This annotated bibliography provides a listing of approximately 75 journal articles, reports, teaching models, symposia proceedings, monographs, and videotape recordings on inclusion of students with disabilities in regular education settings. The listing is organized by subject categories, including case studies, checklists, early childhood, fiscal implications, legal issues, legislation, philosophy, policies, position statements, research, staff training/preparation, strategies/implementation, teacher education/certification, videos, and miscellaneous. Eugene, OR 97403-1268

Descriptors: cultural diversity; survey; middle schools; attitudes; research; qualitative; peers; exclusion; administrators; case studies

Abstract: This article presents the results of a qualitative study which sought to discover how students at two middle schools view diversity and inclusive education and how those attitudes may be linked to the organizational structure of the cultures within each school. Although results of the study do not allow for the isolation of all variables which contribute to student attitudes, the findings lend themselves to the development of the following five hypotheses:

1) Exposure to inclusive practices at the elementary level of education develops a culture of belonging that extends to the secondary level of education;

2) A "culture of exclusion" may result from factors emanating from the home and community;

3) Certain structural elements with a school greatly impact on how students conceptualize diversity;

4) A culture that supports inclusion may result from structures that support inclusion; and

5) Exclusionary practices within a school impact negatively on how students characterize peers with disabilities; inclusionary practices within a school impact positively on how students characterize peers with disabilities.

The results of this study, as well as others cited by the authors, suggest that practices that limit or expand the opportunity for students to interact with peers with disabilities "can have a profound impact on the perceptions and subsequent behavior of students." Implications of the study's findings for administrator practice and preparation are discussed.
Case Studies

Descriptors: inclusion; disabilities; case studies; checklists; curriculum; middle schools; elementary; behavior disorders; teachers; teams

Abstract: This document presents six experiences of teachers who have worked in varied inclusive projects: "Teaming up for Middle School Success" (two Virginia teachers discuss an alternative approach to teaching seventh grade environmental science); "Everyone Can Be a Scientist" (a Massachusetts teacher talks about how the annual science fair has become a peer-drive exhibition where everyone participates and succeeds); "The Inclusive Writing Workshop" (Georgia elementary school teachers talk about teaming to instruct a writing course); "Partners in Inclusion" (Rhode Island high school teachers talk about collaborative partnerships; "Language Arts, Milan-Style" (Ohio elementary teachers discuss teaching language arts in an inclusive setting); and "Integrating Andy" (middle school teachers in Vermont talk about the integration of a student with severe behavioral problems). These teachers, most of whom work in team teaching pairs, describe what worked and what didn't during their inclusion experiences, and provide diagrams, checklists, and tables which might be of practical use to other educators.

Descriptors: case studies; philosophy; planning; staff training; least restrictive environment; parents

Abstract: This is an account of the efforts of the Clark County School District in Clark County, IN to implement an inclusive educational program beginning in 1989 that will culminate in 1997 with all schools in the county having the capacity to offer services to students with disabilities in their home school. The article covers planning, staff training, philosophy, parent involvement, and questions about the inclusion model. The author stresses that, at least in Clark County’s experience, the key to inclusion has been training offered to staff members throughout the school year.

In the conclusion, the author writes: "Inclusion in Clark County is a process that involves the staff, administration, and parents. It takes significant preplanning, training/inservice, implementation, assessment, revision, retraining, and replanning. . . . It's a process that doesn't end, only begins again and again as staff revises, retrains, and replans."

Descriptors: checklists; program evaluation

Abstract: This third edition of the PQI checklist is organized at four levels: 1) local education agency district indicators, 2) building indicators, 3) educational placement and related services indicators, and 4) individual student and program indicators. For each of the four levels, desirable program features are proposed that can be validated as most promising practices in educational and related services. The checklist is designed to be used by school district personnel, families, consumer groups, and researchers as a tool to both evaluate quality inclusive schooling and to guide program development. Ratings of between zero and 4 are given for each of 27 areas for a possible score of 108. Explanations for each area are given along with a scoring box and room for additional comments.

Descriptors: mild disabilities; moderate disabilities; early childhood; curriculum; IEPs; language

Abstract: Based on a field-tested program, this book presents a model for integrating children with mild to moderate disabilities into the regular preschool classroom. The system of instruction is developmentally sequenced for preschool-aged children and provides intervention for young children with disabilities.

The resource includes information in the following areas:

- A philosophy of inclusion based on theory and practice
- How to set up a classroom environment to reflect needs of all students
- C.H.I.L.L.D., the whole-child-based curriculum
- Daily routines that interweave skills and themes
- A reproducible lesson plan format
- IEP development linked to instructional planning and record keeping
- Natural facilitation techniques for language and interpersonal development
- A system for monitoring progress

Descriptors: early childhood; preschool; severe disabilities; research; program evaluation; projects

Abstract: This final report describes the Systematic Integrated Preschool Education Model (SIPE) project, which established classrooms to demonstrate an inclusion model for serving preschool children with severe disabilities. A total of 33 preschool children with identified developmental disabilities and their families in three Virginia school districts were served directly by this project. Six classrooms served as demonstration classes or replication sites. Both full inclusion and reverse mainstream models were implemented. The report provides information on goals and objectives of the SIPE Project, conceptual frameworks for the SIPE model, methodological and logistical problems, project impact, and evaluation findings. Tables provide project details and evaluation results. An appendix describes SIPE model components and validity data.

