Adult Basic Education; *Adult Literacy; Databases; *Educational Research; *Electronic Mail; *Information Dissemination; Information Systems; *Literacy Education; *Telecommunications *Internet

This document provides information on two services established on the Internet by the National Center on Adult Literacy (NCAL): electronic mail (e-mail) communication with NCAL and a Gopher server that makes it possible to access and download information, documents, and software relevant to adult literacy. A recent "NCAL Connections" article, "Doing Adult Literacy on the Internet: Building a Community" (Christopher Hopey, Karl Rethemeyer), describes Internet, e-mail, library and database gateways, bulletin boards, software distribution, Gopher, and routes to accessing the Internet. The article, "Finding NCAL's Internet Gopher," provides information on logging onto the Gopher. The next section describes three types of Internet service providers--Freenets, commercial services, and regional Internet providers--and the different types of services each offers. Providers (companies and organizations that provide access to the Internet) are categorized by these types. This information is provided for each provider: name, community, contact person and address, phone, e-mail, access number, and Telnet access. A list of 20 recent books and articles about the Internet concludes the document. (YLB)

Reproductions supplied by EDRS are the best that can be made from the original document.
Adult Literacy, the Internet, and NCAL: An Introduction

Prepared by

R. Karl Rethemeyer
National Center on Adult Literacy
University of Pennsylvania
Communicating with NCAL via the Internet

As part of NCAL's continuing effort to utilize telecommunications technology in research and dissemination activities, the Center has established two services on the international "network of networks," or Internet: e-mail communication with the Center and a Gopher server which makes it possible to access and download information, documents, and software relevant to adult literacy.

NCAL may now be contacted via Internet e-mail; the general address is Mailbox@literacy.upenn.edu. Enclosed in this packet is an informational brief, "E-Mail to and from the Internet," which explains how commercial bulletin board users may contact the Center from their on-line services.

Gopher is a computer network protocol developed by the University of Minnesota to simplify distribution and retrieval of documents and software via the Internet. Using NCAL's Gopher server, you may learn more about the National Center on Adult Literacy and its many programs. You will also be able to retrieve fully formatted documents, including NCAL Connections, the Center's newsletter, complete policy briefs, occasional papers and technical reports, current research project abstracts, and listings of upcoming events relevant to the field of adult literacy. Current documents will be updated and new documents will be added frequently, so please log on regularly. See the brief, "Finding NCAL's Internet Gopher" in this packet for more information on logging onto NCAL's Gopher.

Despite the popularization of the Internet in the last year, there is still a great deal of confusion about how an individual or organization becomes part of the Internet community. To help alleviate some of that confusion, we have also included a recent NCAL Connections article on the Internet, a list of companies and organizations which provide access to the Internet, and a list of recent books and articles about the Internet.
For years one of the most common concerns in the field of adult literacy has been the lack of interaction between the research, policy, and practitioner communities. With the emergence of new computer networks, like the Internet, the opportunity to bridge this divide is at hand.

The Internet is the world’s largest computer network, connecting millions of people to one another. The Internet is best described as an electronic city where thousands of people visit regularly to exchange mail, trade ideas, conduct business, or just chat. Its impact has been compared to the invention of movable type.¹

The Internet

The Internet was originally developed out of the research efforts of the Department of Defense (DoD) and National Science Foundation (NSF). NSF, tasked with developing a network capable of allowing university researchers to share time on their five supercomputers, began developing the Internet in the early 1980s. To facilitate data sharing, NSF used DoD computer protocols which were designed to allow any computer, regardless of manufacturer, to communicate with the supercomputers. Once a common language was established, professors and students found a variety of other uses for the network, beginning with electronic mail. As new uses developed, more and more universities and corporations joined, first in the United States and later world-wide. At last count, more than five million computers in forty countries were connected to the Internet.

The Internet has grown to support dozens of information services, but five have become ubiquitous: e-mail, library and database gateways, bulletin boards, software distribution, and an emerging technology called “Gopher.”

E-Mail

E-mail is the most popular service on the Internet because, unlike regular mail, delivery and reply are both prompt and reliable. Like a telephone answering machine, e-mail allows the user to store and retrieve messages any time of day. Unlike any other form of electronic communications, the content is textual, allowing large amounts of data to be transmitted.

