Juvenile Assessment Centers (JAC) can provide intervention through assessment of first-time misdemeanor offenders so that they do not become more involved in the juvenile justice system. In this practicum study, offenders are placed in a nonjudicial diversion and given a chance to repay the victim for the misdeed committed. In phase one of the program, case management supervisors and staff meet with the parents/guardians of youths to stress the importance of providing specific service recommendations. In phase two, they work with the families of the youths, who are randomly assigned to receive follow-up telephone support services for a 2-week period to answer questions and aid in accessing services. A comparison of 24 youths in a control group to 25 youths in an intervention group revealed that fewer parents/guardians in the control group than the intervention group: (1) recalled recommendations made by the case manager; (2) contacted the service agencies recommended; (3) applied for services to the recommended agencies; or (4) received the recommended services. These findings highlight the importance of having a follow-up, support service added to the case management unit to help connect youths and their families with services. Ten appendices, comprising over half the document, include various forms, assessment instruments, and lists of service providers. Contains 28 references. (KW)
A Case Management Follow-up Support Strategy for Misdemeanors Processed at a Juvenile Assessment Center

ABSTRACT

A Case Management Follow-up Support Strategy for Misdemeanors Processed at a Juvenile Assessment Center.

A Juvenile Assessment Center (JAC) in a Southern State views the evaluation and assessment of first-time misdemeanor offenders as an opportunity to intervene in youths' lives before they become more involved in the juvenile justice system. These youths are not placed in a detention center, but rather in a nonjudicial diversion program. The Arbitration program and the Juvenile Alternative Services Program (JASP) gives each youth a chance to repay the victim, either with time or money, for the misdeed committed. When the parents/guardians of the first-time misdemeanor offender picks up their child at JAC, the case manager gives to them recommendations to follow-up on. The literature, and a pretest of a small population of cases processed at JAC, indicated the need for follow-up intervention. Very few studies addressed the service needs of misdemeanor arrestees, or developed strategies to link them with needed services. With the assistance of case management unit staff, the author of this practicum has identified the importance of intervention in the lives of misdemeanor arrestees to deter them from further delinquent activities.

The author designed and implemented this practicum in two phases: The first phase involved meeting with case management supervisors and staff to stress the importance of providing specific service recommendations to the parents/guardians of youths picked up at JAC, whose preliminary screening indicated a need for follow-up services. The second phase involved working with families of misdemeanor youths, who had been randomly assigned to receive follow-up, telephone support services, for a two week period to: (1) answer any questions they had regarding the service recommendations that had been made for their child, (2) coach them on how to access services and (3) otherwise assist them in receiving needed services.

By comparing twenty-four (24) youths in the control group to twenty-five (25) youths in the intervention group, findings indicated that fewer parents/guardians in the control group (who were called thirty days after their child entered JAC) than the intervention group (who were called the day after their child entered JAC and for an average of six calls over a two-week period): (1) recalled recommendations made by the case manager (2) contacted the service agencies recommended, (3) applied for services to the recommended agencies or (4) received the recommended services.
These findings highlight the importance of having a follow-up, support service added to the case management unit. This service component would work with the families of misdemeanor youths, identified by the JAC preliminary screening process as having potential problems, and seek to link them with needed services. This cost effective service component has considerable promise of addressing a major problem in the juvenile justice service delivery system: the need to connect youths and their families with services.

CHAPTER 1: INTRODUCTION AND BACKGROUND

The Setting in Which the Problem Occurs

The Juvenile Assessment Center (JAC)

The urgency to respond to the multiple needs of high risk youths in an area where the crime rate has grown considerably in recent years, led to the planning and development of the Hillsborough County Juvenile Assessment Center (JAC). Since 1993, under major support of Anti-Drug Abuse Act of 1988 funds, the Agency for Community Treatment Services, Inc. (ACTS) has been coordinating this 24-hour centralized adolescent receiving, processing and intervention facility in Tampa, Florida. The JAC represents an outgrowth of several years of planning and preparation in Hillsborough County. This development reflected a growing appreciation that the crises in our juvenile justice system necessitated inter-agency, collaborative efforts.

The assessment center consists of two major components. The secure wing processes youths taken into custody on arrest charges. The nonsecure side of the assessment center serves children at risk, including children and families in need of services (CINS/FINS cases), and truant youths. The focus of this practicum report is on youths processed in the secure wing who have committed misdemeanor(s) and are released to their parents/guardians.

When youths are arrested, they are taken to JAC rather than directly to be detained. When a youth enters JAC, the arresting officer, county sheriff’s office deputies operating JAC’s secure
wing and Florida Department of Juvenile Justice (DJJ) staff exchange official information. The youths are given a breathalyzer test, fingerprinted and photographed. A Detention Risk Assessment Instrument (see Appendix A) is completed by intake staff on all arrested youths who are eligible for placement in the detention center. A file is opened or reopened (if the youth has been to JAC before) on each youth, and demographic and current arrest information are computer entered. It takes about six hours to complete a preliminary screening of a youth at JAC (see Appendix B for a hard copy of the computer screens of the preliminary screening package).

The processing activities at the assessment center involve three phases: (1) preliminary screening to identify potential problems the youths may be experiencing. Indication of problems in one or more of 10 psychosocial functioning areas (substance use/abuse, physical health status, mental health status, family relationships, peer relations, educational status, vocational status, social skills, leisure and recreation, and aggressive behavior and delinquency) is provided by the Problem Oriented Screening Instrument for Teenagers (POSIT) (see Appendix C) (Rahdert, 1991); (2) in-depth assessment following release from JAC, if indicated by the POSIT, followed by (3) referral for additional evaluation or treatment. The model used for these phases is the National Institute on Drug Abuse's Adolescent Assessment/Referral System (AARS) (Rahdert, 1991).
The major purpose of the misdemeanor case management unit at JAC is to review the arrest histories and current charges of youths arrested on misdemeanor offenses to determine their eligibility for involvement in one of two nonjudicial diversion programs: arbitration or the Juvenile Alternative Service Program (JASP) (see eligibility criteria in Appendix D). These programs represent alternatives to processing through the juvenile court. Upon successful completion of these programs, youths do not carry a delinquency record.

Youths meeting the criteria for arbitration or JASP are recommended to one of these respective programs by the misdemeanor case managers; and, their recommendations are forwarded to the state attorney’s office for approval. Experience indicates the majority of the case managers’ recommendations are approved by the state attorney’s office. For example, in January 1995 the state attorney’s office agreed with case manager recommendations in 88 percent of the cases.

Youths placed in the arbitration or JASP program are carried on the caseloads of JAC misdemeanor case managers until the youths successfully complete the program to which they have been assigned. If a youth fails to complete the program, the misdemeanor case manager makes a recommendation to the state attorney’s office to reinstate the youth in the program, place the youth in another diversion program or file a delinquency petition against the youth. If a delinquency petition is filed,
the misdemeanor case manager transfers the case to a Department of Juvenile Justice case manager.

Admission of guilt is required for a youth to be accepted in either diversion program. The arbitration program involves a trained arbitrator (not a judge) hearing the case against a youth, obtaining relevant information from the youth, the victim and arresting officer. On the basis of this information, the arbitrator decides on sanctions against the youth. These sanctions can include community service hours, participating in a counseling program, paying restitution, or a combination of these sanctions.

JASP is a 60-day program, which provides immediate sanctions to misdemeanor offenders. It has a number of program components: community work service (where youths are assigned to complete a number of community service hours), victim restitution (where youths make monetary or other reimbursement to the victim) and counseling (which provides short-term individual, adolescent group and family counseling). JASP counselors monitor youth fulfillment of their required sanctions.

As noted earlier, during their preliminary screening at JAC, use of the POSIT identifies potential psychosocial problems the misdemeanor arrestees are experiencing. Problem areas identified by the POSIT are used to direct them into needed services. The parents/guardians of the youth are called to pick their child up at JAC the same day, and to meet with the youth's case manager.
The parents/guardians are informed of the legal issues that surround their child, the results of the youth's preliminary screening, and the case manager's recommendation to arbitration or JASP.

After youths are assessed at JAC, they are sent home with their parents/guardians to continue normal activities. It is usually several weeks before the family receives a letter from either diversion program. In the meantime, if problems are indicated by the results of the POSIT, and service recommendations are made by the case management staff, the youth and family are expected to follow through on the recommendations.

Between April and November, 1994, JAC misdemeanor unit case managers recommended 389 youths for placement in the arbitration or JASP programs. Two hundred and ninety eight (77%) of the youths were recommended for arbitration, and 91 (23%) were recommended for JASP. Most of the youths recommended for arbitration or JASP were male, averaged 14 years of age, and were white. Results of the POSIT consistently indicate large proportions of youths recommended to arbitration or JASP are experiencing problems in a number of areas. In particular, high rates of problems were identified in educational status (i.e., learning difficulties), peer relations, mental health status and social skills.

