This resource manual is designed to assist Alaska school districts in recruiting and retaining special education teachers. It offers 50 practical suggestions for developing an effective recruitment program, focusing on the processes of gathering information, developing recruiters, materials, and strategies; and screening and interviewing applicants. Sample suggestions include: developing a video tape presentation of the school district and the community, promoting the employment opportunities available for spouses, and accepting special education student teachers into the school district for their practica and student teaching experiences. Over 100 strategies are then presented for enhancing teacher retention, categorized as: welcoming new staff, collegiality, work control, professional development, achievement and recognition, and resources. Sample teacher retention strategies include: arranging a social function to introduce new staff to the community, providing a network of ideas, implementing teacher assistance teams, providing job rotation options, telling teachers what they are doing "right," and providing access to professional literature. An appendix presents a list of people to contact for specific information. (Contains 13 references) (JDD)

**INTRODUCTION**

Federal legislation (P.L. 101-476, the Individuals with Disabilities Education Act [IDEA]) included provisions to assess the supply and demand of special education teachers. The law, which took effect in 1993, requires "a description of the procedures and activities the State will undertake to ensure an adequate supply of qualified special education and related service personnel." The provision of the law was designed to meet the general shortage of special education personnel for the increasing numbers of students who needed special education services.

Acting under the auspices of the Department of Education, the Alaska Comprehensive System of Personnel Development (CSPD) Committee was given the responsibility of developing, guiding, and monitoring the personnel plan. In 1992, after reviewing recruitment and retention studies from other states, the CSPD formulated a three-fold plan of action, as follows (Schnorr & Straugh, 1993):

1. The first task was to conduct a survey of all Alaskan teachers (N=1500) who held an endorsement in special education to determine their movement patterns over five years, incentives to continue teaching, deterrents to teaching in special education, and future career plans (Schnorr & Straugh, 1993).

2. The second task was to survey Alaskan administrators of special education from the 55 school districts to determine special education recruitment and retention problems. The survey was sent to all special education directors via facsimile machine and had a return rate of 100% (Dittman Research, 1993).

3. The third task was to develop a resource manual to assist school districts in recruiting and retaining special education teachers. This resource manual contains the culmination of information from the first two surveys, and a follow-up survey by Brady (1994), as well as information from a literature review.

The development of this resource manual was funded through a grant from CSPD. The authors also wish to thank the University of Alaska Anchorage School of Education for supporting the project and all the special education administrators who volunteered to share their expertise and experience.

This document is being submitted to the ERIC Clearinghouse on Disabilities and Gifted Education. Hopefully it will be accepted for inclusion in ERIC. Persons interested in obtaining a copy of this document should conduct an ERIC search to determine if it has been accepted and to obtain the ED number for ordering.

June 1994
Recruitment is defined as locating and attracting personnel who possess, or are eligible for, a special education endorsement in Alaska.

Many Alaskan districts, especially small rural districts, use Alaska Teacher Placement (ATP) Center exclusively for recruitment of teachers. ATP is located on campus at the University of Alaska Fairbanks. The Center serves teachers seeking employment and districts recruiting teachers. Teachers may open a placement file for a nominal fee. This information is furnished to districts who request specific types of qualifications. For example, districts may request a list of applicants who possess an endorsement in special education in the area of mild disabilities. Districts frequently contact applicants directly for interviews and recruitment.

ATP also sponsors annual job fairs typically held during April and July in Anchorage and Fairbanks. In 1993, ATP's registrant pool numbered 1357, and most school districts participated. ATP can be contacted at the following address:

Alaska Teacher Placement
Mary Ellen LaBerge, Director
University of Alaska Fairbanks
P.O. Box 756880
Fairbanks, Alaska 99775-1550
UACN: FYATP
Phone: (907) 474-6644, Fax: (907) 474-6176

An effective recruitment program can be organized into the following categories:

I. Gathering information
II. Developing recruiters, materials, and strategies
III. Screening and interviewing applicants
I. Gathering Information

1. Solicit input from staff regarding what specific training or skills they perceive as essential for job success in the vacant position (Florida Department of Education [FL DOE], 1990).