Descriptors: early childhood; community; planning; families; teams; parents; IEPs; teaching strategies

Abstract: This guide is a tool for educators to use when planning integrated services for young children with disabilities. The guide is designed to:

- Provide a framework for decision making, planning, and problem solving;
- Encourage collaboration, assure mutual understanding of the child's needs, and clarify roles and responsibilities for carrying out recommendations;
- Facilitate communication among parents, community-based early childhood staff members and early childhood special education personnel; and
- Provide a mechanism for collecting and storing information.

The guide includes sections on the following areas: benefits of integration, planning, team members, families, the IEP process, prioritizing objectives and planning accommodations. It also provides examples of teaching strategies and information to share with parents of children without disabilities.

Descriptors: early childhood; preschool; parents; Head Start; placement; eligibility; service delivery; finances

Abstract: This document outlines ways in which parents, public school personnel, child care providers, and Head Start grantees can work together collaboratively to serve children with disabilities in inclusive educational settings. Responsibilities for each collaborating party are discussed in the following areas: 1) individualized educational placements; 2) eligibility; 3) supervision of service delivery; and 4) financial responsibility.

Descriptors: finance; fiscal implications; transportation; staff development

Abstract: This document relates results of a study to determine the fiscal impact of inclusive special education programs and services in a special education cooperative of 19 elementary schools located in Clark County, IN. The study focused on direct and identifiable costs associated with inclusion service delivery: instruction, administration, and transportation. The authors conclude that the cost per pupil difference between inclusion and traditional service delivery programs is minimal. "This analysis strikes at the heart of policy and planning for children with special needs educational programs and services," the authors write. "The rule seems to be that the more students are included in a program in which all services are coordinated, the more value for the dollar is provided."

Additionally, the authors recommend that the state of Indiana lift from a weighted formula to finance education for students with disabilities to a formula that is not tied to categorical labels and that will not discourage inclusion. The authors recommend a flat funding concept that does not require categorical services and encourages flexible service delivery models.

Descriptors: finance; fiscal implications

Abstract: The funding structure for a unified educational system must follow the adoption of a single instructional and administrative system. Most funding structures are based upon categorical labeling of students. Fiscal incentives for including students with disabilities need to be incorporated while disincentives should be removed.

The major features of a unified funding system are listed and several funding approaches are discussed.

Descriptors: finance; teachers; personnel; paraprofessionals; transportation

Abstract: This document presents conclusions drawn from an exploratory study by the Center for Special Education Finance to determine the financial impact when a school district moves to inclusion. The Center studied resource allocations relating to staffing, transportation, facilities, equipment, and professional development in 12 school districts and how expenditures in those areas changed as inclusion was implemented. Although the authors conclude that inclusion does not cost more than other modes of service delivery—that in fact, it may be less expensive—the investigation suggests that initial implementation of inclusion can require additional resources. This reality, however, does not seem to be hindering the inclusion movement, the report concludes. Those districts that feel it is the right thing to do continue to implement inclusion with whatever resources are available to them. These administrators do not necessarily view inclusion as a way to save money or radically redefine special education.

Descriptors: finance; teachers; paraprofessionals; transportation; facilities; equipment; professional development

Abstract: The "costs" of inclusion, in terms of financial and human resources, are explored in this article. University of Maryland researchers interviewed special education directors, principals, and other administrators in 14 school districts practicing inclusion. These individuals identified five areas affected by the move to inclusion: teachers and instructional assistants; transportation; facilities; materials and equipment; and professional development. In addition to discussing each of these areas, the authors attempt to draw conclusions about the cost of each area to school districts. The results of a Minnesota Department of Education study which compares the cost of educating students with various disabilities with regular education students are presented. Results of the Clark County, Indiana school district's analysis of the cost of inclusion are also presented.

Descriptors: fiscal implications; finance; severe disabilities; related services; support; paraprofessionals; transportation; educational reform

Abstract: This article reports results of a longitudinal study of the cost of inclusion in Johnson City School District, Johnson City, New York. Results of the five-year study included the following:

- District costs were significantly less on an annual basis relative to comparable costs for out-of-district services;
- Although there was a significant increase in the number of students with severe disabilities during the five-year period, district costs were still well below that of out-of-district services;
- Related service costs doubled during the five-year period, linked with the increase in students with more intensive needs; and
- The number of and reliance on paraprofessional staff for support in the regular classroom significantly increased.

The authors theorize that the integrated nature of the service delivery system in the district helped them to contain their costs, and that the use of existing resources, such as transportation, rather than creating specialize, benefited all students and eliminated the need for additional expenses.

Although some educators may interpret the data derived from this study as leverage or reassurance for inclusive reform, the authors indicate that their intent was to clarify the issue, not to persuade. "Although cost is an inevitable bedfellow in discussions of educational reform," they write, "it should be recognized as a mediating, rather than controlling, variable. Reform can and should occur for other reasons—principally, to improve that which currently exists."