Library and Database Gateways

One of the most popular uses of Internet is to log onto electronic card catalogs or research databases. Approximately 350 major universities, public libraries, and government agencies, including the Library of Congress, allow Internet users access to their electronic card catalogs and databases. Users can search the databases, retrieve text (and, in some cases, graphics), and save the results to their own computer.
Bulletin Boards

The Internet hosts the world’s largest electronic bulletin board, known as USENET. Currently, USENET hosts more than 3,000 discussions on topics ranging from the sublime to the ridiculous to the highly unusual. Currently, there are no discussion groups specifically for adult literacy practitioners or policymakers. However, there are several groups on education in general and specifically on educational technology.

Software Distribution

Increasingly, the Internet has become a channel through which software is distributed. Using a program called FTP, users can log onto computers that serve as archives for DOS, Windows, Macintosh, or UNIX software, search the archive for a specific program or for a program which fills a specific need, and then have a copy of the program placed on their hard drive or diskette. Most software is free (freeware) or offered at low cost (shareware), and all programs may be “test driven” before final purchase.

Gopher

Most Internet services are not well-known or well-publicized; Gopher solves this problem. The University of Minnesota has developed software which integrates the “gateways” and FTP services into one program known as Gopher (after the Minnesota’s Golden Gophers). Gopher is unique because it offers a directory of Gopher servers, collectively known as Gopherspace. In addition, Gopher allows users to search all of the servers in Gopherspace for information on a given topic or for a specific piece of software.

NCAL has recently joined Gopherspace by setting up its own server. NCAL distributes many of its documents via Gopher, including this issue and back issues of NCAL Connections. NCAL’s research documents and papers as well as information on adult literacy conferences are also available. NCAL’s Gopher can also point you to other Gopher resources relevant to adult literacy.

Accessing the Internet

“Great,” you are thinking, “how do I try it?” Unfortunately, access to the Internet is still problematic because there are few publicly available access points. However, here are a few routes:

Colleges and Universities

Most universities, many community colleges, and some public libraries and corporations offer direct (i.e., 24 hour a day, non-modem) access to the Internet. If you have access to computer facilities at one of these organizations, ask the network or lab administrator if the facility is Internet-capable. If so, the administrator should also be able to configure your computer for Internet operations and provide you with the relevant software. Much of the software needed to access Internet resources is available free of charge.

Modem Access to Internet

For the modem-dependent, do not despair; a number of options are available. First, nine communities already provide free or low-cost Internet access, though many of these services do not offer the full range of Internet services. In addition, several telecommunications vendors are offering modem access to the Internet at prices comparable to those charged by the major commercial on-line services (see below).
Commercial On-line Services

Finally, commercial "on-line" networks such as America On-Line (800-827-6364), Compuserve (800-848-8199), Prodigy (800-776-0840), Delphi (800-695-4005), and GEnie (800-638-9636) are now in wide use and offer many services, including limited Internet access.

Connecting to a commercial on-line service is easy. Many local computer stores sell low-cost sign-up kits, and a few commercial services offer their sign-up kits for free. Installation and use is relatively trouble-free and straightforward.

In addition to Internet access, commercial on-line vendors offer services and information for both professional and personal use. Some services cater to education, while others are geared towards industry, personal productivity, or entertainment. A few offer services related to adult literacy.

Costs for commercial on-line services vary widely. Many charge a setup fee, others have a basic monthly rate, and some charge based on connection time. Basic monthly rates range from $4.95 to $20.00 a month. The hourly rates for use range from $5.00 to $15.00 per hour based on the time of day. Basic rates usually include 1-5 free hours of service. Many of the services offer a trial membership for free or at a reduced rate.

In conclusion, policymakers and researchers are now exploring new ways to connect the Internet community to the adult literacy community. The possibilities are just now being explored; Tech Views will continue to keep you abreast of the field's progress. See the Fall issue of NCAL Connections for more details on accessing and using the Internet.