2. Investigate what has or has not worked with the district's recruitment efforts in the past. Find out what is currently in use (MSRRC, 1987).

3. Consider using the Teacher Perceiver Interview system, which a number of districts have found works well. It is published by Gallup and requires special training. For further information, contact the people listed in the appendix with TPI following their name. The publisher's address is listed below.

   Selection Research Institute, Inc.
   P.O. Box 6438
   Lincoln, Nebraska 68506

4. Network with colleagues statewide about promising applicants whose names they might be willing to share (Brady, in press).

5. Develop an evaluation plan listing yearly activities, costs incurred, and the number of new hires to facilitate monitoring recruitment efforts and results. Comparing the costs incurred with data on efforts provides an evaluation of the program's most and least successful components. Ask for feedback from others regarding the program's effectiveness (MSRRC, 1987).
6. Eliminate the application form. At least one Alaskan district requires none. Their intent is to use nothing that requires a typewriter or a pencil. In addition to a resume, the applicant is encouraged to send any additional information or materials, such as a grant, curriculum, or a video. Relevant demographic information is usually accessible from the applicant's resume. Specific information about multicultural issues could be gained through a question in the application directions, such as, "What experience do you have working with Native American people?" This administrator also suggested that the applicant be encouraged to submit their application materials on a specific format of disc or by fax modem. Insights into the applicant's degree of computer literacy can be gained through this approach. For further information contact the person in the appendix with "Eliminate application forms" following the name (AK CSPD Survey, 1994).

7. Consider the diverse professional needs of applicants. Beginning teachers with limited teaching experience cite dissatisfaction with the field because of lack of support from parents and inadequate resources. When recruiting these applicants, build and stress parental involvement and describe available resources truthfully. Masters level teachers are more frustrated by the lack of professional opportunities. When recruiting these applicants, develop and promote professional opportunities (National Clearinghouse for Professions in Special Education [NCPSE], 1989).

8. Identify incentives that have been successful in your district so that they may be featured in recruitment materials. Specific incentives are listed under the Retention section of this manual (FL DOE, 1990).
II. Developing recruiters, materials, and strategies

Recruiters. Recruitment is heavily dependent on both human interaction and public relations. Individuals or recruiters who interact effectively with others are essential.

9. Choose interviewers with whom applicants might feel comfortable and from whom they might receive reinforcement. The interviewer should be able to create positive interactions with all potential applicants (FL DOE, 1990).

10. Train special education personnel to be recruiters for the profession (Simpson, et al., 1990).

11. Be aware that the most important factor is the impression left by the recruiter. She/he needs to strive to be remembered in very positive terms (FL DOE, 1990).

12. Consider making the position of recruiter a step in the district's career ladder (FL DOE, 1990).

Interviewer assets

13. "Sell" the district through creative marketing techniques. As Dale Carnegie claimed, "packaging" is 80% of marketing a product (Helge & Marrs, 1982).

"Selling" a district

14. Develop a videotape presentation of the district and/or community. Several Alaskan districts have cited this as the most important part of their recruitment program. For a contact address, refer to the appendix and the name above "Recruitment video." The CSPD has also developed a video entitled "Don't Listen to Aunt Louise." This video is distributed by Alaska Teacher Placement.

Videos

Alaska Teacher Placement
MaryEllen LaBerge, Director
University of Alaska Fairbanks
P.O. Box 756880
Fairbanks, Alaska 99775-1550
UACN: FYATP
Phone: (907) 474-6644, Fax: (907) 474-6176
15. Develop a brochure or other written/pictorial information. Make the information attractive and present a positive image of the district while providing a realistic description of the schools and community. For further information, the person listed in the appendix with "Recruitment brochure" following the name can be contacted (FL DOE, 1990).

16. Use recruitment strategies that show clearly the employment opportunities for spouses that may exist in the community (FL DOE, 1990).

17. Prepare recruitment "packets" with Chamber of Commerce information, maps, brochures, information about culture, housing, weather, transportation, and whatever else seems relevant (FL DOE, 1990).

18. Emphasize the special quality of Alaskan life and communities. Reinforce the unique features which are intrinsic motivators and will meet teachers' social, self-esteem, and self-actualization needs (Helge & Marrs, 1982).

