This catalog incorporates information gathered between 1987 and 1989 for inclusion into the National Park Service's Listing of Education in Archaeological Programs (LEAP) computerized database. This database is a listing of federal, state, local and private projects promoting positive public awareness of U.S. archaeology—prehistoric and historic, terrestrial, and underwater. The listing categorizes nearly 1,200 individual LEAP records by major product categories: posters, brochures, exhibits/displays, public participation programs, school education programs, audios/videos/films, broadcasts, press articles, popular publications, and community outreach. This catalog is based on product descriptions, and all the reported public awareness activities are listed by their general programs (e.g., school education programs, community outreach) with a project summary and an identification of sponsoring agency or organization and contact person. Cross referenced indices point to products by detailed categories, sponsoring agencies, or projects/programs. (EH)
Listing of Education in Archeological Programs

Department of the Interior • National Park Service • Archeological Assistance Division • P. O. Box 37127 • Washington, DC 20013-7127
Mission: As the Nation's principal conservation agency, the Department of the Interior has responsibility for most of our nationally-owned public lands and natural and cultural resources. This includes fostering wise use of our land and water resources, protecting our fish and wildlife, preserving the environmental and cultural values of our national parks and historical places, and providing for the enjoyment of life through outdoor recreation. The Department also promotes the goals of the Take Pride in America campaign by encouraging stewardship and citizen responsibility for the public lands and promoting citizen participation in their care. The Department also has a major responsibility for American Indian reservation communities and for people who live in Island Territories under U.S. Administration.

James M. Ridenour
Director of the National Park Service.

Manuel Lujan, Jr.
Secretary of the Interior.
LISTING OF EDUCATION IN ARCHEOLOGICAL PROGRAMS:
THE LEAP CLEARINGHOUSE

1987-1989 SUMMARY REPORT

Edited by
Patricia C. Knoll

NATIONAL PARK SERVICE
U.S. Department of the Interior
1990
This is a catalogue of the information incorporated between 1987 and 1989 into the National Park Service's Listing of Education in Archeological Programs (LEAP) computerized database. This database is a listing of Federal, State, local, and private projects promoting positive public awareness of American archeology—prehistoric and historic, terrestrial and underwater.

The listing categorizes the activities among adult education, articles, audiotapes, brochures, ceremonies/dedications/commemorations, classroom presentations, community outreach, exhibits, films, newspaper articles, popular publications, posters, press releases, school curricula (elementary, middle, secondary), public service announcements (PSAs), radio spots/interviews, slide presentations, television spots/interviews/programs, tours, videotapes, and volunteer involvement.

This catalogue is based on product descriptions, and all the reported public awareness activities are here listed by their general programs (e.g., school education programs, community outreach) with a project summary and an identification of sponsoring agency or organization and contact person. Cross-referenced indices point to products by detailed categories, sponsoring agencies, or projects/programs.
Primary acknowledgement must be made of the many individuals and organizations who designed, implemented, and then reported on the public awareness projects compiled in this database. They have been significant contributors to the preservation of our archeological heritage.

The Federal archeology program’s interagency Public Awareness Working Group (PAWG) identified the need for the LEAP database, and many of its members contributed information to it. They encouraged their agencies to participate in the information collection, which was an essential element to clearinghouse development. Specifically, PAWG member Edward Friedman (then of the Minerals Management Service, now of the Bureau of Reclamation) was of significant help in translating the original questionnaire into a computerized database structure.

Jerry L. Rogers, National Park Service Associate Director for Cultural Resources, has been supportive of the Clearinghouse development since its initiation. Bennie C. Keel, former U. S. Department of the Interior Departmental Consulting Archeologist, Victor Carbone, late Chief of the Archeological Assistance Division (AAD), and current AAD Chief Francis P. McManamon were significant in the development of the LEAP concept and clearinghouse structure and operation. The National Conference of State Historic Preservation Officers has provided critical project contract staff support (Patricia C. Knoll and Lawrence Karr).

Many past and present members of the National Park Service’s (NPS) Archeological Assistance Division (AAD) have contributed to LEAP over the past several years. Francis P. McManamon, George S. Smith, and Ruthann Knudson have sequentially served as project managers and made various contributions to questionnaire and database development, information requests, and report preparation. Marilou Reilly developed the original questionnaire, including the product classification, after discussion with several PAWG members and AAD staff. Brooks Vaughn (then NPS Information & Data Systems Division staff member) and Deborah Katz modified the original database computer format. Patricia C. Knoll has served as LEAP Coordinator since 1988, providing data input and records management amidst a varying array of project managers and computer consultants. Veletta Canouts has provided primary staff support for the LEAP computerized management since 1988, and Lawrence Karr has been a consultant to AAD to develop and implement the LEAP data management system. Jane Caulton and Jean Anderson assisted the data input and editing/proofreading effort. Juliette G. Tahar, AAD publication manager, designed the cover and the page layout and coordinated production of the volume.

Listing of Education in Archeological Programs (LEAP) is a computerized clearinghouse to identify archeological information about American public educational products and programs. This database has been developed by the U.S. Department of the Interior, National Park Service (NPS), Archeological Assistance Division (AAD), in cooperation with Federal, State, and local agencies and private organizations throughout the United States.

The popularity of movies such as the 1980s' "Indiana Jones" series has romanticized archeology and brought it to the attention of the American public. This heightened awareness can be very positive. However, problems arise when people do not realize that their own explorations can permanently damage archeological sites. They are not aware that artifacts and other remains removed from their original depositional context lose much of what they can tell about the past. In addition, many people tend to collect the most attractive artifacts (e.g., projectile points, decorated ceramics) without realizing that the loss of the artifact, much less an entire class of artifacts from a site or even region, can greatly diminish what can be learned about an archeological site as a whole. A significant contribution to the solution to these problems is better public education, through a variety of materials and methods that are positively attractive.

1.1 Clearinghouse Contents

The LEAP Clearinghouse contains, but is not limited to, information on:

- Projects or programs with avocational organizations and volunteers involving archeological survey, testing, excavation, or interpretation;
- Projects or programs with museums, academic institutions, historical societies, etc., for exhibits or displays about archeological resources; and
- Brochures, posters, videos, radio and television coverage, and other products of these efforts.

The LEAP Clearinghouse is intended as a reference for Federal, Tribal, State, and local agencies, museums, societies, educational organizations, and individual archeologists seeking information on existing projects, programs, and products to increase public awareness of archeology.

1.2 LEAP Clearinghouse History

In August 1985 and July 1986, NPS Associate Director for Cultural Resources Jerry L. Rogers, and Department of the Interior Departmental Consulting Archeologist Bennie C. Keel hosted interagency meetings to discuss improving implementation of the Archaeological Resources Protection Act of 1979 (ARPA). Participating in those meetings were cultural resource and law enforcement personnel from a wide variety of Federal agencies. One of the primary concerns raised by the participants was archeological looting and vandalism on public lands. To assist in combatting this problem, it was suggested that a clearinghouse of information about Federal archeological activities, particularly public education efforts and anti-looting initiatives, be developed.

ARPA Section 13 requires that the Secretary of the Interior annually report to Congress
on the Federal agency activities carried out under ARPA, including cooperation with private individuals (required by Section 11), and make recommendations of needed program changes or improvement. This annual report is prepared by the National Park Service acting for the Secretary, under the direction of the DCA with the support of the AAD. In the mid-1980s all these individuals and offices had concerns about the public’s involvement in protecting American archeological materials from looting and vandalism (i.e., enforcement of ARPA), and the lack of information about the present extent of that involvement (and related needs for additional agency awareness efforts). The summer 1985 and 1986 inter-agency meetings made it clear that these concerns were shared throughout the U.S. Federal archeology program, and that there was a primary need for information about the extent of vandalism and agency efforts to involve the public in resource protection.

Following up on all of the concerns and suggestions from the meetings, and in support of annual reporting needs, in November 1986 U.S. Department of the Interior Assistant Secretary for Fish and Wildlife and Parks William Horn invited representatives of the Federal archeology program to meet specifically to discuss archeological public awareness initiatives. Participants at this meeting again expressed the need to establish a clearinghouse for information on public awareness programs, projects, and products used to inform the public about archeology. The AAD agreed to establish and maintain such a Clearinghouse, to support the overall Federal archeology program and to provide a better basis for the annual program evaluation and reporting effort.

National public archeological education data collection was initiated through a March 1987 invitation from Assistant Secretary Horn to all Federal agencies with archeological programs, requesting their participation in the clearinghouse. Agency staff members were asked to complete an AAD-generated information form on each of the agency’s archeological projects or programs that included a public awareness effort (Figure 1.1). The AAD staff also publicized the existence of the clearinghouse and requested information through informal contacts, presentations at meetings, newsletters, and journal announcements. The result of this initial data compilation was named the Listing of Education in Archeological Programs (LEAP) Clearinghouse.

An original LEAP Clearinghouse objective was improvement of information sharing among public agencies and others (Tribes, States, academia, and museums) about efforts to make the archeological information more readily available to the general American public. This objective has expanded to include in the LEAP audience any public or private group interested in promoting its archeological educational activities.

By the end of 1989, more than 430 responses had been received from 13 Federal agencies and 70 State and local governments, academic institutions, museums, societies, and private foundations and companies, resulting in approximately 1200 individual entries of various products used in public education activities. Approximately 90% of those responses were received by AAD in 1987, in response to Assistant Secretary Horn’s invitation and miscellaneous requests. In addition, the LEAP form was reproduced in the Federal Archeology Report (1(2), August 1988), and the Soil Conservation Service enclosed a LEAP form within its November 1988 requests to State Historic Preservation Offices about cultural resource training.

The response data were originally entered into a dBASE III PLUS program that was subsequently modified. A summary of the LEAP Clearinghouse status as of mid-1989
is provided in Keel et al. (1989:46-47). In Fall 1989 AAD brought in a program consultant who modified the original database structure to accommodate the need for word-processing capabilities in describing project summaries, and to provide a mailing-list format for data on information providers and public contact people. The database reported here includes all LEAP information received by AAD through 1989.

1.3. LEAP Structure

The LEAP database is based on information provided by completing Figure 1.1. Information is entered into Clipper-compiled, dBASE III PLUS-based files (Karr Associates 1990). It is presently run on an IBM-compatible personal computer.

This report summarizes nearly 1200 individual records in the LEAP Clearinghouse. Information in the report has been organized into chapters by major product categories: Posters, Brochures, Exhibits/Displays, Public Participation Programs, School Education Programs, Audios/Videos/Films, Broadcasts, Press Articles, Popular Publications, and Community Outreach. Product sub-categories provide additional methods and materials under the main category. For example, "Public Participation Programs" includes the sub-categories of "Volunteer Programs" and "Tours;" "School Education Programs" includes the sub-categories of "Curriculum" (elementary, middle, secondary, adult) and "Classroom Presentations." Under each product, individual organizations (Federal, State, local, or private) are listed by the State in which the archeology project or program occurred. For additional easy reference, there are indices organized by agency, product category and title, and project/program title.

1.4 The LEAP Clearinghouse Future

The annual report to Congress will continue to summarize Federal agency archeological public awareness activities. As long as participants in the Federal archeology program express a need for detailed information about such activities, AAD will continue to solicit additional contributions to the LEAP database. AAD will then produce summary reports on an annual or other basis on a schedule commensurate with the quantities of new information received. The Clearinghouse will be maintained as long as users supply information and updates and find the summaries useful. Information may be submitted to the LEAP Clearinghouse by any Federal, Tribal, State, or local government organization, academic institution, archeological or historical society, museum, private foundation, or company that has used outreach methods and materials to promote an archeological project or program to the public.

Requests for Clearinghouse forms should be directed to the LEAP Coordinator, Archeological Assistance Division, National Park Service, P.O. Box 37127, Washington, D.C. 20013-7127 (ph. 202-343-4101 [FTS 343-4101]).

**Product Title:** Shelter Cove Archaeological Project

The Bureau of Land Management (BLM), in cooperation with Sonoma State University and Santa Rosa Junior College, directed between 4,000 and 5,000 hours of volunteer effort in the stabilization of a major coastal village at Shelter Cove in the King Range National Conservation Area. The cultural deposit had been eroding into the Pacific Ocean at an alarming rate. This massive excavation project was another in a series activated by a long term cooperative agreement between BLM and Sonoma State for the management of prehistoric resources of the North Coast Range. This project and the program focus on three goals: conservation, education, and research.

The Corps of Engineers was the construction agency for the MX Missile Test System at Vandenberg Air Force Base. Los Angeles District archaeologists designed and implemented a cultural resource management plan for the project. Archeology was the environmental issue that had the most "visibility" during the construction, as sites were often discovered during excavation and grading of the project area. The local community is closely connected to activities at the base, so there was a good deal of local interest. Posters were prepared for exhibit at the opening of the missile testing facility.

**Product Title:** Geomorphology and Archeology: Upper Mississippi River  
This poster was presented at the annual meeting of the Society for American Archaeology in 1985. The 9-foot river navigation channel project of the U.S. Army Corps of Engineers (COE) extends from Minneapolis, Minnesota, to Alton, Illinois. The St. Paul District operates 13 locks and dams along the Upper Mississippi River from the Twin Cities to Guttenberg, Iowa. The St. Paul District has conducted numerous archaeological survey and testing projects in association with the operation and maintenance of this project. Two of the 13 COE pools have had extensive geomorphological mapping work conducted within their limits, and one of these has had reconnaissance survey work conducted that was based on the geomorphological mapping. Deeply buried archaeological sites have been recorded at a number of locations along the river and some limited work has been conducted at some of these sites.

The Hickison Petroglyph Recreation Site is a developed picnic and campground. A trail provides access to some of the petroglyphs, which are discussed in a sign at the trail head.
Date of Information: 6/87
A major new gold mine development resulted in the discovery of a rock shelter eligible for the National Register of Historic Places. To mitigate the loss of this 3,000-year-old site, a data recovery plan was developed. A cooperative management agreement between the mining company and the Bureau of Land Management (BLM) was developed to assure adequate financial support, equipment, personnel, and safety to complete the task. The field work required an average of 10 people per day for 3 months. In addition to the archeological consultants hired by the mining company and BLM, volunteers from throughout Nevada, both avocational and professional archeologists, gave their time. Posters were used locally to recruit volunteers.

This major Chaco Canyon project dealt with a survey of park land and excavations of several pueblos. Coupled with energy developments in the San Juan Basin, it initiated studies by other Federal agencies, contributed to legislation designed to recognize a widespread road and outlier system, and had an impact on research perspectives and resource management of sites. Many posters about this work have been presented to the public.

Product Title: Tsagaglalal (She Who Watches)

As part of the Secretary of the Interior's Take Pride in America program the Bureau of Land Management (BLM), in 1986, launched "Operation SAVE - Save Archaeological Values for Everyone" in Oregon and Washington to increase citizen awareness and enforcement of the Archaeological Resources Protection Act in the Pacific Northwest. BLM field employees and citizens helped law enforcement officers, archeologists, land managers, and public affairs specialists initiate public education programs, pro-active enforcement operations, and employee and interagency training. The logo for this program was taken from a...

Wishram Indian legend about a woman chief who was changed into a rock on a cliff overlooking the Columbia River. Called Tsagagialal, "She Who Watches," this prehistoric design is seen on carved artifacts and cliff faces near the river. This poster asks for help in preserving the past by reporting archeological theft and damage through a toll free telephone hot line.

Product Title: Preserving Our Cultural Heritage
This brochure, when completely unfolded, becomes a poster that shows archeologists working at an excavation with inset pictures of the types of artifacts for which they are digging. The brochure explains what cultural resources are and why they are of continuing importance not just to archeologists but to the general public. It details what present day people can learn from their past and then tells how individuals can help preserve this cultural heritage. A list of Corps of Engineers telephone numbers for reporting instances of vandalism is included.

Product Title: Grand Gulch Primitive Area
In 1970 Grand Gulch was designated a primitive area by the Bureau of Land Management (BLM) to provide protection for its ruins. Heavily visited ruins were stabilized to prevent further deterioration. A ranger program was established to monitor visitor use, provide interpretation, and deter vandalism, a problem in the Grand Gulch since the 19th century. Visitors to the area must register with BLM personnel. Along with information about personal safety, visitors also receive details of the area's natural and cultural resources. A brochure and map were developed by the BLM especially for this purpose.

Product Title: I-10 Papago Freeway Archeological Data Processing Program at Las Colinas and La Ciudad

As a result of the Interstate 10 highway project in Phoenix, Arizona, major excavations were conducted at two sites to shed light on the prehistoric inhabitants of this urban area. The large scale of the sites and their sophisticated irrigation canals, mounds, and ball courts drew considerable local attention. A series of guided tours was developed to accommodate the interest of school and adult groups. More than 10,000 persons participated. A group of free-standing pavilions was constructed to shelter a series of bilingual displays on the prehistoric resource. The exhibit presented a glimpse of the houses, surroundings, and activities of the prehistoric inhabitants with the help of this brochure.

Product Title: Ruined Cities: Archeological Investigations in Tonto Basin by Adolph Bandelier, 1883

This brochure focuses on 17 days in the year 1883 that Adolph Bandelier spent on lands later to become part of the Tonto National Forest. Over the course of those 17 days, Bandelier recorded and mapped more than 30 prehistoric ruins and visited several others. Due to Bandelier's generally careful documentation and descriptions, Tonto National Forest has been able to match his report with known archeological sites and to rediscover others.

Product Title: 11,000 Years In the Tonto National Forest

This short pamphlet summarizes the prehistory and history of central Arizona, as represented on lands administered by the Tonto National Forest. Prehistoric occupations date from 11,000 years ago through A.D. 1450. Apache and Yavapai use of the area dates from as early as A.D. 1550, and continues today. Historic Anglo mining and ranching began in approximately 1870 and also has continued to the present. The pamphlet attempts to show how cultural resources fit into Forest Service policies and how they are managed. It also addresses land use problems, as evidenced in the archeological record, and their continuing importance to historic populations in the arid Southwest.

Product Title: Arkansas' Man of Yesteryear
This 1979 pamphlet gives an interesting presentation of prehistory and history that is mostly right, but contains some flaws such as the date when stone tools came into use and the nationality of Hernando de Soto's men. The time period of 20,000 B.C. to the near-present is covered. Arkansas' two National Register sites, Cadron settlement and Monte Ne, are described. The goals of the Corps of Engineers in historic preservation and its work with other agencies are mentioned.

Product Title: Legend and Folklore of the Arkansas River

This brochure has nine short summaries of legends and explanations of place names. It is anecdotal and entertaining in nature, but historical information is conveyed. Stories of early settlers and the places they lived are the topic. Memoisach Lake, Notrebues Bend, Cadron, Sequoyah, Cherokee Nation West, Old Post Road, Spadra Bayou Factory, Cabin Creek, and Vache Grasse are the locales for the people and legends elaborated on in the pamphlet.

Product Title: McClellan-Kerr Arkansas River Navigation System

This pamphlet presents a brief history of Arkansas River travel, which was at its heaviest between 1820 and the 1880s. It mentions floods and snags as major reasons for riverboat wrecks. The discovery of a sunken barge in the Port of Little Rock in 1987 emphasizes the dangerous aspects of travel on the Arkansas River.