Presently, there are 19 case management staff members covering three shifts who work with the misdemeanor offenders:
a case manager supervisor, three case manager shift supervisors, seven case managers, five assessors (two of whom are backup shift supervisors), and three control room operators. The number of misdemeanor cases who are processed at JAC varies each day. Case managers do not carry a caseload as, for example, dc probation or community control workers. Rather, they assume responsibility for cases only until their paperwork is completed and sent to the state attorney's office for review.

The Author's Role in the Juvenile Assessment Center

From 1986 until the summer of 1992, the author worked on research and service projects dealing with high risk youths and their families. In this work setting, the author completed interviews with juvenile detainees, tracked and reinterviewed these youths, and coordinated with various agencies to collect recidivism and other data on them. The purpose of this project was to identify the various problems experienced by the youths; and to document the relationships between their substance use and delinquency over time. This project was a contributing factor to the establishment of the Tampa JAC, and led to the author's involvement in the program.

Since 1993, the author has served as a consultant to the Juvenile Assessment Center. She has provided assistance in a number of areas including: (1) training staff on understanding youths' dependency and delinquency history information, (2) mailing follow-up correspondence to the parents of arrested
youths found to have potential substance abuse or mental health problems, advising of the availability of free in-depth assessments, and (3) completing follow-up telephone calls to the parents of youths (primarily felony cases) who were processed at JAC to determine if they followed through on referrals to various services.

The author is not directly involved in the JAC misdemeanor program. However, in her role as consultant to JAC, she gained an understanding of the various programs and activities taking place there. The knowledge gained from this experience led to the development of this practicum.

The author does not have direct control over implementing changes in the policies and activities of JAC. However, as discussed later, the intervention completed for this practicum led to experiences and results that have been incorporated into the operating procedures of JAC’s misdemeanor case management unit. The enthusiastic support of JAC case management staff for this practicum reflected a commitment to implement program changes which had promise of improving services to youths and their families.
CHAPTER 2: THE PROBLEM

Problem Statement

As noted in Chapter 1, parents, guardians or responsible adults of youths arrested on misdemeanor charges are required to pick their children up at JAC the same day; and to meet with the youth's assigned case manager. The parents/guardians picking up their youths are informed of the legal issues surrounding them, and the recommendation to arbitration or JASP. Although the case managers are expected to inform the child's parents/guardians of potential problems needing further evaluation or care, this did not always occur prior to implementing this practicum. This situation was a consequence of the brief period of time the case managers worked with their assigned cases; and no policies and procedures were in place to ensure that such recommendations were routinely given.

Occasionally, follow-up services were recommended. However, no routine follow-up supportive intervention activities were in place that could clarify the nature of the follow-up service recommendations, and facilitate linking youths with needed services. As a result of this situation, relatively few youths in need of care were connected with programs.

On the basis of experience working with the case management unit at JAC, and the results of telephone interviews with the parents/guardians of thirteen clients (discussed below), the author determined there was a serious need for: (1) a mechanism to ensure that misdemeanor case managers inform parents/guardians...
of their child’s need for additional help, and (2) a follow-up support service (to begin shortly after discharge from JAC) involving periodic telephone calls with the youths’ families, and, where indicated, relevant service agencies. Such a service strategy would be highly effective in the service linkage process.

Documentation of the Problem

In an effort to document the problem that was addressed by the practicum, 30 misdemeanor arrestees, who were processed at JAC in October 1994 and recommended for placement in arbitration or JASP, were selected for contact. Three clients had records that were incomplete at the time the author examined them, nine clients had no telephone, and four clients were not given specific service recommendations by their case managers—although their preliminary screening data indicated potential problems in one or more psychosocial areas. One client had received service recommendations, but did not have a telephone. Thirteen (13) clients had been given service recommendations and had a telephone.

Telephone interviews were completed with the parents/guardians of the thirteen youths an average of ten days following their discharge from JAC (range 2 to 16 days). Respondents were asked whether they recalled any of the recommendations made by the youth’s case manager; and, if so, whether they were followed-up.
The results of these telephone calls indicated only one parent was following up on a recommended counseling program; seven parents/guardians claimed they did not recall any of the recommendations; two clients were on the run after being released from JAC; one client was placed in the Children's Crisis Center; and one client was rearrested. One client's parents were unaware of the misdemeanor arrest.

Analysis of the Problem

Factors Contributing to the Problem at JAC

Experience gained as a result of working as a consultant at JAC, and informal interviews with misdemeanor case management staff, indicate several factors are responsible for the lack of: (1) providing specific recommendations for needed services to the parents/guardians of all arrested youths, and (2) providing supportive follow-up services for misdemeanor youths and their families. First, there are a limited number of misdemeanor case managers to process the large and increasing number of youths arrested on these charges; and to complete the extensive paperwork required for their placement in the arbitration or JASP programs. These pressures limit the amount of "quality time" the case managers spend with parents/guardians. Second, current policy places limits on the scope of work of the misdemeanor unit case managers; and, do not require, for example, follow-up telephone calls to assist families in connecting with needed services. Third, the importance of having a follow-up service
component had not been documented; hence, there was no justification for assigning personnel and material resources to this activity. As discussed in more detail later, one of the benefits of this practicum to the JAC program was documenting the value of the solution strategy, so that it could be incorporated into the responsibilities of the case management unit.

Review of the Literature

There is growing awareness of youth crime and related problems among juveniles entering the justice system. Many youths involved with the juvenile justice system have been found to have serious problems in emotional/psychological functioning (with some of these problems resulting from physical abuse or sexual victimization experiences), to be involved in alcohol or other drug use, to be experiencing educational difficulties, to have deviant peers, and to grow up in troubled families (Dembo, Turner, Chin Sue, Schmeidler, Borden & Manning, in press; Dembo, Williams, Wothke & Schmeidler, 1994; Dembo, Williams, Wothke, Schmeidler & Brown, 1992; Farrington, 1990; Hunner & Walker, 1981; Lewis, Lovely, Yeager & Famina, 1989; Lewis, Shanok, Pincus & Glaser, 1979; National Institute on Drug Abuse, 1992; Tonry, Ohlin & Farrington, 1991; Wick, 1981).

Further, evidence has been accumulating that treating individuals' alcohol/other drug use, and other psychosocial, problems can result in significant decreases in delinquency/crime (Catalano, Hawkins, Wells, Miller & Brewer, 1990-91; Gerstein &

Systems of care have been developed for children living in environments of abuse and neglect. Recognition has also increased that systems of care need to be developed to identify troubled youths entering the justice system, and link them with needed programs/services. In particular, it is more cost efficient and effective to link youths with non-serious offense histories, who generally require services for a shorter period of time, to needs-based services, than to provide these services to older, felony offenders. This strategy gives hope of directing non-serious offenders' patterns of behavior in more prosocial ways at an early point, rather than treating the more serious problems they are likely to develop in later adolescence (Klitzner, Fisher, Stewart & Gilbert, 1991).

This focus on early intervention is consistent with a major, emerging interest of the Office of Juvenile Justice and Delinquency Prevention (OJJDP). Youths entering the juvenile justice system having a first time misdemeanor charge, for example, are excellent candidates for early intervention with appropriate services to meet their needs. "To have greatest impact, assistance must reach families before significant problems develop" (OJJDP, 1993, p. 15). "First-time delinquent offenders (misdemeanors and nonviolent felonies) and nonserious repeat offenders (generally misdemeanor repeat offenses) must be
targeted for system intervention based on their probability of becoming more serious or chronic in their delinquent activities" (OJJDP, 1993, p. 20). The importance of early intervention is also stressed in recent studies completed by the Pacific Institute for Research and Evaluation (1989) and Armstrong (1991).

With relatively few exceptions (which are discussed in chapter 4), existing studies do not seek to identify and address the service needs of misdemeanor arrestees, or present strategies to link them with needed services. For example, in a detailed review of the field, Klitzner, Fisher, Stewart & Gilbert (1991) found very few programs that focused on preadjudication or postadjudication early intervention programs in juvenile justice settings. The literature focuses on youths with serious offense histories, who are more deeply involved with the juvenile justice system (see, for example, Armstrong, 1991).

It is unfortunate that the juvenile justice system becomes concerned with youths' behavior only after they have been to court several times. At this point, many youths have developed a life-style of criminal behavior and related problems—including the use of alcohol and other drugs; are experiencing problems in school; and they have probably failed in a number of supervision programs. As noted above, the limited resources, and large number of youths entering the juvenile justice system, has led to a focus on developing post-adjudication programs. Youths
arrested on misdemeanor charges are often handled informally, or placed in diversion programs, without, as a review of the literature indicates, attention being directed to any underlying problems they may be experiencing. There is a serious need for intervention services for nonserious offenders, which involve identifying the problems they may be experiencing; and linking them with needed services or programs.