19. Design the recruitment program to appeal to persons with lifestyles, interests, and attitudes consistent with local cultural norms. The following would be some factors to consider incorporating: specific academic programs, professional development, social and entertainment opportunities, recreational possibilities, and cultural attributes (Helge & Marrs, 1982).

20. Target images that convey altruism, children as valued by the community, and teachers as valued by the community (FL DOE, 1990).

21. Emphasize information about local advantages, working conditions, opportunities for advancement, factors likely to appeal to a sense of professionalism, financial incentives, and benefits (FL DOE, 1990).

22. Develop a sales portfolio that can be used during recruitment interviews. It could be set up as a table-top flip chart or as a 3-ring binder to display facts about the district (FL DOE, 1990).

23. Use SpecialNet to advertise nationally for job vacancies. The address is listed below (MSRRC, 1987).

GTE Interactive Educational Network Services, Inc.
P.O. Box 911527
Dallas, Texas 75391-1527
1-800-927-3000
24. Use newspaper advertisements for announcing job vacancies. Some districts have had success using them (AK CSPD Survey, 1994).

25. Use local TV and radio to reach the reserve pool of teachers who are not currently working (FL DOE, 1990).

26. Accept special education students into your district for their practica and student learning experiences. After completing the program, they may opt to seek employment in the district (Simpson, et al., 1990).

27. Review college placement files and seek individuals from rural areas. Research findings indicate that individuals who come from rural areas are most likely to return. Keep in mind that only 20% of rurally raised students want to return to rural areas (Bell, et al., 1993).

28. Use individualized "hot buttons," such as advertising the rural lifestyle as an escape from urban problems or use the "Peace Corps" approach (Helge & Marrs, 1982).

29. Recruit promising minority students into the special education field. Provide academic assistance programs for Alaska native students (Simpson, et al., 1990).

30. Cooperate with other small districts to sponsor scholarships that require the recipients to teach in rural districts (Simpson, et al., 1990).

31. Recruit teachers with positive community ties. The most successful teachers appear to be those who are welcome in local homes, participate in community activities, and invite community members to their homes (Helge & Marrs, 1982).
III. Screening and interviewing applicants

32. Include other school personnel, school board members, and community in the interview process (AK CSPD Survey, 1994).

33. Stress in interviews the strategies that the district uses to retain qualified effective personnel (AK CSPD Survey, 1994).

34. Provide descriptions of potential informal and formal peer support groups. This is typically a much stronger attraction than verbiage concerning available facilities and equipment (MSRRC, 1987).

35. Provide an incentive for teachers to accept a job in a critical shortage area or high priority location. Potential incentives are listed under the Retention section of this manual. Examples of "critical shortage areas" would include any special education positions which have been difficult to fill or have been known to be stressful. A "high priority location" may consist of a specific school or location that experiences difficulty recruiting and retaining teachers. Again, try to identify appropriate incentives. The ideas listed under Retention may be explored (MSRRC, 1987).

36. Provide or suggest opportunities for summer employment for teachers (Simpson, et al., 1990).

37. Follow through on the most promising resumes received in the mail. The extra effort often pays off in highly motivated teachers (AK CSPD Survey, 1994).
38. Ask the most promising candidates to interview on site (if possible). This fosters local empowerment. The teacher interacts with the community and has community support from the start (AK CSPD Survey, 1994).

39. Pay expenses for the strongest applicants to visit the district (Casto, 1981).

40. Be honest about the challenges a community poses. Teacher attrition is often linked with a discontinuity between idyllic expectations and harsh realities (AK CSPD Survey, 1994).

41. Pay part of a teacher's relocation expenses (FL DOE, 1990).

42. Arrange a "package deal" by employing a teaching couple (FL DOE, 1990).

43. Observe the applicant teaching, if possible (MSRRC, 1987).

44. Encourage applicants to submit a teaching portfolio that contains samples of their lesson plans for students and their teaching philosophy, as well as a teaching sample on video tape (Schnorr, 1994).

45. Check references by calling the supervising teacher, teacher training advisor, and other professionals who have observed the candidate teaching (MSRRC, 1987).