Product Title: Cadron Blockhouse
This brochure gives details of the blockhouse at Cadron Settlement Park and Tollantusky Trail, where traces of an old road, a cemetery, and the reconstructed blockhouse
recreate an area that had early settlers, a trading post/blockhouse, a stagecoach road, and a grist mill. There are no exhibits, but everything is open to the public, including the blockhouse, which is built in a fashion believed to be like the original.

**Product Title: Cadron Settlement Park**

This brochure is a guide to Cadron Settlement Park and Tollantusky Trail.

**Product Title: Toad Suck and Other Legends**

This brochure covers five legends of the area between Morrilton and Little Rock where a tavern existed near the river crossing in the early 1800s. There was so much drinking that one traveler said that the men suck at a bottle until they swell up like toads. This provided the place with the name Toad Suck Ferry. Petit Jean Mountain is near Morrilton and it got its name from a young French woman buried there who had disguised herself as a cabin boy in order to accompany her fiancé on his explorations. All of the legends add color to the region and are part of the local history.

Product Title: Melones, A Story of a Stanislaus River Town

The New Melones Archeological Interpretative Program was a response to the New Melones Archeological Project of the Corps of Engineers and the National Park Service. Its purpose was to organize the results of the long-term, multi-phased archeological project. This was accomplished through booklets, interpretive displays, and news/video presentations. All of these actions had an element of cooperative or voluntary involvement from the local community. A second edition of this brochure was printed by the Calaveras County Historical Society.

Product Title: Yosemite Research Center for Cultural and Natural Sciences

The cultural resources of Yosemite and Sequoia-Kings Canyon National Parks have suffered from periodic vandalism and unauthorized collection of artifacts. The staff of the Yosemite Archeology Office, which also administers cultural resources management activities at Sequoia Canyon, has increased its efforts of communication and education with other National Park Service staff members, State and Federal agencies, cooperative associations, schools and the general public. This brochure was developed for distribution at the Center. It features a map of the area with a brief history of the Center and an explanation of its research program.

**Product Title:** Kentucky Archaeological Registry

The Kentucky Archaeological Registry (KAR) is a landowner contact/site registration program developed by the Kentucky Nature Preserves Commission.
Native Preserves Commission for the Kentucky Heritage Council, which serves as the State Historic Preservation Office. KAR is aimed at providing low level, long term protection for Kentucky's most significant archeological sites by developing a relationship with landowners and educating them about the significance of their sites. Modeled on the successful protection formula implemented nationwide by the Nature Conservancy for the protection of natural areas, the program has two components, registration and monitoring. Landowner participation in site registration is completely voluntary. Landowners are asked to preserve and protect their sites and notify the Council of any ground disturbing activities or intent to transfer ownership.

Product Title: Grimes Point Archaeological Area, Petroglyph Trail
The Grimes Point Petroglyph Site is a highly significant archeological site east of Fallon, Nevada. Over the last 11 years the Bureau of Land Management’s Carson City District has undertaken an ambitious and aggressive program of site protection and interpretation. The site has a 2,000-foot self-guided interpretive trail, which was selected by the Secretary of the Interior in 1977 as part of the National Recreation Trail system. Since then more than 50,000 people have visited the site. Development of the site has demonstrated that creativity and innovation can be incorporated into cultural resource management. As a public attraction it serves simultaneously as a vehicle for instilling in visitors an ethic of conservation of the nation’s cultural resources.

Product Title: Historical Archeology at New York State Historic Sites

This brochure is designed to introduce historical archeology to visitors at New York's 34 state-owned historic sites by explaining the nature, purpose, and practice of historical archeology. It emphasizes the importance of professional archeological excavation and the need for preservation, and concludes with a paragraph identifying the archeologists of the New York State Office of Parks, Recreation, and Historic Preservation of the Bureau of Historic Sites.

Product Title: Historical Archeology at Senate House State Historic Site, 1988

The text of this leaflet outlines archeological work at the Senate House State Historic Site conducted in July 1988. It provides a brief summary of the site history followed by an explanation of what the archeologists planned to do and what they anticipated finding. Graphics include photographs of the Senate House exterior and previous archeological excavations. This brochure was distributed to site visitors during the 1988 excavation and is one of several site-specific leaflets produced by the New York State Office of Parks, Recreation and Historic Preservation of the Bureau of Historic Sites.

Product Title: Month of Sundays

The North Carolina Museum of History in Raleigh celebrated Archaeology Month in 1989 with a series of popular and educational films. Each week an archeologist from the State Department of Cultural Resources contrasted Hollywood's interpretation of archeology with the realities of such work. This brochure provided program information for audiences.

Product Title: Operation SAVE (Save Archaeological Values for Everyone)
As part of the Secretary of the Interior's Take Pride in America program the Bureau of Land Management (BLM), in 1986, launched "Operation SAVE - Save Archeological Values for Everyone" in Oregon and Washington to increase citizen awareness and enforcement of the Archaeological Resources Protection Act in the Pacific Northwest. BLM field employees and citizens helped law enforcement officers, archeologists, land managers, and public affairs specialists initiate public education programs, pro-active enforcement operations, and employee and interagency training. The logo for this program was taken from a Wishram Indian legend about a woman chief who was changed into a rock on a cliff overlooking the Columbia River. Called Tsagagialal, "She Who Watches," this prehistoric design is seen on carved artifacts and cliff faces near the river. The brochure asks all citizens to share in the responsibility for watching over the nation's prehistoric and historic heritage. It requests help in preserving the past by reporting archeological theft and damage through a toll free telephone hot line.

Product Title: Blue Marsh Lake Project

Product Title: Place Where Time Stood Still, The
These brochures chronicle efforts to preserve the Gruber Wagon Works, a three story wagon factory built in 1882. The factory was listed on the National Register of Historic Places in 1972. During planning for the Blue Marsh Lake Project near Reading, Pennsylvania, the Philadelphia District of the Army Corps of Engineers (COE) determined that the wooden structure, which had remained intact and completely equipped for the manufacture of farm wagons since its construction, would be submerged by the proposed lake. The Historic American Engineering Record was enlisted to record the structure with drawings and photographs, but COE purchased the wagon works in 1974 and, during the winter of 1976-77, relocated the building and its 19,000 tools to the Berks County Heritage Center five miles away. Congress provided funding for this effort and for restoration,
which began in 1979. By 1980 the largest relocation and restoration project undertaken by COE was completed and the Gruber Wagon Works was deeded to Berks County, which maintains and operates it. Brochures are available at the Blue Marsh Lake Visitors Center.

Product Title: Fort Loudoun State Historic Area  
Prior to the impoundment of Tellico Reservoir, major archeological excavations were conducted on the Fort Loudoun site. Subsequent to the excavations, approximately 250,000 cubic yards of fill were placed on the site, raising the surface approximately 20 feet. A model of the palisades and other internal fort features was placed on the contoured fill directly above the original site. A Visitor Center/Museum was built to house interpretive exhibits, as well as slide and film programs. The site and museum are within a 394-acre tract managed by the Tennessee Department of Conservation as an interpretive, recreational, and historical area and park through a permanent easement from the Tennessee Valley Authority. This brochure is provided to visitors.

Product Title: Sequoyah Birthplace Museum  
As part of the memorialization of previous Overhill Cherokee occupation of the Little Tennessee River Valley, the Tennessee Valley Authority (TVA) granted the Eastern Band of Cherokee a permanent easement on 44.6 acres of land along Tellico Reservoir. TVA also established a trust fund that was used by the Cherokee to build the Sequoyah Birthplace Museum. The Museum, through exhibits, displays, and numerous video programs, interprets Cherokee and earlier Native American prehistory in this valley. The Museum, where this brochure is distributed, also has a shop that sells Cherokee crafts and historical monographs.

Product Title: Grand Gulch Primitive Area

In 1970 Grand Gulch was designated a primitive area by the Bureau of Land Management to provide protection for
its ruins. Heavily visited ruins were stabilized to prevent further deterioration. A ranger program was established to monitor visitor use, provide interpretation, and deter vandalism, a problem in the Grand Gulch since the 19th century. Visitors to the area must register with BLM personnel. Along with information about personal safety, the visitors also receive information about the area's natural and cultural resources. Brochures and a map were developed by BLM especially for this purpose.

Archeologists and natural resource specialists from the three Bureau of Land Management District Offices in northern Alaska, Arctic, Kobuk, and Steese-White Mountains, presented information on cultural and other land resources to students of the Fairbanks North Star Borough School District during Natural Resources Education Month in April 1987. Continuing a tradition of outreach programs to public schools, the archeologists made approximately 20 presentations to a total of more than 500 students. They explained theories and methods used in archeology and cultural anthropology worldwide as well as for local prehistory and ethnography of the State. They also showed displays of artifacts and fossil bones to illustrate the science of paleontology, and discussed the interrelationship of soils, permafrost, vegetation, and fire.

Arizona

Agency: Bureau of Land Management
Project/Program: Arizona Archaeology Week
Contact: Gary Stumpf

The Anchorage District Office of the Bureau of Land Management (BLM), in cooperation with the Anchorage District schools, has for several years conducted an Outdoors Week for school children. The programs have been given on the Campbell Tract, a forested BLM managed area in Anchorage, and included numerous specialists providing sixth graders with hands-on experiences in various skills and subject matter. The presentations for cultural resources were given five times daily to various classes in rotation. They included artifact and fossil exhibits, a mock archeological excavation, and discussions on the scientific importance of artifacts and the problems of vandalism and pot hunting.

Date of Information: 5/87
A number of individuals, private firms, and State and Federal agencies participate in Arizona Archaeology Week in March or April of every year. The Bureau of Land Management (BLM) is a major participant, contributing exhibits at the State Capitol, presenting lectures and slide shows to school classes and other groups, sponsoring site tours, taking part in radio talk shows, issuing special editions of the Arizona BLM newsletter, sponsoring archeology fairs, and other activities. A BLM display is produced each year for exhibit in the State Capitol rotunda. Displays have been produced for the Bighorn Cave project, Harquahala Observatory stabilization, and Intaglio research project.

Bighorn Cave had been a target of vandals for many years. To determine appropriate management needs, the Bureau of Land Management (BLM) wanted to assess the nature and extent of its remaining archeological deposits. Northern Arizona University and the Museum of Northern Arizona agreed to carry out a test excavation as a joint research project with BLM supplying a trailer for housing, per diem expenses for student volunteers, and funds for analysis of the archeological materials excavated. In addition to students, Native Americans from two Tribes and members of the amateur Arizona Archaeological Society participated as volunteers. The result was a first-rate site evaluation, good newspaper coverage, and strengthened relationships for BLM with the public and two academic institutions. A display on the project was produced and exhibited at the Arizona State Capitol during the 19J6 Archaeology Week, at the Mohave County Museum, and Meadview Civic Center.

As a result of the I-10 highway project in Phoenix, Arizona, major excavations were conducted at two sites to shed light on the prehistoric inhabitants of that urban area. The large scale of the sites and their sophisticated irrigation canals, mounds, and ball courts excited considerable interest. A series of guided tours was developed to accommodate the interest of school and adult groups. More than 10,000 persons participated. A group of free-standing pavilions was constructed to shelter a series of bilingual displays about the prehistoric resource. This exhibit presented a glimpse of the houses, surroundings, and activities of the area's prehistoric inhabitants.

A Cultural Resource Management display case was set up in Building 3500 at Edwards Air Force Base.
As part of the Vandenberg Air Force Base archeology awareness program, a cultural resource display of both archeological and historical material has been a feature of Armed Forces Day Open House for several years. Displays also can be seen at the Vandenberg Environmental Task Force Office. Programs have emphasized historic preservation at Vandenberg, career awareness, the cultural resources of Vandenberg, local prehistory, and introductory archeology.

Date of Information: 1987

In the Barstow Resource Area public awareness is treated as a day-to-day aspect of the cultural resource management program. Areawide efforts include daily contacts with the public by the archeologist and Desert Rangers, presentations to schools, civic organizations, etc. The Resource Area prepares displays for archeological sites, such as the Calico Early Man Site, and for use at other facilities including local public schools.

Date of Information: 1987

Public awareness is a key element in the El Centro program. Desert Rangers and the archeological and management staff take advantage of opportunities to communicate the need for protection and preservation to the public. Interpretation to the public is also seen as a factor in improving public awareness. A display of a reconstructed ceramic vessel was reported to be in preparation in 1987.

Date of Information: 1987

The Calico Early Man Site, with a history of research extending back to 1957, has had an active Bureau of Land Management (BLM) program for many years. BLM funds provide for interpretation, preservation, and public safety. Major displays are located on site, at the San Bernardino County Museum, and at the BLM Visitor Information Center.

Date of Information: 1987
This facility is managed cooperatively by the Bureau of Land Management with the Desert Studies Consortium. It includes wildlife, natural history, and cultural resource values, historic and prehistoric. Sites are available to the public for tours on a monthly basis, and the facility is a base for numerous college level field courses and tours for groups by reservation. The entire facility is offered as a "display" with some historic materials on exhibit.

Agency: Bureau of Reclamation
Project/Program: New Melones Archeological Interpretative Program
Contact: James West

The New Melones Archeological Interpretive Program was a response to the New Melones Archeological Project of the Corps of Engineers and the National Park Service. Its purpose was to organize the results of the long-term, multi-phased archeological project. This was accomplished through booklets, interpretive displays, and news/video presentations. All of these actions had an element of cooperative or voluntary involvement from the local community. The Bureau of Reclamation loaned to Calaveras County artifacts for an exhibit on New Melones history and archeology. Interpretive displays on the project area's archeology were developed for the Administrative Center at New Melones Reservoir.

Fort Irwin is the site of one of the Army's most important training missions, preparing battalion tank forces for combat.
It also has some of the oldest and richest archeological sites in the desert of the Great Basin. Implementation of an Army Corps of Engineers Los Angeles District (LAD) historic preservation program at this facility, begun in late 1985, faces an almost insurmountable set of problems because of the density and significance of its archeological resources and the destructive nature of tank combat-readiness training. The limitation of funds available for historic preservation further complicates the problem. Data recovery mitigation has been accomplished by LAD at 46 sites. To obtain the maximum educational value from its data recovery efforts, LAD has implemented a program to provide the Fort with a series of exhibits on its cultural and scientific values. A paleontological exhibit was prepared and placed on display in the Soldier's Welcome Center utilizing fossils recovered from the mammoth fossil site. In addition, two kits were prepared using replicas of fossils found at the Fort for use in classrooms. A second exhibit of projectile points and a time line of 2,000 years was being prepared in 1987 and two more were in planning stages. Since the area is rural, without the educational opportunities of a large metropolitan locality, exhibits prepared by LAD are appreciated.

The Corps of Engineers was construction agency for the MX Missile Test System at Vandenberg Air Force Base. Los Angeles District (LAD) archeologists designed and implemented a cultural resource management plan for the project. Archeology was the environmental issue that had the most "visibility" during the construction, as sites were often discovered during excavation and grading of the project area, which is a large dune field. There was a good deal of local interest in this project. LAD archeologists prepared exhibits to increase public awareness of cultural resources encountered during excavation and grading for the missile testing system.

A number of temporary exhibits on the remains of the Civil War ironclad C.S.S. Georgia were prepared for local events. The Savannah District of the Army Corps of Engineers (COE) commissioned a scale model, which has been displayed in the District office, incorporated into temporary displays, and loaned to a local maritime museum. The COE has also provided materials and information for exhibits at Old Fort Jackson adjacent to the site of the C.S.S. Georgia wreck, which was discovered in 1988 on the edge of the Savannah Harbor shipping channel. The COE has conducted several investigations of the wreck, including archival research, diving, hydrographic, magnetometer, and side-scan sonar surveys, and established a metals conservation facility with Old Fort Jackson and the Fort Pulaski National Monument. Old Fort Jackson is operated as an educational and recreational site by the Coastal Heritage Society, principal support of the C.S.S. Georgia.

Isle Royale National Park had a vandalism and protection problem with shipwrecks located in the park. Through cooperation with the local community and the Submerged Cultural Resource Unit of the National Park Service, park officials were able to turn the problem into a major public education initiative. Charter boat operators as well as park officials combine efforts to inform divers about the value of the resource. They also instruct them on health and safety regulations that protect visitors as well as laws and regulations that protect the park. As added protection for the wrecks, mooring buoys were installed near them. Boats tie up at the buoys so that anchors, which could damage the underwater shipwrecks, are not used. The Underwater Trail is marked with signs that describe the history of the wrecks and their features.

A number of informational signs, both outdoor signs and indoor photographic displays, were placed at cultural sites, Forest Service offices, and campground locations throughout the Ottawa National Forest to introduce visitors to historic areas and events. These locations include Burned Dam Campground, Langford Lake Campground, Sparrow-Kenton Wayside, Robbins Pond, State Line Campground, and the Kenton District Office. Signs also were erected at the abandoned sites of two Civilian Conservation Corps Camps, Port and Kenton.

A local historical society placed metal plaques with information on Native Americans’ use of the Tamarac area at several locations in the Tamarac National Wildlife Refuge. The plaques cover the period before and during European settlement, addressing topics such as American Indian burial mounds, trails, wild rice collection, and the establishment of the White Earth Indian Reservation.

A 19-panel travelling exhibit describes the Mississippi River expedition of Zebulon Pike. Pike was commissioned by the U.S. Army to travel from St. Louis up the Mississippi River to negotiate peace between the Dakota and Chippewa nations, purchase land for an Army post (Fort Snelling), record the landscape and look for the sources of the river. Institute for Minnesota Archaeology excavations at the fort are described.

Product Title: Energy Park Site: Portrait of a 1,000 Year Old Community, The
This travelling exhibit consists of three 2-foot by 3-foot panels that present information about the culture florescence in the Lake Pepin area and the archeological excavation of a Mississippian village site.

Product Title: Under the Fleur-de-Lis: The Archeology of a French Colonial Fort in Minnesota
This travelling exhibit of ten 2-foot by 3-foot panels provides an overview of Minnesota's prehistoric and early historic past and discusses the science of archeology. The final seven panels focus on the excavation of MO20, a mid-18th century French fort site, along with culture interaction and trade routes of the early fur traders.

Miles City District
Bureau of Land Management
P.O. Box 940
Miles City, MT 59301
406-232-4331

The Bureau of Land Management archeologically tested the Ayers-Frazier Bison Trap site in 1978 to assess the site and formulate protection and stabilization measures for the 2,000-year-old bison kill site. Field personnel were members of the Young Adult Conservation Corps and volunteers from the local community. Artifacts and photographs were used to develop a public display in the local Prairie County Museum. The site is now stabilized and vandalism has been stopped.

Contact: Will Hubbell
Miles City District
Bureau of Land Management
P.O. Box 940
Miles City, MT 59301
406-232-4331

The Mill Iron site is an 11,300-year-old bison kill and processing area on which the Bureau of Land Management needed basic information to begin active management. The property was tested under a cooperative agreement with the University of Wyoming, and with some volunteer help. Continued university study of the site was subsequently funded by the National Geographic Society. Mill Iron has produced the oldest bison bone bed in the hemisphere and promises to yield extremely rare data on some of the nation's earliest inhabitants. Data are also being acquired from the investigation to preserve and protect the remaining site. Displays were prepared in 1987 for the Montana Historical Society Museum in Helena and the Carter County Museum in Ekalaka.