Descriptors: legislation; teachers

Abstract: This article relates details of legislation passed in West Virginia in March of 1994 that gives regular education teachers more involvement in meeting the needs of special education students in their classrooms. Provisions of the law were included as a part of the state Senate's education finance package. Those provisions give regular education teachers the authority to work with special education teachers to develop students' individual education plans; to reconvene the IEP committee during the school year if needed; and to receive training, additional staff, and resources to provide medical or other services required by the IEP. To insure accountability, faculty committees at each school are required to develop strategic plans to provide the district superintendent on managing the inclusion of special needs students.

**Descriptors:** newsletters; disabilities; best practices; serious emotional disturbance; behavior disorders

**Abstract:** This newsletter, published quarterly from June of 1992 through September of 1994, shares best practice experiences in inclusion ongoing in Vermont schools. Profiles of students and inclusive schools are highlighted with emphasis on practical ideas gleaned from experience. The newsletter focuses primarily on inclusion of students with emotional and behavioral disabilities in regular classrooms.

Abstract: This paper argues that the philosophic assumptions underlying full inclusion efforts for students with severe disabilities and other restructuring movements are actually barriers to "best practice" implementation, and an alternative perspective based on social relations is offered. Two different perspectives on disability, the "different person" perspective (which sees differences as inherent and immutable) and the "rights" perspective (which views all individuals as entitled to the same rights, services, and outcomes) are compared. Both perspectives are seen to result in a dilemma and be inappropriate to guide current restructuring. By contrast, the social relations perspective views differences in the context of relationships, which are expected to change with time or as the comparison basis changes. This perspective is applied to a case in which an emphasis on gender differences in provision of maternity leave is replaced with relation-based provision of parental of family leave. Other examples apply the social relations perspective to inclusion of students with severe disabilities and the provision of bilingual/bicultural education to all students and not just to the Spanish-speaking minority.

Descriptors: systems change; philosophy; finance; placement; vision; checklists

Abstract: This document includes a vision statement for the state's inclusive educational mission and recommended state, district, and building level practices and strategies to support that vision. The Special Education Advisory Council Ad Hoc Committee Studying Neighborhood Schools and Inclusion acknowledges that "attaining the vision and beliefs may be a slow process because of the emotional and professional investment in traditional educational systems and practices," but also believes that "once change is underway, however, it is likely to gain momentum and exceed the vision." The document also includes a school checklist and question-and-answer primer.

Descriptors: policies; philosophy

Abstract: This document analyzes inclusion policies developed by 18 national organizations. While no two organizations have defined inclusion exactly alike, all have taken a position on the issue with various recommendations for definitions, implementation, and standards. Questions asked of the organizations included: A) Does the organization's statement define inclusion? How? B) Does the organization's statement include its goal of inclusion (i.e., physical placement with nondisabled peers, employment, community success, etc.)? What is it? C) Does the organization's statement see a need for a "continuum of placements"? If yes, what is the basis/criterion for removing a student from the mainstream? D) Does the organization's statement mention requirements regarding the qualifications for any or all personnel? Training for any or all personnel? E) Does the organization's statement take other involved persons/areas (i.e., parents, community agencies, local community settings, other in-school programs) into consideration? How? F) Does the organization's statement intend for its position on inclusion to apply to ALL students with disabilities? If not, what is the basis for making the distinction between those to whom it applies and those who are to be exempt? The document includes a copy of the inclusion survey, an analysis of findings, and a matrix illustrating responses.

Descriptors: least restrictive environment; policies; local education agencies; funding; teacher training; technical assistance; monitoring; placement; general education; families

Abstract: This document was written to establish a clear policy direction for the Board of Regents and the New York State Education Department regarding least restrictive environment and to describe how local education agencies and the State will implement this federal and state requirement.

Eight major goals are identified to insure that each student with a disability in the state receives a free appropriate public education (FAPE) in the least restrictive environment. These goals are 1) strengthening and expanding general education services; 2) funding reform; 3) supporting a continuum of alternative placements; 4) promoting statewide equity and access; 5) increasing general education opportunities; 6) strengthening the role of parents and guardians; 7) focusing on results; and 8) transitioning students back to general education.

The paper also defines steps to be taken by the state education department to support the educational community in accomplishing these goals. The steps are in the following areas: 1) funding; 2) planning time; 3) preservice and in-service training; 4) programs and options; 5) consultant teacher services; 6) technical assistance; and 7) monitoring.

Abstract: The authors of this article—educators who were featured in the documentary "Educating Peter"—respond to the accusation made by Al Shanker, President of the American Federation of Teachers, that inclusion will be disastrous for children with disabilities and their classmates. Refuting Shanker's idea that the type of education provided to Peter was expensive and rare, the authors write: "We believe that our program is not unique, not expensive, nor extremely difficult to do." Issues raised by Shanker, such as language instruction, costs, discipline, staff training, and elimination of special services are individually addressed by the authors with inclusion consistently portrayed in a positive way. "Exciting classroom settings where all children learn together with their collective strengths and weaknesses are a must for all schools," they write. "ALL children deserve this opportunity and we believe when segregation is eliminated, ALL students will benefit."
Position

Descriptors: position; philosophy; behavior disorders; serious emotional disturbance

Abstract: This statement of the Council for Children with Behavioral Disorders states that while the successful integration into the regular classroom represents a "reasonable expectation" for some students with behavioral disorders, it is important to maintain a range of service delivery options that have been shown to benefit students with emotional/behavior disorders. CCBD maintains that some alternative arrangements are required for those students who are so disruptive or otherwise demanding of the finite amount of time, energy, and resources of general educators that the instructional needs of non-disabled students are significantly impaired.

