unattended. Always cover with water and dirt to put the fire out completely before sleeping or leaving the campsite.
- Use flashlights instead of candles in Halloween jack-o-lanterns.
- Think safety first whenever you're celebrating. Some of the most tragic fires occur during holiday seasons.

Name

Seconds Count
Problem-Solving Activity

Time Line 1

10:35
Father starts to take a shower, leaves two-year-old playing in bedroom.

10:38
Two-year-old is found with burns on arms and chest, and fire fighters begin first aid.

10:45
Two-year-old is loaded in EMS medical vehicle for trip to hospital emergency room.

10:49
Fire department arrives at hospital emergency room, where special burn professionals begin treatment.

10:52
Emergency medical technicians arrive and begin advanced treatment of burns.

10:55
Two-year-old is loaded in EMS medical van at hospital emergency room.

11:35
EMS vehicle arrives at hospital emergency room, where special burn professionals begin treatment.

Briefly tell what happened

What could one person do to change the story?

How many minutes did it take the fire department to arrive after the neighbor called?

Time Line 2

1:20
9-1-1 operator receives a call reporting a grass fire.

1:24
Fire engine arrives at the scene of reported fire, but cannot locate fire. The call is determined to be a false alarm.

1:30
Fire engine and three fighters are available to respond to another call.

Briefly tell what happened

How many minutes did the fire department waste answering the false alarm?

Time Line 3

Fire prevention officer talks to a group of business owners about preventing fires. One business owner asks the fire prevention officer to help him check his business for fire hazards.

Fire prevention officer visits the business. He locates flammable liquids stored near the furnace and an electrical circuit with too many appliances.

The business owner stores the flammable liquids in a locked, metal cabinet. An electrician replaces electrical outlets properly.

Briefly tell what happened

Do you think that a fire would have started if the business owner had not made the changes the fire inspector suggested? Why?

Briefly tell what happened ____________________________

What could have happened if the neighbor didn’t see the fire and report it quickly? ____________________________

How many minutes did the fire department spend at this fire? ____________________________

Professionals At Work

Read the following descriptions of fire service and medical professionals, then match with the titles below and complete the sentences.

A. fire inspector
B. emergency medical technician
C. fire prevention officer
D. burn care specialists
E. fire fighter
F. fire investigator

1. This professional’s primary job is to put out fires. He or she might also ____________________________

2. This professional’s primary job is to help people prevent fires. He or she might teach fire safety at schools or help inspect buildings for fire hazards.

3. This professional treats medical emergencies where the accident occurs. At a fire, he or she might treat a person for burns or for breathing in dangerous smoke and gases. He or she might also treat ____________________________

4. This professional’s primary job is to carefully look at buildings for things that might cause fires. He or she tells how to correct problems so that a fire may be prevented. Some buildings that this person might inspect are ____________________________

5. This professional looks closely at the scene of the fire to determine how the fire was started and how it developed and spread. He or she is frequently involved in identifying fires that have been started on purpose.

6. These professionals provide advanced types of medical care for people who have been burned. Their jobs include safely cleaning and treating large burns to prevent infections; replacing badly burned skin with skin grafts; and using physical therapy to exercise muscles that have been damaged. We usually call these professionals by these titles: ____________________________

Teacher: Use with Lesson Four, Page 10. Duplicate for student use.
A Time Line For Safety
Problem-Solving Activity

A time line is another way to tell a story. Write your own time line about the story below and describe why reporting a fire promptly is important. Then make a list of all the fire department and medical professionals who were involved.

Story

At 10:00 p.m., the smoke alarm went off in the Martin’s house. Because the family had practiced their fire emergency exit plan, everyone was outside in their meeting place in two minutes. Tom went to the neighbor’s house and called 9-1-1.

The 9-1-1 operator received Tom’s call at 10:05 p.m. One fire department engine arrived at the Martin’s house in three minutes and began searching for the fire. The fire fighters immediately found an electrical fire in the garage. The fire was completely out in six minutes. However, one fire fighter burned his arm and was treated by an emergency medical technician.

The fire fighters set up a large fan to blow smoke out of the house. When the smoke was cleared an hour later, a fire investigator carefully checked the garage and house. His investigation took about 45 minutes.

The fire investigator said the fire was the result of damaged electrical wiring. He suggested that the Martins have a fire inspector or an electrician thoroughly check the house. Mr. Martin agreed to call the fire inspector the next morning.

Time Line

Reporting a fire immediately is important because

Warning: Burn Danger

Problem Analysis and Creative-Writing Activity

From the list below, select three items to complete the activity. Write the name of the item in the first blank in each section. Answer the questions, then create a burn warning label for the item.

<table>
<thead>
<tr>
<th>Electric toaster</th>
<th>Chemical cleaner</th>
<th>Coffee pot</th>
<th>Sunlamp</th>
</tr>
</thead>
<tbody>
<tr>
<td>Heater</td>
<td>Extension cord</td>
<td>Gas cooking grill</td>
<td>Battery</td>
</tr>
<tr>
<td>Bleach</td>
<td>Electric frying pan</td>
<td>Electric grass edger</td>
<td>Hair dryer</td>
</tr>
</tbody>
</table>

1. Name of item:
   How can it cause burns?
   If a burn occurs, what should be done first?

2. Name of item:
   How can it cause burns?
   If a burn occurs, what should be done first?

3. Name of item:
   How can it cause burns?
   If a burn occurs, what should be done first?

Write your own warning label:
