This manual was developed in conjunction with the implementation of the Colorado Effective Education Model, a systems change project designed to develop best educational practices for students with severe disabilities in inclusive settings. The manual presents adaptations to better meet elementary level students' goals and objectives and describes processes for identifying student outcomes within the context of regular education curriculum/activities. Introductory sections offer general guidelines for designing curricular adaptations to enhance learners' participation and level of mastery, and offer guidelines for designing noncurricular adaptations in the environment, materials, assistance, and presentation. A decision-making framework for using adaptations is provided, followed by a case study applying the framework. A chart then lists basic skills and adaptive/alternate activities in the areas of typical routines, math, science, language arts, reading, social studies, physical education, and music. (JDD)
IDEAS AND SUGGESTIONS
for Curricular Adaptations at the Elementary Level

DENVER, COLORADO 80203
This manual was developed in conjunction with the implementation of the Colorado Effective Education Model, a systems change project designed to develop best educational practices for students with severe disabilities. The development of the Colorado Effective Education Model as well as the development of this manual was supported through a federal grant from the Office of Special Education and Rehabilitation Services #84.086.

The authors would like to thank the following educators who, through their exemplary teaching practices and commitment to meeting the needs of all learners, shared their creative ideas for curricular adaptations.

Jill Balthazor  
Paula Clifton  
Paula Farkas  
Linda Hunt-Stone  

Sue Kanaus  
Molly Loran  
Carol Sandstrom  
Callie Varnum

Additionally, the authors would like to recognize the following CEEM project staff for their support in the review and editing of this manual.

Terri Rogers-Connolly  
Billie Jo Clausen  
Michael Aric-Ruffin

This manual was supported by the Office of Special Education and Rehabilitative Services, U.S. Department of Education, pursuant to grant number 84.086. However, the ideas, suggestions, and opinions herein do not necessarily reflect the position or policy of the Office of Special Education, U.S. Department of Education.

Meeting the educational and social needs of learners with diverse abilities is a challenge that many educators are faced with daily. As more students with the most significant support needs are being educated in regular education environments, it is becoming increasingly important to thoughtfully and collaboratively plan and implement instruction that meets the individual needs of each student.

Skilled and dedicated teachers all over Colorado are meeting this challenge with enthusiasm and creativity. While the authors of this manual hesitate to provide the reader with a "cookbook" of curricular adaptations, we are eager to share with you many ideas developed by educators, peers and families. Each of the specific ideas listed in this manual are adaptations designed for specific students in order to better meet their goals and objectives. In most cases, these students have significant learning challenges and diverse educational and support needs. It is our sincere hope that each reader will utilize a team problem-solving process to match individual student needs and goals with the regular education curriculum and that for every adaptation idea that is tried, team members will have a clear rationale for why the adaptation is selected and how it will benefit the learner.

The success of meeting student needs in regular education environments is dependent upon thoughtful planning, ongoing problem solving, an openness to new ideas and a commitment to frequent evaluation. The processes described in this manual for identifying student outcomes within the context of regular education curriculum/activities are critical if students are to receive maximum benefit from their education and if adults are to feel positive about their contribution to the student’s learning.

For ease of reference, the curriculum adaptation section is divided into content areas, both academic and non-academic. These content areas are arranged in a traditional manner and, while the authors realize that many teachers offer an integrated curricular focus delivered through innovative instructional designs, our hope is that each reader will creatively apply the ideas from selected sections in a useful manner.

The word "teacher" is used throughout this manual. This term is used to describe any person who assists a student in his/her learning process.
WHAT ARE CURRICULAR/INSTRUCTIONAL ADAPTATIONS?

There are a myriad of ways to adapt curriculum and instruction. When an educational team decides that a student cannot receive full benefit from the regular education curriculum as it is routinely offered, involvement in the problem-solving process begins to identify the range of alterations that might be helpful to increase student participation and mastery of identified learning outcomes.

A curricular/instructional adaptation is any change that alters the content of the curriculum or the way the curriculum is routinely presented. Adaptations can be made to the:

1. focus of the curriculum;
2. sequence of the curriculum;
3. manner in which the curriculum is taught;
4. manner in which mastery of the curriculum is assessed;
5. relevant context utilized to teach curricular objectives;
6. instructional delivery based upon student's individualized learning style; and
7. activities utilized to teach the curricular concepts.

Many of us use adaptations in our own lives. Persons who have difficulty getting up in the morning, sometimes set two different alarm clocks. Some of us inclined to be perpetually late, set our clocks 10 minutes early to "fool" us into being on time. A few of us can't imagine a life without "yellow stickies" or date books to remind us of what needs to be done and many of us requiring vision correction would rarely go anywhere without our glasses or contact lenses.