**Product Title: Archaeology in the Garden**

This exhibit, organized by Rebecca Yamin and Anne Yentsch, opened at the New Jersey State Museum in the Fall of 1989 prior to its permanent installation at Morven. The exhibit explains the steps taken to locate Morven’s 18th century garden. Eleven panels focus on the 1987 field season, showing photographs of artifacts in situ, and archeologists excavating and recording data. The basic concepts of landscape and historical archeology are explained and important artifacts are displayed.

**Product Title:** Chaco Phenomenon

A major Chaco Canyon project dealt with a survey of park land and excavations of several pueblos. Coupled with energy developments in the San Juan Basin, it initiated studies by other Federal agencies, contributed to legislation designed to recognize a widespread road and outlier system, and had an impact on research perspectives and resource management of sites. Remote sensing was used extensively. A travelling exhibit describing the project was produced by the University of New Mexico and the National Park Service.

Product Title: Cultural Resources/Indian Lifeways Learning Station

Sponsored by the Kiwanis Club of Baker, Oregon, and the county school district, Natural Resources Appreciation Day has become an annual event of cooperation between the Bureau of Land Management, Forest Service, Soil Conservation Service, and Oregon Department of Fish and Wildlife. Sixth grade students from all schools in the county attend and participate in a natural and cultural resources outdoor education experience. Resource stations emphasize conservation and wise management of soil, water, wildlife forage, forests, and cultural resources. Indian lifeways and prehistoric resource use patterns are demonstrated. Students learn that the resources are part of the system of interdependent elements that has been important for the past 10,000 years of human history, and will be important for the next 10,000 years of human history.

As part of the Secretary of the Interior's Take Pride in America program the Bureau of Land Management (BLM), in 1986, launched "Operation SAVE - Save Archeological Values for Everyone" in Oregon and Washington to increase citizen awareness and enforcement of the Archaeological Resources Protection Act in the Pacific Northwest. BLM field employees and citizens helped law enforcement officers, archeologists, land managers, and public affairs specialists initiate public education programs, pro-active enforcement operations, and employee and interagency training. The logo for this program was taken from a Wishram Indian legend about a woman chief who was changed into a rock on a cliff overlooking the Columbia River. Called Tsagaglalal, "She Who Watches," this prehistoric design is seen on carved artifacts and cliff faces near the river. A photo exhibit was prepared to travel to various BLM District Offices, the State Capitol, schools, and places of business. Its message was to "Save Archaeological Values for Everyone - Take Pride in America - Report All Violations."

**Product Title:** Gruber Wagon Works

The Gruber Wagon Works exhibit is an intact, three-story wagon factory built in 1882. The factory was listed on the National Register of Historic Places in 1972. During planning for the Blue Marsh Lake Project near Reading, Pennsylvania, the Philadelphia District of the Army Corps of Engineers (COE) determined that the wagon works, a wooden structure that had remained intact and completely equipped for the manufacture of farm wagons since its construction, would be submerged by the proposed lake. The Historic American Engineering Record was enlisted to record the structure with drawings and photographs, but COE purchased the wagon works in 1974 and, during the winter of 1976-77, relocated the building and its 19,000 tools to the Berks County Heritage Center five miles away. Congress provided funds for this effort and for restoration, which began in 1979. By 1980 the largest relocation and restoration project undertaken by COE was completed and the Gruber Wagon Works was deeded to Berks County, which maintains and operates it.

The Fort Randall Archeological Project focused on the excavation of a 19th century frontier military post. A major purpose of the project was to provide for the establishment of a public education program through cooperation between interested amateur volunteers and professional archeologists. The professionals trained and guided volunteers through the many tasks necessary for archeological data recovery while helping them develop an appreciation of and commitment to historic preservation and cultural resource management. The project was initiated in 1986 and planned to continue through 1990. A historic interpretive trail and a museum display will provide long-term benefits for public awareness and education.

Product Title: Soil Conservation Learning Trail
The 11th National Boy Scout Jamboree held at Fort A.P. Hill, near Fredericksburg, Virginia, was the site of conservation demonstrations and hands-on activities. The Soil Conservation Service (SCS) and the Hanover-Caroline Soil and Water Conservation District reached thousands of active, concerned scouts and their families with their resource conservation message. One major exhibit at the Jamboree was the Conservation Learning Trail, which led to the Conservation Learning Area. Scouts, in small groups, toured one of four trails that had a professional conservation message. The SCS stressed the interdependence of natural energy, air, soil, and water resources. At the archaeological site, a guide discussed conservation practices of the American Indians in the 14th century. The two-acre SCS *Conservation is Your Future* exhibit was a favorite.
Each of the exhibit’s nine stations related to conservation practices that scouts could adapt for use in their own communities.

**Contact:** Thomas F. Zale
Medicine Bow Resource Area
Bureau of Land Management
P.O. Box 670
1719 Edinburgh
Rawlins, WY 82001
307-347-7171

Over the past several years the Rawlins District of the Bureau of Land Management (BLM) has administered an active cultural resources program. Although it has functioned primarily in support of other BLM programs involving energy-related minerals, numerous opportunities have been taken to increase public awareness of cultural resource values and BLM management of them. The programs have included a variety of activities geared toward the general public as well as specialized audiences such as school children and amateur archeologists. An exhibit of plastic reproductions of various projectile point types found in the region is on display at the District Office and has been shown at several county fairs and other area events.

**Date of Information:** 6/87
Ten volunteers and Bureau of Land Management (BLM) staff assisted in the recording, recovery, and stabilization of the Soapy Dale Peak Lodge, a conical pole lodge. The poles were removed and then stabilized at the Washakie County Museum. A curation and exhibition agreement was signed between the BLM and Washakie County Museum to provide for the longterm display of the stabilized lodge at the museum.

The Heart Mountain Relocation Center was constructed to confine more than 110,000 men, women, and children of Japanese ancestry during World War II. At that time it was the third largest city in Wyoming. A portion of the original area was placed on the National Register of Historic Places in 1985, and the Bureau of Reclamation funded two informative plaques at the site. Local support for generating recognition for this property was unprecedented.

Project/Program: Outdoor Week in Anchorage
Contact: Robert E. King
Alaska State Office
Bureau of Land Management
6881 Abbott Road
Anchorage, AK 99507
907-271-5510

The Anchorage District Office of the Bureau of Land Management (BLM), in cooperation with the Anchorage District schools, has for several years conducted an Outdoors Week for school children. The programs have been given on the Campbell Tract, a forested BLM managed area in Anchorage, and included numerous volunteer specialists from the Fish and Wildlife Service and the Army Corps of Engineers providing sixth graders with hands-on experiences in various skills and subject matter. The presentations for cultural resources were given five times daily to various classes in rotation. They included artifact and fossil exhibits, a mock archaeological excavation, and discussions on the scientific importance of artifacts and the problems of vandalism and pot hunting.

Project/Program: Arizona Site Steward Program

Contact: Gary Stumpf

This program has been developed under the auspices of the Governor's Archaeology Advisory Commission, with the Bureau of Land Management playing a major role. It is designed to establish a network of citizen volunteers throughout Arizona who will regularly monitor archeological sites on State and Federal lands. The purpose of the program is to increase public awareness of cultural resources, discourage vandalism, and promote better cooperation among agencies, organizations, and individuals. Twelve regional volunteer coordinators have been appointed and training sessions conducted. A handbook of procedures and forms has also been developed. It is hoped that the program will eventually expand to include public education, site recording, project monitoring, and documentation of private collections, but for the present the program has focused on site monitoring.

Phoenix, AZ 85007  
602-255-8641

As a result of the I-10 highway project in Phoenix, Arizona, major excavations were conducted at two sites to shed light on the prehistoric inhabitants of that urban area. The large scale of the sites and their sophisticated irrigation canals, mounds, and ball courts excited considerable interest. A series of guided tours was developed to accommodate the interest of school and adult groups. More than 10,000 persons participated. A group of free-standing pavilions was constructed to shelter a series of bilingual displays about the prehistoric resource. This exhibit presented a glimpse of the houses, surroundings, and activities of the area's prehistoric inhabitants.

Agency: National Park Service  
Project/Program: Archeology - Petrified Forest National Park
In conjunction with the Western Archeological and Conservation Center and with the volunteer assistance of the American Rock Art Research Association, an archeological boundary survey of the Petrified Forest was conducted by the National Park Service. Archeological resources were inventoried and identified to determine which resources warranted added protection. Project emphasis also included sensitizing and educating volunteers about resources. They became advocates of the Petrified Forest and exhibited feelings of ownership during this boundary survey. A few volunteers donated money to help pay the support and salary costs of archeologists hired for this project. The end result was a boundary survey a quarter of a mile wide from the park boundary inward and an inventory of all park archeological resources.

The Mojave (or Mohave) Road has been in the public eye for many years. It is managed by the Bureau of Land Management as a historic trail for interpretation and recreation. The public has access to the trail by foot or by four-wheel drive or other off-road vehicles, as the road is

Recent large scale mining efforts by Goldfields Mining Corporation resulted in a project worthy of recognition. The company voluntarily agreed to a detailed inventory of several square miles of its land that was subject to potential impact. The inventory phase resulted in recordation of numerous archeological and historic properties, centering on a series of geoglyphs or Earth Figures, sometimes called Intaglios. A mining plan was designed to avoid impacts to these properties. The mining company then provided funds for the purchase of materials to fence the sensitive sites, the Singer Geoglyphs, and a historic wagon road. Installation of the fence was accomplished with the aid of student volunteers from nearby Imperial Valley College.

Project/Program: Archeological Investigations at Petersen House
Contact: Stephen Potter
National Capital Regional Office
National Park Service
1100 Ohio Drive, SE
Washington, DC 20242
202-485-9818

While attempting preservative maintenance of the Petersen House, part of the Ford Theatre National Historic Site, workers uncovered early- to mid-19th century artifacts determined to be pertinent to the historical interpretation of the structure. Under the supervision of Regional Archeologist Stephen Potter, a 3-week excavation was conducted that unearthed more than 5,000 artifacts from five different strata representing a period before the Petersen House construction (c. 1849) through the Civil War. Visitors to the house were able to view the progressing excavation and examine a temporary display of artifacts recovered during the dig. In addition, a National Park Service archeologist delivered an interpretive presentation. During further excavation in October of artifacts from as deep as 6 feet and dating back to the 1830s were recovered. The artifacts were processed, catalogued, and analyzed, and primary historical research was conducted. Several volunteers assisted with these archeological activities.

The National Capital Region Archeology Program (NCRAP) of the National Park Service is one of several volunteer archeological organizations active in the District of Columbia and nearby Maryland and Virginia. These offer training with professional archeologists and opportunities to do curatorial or field work at both urban and rural sites. In 1987 NCRAP had more than 130 volunteers on its mailing list who participated in prehistoric and historic archeology projects in Washington and various parts of Maryland, Virginia, and West Virginia.

Volunteers on the staff at Old Fort Jackson help run the C.S.S. Georgia conservation facility and incorporate the Confederate Ironclad ship's story in interpretive programs. The Civil War era wreck was discovered on the edge of the Savannah Harbor shipping channel in 1968. The Savannah District of the Army Corps of Engineers has conducted several investigations of the wreck, including archival research, diving, hydrographic, magnetometer, and side-scan sonar surveys, and establishment of a metals conservation facility with Old Fort Jackson and the Fort Pulaski National Monument. Old Fort Jackson, located adjacent to the wreck, is operated as an educational and recreational site by the Coastal Heritage Society, principal support of the C.S.S. Georgia.

A major historic property inventory completed in 1986 recommended numerous sites for the National Register of Historic Places. Restoration projects included the clearing of destructive vegetation from a prehistoric wall at the Nuupia Hawaiian fish ponds and construction of an interpretive trail and guide book so access can be enjoyed. Sierra High School hikers and a Military Boy Scout troop participate annually in volunteer work on the historic Nuupia Ponds fishpond walls. Part of the 1987 program encouraged volunteer maintenance of historic sites.

Little information had been available on the present condition of the World War II battleship U.S.S. Arizona, its rate of deterioration, and the impact of marine growth on the hulk. Through a cooperative effort of the memorial park, the local community, the Submerged Cultural Resources Unit of the National Park Service (NPS), and the Navy, a major documentation effort was initiated. Detailed maps, photographs and videotapes were produced to inform and educate the public. Displays of work in progress and live video coverage were provided for visitors to the U.S.S. Arizona Memorial in Honolulu. The NPS cooperative effort with the Navy Mobile Diving and Salvage Unit continued from 1984 through 1987.

Contact: Stephen Potter
National Capital Regional Office
National Park Service
1100 Ohio Drive, SE
Washington, DC 20242
202-485-9818

In June 1986 National Capital Region archeologists unearthed the remains of a house built circa 1690, making it the oldest archeologically documented colonial structure discovered in the Washington, DC, metropolitan area. The house site was found on the grounds of Harmony Hall, an 18th century Georgian estate in southern Maryland owned by the National Park Service (NPS) and leased in October 1985 to a private firm under the provisions of the Historic Leasing Program. The discovery was made during an archeological survey of the property to ensure that plans by the lessees for new construction, utility lines, and pipes would not interfere with culturally significant resources. Intensive excavations exposed two corners and three sides of a post-in-the-ground structure, Delftware, earthenware, clay tobacco pipes, wrought iron hardware, and a pipe bowl. More than 30 volunteers assisted with this work from 1986 through 1987, overseen by NPS Regional Archeologist Stephen Potter. National Capital Parks Historian Marilyn Nickels and several volunteers documented ownership, occupation, and use of the site over a period of 300 years.

USDA Forest Service  
East U.S. Route 2  
Ironwood, MI 49938  
906-932-1330

Phase III mitigation of the Elmwood Logging Camp in the Iron River district provided an exceptional opportunity for the public to visit and learn about cultural resource management and the logging history of the Ottawa National Forest. Elmwood Logging Camp, the only known black logging camp on Michigan's Upper Peninsula, was occupied from 1926 to 1929 after a Wisconsin entrepreneur lured several Chicago families to the Upper Peninsula with promises that they could clear and farm the cutover lands. The sham was exposed when the black loggers, who were never paid for their work, took up poaching and moonshining to make ends meet. Local authorities disapproved of these activities and offered the families train tickets if they would return to Chicago. Representatives from area television, radio, and newspapers were invited to visit the site. Forest Service personnel and members of the public who visited the site during mitigation observed archaeological excavation at first hand and learned about the site's history.

Public rededication ceremonies were held on September 19, 1981, at the Kenton Ranger District Administrative Site to recognize 50 years of resource management and public service by the Ottawa National Forest staff. The native stone monument, erected for proclamation ceremonies at the Kenton District site in September 1931, was originally dedicated by President Herbert Hoover. In 1981, the monument was rededicated in ceremonies conducted by the Forest Service. Keynote speaker was Michigan Congressman Robert Davis. Other speakers included Forest Supervisor Joseph Zyllinski and Clare Hendee, Ottawa Forest Supervisor from 1936 to 1939 and retired Deputy Chief of Administration of the Forest Service. At this time, two capsules containing Ottawa National Forest commemorative material were sealed within the monument.

Project/Program: James Creek Archeological Project
Contact: Stanley H. Jaynes, Jr.

The James Creek Archeological Project is a cooperative management agreement between the Bureau of Land Management (BLM), regional historical societies, and local citizens. The project aims to protect and interpret archeological sites in the James Creek area of Nevada. Volunteer groups have been trained to monitor and report on site conditions, ensuring the preservation of cultural resources.

Date of Information: 5/87
A major new gold mine development resulted in the discovery of a rock shelter eligible for the National Register of Historic Places. To mitigate the loss of this 3,000-year-old site, a data recovery plan was developed. A cooperative management agreement between the mining company and the Bureau of Land Management (BLM) was developed to assure adequate financial support, equipment, personnel, and safety to complete the task. The field work required an average of 10 people per day for 3 months. Flyers were sent out locally and regionally to recruit volunteer help. In addition to the archeological consultants hired by the mining company and BLM, volunteers from throughout Nevada, both avocational and professional archeologists, gave more than 1,500 hours of their time.

Each year the New Hampshire Division of Historical Resources (DHR) and State Historic Preservation Office sponsor, with appropriate institutions, a series of training courses in both prehistoric and historic archaeology for avocational archeologists. During the summer, avocational training is combined with regular academic field schools while spring and fall field work opportunities for avocational archeologists are more informal. In conducting both avocational training and the statewide archeological survey, the DHR works closely with the private New Hampshire Archaeological Society. Results of these combined efforts include a well-trained and responsible avocational work force and a segment of the general population that responds to issues affecting archeological preservation.

Product Title: San Juan Archeological Society Volunteers
The Bureau of Land Management (BLM) has funded data recovery from Archaic, Anasazi, and Navajo cultural sites present on lands transferred into private ownership. Work done in 1987 consisted of excavation of a Pueblo III period room block and associated kivas and early Navajo dwellings. The Office of Contract Archeology, under contract to the BLM and assisted by the San Juan Archeological Society volunteers, conducted the excavations. Subsequent data recovery is planned for Archaic sites on the exchanged lands.

Product Title: Tour of Fort Craig
The State Historic Preservation Office matching grants-in-aid program funded a project to record and nominate Navajo Refugee sites to the National Register of Historic Places. In the mid-1970s the Bureau of Land Management carried out an extensive stabilization program at eight of these sites. Permaloy interpretive signs were installed that provide a brief summary of the period of occupation with detailed site maps showing rooms and other features. A cooperative management agreement to monitor the site was being developed in 1987 with the San Juan Archeological Society.

With the assistance of their fathers, 15 Boy Scouts from Troop 514, La Grande, Oregon, worked on maintenance of the Flanagan Hill Historic Interpretive site on the Oregon National Historic Trail in Baker County. Adverse weather conditions did not deter the scouts from the hard work of applying linseed oil to preserve the ramada housing the interpretive site, removing litter, and resetting traffic barriers. After the work was done, the scouts were told about emigrant life along the Oregon Trail and walked along the original wagon ruts left by pioneer wagon trains of more than 100 years ago. The scouts also learned about protection of historic resources and the importance of pride in the nation's heritage.

Product Title: Rogue Valley Archaeological Society

The Roseburg District, in cooperation with the University of Oregon and Umpqua Community College, conducted test excavations at two prehistoric sites in the Umpqua Basin during the summer of 1986. The project was run as a field school and was used to train not only community college students, but also Bureau of Land Management (BLM) employees and volunteers. BLM cultural resource technicians were able to observe and learn about archeological materials in context. The volunteers were both community members in general and avocational archeologists from the Rogue Valley Archaeological Society. Since the excavations were initiated in response to vandalism, media exposure by radio, television, and newspapers was used in part to inform the public of the importance of archeological values and to appeal for the public's help in preserving those values.

In May 1986 an archeological and historic investigation began at the site of an antebellum plantation mansion called "Portici" on land acquired by the National Park Service in 1985 and incorporated into the Manassas National Battlefield Park. Portici, located on the Lower Bull Run Tract, was built around 1820. It served as Gen. Joseph E. Johnston's headquarters during the First Battle of Manassas and, later, as a Confederate hospital. Controlled surface collections and excavations exposed the foundation and cellar of the mansion, two minor additions and the detached kitchen, four other outbuildings, and two structures belonging to an earlier 18th century plantation house called "Pohoke." More than 35 volunteers assisted with archeological excavations and laboratory work. They were supervised by NPS archeologists Stephen Potter, Katie Parker, Nancy Hildreth, and Michael Strutt.