46. Review summer work experience. Seasonal employment at a youth camp or group home is a good indicator of an applicant's sincere interest in working with children (AK CSPD Survey, 1994).

47. Debrief new employees during the year to talk about the recruitment program and to get suggestions for improving activities (MSRRC, 1987).

48. Do a cost analysis to determine whether the money spent on recruitment is allocated the best way possible (MSRRC, 1987).

49. Look for past evidence of work experience in cross-cultural situations (AK CSPD Survey, 1994).
50. Look for the following characteristics in applicants for special education positions, as specified by Alaskan administrators of special education statewide (AK CSPD Survey, 1990):

A. Determine whether the applicant is a "special educator" who has made a commitment to the profession, or an educator with a special education endorsement who is merely seeking employment. Commitment to the profession is essential for program development and stability.

B. Look for specific special education knowledge. How up-to-date is the candidate? Do they understand current state regulations? Are they knowledgeable about new special education techniques for inclusion?

C. Determine whether the candidate is interested in professional growth activities.

D. Avoid hiring people who do not appear able to handle stress.

E. Assess personality to determine how they will fit into the school and community environments.

F. Look for flexibility.

G. Look for people who enjoy winter and winter activities.

H. Look for a congenial personality.

I. Look for a sense of humor.

J. Look for a philosophical match.

K. Look for a willingness to team and work collaboratively.

L. Look for people who genuinely like children and people.

M. Look for people able to postpone short-term gratification in favor of long-term gratification.
Retention is defined as the efforts or strategies utilized to keep qualified personnel in the job pool. District practices for retaining personnel may also prove useful in attracting new special education teachers.

Teacher retention is enhanced when emotional support is provided. Emotional support encompasses the following: maintaining open communication with teachers, listening to their needs, and appreciating and recognizing their efforts. These actions show support for teachers, and costs are minimal. They are also intrinsic to good administrative practice (Billingsley, et al., 1993).

In this booklet, the strategies designed to enhance teacher retention are grouped into the following five categories:

I. Welcoming new staff
II. Collegiality
III. Work control
IV. Professional development
V. Achievement and recognition
VI. Resources

Information from the 1993 Alaska CSPD Teacher Survey Report is included in this document in the appropriate categories listed above. The 30 incentives from the survey are identified with an asterisk *. The number ranking and the percentage of Alaskan special education teachers who indicated that item as an incentive are cited, followed by a brief explanation.
I. Welcoming new staff

1. Provide preservice training which addresses specific local customs and challenges (AK CSPD Survey, 1994).

2. Arrange a social function to introduce new staff to the community (Smith-Davis & Murray, 1991).

3. Orient new teachers to the school and community by providing information such as the following: 1) names and duties of school staff members, 2) administrative procedures, 3) clear statements of expectations, 4) curriculum objectives, 5) course outlines, 6) a calendar of school year dates, 7) maps of the school and community, and 8) lists of community resources (FL DOE, 1990).

4. Involve new teachers in an activity or program outside the classroom which requires interacting with school and community personnel (Helge & Marrs, 1982).

5. Be aware that the highest rate of attrition occurs during the first five years of teaching. High attrition rates may be reduced through collegial support networks including the following support strategies: 1) assign a veteran teacher to work with each beginning teacher in a mentoring or peer teaching format; or 2) place new teachers in team teaching situations where support is readily available (Billingsley, et al., 1993).

7. Facilitate the search for housing or subsidize teacher housing through cooperative arrangements with businesses (MSRRC, 1987).
II. Collegiality

Although many teachers work in professional isolation within their classrooms, the unique aspects of teaching special education make forming productive relationships with peers even more challenging. The learning opportunities afforded by productive collegial relationships promote both professional collaboration and a sense of belonging (Gallagher, 1993). The area of "Collegiality" contained three out of the 15 top "Incentives for Teaching Special Education" (Schnorr & Straugh, 1993).

* 8. Provide a supportive principal. Although 88% of Alaskan special education teachers cited a supportive principal as a retention incentive, unfortunately, only 52% felt they had one. Since such a large percentage of Alaskan teachers indicated this was a "Definite" incentive, it ranked as #1 overall (Schnorr & Straugh, 1993).