Descriptors: position; placement; mental retardation

Abstract: This sequel to the 1992 Arc Report Card to the Nation on Inclusion of Students with Mental Retardation reviews placement of children with disabilities and ranks states in the following areas: 1) the percentage of students with mental retardation served in regular classes; 2) the percentage of students with mental retardation served in resource rooms; 3) the percentage of students with mental retardation served in separate classes; 4) the percentage of students with mental retardation served in separate schools; and 5) a weighted composite ranking of inclusion scores based upon placement. Vermont had the highest inclusion score of any state for the 1990 - 1991 school year, with 66 percent of students with mental retardation receiving educational services in regular classrooms. Vermont was followed by Wyoming, Idaho, Montana, and Minnesota. The lowest scores were given to New Jersey, New York, the District of Columbia, Illinois, Maryland, and Florida.

The document states that while the data indicate that "slow progress" is being made, the Arc calls on the federal government, state governments, advocacy organizations, and leaders of the nation's schools to continue efforts to achieve the inclusion of children with mental retardation throughout the country by the year 2000.

Descriptors: position; placement; physical disabilities

Abstract: In this statement, OSERS Director Judy Heumann calls for the inclusion of more students with disabilities in regular classrooms, especially those with physical disabilities. Although she concedes that there may be some children who would not be appropriately served full time in the regular classroom, she argues that "the regular classroom, with the necessary supports in place, is where most disabled students should be. When 50 percent of physically disabled students are still receiving their education in some type of separate setting, there is a problem," she writes. Heumann calls for inclusion of students with disabilities in their neighborhood schools to become "part of the broader educational reform in this nation." Her comments end with tips on how to make inclusion work and what inclusion is not.

Descriptors: teacher preparation; collective bargaining; finance; staff development

Abstract: This report includes findings and recommendations of the Inclusive Education Recommendations Committee in four areas considered critical to the state's implementation of inclusive education: 1) research and model programs; 2) rules, collective bargaining, policy and finance; 3) teacher preparation and staff development; and 4) school improvement and full continuum of programs and services. The report identifies 26 barriers to inclusive education, followed by 85 recommendations that Committee members felt would remove the barriers and facilitate the implementation of inclusive education in Michigan's schools.

Descriptors: hearing impairment; deafness

Source: The author explores issues surrounding the choice of the best environment for educating deaf students, given the unique needs of students with hearing impairments. Included are nine specific suggestions to be considered by educators before attempting to provide inclusive educational programming for students who are deaf.

Descriptors: policies; placement; disabilities; least restrictive environment

Abstract: This policy statement supports the concept of least restrictive environment and the continuum of alternative placements to meet the individual needs of students with disabilities. NYSUT agrees that additional services should be provided to support students with disabilities placed in regular education classrooms, "but not at the cost of dismantling the continuum of alternative placements." The organization maintains that the educational needs of regular education students must be considered in the operation of inclusion programs, and inclusion should not be allowed to "work to the detriment of the general education student." Therefore, placement decisions should be based not only on the educational benefit to the disabled student but also on the judgment that the placement will not adversely affect the education of the regular education students in the classroom. NYSUT states that it does not support the use of regular education classrooms as the only placement for students with disabilities; nor does it support the placement of students with disabilities in the regular education classroom if that placement is based on cost-saving considerations.

Descriptors: inclusion; disabilities; parents

Abstract: This article describes the ACB (All Children Belong) project, funded through September of 1996, which works to promote inclusion. Using a trainer-of-trainers model, the ACB staff trains trainers from participating Parent Training and Information Centers operating in 42 states. These PTI trainers train and support parents in the benefits of inclusion in school and community life. Project materials and activities are described.

Descriptors: cultural diversity; survey; middle schools; attitudes; research; qualitative; peers; exclusion; administrators

Abstract: This article presents the results of a qualitative study which sought to discover how students at two middle schools view diversity and inclusive education and how those attitudes may be linked to the organizational structure of the cultures within each school. Although results of the study do not allow for the isolation of all variables which contribute to student attitudes, the findings lend themselves to the development of the following five hypotheses:

1) Exposure to inclusive practices at the elementary level of education develops a culture of belonging that extends to the secondary level of education;

2) A "culture of exclusion" may result from factors emanating from the home and community;

3) Certain structural elements with a school greatly impact on how students conceptualize diversity;

4) A culture that supports inclusion may result from structures that support inclusion; and

5) Exclusionary practices within a school impact negatively on how students characterize peers with disabilities; inclusionary practices within a school impact positively on how students characterize peers with disabilities.

The results of this study, as well as others cited by the authors, suggest that practices that limit or expand the opportunity for students to interact with peers with disabilities "can have a profound impact on the perceptions and subsequent behavior of students." Implications of the study's findings for administrator practice and preparation are discussed.

