Illinois

This competency-based secondary learning guide on improving responses to crises is part of a series that are adaptations of guides developed for adult consumer and homemaking education programs. The guides provide students with experiences that help them learn to do the following: make decisions; use creative approaches to solve problems; establish personal goals; communicate effectively; and apply management skills to situations faced as an individual, family member, student, and worker. Each learning guide includes the following sections: a general introduction and guidelines for using the material; a checklist for users for advance planning; introduction to the guide; specified competencies, with student outcomes/evaluations, definitions, key ideas, teacher strategies/methods, suggested student activities, sample assessments, and supplementary resources. The following competencies are addressed: identify life situations that cause stress for individuals or families; describe ways children and adults may react to stress; determine strategies for coping with stress; and employ a conflict management strategy in a life situation. Twenty-nine supplements contain information and activity sheets on the following: life span development, stress levels, stress management, personal strengths, support systems, coping strategies, values, anger, constructive communication, good listening, and conflict resolution. Concluding the guide is a 69-item bibliography. (MN)
Improving Responses to Individual and Family Crises

General Comments for Use of this Learning Guide

The key to responding to individual and family crisis seems to be CONTROL—taking charge of one's life. Techniques need to be included that cause students to control (make choices and take specific actions).

It is important for the teacher to be well-acquainted with each person. A variety of warm-up activities to get acquainted may be used to introduce group sessions.

The teacher should work toward setting up a comfortable, respectful, and trusting environment in the classroom. Assure students their participation is important, but only as they are comfortable doing so.

Specific rules related to discussion and disclosure should be made known to students. People need to feel free to discuss or not, and disclose whatever does or doesn't make them comfortable.

The teacher should use techniques that build self-esteem. In order to be in charge of themselves, people need a positive self-image. Concentrate on what students do well.

The teacher should have a can-do attitude and encourage students to do likewise. Many students have had little positive reinforcement or successful, supportive role models.

The teacher should be ready to use values clarification activities. Let students talk about what is important to them. Do not pass judgment nor show shock at what or how you are told.

Content and activities should be adapted to the unique needs of students and the local standards. Alternate plans should be developed in case planned materials are too sensitive or otherwise objectionable.

Keeping a journal helps develop writing skills, but more importantly, provides an avenue to express frustrations in a nonthreatening way. The teacher need not look at the journals, but may invite the student to discuss written responses.

Students should be encouraged to share class content with family and friends.
General Guidelines

The terms “teacher” and “student” are used throughout to describe the instructor and participants.

STRATEGIES (for teachers) and ACTIVITIES (for students) as stated in the guide are not always parallel to the numbering system.

Teachers need to carry out preassessment activities to determine level of student competency. Previous work or educational experiences may be such that the teacher will choose not to do some of the competencies.

Key to Symbols – The following symbols are used throughout the guides to designate enhancement activities:
- related basic skills, giving particular attention to language arts and mathematics
- related decision-making and problem-solving skills, including the application and transferability of these skills to personal, family, and work responsibilities to be demonstrated
- enrichment activities according to student abilities and experiences
- interrelationship of concepts to personal, family, and work
- influence of technology on the subject matter, application of knowledge, and related work
- pre- and/or posttest assessment activities

Checklist for Users

Before addressing any of the competencies, the teacher should check in advance to see what materials or preparations are needed.

Competency #1 – Identify life situations that cause stress for individuals or families.

_____ Have on hand pictures from magazines or newspapers that depict stress.
_____ Have ready a short story or news article to aid in defining stress.
_____ Duplicate Supplement 1, “Development Through the Life Span,” on possible stress-producing events.
_____ A chalkboard or newsprint may be needed to list examples of stress.
_____ Have ready 10 blank 3” x 5” index cards or blank pieces of paper for stress cards.
_____ Duplicate Supplement 5, “Top Stressors,” to list stressors for teenagers and to compare stressors of parents with those of teens.

Competency #2 – Describe ways children and adults may react to stress.

_____ Duplicate Supplement 6, “Stages of Stress.”
Duplicate Supplement 7, "Stress-Related Signs and Symptoms."

Duplicate Supplement 8, "Case Study," to identify stress-related signs and symptoms.

Duplicate Supplement 9, "How Likely Are You To Be Affected by Stress?," for identifying vulnerability to stress.

**Competency #3** – Determine strategies for coping with stress.

Duplicate Supplement 17, "Positive and Negative Coping Strategies," for a handout on stress management and again to identify positive and negative coping strategies of hypothetical characteristics described in Supplement 8.

Invite a guest speaker or panel of professionals to discuss strategies of stress management.

Duplicate Supplement 15, "Personal Stress Reduction Plan," to rate students' personal stress management plans.

Have a local telephone book available to help identify people, groups, and agencies that offer free or inexpensive help in coping with stress.

Have magazine and newspaper articles available for examples of how various people have coped with stress.

Duplicate Supplement 16, "Children Coping with Stress."

**Competency #4** – Employ a conflict management strategy in a life situation.

Duplicate Supplements 18, "What Do I Value in Life?," and 19, "Values-in-Conflict Case Studies," for values and conflict activities.