With the establishment of Juvenile Assessment Centers in Florida, increasing interest is being shown in intervening with youths arrested on misdemeanor charges, in an effort to reduce their moving deeper into the juvenile justice system. This is a key purpose of case management unit at JAC, which is serving as a prototype for the rest of the state.
CHAPTER 3: GOALS AND OBJECTIVES

As discussed in chapters 1 and 2, misdemeanor youths processed at JAC are experiencing multiple problems. There is a need to ensure that case managers provide the parents/guardians of misdemeanor youths with recommendations for any needed services. In addition, a follow-up support service, involving periodic telephone calls with the youths’ families, needs to be implemented and evaluated. The service linkage strategy developed by the author reflected a critically needed service addition to JAC’s operating procedure.

Drawing upon the need for this service component, and the purposes of the misdemeanor case management unit, four goals and their associated objectives were developed for this practicum. These goals and objectives were expected to be accomplished during a ten week implementation period.

Goal 1: Misdemeanor case managers would show an increase in the percent of parents/guardians receiving needed recommendations for follow-up services for their children.

Objective:

As a result of the implementation of the author’s practicum, it was expected there would be a fifty percent increase in parents/guardians of misdemeanor youths having potential problems receiving case manager recommendations for follow-up services, when compared to the four week period preceding the beginning of the intervention.
Goal 2: The misdemeanor follow-up intervention would increase parent/guardian knowledge of case manager recommendations for services.

Objective:

Forty percent more of the parents/guardians of misdemeanor youths recommended for arbitration or JASP, who received follow-up intervention, would be able to recall the recommendations made by misdemeanor case managers, than the parents/guardians of control group misdemeanor youths.

Goal 3: The misdemeanor follow-up intervention would improve linking youths and parents/guardians with recommended services.

Objectives:

1. Forty percent more of the youths and parents/guardians receiving intervention services would contact service programs recommended by misdemeanor case managers, than youths and parents/guardians of control group youths.

2. Fifteen percent more of misdemeanor youths and parents/guardians receiving intervention services would apply for the services recommended by misdemeanor case managers, than youths and parents/guardians of control group youths.

3. Fifteen percent more of misdemeanor youths and parents/guardians receiving intervention services would receive
the services recommended by misdemeanor case managers, than youths and parents/guardians of control group youths.

Goal 4: Parents/guardians of misdemeanor youths receiving intervention services would indicate a greater degree of helpfulness of JAC case management services.

Objective:

Twenty percent more of the parents/guardians of misdemeanor youths receiving intervention services would indicate they found JAC case management services were helpful, than parents/guardians of control group youths.
CHAPTER 4: SOLUTION STRATEGY

Review of Existing Programs, Models, and Approaches

The General Accounting Office (GAO) (1992) completed a review of different strategies to integrate human services. Various system efforts and service reform efforts were compared. System reform efforts include changing the way agencies plan and fund their programs, and eliminating some of the paperwork involved in the operation of these programs (e.g., data collection, reporting requirements). The GAO found that system oriented efforts faced a number of obstacles, and, at best, met with partial success. Among the problems these efforts encountered were: (1) the difficulty in getting agencies to reach consensus on the problems they needed to face, and how these would be addressed; (2) agency concern about protecting their identities, ideologies and resources; and (3) reluctance to combine personnel and resources.

Service oriented efforts attempt to eliminate fragmentation of services by seeking ways to create a new delivery system of services in a more comprehensive manner. These efforts are less ambitious in scope. They seek to connect clients with existing services, and establish collaborative relationships among different service providers, without changing agency service responsibilities, the manner in which programs are budgeted and funded, or the structure of service agencies.

Service oriented efforts were found to be more effective in linking at-risk families with programs, and providing health and
other support services. Because these program efforts did not seek to alter agency structures and operations, they were successful in convincing providers of the need to coordinate their efforts, establish common goals and develop administrative procedures to effect program changes (GAO, 1992). The follow-up support service strategy implemented in this practicum reflected this service oriented approach.

Unfortunately, as noted earlier, there are few examples of service linking strategies involving youths in the juvenile justice system (Klitzner, Fisher, Stewart & Gilbert, 1991). In fact, a special literature search completed for this practicum by the Juvenile Justice Clearinghouse did not identify any programs which could inform its efforts. There is a special need for service linkage programs for misdemeanor offenders, who often receive citations to appear in court—and are not provided any intervention services to address problems they may be experiencing.

Klitzner et al. (1991) did find one promising pre-adjudication program. The Family Education Program is operated by the Prevention and Intervention Center for Alcohol and Drug Abuse (PICADA) in Madison, Wisconsin; and has been subject to preliminary outcome evaluation. PICADA is a diversion program, providing a number of intervention services, including screening, assessment, education and referrals to adolescents and their families. The goals of the program are to: (1) increase
knowledge about alcohol/other drugs, (2) increase clients’ ability to identify and communicate attitudes about alcohol/other drugs, (3) promote attitude change, (4) increase clients’ abilities to more accurately assess their substance use/abuse and (5) increase clients’ willingness to accept PICADA’s referrals. Program activities include family attendance at an educational lecture, and family and adolescent participation in screening for alcohol/other drug abuse problems. A preliminary evaluation, involving pre- and posttest measurements in the absence of a control or comparison group, provided some evidence that the program led to intended changes in knowledge, attitudes and feelings regarding substance use, when assessed shortly after program participation.

Involving families in the service process is one of the ingredients contributing to the success of PICADA, as is the relatively small number of clients the program services. For services at the front end of the juvenile justice system in jurisdictions which process many cases, and have limited personnel, it is easy to have youths fall through the gaps in the system. There is a critical need to connect youths, released to their parents or guardians, with needed services. Although statutes exist which permit judges to involuntarily order youths into services, judges are understandably reluctant to use this option. Accordingly, service linkage strategies, which provide encouragement and support to the parents/guardians of released
youth, as well as seek to connect them with agencies/programs, can provide a vital, and much needed, service component.

In recent years, considerable thought and program development have occurred in the area of intensive post-adjudication supervision (Armstrong, 1991; Altschuler and Armstrong, 1990), which serves youths who are already involved in the juvenile justice system. This program emphasis is understandable for several reasons: 1) there is growing public concern about juvenile crime, especially violent crime; 2) current political and public policy, fueled by a number of heavily reported, visible youth crimes (e.g., murders of foreign tourists), emphasize the need to build more secure, long term facilities for youthful offenders; and 3) limited resources and staff in the juvenile justice system.

An intensive aftercare probation supervision service for juveniles in Philadelphia is an example of a successful postadjudication program (Sontheimer, Goodstein & Kovacevic, 1990). A study of this program compared two groups of juveniles. Experimental group probation officers had caseloads of 12 clients or less; they met with their clients at least once a month during incarceration and three times a week after they were released. Control group probation officers had caseloads of 90, and met with juveniles at their discretion. Evaluation showed that juveniles who were assigned to the intensive aftercare group were more likely to leave residential placement with definite plans.
for work and/or school, than those in the control group. Experimental group juveniles were more cooperative with their probation officers, and experienced fewer adjustment problems related to family relations and school, than control group youths. Importantly, fifty percent of the youths assigned to the experimental group were rearrested, compared to 64 percent of control group juveniles.

Another example of a successful postadjudication program is provided by the Regional Youth Educational Facility (RYEF) in California (Skonovd & Krause, 1991). The RYEF is an intensive, six month residential program designed to encourage delinquent youths to internalize effective survival skills and to accept responsibility for their behavior. The residential component of this program is followed by a four to six month intensive aftercare period, which encourages the youths to realize the work, educational, and personal goals they set for themselves before their release. An evaluation study of the RYEF, involving a comparison group of youths completing another program, found that, at six months, the recidivism rate for the RYEF group was 16 percent, compared to 45 percent for the comparison group.

The Philadelphia intensive aftercare probation service and RYEF program contain a common element accounting for their success. In both cases, youths were given follow-up support services.
Studies of service utilization have identified a number of factors that are related to families not accessing and using mental health, social and medical services. A recent, national study of service utilization (Arcia, Keyes, Gallagher and Herrick, 1993) identified a number of sociodemographic factors that were associated with health and social service underutilization: minority ethnic status (black, Latino, native American and other ethnic minorities); very low income (VLI) (family income below 150% of the poverty line); mother in the labor force (limiting the amount of time to access services); female headed household (resulting in limited financial resources); maternal education less than 12 years; having a large family; and being a teen mother.

Based on these criteria, analyses showed that sizeable percentages of U.S. children had one or more of these determining factors of service underutilization. For example, the research indicated that "of children under 5 years of age, 32% were of ethnic minority, 35% lived in families with VLI, and 54% had mothers in the labor force" (p. 293). Drawing upon their findings, the authors proposed a number of policy recommendations to improve service utilization. Key among these recommendations are policies to improve enabling factors, which enhance the ability of families to use services (e.g., reducing costs, and placing services closer to the families that need them); and policies that empower families (e.g., allowing families to define
their members, to choose their service coordinators and to choose the language for assessments and services).

