This annotated bibliography of material from the ERIC database presents 87 annotations on the topic of the "whole" whole-language debate. Entries in the bibliography are grouped under the topics of philosophy and analysis; the struggle for a definition; comparative analyses of whole language versus traditional approaches; and application of the whole language approach. The journal articles, books, reports, practica, conference papers, and theses in the annotated bibliography were published between 1988 and 1992. (RS)

AB: Whole language has to do with beliefs about language and learners that lead to beliefs about curriculum and instructional procedures. The term emerged as a label for the way language is thought to be learned: as a cohesive organization of systems working together as one--as a whole. The term whole language also refers to the learner as being whole--as sound and healthy, rather than flawed and in need of fixing. Whole language means that learners and teachers are at the center of curricular gravity; all materials and resources are used only if they are appropriate, authentic, and lead to student reflection and reflexivity. Invitations originate from the authentic life of the classroom and are issued by teachers, students, by appropriate and compelling resources and materials, and even from the acts of reading and writing themselves. Invitations to action that can lead to reflection and reflexivity come from students' abilities, interests and needs, and such invitations have to do with: listening and telling stories; reading real literature; writing with real intent; discussing and sharing with others; and solving difficult problems. Reflection involves the personal and systematic exploration of possibilities.
Reflexivity involves independence, initiative, and creativity, and is characterized by restructure or extension of the present performance and the forging of new ideas or questions. When teachers serve as facilitators, give invitational demonstrations, and ask their students to do only those things that they are willing to do themselves, quality thinking and learning take place. AB: The biggest concern with whole language instruction lies in ignoring some of the obvious problems in implementation or denying that there could be any problems at all. Problems mentioned by Maryland reading supervisors involve: teacher competence; phonics/spelling/skills instruction; responses of whole language advocates when asked what direction educators should take for children who fail when using the whole language approaches; assessment; and teacher accountability. It is only because people are trying things that they make mistakes. It is not bad to make mistakes; it is only bad not to admit them or to examine their causes. If whole language fails, it will do so because either too many people will do it poorly or it will be done by the staunchest advocates who demand such rigidity that there is no room for the kind of flexibility which research and logic say are essential when educators talk about human learning. The good news about whole language methods includes the following points: (1) there is an insistence on authenticity of real texts and on engaging children in real life functional literacy tasks that matter to them; (2) book reading is up in areas where literature is stressed in the classroom; (3) there is an increasing awareness of the uses of reading and writing together in content instruction; (4) teachers are excited and show enthusiasm about their reading programs; and (5) the kids are excited and enjoy learning and reading in whole language classrooms. NT: 309 p.
PR: Document Not Available from EDRS.
AB: Providing introduction to the whole language philosophy, this book aims to demonstrate that whole language is indeed good education. It outlines what kinds of research support whole language education, how a whole language philosophy may be carried out in practice, and how to go about implementing a whole language philosophy in a school or a school system. The book is designed for a broad audience of not only teachers and teacher educators but also curriculum supervisors and specialists, principals and superintendents, parents, and members of school boards. The chapters progress from defining whole language to fostering the development of whole language teachers and creating whole language classrooms and schools, from principles to practice. Chapter titles are: (1) What Whole Language Is, and Why Whole Language; (2) Defining and Redefining Literacy; (3) Impetus for Revision and Reform; (4) Developing Language and Literacy; (5) What Does the Research Say? Research in Support of Part-to-Whole; (6) What Does the Research Say? Research in Support of Whole-to-Part; (7) Developing Phonics Knowledge in Whole Language Classrooms; (8) Developing Comprehension and Thinking in Whole Language Classrooms; (9) Reconsidering Standardized Tests for Assessment and Accountability; (10) Reconceptualizing and Reclaiming Assessment and Accountability; and (11) From Understanding to Implementing a Whole Language Philosophy. AB: This report discusses whole language, portraying it as a philosophy of education with three basic premises: (1) learning in school ought to incorporate what is known about learning outside of school; (2) teachers should base curricular decisions on what is known, they should possess and be driven by a vision of literacy, they should use observation to inform teaching, and they should reflect continuously; and (3) teachers as professionals are entitled to a political context that empowers them as informed decision makers. The report begins with a brief discussion of each of these premises and then surveys research that has been conducted on classrooms and practices that are consistent with a whole language philosophy. It goes on to provide annotations for 38 studies, 10 of which compare whole language with traditional instruction. (One table of data and 124 references are attached.) (Author/SR)