Have available some examples from commercials, cartoons, newspapers, and magazines to illustrate values.

Duplicate Supplement 20, "Anger Test," for discussion of handling anger.

Duplicate Supplement 23, "Interpersonal Communication Inventory."

Duplicate Supplement 24, "Ten Commandments for Good Listening," or 25, "Listen Kit," for discussion of listening skills.

Assemble articles required for "Listen Kit" (Supplement 25).

Duplicate Supplement 26, "Getting the Message," for communications skills activity.

Duplicate Supplement 27, "Conflict Situations," to identify outcomes for conflict situations.

Duplicate Supplement 28, "Rules To FIGHT By . . .," for a handout on resolving conflict.

Duplicate Supplement 29, "Steps in Resolving Conflict," for use as a worksheet to illustrate a personal strategy for resolving conflict.
**Introduction**

Try as one may to keep life on an even keel, the reality is that to grow and develop, major life changes will need to be made, and one will need to negotiate the inevitable ups and downs of change.

All change, whether important or trivial, planned or unplanned, joyous or sad, makes demands upon one's energy for coping and adapting. All adaptation to life events causes some stress. Ordinarily, change occurs slowly over a long time, and people have enough energy to accommodate the positive and negative changes with relative stability. People simply adapt to the wear and tear of life's circumstances or maintain the status quo. A crisis situation can result when people are not able to handle change (The Technology of Building High Self-Esteem . . . , n.d.).

A crisis is an extreme change, a type of demand in which a person suffers a breakdown in coping ability. Whether due to a major threatening event or a series of stressful events, the burden may seem too great to bear. The resulting disorganization and confusion can affect feelings, thoughts, physical functioning, social relationships, and behavior (Slaikeu, 1990).

Two types of crises that individuals and families experience are (1) developmental transitions or changes with movement from one stage of life to another such as entering high school or college, leaving home, and getting married; or (2) situational crises that occur due to hazards in life that are less expected such as physical injury or illness, violent crimes, loss of an important relationship, death of a family member or friend, and divorce.

The state of crisis is characterized by symptoms of stress, an attitude of panic or defeat, focus on relief, and lowered efficiency in functioning and problem solving (Slaikeu, 1990).

Response to crisis (or the crisis resolution process) results in getting people to do as much as they can for themselves, to operate from a position of strength rather than weakness, to regain some type of equilibrium in life, and to regain control of life. Responding to crisis and working through the crisis situation may include the following areas of concern:

- **Immediate intervention**—getting help  
- **Action**—assessing the situation, including what can and cannot be done; setting priorities  
- **Setting a limited goal**—helping oneself on a small scale at first  
- **Restoring hope and expectations**—recognizing crises do not last forever  
- **Support**—activating support systems for help  
- **Focused problem solving**—identifying the real problem and making a plan of action; this is the backbone of crisis intervention  
- **Self-image**—assessing, then making efforts to protect and enhance self-image  
- **Self-reliance**—combating dependency (Slaikeu, 1990)

Certain conditions have been identified which increase the chances that a family or individual can cope effectively with a crisis once it occurs.

Twelve optimum conditions for recovery from a crisis are as follows:

1. adequacy of the family organization (i.e., a group or unit that works together efficiently)  
2. flexibility of the family to change  
3. length of time the family has had to anticipate the event  
4. degree of consensus, happiness, stability, and satisfaction present among family members  
5. family's previous experience with other crisis events  
6. extent to which the family uses democratic problem-solving methods  
7. degree of participation by partners in roles outside the home  
8. amount of social network support available to the family  
9. family's ability to place responsibility for the crisis on external events or persons  
10. changes necessary to cope with the crisis  
11. amount of change, both positive and negative, experienced in the past year by family members  
12. how the family interprets the event—whether it is considered a loss, a threat, or a challenge (Families in Crisis . . . , 1979)
How an individual responds to a crisis event and works through the crisis experience depends on the severity of the precipitating event (how the person perceives the event); material resources (money, food, housing, transportation) to alleviate financial burdens; personal resources (ego strength, previous history of coping with stressful situations, existence of any unresolved personality problems, and physical well-being), and social resources (support systems such as family, friends, work associates for emotional support, information, and referral) (Slaikeu, 1990).

Skills such as stress management, communication, and conflict resolution can make a significant improvement in response to crisis.

The ways one chooses to deal with crises will determine whether growth and a new level of awareness and maturity develop or whether stagnation and failure to develop dominate.
Identify Life Situations that Cause Stress for Individuals or Families.

Student Outcomes

- Give varied examples of sources of stress.
- Given task listings, student can select stressful events for children, adults, and elders.
- Given a list of events and activities, student will assess life changes that can affect stress levels.

Definitions

</thead>
<tbody>
<tr>
<td>stress</td>
<td>a natural reaction of the body to any demand (unpleasant or pleasant) placed upon it; may be physical or psychological; may be an attitude caused by some event or situation</td>
</tr>
<tr>
<td>life situation</td>
<td>an event, condition, or stage in life</td>
</tr>
</tbody>
</table>

Key Ideas

Stress is a normal, natural, and necessary part of life. It motivates one to meet life's challenges and provides the extra strength to fight off danger or to flee from it.