Product Title: Learning Weeks in Archaeology  
Learning Weeks in Archaeology is an educational program designed to introduce participants to the goals and methods of archeological research at Colonial Williamsburg. Hands-on experience excavating a site in the Historic Area, taking field notes, mapping finds, identifying artifacts associated with the 18th century, and analyzing site remains are supplemented by tours, lectures, and special events. The 1989 field work took place on Market Square, where excavations attempted to locate the remains of the 18th century Market House and ancillary structures associated with the 18th century Powder Magazine. One-week and two-week sessions are offered at cost.

Product Title: Archeological Society of Virginia  
The 11th National Boy Scout Jamboree held at Fort A.P. Hill, near Fredericksburg, Virginia, was the site of conservation demonstrations and hands-on activities. The Soil Conservation Service (SCS) and the Hanover-Caroline Soil and Water Conservation District reached thousands of active, concerned Scouts and their families with their resource conservation message. One major exhibit at the Jamboree was the Conservation Learning Trail, which led to the Conservation Learning Area. Scouts, in small groups, toured one of four trails with a professional conservation message. The SCS exhibit stressed the Inter-dependence of natural energy, air, soil, and water resources. At the archeological site, a guide discussed conservation practices of the American Indians in the 14th century. The two-acre SCS "Conservation is Your Future" exhibit was a favorite. Each of the exhibit's nine stations related to conservation practices that scouts could adapt for use in their own communities. The Archeological Society of Virginia assisted SCS with its activities at the Jamboree.

Central Washington University established a volunteer excavator program during test excavations at the Chief Joseph Dam project in 1982 and 1983.

Agency: National Park Service  
Project/Program: Fort Vancouver National Historic Site Volunteer Excavations
Excavations were conducted at Fort Vancouver National Historical Site by the Oregon Archeological Society for a five-year Take Pride In America project, the product of cooperation between National Park Service (NPS) staff and the Oregon Archeological Society. The Society, a volunteer organization headquartered in Portland, excavated the site of an early 19th century office under the direction and supervision of a private archeologist provided by the NPS. Visitor response to the excavation was enthusiastic. The Society designated a person to act as an interpreter to explain the archeological process and research questions that were being pursued. The volunteer interpreter provided brochures, which gave a brief history of the project and its purpose. A large, 3-foot by 6-foot professionally rendered sign proclaimed this as a Take Pride In America project of the Society.

Over the past several years the Rawlins District of the Bureau of Land Management (BLM) has administered an active cultural resources program. Although it has functioned primarily in support of other BLM programs involving energy-related minerals, numerous opportunities have been capitalized on to increase public awareness of cultural
resource values and BLM management of them. The programs have included a variety of activities geared toward general audiences as well as specialized audiences such as school children and amateur archeologists. Volunteers associated with the Student Conservation Association have been utilized to encode data from existing site forms for entry into the Intermountain Antiquities Computer System. Other volunteers have assisted BLM employees in a variety of tasks including the completion of inventories and associated reports.

The Anchorage District Office of the Bureau of Land Management (BLM), in cooperation with Anchorage District schools, has for several years conducted an Outdoors Week with local school children. The programs have been given on the Campbell Tract, a forested BLM managed area in Anchorage, and included numerous specialists providing sixth graders with hands-on experiences in various skills and subject matter. The presentations for cultural resources were given five times daily to various classes in rotation. They included artifact and fossil exhibits, a mock archeological excavation, and discussions on the scientific importance of artifacts and the problems of vandalism and pot hunting. The programs have enjoyed local television coverage.

Product Title: Alaska Staff Reaches out to Students
Archeologists and natural resource specialists from the three Bureau of Land Management District Offices in northern Alaska, Arctic, Kobuk, and Steese-White Mountains, presented information on cultural and other land resources to students of the Fairbanks North Star Borough School District during Natural Resources Education Month in April 1987. Continuing a tradition of outreach programs to public schools, they made about 20 presentations to a total of more than 500 students. They explained theories and methods used in archeology and cultural anthropology worldwide as well as in local prehistory and ethnography of the State. They showed displays of artifacts and also fossil bones to illustrate the science of paleontology, and discussed the interrelationship of soils, permafrost, vegetation and, fire.

The Corps of Engineers was the construction agency for the MX Missile Test system at Vandenberg Air Force Base. Los Angeles District archeologists designed and implemented a cultural resources management plan for the project. Archeology was the environmental issue that had the most "visibility" during construction, as sites were often discovered during excavation and grading of the project area, which is a large dune field. There was a good deal of local interest. Presentations were given by the staff archeologist at the Lompoc Museum, to the Scorpiotmist Club and numerous local schools and Scout troops.

Scope. This training program will systematically target agency employees involved in SCS program and management decisions at different ability, skill, and knowledge (ASK) levels. These ASK levels range from a rudimentary awareness to a proficiency in independently handling cultural resource concerns. Training materials are formatted in nine modules that are assigned appropriate ASK levels. Modules 1 through 7 are composed of self-paced slide/tape presentations on the importance and recognition of cultural resources. Additional classroom study is provided by a Study Guide with tests and an instructor's Leader Guide. Module 8 consists of a field exercise/workshop that may include a video tape. Module 9 is specialized to instruct a select audience in how to better contract for cultural resource studies.

Subjects such as Native American art, prehistory of the Midwest, environmental change on the Mississippi River, and prehistoric peoples, lithic and ceramic technology and styles, and geomorphology form the basis for an elementary
and high school archeological awareness effort undertaken by Corps of Engineers archeologists. The purpose of the effort is to expose pre-college age children to archeological objectives, Native American culture and products, environmental characteristics, and preservation ethics. Speeches, illustrated with slides and displays, are given to Kindergarten through 12th grade classes, tailored to meet age group needs and school program objectives. As of 1987, several high schools and six elementary schools had participated in the program. One high school was taken out in the field to visit an ongoing excavation project.

The Grimes Point Petroglyph Site and Hidden Cave are highly significant archeological sites east of Fallon, Nevada. Over the last 11 years, the Bureau of Land Management's Carson City District has undertaken an ambitious and aggressive program of site protection and interpretation utilizing innovative funding techniques. This area has become a model for cultural resources management and interpretation. Four archeological study kits and slide programs designed and built by Carson City District personnel have been made available to local school districts. These study kits focus on the environment and prehistory of the Grimes Point/Hidden Cave area. Development of these sites has demonstrated that creativity and innovation can be incorporated into cultural resource management. As popular public attractions, the sites serve as vehicles for instilling in visitors an ethic of conservation of the nation's cultural resources.

Product Title: Cultural Resources/Indian Lifeways Learning Station

Sponsored by the Kiwanis Club of Baker, Oregon, and the county school district, Natural Resources Appreciation Day has become an annual event of cooperation between the Bureau of Land Management, Forest Service, Soil Conservation Service, and Oregon Department of Fish and Wildlife. Sixth grade students from all schools in the county attend and participate in a natural and cultural resources outdoor education experience. Resource stations emphasize conservation and wise management of soil, water, wildlife forage, forests, and cultural resources. Indian lifeways and prehistoric resource use patterns are demonstrated. Students learn that the resources are part of the system of interdependent elements that has been important for the past 10,000 years of human history, and will be important for the next 10,000 years of human history.

Over the past several years, the Rawlins District has administered an active cultural resources program. Although it has functioned primarily in support of other Bureau of Land Management (BLM) programs involving energy-related minerals, numerous opportunities have been capitalized on to increase public awareness of cultural resource values and the BLM's management of those values. These programs have included a variety of slide and video presentations geared to general audiences as well as specialized audiences such as school children and amateur archeologists.

Date of Information: 6/87

Product Title: Selected Topics in Archaeology

Archeologist David Vlcek developed a course titled "Selected Topics in Archaeology" that is basically an introductory archeology class in North American prehistory. It is geared to non-technical laymen with minimal formal training in archeology, and grades are based on a final take-home exam. The class begins with an extensive discussion of the glacial period, Paleoindian occupations in the last glacial period, concepts of Primary Forest Efficiency, and Plains Archaic adaptations, stressing sites in Wyoming. Sessions are spent on the Mound Builders (Adena/Hopewell, Mississippian), the Southwest, the Fremont area, and, if time allows, Mesoamerica and especially the Maya. Theoretical perspectives discussed include: the development of agriculture and how this changed aboriginal settlement patterns; the development of towns, cities, and the State; culture-ecology and especially local adaptations. The course has recently been offered for college credit and is popular with interested adults and some high school students in small Wyoming communities.

**Product Title:** *Archeological Investigations of the Midvale Site*

This 38-slide audio-visual program, by Robert E. Gasser, details archeological work done by the Museum of Northern Arizona between 1981 and 1983 at Williams Air Force Base in Arizona prior to further development of land on the base. Excavation of randomly placed trenches exposed 56 prehistoric features including pit house floors, trash areas, cooking pits, and a large reservoir. Prehistoric remains were photographed and scale drawings were made. Museum staff mapped the Midvale site, nominated it to the National Register of Historic Places and made recommendations for future archeological work at the base.

Product Title: *Place in Time, A*

This documentary film presents the archeological excavations and petroglyph recordation at Adobe Dam. It includes information about Federal requirements and responsibilities for cultural resources preservation, the story of the Hohokam pioneers in the region, and the importance and fragility of petroglyph and archeological sites. It shows archeologists at work and how clues are carefully pieced together to reconstruct the past. Produced under contract with the Corps of Engineers (COE) Los Angeles District by Concept Associates (1979), it was distributed to public television stations and shown on KCET Channel 28. Currently, the film is on satellite and can be picked up by public television stations across the nation. The 16 mm version has been shown at schools, colleges, and COE training sessions.

More than 7,000 hours of volunteer labor were contributed by students, professional archeologists, and regional residents in the conservation of imperiled cultural material at four coastal and four interior archeological sites within the King Range National Conservation Area. Summer excavations removed nearly 200 cubic meters of material from these sites and offset losses due to erosion and recent human impacts. The projects were part of a long-term cooperative management agreement between the Bureau of Land Management and Sonoma State University for management of prehistoric resources in the North Coastal Range of California. The summertime projects satisfied three mutual goals, i.e., conservation, education, and research. Students work was videotaped in 1985.

**The cultural resources of Yosemite and Sequoia-Kings Canyon National Parks have suffered from periodic vandalism and unauthorized collection of artifacts. The staff of the Yosemite Archeology Office, which also administers cultural resources management activities at Sequoia Canyon, has increased its efforts of communication and education with other National Park Service (NPS) staff members, State and Federal agencies, cooperative associations, schools and the general public. This 4-minute news feature on Yosemite archeological and preservation concerns was produced by Fresno Channel 30 News and has been made available for group viewing. It is used to increase public awareness of the NPS archeological program and concerns for preserving cultural resources.**

303-776-1756
FTS-776-1756

**A video tape was produced by KRMA-TV (Channel 6, PBS) and the Denver Museum of Natural History. It features rock art experts such as Sally Cole, and deals with the interpretation, protection, and preservation of rock art in western Colorado and eastern Utah. Many of the sites discussed are on Bureau of Land Management lands, for example, Irish Canyon in the Craig District. The tape runs 30 minutes and was broadcast several times on both Denver public television stations. A very positive image of archeology and the need to preserve rock art as part of our past is portrayed in this program.**

Agency: Bureau of Reclamation

Project/Program: Fryingpan/Arkansas River Project Restoration

Contact: Jeff Kenyon
Interlaken, a resort, and the Village of Twin Lakes were important in the development of adequate transportation across the Continental Divide. The InterLaken Resort, a complex of 11 buildings, was to be partially inundated by the Fryingpan/Arkansas Project raising the pool level of the Twin Lakes. In consequence, a great deal of work involving research, archeology, and stabilization was done at the complex. A video was prepared about this project.

The Soil Conservation Service (SCS) is an agency of the Department of Agriculture that provides assistance to the public in protecting national soil and water resources. In order to comply with historic preservation laws and ensure that significant cultural resources are not inadvertently destroyed during assistance activities, the SCS has embarked on a cultural resources training program of national scope. This training program will systematically target agency employees involved in SCS program and management decisions at different ability, skill, and knowledge (ASK) levels. These ASK levels range from a rudimentary awareness to a proficiency in independently handling cultural resource concerns. Training materials are formatted in nine modules that are assigned appropriate ASK levels. Modules 1 through 7 are composed of self-paced slide/tape presentations on the importance and recognition of cultural resources. Additional classroom study is provided by a Study Guide with tests and an Instructor's Leader Guide. Module 8 consists of a field exercise/workshop that may include a video tape. Module 9 is specialized to instruct a select audience in how to better contract for cultural resource studies.

One video on the wreck of the ironclad warship C.S.S. Georgia was made by Texas A&M University. It has had only limited use. C.S.S. Georgia was rediscovered at the edge of the Savannah Harbor shipping channel in 1968. The Army Corps of Engineers has made several investigations of the wreck. These have included archival research, diving, hydrographic, magnetometer, and side-scan sonar surveys, and creation of a metals conservation facility with Old Fort Jackson and Fort Pulaski National Monument. Old Fort Jackson, located adjacent to the wreck, is operated as an educational and recreational site by the Coastal Heritage Society, the principal support of the C.S.S. Georgia wreck.

Little information had been available on the present condition of the World War II battleship U.S.S. *Arizona*, its rate of deterioration, and the impact of marine growth on the hulk. Through a cooperative effort of the memorial park, the local community, the Submerged Cultural Resources Unit of the National Park Service (NPS), and the Navy, a major documentation effort was initiated. Detailed maps, photographs, and videotapes were produced to inform and educate the public. Displays of work in progress and live video coverage were provided for visitors to the U.S.S. *Arizona* Memorial. A model of the vessel, as it exists today, was constructed and is on display in the Visitor Center in Honolulu. Videos include one prepared by the NPS Submerged Cultural Resources unit for use by television stations, a recording of underwater sites for use by sport diving groups, and an informational video on U.S.S. *Arizona* research.

Eastlawn
The University of Iowa
Iowa City, IA 52242
319-335-2390

Product Title: Earthlodge People
This 1973 color film documents the excavation by an archeologist of a Glenwood Indian earth lodge that was occupied between A.D. 900 and 1300. The Earthlodge people followed a pattern of building single or clustered earth lodges throughout the Midwest. This 20-minute film recreates through sketches and drawings the activities involved in the building of an earth lodge, hunting, and farming.

Product Title: Fort Atkinson
In the late 1840s, a regiment of U.S. cavalry was sent to what is today northern Iowa to keep peace among the various Native American Tribes the U.S. government had resettled there. A fortified outpost was erected to house the regiment. It was called Fort Atkinson after the commanding officer. This 20-minute color film, made in 1976, documents the history of Fort Atkinson and surveys the efforts of archeologists to reconstruct something of the quality of day-to-day life at a frontier military outpost.

Product Title: Fort Madison Archaeology
In 1965 the remains of Old Fort Madison, the first United States fort in the Upper Mississippian Valley, were discovered under a parking lot. Interpretation of the structural remains is used in this 1973 color film to recreate the appearance of the original fort. Daily activities at the fort are revealed through examination of tools and ordinary household belongings found in the buildings. Running time for this film is 15 minutes.

Product Title: Iowa's Ancient Hunters: The Reconstruction of a Prehistoric Site
This 28-minute color film is an interesting portrayal of the archeological work done in 1976 at the Cherokee Sewer Site in northwest Iowa, effectively emphasizing the contributions of a multidisciplinary group of investigators, archeologists, paleontologists, climatologists, geologists, and palynologists. The excavation sequences will probably intrigue young audiences. However, the subsequent discussions and interpretations may be too advanced for elementary school students. It will be excellent for use in high school classrooms.

Product Title: Late Woodland Village
As is shown in this 1974 color film, excavations of the Late Woodland Hartley Fort revealed details of life in a stockaded village of about A.D. 900. After the abandonment of the village, it was reused by the Onaota as a burial site. Drawings based on the archeological evidence show how these people lived. This film runs 20 minutes in length.

Product Title: Mill Creek Village
The Whittrock site excavations in northwest Iowa shown in this color film provide a representational view of the prehistoric, fortified Earthlodge people, typical of the plains farming way of life. Artists' drawings combine archeological and ethnological perspectives to reconstruct life as it was lived around AD 1400. Shot in 1974, this film runs 27 minutes in length.

Product Title: Onaota Longhouse People
Archaeological discoveries of post patterns in northwest Iowa, as detailed in this 1973 color film, reveal huge longhouses averaging 25 feet wide and as much as 90 feet long. Historical narratives suggest that these were summer villages for some kind of residential clan groups. This 14-minute film concludes with the reconstruction of a village and views of how life might have been lived at this site 1000 years ago.

Product Title: Prehistoric Cultures
This film illustrates cultural developments in prehistoric times from the Paleo-Indian through the Woodland and early agricultural societies. It develops the historical dimensions of prehistory, and includes a flint knapper making a Clovis point and discussions of archeological techniques. Made in Iowa in 1974, this color film runs 26 minutes.

Product Title: Visiting the Indians with George Catlin
In this film the different lifestyles of four Indian Tribes during the 1830s are viewed through the original lithographs and maps made by artist George Catlin. The purpose of the film is to break commonly held stereotypes of the frontier Indians and to provide the ethnographic perspective of tribal cultures necessary for an understanding of prehistory. Shot in color in Iowa in 1973, this film runs 24 minutes.

Product Title: Ancestors of the Ioway
The Iowa's PAST (Programming Archaeology for School Teachers) program distributes a series of 10 kits on Iowa's prehistory intended for use in elementary and secondary schools. Each kit consists of a filmstrip, narration cassette, and handbook. A teacher's guide is also available. Filmstrips are available in both Basic (fifth grade) and Advanced (high school) kits. Iowa's PAST was made possible by a grant from the National Endowment for the Humanities. Instructional materials were prepared by the Office of the State Archaeologist in cooperation with the State Department of Public Instruction. This 57-frame filmstrip (16 minutes Basic, 26 minutes Advanced) discusses the Ioway, who they were and where they originated.

Product Title: Ancient Site at Cherokee, The
This 63-frame filmstrip (19 minutes Basic, 32 minutes Advanced), filmed at Iowa's oldest excavated archeological site, shows what happens on an archeological dig, how archeologists work, and what they find.

Product Title: Archaeology and You
This 42-frame filmstrip (14 minutes Basic, 18 minutes Advanced) describes how thousands of people across the country are involved in archeology and how one can aid in the study of the past, either as a hobby or a career.

Product Title: Early Iowans, The
This filmstrip of 50 frames (18 minutes Basic, 32 minutes Advanced) tells where the Indians came from and describes the earliest hunting people of the State, who came in pursuit of mammoth late in the Ice Age.

Product Title: Earthlodge Builders at Glenwood
This 64-frame filmstrip (19 minutes Basic, 34 minutes Advanced) illustrates how houses of southwest Iowa's ancient Earthlodge builders resemble the houses built by the historic Mandan and Hidatsa Tribes.