In a related paper, Allen, Affleck, McGrade and McQueeney (1984) reviewed the factors which present obstacles to the success of early intervention programs. Their discussion focused on lower socioeconomic (SES) families with children experiencing developmental delays. A number of such factors were identified, including issues with verbal skills and styles of verbal interaction (differences in these two areas have been found to inhibit lower-SES parents' ability to understand and to implement recommended activities); maternal interactional styles (e.g., early intervention interaction for lower-SES parents needs to be consistent with their normal patterns of interaction with their children); differences in values and attitudes between lower-class parents and middle-class therapists treating them; lower class living conditions (e.g., lower-SES parents often devote most of their time and energy to cope with environmental stresses, and have limited time to attend to their child's special needs); parents' perceptions of the child's handicap (e.g., lower-SES parents of children who do not display specific, visible disorders are often less motivated to comply with professionals' recommendations, than middle or upper-class parents). The authors urge: (1) that better ways be found to involve parents in these early intervention programs, (2) greater
program flexibility, and (3) altering interventions to accommodate parental diversity.

Underutilization of services has been a continuing concern in the mental health field. In particular, dropping out from psychotherapy and other mental health services is a major problem for clinicians and administrators; and a number of studies have examined these issues. For example, Tolan, Ryan and Jaffe (1988) examined the client, referral process, service process and provider factors relating to outcomes of contact with an outpatient adolescent mental health clinic. The study of this clinic, which was located in a large urban medical center, covered a three year period. The outcome measures included: (1) returning after an initial screening interview, (2) how far clients proceeded along the clinic's four-stage process--contact, screening, diagnosis and treatment and (3) the total number of sessions for each client.

The research found that few client characteristics or referral process (e.g., referral source, method of payment), and none of the provider (e.g., sex, age, ethnicity and professional discipline of screener and therapist), factors studied were associated with any of the outcome measures. However, significant associations were found between service process characteristics and adolescents' use of the clinic's services. In particular, clients were more likely to complete the clinic's service process, and to remain in treatment: (1) if they had
contact with only one service provider, and (2) if their parents and other family members were included in the diagnostic sessions and in treatment.

In another study, Sirles (1990) examined factors relating to dropping out at the intake, diagnostic and treatment stages at an outpatient child psychiatry clinic in an urban area. Characteristics of 321 children, their families, their clinical process experiences, and their service usage were studied. Data were collected at three points in time: (1) intake, (2) upon completion of diagnostic procedures and (3) at the termination of the client’s case.

Results indicated sixty-eight percent of the cases self-terminated from services at the clinic, with twenty-one to twenty-four percent of the cases terminating at intake, diagnostics and treatment. Analysis showed different factors were associated with self-termination at each of these three stages, although client demographic factors were not significant predictors of dropout at any stage. The intensity of the client’s problems and the method of receiving clients into services were the best predictors of dropping out before treatment. Clients with low motivation to receive care, and who received unacceptable services in the pretreatment stages, tended to dropout before therapy became available.

Overall, clinical process factors were found to be the best predictors of dropout. In particular, when family members were
involved in the intake, diagnostic and treatment process, there was an increase in the likelihood of commitment to receive services. In order to avoid clients becoming discouraged after the intake stage, clinicians need to be careful not to extend the diagnostic process beyond a few sessions.

Description of the Solution Strategy

The author’s solution strategy involved two phases. The first phase involved working with case management staff, and assisting them in making specific service recommendations to the parents/guardians of youths with problems. In the second phase, the author implemented a follow-up support service, involving periodic telephone calls with the youths’ families, and, where indicated, relevant service agencies.

The author’s solution strategy was informed by the consistent findings in the literature identifying program service delivery factors related to service utilization. In particular, although little can be done to alter clients’ sociodemographic characteristics, the process by which services are delivered can be changed in an effort to engage persons into needed programs. Further, efforts that involve parents in the service linkage process by informing them of their child’s need for services, and which seek to engage them in a collaborative follow-up effort, serve to affirm their importance and empower them (Dunst et al., 1988).
Phase 1 involved the author's meeting with Juvenile Assessment Center case management supervisors and staff. These meetings stressed the importance of providing specific service recommendations to the parents/guardians of youths picked up at JAC, whose preliminary screening indicated a need for follow-up services. In order to facilitate this effort, the author contributed to the development of a user friendly service provider list, which was made available to case management staff. Phase 2 of the author's solution strategy involved working with the families of misdemeanor youths, who had been randomly assigned to receive follow-up, telephone support services, for a two week period to: (1) answer any questions they had regarding the service recommendations that had been made for their child, (2) coach them on how to access services and (3) otherwise assist them in receiving needed services. These telephone calls took place at various times during the day.
CHAPTER 5: STRATEGY EMPLOYED - ACTION TAKEN AND RESULTS

Activities Completed For the Practicum

A number of tasks were completed during the ten week implementation period of this practicum. These activities are presented in Appendix E. Data collection relating to Goal 1 was completed by the author of this practicum report. In regard to Goals 2, 3 and 4, the author also completed the telephone calls to the parents/guardians of misdemeanor youths assigned to receive the follow-up support service. However, follow-up, outcome telephone interviews with the parents/guardians of intervention (i.e., experimental) group youths, and telephone and in person interviews with control group youths, were completed by independent interviewers, who did not know the groups to which the youths were assigned.

Phase 1: Meeting with Case Management Unit Supervisors and Staff

The first part of the author's solution strategy was to meet with misdemeanor case manager supervisors, and to work individually with their staff, to reinforce the importance of providing specific follow-up service recommendations to the parents/guardians of youths, whose preliminary screening data indicated potential psychosocial problems. The author's work was also supported by her attendance at a weekly meeting of the case manager supervisors; and frequent contact with case management staff. (The author of this practicum report had already gained the trust and support of the case manager supervisors for the practicum.) The case managers were helped in their work by a
listing of service agencies, which the author of this practicum report prepared (see Appendix F).

**Phase 2: Working with the Families of Misdemeanor Youths**

The second part of the implemented solution strategy concerned the misdemeanor youths processed at JAC and their parents/guardians. Beginning December 1, 1994, a sample of 50 misdemeanor youths recommended for arbitration or JASP, who met the criteria of having been given service recommendations by a misdemeanor case manager and had a telephone, were randomly selected over a period of four weeks: 25 for the experimental group and 25 for the control group. (As expected, statistical analysis indicated the two groups did not differ significantly in regard to race, ethnicity, sex, age, and whether the youths were arbitration or JASP cases.)

During a two-week intervention period, the parent/guardian of each youth in the experimental group was contacted by telephone an average of six times. The purpose of these telephone calls was to coach them on how to access services and otherwise assist them in receiving needed services. An effort was made to work with the same parent/guardian during this intervention period. Each parent/guardian of control group youths was contacted by telephone (and, in a few instances, in person) only one time. This occurred during the follow-up phase of the practicum.
Experimental group parents/guardians were called the day following the youth's processing at JAC to review the case manager's service recommendations. As noted above, after the initial telephone call, intervention group parents/guardians were called an average of six times.

**Meeting Goal 1 and Its Objective**

As discussed in chapter 3, it was anticipated that there would be a fifty percent increase in parents/guardians of misdemeanor youths having potential problems receiving case manager recommendations for follow-up services. This analysis involved a comparison of a random sample of 50 cases assessed at JAC before phase 1 of the implemented solution strategy with a random sample of 50 cases assessed at JAC after phase 2.

During the period before phase 1 began, 43 of the 50 youths had indicated problems. Of these 43 youths, only 35 (81%) received service recommendations from their case managers. During the period after phase 2, 46 of the 50 youths had indicated problems. Of these 46 youths, 41 (89%) received service recommendations from their case managers. There was a decrease of eight percent (from 19% to 11%) in the instances where case managers failed to make recommendations (a 42% reduction). Although this percent change fell eight percent short of the 50 percent level targeted for the practicum, this figure is rather impressive--given the relatively short period of the practicum intervention.
As noted earlier, this aspect of the practicum was helped by a service provider list the author prepared. This list served as a resource guide to case managers in making more specific service recommendations to parents/guardians. Subsequently, a JAC staff member added several service agencies to this listing. This revised list of services and associated agencies has been entered in the Juvenile Assessment Center’s provider list file.

Meeting Goals 2, 3 and 4 and their Objectives

The impact of this aspect of the solution strategy was assessed during the follow-up phase of the practicum. For the youths, the follow-up period covered 30 days (including weekends) following the date they were processed at the Juvenile Assessment Center. The follow-up telephone interviews with the parents/guardians of experimental group youths, and follow-up telephone calls and (in a few instances where telephones had been disconnected) in person interviews with control group youths, were conducted by independent interviewers.