Pressure and demands on one's energy and time can come from several sources, but the main sources of stress can be found:

- at one's job (deadlines, conflict, boredom).
- in one's personal life (money problems, marriage, divorce, death, violence).
- in one's environment (weather, living conditions, traffic).

Stress is felt by all people—children, adults, and elders.
Teacher Strategies/Methods

1. Define and clarify what stress means. Emphasize that stress is the way one's mind and body reacts to any situation that is new, threatening, or exciting. For example: mentally, one may experience feelings of nervousness, anger, anxiety, or depression; physically, one may experience increased heart rate, shortness of breath, indigestion, and/or tight muscles.

2. Have available some examples such as a story, picture, or news article to aid in defining stress. Ask students to think of a recent event that may have caused someone they know to be nervous, swear, lose sleep, or be fatigued. (Soap operas on television can be a rich source of examples.) Emphasize that these signs such as nervousness, swearing, and fatigue help determine that a person is reacting to stress.

3. Discuss with students life situations (events, conditions, or stages in life) that can be stressful. Give or ask for examples of how new, threatening, or exciting situations can produce stress. Some examples might include starting school, discussing a personal problem, speaking before a group, peer pressure, unemployment in the family, asking for a loan, family conflict, death of a loved one, standing up for one's rights, and/or accepting praise. Have students individually list the events and then discuss as a group.

4. Ask students to identify pleasant and unpleasant life situations that produce stress. Emphasize that a situation might be pleasant for one person and unpleasant for someone else. Some examples of pleasant events might be winning a prize, marriage, birth of a child, holidays, a new romance, change in weather, starting a new job, or starting school. Unpleasant events may include death of a close friend or relative, divorce, major illness, failing a class, trouble with family, conflict with a person, breakup of a relationship, military separation, or being made fun of.

5. List and discuss sources of stress at the job, in personal life, and in the environment. Some examples include the following: JOB (coworkers, responsibilities, pay, deadlines, promotion, lay off, strike), PERSONAL LIFE (health, relationships), and ENVIRONMENT (weather, living conditions, neighborhood).

6. Use Supplement 1, "Development Through the Life Span," in a variety of ways to illustrate that stress may be felt throughout a person's life, by a child as well as an adult or elder. Select tasks represented by students, identify experiences students may already have had, or project upcoming events.

7. Use Supplements 2, "Determine Your Stress Level – Adults," 3, "Determine Your Stress Level – Teens," or 4, "Stress Scale – Child," to identify life situations that produce stress. Scales are available for the adult, teen, and child. These scales are intended to be used for viewing how many changes are occurring in one's life, but should not be interpreted as scientific fact. Encourage students to have an adult and a child fill out the stress scales. Compare the stressors of different age groups.

8. Have students use Supplement 5, "Top Stressors," to list what students identify as the top ten stressors for teenagers.

Note: Keep in mind that using the varied activities in this learning guide can enable the student to honestly explore one's own life situations regarding stress. While students may benefit from sharing experiences, caution should be used in asking students to disclose information that may be sensitive.
Suggested Student Activities

1. Using magazines or newspapers, collect pictures that could depict stress. Examples could include winning the lottery, famous person with a serious illness, famous person suffering an embarrassment, losing a home due to a flood, or a child starting school. Tell why these could be stressful. If appropriate, use pictures to create a collage or bulletin board.

2. Write on newsprint or on a blackboard the three headings "JOB," "PERSONAL LIFE," and "ENVIRONMENT"; then, have students give examples of stress under each heading. An alternative would be to have students work in groups to give examples of stress on the job, in personal life, and in the environment. Groups could share results of discussions. Discuss whether the stressful life situations are pleasant or unpleasant.

3. Using random ages, discuss how age might be a factor in the stressful events that happen to a person. (Refer to Supplement 1.) Discuss how change produces stress.

4. Each student should have 10 blank 3" x 5" index cards (or blank pieces of paper). On each card, have them list a life situation (event, condition, or stage in life) that produces stress in the student's own life. Examples could be being late to class, being compared to your brother or sister, not being allowed to stay out late, being pressured into doing something, arguing with your best friend, not understanding a homework assignment, not making a team, visiting with a stepfamily, giving a speech, or moving to a new town. Each student should rank cards according to the amount of stress produced. If appropriate, students can share ranking with others or with the group and discuss how people experience and rank stress differently in life situations.

5. Using the stress cards from the activity above, each student might trade one stress card with another student. Discuss why the stress card was traded and how life might be different if one did not have that stress in life. Other ways to sort cards could be according to stress as pleasant or unpleasant; stress as related to job, personal life, or environment; or according to what age group each stress might be most apt to affect.

6. Bring in news items that depict stress for various age groups and share. News items can be used to make a bulletin board on stress topics (e.g., unemployment).