* 9. Supply a principal supportive of educational change. Only 49% of the teachers surveyed felt they had a principal who was supportive of change. However, 71% of Alaskan special education teachers surveyed indicated this was a "Definite" incentive (Schnorr & Straugh, 1993).

* 10. Provide a network to share ideas. Possibilities include the following:

a. Schedule regular meetings to "talk out" difficulties (AK CSPD Survey, 1994).

b. Use an electronic bulletin board for rural teachers as a support network (AK CSPD Survey, 1994). Fifty-four percent of Alaskan special education teachers surveyed indicated this was a "Definite" incentive (Schnorr & Straugh, 1993).

* 11. Make mentoring or partnerships available to new teachers in districts. See item 10. below for contact address for more information. Thirty-two percent of Alaskan special education teachers indicated this was a "Definite" incentive (Schnorr & Straugh, 1993).

* 12. Implement teacher assistance teams within the district. Possibilities include the following:
A. Use regular meetings to conduct clinical case reviews of challenging students and then problem-solve through anecdotal records (AK CSPD Survey, 1994).

B. Schedule specific time for collaboration between regular and special education teachers (Billingsley, et al., 1993). Thirty-one percent indicated this was a "Definite" incentive to teaching special education (Schnorr & Straugh, 1993).

* 13. Center the community around the school. Twenty-four percent of Alaskan special education teachers indicated this was an incentive (Schnorr & Straugh, 1993).

* 14. Collaborate with university faculty. Twenty-two percent of Alaskan teachers indicated this was a "Definite" incentive to teaching special education (Schnorr & Straugh, 1993).

* 15. Share educational programs with the community via the media. Fourteen percent of the special education teachers surveyed felt this was an incentive to remaining in their field (Schnorr & Straugh, 1993).

16. Implement a peer tutoring program between two classes. Students can assist each other while one of the teachers is released to collaborate with another professional (VA DOE, 1993).

17. Release a few teachers to work together when assemblies or other large-group student activities are scheduled. Other staff member can assume responsibility for the students they were supervising (VA DOE, 1993).

18. Revise the school schedule to provide joint planning time for the teachers who collaborate most together (VA DOE, 1993).

19. Use at least part of any professional development days in the calendar to plan for collaboration (VA DOE, 1993).
20. Consider incorporating a "Wellness" program to promote collegiality and better health, while reducing stress. Stress reduction activities can include anything from desensitization to "venting," social functions to physiological stress reduction exercises, and establishing local support systems for continuous stress reduction. For further information on one district's Wellness Program, contact the person listed in the Appendix with "* Wellness program" following the address.

The University of Alaska Anchorage (UAA) frequently conducts a five day H.O.P.E. Institute, designed for Health, Outdoor, and Physical Educators, and Enthusiasts. The contact address is, as follows:

H.O.P.E. Institute  
School of Education  
College of Community and Continuing Education  
University of Alaska Anchorage  
3211 Providence Drive  
Anchorage, Alaska 99508

21. Implement mentoring for new teachers entering or reentering the profession (Gallagher, 1993). The Anchorage School District and UAA participate in a joint mentoring project. For further information regarding this program contact:

Dr. Patricia Kyle  
School of Education  
University of Alaska Anchorage  
3211 Providence Drive  
Anchorage, Alaska 99508  
786-7987

22. Encourage teachers to "embrace the culture" - wherever or whatever it may be (AK CSPD Survey, 1994).

23. Arrange for regular social gatherings. Several districts have potlucks after specific deadlines have been reached to unwind together (AK CSPD Survey, 1994).

24. Involve the community, local businesses, and civic groups in welcoming new teachers and welcoming back returning teachers (Smith-Davis & Murray, 1991).

26. Make new staff aware of the local power structure and communication system (FL DOE, 1990).

27. Establish ways for newcomers to have positive social experiences and to publicize their achievement with certain types of children so that they are readily accepted by their peers (Helge & Marrs, 1982).

28. Place newcomers on committees where they can contribute and share past experiences (MSRRC, 1987).

29. Provide teachers with training regarding effective parent/teacher conferencing skills. Include specific suggestions that help teachers bridge cultural differences (Billingsley, et al., 1993).