As noted earlier, the author of this practicum report attended a weekly case management staff meeting to encourage staff to make specific service recommendations to parents/guardians. She also made periodic visits to each of the three shifts to talk with the case managers to emphasize the importance of making specific service recommendations; and to stress the key role they play in helping parents/guardians understand the service recommendations and advising them of needed services. Further, she made additional visits to JAC to observe the case
managers' activities. Detailed notes were kept of these meetings, visits and observations (see Appendix G for a copy of these notes). These observation and monitoring activities enabled the author of this practicum report to become quickly aware of problems affecting the implementation of the practicum, and to address any unanticipated obstacles to completing the practicum.

A key evaluation instrument used in this practicum to assess whether Goals 2, 3 and 4, and their associated objectives, were achieved was an interviewer follow-up form. A copy of this form appears in Appendix H.

Before presenting the results of analyses relating to whether Goals 2, 3, and 4, and their associated objectives, were achieved, it is important to discuss two general topics: the flow of youths and their families into the practicum, and the issue of the generalizability of the practicum's findings. The latter involves examining whether youths involved in the practicum project were similar, in terms of their demographic characteristics, to youths who were excluded due to having no telephone or not being provided specific service recommendations to address problems identified in the JAC preliminary screening process.

In regard to the flow of youths and their families into the practicum, Figure 1 indicates that, overall, 74 cases were involved in one way or another in phase 2 of the practicum project. Seventeen of these youths were eliminated prior to

selected cases were substituted for the eliminated cases.
random assignment due to not having a telephone or being provided with no specific service recommendations. Initially, 25 youths were randomly assigned to the intervention group, and 25 were randomly assigned to the control group. However, following their initial telephone calls, seven intervention group cases were excluded from the practicum due to a variety of reasons. Principal among these reasons was the child was already receiving services or the parent felt their child did not need services. These seven youths were replaced by an additional seven cases who were randomly assigned to the intervention group.

Comparison was made between the 17 excluded youths and the 50 youths who were involved in the practicum project in regard to their gender, race (black vs nonblack [predominantly white]), ethnicity (Hispanic vs nonHispanic), age, and whether they were recommended to arbitration or JASP. The results indicated the youths in both groups were similar to one another on these characteristics.

As discussed in chapter 3, Goal 2 and its associated objective related to an increase in parent/guardian knowledge of JAC case manager service recommendations. In particular, it was indicated that 40 percent more of the parents/guardians of misdemeanor youths receiving intervention services would be able to recall the recommendations made by misdemeanor case managers, than the parents/guardians of control group misdemeanor youths.
Examination was made regarding whether Goal 2 and its objective had been achieved by completing a cross-tabulation analysis comparing whether interviewed intervention and control group parents recalled or did not recall the service recommendations they had been given. For the purposes of this analysis, a parent/guardian who recalled at least one of the case managers service recommendations was considered to have remembered them. It should also be noted that follow-up interviews were completed with 24 control group cases. One control group case could not be reached by telephone or contacted for a personal interview.

As Table 1 shows, 71 percent of intervention group families, compared to 39 percent of control group families, recalled the service recommendations given them by JAC case managers. Although the percent difference of 32 percent falls short of the hypothesized 40 percent difference, this result is statistically significant. One reason accounting for this significant difference in recall is the fact that the author of this practicum contacted intervention group families soon after they left JAC, and worked with them for a sufficient period of time to reinforce the importance of these service recommendations.

As discussed in chapter 3, Goal 3 and its associated objectives related to an increase in parent/guardian contacting service programs recommended by JAC case managers; and applying for or receiving these services. In particular, in regard to

contacting service programs (Objective 1), it was indicated that 40 percent more of the parents/guardians of misdemeanor youths receiving intervention services would contact service programs recommended by misdemeanor case managers, than the parents/guardians of control group misdemeanor youths.

Determination of whether Goal 3, Objective 1 had been achieved was made by cross-tabulation analysis, comparing whether interviewed intervention and control group parents contacted or did not contact one or more recommended service program. The results of this comparison, shown in Table 2, indicate that 60 percent of intervention group families, compared to 21 percent of control group families, contacted recommended service programs. This 39 percent difference is just one percent short of the hypothesized 40 percent difference, and is statistically significant.

In regard to applying for services (Objective 2), it was indicated that 15 percent more of the parents/guardians of misdemeanor youths receiving intervention services would apply for services at programs recommended by JAC misdemeanor case managers, than the parents/guardians of control group misdemeanor youths. To address this issue, cross-tabulation analysis compared whether interviewed intervention and control group parents applied or did not apply to one or more recommended service programs. As Table 3 indicates, 56 percent of intervention group families, compared to 17 percent of control

group families, applied for services. This 39 percent difference exceeds the hypothesized 15 percent difference, and is statistically significant.

In terms of receiving services (Objective 3), it was indicated that 15 percent more of the parents/guardians of misdemeanor youths receiving intervention services would receive services at programs recommended by JAC misdemeanor case managers, than the parents/guardians of control group misdemeanor youths. Cross-tabulation analysis shown in Table 4, comparing whether interviewed intervention and control group parents received or did not receive recommended services, found that 29 percent of intervention group families, compared to 12 percent of control group families, applied for services—a 17 percent difference. Although this percent difference exceeds the hypothesized 15 percent difference, it is not statistically significant (due to the small number of cases in the analysis).

As discussed in chapter 3, Goal 4 and its associated objective related to the felt helpfulness of JAC case management services. In particular, it was expected that twenty percent more of the parents/guardians of misdemeanor youths receiving intervention services would indicate they found JAC case management services were helpful, than the parents/guardians of control group youths.

Two separate analyses were completed to determine whether this objective had been met. First, the follow-up interviewer

asked each parent/guardian in the intervention and control group how helpful they felt JAC case management services were. As Table 5 indicates, there was no statistically significant difference in perceived helpfulness of services between intervention and control group parents/guardians.

More important, however, are the results of a related analysis, shown in Table 6. This analysis compared, for intervention group parents/guardians only, their perceived helpfulness of JAC case manager and the interventionist’s services. As can be seen, 94 percent of the respondents claimed the interventionist’s services were very or extremely helpful, whereas 58 percent of the respondents indicated the services provided by JAC case managers were very or extremely helpful! This difference is statistically significant. (Although the follow-up interview form did not include a question specifically probing this issue, the follow-up interviewer systematically asked each respondent about this matter.)

Examples of Successful Intervention with Families

The above reported statistical analyses indicate the impact of the strategy employed by the practicum author in connecting misdemeanor youths and their families with needed care. The following three examples document, in human terms, the value of this intervention.

Jaudon, a 16 year old black male, was arrested for marijuana possession, and assessed at JAC the first week of the

intervention period. The telephone number recorded at JAC was the client's private line rather than his mom's, so he gave the practicum author her telephone number. It was several days before the mother was reached. This case was about to be eliminated when the mom finally answered the telephone. The recommendation from the case manager was for the mom to call the Youth Outpatient Program (YOP). She did not remember that suggestion, but said she would call the next day. The practicum author told her she would call her in a couple of days. Since the mom works two jobs, she gave the practicum author her sister's telephone number in case she could not be reached at home.

During one of three calls to the mom, and subsequently to her sister, it was learned that mom did not understand how she was to communicate with the YOP. The practicum author explained to the sister that this program was for short-term residential drug treatment for Jaudon's frequent use of marijuana. The mom made arrangements for Jaudon to go to this treatment facility. He had wrecked his grandmother's car under the influence of marijuana, and realized he needed help. He voluntarily went to the facility and remained there for drug evaluation and treatment. Mom feels this has made a big difference in her son's life, and was very grateful for the persistence of the intervention.

**********
Anna, a 14 year old Hispanic female, was out on a church outing to the mall, and was picked up for shoplifting. Her mom and the minister of their church came to JAC to pick her up that evening. The minister asked the case manager if he could be assigned to counsel with Anna on a regular basis rather than a private outside agency, and this met with approval. In addition to sessions with the senior pastor and youth pastor, mom initiated counseling sessions with Life Connection, and they began within a couple of weeks. The mom was grateful for the intervention, because it encouraged her to follow through on getting Anna the help she needed; and she realized that the juvenile justice system was interested in what happened to Anna.

**********

Christy is a 17 year old white female, who lives with her husband, two-year old child, mother-in-law and father-in-law. She was picked up for shoplifting. The case manager recommended that Christy pursue vocational training. It is difficult to obtain a job without a high school education. The intervention with the mother-in-law helped her to decide to enroll Christy in classes to obtain her GED. As it turned out, both Christy and her mother-in-law began attending these classes together.
CHAPTER VI: CONCLUSION - IMPLICATIONS AND RECOMMENDATIONS

Summary of Findings

The results of this practicum document that the follow-up support intervention was successful and addressed an important need among case management unit staff, misdemeanor youths processed at JAC and their families. In particular, developing an agency resource referral listing, and coaching case managers on the use of this list and on the importance of providing parents/guardians with specific service recommendations, was found to improve their rate of providing such recommendations (see narrative on p. 31).