PY: 1990
PR: EDRS Price - MF01/PC01 Plus Postage.
AB: Like so many slogans, "Whole Language" is a dangerous term because its meaning varies with each educator. Whole Language is not a method of teaching, nor is it a program; it is a philosophy or viewpoint. Nine major characteristics of a Whole Language approach as culled from a variety of sources, with most agreed upon by a majority of authors, are: (1) fun in reading; (2) oral language as a bridge to print; (3) risk taking; (4) use of rich literature; (5) developmental versus preconceived sequence; (6) integrating the language arts; (7) reading whole texts versus excerpts; (8) meaningful use of language versus isolated drill; and (9) reading is a natural act. While bits and pieces of method associated with the philosophy have been supported by research, little research has been done on the total. Educators are obviously in a state of flux. Educators must make every effort to ensure that the effective elements are here to stay, especially: the encouragement to modify curriculum to fit kids instead of trying to fit kids into preconceived molds; the emphasis on children doing a lot more real reading and writing; and the practice of children doing both reading and writing as communicative acts rather than devoting the majority of time to skill exercises. If children are to become independent readers, the skills they do learn need to be used in real reading. Educators need to recognize that both skill and interest are essential. (Thirty-four references are attached.) (MG)

TI: The Effects of a Code Emphasis Approach and a Whole Language Approach upon Emergent Literacy of Kindergarten Children.
PY: [1985]
NT: 28 p.
PR: EDRS Price - MF01/PC02 Plus Postage.
AB: A year-long, quasi-experimental study investigated the comparative effects of a whole language approach and a code emphasis approach upon the emergent literacy of 53 girls in two kindergarten classes in an all girls' parochial school in the Northeast. Subjects in the experimental class received instruction in Holdaway's Shared Book Experience Program, a whole language approach, while subjects in the comparison class received instruction in Lippincott's Beginning to Read, Write, and Listen Program, a code emphasis approach. Emergent literacy—the concepts about reading and writing resulting from a child's first encounters with printed material—was divided into three subsets: linguistic, orthographic, and grapho-phonemic literacy. Posttest results for each of these literacy sets indicated a significant treatment effect favoring the whole language group. The results corroborated Holdaway's research, which indicated a high level of success with the Shared Book Experiences in comparison with a code emphasis approach. The study showed a naturalistic learning model to be structured and viable within a school instructional environment that was informal, relaxed, and supportive. (HTH)

PY: [1989]
NT: 87 p.
PR: EDRS Price - MF01/PC04 Plus Postage.
AB: This report details a year-long study of the emerging literacy of preschoolers and kindergarteners in two southwest Florida communities. Using a quasi-experimental design, investigation focused on two preschools and two kindergarten classes that implemented certain strategies associated with a whole language philosophy, including daily shared reading experiences and weekly opportunities to write freely. The classes and matched comparison groups were pretested and posttested with qualitative and quantitative measures, including the Goodman Book Handling Task, a story retelling inventory, the
Metropolitan Early School Inventory (ESI), and the Metropolitan Readiness Test. Findings indicated that the preschool experimental classes performed significantly better than comparison groups on the Goodman Book Handling task, the story retelling inventory, and on subtest C of the ESI. Kindergarten experimental classes performed better than their comparison groups on the Goodman Book Handling task, subtests B, C, E, and F of the Metropolitan ESI, and the Metropolitan Readiness Test. Experimental subjects not only knew more than their comparison peers on meaningful aspects of reading, but exhibited enthusiasm for books and stories, and were observed developing attitudes toward literacy that are not measurable. Over 35 references are cited. (Author/RH)

PY: 1989
PR: EDRS Price - MF01/PC01 Plus Postage.
AB: A study examined whether children learn phonic decoding skills by reading without direct phonic instruction; compared the effects of a whole language first grade reading program with the effects of a traditional basal reading program; and determined whether there was a difference in decoding and comprehending abilities across levels of ability. Subjects, an experimental group of 33 low socioeconomic first grade students in two classrooms who completed the year-long program and a control group of 33 low socioeconomic students in two other elementary schools matched by sex and reading readiness, completed a Nonsense Word Test to assess decoding ability and a Deletion test to assess their ability to comprehend increasingly more difficult prose. The control group used the Scott Foresman Basal Series. Testing occurred upon completion of the school year. Comparison of the test results indicated that: (1) students in the whole language classrooms scored as well in decoding ability as those students who received direct phonics instruction; (2) as a group, students in the whole language classrooms scored higher on the Deletion Test than the control group (indicating greater comprehension of increasingly difficult prose); although (3) subjects scoring in the middle and lowest on a reading readiness test accounted for much of the difference in the overall difference in the mean scores on the Deletion Test. Findings suggest support for the whole language approach. (RS)