30. Create a library of videos of effective instructional practices in schools for sharing among districts (FL DOE, 1990).
III. Work control

The motivation to teach effectively requires that teachers be given the power to control certain conditions that influence the outcome of their efforts. This translates to having control over those factors which influence teaching performance; thus empowering teachers to make accurate judgments regarding the outcome of their endeavors. Work control encompasses decision-making power about the variables affecting the outcome of teaching, such as work load, school policies, role clarity, and role harmony (Gallagher, 1993). Alaskan teachers ranked four "Work control" issues in the top five "Incentive for Teaching Special Education."

* 31. Provide planning time. Eighty-four percent of the teachers surveyed indicated this was a "Definite" incentive to remain in special education, thus ranking it #2 overall (Schnorr & Straugh, 1993).

* 32. Place a cap on case load. Approximately 84% of Alaskan teachers surveyed indicated limiting case loads was a "Definite" incentive in the field of special education, thus ranking it #3 (Schnorr & Straugh, 1993).

* 33. Provide release time for testing. Eighty percent of the Alaskan teachers surveyed indicated release time for testing was an incentive to remain in the profession, thus ranking it as #4 (Schnorr & Straugh, 1993).

* 34. Place a cap on class size. Seventy-six percent of the special education teachers in the survey felt this was an incentive to continue in their chosen field, thus ranking it #5 overall (Schnorr & Straugh, 1993).

* 35. Provide job rotation options (special education to regular education.) Forty-four percent of the teachers surveyed indicated this was a "Definite" incentive to remain in special education (Schnorr & Straugh, 1993).

36. Consider job rotation whereby teachers can change assignments or roles for one year out of every four or five. Rotation may not only be horizontal, but also vertical, into a supervisory or consulting position (Florida, 1990).
37. Sharing jobs - having the option to work half-time. This allows two part-time teachers to fill one full-time position. Mothers with young children sometimes prefer this schedule. Twenty-eight percent of Alaskan teachers indicated this was a "Definite" incentive to the special education field (Schnorr & Straugh, 1993).

38. Solicit and use teacher's ideas for institutional policy making.

39. Share with special education staff the power to make decisions regarding scheduling, budget development, student discipline codes, grading policies, school, grade, and subject level assignments. This promotes responsibility and a general sense of personal investment.

40. Define special education teachers' roles. Ambiguity in role definition results in lowered motivation and efficacy.

41. Provide assistance in developing effective strategies for student advocacy so that special education teachers can develop into constructive student advocates (Gallagher, 1993).

42. Provide paraprofessional or sub help as needed and as budgeting allows.

43. Offer assistance in resolving scheduling conflicts between general and special education (Gallagher, 1993).

44. Involve special education personnel in curriculum development for the district or school.

45. Minimize paper-work. Research indicates that special education teachers are reinforced specifically by their students and not by activities such as paper-work which takes them away from students.

46. Investigate the possibility of including teachers on the school board. One school district in Alaska has found this to have a positive effect on education. For more information, contact the person with "*Teachers on the school board" following the address in the Appendix.

47. Hire highly qualified teachers who must reduce their work time commitment to work part-time in one of the following capacities: part-time mentors, trainers, curriculum consultants, or to complete short-term tasks for the district (Florida, 1990).
IV. Professional Development

Besides being mandated by both federal and state legislation, professional training is essential in special education to ensure a relevant knowledge base for effectiveness in this dynamic field. Professional development involves inservice training, graduate studies, and adding additional endorsements (Schnorr, 1994). Schnorr & Straugh (1993) found four of the top 15 "Incentives for Teaching Special Education" involved Professional Development.

* 48. Provide release time for professional development. Sixty-four percent of Alaskan special education teachers indicated this was a "Definite" incentive to remain in the field (Schnorr & Straugh, 1993).

* 49. Make professional development available on site. Fifty percent of the teachers surveyed indicated that this was an incentive in the field of special education (Schnorr & Straugh, 1993).

* 50. Provide stipends for pursuing additional endorsements. Forty-nine percent of Alaskan special education teachers indicated that this was an incentive to remain in the field (Schnorr & Straugh, 1993).