Descriptors: rural; elementary; collaboration; teachers; attitudes; regular education; special education

Abstract: During the 1992-93 school year, Billings School District #2 implemented full inclusion of students with disabilities at Garfield Elementary. All students were placed in regular classrooms, and special education teachers began collaborating with regular educators in the regular settings. Other interested schools in the district implemented inclusion on a more limited basis. Achievement test data demonstrated consistent academic gains made by regular education students. Students progressed toward IEP goals in all but one or two cases, and phenomenal 2- to 3-year gains were realized by several. Overall teacher attitudes tended to be neutral or slightly negative, while attitudes of teachers involved in inclusion were positive.

Billings inclusion efforts are useful to rural administrators seeking guidelines for inclusion and to regular and special teachers seeking strategies for collaboration and instruction.

Descriptors: mild disabilities; severe disabilities; placement; research; socialization; IEPs

Abstract: This article discusses the results of a program evaluation study to investigate the effects placing students with severe disabilities in general education versus special education classes in California. Sixteen elementary students, eight receiving educational services in regular classrooms and eight in special education classes, participated in the study. Two students were selected from each program, one experiencing "more disability" and the other student experiencing "less disability." Among the findings of the study were the following:

- IEP objectives written for the students with less disability included in regular classrooms included significantly more instruction of basic skills than those written for students placed in special education classrooms;

- IEP objectives written for the students with less disability included in regular classrooms included less recreation/leisure activities and more academic activities;

- Students with less disability included in regular classrooms were less often alone and more often with others than their peers in special education classrooms;

- Students included in general education classrooms spent more time in integrated activities in their classrooms, school, and community;

- There were no significant differences between the students placed in regular or special education classrooms on any measure of affective demeanor; and
• Students included in regular classrooms initiated more social interactions than those in special education classrooms.

Results of the study, the authors write, "suggest that there are important differences in the quality and curricular content of written educational programs for children with disabilities who are full-time members of general education classrooms; and there are significant differences in their levels of engagement in the activities of the school day, the type of activities in which they are engaged, the type and level of participation in integrated school environments, and the degree to which they initiate and engage in social interactions with peers and adults." The results serve as a preliminary investigation of the effects of inclusion; additional research is needed to validate observed outcomes of this particular study.

Descriptors: secondary; teachers; junior high; rural; urban; research

**Abstract:** This study describes how two junior high and secondary schools, one rural and one urban, in Nova Scotia, Canada have attempted to accommodate students with widely diverse needs in regular classrooms. The focus of the study was on the ways teachers have adapted to structural changes that have taken place in the school. Primarily through analysis of teacher interviews, researchers conclude that "teachers and administrators must challenge the way in which professional practice has been traditionally defined and carried out" and confront barriers to inclusive educational practices. A second implication of the study is the acknowledgment that teaching widely diverse groups of students is shared work and necessitates the structural configuration of the school to change in order to "accommodate the common time for the necessary planning, problem solving, and creating new knowledge that is essential for successful inclusive educational practice."

Descriptors: disabilities; behavior; academic performance; research

Abstract: This article reports the results of a study conducted to determine the effect of the inclusion of students with disabilities on the academic performance and behavior of their regular education peers. The study was conducted in an elementary school of 640 students in rural Minnesota. The school has five students with varied disabilities included in regular education classes who were formerly placed in self-contained special education classes. Standardized test and report card measures used to determine impact revealed no significant negative academic or behavioral effects on classmates who are educated in classes with students with disabilities.
(ERIC Reproduction Service No. ED 370 928)

Descriptors: philosophy; teachers; research; surveys; preparation;
communication; cooperative learning; attitudes

Abstract: The issue of inclusion has been at the forefront of attention in
education, and has been widely discussed and debated. Since
teachers will be the primary service deliverers of whatever
inclusion practices are adopted, this study was conducted in an
attempt better to understand teachers' understanding and
perceptions of inclusion. Focus group interviews were used to
solicit teachers' views. Subgroups of teachers who were targeted
include special education teachers (N=25); general education
teachers (N=25); Chapter I teachers (N=8); and teachers of the
gifted (N=15). Interview results revealed passionate responses
from teachers, the majority of whom had strong, negative
feelings. Teachers felt that decision-makers were out of touch
with classroom realities. They identified factors that would
affect the success of inclusion such as class size, inadequate resources,
the extent to which all students would benefit, and lack of
adequate teacher preparation. Two topics were identified as
necessary if inclusion were to be successful—communication
among teachers and use of cooperative learning grouping.
Informants' responses formed the basis for guidelines to
implement school-based inclusion models.

Descriptors: staff training; systems change; planning; socialization

Abstract: This series is designed to prepare inclusive education specialists in local and intermediate school districts to provide and coordinate planning, training, and support for the inclusion of students with diverse needs in regular education classrooms. The series consists of the following five guides:

- Systems Change that Supports All Students
- Components of Inclusive Education
- The Planning Process for Inclusive Education
- Instructional Accommodation in Inclusive Education
- Social Inclusion

Each guide includes flowcharts, activities, transparency and handout masters, forms, and a "tool box" of resource information.