TI: Writing Development of Inner City Primary Students: Comparative Effects of a Whole Language and a Skills-Oriented Program.
PY: 1990
PR: EDRS Price - MF01/PC02 Plus Postage.
AB: A study compared the writing development and ideas about writing of students in a whole language program with students in a skills-oriented program from the time they entered kindergarten to the end of the second grade. Subjects were 22 inner city students who completed second grade out of an original kindergarten cohort of 50 minority students who had been randomly divided into a whole language group and a skills-oriented group. Subjects were interviewed regarding their views about writing at the end of each year, had their spelling ability assessed at the end of first and second grade, and had their writing assessed in a variety of ways throughout the 3-year period. Results indicated that students in the whole language group: (1) were better writers; (2) viewed themselves as writers of real texts and had confidence in themselves as writers; and (3) outperformed the skills-oriented students on measures of spelling achievement. Findings suggest that whole language should be considered as an alternative to skills-oriented instruction in inner city schools. (Fourteen tables of data are included; 14 references are attached.) PR: EDRS Price - MF01/PC04 Plus Postage.
AB: A study investigated whether students in whole language based and basal reader approaches would have different concepts of reading when asked to define reading. Subjects, 69 suburban New Jersey first and third graders and 16 New Zealand first graders, were asked 3 questions: "What is reading?"; "What do you do when you read?"; and "If someone did not know how to read, what would you tell her she needs to learn?" The responses of the first graders were tape-recorded, while the third graders wrote their answers. For each question, responses were placed in one of four categories: vague, educational, decoding, or meaning-centered. Results indicated that whole language students gave less vague responses than did those students in basal reader groups. Results further indicated that although many students saw reading as a catalyst for learning and gave "educational" responses, basal reader students were more apt to view reading as solely a school activity, while whole language students saw reading as an integral part of their lives. Results also showed that although instructional setting accounted for a few differences, young children think of reading mainly as decoding, and do not see it as a meaning-getting, communicative process. (Five tables of data are included, and 49 references are attached.) (Author/PRA)

PR: EDRS Price - MF01/PC10 Plus Postage.
AB: A 1-year naturalistic study examined the differences and similarities in the literacy experiences of second grade at-risk children in 2 different types of classrooms: 1 traditional and 1 whole language classroom. The purpose was to develop models of the 2 contrasted classrooms. The study sought to shed light on the probable causes accounting for the differential literacy development taking place through comparing and contrasting the activities of the 44 inner-city children and 2 teachers participating in the study. Results indicated that the whole-language philosophy created a classroom where children were encouraged to think, make choices, problem solve, and collaborate on learning in ways that are very different from a traditional classroom. Results further indicated that the whole language teacher spent more time actually teaching during the reading/language arts block than did the traditional teacher. Results also showed that children's "off-task" behavior usually had a literate basis in the traditional classroom. (Fifteen figures are included; 160 references and 3 appendixes containing samples of children's writing are attached.) (PRA)

AN: ED327840
AU: Phillips, Laura A.
PY: 1990
A study investigated the effectiveness of a program to improve the reading/vocabulary skills of an ability-grouped fifth-grade class of "low achievers" (N=15) through the implementation of a literature-based whole language approach. Students were read aloud to from quality children's literature. From these books, spelling and vocabulary lists were developed and administered 30 minutes a day, 4 days a week during the scheduled classroom reading period. By means of a thematic web, additional skills and subject matter were interwoven so as to provide students with a less fragmented curriculum. The Iowa Tests of Basic Skills were administered in the spring prior to the program and again in the spring of the following year. Results indicated gains of: (1) one year and four months in vocabulary; (2) one year and five months in reading; and (3) seven months in spelling. While the positive statistical findings related to the project were encouraging, the classroom teacher was much more excited by the day-to-day response from the students. For the first time, this group of "low achievers" became aware of the function of print, the nature of written language, and the structure of narrative text. They began to value books, independently selected books appropriate for their reading level, and were eager to share books with each other and the teacher. (Two figures representing literature webs, four tables of data, and one graph are attached.) (RS)
AB: Compares results of a modified whole language approach (incorporating daily 15-minute total class phonics instruction) with those obtained from a popular basal approach. Finds that students in the whole language classes made greater gains in phonics, vocabulary, reading comprehension, and total reading achievement than students in the basal program. (RS)

TI: Evaluation of Whole Language and Traditional Language Arts Instruction Using a Cloze-Procedure Test for Reading Comprehension.
PY: 1991
PR: EDRS Price - MF01/PC01 Plus Postage.

