The Migrant Education Program (MEP) secured a new 5-year lease on life when it was reauthorized in the Improving America’s Schools Act (IASA) of 1994, signed into law by President Clinton in October 1994. The new authorization, effective July 1, 1995, requires changes in eligibility, priority for services, schoolwide projects, migrant student record transfer, the summer funding formula, and consortium incentives. This digest describes the new requirements, which, taken together, make this the most sweeping one-time change in programming for children of migratory farmworkers and fishermen since it was first enacted as a 1966 amendment to the Elementary and Secondary Education Act of 1965.

OVERVIEW

Changes in eligibility remove about 200,000 children from the program but add unknown numbers of older youth. Program priorities are redefined. There are new requirements for joint planning with other federal and state programs, options for interstate consortia, and modifications in the summer funding formula. Comparable to other IASA programs, there is a call for migrant students to meet challenging academic standards.

Equally dramatic is what is missing from the new legislation: a set-aside for funding a national migrant student database. The Migrant Student Record Transfer System (MSRTS) is scheduled for discontinuation June 30, 1995, but the new legislation nevertheless requires Migrant Education grantees to exchange student records.

For all that, however, the Migrant Education Program retains its essential character and purpose: it remains a state grant program. The authorizing language carries no mandate to make major modifications in program models and delivery systems now being used to serve migrant children.

But services to migrant children will be affected, to a degree impossible to estimate, by changes in the MEP’s parent program, the Title I Part A "basic" program. Redefined as a program to help disadvantaged students meet high standards, Title I authorizes the use of funds from a number of sources, including Migrant Education, to serve children in schoolwide projects. The new MEP carries a "special rule" concerning migrant children in such projects.

The new MEP authorization is about twice as long as the version in effect through June 30, 1995. Additional text includes, for the first time, a statement of purpose specifically addressing the migrant program; program requirements relating the MEP to the Goals 2000 program; definitions formerly carried only in regulations; and mechanisms for coping with the absence of MSRTS, which has not only been used to exchange information between schools and MEP sites, but also has been the basis for
enumerating migrant children and allocating program funds among the states.

**ELIGIBILITY**

About a third of the children presently eligible for the Migrant Education Program will no longer qualify, owing to the reduction in the eligibility period for children who cease to migrate. The core criteria for initial eligibility are unchanged in the new legislation, i.e., a child (ages 3-21, inclusive) is defined as migratory when he or she moves from one school district to another in order for one or more family members to seek temporary or seasonal work in agriculture or fishing. Beginning July 1, 1995, the eligibility based on a single move extends for only 3 years (reduced from 6 years).

Children who move more frequently establish a new eligibility each time they make a "qualifying" move. For example, if a family home-based in Texas migrates each year to Ohio and then to Michigan to pick cucumbers, cherries and apples, the children become eligible on the move to Ohio and then start a new 36-month cycle of eligibility when they relocate to Michigan. But the return to Texas is ordinarily not a qualifying move, because the family is returning home--though for many it is a home they know for only 6 or 7 months a year.

By reducing the term of eligibility, Congress intended to focus more funds on the children who move most frequently. This was consistent with recommendations from many quarters, including the National Commission on Migrant Education and the National Association of Migrant Educators.

The new law provides three exceptions for continuing services beyond the 3-year mark: any child whose eligibility expires during a school term may be served until the end of the term; a child whose eligibility ends prior to the start of a term may be served for another year "if comparable services are not available through other programs," and secondary students can continue to be served "through credit accrual programs" until graduation. Because children served under the continuation provisions are not weighted in the funding allocations, services to such children may be limited. However, continuing concern about the still high dropout rate among migrant students (about 50 percent) may result in use of the continuation option for many secondary students.

The immediate effect of the 3-year eligibility period will be to produce a redistribution among the states of the MEP appropriation (approximately $305 million for the 1995-96 program year). States currently enrolling larger numbers of migrant children in the 4th, 5th, and 6th years of eligibility will lose funds, while states enrolling more children in the first 3 years of eligibility will gain.

Another revision in the eligibility definition makes eligible a category of older youth who previously did not qualify. Migrant workers and their spouses through the age of 21 will now qualify. Previously, a worker qualified for the program only if he or she had earlier migrated with a parent or guardian, and spouses did not qualify. It is difficult to estimate
the number of migrants in the 16-21 age range who will qualify under this provision, but
the number could be significant. In some cases, parents and children both may be
eligible. Major program adjustments will be necessary if educational and support
services are to be provided to a population that is not likely to be enrolled in school.

PRIORITY FOR SERVICES

There is a major change in the legislative priority for MEP services. In using MEP funds,
grantees and subgrantees "shall give priority to migratory children who are failing, or
most at risk of failing, to meet the State's challenging...standards, and whose education
has been interrupted during the regular school year."
Migrant educators generally believe that virtually all migrant children are at risk in
relation to challenging performance standards. Even outstanding students are in
jeopardy because of state-to-state differences in curriculum and testing requirements.
There is greater concern about implications and possible interpretations of the
educational interruption priority. This criterion is viewed as a potential disincentive for
migrant families to delay departures from their home bases until the end of the school
year--a practice that the MEP has promoted for decades with considerable effect. If
migrant families believe that allowing their children to complete the school year will
result in loss of access to summer programs in receiving states, they may simply
withdraw them and migrate earlier.