Most of us wouldn't think of borrowing someone else's adaptation unless it worked well for us. Each of us designs and utilizes ways to adapt our environment that assist us in functioning more effectively and efficiently. We each make individual decisions as to whether those adaptations are temporary or become a permanent part of our lives and we do not continue to use them unless they are successful.

Decisions around curricular instructional adaptations should always be purposeful. Specific learner needs and identified learning outcomes should drive all decisions. Careful observation, thoughtful educational planning and systematic evaluation, will
guide decisions as to which adaptations are needed. Observation of student functioning in identified regular education environments will assist in determining whether curricular/instructional adaptations are needed and if so, which adaptations best support these identified needs.

Caution is advised when making generalized assumptions that adaptations will be needed for all activities. Oftentimes, students can learn to follow typical routines, master curricular content, and engage in appropriate social interactions once they are given opportunities to be valued members in regular education environments. Sometimes the limitations are not the student's, but rather are due to the diminished expectations of others. Care must be given to insuring that adaptations are evaluated on an ongoing basis to assess whether they continue to serve the purpose for which they were originally designed.

General guidelines for designing and implementing adaptations include considerations such as:

1. maximizing student participation and interaction;
2. enhancing the respect and dignity of the person using the adaptation;
3. promoting interdependence;
4. building on learner strengths;
5. increasing self-esteem and;
6. ease of use across school and community settings.

Many teachers are beginning to utilize a relatively new resource for creative adaptation ideas by involving typical peers in problem-solving processes. Peers and classmates often have wonderfully unique abilities to "know" what their classmate needs to be a fully participative member of a regular education class. We would encourage each of you to tap into this resource. The ability of students to both brainstorm and implement a variety of ways to support their friends and fellow classmates has been described as being both refreshing and amazing.
There are many types of general adaptations that might be made to enhance the learner's participation and level of mastery. Many teachers routinely make these changes to better fit their personal teaching style and/or the diverse learning styles of their students. Categories for non-curricular specific adaptations involve such areas as: environment, materials, assistance and presentation. Each of these will be discussed with examples given of general adaptations.

Adaptations to the environment involve altering the classroom or other instructional environments to make it more conducive to learning. Learners, because of their individual learning style and preferences, often require different characteristics in their instructional environments. Some learners make these alterations quite easily across learning activities and independent of adult assistance. For other learners, it becomes more incumbent on the adults to structure these characteristics into each learning environment.

In designing environmental adaptations, consider the student's senses including vision, hearing, touch and smell.

- seat student close to the board
- seat student away from the glare of the window
- make a carrel or a visual screen available
- provide a slant board for placement of books and papers
- differentiate parts of the work area using textured materials
- use "scratch and sniff" stickers to designate important activities on the classroom schedule.

Consider also, the learner's minimal toleration of movement or frequent desire to move; organizational abilities/preferences; need for enhanced or reduced sensory stimulation; as well as the preference to work independently or in a group.

- offer additional storage space away from student's desk
- place work space in the middle of classroom activity
- attach learning materials to desk
- laminate a photograph schedule with pictures of materials needed for each time/activity period
• provide opportunities for students to work together
• structure classroom jobs that require purposeful movement in the classroom
• make headphones available to mask background noise.

Adaptation to **materials** involves altering the materials that the learner uses. Students can learn to provide their own material adaptations, self-advocate for their individualized needs and/or increase their mastery of a given skill or task utilizing material adaptations designed and provided by another person in their learning environment.

In designing material adaptations, consider the student’s learning style; visual/perceptual, auditory and motor abilities and preferences; cultural preferences; and strengths and interests.

• provide enlarged printed materials
• allow student to choose preferred materials
• equip computer with head switch to activate off/on
• tape record reading assignment and test review questions
• select food items for special snacks based on student’s cultural preferences

Consider also, the learner’s potential to demonstrate the curricular proficiencies in an alternative manner. Frequently, a variety of skills can demonstrate mastery of the same or similar curricular objectives.

• solve worksheet math problems using a calculator
• activate pre-programmed answers on assistive communication device to answer classroom questions
• eye-gaze to the correctly spelled word
• utilize both picture and word cues to return supplies to proper place

Adaptations to the **presentation** of the curricular content include: altering presentation format in both level and intensity; utilizing an array of presentation methods, combining a variety of strategies to engage learner participation, and articulating clear learner expectations. Successful student learning can be facilitated via curricular content delivered in effective and relevant ways.