Descriptors: teachers; staff training; preparation; training; elementary; secondary

Abstract: This article reports the results of a study to identify competencies, skills, and knowledge needed by elementary and secondary teachers to work with students in inclusive educational settings. A focus group developed a list of 11 areas students learning to become teachers must be familiar with in order to teach in inclusive classrooms. These recommendations are discussed in the article.
Strategies/Implementation

(ERIC Reproduction Service No. ED 367 078)

Descriptors: secondary; planning; severe disabilities; curriculum; checklists

Abstract: This paper describes the development and establishment of an inclusive education program on a junior high school campus. Although this documentation is for secondary programming, with an emphasis on severe disabilities, these "phases" can be generalized to other program areas and levels of education. During phase one, a functional, community-based curriculum was delivered to students with severe disabilities at a special school site. Gradual integration for recess, lunch, and assemblies was implemented. During phase two students with severe disabilities were assigned to regular classes and community instruction with appropriate support. The third phase involved a refocusing so that all special education program areas are addressed within the framework of inclusion. A checklist suggests indicators for the three phases of the inclusive school process. Handouts and visual materials accompany the presentation of this paper.

Descriptors: physical education; checklists; assessment; curricular adaptation; disabilities; evaluation

Abstract: This guide offers step-by-step instructional and curricular strategies to help educators adapt programs to meet the physical education needs of all students. The book includes game and activity modifications as well as forms and checklists to provide assistance in program planning, individualized assessment, and ongoing evaluation of programs and students.

Descriptors: assessment; regular education; special education; teachers; collaboration; planning

Abstract: This article discusses changes that have occurred in the field of assessment and emphasizes the need for special and regular education teachers to consult and collaborate with each other to develop and implement co-assessment procedures. Opportunities for planning assessment, designing assessment, administering assessment, interpreting assessment results, evaluating assessment, and reporting assessment results are outlined. A Co-Assessment Plan form is illustrated.

Descriptors: inclusion; disabilities; case studies; checklists; curriculum; middle schools; elementary; behavior disorders; teachers; teams

Abstract: This document presents six experiences of teachers who have worked in varied inclusive projects: "Teaming up for Middle School Success" (two Virginia teachers discuss an alternative approach to teaching seventh grade environmental science); "Everyone Can Be a Scientist" (a Massachusetts teacher talks about how the annual science fair has become a peer-drive exhibition where everyone participates and succeeds); "The Inclusive Writing Workshop" (Georgia elementary school teachers talk about teaming to instruct a writing course); "Partners in Inclusion" (Rhode Island high school teachers talk about collaborative partnerships; "Language Arts, Milan-Style" (Ohio elementary teachers discuss teaching language arts in an inclusive setting); and "Integrating Andy" (middle school teachers in Vermont talk about the integration of a student with severe behavioral problems). These teachers, most of whom work in team teaching pairs, describe what worked and what didn’t during their inclusion experiences, and provide diagrams, checklists, and tables which might be of practical use to other educators.

Descriptors: regular education; restructuring; fiscal implications; categorization; identification; referral; instructional strategies; evaluation; staff development

Abstract: This information packet identifies issues in the interface between special and regular education and highlights examples of regular education/special education cooperative action. Major issues discussed regarding the restructuring of regular and special education into a more unified educational system include categorization, mainstreaming, instructional practices, and funding. Principles for developing an ideal interface between the two systems are identified, focusing on leadership and a shared commitment to education of students with disabilities. Exemplary practices in the areas of identification, referral, instruction/intervention, evaluation, and staff development are examined.
Follow the leader: Principals discuss the attitudes that made inclusion work in their schools. (1994, September). Inclusive Education Programs, 1, 4 - 7.

Descriptors: principals; leadership; philosophy; collaboration; mentoring; support; communication

Abstract: Principals of inclusive schools in Idaho, Illinois, Virginia, and Washington interviewed for this article share their philosophies, strategies, and experiences as leaders of schools that include all students in regular classrooms. Acceptance, good communication, camaraderie, collaboration, flexibility, mentoring, and support are keys to successful inclusion discussed by these school leaders.
Idol, L. (1994). *Key questions related to inclusion and collaboration in the schools.* (ERIC Reproduction Service No. ED 370 331)

Descriptors: planning; collaboration; funding; parents; philosophy; support; teachers; attitudes; service delivery; program evaluation; staff preparation

Abstract: This paper presents 15 questions for educators and administrators to ask themselves in designing and implementing inclusive and collaborative school programs. Questions, and the accompanying answers, cover such issues as funding, parental support, district philosophy, support for teachers, service delivery, teacher attitudes, regular education student and staff preparation, and program evaluation. Together, the questions are intended to guide the planning process and create a solid proactive foundation for the collaborative development and implementation of inclusive education programs.
Strategies/Implementation

Descriptors: early childhood; visual impairments; hearing impairments; deaf-blindness; traumatic brain injury; serious emotional disturbance

Abstract: This article, included in the "Reference Shelf" supplement to this edition of SESA, offers practical strategies for working with students with varying disabilities in inclusive classrooms. Disabilities addressed by the author include visual impairments, hearing impairments, deaf-blindness, traumatic brain injury, and serious emotional disturbance. A section is also devoted to ideas for working with young children with disabilities.

Descriptors: planning; restructuring; vision; mission; outcomes; accountability; curriculum; instruction; staff development; finance; leadership

Abstract: This paper reports the results of a two-year study by the Center for Policy Options in Special Education on the restructuring of special education programs in local school districts. Five critical areas of focus are identified for schools: vision and mission; outcomes and accountability; governance; curriculum and instruction; and staff development. Options for each focus area are discussed. Challenges and tensions which must be addressed in the restructuring process are outlined.