There is also uncertainty about whether a migrant child's late return to his or her
home-base school constitutes an interruption. Many migrant students do not return until
October or November each year, and many, especially the older youths who help their
parents in the field, have not attended school before their return. Technically, their
school year has not been interrupted, because it has not yet begun.

SCHOOL-WIDE PROJECTS

Title I Part A authorizes the use of Part A funds, "in combination with other Federal,
State and local funds," for schoolwide programs. Pending development of regulations,
this is generally interpreted as authorizing the commingling of MEP funds with other
funds in schoolwide projects that serve migrant children. The provision, however, does
not supersede the MEP program requirements for states to assess needs of migrant
children and plan appropriate services. In other words, MEP funds can be placed in
schoolwide projects if state administrators decide that such projects would meet the
needs of migrant children, but there is no mandate to use schoolwide projects as a
primary means of meeting their needs.
Additionally, the special rule carried in the MEP authorization requires that any
schoolwide projects receiving MEP funds must use those funds to meet needs that
result from the migratory lifestyle of migrant children or are not addressed by other
programs, or to provide services needed to permit migrant children to participate
effectively in school.

**LIFE AFTER MSRTS**

The new MEP statute contains an implicit mandate to replace MSRTS by directing the Secretary to seek recommendations on new means of counting migrant children and transferring records, the twin functions of the system defined in the old law. Allocation of funds for the 1995-96 program year is to be based for the last time on data provided by the MSRTS, which was scheduled to begin phasedown of operations after compiling full-time equivalent counts of migrant children in each state in 1994.

The new authorization, like the old, requires state grantees to foster interstate coordination of services, including "the timely transfer of pertinent school records." In the absence of MSRTS, the law calls for the Secretary to solicit information and recommendations on the transfer of student records and possible technologies that could be employed, and to make a report to Congress by April 30, 1995. The report is to include "recommendations for interim measures that may be taken to ensure continuity of services in this program."

In existence since the early 1970s and originally a showpiece of educational technology at work, MSRTS, a national information system anchored in Little Rock, Arkansas, had come under criticism for its costs--an estimated $25 million at federal, state and local levels--and alleged ineffectiveness. The National Commission on Migrant Education (1991) produced a set of recommendations for improving the system. Before the recommendations could be carried out, however, Congress enacted P.L. 103-59 in 1993, providing for extension of the system only until June 30, 1995. Continuation beyond that point would be at the discretion of the Secretary of Education. When the chairman and ranking minority member of the House Education and Labor Committee subsequently filed a Migrant Education reauthorization bill (HR2679) that specified the discontinuation of MSRTS, the Department of Education took it as its cue to omit MSRTS from its reauthorization package.

Ironically, the new legislation devotes more attention to records transfer than did the previous statutes. Many observers expect attempts to create alternate systems for the transfer of records to add substantially to costs.

**SUMMER FUNDING FORMULA**

Summer programs were originally conceived as "safe havens" for migrant children, who might otherwise be with their parents harvesting crops in the field, as well as places for providing a wide range of educational opportunities. Summer schools were inherently more costly than regular term supplemental programs because they could not piggyback on the existing infrastructure (buildings, maintenance, food service, transportation, etc.) The MEP law was amended to provide an upward adjustment to the
allocation to states providing the summer program, producing a formula under which a
migrant child generated about four times as much for each day enrolled in summer
school as for a day in regular term.
While the adjustment initially achieved its purpose, it became problematic when some
MEP grantees began to offer nontraditional, nonschool-based summer programs in
which migrant children could be enrolled and served at lower cost. The Department of
Education ruled that each state had the right to define an educational program for
migrant children according to its own principles and standards. The number of migrant
children, especially formerly migrant children, enrolled in low-cost programs dramatically
increased because it was possible to generate more funds in supplemental funding than
the programs cost to operate. Such programs drew criticism from those who felt the
low-cost programs, if conducted primarily to generate additional funds, were contrary to
the essential purpose of the programs.

The new law addresses the criticism by directing the Secretary to develop a procedure
that more accurately reflects cost factors for the different types of summer programs.

CONSORTIUM INCENTIVES

Although the MEP statute had historically permitted states to join together in applying
for their basic grants, no states ever exercised the option. The new law, in an effort to
make programs more effective in states receiving smaller grants, provides monetary
incentives for doing so. States that join in consortia are eligible to receive additional
grants of up to $250,000 from a $1.5 million set-aside. Besides the financial incentive,
the statute provides that the Secretary "shall consult" with states receiving MEP grants
of under $1 million "to determine whether consortium arrangements with another State
or other appropriate entity would result in delivery of services in a more effective and
efficient manner."