AB: A study investigated whether there was a relation between methods of language arts instruction and reading comprehension as measured by the Cloze-procedure. Subjects, 98 third-grade students in 4 classes (2 "traditional" and 2 "whole language") at 2 elementary schools in South Dakota, had their reading comprehension tested 6 months into the school year using a 35-item Cloze procedure. The two traditional teachers and the two self-taught whole-language teachers had identified themselves on a self-report measure of teaching strategies. Data from the comprehension test were analyzed using a t-test. Results indicated no significant difference between the reading comprehension of students instructed using traditional (basal reading) and whole language methods of instruction. (The teacher survey instrument, the checklist of classroom items normally found in a whole language environment, a sample Cloze-procedure passage, a sample of verbatim and acceptable answers, and a table of data are included.) AB: A study compared the writing abilities of children in a whole language classroom with those of children involved in a skills-based classroom. Subjects, 37 African-American students in two heterogeneous first-grade classrooms in a low socio-economic area school in the inner-city of a large Alabama city, completed a reading/writing assessment (a sample of the Stanford Achievement Writing Test for second-grade students) after 7 months of instruction. One group of subjects consisted of 19 students who had been instructed using a whole language curriculum; the other group consisted of 18 participants who had been instructed using a traditional curriculum emphasizing skill mastery. Writing samples were analyzed according to content and the ability to express thought. Total words and t-units (number of thoughts) were also compared between the groups. Results indicated that, on all tools of assessment, the whole language group scored significantly higher than the skill-oriented group. (Five tables of data are included; 18 references are attached.) NT: 183 p.; Some forms may not reproduce well due to broken print.
PR: EDRS Price - MF01/PC08 Plus Postage.
AB: A two-part study evaluated the effectiveness of Longfellow School's primary-grade whole-language literacy project. Part 1 of the study began in the academic year 1984-85 with children in standard English and bilingual classes in grade K-3. Over a 5-year period, a total of 1,021 individual assessments were carried out on 336 students. Data consisted of samples of students' work, classroom observations, and teacher interviews. Part 2 of the study collected additional follow-up data on two cohorts, conducted 13 child studies, analyzed summary data, described the context of learning at the school, and critiqued the instruments used. Results from both parts indicated that: (1) all children in standard classes remaining in the program learned to read and write competently by the time they were in the upper elementary grades; (2) children learned in uneven increments, not according to grade level expectations; (3) children in bilingual classes began school with less knowledge of the conventions of print than those in standard classes but made equivalent gains between kindergarten and first grade; (4) sources of literacy learning varied; (5) questions of morale and self-respect were central to learning; (6) teachers represented a continuum of beliefs and practices; (7) children were exposed to literature on a daily basis; and (8) all teachers changed their beliefs and practices to some extent. (Numerous unnumbered charts, graphs, and tables of data are included; a history of the project, further information about the instruments, and copies of texts used for the oral reading samples are attached.) TI: All the King's Horses and Men, Basic Skills, and Whole Language.
PY: 1990
PR: EDRS Price - MF01/PC01 Plus Postage.
AB: Like Humpty Dumpty after the fall from the wall, language does not work effectively when it is not whole. For many students, the reading problems they begin to experience in the third or fourth grade are caused by the basic skills manner in which beginning reading is taught. Recognizing the limitations of basic skills instruction and the genre of reading instructional materials which focus on a skills acquisition model of the reading process, school systems across the nation are implementing a shift in both instruction and materials to what is known as a literature-based, whole language approach. New directions for reading and writing instruction will enable students to meet the challenge of higher literacy expectations. Six suggestions provide teachers with a place to start as they move into whole language instruction: (1) provide only meaningful experiences for the language learner; (2) provide situations in which children read to learn as they learn to read; (3) provide a language learning setting that acknowledges the uniqueness of each individual learner; (4) provide experiences which guide, support, monitor, encourage, and facilitate learning; (5) provide opportunities for expression (writing) and comprehension (reading) through the idea of authors as readers; and (6) based on an understanding of whole language learning, speak to those who do not understand. Literature-based, whole language reading instruction must begin with the understanding and acceptance of the purpose of reading. Reading instruction must be implemented in the context of the other language/communication processes--spelling, listening, and writing. (MG)

AU: Gutknecht, Bruce
TI: From Basic Skills to Whole Language in Reading Instruction: Can We Get There from Here?
PY: 1989
PR: EDRS Price - MF01/PC01 Plus Postage.
AB: Reading instruction based on the acquisition of basic skills has produced a basic level of literacy in children, but such minimal levels of literacy are no longer sufficient for students required to deal effectively with complicated literary and informational material encountered in upper elementary, middle, and high school texts. Research in the cognitive processes of readers has produced models of
the reading process that show reading as a search for meaning in which the readers bring their experiential background and their language systems to their understanding of the author’s message. Recognizing the limitations of basic skills instruction, school systems across the nation are implementing a shift in both instruction and materials to the whole language approach. In short, whole language reading instruction begins in the mind of the reader, not with the letters on the page. Using a "top-down" or transactive/interactive approach, teachers should use meaningful, predictable stories and ask literal and interpretive level questions, involving children in comprehension strategies. Reading should not be taught as a fragmented series of subskills, because real language does not exist in isolated bits and pieces. (RS)