Endnotes

E-mailing to and from the Internet

Because e-mail is such a popular feature of any on-line service, most major on-line providers allow their users to send and receive e-mail from users on the Internet. However, in order to send e-mail to an Internet user from a commercial service or vice versa, you must make changes to the recipient’s e-mail addresses. Listed below are suggested changes.

E-mailing from commercial services to the Internet:

America On-line (AOL): Enter the Internet address without any changes.
Example: Internet address = doe@literacy.upenn.edu
AOL address: doe@literacy.upenn.edu

Applelink: Add the extension "@internet#" following the Internet address.
Example: Internet address = doe@literacy.upenn.edu
Applelink address: doe@literacy.upenn.edu@internet#

Compuserve: Enter ">INTERNET:" followed by a space and the Internet address.
Example: Internet address = doe@literacy.upenn.edu
Compuserve address: >INTERNET: doe@literacy.upenn.edu
Note: INTERNET must be in capital letters

Delphi Internet Services: Enter the Internet address without any changes.
Example: Internet address = doe@literacy.upenn.edu
Delphi address: doe@literacy.upenn.edu

GEnie: Add the extension "@inet#" to the Internet address.
Example: Internet = doe@literacy.upenn.edu
GEnie address: doe@literacy.upenn.edu@inet#

Prodigy: Enter the Internet address without any changes.
Example: Internet = doe@literacy.upenn.edu
Prodigy address: doe@literacy.upenn.edu
NOTE: REQUIRES THE PRODIGY MAIL MANAGER SOFTWARE.
E-mailing from the Internet to commercial services:

America On-line (AOL): Add "@aol.com" to the America On-line address.
Examples:   AOL address = John Doe
            Internet: John Doe@aol.com
            AOL address = Johndoe
            Internet: Johndoe@aol.com

AppleLink: Add "@applelink.apple.com" to the AppleLink address.
Example:    AppleLink address = D9876
            Internet: D9876@applelink.apple.com

Delphi Internet Services: Enter the Delphi address without any changes.
Example:    Delphi address = Doe@delphi.com
            Internet: Doe@delphi.com

Compuserve: Replace the comma in the Compuserve address with a period and add
            "compuserve.com."
Example:    Compuserve address = 98765,321
            Internet: 98765.321@compuserve.com

GEnie: Add "@genie.geis.com" to the GEnie address.
Example:    GEnie address = Johndoe
            Internet: johndoe@genie.geis.com

Prodigy: Add "@prodigy.com" to the Prodigy address.
Example:    Prodigy address = DKGS71A
            Internet: DKGS71A@prodigy.com
            NOTE: THE PRODIGY MEMBER MUST HAVE PRODIGY'S MAIL
            MANAGER SOFTWARE IN ORDER TO RECEIVE INTERNET MESSAGES.
Finding NCAL's Internet Gopher

Gopher is a computer network protocol developed by the University of Minnesota to simplify distribution and retrieval of documents and software via the international "network of networks," or Internet. NCAL recently established a Gopher server in order to distribute information about the National Center on Adult Literacy and its programs. From this server you will be able to retrieve fully formatted documents, including NCAL Connections (the Center's newsletter), complete policy briefs, occasional papers and technical reports, current research project abstracts, and listings of upcoming events relevant to the field of adult literacy.

There are several different ways to access Gopher. Below you will find a list of different access points and methods. We recommend contacting your network or computer laboratory administrator before attempting to install Gopher on your computer.

1. If you already have Gopher installed on your hard drive or know how to use a telnettable Gopher client:

NCAL's server may be found on the "Home Gopher Server" in the folder/directory "Other Gopher and Information Servers/All Gopher Servers in the World" under the name "National Center on Adult Literacy." Or you may point your Gopher client at "litserver.literacy.upenn.edu."

2. If your computer is already configured to use Internet communications software (i.e., telnet, ftp, netnews, etc.):

Gopher clients (i.e., software used to communicate with computers using Gopher) may be obtained free of charge via FTP (file transfer protocol) from the University of Minnesota. FTP to "boombox.micro.umn.edu"; the Gopher clients are stored in the "pub/gopher" folder/directory. Currently, clients are available for the following operating systems: Macintosh (TurboGopher is the best Mac version), Windows, DOS (several versions of varying quality), OS/2, NeXT, Unix, and VMS. Installation instructions are included with the client software; make sure to download any "readme" files as well.