Product Title: Hopewell Culture, The
This 64-frame filmstrip (16 minutes Basic, 32 minutes Advanced) describes early mound builders of southeastern Iowa, whose religious beliefs spread over much of what is now the eastern United States at the time of Christ.

Product Title: Iowa Effigy Mounds, The
This 64-frame filmstrip (16 minutes Basic, 32 minutes Advanced) describes curious animal-shaped mounds found in northeast Iowa that have captivated people's imaginations for more than a century. It tells who built them, when, and why.

Product Title: Iowa's Historic Indians
This 57-frame filmstrip (16 minutes Basic, 16 minutes Advanced) describes how the Keokuk and Blackhawk fit into the history of the Mesquakie Indians living in central Iowa near Tama.

Product Title: Northwest Iowa Farmers
This 63-frame filmstrip (19 minutes Basic, 35 minutes Advanced) compares two groups of farming people who lived about 1,000 years ago, showing that neighboring groups were not always alike.

Product Title: Preserving Iowa's Past
This 53-frame filmstrip (14 minutes Basic, 22 minutes Advanced) illustrates how Iowa's prehistoric sites are being rapidly destroyed by modern civilization and what can be done about the problem.

Isle Royale National Park had a vandalism and protection problem with the shipwrecks in the park. Through cooperation with the local community and the Submerged Cultural Resource Unit of the National Park Service, park officials were able to turn the problem into a major public education initiative. Charter boat operators as well as park officials combine efforts to inform divers about the value of the resource. They also instruct them on health and safety regulations that protect visitors as well as the laws and regulations that protect the park. As added protection for the wrecks, mooring buoys were installed near them. Boats tie up at the buoys and no anchors, which could damage the underwater shipwrecks, are used. Registration is required and can be accomplished either at the park or through the operator of a charter boat, who radios registration information to the park. Videos on specific vessels are available for use by park visitors. The Submerged Cultural Resources Unit has also prepared videos for use by television stations.

The Grimes Point Petroglyph and Hidden Cave are highly significant archeological sites 10 miles east of Fallon, Nevada. Over the last 11 years, the Bureau of Land Management (BLM) Carson City District has undertaken an ambitious and aggressive program of site protection and interpretation here, utilizing innovative funding techniques. This area has become a model for cultural resources management and interpretation. The Grimes Point Petroglyph Site has a 2000-foot, self-guiding interpretive trail, which was selected by the Secretary of the Interior in 1977 to be part of the National Recreation Trail system. Since then more than 50,000 people have visited the site. Development of these sites has demonstrated that creativity and innovation can be incorporated into cultural resource management. As popular public attractions, they serve as vehicles for instilling in visitors an ethic of conservation of the nation's cultural resources. Videos on the sites are on file at the BLM Nevada State Office.

128
During July 1986, the Chacoan Outlier Casamero was restabilized through an Interagency Agreement with the National Park Service. The stabilization crew from Chaco Culture National Historical Park conducted the work. The site was first stabilized in 1976 by the Bureau of Land Management (BLM). Weather had eroded much of the mortar from between the building stones. It was necessary to replace this mortar to keep the walls from collapsing. A video was made of the stabilization project for the New Mexico BLM Albuquerque District Office and listed in its video magazine.

The Fort Randall Archeological Project focused on the excavation of a 19th century frontier military post. A major purpose of the project was the establishment of a public education program through cooperation between interested amateur volunteers and professional archeologists. The professionals trained and guided volunteers through the many tasks necessary for archeological data recovery while helping them develop an appreciation of and commitment to historic preservation and cultural resource management. The project was initiated in 1986 and planned to continue through 1990. As of May 1987 a video describing the project was in preparation.

238 Natural Resources Building  
Norris, TN 37820  
615-632-1583  

Prior to the impoundment of Tellico Reservoir, major archeological excavations were conducted on the Fort Loudoun site. Subsequent to the excavations, approximately 250,000 cubic yards of fill were placed on the site, raising the surface approximately 20 feet. A model of the palisades and other internal fort features was placed on the contoured fill directly above the original site. A Visitor Center/Museum was built to house interpretive exhibits, as well as slide and film programs. The site and museum are within a 394-acre tract managed by the Tennessee Department of Conservation as an interpretive, recreational and historical area and park through a permanent easement from the Tennessee Valley Authority.

As part of the memorialization of previous Overhill Cherokee occupation of the Little Tennessee River Valley, the Tennessee Valley Authority (TVA) granted the Eastern Band of Cherokee a permanent easement on 44.6 acres of land along Tellico Reservoir. TVA also established a trust fund that was used by the Cherokee to build the Sequoyah Birthplace Museum. The Museum, through numerous videos, exhibits, and displays, interprets Cherokee and earlier Native American prehistory in this valley. The Museum also has a shop that sells Cherokee crafts and historical monographs.  
Date of Information: 6/87
This project consisted of an underwater sample survey and test excavation in 1985 and 1986 of selected magnetic anomalies at Padre Island National Seashore. In addition to some 20th century shipwreck materials, a fragment of an AD 1554 Spanish anchor was discovered. This solved some interpretive questions relating to the famous AD 1554 Spanish Plate Fleet wreck. Many feet of video tape were shot.

Over the past several years the Rawlins District of the Bureau of Land Management (BLM) has administered an active cultural resources program. Although it has functioned primarily in support of other BLM programs involving energy-related minerals, numerous opportunities have been capitalized on to increase public awareness of cultural resource values and BLM management of them. The programs have included a variety of activities geared toward the general public as well as specialized audiences such as school children and amateur archeologists. Video tapes describing several data recovery projects have been completed. These include excavations at Scoggins, a bison kill site, as well as the Medicine House, Split Rock, and Nova Petroleum sites, at which semi-subterranean structures were discovered. Edited versions of these tapes have been presented to various groups and have been incorporated into displays at county fairs in the region.

The Anchorage District Office of the Bureau of Land Management (BLM), in cooperation with Anchorage District schools, has for several years conducted an Outdoors Week for local school children. The programs have been given on the Campbell Tract, a forested BLM-managed area in Anchorage, and included numerous specialists providing sixth graders with hands-on experiences in various subjects and classes. The presentations for cultural resources were given five times daily to various classes in rotation. They included artifact and fossil exhibits, a mock archaeological excavation, and discussions on the scientific importance of artifacts and the problems of vandalism and pot hunting. The programs have enjoyed local television coverage.

To increase its law enforcement effectiveness the Bureau of Land Management requested the assistance of the Arizona National Guard in surveillance efforts to detect and deter vandalism of cultural resources. The Guard agreed to provide the assistance as an incidental training exercise for its helicopter pilots. Under this program, Guard pilots watch for and report any incidents of cultural resource vandalism they observe during their training flights within the state. Approximately 50 such flights occur each month. Incidents are reported using a toll-free statewide telephone hot line manned 24 hours a day, 7 days a week. BLM archeologists conducted short training sessions for the pilots and mapped high-value cultural resource areas on the pilots' aeronautical charts. Excellent television and newspaper coverage was received, which is expected to have a deterrent value. This effort was featured on the Channel 3 evening television newscast, including a sequence filmed from a National Guard helicopter.

This documentary film presents the archeological excavations and petroglyph recordation at Adobe Dam. It includes information about Federal requirements and responsibilities for cultural resources preservation, the story of the Hohokam pioneers in the region, and the importance and fragility of petroglyph and archeological sites. It shows archeologists at work and how clues are carefully pieced together to reconstruct the past. Produced under contract with the Corps of Engineers (COE) Los Angeles District by Concept Associates, 1979, it was distributed to public television stations and shown on KCET Channel 28. Currently, the film is on satellite and can be picked up by public television stations across the nation. The 16 mm version has been shown at schools, colleges, and COE training sessions.

Date of Information: 6/87

In the District of Columbia, archeologists uncovered early- to mid-19th century artifacts determined to be pertinent to the historical interpretation of the structure. Under the supervision of Regional Archeologist Stephen Potter, a 3-week excavation was conducted that unearthed more than 5,000 artifacts from 5 different strata representing a period before the Petersen House construction (c. 1849) through the Civil War. Visitors to the house were able to view the progressing excavation and examine a temporary display of artifacts recovered during the dig. In addition, a National Park Service archeologist delivered an interpretive presentation. During further excavation artifacts from as deep as 6 feet and dating back to the 1830s were recovered. The artifacts were processed, catalogued, and analyzed, and primary historical research was conducted. The Washington CBS affiliate and several cable television companies filmed archeology programs here.

The Birds of Prey ACEC is also known as the Guffey Butte-Black Butte Archeological District. Management of its cultural resources has included active public awareness activities. The Halverson Bar volunteer effort resulted in detailed management planning for one site in the Birds of Prey ACEC and several presentations and television programs.

Agency: National Park Service
Project/Program: Archeological Investigations at Harmony Hall

142
In June 1986 National Capital Region archeologists, aided by more than 30 volunteers, unearthed the remains of a house built circa 1690, making it the oldest archeologically documented colonial structure discovered in the Washington, DC metropolitan area. The house site was found on the grounds of Harmony Hall, an 18th century Georgian estate in southern Maryland owned by the National Park Service and leased in October 1985 to a private firm under the provisions of the Historic Leasing Program. The discovery was made during an archeological survey of the property to ensure that plans by the lessees for new construction, utility lines, and pipes would not interfere with culturally significant resources. Intensive excavations exposed two corners and three sides of a post-in-the-ground structure, Delftware, earthenware, clay tobacco pipes, wrought iron hardware, and a pipe bowl. Harmony Hall was featured locally on both NBC and Metromedia television in June 1986.

Project/Program: Phase III Excavations of Elmwood Logging Camp, May-June 1986

Contact: Mark Hill
Forest Archaeologist
Ottawa National Forest, S.O.
USDA Forest Service
East U.S. Route 2
Ironwood, MI 49938
906-932-1330

Phase III mitigation of the Elmwood Logging Camp in the Iron River district provided an exceptional opportunity for the public to visit and learn about cultural resource management and logging history of the Ottawa National Forest. Elmwood Logging Camp, the only known black logging camp on Michigan's Upper Peninsula, was occupied from 1926 to 1929 after a Wisconsin entrepreneur lured several Chicago families to the Upper Peninsula with promises that they could clear and farm the cutover lands. The sham was exposed when the black loggers, who were never paid for their work, took up poaching and moonshining to make ends meet. Local authorities disapproved of these activities and offered the families train tickets if they would return to Chicago. Representatives from area television, radio, and newspapers were invited to visit the site. Forest Service personnel and members of the public who visited the site during mitigation observed archeological excavation at first hand and learned about the site's history.

Project/Program: Submerged Resource Management Program - Isle Royale Underwater Archeology Trail

Contact: Dan Lenihan
Southwest Cultural Resources Center
National Park Service
Isle Royale National Park had a vandalism and protection problem with the shipwrecks located in the park. Through cooperation with the local community and the Submerged Cultural Resource Unit of the National Park Service (NPS), park officials were able to turn the problem into a major public education initiative. Charter boat operators as well as park officials combine efforts to inform divers about the value of the resource. They also instruct them on health and safety regulations that protect visitors as well as laws and regulations that protect the park. As added protection for the wrecks, mooring buoys were installed near them. Boats tie up at the buoys and no anchors, which could damage the underwater shipwrecks, are used. Registration is required and can be accomplished either at the park or through the operator of a charter boat, who radios registration information to the park. Television features were filmed in 1984 by Duluth, Minnesota stations and Venture North with Glen Maxim, producer. The BBC and National Geographic Society filmed in August 1986. National Geographic and the Ventos Corporation assisted NPS in its research by supplying two underwater robots and accompanying equipment for filming. Because of the astronomical cost of such equipment, NPS would not have otherwise been able to conduct this research.

Agency: Bureau of Land Management
Project/Program: Grimes Point/Hidden Cave
Contact: Roberta McGonagle

The Grimes Point Petroglyph Site and Hidden Cave are highly significant archeological sites 10 miles east of Fallon, Nevada. Over the last 11 years the Carson City Bureau of Land Management District has undertaken an ambitious and aggressive program of site protection and interpretation here, utilizing innovative funding techniques. This area has become a model for cultural resources management and interpretation. Development of these sites has demonstrated that creativity and innovation can be incorporated into cultural resource management. As popular public attractions, they serve as vehicles for instilling in visitors an ethic of conservation of the nation's cultural resources. Numerous visits to the sites were made by local television news crews during 1979 and 1980.

New Mexico

Agency: Bureau of Land Management
Project/Program: Casamero Stabilization
Contact: Peggy Gaudy

Unusually high water in Stillwater Marsh in the Stillwater National Wildlife Management Area exposed significant biological and cultural remains of Native Americans who inhabited the valley hundreds, even thousands, of years ago. This public information campaign was important in reducing theft and vandalism of cultural resources exposed by wind and water erosion. Extensive burial mounds and other artifacts cover a wide area. The program called on the public to notify authorities of newly exposed cultural resource sites, to report theft or vandalism, and to form citizen groups to watch over areas of artifact concentration to preserve them for future generations. Considerable television coverage on the importance of preserving archeological resources occurred during 1985 and 1986.

Date of Information: 5/87
During July 1986 the Chacoan Outlier Casamero was restabilized through an Interagency Agreement with the National Park Service. The stabilization crew from Chaco Culture National Historical Park conducted the work. The site was first stabilized in 1976 by the Bureau of Land Management. Weather had eroded much of the mortar from between building stones and it was necessary to replace this mortar to prevent the collapse of walls. This television news story appeared on ABC and NBC affiliated stations in Albuquerque, New Mexico.

Farmington Resource Area
Bureau of Land Management
900 La Plata Highway
Farmington, NM 87401
505-325-3581

The Bureau of Land Management has funded data recovery from Archaic, Anasazi, and Navajo cultural sites present on lands transferred into private ownership. Work done in 1987 consisted of excavation of a Pueblo III period room block and associated kivas and early Navajo dwellings. The Office of Contract Archeology, under contract to BLM and assisted by the San Juan Archeological Society, conducted the excavations. Subsequent data recovery is planned for Archaic sites on the exchanged lands. Because the sites are close to Farmington, media coverage was encouraged, and a 30-minute news item was broadcast over KENN radio in Farmington and some media coverage was provided by KOBF television and the BLM New Mexico Video Magazine.

Roseburg, OR 97470
503-672-4491

The Roseburg District, in cooperation with the University of Oregon and Umpqua Community College, conducted test excavations at two prehistoric sites in the Umpqua Basin during the summer of 1986. The project was run as a field school and was used to train not only community college students, but also Bureau of Land Management (BLM) employees and volunteers. BLM cultural resource technicians were able to observe and learn about archeological materials in context. The volunteers were both community members in general and avocational archeologists from the Rogue Valley Archeological Society. Since the excavations were initiated in response to vandalism, media exposure by radio, television, and newspapers was used in part to inform the public of the importance of archeological values and to appeal for the public's help in preserving those values.

Contact: Richard Hanes
Oregon-Washington State Office
Bureau of Land Management
P.O. Box 2985
Portland, OR 97208
503-230-5315

As part of the Secretary of the Interior's Take Pride In America program the Bureau of Land Management (BLM), in 1986, launched Operation SAVE - Save Archeological Values for Everyone in Oregon and Washington to increase citizen awareness and enforcement of the Archaeological Resources Protection Act in the Pacific Northwest. BLM field employees and citizens helped law enforcement officers, archeologists, land managers, and public affairs specialists initiate public education programs, pro-active enforcement operations, and employee and interagency training. The logo for this program was taken from a Wishram Indian legend about a woman chief who was changed into a rock on a cliff overlooking the Columbia River. Called Tsagaglalal, "She Who Watches," this prehistoric design is seen on carved artifacts and cliff faces near the river. Two public service announcements were made for television, one with a prominent local politician, to encourage people to assist in protecting archeological sites by reporting archeological theft and damage through a toll free telephone hot line.

Agency: Private
Project/Program: Field School in Archaeology/Workshops in Archaeology
Contact: Jordan Kerber
Starting in June 1988, the Public Archaeology Laboratory, Inc. undertook an educational program offering a summer field school and weekend workshops in archeology at a prehistoric site in Warwick, Rhode Island. The Lambert Farm Site is listed on the National Register of Historic Places, but was threatened by a private residential development that resulted in the destruction of the entire two-acre site. Through a series of discussions with the developer, the Rhode Island Historical Preservation Commission (State Historical Preservation Office), and other state agencies, an agreement was reached to allow the general public to excavate the site, in the context of a field school, for a period of two years. The site dates to about 3,500 years ago, at least, and contains some unusual finds such as two prehistoric dog burials, a soapstone smoking pipe, shark teeth, and stone materials from Pennsylvania and New York. The project was covered by several members of the media.

In 1970 Grand Gulch was designated a primitive area by the Bureau of Land Management (BLM) to provide protection for its ruins. Heavily visited ruins were stabilized to prevent further deterioration. A ranger program was established to monitor visitor use, provide interpretation, and deter vandalism, a problem in the Grand Gulch since the 19th century. Along with information about personal safety, visitors also receive details of the area's natural and cultural resources. A brochure and map were developed by BLM especially for this purpose. The program has received major television network coverage.

Excavations were conducted at Fort Vancouver National Historic Site by the Oregon Archeological Society for a five-year Take Pride in America project, the product of cooperation between National Park Service (NPS) staff and the Oregon Archeological Society. The Society, a volunteer organization headquartered in Portland, excavated the site of an early 19th century office under the direction and supervision of a private archeologist provided by the NPS. Visitor response to the excavation was enthusiastic. The Society designated a person to act as an interpreter to explain the archeological process and research questions that were being pursued. The volunteer interpreter provided brochures, which gave a brief history of the project and its purpose. A large, 3-foot by 6-foot professionally rendered sign proclaimed this a Taka Pride in America project of the Society. Television coverage was provided by KGW-TV, KOIN-TV, and KPTV-TV in Portland.

The Soil Conservation Service (SCS) assisted with the development of a Resource Conservation and Development plan involving installation of water based recreation facilities at the site of the State's first permanent capitol. The proposed park site and surrounding area comprise a significant historical and archeological site. SCS played a major role in promoting detailed field investigations at the site and research of historical records relating to the area. This effort involved academic institutions, local and State historical and archeological associations, and other agencies and volunteers.

Product Title: Grad Student Leads Coldfoot Dig as part of UAF-BLM Trial Plan

In early 1987 the Arctic District Office of Bureau of Land Management (BLM) signed a memorandum of understanding with the University of Alaska-Fairbanks to establish a trial cooperative program to facilitate and provide for the use of archeological and historical materials on public lands in a controlled manner for education, scientific study, and public interpretation. The results have included BLM sponsorship of a graduate student who led an archeological excavation during the summer of 1987 on BLM-managed land above the Arctic Circle. BLM personnel and the public received from this effort valuable scientific information for better understanding and interpreting local prehistory. This information will also help BLM to better manage the area involved.

The Anchorage District Office of the Bureau of Land Management (BLM), in cooperation with Anchorage District schools, has for several years conducted an Outdoors Week for school children. The programs have been given on the Campbell Tract, a forested BLM-managed area in Anchorage, and included numerous specialists providing sixth graders with hands-on experiences in various skills and subject matter. The presentations for cultural resources were given five times daily to various classes in rotation. They included artifact and fossil exhibits, a mock archeological excavation, and discussions on the scientific importance of artifacts and the problems of vandalism and pot hunting.