Impressive results were also found in regard to service recommendation recall, service linkage and felt helpfulness of services among families of misdemeanor youths randomly assigned to receive follow-up telephone support for a two week period. Specifically, compared to control group families, intervention group families were significantly more likely to recall case manager provided service recommendations (Goal 2--see Table 1, p. 37), to contact recommended service programs (Goal 3, Objective 1--see Table 2, p. 39), to apply for recommended services Goal 3, Objective 2--see Table 3, p. 40), and more likely to evaluate the interventionist's services as very or extremely helpful (Goal 4--see Table 6, p. 45). The percent differences reflected in these analyses were close to or exceeded those that were specified prior to the initiation of the ten week practicum intervention period. (It is important to note that,
since the author did not randomly select youths and their families for phase 2 of this practicum, statistical tests based on the random model, strictly speaking, do not apply. However, these tests were used to highlight relationships.)

The percent difference between intervention group and control group families' receiving recommended services (17%) exceeded the hypothesized percent difference of fifteen percent (Goal 3, Objective 2--see Table 4, p. 42). However, due to the relatively small number of cases involved in this analysis, the result was not statistically significant.

Program Implications and Recommendations

The results of this practicum have a number of important implications for the operation of JAC's case management unit. The findings highlight the importance of having a follow-up, support service added to the case management unit. This service component would work with the families of misdemeanor youths, identified by the JAC preliminary screening process as having potential problems, and seek to link them with needed services. Although it would be optimal for such a service to be provided by case management staff, volunteer staff could be trained for this important activity.

As this practicum demonstrated, this service component has considerable promise of addressing a major problem in the juvenile justice service delivery system: the need to connect youths and their families with services. Too many troubled youths entering the juvenile justice system fall through the
cracks of the service delivery system. Since most of the youths processed through JAC have telephones, a telephone support service represents a cost efficient method of addressing this issue. The misdemeanor youths serviced by the juvenile assessment center case management unit represent a critical target group for intervention. They tend to be younger, and are less seriously involved in delinquency, than youths processed at JAC who are arrested on felony charges. Addressing their problems will reduce their chances of moving deeper into the juvenile justice system.

Further, the results of this practicum highlight the need for ongoing training of case management staff, and a thorough training of new staff, to focus their efforts on identifying youths' potential problems; selecting appropriate agencies/programs to address these problems; sharing this information with parents/guardians picking up their children at JAC; and seeking to link troubled youths and their families with these services. Although identifying youths' problems is important, it is essential to respond to these problems by placing troubled youths in needed care.

The experience gained in this practicum highlights the need for a service coordinator at the juvenile assessment center. This person would be responsible for ensuring effective communication among different JAC units; for training new and regular staff in identifying youths' potential problems; and for
monitoring staff enactment of a primary function of JAC: identifying youths' problems and seeking to remediate them.

Implications for Related Professionals

The results of this practicum indicate that this solution strategy can be adapted for use in settings in which there is a need to encourage clients to follow through on service recommendations. In particular, this relatively low cost, but effective, follow-up support service is recommended for use in Juvenile Assessment Centers that are being established in other parts of Florida. The solution strategy is also of potential value for use in other settings, such as schools or mental health clinics.

Program Development and Other Products of this Practicum

This practicum resulted in a number of program changes and concrete products, which promise to improve the efficiency and quality of service JAC case managers provide to the families of misdemeanor youths. In particular, the practicum author was a key contributor to the development of a service provider list (Appendix I), which is currently being used by case managers and other assessors of misdemeanor youths, to provide concrete service/program recommendations for youths with potential problems needing follow-up.

A software program has been written (paid for by funds available to the Juvenile Assessment Center) for the case managers and other assessors to use. Once potential problems
have been identified for a given youth, this software program permits an easy shifting to relevant programs/services on the provider list. The case managers or other assessors, then, select specific programs for each problem area. These selections are recorded on the youth’s case file; and a report is printed, which the case manager gives to the parents/guardians picking up the youth at JAC. Documentation of this software program appears in Appendix J.

Further, discussions have been held with the supervisor of JAC, advising him of the results of this practicum, particularly those relating to Goal 1. During this conversation, the importance of training new case management staff, and providing ongoing training to current case management staff, was stressed. A critical component of this training involves providing appropriate and specific program/service recommendations to the parents/guardians of youths processed at JAC who preliminary screening indicate have potential psychosocial problems. The JAC supervisor is in process of implementing such training.

Dissemination of the Results of this Practicum

As noted above, the results of this practicum relating to Goal 1 have already been shared with the supervisor of JAC. He is in the process of implementing case manager training in providing appropriate and specific program/service recommendations to the parents/guardians of youths processed at
JAC who preliminary screening indicate have potential psychosocial problems.

In addition, the practicum author plans to share the full results of this practicum, together with their associated recommendations, with the supervisor of the juvenile assessment center in the near future. During this meeting, the critical importance of implementing a follow-up, telephone support service will be stressed.

Relatedly, the practicum author plans to share the entire results of the practicum with JAC case manager supervisors. This meeting will provide a rich opportunity to reinforce the importance of case manager staff making appropriate, timely and specific service recommendations for youths needing help; and to ensure that their parents/guardians are provided with a report of recommended agencies they can contact.

Lastly, the practicum author plans to write a manuscript reporting the background, design, results and conclusions of this practicum project. The completed manuscript will be submitted for publication to a professional journal.

Yes

No

1. The youth is alleged to be an escapee or an absconder from a commitment program, a
community control program, furlough, aftercare supervision, or is alleged to have escaped while
being lawfully transported to or from such program or supervision, or the child is wanted in another
jurisdiction for an offense which if committed by an adult, would be a felony;
The youth is charged with a delinquent act or violation of law and requests
in writing through legal counsel to be detained for protection from an imminent physical threat to his
personal safety; (Attach documentation)
The youth is charged with committing an offense of domestic violence against the child's parent, cohabiting
spouse, or offspring and is detained as provided in s. 39.042(2) (b) 3, pursuant with s. 39.042 a youth
may be held in secure detention if a respite home or similar authorized residential facility is not available
for up to 48 hours.
The youth is charged with a capital felony, a life felony, a felony of the first degree, a felony of the
second degree that does not involve a violation of chapter 893, or a felony of the third degree that is also
a crime of violence, including any such offense involving the use or possession of a firearm; or

BEST COPY AVAILABLE
Committee Approved Draft RAI 9/2/94

Factor #5 requires an affirmative answer to at least one of the qualifiers before a yes answer can be recorded (s. 39.044(1)(d), F.S.).

Yes _____ No _____

The youth is charged with any second-degree or third-degree felony involving a violation of chapter 893 (Felony Drugs), any third degree felony that is also a crime of violence (excluding firearm offenses) and the:

Yes _____ No _____ (a) youth has a record of failure to appear at court hearings after being properly notified in accordance with the Rules of Juvenile Procedure;

Yes _____ No _____ (b) youth has a record of law violations prior to court hearings;

Yes _____ No _____ (c) youth has already been detained or has been released and is awaiting final disposition of the case; or

Yes _____ No _____ (d) youth has a record of violent conduct resulting in physical injury to others;

Yes _____ No _____ youth found to be in possession of a firearm.

D. Yes _____ No _____ Notwithstanding s. 39.042 or s. 39.044(1) if a minor under 18 years of age is charged with an offense that involves the use or possession of a firearm, as defined in s. 790.001, other than a violation of subsection (3), or is charged for any offense during the commission of which the minor possessed a firearm, the minor SHALL BE DETAINED in secure detention unless the state attorney authorizes the release of the minor, or

A youth delivered with a judicial order requiring detention care must be detained. The risk assessment instrument must be completed for informational purposes, but the youth must be detained regardless of the points scored.

C. Yes _____ No _____ A youth may be placed into detention status for contempt of court, however, this requires a written court order.

E. Yes _____ No _____ Pursuant with s. 316.015 a juvenile traffic offender found to be in contempt of court for failure to appear or not performing court-ordered sanctions for traffic violations, must be securely detained, unless a staff secure shelter is available, if ordered by the court.

If any of the above (A1-5) are answered yes, proceed to Section III unless youth is charged solely with an act of misdemeanor domestic violence. If each of the above (A1-5) are answered no the youth must be released, unless B through E is answered yes.

The responsibilities of law enforcement and case managers for releasing a youth from custody will be discharged in accordance with s. 39.038.