Once you have installed and started up your Gopher client, NCAL's server may be found on the "Home Gopher Server" in the folder/directory "Other Gopher and Information Servers/All Gopher Servers in the World" under the name "National Center on Adult Literacy."

IMPORTANT: to work properly, your computer or LAN must be connected directly to the Internet or have access to a Serial Line Internet Protocol (SLIP) or Point-to-Point Protocol (PPP) modem service. Additionally, you must have the proper packet drivers (software which facilitates communication via the Internet). If you are not sure your computer is properly configured for Internet communications, consult your network or computer lab administrator before attempting to install or use Gopher.
3. If you know how to start a telnet session, either from a machine directly connected to the Internet or by using a modem:

There are several telnetable Gopher clients (i.e., clients which may be accessed using a terminal emulation program; some terminal emulators are designed for computers that are directly connected to the Internet, others may be used with a modem):

<table>
<thead>
<tr>
<th>Hostname</th>
<th>IP#</th>
<th>Login</th>
<th>Area</th>
</tr>
</thead>
<tbody>
<tr>
<td>consultant.micro.umn.edu</td>
<td>34.84.132.4</td>
<td>gopher</td>
<td>North America</td>
</tr>
<tr>
<td>gopher.uiuc.edu</td>
<td>128.174.33.160</td>
<td>gopher</td>
<td>North America</td>
</tr>
<tr>
<td>panda.uiowa.edu</td>
<td>128.255.40.201</td>
<td>panda</td>
<td>North America</td>
</tr>
<tr>
<td>gopher.sunet.se</td>
<td>192.36.125.2</td>
<td>gopher</td>
<td>Europe</td>
</tr>
<tr>
<td>info.anu.edu.au</td>
<td>150.203.84.20</td>
<td>info</td>
<td>Australia</td>
</tr>
<tr>
<td>gopher.chalmers.se</td>
<td>129.16.221.40</td>
<td>gopher</td>
<td>Sweden</td>
</tr>
<tr>
<td>tolten.puc.cl</td>
<td>146.155.1.16</td>
<td>gopher</td>
<td>South America</td>
</tr>
<tr>

<td>gopher</td>
<td>Ecuador</td>
</tr>
<tr>
<td>gan.ncc.go.jp</td>
<td>160.190.10.1</td>
<td>gopher</td>
<td>Japan</td>
</tr>
</tbody>
</table>

Telnet clients do not allow you to download fully formatted documents. However, the telnet client can send any plain text document to your e-mail account. If you choose to e-mail yourself any of NCAL's longer documents, be sure to choose the text version.

NCAL's server may be found on the “Home Gopher Server” in the folder/directory “Other Gopher and Information Servers/All Gopher Servers in the World” under the name “National Center on Adult Literacy.”

IMPORTANT: you may have access to telnet and not realize it. Many e-mail accounts are accessed using telnet. If, to access your e-mail account, you must enter a long, period-separated hostname like those listed above, you may have access to telnet. Check with your network administrator for more details. Currently, none of the major commercial bulletin board services offer telnet services, however.

4. If you are not using any of these services currently:

If you have a local area network or computer laboratory in your place of work, public library, or literacy program, check with the network or laboratory administrator to see if you can gain access to the Internet from their facility. You may have Internet services but not realize that you do.

Even if you have no affiliations with Internet-capable institutions, you may still be able to access the Internet. Any personal computer equipped with a modem (a device which allows computers to exchange information with one another via plain phone lines) can communicate with the Internet. In order to do so, you will need to subscribe to either a commercial on-line service or a community Internet access point (often called a Freenet). As of this writing, the two largest providers of commercial access to Gopher services are Delphi Internet Services and America On-line. See the NCAL document “Modem Access Points to the Internet” for more information.
5. If all else fails:

Contact Karl Rethemeyer
E-mail: Rethemeyer@literacy.upenn.edu
Fax (215) 898-9804
Surface mail: National Center on Adult Literacy
3910 Chestnut Street
Philadelphia, PA 19104-3111

No phone inquiries, please.
Freenet and Commercial Access Points to the Internet

Introduction

Despite the growing popularity of the Internet as a telecommunication tool, finding a service provider that offers individuals or organizations access to the Internet is still not easy. Using the Internet, we have compiled the following list of access providers.