7. Using Supplement 1, "Development Through the Life Span," discuss stressful events likely to be faced by children, adults, and elders. For example, children may face starting school, separation from family, changes in family, and peer pressure; adults may experience marriage, pregnancy, loss of a loved one, money problems, and injury; elders may face retirement, lack of income, and physical inability.

8. As appropriate, fill out one of the scales (or have someone fill out for adult, child) in Supplements 2 "Determine Your Stress Level - Adults," 3, "Determine Your Stress Level - Teens," and 4, "Stress Scale - Child," to identify changes or stressful experiences. Total the stress score.
Sample Assessments

Knowledge

Ask students to do the following:

1. Write a definition of "stress."

2. Give an example of an event that could cause a person stress
   - at home.
   - at school.
   - at work.
   - in one's environment.

3. For each of the following, list two examples of life events which could cause stress.
   - for a child
   - for a teen
   - for an adult
   - for an elder

4. List five examples of how changes in life can affect stress levels.

Application

1. Complete Supplement 3, "Determine Your Stress Level - Teens". List five examples of stress in your life (or in the life of a teenager). For each example listed, identify if it is "good" stress or "bad" stress (pleasant or unpleasant).

2. Take a survey of teenagers in your school to identify what they consider to be the main sources of stress for people their age. Use the results of your survey to write an article for the school newspaper. This project may be done individually or as a group.

3. Draw a pie chart divided into the ways your (a high school student's) "average" day is spent (e.g., attending classes, driving to and from school, sleeping, studying, eating, getting ready, and so forth). Shade in each activity that is highly stressful for you. Summarize in writing the amount of stress in your day, the time the stress occurs, the causes, and the likely effect on you physically and mentally.

</table>

**Total**
Add up the score of all the events that applied to you in the past year. If you score 250 points, you have about a one in three chance of suffering a serious illness in the next two years. If you score between 250 and 300 points, your chances rise to 50/50. If you score over 300 points, your chances are 90%.

Determine Your Stress Level – Teens

This stress test is not an exact scientific measurement or analysis. It is meant to allow you to think about stress in your life. Changes in our lives are certain to cause stress. Knowing that some life events are more stressful than others and trying to anticipate and plan for such changes may help us.

Below is a list of stress-causing life events you may have experienced. The events are listed in order from some of the most stressful to least stressful for many teens.

**DIRECTIONS:** Go through the list and circle the number next to each event you have experienced in the past year. Add to the list any stressful events not listed. You may use the space at right to rank order your list of stressful events from most stressful (#1) to least stressful (#44).

Total points =

300+ Major stress 150-199 Mild stress
250-299 Serious stress 11-149 Very little stress
200-249 Moderate stress

According to Mendler (1990, p. 37), symptoms of stress in children may take many forms such as withdrawal from others, hyperactivity, underachievement, depression, anxiety, fatigue, nightmares, irritability, aggression, nervous laughter, body aches, and emotional tension. The better children feel about themselves (high self-esteem), the more able they are to handle stress.

Top Stressors

Female Married

1. Economics/finances/budgeting
2. Lack of shared responsibility in family
3. Insufficient couple time
4. Children’s behavior/discipline/sibling fighting
5. Housekeeping standards
6. Insufficient “me” time
7. Guilt for not accomplishing more
8. Insufficient family playtime
9. Spousal relationship (e.g., communication, friendship, sex)
10. Self-image/self-esteem/feelings of unattractiveness

Male Married

1. Economics/finances/budgeting
2. Insufficient couple time
3. Communicating with children
4. Children’s behavior/discipline/sibling fighting
5. Spousal relationship (communication, friendship, sex)
6. Overscheduled family calendar
7. Insufficient “me” time
8. Unhappiness with work situation
9. Insufficient family playtime
10. Television

Single Parent

1. Economics/finances/budgeting
2. Guilt for not accomplishing more
3. Insufficient “me” time
4. Self-image/self-esteem/feelings of unattractiveness
5. Children’s behavior/discipline/sibling fighting
6. Unhappiness with work situation
7. Housekeeping standards
8. Communicating with children
9. Insufficient family playtime
10. Lack of shared responsibility in family

Describe Ways Children and Adults May React to Stress.

**Student Outcomes**

- Give examples of stress-related signs and symptoms.
- Given a checklist of stress symptoms, student will determine personal responses to stress.
- Using a scoresheet, student will determine her/his vulnerability to stress.
- Differentiate how children and adults respond to stress.

**Definitions**

</tbody>
</table>

**Key ideas**

Stress affects the way one thinks and feels about oneself, other people, and the world all around. Stress can attack one’s self-esteem, may make it harder to relate to others, and can decrease one’s energy needed to participate in activities in one’s surroundings.

Some stress is good because it can motivate one to meet challenges and help make life interesting. Too much stress can leave one feeling nervous, angry, hassled, and burned out. Too much stress can harm one’s physical and mental health and may contribute to serious depression or disease (e.g., ulcers, allergies, high blood pressure, heart attacks, or stroke).