* 51. Provide financial support for summer workshops. This may include a small stipend to help defray costs. Approximately forty-nine percent of the teachers surveyed considered this an incentive to remain in special education (Schnorr & Straugh, 1993).

* 52. Provide opportunities for advanced degrees on site. Thirty-nine percent of the Alaskan teachers surveyed indicated that this was an incentive in the field of special education (Schnorr & Straugh, 1993).

* 53. Provide access to professional literature, including Council for Exceptional Children (CEC) publications. Thirty-five percent of the surveyed teachers considered this to be a retention incentive (Schnorr & Straugh, 1993).

* 54. Provide access to a library of videotapes for professional development. Twenty-six percent of Alaskan special education teachers indicated that this was an incentive in the field of special education (Schnorr & Straugh, 1993).
* 55. Provide teacher exchange options with other districts. Twenty-three percent of the teachers surveyed considered this to be a retention incentive (Schnorr & Straugh, 1993). Also encourage teachers to explore exchanges internationally. The persons listed in the Appendix with "Teacher exchanges" have had successful exchanges in their districts and can be contacted for more information.

* 56. Implement a career ladder to supervisory roles. Nineteen percent of the Alaskan teachers surveyed indicated that this was an incentive to remain in special education (Schnorr & Straugh, 1993).

Design district career ladders with multiple career options. For teachers, some suggestions might include: mentor teacher, lead teacher, recruiter, trainer, teacher assistance team member or leader, supervisor, curriculum specialist, or administrator. Career ladders for paraprofessionals could lead to teaching roles (FL DOE, 1990).

* 57. Encourage teachers to teach professional development courses. Fourteen percent of the teachers surveyed considered this to be a retention incentive (Schnorr & Straugh, 1993).

58. Assist special education teachers with the development of professional growth plans which meet both individual and district needs.

59. Utilize "outreach" programs to train and retain special education teachers in rural areas. The U.A.A. Distance Education program offers a number of courses via distance delivery that incorporates a combination of professional literature, videotape, and audioconference. The program also requires classes on campus during the summer. For current offerings, contact the following address:

Distance Education/Telecom Center  
College of Community and Continuing Education  
University of Alaska Anchorage, Building K  
3211 Providence Drive  
Anchorage, Alaska 99508  
786-1626

60. Have available current catalogs from UAA and other universities with information on course offerings that can be completed both on campus and through distance delivery.
61. Inform staff about CEC professional development offerings as they become available.

Professions Information Center
The Council for Exceptional Children
1920 Association Drive
Reston, Virginia 22091
(703) 264-9474

62. Encourage special education teachers to participate in the summer academies offered by the Alaska Staff Development Network. The contact address is listed below.

Kelly Tonsmeire, Alaska Staff Development Network
University of Alaska Southeast
School of Career and Continuing Education
1108 "F" Street
Juneau, Alaska 99801
(907) 465-8745, Fax: 465-2166

63. Encourage and identify opportunities for teachers to participate on local, state, and national committees and task forces (FL DOE, 1993).

64. Collaborate with local colleges and universities to develop teachers as adjunct faculty members in the delivery of district-based outreach services and on campus (FL DOE, 1990).

65. Support teachers who want to become district inservice teachers. Encourage them to participate in CSPD training related to the Paraprofessional and Early Childhood Inservice Modules. The following person can be contacted for additional information:

DiAnn Brown
Department of Education
801 West 10th Street, Suite 200
Juneau, Alaska 99801
(907) 465-2972, Fax 465-3396

66. Work with local businesses and agencies to develop summer job opportunities for teachers, particularly in fields where new skills can be applied in the classroom (FL DOE, 1990).

67. Encourage and assist teachers and administrators to write articles about their methods and experiences for publication (FL DOE, 1990).
68. Set up school and district procedures for identifying promising classroom practices and distribute outcomes to other schools (FL DOE, 1990).