To utilize any of these services you will need to have, at minimum, the following equipment: a personal computer and a modem (a device that allows computers to exchange data with one another via plain phone lines). Modems come in different speeds; modem speed is usually expressed either in bits per second (bps) or baud rate (both of which measure the amount of data a modem can transfer in one second). Baud rate and bits per second are (roughly) synonymous. Most people use 2400 bps modems; however, 9600 and 14,400 bps modems are becoming cheaper and are preferable for accessing the Internet.

You may also need terminal emulation software (software that controls the modem and coordinates communication between your computer and the computer on the other end of the phone line). The most popular terminal emulation programs are ProComm for DOS and Windows-based computers and Microphone II for Macintosh computers. Some commercial services provide terminal emulation software with their service, so consult your service provider before purchasing a package.

There are three types of Internet service providers: Freenets, commercial services, and regional Internet providers. Each offers different types of services:

Freenet Providers:

As the name implies, Freenets are free (or very low cost) community access points to the Internet. Each Freenet site provides Internet e-mail accounts for their registered users and a variety of community-oriented on-line services—everything from bulletin boards to library card catalogs. Additionally, some sites offer access to Internet data and navigation tools such as Gopher, WAIS, and Telnet. Though these sites are focused on one community, anyone may join, regardless of location. For those living outside a Freenet's "home" community, the drawback to these services is that one must pay long distance charges to gain access to the system.

Commercial Dial Up Access to the Internet:

There are two types of commercial services: Dial-up e-mail and dial-up IP. Services that offer dial-up e-mail, as the name suggests, provide only e-mail access to the Internet. While one may access a growing number of databases via e-mail requests, e-mail only accounts do not offer access to the most powerful Internet tools like Gopher, Telnet, or WAIS. However, you may access dial-up e-mail accounts using a simple telecommunications program. Dial-up IP accounts offer full access to all the Internet's tools and data sources. You will need to acquire special modem software to use dial-up IP. Check with your service provider for more details. Both "e-mail only" and IP providers usually have local access numbers for their services in metropolitan areas of 50,000 to 100,000 inhabitants.

Many commercial providers offer other services in addition to Internet access—anything from on-line stock quotes to airline ticket reservation services. The list below only highlights the type of Internet access a provider offers.
Regional Internet Providers:

The regional Internet providers are primarily responsible for connecting institutional local area networks (LANs) to the Internet. If you wish to connect your LAN to the Internet, you will need to contact one of the providers listed below. Regional providers can help you determine what level of service and what type of equipment you will need to buy. However, the regional providers can also steer individuals toward dial-up service providers. In fact, some offer dial-up access directly (those which do are listed in the commercial dial-up list). If you have trouble determining what type of service you need and where to get it, the regional provider for your area is your best resource.

This list is current as of the date listed at the bottom of this page. If you know of or discover a service that should be listed here, please contact Karl Rethemeyer at NCAL (E-mail: rethemeyer@literacy.upenn.edu; phone: (215) 898-2100). Currently, the InterNIC, an organization created by the National Science Foundation to help groups and individuals get connected to and use the Internet, is compiling a comprehensive list of service providers; NCAL will update this list as the InterNIC’s information becomes available. The InterNIC also provides information about the Internet and the various ways to join the Internet community. For more information about the InterNIC and its services, call 800-444-4345 between 6 AM and 6 PM Pacific Time.

The National Center on Adult Literacy and the University of Pennsylvania neither supports nor endorses the organizations listed below.

Freenet Providers:

Note: “Demo” sites may not be available to the public yet or may not offer some of the services mentioned above. Contact the service provider for information on service availability.