While childhood is a time for fun and play, it is a time of intense stress for many. Reactions to stress can take many forms, but symptoms of stress in children can be seen in four main areas: emotional functioning (depression, anxiety, sense of hopelessness, nightmares, crying, apathy, worry), behavior (fatigue, hyperactivity, aggressive behavior, withdrawal from others, nervous laughter, irritability), school performance (underachievement, truancy, fighting, stealing), and health (body aches, headaches, insomnia, and appetite changes).

Many stressors for children are stressors for adults as well. Children are likely to react or return to the behavior of a younger age because they have not learned what else to do. Sometimes children may be labeled “bad” when they react to stress in a way that is considered by adults to be inappropriate.
Teacher Strategies/Methods

1. Discuss with students how stress happens. Supplement 6, "Stages of Stress," can be given as a handout for students to read. Emphasis should be given to the three stages of stress as it affects the body.

2. Using Supplement 7, "Stress-Related Signs and Symptoms," ask students to identify stress-related signs and symptoms they may have experienced or seen in others. Emphasize the three different categories where stress can be seen: physical signs and symptoms, thoughts and feelings, and behaviors. It is recommended that the teacher read the paragraph at the bottom of handout with students.

The teacher may work individually with students.

3. As students begin to note stress-related signs and symptoms, the teacher should emphasize that learning to identify reactions to stress is the goal. (Do not let students get bogged down on which category an example fits into.)

4. Emphasize that stress affects the way one thinks and feels about oneself, other people, and the world all around. In order to stimulate discussion, the teacher might ask questions such as:

- What is a stressful event that could attack one's self-esteem? (Example: being laughed at for some article of clothing or for a physical disability.)

- How would stress make it harder to relate to others? (Example: People may become withdrawn or short-tempered and may have a problem relating to others.)

- How can stress influence how you relate to the world around you? (Example: Stress may limit one's ability to function well.)

- What might be the effect or result of stress carried for a long time? (Example: Stress may harm one's physical or mental health and may lead to serious depression or disease.)

5. Discuss with students how some reactions to stress can have unwanted consequences and may make a stressful situation even worse. (Example: Because a person is late due to a car problem, she/he drives fast to work and gets a speeding ticket that she/he cannot afford, which forces her/him to use Christmas savings.)

The teacher might ask such questions as:

- What are some typical reactions to stressful situations? (Supplement 7 gives examples of reactions to stress.)

- Which reactions to stress can be considered helpful? (Those that help manage stress, maintain control, and do not contribute to other stressful situations.)
• Which reactions to stress make a situation worse (reactions to stress that avoid the problem or that cause hurt people or hurt feelings—e.g., anger, withdrawal, excuses, self-pity)?

• Which reactions to stress make it possible for a person to have some control over the stressful situation? (Think through what needs to be done rather than becoming hysterical or out of control.)

• What are some alternatives to unhelpful reactions to stress? (Take a timeout, ask someone for help, be healthy, decide to make the situation better.)

6. Have students complete Supplement 9, “How Likely Are You To Be Affected by Stress?” (Activity 5). Note that this supplement has a teacher’s guide of points that can be made (Supplement 9A).

   If students desire personal help, the teacher might work with each student to discuss individual scores. The following questions could be asked:

   • How could these items (any) affect you in a negative way?

   • What is the relationship of these (any) items to stress?

7. The teacher may discuss ways children react to stress by referring to Supplements 1, “Development Through the Life Span,” and 4, “Stress Scale – Child.” Ask students to review what events in childhood may produce stress. (The teacher should be ready to give examples of stress in children if none are volunteered.) Emphasize that stressors for children may be stressors for adults as well (such as divorce, or death of a loved one). Reactions of children to stress may be similar to those of adults and harmful to a child’s physical and mental health. (See Key Ideas for points about children’s stress.)

8. Ask a school counselor to class to address ways to assist children in managing stress.

Suggested Student Activities

1. Using Supplement 6, “Stages of Stress,” have students volunteer any experiences they may have had with the three stages of stress.

2. Using Supplement 7, “Stress-Related Signs and Symptoms,” have students give examples of the three categories of signs and symptoms of stress (physical signs and symptoms, thoughts and feelings, and behaviors) that they may have had or noted in others.

3. Identify personal stress symptoms by filling out Supplement 7. (Individual or personal discussions with the teacher may be appropriate but voluntary.)

4. In groups or individually, read Supplement 8, “Case Study,” and list stress-related signs and symptoms the people in the case study might be experiencing. Students may compare responses. (There are no right or wrong answers.)

5. Students may become aware of their vulnerability to stress through filling out Supplement 9, “How Likely Are You To Be Affected by Stress.” Students could tell what effect each behavior listed on the questionnaire would likely have on her/his vulnerability to stress.
6. Using Supplements 1, “Development Through the Life Span,” or 4, “Stress Scale – Child,” give examples of stressors children have, stressors adults have, and how each may react to stress.