Descriptors: program models; instructional practices; grades; disabilities

Abstract: This article describes six program models, six classroom practices, and 12 grading options which may be combined in different, creative configurations to meet the diverse needs of students with disabilities. The six models described in the article include collaborative support, blended class, clustered aides, three part schedules, schoolwide support center, and houses. Classroom practices include parallel teaching, remedial teaching, station teaching, supplemental teaching, co-teaching/collaborative teaching, and team teaching. And the 12 grading options described are an IEP plan, written report, portfolio approach, three grade system, averaged grades, percentage system, curriculum-based measurement, pass/fail, daily grades, contract system, adjusted grades, and group grading. The varied options presented in this article illustrate the flexibility possible in inclusive education.

Descriptors: cooperative learning

Abstract: This study examined what occurs in cooperative learning groups that include students with mild disabilities in grades 3 - 6. Teacher interviews were combined with observations of 10 special and 10 regular education students' behavior in cooperative learning groups which used the Cooperative Integrated Reading and Composition model. Results are discussed in terms of who is providing help to the student with disabilities and how often, what contributions the student makes to group tasks, the assignment length, the teacher's role in successful participation of students with disabilities, teacher expectations for student competence, and the process of setting up expectations. The paper concludes that successful use of cooperative learning as an inclusion strategy will require (1) rethinking and reorganizing of the ways special education provides resources, services, and modifications for students with disabilities; and (2) sustained effort of regular class educators to raise the status of contributions by children with disabilities and to establish and maintain norms of participation and helping.

Descriptors: planning; elementary

Abstract: The authors of this article present a six-phase strategic planning model for implementation of inclusion. The phases of this strategic planning cycle diagrammed and discussed include: a) objective setting; b) criteria setting; c) program planning; d) operationalization; e) evaluation; and f) valuing. The model is applied to an elementary school and implications are drawn.
Strategies/Implementation

Descriptors: superintendent; planning; principals; site-based management; vision; finance; parents; teacher training

Abstract: Based on interviews, surveys, and focus groups of educators, advocates, parents, and students across the country, the author identifies six critical principles for school administrators to consider as they implement an inclusive approach in schools.

- Superintendents lay the foundation for inclusion in the school district;
- Principals are key in creating inclusive schools;
- Site-based management provides a window of opportunity for principals to create inclusive schools;
- Planning is critical in moving a district toward inclusion, and administrators advise against moving too fast;
- Clear, strong lines of communication are essential in supporting the ongoing success of inclusion, district wide and in individual school buildings; and
- Local boards of education can be key actors in creating a district wide vision for inclusion.

Tips on involving parents, building support with the board of education, training teachers, developing budgets, and handling opposition are discussed.

Descriptors: severe disabilities; mild disabilities; teachers; teams; collaboration; communication

Abstract: This document describes the inclusion strategy adopted by Joshua Intermediate School, located in a rural community near Fort Worth, Texas. The school uses inclusion to address the needs of special education students while allowing opportunities for success in the regular classroom through co-teaching experiences between general and special staff. Inclusion has evolved gradually at Joshua Intermediate School, starting with one grade level and expanding. Students with more severe disabilities start by being included in nonacademic subjects, and gradually add content areas. Students with mild to moderate disabilities are evenly divided among the teams of teachers, who strive for flexibility, communication, cooperation, and collaboration. Each team develops its own inclusion schedule based on needs of students and preferences of the teachers. This school finds inclusion advantageous to teachers, students, and parents.

Descriptors: outcomes; disabilities; testing; adaptations

Abstract: The authors of this article offer recommendations for building accountability systems based on outcomes and performance that include all students. Four suggestions are highlighted:

- Make an up-front commitment to include all students in your system of accountability for outcomes and student performance;

- Promote inclusion of all students in assessment by making reasonable accommodations;

- Be broad when setting up your outcomes and performance levels; and

- Build efforts on existing data collection.

Descriptors: early childhood; best practices; mentoring; systems change; training; collaboration

Abstract: This article describes three successful inclusion programs, two in Chicago and one in Minnesota. The West Chicago Elementary School District #33 attributes the success of its inclusion program to the courage to try something new, the commitment to do what is best for children, and cooperation, consultation, and collaboration among all who are involved. The Early Choices Program has developed partnerships between Chicago public schools and community-based preschools and day care centers. Also profiled is the Inclusion Mentorship Program at the University of Minnesota. The staff development project is one of several within the systems change grant Together We're Better. The program offers regional participants the opportunity to exchange ideas, support one another, and share successes and visions.
Placing Learners Under Guidelines for Inclusion (PLUG-IN) Project.
(SpecialNet message, CSPD Board, March 29, 1994).

Descriptors: teacher education; teacher certification; regular education; personnel preparation

Abstract: This message describes a personnel preparation program offered at the University of North Carolina-Charlotte which will result in a professional degree and/or certification in cross-categorical special education for 48 special education and 48 regular education teachers employed in Charlotte-Mecklenburg Schools who are teaching in schools that are developing full inclusion programs. The project is modifying the cross-categorical certification and degree program to prepare these teachers for collaboration, interactive teaming, and co-teaching.