Section III

Risk Assessment

A. Most serious current offense

1. All capital, life, and first degree felony P.U.
2. All other first degree felonies, vehicular homicide, violent second degree felonies, youth is wanted by another jurisdiction for a felony offense
3. Second degree felony drug charges, escape or absconding, any third degree felony involving the use or possession of a firearm, burglary of an occupied residential structure, or possession of a firearm or concealed weapon by a youth previously adjudicated or with adjudication withheld for a crime that would be a felony if committed by an adult
4. Violent third degree felonies
5. All other second degree felonies (except dealing stolen property)
6. Dealing in stolen property, other third degree felonies that qualify for detention in s. 39.044(2)(d) (See factor #6 above)
7. Reckless display or unlawful discharge of a firearm (Must Be Detained)

B. Other current offenses and pending charges (separate, non-related events)

1. Each felony
2. Each misdemeanor
3. Prior felony arrest within last 7 days

C. Prior History

1. 3 felony adjudications or adjudications withheld last 12 months, or
2. 2 felony adjudications or adjudications withheld last 12 months, or
3. 1 felony adjudication or adjudication withheld or misdemeanor adjudications or adjudications withheld
Committee Approved Draft RAI 9/2/94

D. Legal Status

1. Committed or detention
2. Active community control case with last adjudication or adjudication withheld within 90 days
3. Active community control case with last adjudication or adjudication withheld more than 90 days ago

E. Aggravating or Mitigating Circumstances

1. Aggravating factors (add to score)
2. Mitigating factors (subtract from score)
   The case manager must fully document the reasons for scoring aggravating or mitigating points

F. Detain/release decision

0-6 points = release
7-11 points = nonsecure or home detention
12 or more points = secure detention

Total (Sum A-E)

Section IV. State Attorney Review/Decision (Complete based upon item #1 being appropriate)

1. If the case manager believes that a youth who is eligible for detention based upon the results of the risk assessment instrument should be released, the state attorney must be contacted to approve release (s. 39.044(1)(c)). The state attorney also may approve home or nonsecure detention for a youth who scores eligible for secure detention. The case manager must document the reasons for the recommendation in the narrative section.

2. (a) State Attorney contacted Yes No

INSTRUCTIONS

The purpose of these questions is to help us choose the best ways to help you. So, please try to answer the questions honestly.

Please answer all of the questions. If a question does not fit you exactly, pick the answer that is mostly true.

You may see the same or similar questions more than once. Please just answer each question as it comes up.

Please put an "X" through your answer.

If you do not understand a word, please ask for help.

You may begin.

138. Yes No Do you scream a lot?
139. Yes No Have you ever had sexual intercourse without using a condom?
APPENDIX D

ELIGIBILITY REQUIREMENTS FOR PLACEMENT IN ARBITRATION OR THE JUVENILE ALTERNATIVE SERVICES PROGRAM (JASP)

Arbitration Eligible

Criteria: 1. First time misdemeanor arrest, with no prior record

2. Prior record with only Nolle Prosequi, No file and/or dismissed disposition.

JASP Eligible (A non-serious juvenile offender under the age of 18).

Criteria: 1. Second time misdemeanor arrest with prior diversion or treatment program experience.

2. Second time misdemeanor arrest with arbitration case pending. (This case could go to arbitration again depending on the seriousness of the charge.)

3. Previously gone through arbitration.

4. Prior felony offense--No adjudications or adjudications withheld.
APPENDIX E

WEEKLY CALENDAR OF PLANNED ACTIVITIES

WEEK 1:

**TASK 1:** Collected information on service recommendations given by case managers for a four week period before the beginning of the intervention.

**TASK 2:** Each day up to 4 misdemeanor youths’ parents/guardians, who were given service recommendations by case managers and who had a telephone, were randomly assigned to receive the intervention.

**TASK 3:** For the intervention group, the first telephone call to parents/guardians occurred the day after the youths were registered at JAC. The parents/guardians were called to review the case manager's service recommendations. After the initial telephone call, intervention group parents/guardians were called an average of six times during the two-week period to assist them in obtaining needed services.

**TASK 4:** For each intervention group youth, efforts were made to assist parents/guardians in following through on the recommendations given to them; and to link them with programs or services. This involved telephone calls to the youths parents/guardians.

WEEK 2:

Intervention activities specified in WEEK 1 (TASKS 2-4) continued to be carried out.
WEEK 3:
Intervention activities specified in WEEK 1 (TASKS 2-4) continued to be carried out.

WEEK 4:
Intervention activities specified in WEEK 1 (TASKS 2-4) continued to be carried out.

WEEK 5:
Intervention activities specified in WEEK 1 (TASKS 2-4) continued to be carried out.

TASK 5: A follow-up, outcome interviewer, who did not know the membership of the experimental and control groups, began to call each parent/guardian to learn: (1) if they recalled the recommendations of the case manager, (2) followed through on the recommendations made by the case manager, and (3) how helpful they found JAC staff were in linking them with a needed program/service.

WEEK 6:
Follow-up activities specified in WEEK 5 (TASK 5) continued to be carried out.

Week 7:
Follow-up activities specified in WEEK 5 (TASK 5) continued to be carried out.

TASK 6: Aggregated data on service recommendations given by case managers to the parents/guardians of misdemeanor cases with potential problems during the intervention period (Goal 1).
Week 8:
Follow-up activities specified in WEEK 5 (TASK 5) continued to be carried out.

Week 9:
Follow-up activities specified in WEEK 5 (TASK 5) continued to be carried out.

Week 10:
Follow-up activities specified in WEEK 5 (TASK 5) continued to be carried out.
SERVICE RECOMMENDATIONS

A list of providers recommended to link youths, who have committed misdemeanor crimes, to services within the community. This list will be used by Case Managers at the Juvenile Assessment Center, who will recommend these services to youths and their families, in addition to Arbitration and JASP.

APPENDIX G

FIELD NOTES

Date: October 6, 1994  Time: From: 2:30 pm  To: 4:00 pm

Specific location within JAC:
Conference Room

Activity (check appropriate category):

- observation
- meeting
- interview
- other (specify: ________________)

Person(s) observed: ________________

Person(s) involved in meeting: JAC Case Management Supervisor, three shift case manager (CM) supervisors, Linda Williams, the practicum author and the practicum verifier

Person(s) interviewed: ________________

Other: ________________

Comments:

This meeting was called to introduce Linda Williams to the case management staff, and to discuss her practicum project.

Detailed notes of observation, meeting, interview, etc.

A discussion of the practicum activities encouraged the supervisors to train their case managers to make service recommendations to first-time misdemeanor offenders and their families. Emphasis was on the importance of families linking with needed services.
FIELD NOTES

Date: November 7, 1994    Time: From: To:

Specific location within JAC:
   Telephone

Activity (check appropriate category):
   ___ observation
   ___ meeting
   ___ interview
   X other (specify: telephone conversation)

Person(s) observed:

________________________________________________________

Person(s) involved in meeting:

________________________________________________________

Person(s) interviewed:

________________________________________________________

Other: Conversation with CM Supervisor

Comments:

I was concerned that the CM's were not giving appropriate,
matching and sufficient recommendations to families.

________________________________________________________

Detailed notes of observation, meeting, interview, etc.

Having pretested a random sample of first-time misdemeanor
offenders, there was a concern there was a mismatch between
the problems identified and the recommendations made. I made
a shortened version of the service provider list from two
large documents to aid the CM's in making recommendations.

________________________________________________________
FIELD NOTES

Date: November 23, 1994

Specific location within JAC:

Telephone

Activity (check appropriate category):

- observation
- meeting
- interview

X other (specify: telephone conversation)

Person(s) observed:

Person(s) involved in meeting:

Person(s) interviewed:

Other: Conversation with CM Supervisor

Comments:

Follow-up to conversation of November 6th.

Detailed notes of observation, meeting, interview, etc.

It was necessary to again emphasize the importance of case management staff making appropriate, matching and sufficient recommendations to families. I gave examples of concerns (e.g. clients having mental health or substance abuse problems, being recommended to contact Boys/Girls Club). Final draft of a more in-depth service provider list was on Director's desk.
FIELD NOTES

Date: November 25, 1994  Time: From: 7:00 pm To: 8:00 pm

Specific location within JAC: Checkon room

Activity (check appropriate category):

x  observation

__  meeting

__  interview

__  other (specify:  

Person(s) observed:  A CM Supervisor and a mother who was  
at JAC to pick up her son.

Person(s) involved in meeting:  

Person(s) interviewed:  

Other:  

Comments:

Detailed notes of observation, meeting, interview, etc.

The observation was to see firsthand the dialogue between the  
staff and a parent in order to understand the process by which  
parents are informed of diversionary programs, CM staff and  
identification of youths' problems and recommendation for  
follow-up services.
FIELD NOTES

Date: November 27, 1994  Time: From: shifts  To: ______

Specific location within JAC:

Control Room and CM offices

Activity (check appropriate category):

- observation
- meeting
- interview
- other (specify: ______________________)

Person(s) observed: ____________________________________________

_________________________________________________________________

Person(s) involved in meeting: ___________________________________

_________________________________________________________________

Person(s) interviewed: The three CM shift supervisors, assessors and CM's on each shift

Other: _________________________________________________________

Comments:

_________________________________________________________________

Detail notes of observation, meeting, interview, etc.