70. Identify and assist teachers to develop presentations and workshops at local, state, and national conferences. Facilitate their participation through release time, reimbursement of travel expenses, and other means (FL DOE, 1990).
V. Achievement and Recognition

The choice to enter the field of special education is frequently based on the rewards intrinsic to the profession. Therefore, it is important that teachers be able to both recognize and be recognized for their accomplishments. Knowledge of one's positive performance has been referred to as psychic rewards. For special education teachers these psychic rewards include a sense of accomplishment and a meaningfulness of work (Gallagher, 1993). Three of the top 15 "Incentives for Teaching Special Education" for Alaskans were in the area of Achievement and Recognition.

* 71. Facilitate support for special education in the community. Fifty-six percent of the Alaskan teachers surveyed indicated that community support for special education was a "Definite" incentive (Schnorr & Straugh, 1993).

* 72. Facilitate community appreciation of teachers. Over half (51%) of the teachers surveyed considered community appreciation of teachers important (Schnorr & Straugh, 1993).

* 73. Implement school/district recognition of professional efforts. Half (50%) of the Alaskan teachers surveyed indicated that school/district recognition of professional efforts was a "Definite" incentive (Schnorr & Straugh, 1993).

74. Be aware that performance ratings completed by principals are the strongest single indicator of job satisfaction for beginning teachers. This is in spite of the research attesting to the problems of constructing fair and accurate evaluations (Gallagher, 1993).

75. Send out letters of appreciation or congratulations on a job well done (AK CSPD Survey, 1994).

76. Formally recognize efforts "above and beyond" the call of duty.

77. Tell teachers what they are doing right. Make appreciation of teachers part of the overall school climate.

78. Provide informal feedback regularly (Gallagher, 1993).
79. Explain to beginning special education teachers how district forms and expectations will reflect their work with exceptional students.

80. Collaborate with business, civic, and professional groups to develop recognition programs, awards, volunteer activities, and general appreciation of teachers.

81. Use merit increases or other approaches to recognize extraordinary performance.
VI. Resources

This includes equipment, materials and financial support (Gallagher, 1993). It is the toughest area to augment in times of declining oil revenues. Alaskan special education teachers ranked "Sufficient supplies" as seventh when prioritizing "Incentives."

* 82. Keep sufficient quantities of supplies and materials available. Alaskan special education teachers considered sufficient resources important enough that 67% of them indicated it to be a "Definite" incentive (Schnorr & Straugh, 1993).

* 83. Make mini grants for special classroom projects available. Twenty-nine percent of Alaskan teachers of special education considered classroom mini grants important as an incentive (Schnorr & Straugh, 1993).

* 84. Make day care available for children. Seventeen percent of Alaskan teachers indicated that day care was a retention incentive (Schnorr & Straugh, 1993).

85. Problems with equipment are ranked among the top in terms of frustration for teachers (Gallagher, 1993).

86. Be aware that lack of resources is highly related to special education teacher burnout (Gallagher, 1993).

87. Investigate the relationship between funding levels and burnout among special educators (Gallagher, 1993).

88. Be aware of the direct linkage between teachers' perceptions of low financial support for their classroom endeavors and a decreased sense of personal accomplishment (Gallagher, 1993).

89. Provide money for conferences.

90. Inform staff of CSPD grants. Special education directors statewide receive information on the grants yearly. Contact the Department of Education (DOE) at the address below for further information:
91. Provide a support network which accesses content-related information as needed.

92. Augment salaries and benefits.

93. Provide salary increments for multiple endorsements.

94. Provide tuition reimbursements for professional development.

95. Pay or reimburse fees for professional memberships.

96. Encourage teachers to use resources from the community.

97. Consider implementing a computerized curriculum system. A contact person is listed in the appendix for one such system, called TRACE. Under the address, look for "* Computerized curriculum" (AK CSPD Survey, 1994).

98. Prepare a master list of instructional materials and directions for locating them (Gallagher, 1993).

99. Ask special education staff about perceived needs for both the present and the future (Gallagher, 1993)

100. Encourage and support sharing of materials among teachers. Provide a central location and check-out procedures to prevent useful materials from "getting out of circulation" (Gallagher, 1993).

101. Encourage beginning teachers to consult with experienced teachers about specific materials and their use (Gallagher, 1993).

102. Compile a list of the special topics (e.g., crafts, outdoor skills, travelogues, etc.) which faculty on site would be willing to share with other classes and colleagues (Helge & Marrs, 1982).