Descriptors: teacher education; curriculum; elementary; secondary

Abstract: The goal of Project Partnership was to determine the competencies, skills, and knowledge needed by elementary and secondary teachers to work with students in an inclusive educational setting. This document discusses 11 broad competencies prepared by the Project for university and college teacher training programs to add to their curriculum to accommodate the needs of the inclusive classroom.

Descriptors: disabilities; teams; planning; socialization; philosophy

Abstract: This issue of *The Video Journal of Education* explores the philosophy, rationale, and tools of inclusion used to broaden learning opportunities for all students. The video features Jack Pearpoint and Marsha Forest, co-directors of the Center for Integrated Education and Community in Toronto, Ontario, with Judith Snow, lecturer and author. Teachers, administrators, and students discuss the positive values of inclusion. The package includes two videotapes, a soundtrack audio tape, and a teacher guidebook.

Videotape program one (33 minutes) highlights the following concepts:

- The philosophy and rationale of inclusion is that all children have a right to a quality education and they learn better when they are included with their peers.

- It is not the function of education to sort and label kids for the purpose of excluding them from learning opportunities available to others.

- The interactions and sharing that can occur with children in school is what makes inclusion rich and rewarding for everyone.

- The key ingredient for successful inclusion is teachers collaborating in teams.

- It is natural for teachers to feel frustration at not knowing how to help children with special needs. Staff development and training will help solve this problem.

- The three biggest obstacles to inclusion are fear, complacency, and control.
Videotape program two (33 minutes) emphasizes the following concepts:

- At the heart of inclusion is the belief that people are the most important thing in the world.
- The tools of inclusion help us all live better with one another.
- Three specific tools of inclusion are the Circles of Friends, the MAPS Process, and the Path Process.
- Teaming and planning for inclusion.
- The inclusive classroom.
- Moving students from isolation to interaction.
- Recognizing and developing the giftedness within all children.

Descriptors: definitions; instructional practices

Abstract: This article reprints the definition of inclusion developed by members of Colorado's Special Education Services Unit. The definition defines what inclusion means at the building level as well as the classroom level, including 18 different strategies to build inclusive environments. Director of Special Education Fred Smokoski says the definition goes beyond merely defining inclusion to provide a broader vision of the "way we think schools ought to be."

Descriptors: public relations; rural; parent involvement; community; philosophy; attitudes

Abstract: This public relations guide provides step-by-step instructions on implementing an effective, low-budget public relations campaign on the issue of inclusion. The follow chapter topics are included: Promoting an Image; Language, Attitudes and Disability; Publicity; Parent Involvement; Community Organizations; Employer/Business Participation; School Personnel Participation; Brochures and Newsletters; Speakers Bureau; and Rural Communities. Although many of the sources listed in the guide are specific to Utah, the information can be applied to other states as well.

Abstract: This analysis of the U. S. Department of Education's 16th Annual Report to Congress on the Implementation of IDEA indicates that 35.7 percent of the nation's students with disabilities were placed in regular education classrooms for 80 percent of the school day during the 1991-92 school year. This represents an 8.4 percent increase over the previous school year.

The analysis also notes that although placement of students with disabilities in regular education classrooms increased, funding for special education did not significantly increase. The average allocation during the fiscal year 1993 was $411 per student—only $1 more than the previous school year.

Descriptors: policies; philosophy; regular education; special education; positions; deafness; blindness

Abstract: The essays in this book analyze the movement toward full inclusion of students with disabilities from a perspective that questions and cautions, lest the movement produce disappointment by "crushing" the very students it was supposed to defend. Part one places the full inclusion movement in historical context; Part two examines policies and commentaries; Part three discusses disability-specific issues, including blindness and deafness. Inclusionary placement for ALL students is questioned by many of the 15 authors whose essays are included in this collection. Statements from several disability related associations are included in the Appendix.

Descriptors: model programs

Abstract: This article profiles nine schools and school districts considered exemplary in their inclusion efforts from a field of 32 nominees reviewed by the Council of Administrators of Special Education. Schools and school districts in Bloomington, IN; Clinton, NJ; Pittsburg, PA; Ontario, Canada; Chicago, IL; Ontario, OR; Provo, UT; and Williston, VT are included. Profiles are one to four paragraphs in length.
Snart, F., & Vaselenak, L. (1993). Integration of students with special needs into educational settings: An annotated bibliography. (ERIC Reproduction Service No. ED 358 616)

Descriptors: bibliography; resources

Abstract: This annotated bibliography lists close to 1,200 journal articles published between 1985 and 1991 drawn primarily from the ERIC and PsychLit databases. Primary attention has been given to articles discussing the needs and methods of teaching students with mild to moderate disabilities. Specific topics include assessment, attitudes, cross-cultural issues, early education, adult education, secondary education, behavior problems or autism, communication problems, hearing impairments, cognitive disabilities, learning disabilities, physical disabilities, visual impairments, English as a second language, legal issues, program evaluations, physical education, social factors, teacher preparation and inservice, teaching methods, use of music, and use of computers and other technology. Entries are arranged alphabetically by author; a subject index is included.
Describers: case studies; resources; legal issues; definitions; positions; checklists

Abstract: This document is a compilation of case studies of successful integration and various resources on the topic of inclusion. The four case studies are preceded by a list of factors which contributed to the success of the inclusion efforts described.