How might children and adults react differently to the stress of

- money problems at home?
- moving to a different house?
- divorce?
Sample Assessments

Knowledge

1. List two examples for each category of the following stress-related sign or symptom categories:

   - physical signs and symptoms
   - thoughts and feelings
   - behaviors

2. Given an example of a stress-causing life event (e.g., divorce), differentiate, in writing, how children and adults may react to the stress of this event. In your answer, include physical signs and symptoms, thoughts and feelings, and behaviors each age group may display.

Application

1. Select an event that can cause stress. Interview people of different ages to find out how they think people of their own age might react to that stressor. You might select an event such as winning the lottery or moving to a new town. Summarize your findings in a written report.

2. Individually, or as a group, research a disease related to stress. Prepare a written report of your findings. In the written report, include information on numbers and types of people affected, a description of the disease, how stress contributes to the disease, and courses of action to lessen one’s chance of contracting the disease.

Supplementary Resources

Booklet

Video

Stages of Stress

1. Alarm
   * Body Identifies Stressor
   * Increase in production of hormones (adrenaline)
     * Increase in rate of heartbeat
     * Increase in rate of breathing
     * Increase in perspiration
     * Pupils dilate
   * Decrease in rate of digestion
   * Increase in blood sugar level
   \[ \text{BURST OF ENERGY} \]

2. Resistance
   * Body Attempts To Adapt. This Depends on . . .
     * Body's ability to resist
     * Power of stress
     * How stressor is perceived
     * Ability of body to repair itself under stress
     * Chemical changes brought on by stress
   \[ \text{HOLDING ACTION} \]

3. Exhaustion
   * Body Is Extremely Tired
     * Stress illness may develop
     * Hormone supply diminishes
       * Energy is gone
     * Body can no longer adapt
   \[ \text{BREAKDOWN} \]

### Stress-Related Signs and Symptoms

**DIRECTIONS:** Check the stress symptoms that you often experience.

#### Physical Signs and Symptoms

- Fatigue
- Sleep problems
- Frequent illness
- Tight neck and shoulders
- Cold or sweaty hands/feet
- Headaches
- High blood pressure
- Upset stomach
- Eyestrain
- Excessive sweating
- Constipation/diarrhea
- Nervous tics
- Overuse of medicine
- Appetite changes
- Weight gain or loss
- Indigestion/Heartburn
- Worrying too much about illness
- Face feels hot/flushed
- Dry mouth/throat
- Dizziness
- Legs get shaky
- Teeth grinding
- Rashes
- Other

#### Thoughts and Feelings

- Nervousness
- Get upset easily
- Impatience
- Anger
- Low self-esteem
- Don't care attitude
- Depression
- Helplessness
- Loss of confidence
- Inability to concentrate
- Feeling "blah"
- Boredom
- Feeling worthless
- Restlessness
- Insecurity
- Denying problems
- Feeling of sadness
- Feeling suspicious
- Other

#### Behaviors

- Keeping to yourself
- Overeating
- Putting things off
- Swearing
- Reckless driving
- Forgetfulness
- Drinking and drug abuse
- Putting others down
- Increase in smoking
- Belittling others
- Arguing
- Nail biting
- Crying
- Tapping fingers or feet
- Sleeping or going to bed to escape
- Avoiding work
- Neglecting responsibility
- Gambling
- Spending sprees
- Sexual promiscuity
- Being late to work
- Poor appearance
- Poor health habits
- Being accident prone
- Credit trouble
- Shoplifting
- Violent actions
- Other

---

Case Study

Miguel and Eduardo, single noncustodial parents, have worked in the same factory for ten years as part of the maintenance staff. The factory keeps laying off personnel. So far, Miguel and Eduardo have worked steadily, but they are expecting to be laid off within the next six months. They talked it over and decided to start a business doing maintenance and repairs for small businesses in the area that don't have employees doing that kind of work. Mark has a large shed they can use to start the business. Both have a variety of tools they will need. Each has a little money ahead, though both realize they haven't saved what they should.

DIRECTIONS: For each situation below, list stress-related signs and symptoms each person might experience. (Refer to Supplement 6 if needed.)

A. The court orders Miguel to pay delinquent child support and this depletes his savings.

B. Eduardo gets laid off.

C. They are unable to get a business loan to buy the equipment they need.

D. A friend offers them a three-month maintenance contract for his business.

E. Miguel gets an offer of a promotion but it involves moving to another state.

F. Eduardo's uncle dies and his aunt asks him to manage their business.

G. Miguel's two teenage sons come to live with him.

H. A fire destroys the shed and all the tools they had collected. No insurance had been purchased.

I. Eduardo meets a woman he wants to marry.

J. Miguel takes an entrepreneur course and realizes he does not have the characteristics and skills to be an entrepreneur.

How Likely Are You To Be Affected by Stress?

DIRECTIONS: Here is a list of some habits that may influence how you are affected by stress. Read each question and make an "X" on the blank beside each item that applies to you. The attached guide explains why each factor may be important in how you are affected by stress.

Do you . . .

Physical Factors

____ 1. eat a balanced diet?
____ 2. get plenty of sleep (seven to eight hours of sleep most nights)?
____ 3. exercise to the point of sweating several times a week?
____ 4. avoid cigarettes?
____ 5. avoid alcoholic drinks?
____ 6. maintain a healthy weight for your height?
____ 7. maintain good health?
____ 8. drink less than three cola drinks (or coffee or tea) a day?