BIG SKY TELEGRAPH
Community: Dillon, Montana
Contact Person: Frank Odasz
Western Montana College of the University of Montana
Dillon, MT 59725
Phone: (406)683-7338
E-mail: franko@bigsky.dillon.mt.us
Access number: (406) 683-7680
(1200 baud)
Telnet Access: 192.231.192.1 (not receiving guest telnet connections currently)

BUFFALO FREE-NET
Community: Buffalo, New York
(Demo System)
Contact Person: James Finamore
Town of Tonawanda
1835 Sheridan Drive
Buffalo, NY 14223

New York Institute of Technology
Central Islip Campus
Building 66, Room 205
Central Islip, NY 11722
Contact: Barbara Zayes
Phone: (516) 348-3317; (800) 462-9041

Commercial Dial Up Access to the Internet:

a2i Communications
E-mail: info@rahul.net
Area Served: San Jose, CA
(408 area code)
Services: Dialup e-mail

Anterior Technology
Phone: (415) 328-5615
E-mail: info@radiomail.net
Area Served: San Francisco bay area
Services: Dialup e-mail

America On-line, Inc.
Phone: (800) 827-6364
E-mail: info@aol.com
Area Served: US and Canada
Services: Dialup e-mail.

The Black Box
Phone: (713) 480-2684
E-mail: mknewman@blkbox.com
Area Served: Area code 713 (Houston, TX)
Services: Dialup E-mail

National Center on Adult Literacy
Revised December 3, 1993
BIX
Phone: (800) 695-4775
(617) 354-4137
E-mail: TIL@mhhs.bix.com
Area Served: Area code 617; local dialup connections outside 617 available through TYMNET.
Services: Dialup e-mail.

CERFnet
Phone: (800) 876-2373
(619) 455-3900
E-mail: help@cerf.net
Services: Network connections, national dialup IP, dialup e-mail.

Capcon Connect
Phone: (202) 466-7057
E-mail: jhagerman@capcon.net
Area Served: Area code 202.
Services: Dialup e-mail, Dialup IP

Channel 1
Phone: (617) 864-0100
E-mail: whitehm@channel1.com
Area Served: Massachusetts
Services: Dialup e-mail.

CLASS
Cooperative Agency for Library Systems and Services
Phone: (800) 488-4559
E-mail: class@class.org
Area Served: US
Services: Dialup access for libraries in the US.

Community News Service
Phone: (719) 579-9120
E-mail: klaus@cscns.com
Area Served: Colorado Springs, CO (719 area code)
Services: Dialup e-mail.

CompuServe Information System
Phone: (800) 848-8990
(614) 457-0802
E-mail: postmaster@csi.compuserve.com
Services: Dialup e-mail.

The Cyberspace Station
Phone: (619) 944-9498 ext. 626
E-mail: help@cyber.net
Area Served: San Diego, CA
Services: Dialup e-mail

DASNET
Phone: (408) 559-8649
E-mail: postmaster@das.net
Area Served: California
Services: Dialup e-mail

Delphi Internet Services, Inc.
Massachusetts Avenue
Cambridge, MA 02138
Contact: Rusty Williams
Phone: (800) 544-4005
Area Served: US
Services: Dial-up e-mail, dial-up IP

Express Access Online Communications Service
Phone: (301) 220-2020
E-mail: info@digex.com
Services: Dialup e-mail in the Northern VA, Baltimore MD, Washington DC areas (area codes 202, 310, 410, 703).

EZ-E-Mail
Phone: (603) 672-0736
E-mail: info@lemuria.sai.com
Area Served: US and Canada
Services: Dialup e-mail.

Halcyon
Phone: (206) 426-9298
E-mail: info@remote.halcyon.com
Area Served: Seattle, WA
Services: Dialup e-mail.
HoloNet
Phone: (510) 704-0160
E-mail: info@holonet.net
Area Served: Berkeley, CA (area code 510)
Services: Dialup e-mail.

Institute for Global Communications (IGC)
Phone: (415) 442-0220
E-mail: support@igc.apc.org
Services: Dialup e-mail; affiliated with PeaceNet, EcoNet, and ConflictNet; member of the Association for Progressive Communications (APC).

IDS World Network
Phone: (401) 884-7856
E-mail: sysadmin@ids.net
Area Served: East Greenwich, RI; northern RI
Services: Dialup e-mail, dialup IP

JvNCnet
Contacts: Sergio F. Heker
          Allison Pihl
Phone: (800) 358-4437
       (609) 258-2400
E-mail: market@jvnc.net
Services: Network connections, national dialup IP, dialup e-mail.