Archeologists and natural resource specialists from the three Bureau of Land Management District Offices in northern Alaska, Arctic, Kobuk, and Steese-White Mountains, presented information on cultural and other land resources to students of the Fairbanks North Star Borough School District during Natural Resources Education Month in April 1987. Continuing a tradition of outreach programs to public schools, they made about 20 presentations to a total of more than 500 students. They explained theories and methods used in archeology and cultural anthropology worldwide as well as in local prehistory and ethnography of the State. They showed displays of artifacts and also fossil bones to illustrate the science of paleontology, and discussed the interrelationship of soils, permafrost, vegetation and fire.

602-241-5509

Product Title: Cooperative Agreement Opens Cave for Research

The Bureau of Land Management (BLM) Arizona Strip District cooperated with Brigham Young University (BYU) for two years on a research project focusing on Antelope Cave. This rich cave site had been vandalized for nearly 40 years, and repeated efforts to fence the entrance had been unsuccessful. To save what was left of the intact
archaeological deposits, BYU agreed to conduct a study of the site from a regional perspective, including excavation at the cave and a nearby vandalized rock shelter. BLM contributed some field labor and funds for analysis of archeological materials. The project ultimately resulted in field survey of a 10 km diameter area. BLM personnel, students from BYU, and volunteers from the amateur Utah Archeological Society worked on the project under the direction of BYU and BLM professional archeologists. The result was a successful study that involved the public and generated valuable information about a little known region. This press release appeared in a BLM newsletter that was mailed to 2,200 individuals and organizations.

Phoenix, AZ 85104
602-241-5509

To increase its law enforcement effectiveness the Bureau of Land Management requested the assistance of the Arizona National Guard in surveillance efforts to detect and deter vandalism of cultural resources. The Guard agreed to provide the assistance as an incidental training exercise for its helicopter pilots. Under this program, Guard pilots watch for and report any incidents of cultural resource vandalism they observe during their training flights within the state. Approximately 50 such flights occur each month. Incidents are reported using a toll-free statewide telephone hot line manned 24 hours a day, 7 days a week. BLM archeologists conducted short training sessions for the pilots and mapped high-value cultural resource areas on the pilots' aeronautical charts. Excellent television and newspaper coverage was received, which is expected to have a deterrent value.

Product Title: Bighorn Cave Excavation Reveals Wealth of Information

Bighorn Cave had been a target of vandals for many years. To determine appropriate management needs, the Bureau of Land Management (BLM) wanted to assess the nature and extent of its remaining archeological deposits. Northern Arizona University and the Museum of Northern Arizona agreed to carry out a test excavation as a joint research project with BLM supplying a trailer for housing, per diem expenses for student volunteers, and funds for analysis of the archeological materials excavated. In addition to students, Native Americans from two Tribes and members of the amateur Arizona Archeological Society participated as volunteers. The result was a first-rate site evaluation, good newspaper coverage, and strengthened relationships for BLM with the public and two academic institutions. A press release on this effort appeared in a BLM newsletter that was mailed to 2,200 individuals and organizations.

Product Title: Archeological Boundary Survey Continues at Petrified Forest National Park

In conjunction with the Western Archeological and Conservation Center and with the volunteer assistance of the American Rock Art Research Association, an archeological boundary survey of the Petrified Forest was conducted by the National Park Service. Archeological resources were inventoried and identified to determine which resources warranted added protection. Project emphasis also included sensitizing and educating volunteers about resources. They became advocates of the Petrified Forest and exhibited feelings of ownership during this boundary survey. A few volunteers donated money to help pay the support and salary costs of archeologists hired for this project. The end result was a boundary survey a quarter of a mile wide from the park boundary inward and an inventory of all park archeological resources. A press release on this project was issued.

Fort Pluto, actually a redoubt on the Old Government Road, also known as the Mohave Road, has left remains at Palito Springs in the east Mojave Desert. The desolate location brings to mind the hardships endured by prehistoric and historic populations in living in this desert environment. Remains include rock walls stabilized by the Bureau of Land Management (BLM). Protective facilities designed or approved by BLM have been installed with the aid of volunteer groups. A plaque and sign identify the site, and a brochure on its resources is used to educate the public on its resource values, history, and the need to leave everything undisturbed. For the past several years volunteer archeologists, often recruited through the Student Conservation Association, have been used to inventory and monitor an extensive prehistoric complex there. Various news articles on Fort Pluto have been published.

Product Title: Dig the Lost Coast

During July 1984 the Eureka Times Standard reported on more than 7,000 hours of volunteer labor that were contributed by students, professional archeologists, and regional residents in the conservation of imperiled cultural material at four coastal and four interior archeological sites within the King Range National Conservation Area. Summer excavations removed nearly 200 cubic meters of material from the sites and offset losses due to erosion and recent human impacts. The projects were part of a long-term cooperative management agreement between the Bureau of Land Management and Sonoma State University for management of prehistoric resources in the North Coastal Range of California. The summertime projects satisfied three mutual goals, i.e., conservation, education, and research.

**Product Title:** 4,000 Years of Chumash History

In 1985 the Bureau of Land Management (BLM) initiated a cultural cooperative management agreement with the University of California at Santa Barbara to conduct archeological investigations and management of several prehistoric sites along the Pacific Ocean coast that were threatened by severe erosion. At Point Sal on the southern California coast, faculty and students worked voluntarily with BLM to excavate and retrieve important archaeological data. In addition to the scientific values obtained from the investigations, the project provided an archeological fieldwork experience in survey methodology and excavation for university students and other volunteers. Subsequent to completion of the study, a cultural interpretation of the resources and a long term preservation plan were developed. An article on the Point Sal project appeared in a February 1987 edition of the Santa Barbara News Press.

Product Title: Finding History In Trash: Archeologists Sift through Tidbits in House Where Lincoln Died

Product Title: Historic House Hides a Wealth of Artifacts Beneath Floorboards

Product Title: House Where Lincoln Died Still Rich in History

While attempting preservative maintenance of the Petersen House, part of the Ford's Theatre National Historic Site, workers uncovered early- to mid-19th century artifacts determined to be pertinent to the historical interpretation of the structure. Under the supervision of Regional Archeologist Stephen Potter, a 3-week excavation was conducted that unearthed more than 5,000 artifacts from 5 different strata representing a period before the Petersen House construction (c. 1849) through the Civil War. Visitors to the House were able to view the progressing excavation and examine a temporary display of artifacts recovered during the dig. In addition, a National Park Service (NPS) archeologist delivered an interpretive presentation. During further excavation artifacts from as deep as 6 feet and dating back to the 1830s were recovered. The artifacts were processed, catalogued, and analyzed, and primary historical research was conducted. A NPS press release on this project went out on Jan. 30, 1986. The Feb. 14, 1986 Tucson Arizona Daily Star ran a feature article on this project.

Product Title: Dig This: Volunteers Unearth Local History

Product Title: Life in the Fast Lane

Product Title: Speaking of Professionals...Scratching the Surface

Product Title: You Dig. Or at Least You Can, D.C. Being a Hotbed of Archeology

The National Capital Region Archeology Program (NCRAP) of the National Park Service is one of several volunteer archeological organizations active in the District of Columbia and nearby Maryland and Virginia. They offer training with professional archeologists and opportunities to do curatorial or field work at both urban and rural sites. NCRAP was one of nine area programs using volunteers, including high school students, in all phases of archeological work that were mentioned in this June 5, 1987 Journal newspaper story. The Washington Post and Journal newspapers carried stories on these projects from 1985 to 1987. Volunteers helped NPS archeologist Stephen Potter and his staff uncover a foundation and artifacts predating a 1723 Georgian manor house in Prince George's County, Maryland. This was reported on in the May 26, 1986 Washington Post. An article in the June 19, 1987 Washington Post listed museums, field schools, and programs actively recruiting volunteers.

Savannah District Office  
U.S. Army Corps of Engineers  
P.O. Box 889  
Savannah, GA 31402-0089  
912-944-5794

Numerous newspaper and magazine articles were published, and articles have appeared in the Army Corps of Engineers Savannah District newspaper. C.S.S. Georgia is the wreck of an Ironclad warship discovered in 1968 on the edge of the Savannah Harbor shipping channel. Savannah District has conducted a number of investigations of the wreck. These have included archival research, diving, hydrographic, magnetometer, and side-scan sonar surveys, and creation of a metals conservation facility with Old Fort Jackson and the Fort Pulaski National Monument. Old Fort Jackson is located adjacent to the wreck site and is operated as an educational and recreational site by the Coastal Heritage Society, the principal supporter of the wreck.

The Savannah District of the Army Corps of Engineers has issued news releases for nearly all events surrounding the C.S.S. Georgia, the wreck of an Ironclad warship located on the edge of the Savannah Harbor shipping channel. Since its rediscovery by a dredge in 1968, it has acquired something of a local and state "celebrity" status and anything to do with it is considered newsworthy. The District is charged with the operation and maintenance of the navigation channel and studies for future harbor improvements.

Local, regional and national periodicals printed articles on the Richard B. Russell Cultural Resource Mitigation Program, a $4.7 million effort to offset effects of the construction of the Russell Dam and Lake in Georgia and South Carolina. The program was a joint effort of the Savannah District of the Corps of Engineers and the Archeological Services Division of the National Park Service Southeast Regional Office. A Multiple Resource Area was established, cultural resource management and site specific mitigation plans made and contract studies implemented in accordance with these plans, with particular resource types such as historic mills and multicomponent prehistoric sites being studied together. The program has generated the Russell Series Papers and will ultimately produce a technical synthesis and a popular volume.

Over the last six years the Army Corps of Engineers Savannah District has issued news releases on the Russell Dam project. The last release and media package was prepared in 1985 for the relocation of historic Blackwell Bridge.

The Corps of Engineers archeologist performed a survey and subsurface testing as part of environmental documentation for the resettlement and cleanup of Bikini Atoll in the Republic of the Marshall Islands. This atoll was the site of American nuclear bomb testing during the 1940s and 1950s. Extensive prehistoric cultural resources discovered on the atoll have called into question some of the most widely held theories on prehistoric migration and settlement in this part of the Pacific Ocean. Some of the oldest cultural remains yet found in all of Micronesia and the western Pacific indicate that this atoll may have been occupied continuously for perhaps 4,000 years. Considerable academic and popular interest was generated for this project. Close cooperation was maintained with members of the Bikini community for assessing the social importance of these resources and their preservation. The Bikini community set aside public space on one of the atoll islands so that particularly important cultural resources can be preserved from any possible adverse impact due to construction of resettlement facilities. Several press releases resulted in Associated Press stories appearing in newspapers in Guam, Majuro, Honolulu, New York, and other cities.

Local news articles have appeared about the Birds of Prey ACEC, also known as the Guffey Butte-Black Butte Archeological District. Management of its cultural resources has included active public awareness activities. For example, the Halverson Bar volunteer effort resulted in detailed management planning for one site in the Birds of Prey ACEC. Intergovernment cooperation with the Idaho National Guard resulted in an additional inventory and protection of sites in the National Guard Training Area within the Birds of Prey Area. Other volunteer efforts provided site evaluation.

News releases have occasionally been issued about the Birds of Prey ACEC and Archeological District.

During the summers of 1982 and 1983 a number of small terraced gardens were discovered in the drainage of the South Fork of the Salmon River near the old Warren Mining District. Investigation revealed that they were constructed and worked by Chinese men between the 1870s and the early 1900s. Their garden produce was transported to Warren, Idaho for sale to the miners. A news release on these old gardens went out from the Department of Agriculture Office of Information on May 10, 1983. A tour was given to members of the news media on July 20, 1983 resulting in articles in the Boise Idaho Statesman on July 24, 1983; on July 27, 1983 in the McCall Idaho Star News; on July 30, 1983 in the Los Angeles Times; in the San Francisco Aslan Week on Aug. 11, 1983; in the July 20, 1983 San Francisco Chronicle (feature); in the Nov. 14, 1983 Spokane Spokesman Review; and in the Nov. 15, 1983 New York Times (feature).

An agency news release was issued to regional newspapers and television and radio stations on the Jim Moore Place Stabilization Project. Articles were printed in the Idaho County Free Press and other regional newspapers. The Jim Moore Place is a historic site next to the Salmon River in the Frank Church-River of No Return Wilderness. In the 1890s Moore built 10 structures on the site. He sold fruit, vegetables, meat, and hides to miners traveling the Tree Blaze Trail to the Thunder Mountain boom around the turn of the century. Crews of volunteers, private organizations, State, and Federal workers spent several weeks in 1983 and 1984 stabilizing five structures at the site. Interpretive signs were placed at the site for the approximately 600 rafters who visit the area each week during the rafting season. A picture display of the stabilization work is located at the Nez Perce National Forest Supervisor's Office in Grangeville, Idaho.

The Kentucky Archaeological Registry (KAR) is a landowner contact/site registration program developed by the Kentucky Native Preserves Commission for the Kentucky Heritage Council. KAR is aimed at providing low level, long term protection for Kentucky’s most significant archaeological sites by developing a relationship with landowners and educating them about the significance of their sites. The program has two components, voluntary registration and monitoring. Participating landowners are asked to preserve and protect their sites and notify the Council of any ground disturbing activities or intent to transfer ownership. A press release announced the registration of the Wickliffe Mounds, a Mississippian Indian town site inhabited from about AD 1000 to 1300, as the first Kentucky Archaeological Landmark on Feb. 28, 1987. Another release announced the registration of the Forest Home Site Complex, preserving three significant prehistoric and historic archeological sites, as the fourth Kentucky Archaeological Landmark. The registration of the Gaitskill Mound, a large earth mound built by people who lived in central Kentucky between 400 BC and AD 200, was announced, as was registration of the Stone Serpent Mound.

Product Title: Harmony Hall Restored: 'Beneficial Partnership' Puts Public Property to Private Use

Product Title: Harmony Hall: Archeology Background

In June 1986 National Capital Region archeologists, aided by more than 30 volunteers, unearthed the remains of a house built circa 1690, making it the oldest archeologically documented colonial structure discovered in the Washington, DC metropolitan area. The house site was found on the grounds of Harmony Hall, an 18th century Georgian estate in southern Maryland owned by the National Park Service and leased in October 1985 to a private firm under the provisions of the Historic Leasing Program. The discovery was made during an archeological survey of the property to ensure that plans by the lessees for new construction, utility lines, and pipes would not interfere with culturally significant resources. Intensive excavations exposed two corners and three sides of a post-in-the-ground structure, Delftware, earthenware, clay tobacco pipes, wrought iron hardware, and a pipe bowl. A NPS press release on this dig was sent out on Nov. 1, 1985. A June 17, 1986 Washington Post article reported the discovery. An article on the dig appeared in the June 23, 1986 Prince George's Journal. The partnership was featured in an article in the March 19, 1986 South County Current.

Two Wisconsin residents were cited and fined $50 each, under the Forest Service (FS) Code of Federal Regulations, for digging in a historic site. FS personnel discovered the pair using metal detectors and probes to locate artifacts at a 19th century logging camp in the Ottawa National Forest. A FS law enforcement officer issued the citations. Cultural sites are protected under Federal laws and regulations against the digging or surface collection of artifacts as part of a Federal cultural resource management program. Since archeological artifacts are nonrenewable remnants of the past, taking them is actually stealing a part of history from the public, which is encouraged to visit but respect and help protect historic sites.

Phase III mitigation of the Elmwood Logging Camp in the Iron River district provided an exceptional opportunity for the public to visit and learn about cultural resource management and the history of logging in the Ottawa National Forest. Elmwood Logging Camp, the only known black logging camp on Michigan's Upper Peninsula, was occupied from 1926 to 1929 after a Wisconsin entrepreneur lured several Chicago families to the area with promises that they could clear and farm the cutover lands. The sham was exposed when the black loggers, who were never paid for their work, took up poaching and moonshining to make ends meet. Local authorities disapproved of these activities and offered the families train tickets if they would return to Chicago. The Forest Service (FS) issued a news release on the 1980s cultural resource management project in May 1986. Representatives from area television and radio stations and newspapers were invited to visit the site. Forest Service personnel and members of the public also visited the site during mitigation to observe archeological excavation first hand. A news article about this project appeared in the Chicago Defender that same month. Articles also appeared in the Iron River, Michigan Reporter, the Iron Mountain-Kingsford, Michigan Daily News, and the Diamond Drill in June 1986.

Public rededication ceremonies were held on September 19, 1981 at the Kenton Ranger District Administrative Site to recognize 50 years of resource management and public service by the Ottawa National Forest staff. The native stone monument, erected for proclamation ceremonies at the Kenton District site in September 1931, was originally dedicated by President Herbert Hoover. In 1981 the monument was rededicated in ceremonies conducted by the Forest Service. Keynote speaker was Michigan Congressman Robert Davis. Other speakers included Forest Supervisor Joseph Zylinski and Clare Hendee, Ottawa Forest Supervisor from 1936 to 1939 and retired Deputy Chief of Administration of the Forest Service. At this time, two capsules containing Ottawa National Forest commemorative material were sealed within the monument.

FTS-476-1750

Isle Royale National Park had a vandalism and protection problem with shipwrecks located in the park. Through cooperation with the local community and the Submerged Cultural Resource Unit of the National Park Service, park officials were able to turn the problem into a major public education initiative. Charter boat operators as well as park officials combine efforts to inform divers about the value of
this resource. They also instruct them on health and safety regulations that protect visitors as well as laws and regulations that protect the park. As added protection for the wrecks, mooring buoys were installed near them. Boats tie up at the buoys and no anchors, which could damage the underwater shipwrecks, are used. Registration is required and can be accomplished either at the park or through the operator of a charter boat, who radios registration information to the park. The *Daily Mining Gazette* carried an article on the Isle Royale Underwater Archeology Trail in June 1982.

The Bureau of Land Management tested the Ayers-Frazier Bison trap in 1978 to assess the site and formulate protection and stabilization measures for the 2000-year-old bison kill site. Field personnel were members of the Young Adult Conservation Corps and volunteers from the local community. Scientific information from the test was published. Artifacts and photographs were used to develop a public display in the local Prairie County Museum. The site is now stabilized and vandalism has been stopped.

Volunteers assisted archeologists from Montana State University in the excavation of a prehistoric archeological site that includes 3,000-year-old components. The site is located in the historic and scenic White Rocks section of the Upper Missouri River and on Eagle Creek at the campsite of the Lewis and Clark Expedition on May 31, 1805. Volunteers were supervised in a variety of tasks that ranged from surface collection at the site to cataloging prehistoric artifacts. There was a state-wide press release about the project.

The Mill Iron Site is an 11,300-year-old bison kill and processing area on which the Bureau of Land Management needed basic information to begin active management. The property was tested under a cooperative agreement with the University of Wyoming, and with some volunteer help. Continued university study at the site was subsequently funded by the National Geographic Society. Mill Iron has produced the oldest bison bone bed in the hemisphere and promises to yield extremely rare data on some of the nation's earliest inhabitants. Data are also being acquired from the investigation to preserve and protect the remaining site.

**Contact:** Burton Williams
In 1976 the Upper Missouri National Wild and Scenic River was designated by Congress. Since then there has been an ongoing effort to acquire lands along the river. A recent acquisition has brought Woodhawk Bottom into federal ownership. A principal reason for that acquisition is two historic wooden structures. During June 1987 volunteers did preliminary restoration work on the wooden structures, including basic maintenance and securing of historic artifacts and farm machinery.