AB: There is considerable research evidence to suggest that (1) literature has a positive effect both on reading achievement and attitude toward reading; and (2) the use of a literature-based program is an effective alternative to the traditional basal reading approach. The majority of studies concluded that the literature-based approach produced higher reading achievement and fostered more positive attitudes toward reading than the basal-reading method. Children of all ability levels, given the opportunity to experience reading as a visual and thought process, take a more active role in their own learning. Students not only learn to read, they also develop a love for reading and become life-long readers through the process of using a literature-based approach. Research evidence also supports the use of a shared book experience. Most teachers are required to use a basal reading series. One literature-based, whole language-oriented basal series is "Impressions." "The Story Box in the Classroom" is a kit which provides numerous strategies for shared reading. In literature-based programs, the secret of success is creating the right learning environment, one in which a natural intimacy between teacher and children develops and one in which reading is pleasurable and meaningful. TI: Administrative Guidelines for Supporting the Whole Language Philosophy.
PY: [1990]
NT: 28 p.
PR: EDRS Price - MF01/PC02 Plus Postage.
AB: Administrators should realize that whole language is a multidimensional belief system, that everyone involved in its implementation must become a learner, and that this process requires risk taking in a supportive environment. Principals can provide such support by working cooperatively with teachers during every phase of implementation. The following guidelines are suggestions that can be added to individuals’ repertoires and used when needed: (1) form study groups for the purpose of sharing information; (2) develop a firm belief in emerging literacy; (3) treat independent reading as an important activity rather than as a frill; (4) encourage the teaching of vocabulary through reading immersion; (5) support teachers’ demonstration activities that reinforce the role of context for expanding word knowledge; and (6) focus on informal evaluation that is well-matched with instruction. These guidelines are only a sampling of the many ways in which educational leaders and teachers can take risks while they promote worthwhile strategies and activities for children. PY: 1990
NT: 165 p.
PR: Document Not Available from EDRS.
AB: This book helps teachers and media directors to use children's literature to enrich elementary reading programs and to pursue sound educational objectives as they share the books and stories. It provides activities designed to expand and enrich the opportunities for children to become literate. It is a tool which addresses the need for children to read widely in order to practice their literacy and begin to form ideas and judgments. The book contains three chapters by level: (1) kindergarten, transitional, and first grade activities; (2) second and third grade activities; and (3) fourth and fifth grade activities. Each chapter presents several units on topics including: visual literacy, predicting, patterns in literature, sequencing, characterization, plot line, vocabulary, discovering and using information books, exploring poetry, analyzing contemporary realistic fiction, learning from biographies and autobiographies, enjoying modern fantasy, and introducing classics. Each unit presents student objectives, gives an annotated list of recommended books for use with that unit, details a group introductory activity, and outlines numerous follow-up activities related to the recommended reading. Appendixes include a glossary and a list of 13 sources for reading and children's literature theory and techniques. (PRA)

TI: Creating the Child-Centred Classroom.
PY: 1991
NT: 100 p.
PR: Document Not Available from EDRS.
AB: This book provides practical implementation strategies for, and a clear outline of, the theory behind the child-centered classroom, a theory which involves an understanding of the concepts of whole language and active learning. It is hoped that teachers will use the ideas in the book to build their own beliefs and understandings, and to develop their own philosophy regarding the child-centred classroom. The practical classroom strategies that are suggested provide a base from which to begin, a springboard from which to experiment, to modify and to adapt to fit teachers' and students' individual needs and strengths. Although there are many references to planning and implementation in all curriculum areas, the book is not intended to form a comprehensive guide for all subjects; rather, the book recommends activities as a sampling of possibilities that teachers might find helpful. The eight chapter titles include: (1) Whole Language and Active Learning: A Philosophical Model; (2) The Physical Set-Up of the Classroom; (3) Timetabling; (4) Classroom Atmosphere; (5) Whole Language; (6) An Integrated Child-Centred Curriculum; (7) Learning Centres; and (8) Record Keeping, Student Evaluation and Parental Involvement. Blackline masters are provided for student, teacher, and parent use. A list of favorite children's books is appended. (MG)