I reemphasized to each CM the importance in making recommendations to parents. They need services while waiting to hear from the diversionary program. One CM did not realize that most agencies do not contact the parent--it is the discretion of the parent to make contact. Families need to be encouraged.
FIELD NOTES

Date: December 4, 1994  Time: From: 7:00 pm To: 9:00 pm

Specific location within JAC:

Checkon Room

Activity (check appropriate category):

☐ observation
☐ meeting
☒ interview
☐ other (specify: ______________________)

Person(s) observed: ____________________________________________________________

Person(s) involved in meeting: Second Shift CM

Person(s) interviewed: Other assessor and CM that I had not spoken to as yet.

Other: ________________________________

Comments:

________________________________________________________

________________________________________________________

________________________________________________________

Detailed notes of observation, meeting, interview, etc.

I needed from the second shift CM an explanation of some services that were recommended. The other staff members needed my reinforcement on making service recommendations.
FIELD NOTES

Date: December 6, 1994  Time: From: 7:45 pm  To: 8:15 pm

Specific location within JAC:

Checkon Room

Activity (check appropriate category):

- observation
- meeting
- interview
- other (specify: _____________)

Person(s) observed: __________________________________________________________

Person(s) involved in meeting: Linda Williams and a CM supervisor

Person(s) interviewed: ________________________________________________________

Other: ______________________________________________________________________

Comments:

My intervention was getting on CM's nerves. Once they realized the importance of my function, they accepted the joint effort. This CM supervisor runs a tight shift.

Detailed notes of observation, meeting, interview, etc.

CM staff were prompted to study more carefully the problems that had been assessed, and therefore, to make recommendations accordingly. When a lot of misdemeanors come through JAC to be assessed, the paper work gets to be cumbersome.
Date: December 7, 1994    Time: From: 2:20 pm To: 2:25 pm

Specific location within JAC:

Telephone

Activity (check appropriate category):

___ observation
___ meeting
___ interview
___ other (specify: telephone conversation)

Person(s) observed:

Person(s) involved in meeting:

Person(s) interviewed:

Other: Conversation between Linda Williams and TASC/DAT staff

Comments:

TASC/DAT (Treatment Alternative to Street Crime and Delinquency Assessment Team) staff provide mental health and substance abuse pro bono evaluation for misdemeanor youth.

Detailed notes of observation, meeting, interview, etc.

I needed clarification on the fact that when a CM makes a recommendation to TASC/DAT staff, the information is placed in a pickup box; and the staff either call or correspond with the parent/guardian to bring their child in for a two-hour free consultation.
DATE: December 13, 1994
TIME: From: 8:00 pm To: 8:45 pm

Specific location within JAC:

Checkon Room

Activity (check appropriate category):

- observation
- meeting
- interview
- x other (specify: chit chat)

Person(s) observed:

__________________________________________________________

Person(s) involved in meeting:

__________________________________________________________

Person(s) interviewed:

__________________________________________________________

Other:

__________________________________________________________

Comments:

Linda Williams and a CM discussed what the diversionary programs require the clients to do. The court does not like for the CM at JAC to tell clients what sanctions may be placed on them.

Detailed notes of observation, meeting, interview, etc.

Arbitration/JASP may require a client to write a letter of apology, an essay covering the events that led up to their misdemeanor offense, or to do community service hours. Matters of personnel were also discussed.
FIELD NOTES
Date: December 14, 1994  Time: From: 4:00 pm To: 4:15 pm
Specific location within JAC:
Telephone

Activity (check appropriate category):
   ____ observation
   ____ meeting
   ____ interview
   x other (specify: telephone conversation)

Person(s) observed: ______________________________

Person(s) involved in meeting: ______________________

Person(s) interviewed: _____________________________

Other: Conversation with a TASC/DAT staff member

Comments:
There appears to be a lack of communication between the CM and TASC/DAT staff in making and receiving referrals.

Detailed notes of observation, meeting, interview, etc.
While relaying a change of address for an experimental group youth to a TASC/DAT staff member, I discovered that five other youths had not been referred to them by the CM unit—even though these youths had referrals noted on their preliminary screening file. This matter was discussed with the CM supervisor, and letters were sent out to these families.
FIELD NOTES

Date: December 15, 1994    Time: From: 6:30 pm To: 7:00 pm
Specific location within JAC:
   Classroom
Activity (check appropriate category):
   □ observation
   □ meeting
   □ interview
   □ other (specify:)
Person(s) observed:

Person(s) involved in meeting:

Person(s) interviewed: A new assessor staff member who works with TASC/DAT
Other:

Comments:

This staff member has had no training on the floor as to making recommendations to families. Her function is to set up an appointment for the free evaluation with TASC/DAT staff.

Detailed notes of observation, meeting, interview, etc.

This staff member became frustrated when she realized she had not been trained to make recommendations to families, and had not seen the service provider list. This situation was brought to the attention of the CM shift supervisor, who talked to her, and spoke to the CM Supervisor the next day.
FIELD NOTES

Date: December 19, 1994

Time: From: _______ To: _______

Specific location within JAC:

Telephone

Activity (check appropriate category):

- observation
- meeting
- interview
- [ ] other (specify: telephone conversation)

Person(s) observed: ________________________________

Person(s) involved in meeting: __________________________

Person(s) interviewed: ________________________________

Other: ____________________________________

Comments:

I checked a list of client referrals with TASC/DAT since a lot of referrals had been made to them.

Detailed notes of observation, meeting, interview, etc.

Since TASC/DAT address mental health and substance abuse problems, is a free service to families, and is located in the same area as JAC, they receive a large portion of the CM referrals. I periodically check with the TASC/DAT staff to learn the status of the families I am intervening with.
FIELD NOTES

Date: December 29, 1994

Time: From: _______ To: _______

Specific location within JAC:

Telephone

Activity (check appropriate category):

- __ observation
- __ meeting
- __ interview
- x other (specify: telephone conversation)

Person(s) observed: _________________________________

________________________________________________

Person(s) involved in meeting: _______________________

________________________________________________

Person(s) interviewed: ______________________________

________________________________________________

Other: Conversation with JAC staff member processing

service provider computer program list.

Comments: Concern with new service provider list.

________________________________________________

Detailed notes of observation, meeting, interview, etc.

The computer programer at JAC was writing a software program

that would identify youths' problem areas (e.g., mental health, problem with peers, etc.) and print a list of various agencies

within each problem area parents/guardians would be recommended to contact. When completed, this program will enable CM's to access information more easily to relay service provider information to families.
APPENDIX H

PARENT/GUARDIAN FOLLOW-UP OUTCOME FORM

Information on Youth:

1. Name of youth: ________________________________

2. Male: ___  Female: ___  Age: ___  DOB: __________

APPENDIX J

Referral Instructions

I. For each youth registered at JAC.
   A. Make an entry in the "Referral" Program.
      1. Assessor last name, first initial. (This information is automatically displayed if the screening information has been entered into the computer).
      2. Was(will) the youth referred for In-depth Assessment? Indicate Yes, No. This is a separate question than the one asked on the FURTHER Assessment screen, which asks if the youth 'needs' in-depth assessment.
      3. Date. Indicate the date that the referral was made. If the referral decision has not yet been made, enter today's date. (This information is automatically displayed if the screening information has been entered into the computer).
      4. If youth is not referred for in-depth assessment, indicate the reason why.
         i. 0 = pending
         ii. 1 = family felt assessment not needed
         iii. 2 = youth recently evaluated
         iv. 3 = youth already evaluated
         v. 4 = youth currently being evaluated
         vi. 5 = other reason
         vii. 9 = not applicable (if youth was referred for in-depth assessment)
      5. If "other reason" was selected above, specify what that reason was.

II. For each youth that is referred for treatment.
   A. Make one entry into the "Treatment Referral" program for each referral for treatment that is made.
      1. Recommended program/agency. Using the Provider List, indicate the code number of the recommended agency (and press enter). This will cause the agency name to appear to the right of the code. When you <Tab> through the remaining address and phone number fields, they will automatically be filled in, using the information stored in the Provider Table.
      2. Recommended Treatment Type:
         i. 00 = pending
         ii. 01 = medical exam
iii. 02 = mental health program
iv. 03 = group home
v. 04 = halfway house
vi. 05 = community service agency
vii. 06 = education/vocation
viii. 07 = alcohol/drug treatment
ix. 08 = detoxification program
x. 88 = other
xi. 99 = not applicable

3. Setting:
i. P = pending
ii. O = outpatient
iii. I = inpatient
iv. R = residential
v. N = not applicable

### III. Before the Youth is released.

A. Print the Youth Referral Form and give it to the parent/guardian when the youth is released or give it to the receiving agency.

### IV. Service Providers.

A. Service Provider Inquiry.

1. This program is used to inquire (alphabetically, by category) on the service providers available for referral. See attached category list.

2. You may only inquire by category. To inquire, enter the category name (or partial name) and press <F9>.

4. To exit, press <Esc>.