The Grimes Point Petroglyph Site and Hidden Cave are highly significant archeological sites east of Fallon, Nevada. Over the last 11 years the Bureau of Land Management's Carson City District has undertaken an ambitious and aggressive program of site protection and interpretation. Development of these sites has demonstrated that creativity and innovation can be incorporated into cultural resource management. As popular public attractions they serve as vehicles for instilling in visitors an ethic of conservation of the nation's cultural resources. Numerous press releases were issued about the sites from 1976 to 1982.

A major new gold mine development resulted in the discovery of a rock shelter eligible for the National Register of Historic Places. To mitigate the loss of this 3,000-year-old site, a data recovery plan was developed. A cooperative management agreement between the mining company and the Bureau of Land Management (BLM) was developed to assure adequate financial support, equipment, personnel, and safety to complete the task. The field work required an average of 10 people per day for 3 months. In addition to the archeological consultants hired by the mining company and BLM, volunteers from throughout Nevada, both avocational and professional archeologists, gave their time. Articles were written for newspapers throughout the state.

Unusually high water at Stillwater Marsh in the Stillwater National Wildlife Management Area has exposed significant biological and cultural remains of Native Americans who inhabited the valley hundreds, even thousands, of years ago. This public information campaign was important in reducing theft and vandalism of cultural resources exposed by wind and water erosion. Extensive burial mounds and other artifacts cover a wide area. The program called on the public to notify authorities of newly exposed cultural resource sites, to report theft or vandalism, and to form citizen groups to watch over areas of artifact concentration to preserve them for future generations. Considerable newspaper coverage on the importance of preserving archaeological resources occurred during 1985 and 1986.

As part of the Secretary of the Interior's Take Pride In America program the Bureau of Land Management (BLM), in 1986, launched "Operation SAVE - Save Archeological Values for Everyone" in Oregon and Washington to increase citizen awareness and enforcement of the Archaeological Resources Protection Act in the Pacific Northwest. BLM field employees and citizens helped law enforcement officers, archeologists, land managers, and public affairs specialists initiate public education programs, pro-active enforcement operations, and employee and interagency training. The logo for this program was taken from a Wishram Indian legend about a woman chief who was changed into a rock on a cliff overlooking the Columbia River. Called Tsagaglalal, "She Who Watches," this prehistoric design is seen on carved artifacts and cliff faces near the river. News releases were distributed free regionwide announcing the SAVE program and a toll free telephone hot line number for reporting theft and damage to archeological sites on public land.

Starting in June 1988, the Public Archeology Laboratory, Inc., undertook an educational program offering a summer field school and weekend workshops in archeology at a prehistoric site in Warwick, Rhode Island. The Lambert Farm Site is listed on the National Register of Historic Places, but was threatened by a private residential development that resulted in the destruction of the entire two-acre site. Through a series of discussions with the developer, the Rhode Island Historical Preservation Commission (State Historical Preservation Office), and other state agencies, an agreement was reached to allow the general public to excavate the site, in the context of a field school, for a period of two years. The site dates to about 3,500 years ago, at least, and contains some unusual finds such as two prehistoric dog burials, a soapstone smoking pipe, shark teeth, and stone materials from Pennsylvania and New York. The project was covered by several members of the media.

In an effort to expedite testing for National Register of Historic Places eligibility of archeological sites, the Corps of Engineers Omaha District began conducting in-house archeological excavations using volunteer labor and professional staff archeologists. The Antelope Creek Archeological Project was the first District project to use volunteers, in 1982. The project was covered by various local news agencies.

Numerous press releases, distributed statewide and nationally, described a National Landmark site that was the site of excavations of a mass burial in 1978. The village dates to the Plains Village Initial Coalescent period, around A.D. 1325. The project became the center of a controversy between Native American religious rights and scientific research when it was proposed that all of the skeletal material, consisting of the remains of nearly 500 individuals, be reburied on the site. The reburial took place in 1981.

Annual seminars are held to help teachers become more aware of opportunities for using the out-of-doors for learning experiences. They also provide a variety of experiences to be used effectively with students and to assure teachers direct contact with outdoor career personnel who can provide guidance in the care of the environment. Archeology and cultural resource management have been highlighted in one of a series of different environmental displays. These seminars are organized by the Soil Conservation Service and the Environmental Education Association of South Dakota. The Corps of Engineers has participated annually in the seminars since 1983. Local news coverage of the events is provided.

News releases and statewide television coverage detailed progress of the Fort Randall Archeological Project, which focused on the excavation of a 19th century frontier post. A major purpose of the project was the establishment of a public education program through cooperation between interested amateur volunteers and professional archeologists.

The professionals trained and guided volunteers through the many tasks necessary for archeological data recovery while helping them develop an appreciation of and commitment to historic preservation and cultural resource management. The project was initiated in 1986 and planned to continue through 1990.

There was local newspaper coverage in September of 1983 when the need arose to test the Little Pumpkin Site (39H/US7) for National Register of Historic Places eligibility. It was decided to do the work in-house using the Corps of Engineers professional staff archeologists and local volunteers. The site was a prehistoric earthlodge village of the Extended Coalescent variant of the Plains Village period dating around A.D. 1450.

As part of the memorialization of previous Overhill Cherokee occupation of the Little Tennessee River Valley, the Tennessee Valley Authority (TVA) granted the Eastern Band of Cherokee a permanent easement on 44.6 acres of land along the Tellico Reservoir. TVA also established a trust fund that was used by the Cherokee to build the Sequoyah Birthplace Museum. The Museum, through exhibits, displays, and numerous video programs, interprets Cherokee and earlier Native American prehistory in this valley. The
Museum also has a shop that sells Cherokee crafts and historical monographs.

The Texas Historical Commiai i on, Amistad Recreation Area, and the Southwest Regional Office of the National Park Service cooperated on a project to clean up, assess, protect, and preserve the archeological resources at Amistad Reservoir. This project began in 1986 and involved volunteer professional and amateur archeologists, area historical societies, the Val Verde County Chamber of Commerce, and various individuals from the State of Texas, its universities and museums. Amistad Recreation Area cooperates with individuals and agencies pursuing research interests on cultural topics in the reservoir area. Some of these projects are ongoing. An article on the project appeared in the Del Rio News Herald in March 1987 and in the Austin Texas Medallion in January 1987. The Albuquerque Journal printed an article on the project in October 1986, and the San Antonio Express reported on the project in May 1987.

Santa Fe, NM 87504-0728
505-988-6766

This project consisted of an underwater sample survey and test excavation in 1985 and 1986 of selected magnetic anomalies at Padre Island National Seashore. In addition to some 20th century shipwreck materials, a fragment of an AD 1554 Spanish anchor was encountered. This solved some interpretive questions relating to the famous AD 1554 Spanish Plate Fleet shipwrecks. An additional magnetometer survey of a survivors' camp was planned. The incident was reported in the Corpus Christi Caller in 1985.

Product Title: You Dig. Or at Least You Can, D.C. Being a Hotbed of Archeology  

In May 1986 an archeological and historical investigation began at the site of an antebellum plantation mansion called "Portici" on land acquired by the National Park Service in 1985 and incorporated into the Manassas National Battlefield Park. Portici, located on the Lower Bull Run Tract, was built around 1820. It served as Gen. Joseph E. Johnston's headquarters during the First Battle of Manassas and later as a Confederate hospital. Controlled surface collections and excavations exposed the foundation and cellar of the mansion, two minor additions and the detached kitchen, four other outbuildings, and two structures belonging to an earlier 18th century plantation house called "Pohoke." Area museums, field schools and archeological organizations that use volunteer workers were listed in this June 19, 1987 Washington Post feature article.

Excavations were conducted at Fort Vancouver National Historic Site by the Oregon Archeological Society for a five-year Take Pride in America project, a product of cooperation between National Park Service (NPS) staff and the Oregon Archeological Society. The Society, a volunteer
organization headquartered in Portland, excavated the site of an early 19th century office under the direction and supervision of a private archeologist provided by the NPS. Visitor response to the excavation was enthusiastic. The Society designated a person to act as an interpreter to explain the archeological process and research questions that were being pursued. The Portland Oregonian reported on the excavations. An article on the Fort Vancouver project appeared in the Oregon Journal and the Vancouver Columbian ran a story on the excavations.

The San Juan National Historical Park superintendent and staff have hosted University of Washington archeological excavations at the British Camp for several years. The excavations provide a field school for undergraduate and graduate archeologists. As part of the investigation, volunteers, usually senior citizens, dig alongside the students under supervision of a doctoral candidate. A student interpreter is assigned to explain the excavations to visitors and show examples of artifacts that are common to the site. The excavations received press coverage in the San Juan Journal. The San Juan Sounder reported on this archeological work.

Date of Information: 5/87
The Heart Mountain Relocation Center was constructed to confine more than 110,000 men, women, and children of Japanese ancestry during World War II. At that time it was the third largest city in Wyoming. A portion of the original area was placed on the National Register of Historic Places in 1985, and the Bureau of Reclamation funded two informative plaques at the site. Numerous newspaper and TV articles were written about this property and its effects on its former inhabitants. Local support for generating recognition for this property was unprecedented. Articles appeared in Powell and Cody, Wyoming newspapers.

Product Title: Alaska Staff Reaches out to Students

Archeologists and natural resource specialists from the three Bureau of Land Management District Offices in northern Alaska, Arctic, Kobuk, and Steese-White Mountains, presented information on cultural and other land resources to students of the Fairbanks North Star Borough School District during Natural Resources Education Month in April 1987. Continuing a tradition of outreach programs to public schools, they made about 20 presentations to a total of more than 500 students. They explained theories and methods used in archeology and cultural anthropology worldwide as well as in local prehistory and ethnography of the State. They showed displays of artifacts and also fossil bones to illustrate the science of paleontology, and discussed the interrelationship of soils, permafrost, vegetation and fire.

Product Title: Cooperative Agreement Opens Cave for Research
The Bureau of Land Management (BLM) Arizona Strip District cooperated with Brigham Young University (BYU) for two years on a research project focusing on Antelope Cave. This rich cave site had been vandalized for nearly 40 years, and repeated efforts to fence the entrance had been unsuccessful. To save what was left of the intact archaeological deposits, BYU agreed to conduct a study of the site from a regional perspective, including excavation at the cave and a nearby vandalized rock shelter. BLM contributed some field labor and funds for analysis of archeological materials. The project ultimately resulted in field survey of a 10 km diameter area. BLM personnel, students from BYU, and volunteers from the amateur Utah Archeological Society worked on the project under the direction of BYU and BLM professional archeologists. The result was a successful study that involved the public and generated valuable information about a little known region. This press release appeared in a BLM newsletter that was mailed to 2,200 individuals and organizations.

A number of individuals, private firms, and State and Federal agencies participate in Arizona Archaeology Week in March or April of every year. The Bureau of Land Management (BLM) is a major participant, contributing exhibits at the State Capitol, presenting lectures and slide shows to school classes and other groups, sponsoring site tours, participating in radio talk shows, sponsoring archeology fairs, and other activities. A special edition of the Arizona BLM newsletter is published each year focusing on Archaeology Week and featuring archeological activities in each BLM District.

Agency: Bureau of Land Management
Project/Program: Bighorn Cave Cooperative Research Project
Product Title: Bighorn Cave Excavation Reveals Wealth of Information

Bighorn Cave had been a target of vandals for many years. To determine appropriate management needs, the Bureau of Land Management (BLM) wanted to assess the nature and extent of its remaining archeological deposits. Northern Arizona University and the Museum of Northern Arizona agreed to carry out a test excavation as a joint research project with BLM supplying a trailer for housing, per diem expenses for student volunteers, and funds for analysis of the archeological materials excavated. In addition to students, American Indians from two Tribes and members of the amateur Arizona Archeological Society participated as volunteers. The result was a first-rate site evaluation, good newspaper coverage, and strengthened relationships for BLM with the public and two academic institutions. A press release on this effort appeared in a BLM newsletter that was mailed to 2,200 individuals and organizations.

Agency: Bureau of Land Management
Project/Program: Harquahala Peak Solar Observatory Stabilization
Contact: Gary Stumpf
Arizona State Office
Bureau of Land Management
3707 North 7th Street
Phoenix, AZ 85104
602-241-5509

Product Title: Harquahala Peak-Solar House of the Southwest

The Harquahala Peak Observatory, built in 1920 by the Smithsonian Institution, was the only solar observatory of its kind in the United States at that time. Its mission was to measure the energy output of the Sun to determine its effect on the Earth's climate. This National Register site had deteriorated badly and needed repair. The structure was stabilized under contract, and volunteers from a local four-wheel-drive club agreed to monitor it periodically. This press release appeared in a Bureau of Land Management newsletter mailed to 2,200 individuals and organizations.

Project/Program: Public Education about Geoglyphs on the Lower Colorado River

Product Title: Apart from the People: Hohokam Indians North of the Salt River Valley

This 1981 publication by J. Simon Bruder was prepared as a general guide to the prehistory of the Northern Hohokam periphery as it is presently understood. Published by the Museum of Northern Arizona for the Army Corps of Engineers Los Angeles District, it presents information gathered during an archeological mitigation program by the Museum at the Adobe Dam Site portion of an Army Corps of Engineers flood control project. Of specific concern are Hohokam colonists who lived in the peripheral zone north of the Salt River Valley during AD 800-1150. Information from five sites in the Adobe Dam project area on Skunk Creek is presented in detail as an example of current archeological research in this region.

Product Title: Hohokam Prehistory in the Central New River Drainage, Arizona

This non-technical report summarizing the results of data recovery mitigation at New River Dam was prepared as part of a comprehensive effort to disseminate this information to the public. Written by David Doyel and published by the Pueblo Grande Museum in 1986 for the Los Angeles District of the Corps of Engineers, it is available at the Museum and at the Los Angeles District office.
**Product Title: Symbols in Stone: Rock Art of the Northern Hohokam Periphery**

This 1981 publication by J. Simon Bruder was prepared as a layperson's guide to the rock art of the Northern Hohokam peripheral zone. Published by the Museum of Northern Arizona for the Corps of Engineers (COE) Los Angeles District, it was sponsored by COE as part of the mitigation program for a Phoenix and vicinity flood control project. Data from the Heogpeth Hills Petroglyph Site, by far the largest in the region, is emphasized. Information from 13 smaller sites is presented for comparison.

**Product Title: Unearthing the Secrets of the First Phoenix**

As a result of the Interstate 10 highway project in Phoenix, Arizona, major excavations were conducted at two sites to shed light on the prehistoric inhabitants of this urban area. The large scale of the site and their sophisticated irrigation canals, mounds, and ball courts drew considerable local attention. A series of guided tours was developed to accommodate the interest of school and adult groups. More than 10,000 persons participated. A group of free-standing pavilions was constructed to shelter a series of bilingual displays on the prehistoric resource. This exhibit presented a glimpse of the houses, surroundings, and activities of the prehistoric inhabitants. This article on the project appeared in the February 1984 Arizona Highways magazine.

A popular topic in Casa Grande Ruins interpretation is ancient astronomy. An article in the August 1987 American West Magazine presents in layman's terms the astronomical significance of Casa Grande Ruins and other National Park Service areas in the Southwest. The article was written by a former director of the Flandreau Planetarium in Tucson, Arizona.

In conjunction with the Western Archeological and Conservation Center and with the volunteer assistance of the American Rock Art Research Association, an archeological boundary survey of the Petrified Forest was conducted by the National Park Service. Archeological resources were inventoried and identified to determine which resources warranted added protection. The emphasis also included sensitizing and educating volunteers about the resources. They became advocates of the Petrified Forest and exhibited feelings of ownership during this boundary survey. A few volunteers donated money to help pay the support and salary costs of archeologists hired for the project. The end result was a boundary survey a quarter of a mile wide from the park boundary inward and an inventory of all archeological resources. An article, "Archeological Fieldwork at Petrified Forest," appeared in the February 1986 Courier magazine.

Project/Program: King Range Archeological Projects I & II
More than 7,000 hours of volunteer labor were contributed by students, professional archeologists, and regional residents in the conservation of imperiled cultural material at four coastal and four interior archeological sites within the King Range National Conservation Area. Project information is published in the *King Range Newsletter*. Summer excavations removed nearly 200 cubic meters of material from these sites and offset losses due to erosion and recent human impacts. The projects were part of a long-term cooperative management agreement between the Bureau of Land Management and Sonoma State University for management of prehistoric resources in the North Coastal Range of California. The summertime projects satisfied three mutual goals, i.e., conservation, education, and research.

Widely known to the archeological community, both professional and avocational, Table Mountain has attracted attention due to the Bureau of Land Management (BLM) decision to deny development of the area in deference to the presence of some 200 archeological properties. The San Diego County Archeological Society, in cooperation with BLM, organizes trips to the area twice a year. Presentations on archeology are given at fireside; tours to key sites are given during the day; and work groups inventory and reinventory public lands for both training and monitoring purposes. A brochure for public release to aid in interpretation, protection, and preservation, and development of an educational slide-tape program have been planned. Articles about Table Mountain also are featured regularly in the San Diego County Archeological Society Newsletter.

Two avocational archeologists, Mark Gary and Deborah MacLean, conducted an intensive field inventory within Wilson Valley and the surrounding area, and identified and recorded nearly 40 archeological sites on lands recently acquired by the Bureau of Land Management (BLM). Marlene Greenway, a student intern from Sonoma State University, established a photo monitoring program for these sites and collected surface materials for scientific analyses. Local resident Hope Hamilton collected oral and written information relating to the region's past. All this integrated work was performed on a volunteer basis and will result in better understanding of and protection for high caliber cultural resources. This article appeared in the BLM Newsbeat in June 1987.

Mesa Verde National Park has, through its various forms of public contact including publications, brochures, exhibits, and speeches, presented a general theme of cultural resource protection. Through ranger conducted tours, federal laws and regulations concerning antiquities are explained. In September 1984 representatives from 37 nations participated in the First World Conference on Cultural Parks, held at Mesa Verde. Issues and problems confronting cultural parks throughout the world were discussed and possible solutions were explored. Themes of the conference were Cultural Parks and Native Cultures, Tourism and Use, and Technology and Preservation. An Air Quality Symposium was also held at Mesa Verde in May 1984. It gave participants an opportunity to exchange information and views on research, management, and regulatory issues regarding the effect of air pollution on parks and wilderness areas. Articles on the park have appeared in National Geographic magazine. Readers Digest ran an article on the park, as did Travel and Leisure magazine.

Product Title: Training Programs for Archeological Preservation
The Soil Conservation Service (SCS) is a Department of Agriculture agency that provides assistance to the public in protecting national soil and water resources. In order to comply with historic preservation laws and ensure that significant cultural resources are not inadvertently destroyed during assistance activities, the SCS has embarked upon a cultural resources training program of national scope. This training program systematically targets agency employees involved in SCS programs and management decisions at different ability, skill, and knowledge (ASK) levels. These ASK levels range from a rudimentary awareness to a proficiency in independent handling of cultural resource concerns. Training materials are formatted in nine modules that are assigned appropriate ASK levels. Modules 1 through 7 are composed of self-paced slide/tape presentations on the importance and recognition of cultural resources. Additional classroom study is provided by a Study Guide with tests and an instructor's Leader Guide. Module 8 consists of a field exercise/workshop that may include a video tape. Module 9 is specialized to instruct a select audience in how to better contract for cultural resource studies.