Emotional Factors

____ 9. feel loved?
____ 10. have at least one relative close by (within 50 miles) on whom you can rely?
____ 11. get strength from your religious beliefs?
____ 12. regularly attend club or social activities?
____ 13. have a support system of friends and acquaintances?
____ 14. have one or more friends to confide in about personal matters?
____ 15. speak openly about your feelings when angry or worried?
____ 16. talk to the people you live with about school or home problems?
____ 17. do something for fun at least once a week?
____ 18. plan your time to get things done?
____ 19. take quiet time for yourself during the day?

Economic Factor

____ 20. have enough income to meet basic expenses?
How Likely Are You To Be Affected by Stress? (Teacher's Guide)

Physical Factors

1. Good nutrition including a variety of foods can aid one's body in maintaining best health and in coping with stress. The right food at the right time may help one live with or relieve stress. Air-popped popcorn, dry breakfast cereals, or rice cakes can be helpful additions to a nutritious diet for especially stressful times (Editors of Prevention Magazine Health Books, 1988).

2. Enough sleep means one can be alert and go about one's activities. Many people experiencing stress may have trouble sleeping and may wake up tired and irritable. Over time, lack of sleep may contribute to the body's lack of energy to cope with stress. To help in falling asleep, one may try a light snack of complex carbohydrates (such as crackers, not sugar), exercise early in the day, avoid nicotine and caffeine, and practice relaxation techniques (Editors of Prevention Magazine Health Books, 1988).

3. Researchers have found that a minimum of three half-hour exercise sessions weekly not only help relieve depression, but reduce the frequency and severity of it. Exercise improves physical condition enabling one's body to more efficiently deliver oxygen to muscles so one does not tire quickly. It also stimulates an overall feeling of well-being (Depression, 1983).

4. Nicotine in cigarettes causes slight impairment of a person's ability to react in emergencies, and it affects a person's breathing efficiency (especially important in stressful situations) (Romness & Carr, 1986).

5. Alcohol is a powerful depressant drug that masks the symptoms of stress. Alcohol can increase stress by inhibiting clear thinking, or by creating new problems such as arguments, accidents, and so on (About College and Stress, 1991).

6. Looking good can help one feel good. Best body weight can lessen the burden on body systems and leaves more energy for use in adapting to stress.

7. The amount of stress in one's life has been found to be a factor in one's risk of illness. Stress may not cause disease but it is known to be a major contributor to several illnesses (including heart disease and asthma). Stress can impair the ability of the body's immune system to fight off disease.

8. Caffeine (found in coffee, tea, chocolate, and some soda pop) may produce a nervous, jittery feeling that may make stress symptoms seem worse and may make it more difficult to think clearly.

Emotional Factors

10. Many families provide the caring for and about one another that people need, especially in times of stress. The strength of a family may lie in how well it fulfills the expectations of its members for love, security, protection, emotional and financial support, nurturing, guidance, and encouragement (Romness & Carr, 1986).

11. Religion may provide a personal philosophy that gives one's life meaning and hope, even in seemingly hopeless situations (Editors of Prevention Magazine Health Books, 1988).

12. Social networks provide emotional support, communicating to a person that she/he is loved, cared for, and valued. Social networks may provide information and referral to helpful resources (Slaikeu, 1990).
13. Friends tend to give each other emotional comfort and act as buffers against stress (Editors of *Prevention Magazine Health Books*, 1988).

14. Confiding in a trustworthy, level-headed person may relieve strain, help one see a situation in a clearer light, and help one determine what to do (Ohio Department of Education, 1989a).

15. Bottled-up anger ("stuffing it") may boost blood pressure, contribute to headaches, and possibly aggravate such conditions as ulcers. A healthy response to anger is to direct it. For example: calmly discuss problems, discuss the causes of anger, express anger in ways that do not hurt, and learn to let go anger when it is expressed. Crying may relieve stress by ridding the body of harmful chemicals produced in stressful times.

16. Living is not something one does alone. People become dependent on the help, services, and friendship of others. Talking about everyday problems may lessen stress and prepare one for major stressors (Romness & Carr, 1986).

17. Laughter is good exercise, a form of “inner jogging.” A good laugh may lower blood pressure, reduce muscle tension, increase alertness, and improve digestion. If one laughs hard enough to cry, she/he may benefit from the tears which contain bacteria-killing agents. Books, movies, jokes, and reminiscing may be fun therapy (Adapting to Stress, 1988).

18. Planning ahead gives one a sense of control over events and helps prepare one mentally for stress. Planning can save time and help prevent the jitters when the unexpected occurs (Editors of *Prevention Magazine Health Books*, 1988).

20. Studies have shown that people can reduce their heart rate, respiration, and blood pressure by committing to a regular routine of a few minutes of quiet relaxation morning and evening.