In designing adaptations to presentations, consider the student’s capability to process, retain and generalize information.
simultaneous with verbal presentation, highlight key points on overhead
use different colored chalk when recording information on board
provide structured fill-in-the-blank forms for guided practice on note-taking during class lecture
video tape presentations for subsequent student review
reinforce practice of new skills utilizing a variety of board games
encourage students to role play comprehension of instructions

Consider also, the learner’s individualized needs within the direct instructional format, including the learner’s ability to sustain attention; preferences along the continuum from active, hands-on learning to passive participation; as well as the learner’s ability to transition from one activity or curricular focus to the next.

allow student to self-monitor need for movement throughout the lecture
incorporate “turn to your neighbor and discuss one key point” throughout the presentation
alternate presentation of map reading skills with a team scavenger hunt

using recorded music, cue class to put away art materials and line up for gym
provide the student with a bell to ring to indicate desire to answer a question

The use of assistance provided by another person as an adaptation can provide the essential support necessary to maximize active participation for identified learners. Some students because of physical, instructional, behavioral, or communicative abilities may benefit from utilizing personal assistance options. Typically, personal assistance takes one of two forms: that which is or can be naturally occurring within any given instructional environment (e.g., a classmate helps his/her fellow classmate find his homework assignment) or that which is purposefully designed and artificially added to the instructional environment (e.g., paraprofessional provides additional direct instruction to student using augmentative communication device in a Foreign Language class).

When using assistance provided by another person as an adaptation, consider both the short term and long range effects of such adaptations.

student becomes dependent upon one service provider and does not follow directions given by other instructors
peers are reluctant to invite a student to play a game because an adult is always close by teacher gives instructions to personal assistant rather than directly to the student additional intense instruction can be provided by an adult thereby enabling the student to learn the skill faster time-limited direct observation and/or implementation of instruction by an additional service provider facilitates more effective problem-solving with the classroom teacher teaching students to assist each other creates a sense of classroom community and cooperation.

Consider also the learner’s preference for personal assistance; the ability to accept assistance from different people; how the utilization of personal assistance affects others’ perceptions of the learner; the ability of adults to fade artificial supports to more natural supports as well as the availability of identified assistance.

student chooses, by pointing to classmate, who he/she wants to work with in cooperative group classmates alternate who will help student tape record his homework assignment paraprofessional is assigned to the 6th grade class rather than being assigned to specific student classroom teacher models effective way for peers to provide hand-over-hand guidance to assist classmate to write in daily journal student planning team meets weekly and identifies critical times for personal assistance throughout the week and matches with resource availability

The designing of curricular and/or instructional adaptations should be a collaborative process between students, educators, and peers where possible, in order to provide effective and efficient supports that maximize the successful participation of diverse learners in regular education classroom. We hope that this manual will provide educational planning teams with an effective decision-making process as well as some practical and functional suggestions to include all learners.
DECISION-MAKING FRAMEWORK FOR USING ADAPTATIONS

1. Identify peer-referenced schedule and activities throughout the school day

2. Delineate needs, strengths, and abilities of identified learner

3. For each scheduled class or curricular area, identify specific activities and typical routines

4. Assess typical student performance and behavior within each class, activity, and typical routine

5. Observe and compare identified learner performance and behaviors within each activity

- Identify learner performance similar to typical peers
  - Learner can perform activity as is
    - No adaptation necessary

- Identify learner performance dissimilar to typical peers
  - Learner needs assistance to perform activity
    - Brainstorm possible adaptations
Case Study

Melissa is a third grader at Brown Elementary School. Melissa’s educational team has decided that Melissa’s needs can be best met by following the typical third grade schedule and accessing the variety of instructional environments that her third grade classmates frequent. Melissa enjoys being around her classmates, has a great sense of humor, can stay on task until completion when the activity is an enjoyable one for her, recognizes some numbers and is able to communicate some of her wants and needs using speech and by pointing to pictures. The third grade schedule consists of: opening, spelling, English, reading, recess, math, lunch, sharing, library or storytime, music or science, art, physical education or social studies, and dismissal.

Many of Melissa’s needs can be addressed across her school day. Her team has highlighted the following three learning outcomes to be worked on across instructional environments: make and communicate choices, follow a picture schedule, and initiate social greetings with peers. Melissa also has more specific learning outcomes which are better suited to being taught within context of specific class subjects. These outcomes are: obtain information from printed words and pictures (worked on during language arts), recognize numbers and quantities up to 20 (worked on during math), and develop several individual and group leisure skills (worked on during center activities and free choice time).

Melissa has a tendency to rely on adults when she is feeling unsure about what to do, is in an unfamiliar environment or is frustrated by a task. Her team members are working very hard to encourage classmates to assist Melissa and are trying to teach Melissa other strategies for finding support. Team members are also brainstorming ways for Melissa to provide assistance to her classmates so that she isn’t always the classmate needing to be helped.