MCI Mail Engineering
Phone: (800) 444-6245
       (202) 833-8484
E-mail: 2671163@mcimail.com
       3248333@mcimail.com
Area Served: nation
Services: Dialup e-mail.

MichNet
Contact: Jeff Ogden
Phone: (313) 764-9430
E-mail: jogden@merit.edu
Area Served: Michigan
Services: Dialup e-mail.

Milwaukee Internet X
Phone: (414) 962-8172
E-mail: sysop@mixcom.com
Area Served: Milwaukee area
Services: dialup e-mail

MindVox
Phone: (212) 988-5987
E-mail: info@phantom.com
Area Served: New York City (area codes 212, 718)
Services: Dialup e-mail.

MSEN, Inc.
Contact: Owen Scott Medd
Phone: (313) 998-4562
E-mail: info@msen.com
Area Served: U.S.
Services: Network connections, dialup IP, dialup e-mail.

New Mexico Technet
Phone: (505) 345-6555
E-mail: reynolds@technet.nm.org
Area Served: New Mexico
Services: Dialup e-mail.

Net Access
Contact: Avi Freedman
Phone: (215) 960-0972
Access Number: (215) 836-4832 (offers free demo account)
Area Served: SE Pennsylvania, Southern New Jersey, Delaware
Services: Dialup e-mail; dialup Gopher, Telnet, etc.

Netcom Online Communications Services
Phone: (408) 554-8649
E-mail: info@netcom.com
Area served: San Jose-San Francisco, CA
Services: Dialup e-mail, dialup IP
Old Colorado City Communications  
Phone: (719) 632-4848  
E-mail: dave@oldcolo.com  
Area Served: Colorado  
Services: Dialup e-mail.

Sugar Land Unix  
Phone: (713) 438-4964  
E-mail: info@Neosoft.com  
Area Served: Texas (Houston metro area)  
Services: Dialup e-mail.

Panix Public Access Unix  
Contact: Alexis Rosen  
Phone: (212) 877-4854  
E-mail: alexis@panix.com  
or  
Contact: Jim Baumbach  
Phone: (718) 965-3768  
E-mail: jsb@panix.com  
Area Served: New York City, NY (area codes 212, 718)  
Services: Dialup e-mail.

UUNET Technologies, Inc.  
Phone: (800) 488-6384  
(703) 204-8000  
E-mail: info@uunet.uu.net  
Services: Network connections, dialup e-mail; Alternet is a product of UUNET Technologies.

Performance Systems International, Inc.  
(PSI)  
Phone: (800) 827-7482  
(703) 620-6651  
E-mail: info@psi.com  
Services: Network connections, dialup IP, dialup e-mail.

Village of Cambridge  
Phone: (617) 494-5226 (voice)  
(617) 252-0009 (modem)  
E-mail: service@village.com  
Area Served: Massachusetts  
Services: Dialup e-mail

Portal Communications, Inc.  
Phone: (408) 973-9111  
E-mail: cs@cup.portal.com  
info@portal.com  
Area Served: Northern California (area codes 408, 415)  
Services: Dialup e-mail.

Whole Earth 'Lectronic Link (WELL)  
Phone: (415) 332-4335  
E-mail: info@well.sf.ca.us  
Area Served: San Francisco Bay Area (area code 415)  
Services: Dialup e-mail.

RISCnet  
Contact: Andy Green  
Phone: (401) 885-6855  
E-mail: info@nic.risc.net  
Area served: Rhode Island  
Services: Dialup IP

The WORLD  
Software Tool & Die  
1330 Beacon Street  
Brookline, MA 02146  
Phone: (617) 739-0202  
Fax: (617) 739-0914  
E-mail: office@world.std.com  
Access Number: (617) 739-9753  
Area Served: US  
Services: Dialup e-mail, dial-up IP

Seattle Online  
Phone: (206) 328-2412  
E-mail: bruceki@online.com  
Area Served: Seattle, WA  
Services: Dialup e-mail.