Date of Information: 1989
Product Title: Helping the Past Have a Future

Soil Conservation Service (SCS) erosion control programs have saved a number of archeological sites from erosion, including the Grand Village of the Natchez National Historic Landmark in Mississippi, the Mitchell National Historic Landmark in South Dakota, and a number of archeological sites at St. Mary's City National Historic Landmark in Maryland. Reports on these programs appeared in local newspapers. The January 1984 edition of the SCS Soil and Water Conservation News carried an article on emergency action by SCS at Grand Village in 1983.

Little information had been available on the present condition of the World War II battleship U.S.S. Arizona, its rate of deterioration, and the impact of marine growth on the hull. Through a cooperative effort of the memorial park, the local community, the Submerged Cultural Resources Unit of the National Park Service, and the Navy, a major documentation effort was initiated. Detailed maps, photographs, and videotapes were produced to inform and educate the public. Displays of work in progress and live video coverage were provided for visitors to the U.S.S. Arizona Memorial. A model of the vessel, as it exists today, was constructed and is on display in the Visitor Center in Honolulu. This information appeared as an article in APT Bulletin, 1987. Articles about U.S.S. Arizona were printed in Underwater USA in 1984, 1985, and 1986.

**Product Title:** Putney Landing Excavations

An article on excavations at Putney Landing appeared in the *Army Corps of Engineers Tower Times* newspaper. The Quad Cities Archeological Society was provided the opportunity to visit the Putney Landing Site, a Middle Woodland village and burial mound complex dating to A.D.100 in Henderson County, Illinois. Members were able to observe and help with excavation and artifact processing. Archeological fieldwork and laboratory techniques were taught. Several months later contractor Charles Markman from Northern Illinois University returned to Rock Island to give a talk and slide show about the excavation and to summarize how important the contribution of local preservation societies can be in large excavation projects.

The *Kansas Anthropological Association Journal* publishes articles and reports on Central Plains archeology and prehistory, with an emphasis on Kansas. It also serves as a newsletter, providing a forum for communication with members of the Kansas Anthropological Association, a statewide group of amateur archeologists and others interested in the prehistory and history of the state. Editing is carried out by the State Historical Society's public archeologist. The Journal is issued at the rate of nine numbers (one volume) a year. It is free to Association members and available at a nominal price to non-members.

**Product Title: Kentucky Archaeological Registry Newsletter**  
The Kentucky Archaeological Registry (KAR) is a landowner contact/site registration program developed by the Kentucky Native Preserves Commission for the Kentucky Heritage Council. KAR is aimed at providing low level, long term protection for Kentucky’s most significant archeological sites by developing a relationship with landowners and educating them about the significance of their sites. The program has two components, voluntary registration and monitoring. Participating landowners are asked to preserve and protect their sites and notify the Council of any ground disturbing activities or intent to transfer ownership. This newsletter provides information to registered landowners about State preservation and archeology activities and brief histories of registered sites.

Ottawa National Forest, S.O.  
USDA Forest Service  
East U.S. Route 2  
Ironwood, MI 49938  
906-932-1330

Phase III mitigation of the Elmwood Logging Camp in the Iron River District provided an exceptional opportunity for the public to visit and learn about cultural resource management and the logging history of the Ottawa National Forest. Elmwood Logging Camp, the only known black logging camp on Michigan's Upper Peninsula, was occupied from 1926 to 1929 after a Wisconsin entrepreneur lured several Chicago families to the Upper Peninsula with promises that they could clear and farm the cutover lands. The shem was exposed when the black loggers, who were never paid for their work, took up poaching and moonshining to make ends meet. Local authorities disapproved of these activities and offered the families train tickets if they would return to Chicago. Representatives from area television and radio stations and newspapers were invited to visit the site. Forest Service personnel and members of the public visited the site during mitigation to observe archeological excavation first hand and learn about the site’s history. An article about the project appeared in the FS Region 9 Contact newsletter in September 1986.

Isle Royale National Park had a vandalism and protection problem with shipwrecks located in the park. Through cooperation with the local community and the Submerged Cultural Resource Unit of the National Park Service, park officials were able to turn the problem into a major public education initiative. Charter boat operators as well as park officials combine efforts to inform divers about the value of this resource. They also instruct them on health and safety regulations that protect visitors as well as laws and regulations that protect the park.

As added protection for the wrecks, mooring buoys were installed near them. Boats tie up at the buoys and no anchors, which could damage the underwater shipwrecks, are used. Registration is required and can be accomplished either at the park or through the operator of a charter boat, who radios registration information to the park. An article on Isle Royale appeared in the April 1985 *National Geographic* and in the March/April 1982 *National Parks Magazine*.

**Product Title:** Archeological Potential of Pool 10, Upper Mississippi River: A Geomorphological Potential, The
The 9-foot river navigation channel project of the U.S. Army Corps of Engineers (COE) extends from Minneapolis, Minnesota, to Alton, Illinois. The St. Paul District operates 13 locks and dams along the Upper Mississippi River from the Twin Cities to Guttenberg, Iowa. The St. Paul District has conducted numerous archaeological survey and testing projects in association with the operation and maintenance of this project. Two of the 13 COE pools have had extensive geomorphological mapping work conducted within their limits, and one of these has had reconnaissance survey work conducted that was based on the geomorphological mapping. Deeply buried archaeological sites have been recorded at a number of locations along the river and some limited work has been conducted at some of these sites. This article by Peter E. Church appeared in the *Wisconsin Archeologist* (Vol. 66, No. 3; September 1985).

Miles City District  
Bureau of Land Management  
P.O. Box 940  
Miles City, MT 59301  
406-232-4331

The Mill Iron Site is an 11,300-year-old bison kill and processing area on which the Bureau of Land Management needed basic information to begin active management. The property was tested under a cooperative agreement with the University of Wyoming, and with some volunteer help. Continued university study of the site was subsequently funded by the National Geographic Society. Mill Iron has produced the oldest bison bone bed in the hemisphere and promises to yield extremely rare data on some of the nation's earliest inhabitants. Data was also acquired from the investigation to preserve and protect the remaining site. Information on the research was published in the *BLM Quarterly Steward* and archeological newsletters, and was the subject of press releases.

          702-635-5181

Product Title: Cultural Resources Management at Grimes Point

The Grimes Point Petroglyph site and Hidden Cave are highly significant archeological sites 10 miles east of Fallon, Nevada. Over the last 11 years, the Carson City Bureau of Land Management District has undertaken an ambitious and aggressive program of site protection and interpretation here, utilizing innovative funding techniques. This area has become a model for cultural resources management and interpretation. The Grimes Point Petroglyph Site has a 2000-foot, self-guiding interpretive trail, which was selected by the Secretary of the Interior in 1977 to be part of the National Recreation Trail system. Since then more than 50,000 people have visited the site. Development of these sites has demonstrated that creativity and innovation can be incorporated into cultural resource management. A popular public attraction, Hidden Cave serves as a vehicle for instilling in visitors an ethic of conservation of the nation's cultural resources. This article by David Hurst Thomas was published in the Native American Annual, Vol. 1, No. 1.

The States Historic Preservation Office matching grants-in-aid program funded a project to record and nominate Navajo Refugee sites to the National Register of Historic Places. A technical report, site forms, and nomination were prepared by a local contract firm, the Division of Conservation Archaeology. In the mid-1970s the Bureau of Land Management (BLM) carried out an extensive stabilization program at eight of these sites. Pernmaloy interpretive signs were installed that provide a brief summary of the period of occupation with detailed site maps showing rooms and other features. An article about the project appeared in the New Mexico Advisor BLM newsletter.

This major Chaco Canyon project dealt with a survey of park land and excavations of several pueblos. Coupled with energy developments in the San Juan Basin, it initiated studies by other Federal agencies, contributed to legislation designed to recognize a widespread road and outlier system, and had an impact on research perspectives and resource management of sites. Remote sensing was used extensively. Numerous newspaper articles on the project and remote sensing were published. Approximately 15 books on the project were published.

Product Title: People of the Past
The Arkansas River valley is extremely rich in prehistoric archeological sites. These sites are found along the length of the Arkansas River Navigation System through eastern Oklahoma. Because of the great public interest in these sites and because the sites were subject to considerable vandalism, the District staff produced a short book oriented to the amateur public. The book is available free of charge. It is professionally written and well illustrated. The publication explains the rich culture that thrived in the valley in prehistoric and early historic times and stresses the need to protect and manage the prehistoric resources that are still present. The book is available at State and local amateur archeological society meetings as well as in the project offices along the Arkansas River and in the Tulsa District Office.

Roseburg District
Bureau of Land Management
777 NW Garden Valley Boulevard
Roseburg, OR 97470
503-672-4491

The Roseburg District, in cooperation with the University of Oregon and Umpqua Community College, conducted test excavations at two prehistoric sites in the Umpqua Basin during the summer of 1986. The project was run as a field school and was used to train not only community college students, but also Bureau of Land Management (BLM) employees and volunteers. BLM cultural resource technicians were able to observe and learn about archeological materials in context. The volunteers were both community members in general and avocational archeologists from the Rogue Valley Archaeological Society. Since the excavations were initiated in response to vandalism, media exposure by radio, television, and newspaper was used in part to inform the public of the importance of archeological values and to appeal for the public's help in preserving those values. An article on this project appeared in a BLM newsletter in August 1986.

The Fort Randall Archeological Project has focused on the excavation of a 19th century frontier post. A major emphasis has been to provide a public education program through cooperation between interested amateur volunteers and professional archeologists. Professionals have trained amateur volunteers and guided them through the many field and laboratory tasks necessary for archeological data recovery while helping them develop an appreciation of and commitment to historic preservation and cultural resource management. This project was initiated in 1986 and planned to continue through 1990. Articles on the project appeared in the Newsletter of the South Dakota Archeological Society (Vol. 16, No. 1; June 1986), in the History Notes newsletter of the South Dakota Historical Society (Vol. 2, No. 1; July 1986), and in Headquarters Hellogram, the newsletter of the Council on America's Military Past (No. 179; September 1986).

**Product Title:** Archaeological and Historical Assessment of the First Hermitage, An

This book details two years, 1974 and 1975, of research on the log cabins that served as Andrew Jackson's first home at the Hermitage plantation. The Jacksons lived there from 1804 until 1821, when the Hermitage mansion was completed. Included are chapters on the site's history, on field findings, and studies of glass beads and faunal remains. One chapter details the largely inconclusive dendrochronological research performed on the cabins. This book serves as a good source on general aspects of early settlement in middle Tennessee and on the material culture of elite plantation life from 1800 to 1850. It was edited by Samuel D. Smith.

Product Title: *Ancient Texans*

The Texas Historical Commission, Amistad Recreation Area, and the Southwest Regional Office of the National Park Service cooperated on a project to clean up, assess, protect, and preserve the archeological resources at Amistad Reservoir. This project began in 1986 and involved volunteer professional and amateur archeologists, area historical societies, the Val Verde County Chamber of Commerce, and various individuals from the State of Texas, its universities and museums. Amistad Recreation Area cooperates with individuals and agencies pursuing research interests on cultural topics in the reservoir area. Some of these projects are ongoing. Harry Schafer edited this 1987 publication by *Texas Monthly* magazine.

**Product Title:** Portici Unearthed  
In May 1986 an archeological and historical investigation began at the site of an antebellum plantation mansion called "Portici" on land acquired by the National Park Service in 1985 and incorporated into the Manassas National Battlefield Park. Portici, located on part of the Lower Bull Run Tract, was built around 1820. It served as Gen. Joseph E. Johnston's headquarters during the First Battle of Manassas and, later, as a Confederate hospital. Controlled surface collections and excavations exposed the foundation and cellar of the mansion, two minor additions and the detached kitchen, four other outbuildings, and two structures belonging to an earlier 18th century plantation house called "Pohoke." Park Historian Edmund Raus wrote this article on Portici for the Maryland Line (Vol. 7, No. 9; May, 1987).

The 11th National Boy Scout Jamboree held at Fort A.P. Hill, near Fredericksburg, Virginia, was the site for several conservation demonstrations and hands-on activities. The Soil Conservation Service (SCS) and the Hanover-Caroline Soil and Water Conservation District reached thousands of active, concerned scouts and their families with their resource conservation message. One major exhibit at the Jamboree was the Conservation Learning Trail that led to the Conservation Learning Area. Scouts, in small groups, toured one of four trails with a professional conservation message. The SCS stressed the interdependence of natural energy, air, soil, and water resources. At the archeological site a guide discussed conservation practices of the American Indians in the 14th century. The two-acre SCS "Conservation is Your Future" exhibit was a favorite. Each of the exhibit's nine stations related to conservation practices that scouts could adapt for use in their own communities. An article about the Jamboree appeared in the December 1985 Bulletin of the Society for America Archaeology. A news story about the Jamboree appeared in the SCS Soil and Water Conservation News of February 1986.

The Corps of Engineers was the construction agency for the MX Missile Test System at Vandenberg Air Force Base. Los Angeles District archeologists designed and implemented a cultural resources management plan for the project. Archeology was the environmental issue that had the most "visibility" during construction, as sites were often discovered during excavation and grading of the project area, which is a large dune field. There was a good deal of local interest. Presentations were given by the staff archeologist at the Lompoc Museum, to the Soroptomist Club and numerous local schools and Scout troops.

Product Title: Kentucky Archaeological Registry: Citizen-Based Preservation for Kentucky's Archaeological Sites, The

The Kentucky Archaeological Registry (KAR) is a landowner contact/site registration program developed by the Kentucky Native Preserves Commission for the Kentucky Heritage Council, which is administered by the Kentucky Heritage Council serving as the State Historic Preservation Office. KAR is aimed at providing low level, long term protection for Kentucky's most significant archeological sites by developing a relationship with landowners and educating them about the significance of their sites. Modeled on the successful protection formula implemented nationwide by the Nature Conservancy for the protection of natural areas, the program has two components, registration and monitoring. Landowner participation in site registration is completely voluntary. Landowners are asked to preserve and protect their sites and notify the Council of any ground disturbing activities or intent to transfer ownership.

U.S. Fish & Wildlife Service
Eastside Federal Complex
911 Northeast 11th Avenue
Portland, OR 97232-4181
503-231-6176

Unusually high water at Stillwater Marsh in the Stillwater National Wildlife Management Area has exposed significant biological and cultural remains of Native Americans who inhabited the valley hundreds, even thousands, of years ago. This public information campaign was important in reducing theft and vandalism of cultural resources exposed by wind and water erosion. Extensive burial mounds and other artifacts cover a wide area. The program called on the public to notify authorities of newly exposed cultural resource sites, to report theft or vandalism, and to form citizen groups to watch over areas of artifact concentration to preserve them for future generations. Many presentations on this program were made by the staff archeologist to various local service clubs and interested groups.

Billings, MT 59107-0137
406-657-6916

Cultural work by the University of North Dakota along the James River generated numerous papers, local news articles, and speaking engagements by the personnel involved. The Bureau of Reclamation encouraged the principal investigator and others to share their information and results with the public, which would not have access to professional level reports or articles. A Public Awareness Day was held, and seasonal volunteers assisted in excavations along the James River.

**Contact:** Douglas Scott
Midwest Archeological Center
National Park Service
Federal Building, Room 474
100 Centennial Mall North
Lincoln, NE 68508-3873
402-471-6392

Prior to reconstruction of Fort Union, archeological work preceded the destruction of the resource base. Paid crew members supervised volunteers who worked alongside the archeologists. Presentations about the project were made to the Platte Valley Muzzle Loading Association, Lincoln Corral of the Westerners, and the Fort Laramie Fur Trade Symposium.

**Date of Information:** 6/87
Presentations have been made to groups of grade school classes on archeological methods and Native American prehistory, and to classes at Oregon State University on cultural resource management in the Bureau of Land Management (BLM). One slide presentation was made at the Salem Senior Center on cultural resources of the Salem District of BLM.

Product Title: Cultural Resources/Indian Lifeways Learning Station
Sponsored by the Kiwanis Club of Baker, Oregon, and the county school district, Natural Resources Appreciation Day has become an annual event of cooperation between the Bureau of Land Management, Forest Service, Soil Conservation Service, and Oregon Department of Fish and Wildlife. Sixth grade students from all schools in the county attend and participate in a natural and cultural resources outdoor education experience. Resource stations emphasize conservation and wise management of soil, water, wildlife forage, forests, and cultural resources. Indian lifeways and prehistoric resource use patterns are demonstrated. Students learn that the resources are part of the system of interdependent elements that has been important for the past 10,000 years of human history, and will be important for the next 10,000 years of human history.

A teaching kit can be checked out from the Utah Statewide Archaeological Society for use in public school and civic group presentations. It consists of a manuscript, posters, maps, publications, 35 mm slides, handouts, and artifact replicas. The kit is adaptable to surrounding states in the Great Basin, Intermountain, and Southwest areas. It has been in use in Utah's public schools for several years.

The Colorado Plateau has a large and growing problem with vandalism and looting of prehistoric Indian sites. The parks there have developed a guideline to use when giving information to the public. This was done to allow public access to certain sites while not encouraging visitation to fragile sites. Presentations are given to tour guides of jeep and boat trips for this purpose.

Product Title: Selected Topics in Archaeology

Archeologist David Vicek developed a course titled "Selected Topics in Archaeology" that is basically an introductory archeology class in North American prehistory. It is geared to non-technical laymen with minimal formal training in archeology, and grades are based on a final take-home exam. The class begins with an extensive discussion of the glacial period, Paleoindian occupations in the last glacial period, concepts of Primary Forest Efficiency, and Plains Archaic adaptations, stressing sites in Wyoming. Sessions are spent on the Mound Builders (Adena/Hopewell, Mississippian), the Southwest, the Fremont area, and, if time allows, Mesoamerica and especially the Maya. Theoretical perspectives discussed include: the development of agriculture and how this changed aboriginal settlement patterns; the development of towns, cities, and the State; culture-ecology and especially local adaptations. The course has recently been offered for college credit and is popular with interested adults and some high school students in small Wyoming communities.

Bureau of Land Management

This article in the Smithsonian Institution Research Associates Newsletter announced a lecture by Stephen R. Potter, Regional Archeologist for the National Park Service, National Capitol Region, on archeology in and around Washington, D.C.

Date of Information: 7/87
The Casper District of the Bureau of Land Management (BLM) set up interpretive signs along the Ryan Hill (Prospect Hill) segment of the Oregon Trail near Casper, Wyoming. A dedication was held for this section of the trail in cooperation with the Oregon-California Trail Association. The signing was part of a larger effort to enhance and protect significant segments of the Oregon Trail on public lands in Wyoming. The signs also serve as a BLM public education and use tool.

Ten volunteers and Bureau of Land Management (BLM) staff contributed three Saturdays for the recording, recovery, and stabilization of the Soapy Dale Peak Lodge, a conical pole lodge. The poles were removed, and then stabilized at the Washakie County Museum. A curation and exhibition agreement was signed between the BLM and Washakie County Museum to provide for the longterm display of the lodge at the museum.