Melissa seems very aware of what her classmates are doing and likes to participate as much as possible during each class period. Her team members have observed that Melissa’s learning is enhanced when she is able to utilize manipulatives and when learning situations are structured to be active and experiential.
DECISION-MAKING FRAMEWORK FOR USING ADAPTATIONS

1. Identify peer-referenced schedule and activities throughout the school day

2. Delineate student needs, strengths, and abilities

3. For each scheduled class or curricular area, identify specific activities and typical routines

4. Assess typical student performance and behavior within each class, activity and typical routine

5. Observe and compare identified learner performance and behaviors within each activity

Third grade students spend a large portion of their day with their homeroom teacher. Two classes, reading and spelling, are team-taught with another third grade teacher. Specials are taught by the music teacher and the physical education teacher. Homeroom teachers combine classes to teach art. All third graders eat lunch at the same time and are free to eat with whomever they choose.

Melissa enjoys being with her third grade classmates and wants to participate in similar activities. Her needs are primarily: to make choices, follow a schedule, initiate interactions with peers, obtain information from words and pictures, recognize numbers and quantities 1-20, and develop leisure skills. Melissa enjoys using manipulatives and learns more effectively when taught relevant tasks.

Specifically for math, Melissa's class utilizes individual seatwork, cooperative work groups and large group instruction. Students are expected to: work independently on "paper-pencil" tasks and check their work for accuracy; have a basic understanding of group interaction skills in order to work effectively in a small group; and in large group instruction, students are expected to sit quietly, listen to the teacher, obtain information from the chalkboard and/or overhead and ask questions if they do not understand the math concept being presented.

Students typically have their math books and pencils in their desks. They obtain any other necessary materials from the math supply box located in the cupboard. Directions for each math lesson are given verbally and oftentimes are also written on the board. Students can always use manipulatives if they choose to and most of the time are free to ask classmates for assistance. The only time students are expected to remain in their seats is during large group instruction.

Melissa is able to follow teacher and classroom cues to get out her math book and a pencil. She doesn't always get the appropriate additional materials from the supply box. She does better during small group time as she can partially participate in the group task. She loses attention during large group instruction and does not understand many of the concepts being presented. It is difficult for her to answer questions or contribute to the class discussion. She frequently seeks out adult assistance and approval during independent seat work time and sometimes stays on task for only short periods of time.
Identify learner performance similar to typical peers

Melissa can get materials from desk, contribute to small group tasks and attend for a portion of the time

Learner can perform activity as is

No adaptation necessary

Melissa does not understand complex math concepts, cannot complete paper and pencil tasks and cannot sit still for entire large group instruction

Re-define math outcomes to include number identification, 1:1 correspondence and understanding quantities 1-20. Work with manipulatives instead of pencil and paper

Pair up with classmates during individual seatwork and use manipulatives during second half of group, prepare for small group by distributing necessary materials to each table

Identify learner performance dissimilar to typical peers

Learner needs assistance to perform activity

brainstorm possible adaptations

Use functional objects and games to teach math skills, develop picture cuing system to distribute correct number of materials to each small group. Coach Melissa to answer one pre-determined question during large group, communicate acquired math skills to Melissa's family to assist in generalizing skills across environment

## ELEMENTARY LEVEL

### Objective: Writing for Meaning
- Journal writing
- Book reports
- Creative Writing

### Activity
- Writing for Meaning
- Book reports
- Creative Writing

### Basic Skills
- Recall events
- Sequence events
- Communicate events
- Penmanship
- Edit work
- Knowledge of grammar/composition

### Adaptive/Alternate Activity
- Classmates tape what student did during day/week at school and sends home
- Families tape/record what student did over the weekend. Student turns on tape and classmate writes down events in journal
- Families report directly to teacher what student did over the weekend/vacation and teacher retells activities to class
- Polaroid picture journal is updated regularly
- Dictate journal entries to a classmate who records entries in journal
- Use computer to record journal entries
- Read journal entry with prompts from a classmate
- Use communication board to tell a story
- Cut out pictures to paste in a journal
- Take pictures of events to include in journal
- Use sentence strips to compose a short story
- Dictate story into tape recorder and transcribe story at home for homework
- Classmate holds up two pictures and student indicates first and last
- Use graphics program on computer to illustrate story
- Illustrate story instead of writing a story
- Use cut apart comic strips to sequence a story and tell story to a classmate
- Copy dictation
- Put name on journal/papers
- Draw picture
- Use stencils to trace letters

### Writing Practice Skill Work
- Writing/penmanship practice
- Letter formation
- Copying skills
- Neatness

### Notes
- The content covers a range of activities and skills focused on geography, diversity of people, and family/neighborhood/community. Each section includes specific activities designed to enhance understanding and engagement with social studies concepts.
- The activities are diverse, including map skills, role-playing customs, and exploring family and community dynamics.
- The basic skills listed are essential for developing a comprehensive understanding of social studies at the elementary level.
- The adaptive/alternate activities are tailored to support diverse learning needs, ensuring inclusivity in the educational process.