**Economic Factor**

20. If one wants to be independent, one needs to be able to financially support oneself. One needs to pay for basic needs of food, shelter, and clothing as well as transportation, education, recreation, medical costs, and taxes. A person should allow a certain amount of money weekly or monthly for expenses, plan ahead, and stick to a budget (Romness & Carr, 1986).
Determine Strategies for Coping with Stress.

**Student Outcomes**
- Using results of self-awareness activities in Competencies One and Two, student will assess personal stress level and vulnerability to stress.
- Anticipate upcoming events/changes that may produce stress.
- Determine personal support systems.
- Develop a personal plan of action for coping with stress in a life situation.
- Develop an awareness of strategies useful to assist a child in coping with stress.

**Definitions**

<table>
<thead>
<tr>
<th>Term</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>crisis</td>
<td>crucial time or event which causes a major change in one's life and where ordinary coping ability is disabled</td>
</tr>
<tr>
<td>distress</td>
<td>harmful side effect of stress; may cause physical or mental breakdown</td>
</tr>
<tr>
<td>self-esteem</td>
<td>beliefs and attitudes one has about oneself</td>
</tr>
<tr>
<td>cope</td>
<td>to deal with to some degree of success (not the same as reaction)</td>
</tr>
<tr>
<td>coping strategy</td>
<td>a way of managing stress</td>
</tr>
<tr>
<td>support system</td>
<td>things and people one can depend upon for help</td>
</tr>
<tr>
<td>reaction</td>
<td>action caused by some influence; may be unplanned</td>
</tr>
</tbody>
</table>

**Key Ideas**

A person who copes well with stress can find ways to make herself/himself feel better without hurting anyone.

To cope with stress, one must learn to recognize the sources of stress in one's life.

The ability to control or take charge of one's life seems to be a key to effectively coping with stress in life situations. While one cannot control whether a stressful life event will occur, one can control how one thinks, feels, and acts.

The foundation for coping with stress is laid out in childhood through building high self-esteem and an "I can do it" attitude.

The better one feels about oneself, the more capable one is of coping with stress.

Children's ways of coping with stress are different from those of adults. Children lack the variety of coping mechanisms available to adults. For example, one may start acting like a child of a younger age or slip into "bad" behavior for lack of knowing what else to do with stress. Skills children need to cope with stress include liking themselves, feeling in charge of things that happen to them, taking responsibility for decisions, and effectively solving problems with others.

If not managed effectively, stress may contribute to life situations becoming out of control and crises may result.
Teacher Strategies/Methods

1. Discuss the difference between reaction to stress (action caused by some influence, often unplanned and unhelpful) and coping with stress (to deal with to some degree of success). Effective coping involves a plan for managing stress that would include making one feel better without hurting anyone.

2. Emphasize the importance of coping (dealing with stress). If not managed effectively, stress may contribute to life situations becoming out of control and crises may result. Emphasize that one's physical and mental health may be influenced by the way one adapts to the ups and downs and change in daily living. For example, stress has been identified as a major contributor (directly or indirectly) to the following: high blood pressure, coronary heart disease, cancer, canker sores, infections, genital herpes, lung ailments, accidental injuries, cirrhosis of the liver, diabetes, and migraine headaches. (It would be helpful to have some articles or publications available to share with students that call attention to this.)

3. Emphasize that one can develop skills for coping with stress (see Key Ideas). One technique for developing coping skills is learning more about oneself. Use self-awareness activities such as those in Supplements 7, “Stress-Related Signs and Symptoms,” and 9, “How Likely Are You To Be Affected by Stress?” (Supplements 2, 3, and 4 can also be considered.) These self-awareness techniques can help students to identify one's personal stress symptoms and whether one is vulnerable to stress.

4. Another technique the teacher can use to develop coping skills is to direct students to anticipate changes in life situations. Have students complete a time line or calendar of anticipated changes in the three categories of personal, job, and environment. (See Supplement 10, “Preparing for Stress . . . Personal Time Line.”) Emphasize that if one is able to anticipate changes, control can be exercised by spreading out stressful events so they do not all come at once, enabling one to make arrangements which will assist in coping with the stressful events.

5. Using Supplements 13, “Test Your Support Network” and 14, “Building Your Support System,” the teacher can have students identify people who can provide various types of support. Emphasize the value of having support systems. The teacher might make the following points:

   - Support systems may offer a place to talk about problems and provide emotional support.
   - Support systems communicate to a person that she/he is loved, cared for, and valued.
   - Support systems may provide information and referral to other sources of help.
   - Support systems may offer a source of money, transportation, and shelter.

6. Hand out Supplement 17, “Positive and Negative Coping Strategies.” Discuss with students the meaning of these strategies.

7. Use the case study in Supplement 8 to have students (individually or in groups) suggest positive coping strategies. Positive coping strategies are ways of making oneself feel better without hurting anyone (self or others). Coping strategies from Supplement 17 may be used for ideas on how to handle stress in positive ways.

8. Invite a guest speaker or panel of professionals to discuss stress management.

9. Have students set a goal for reducing stress in some aspect of their life and then create a personal plan to manage the identified stress. Emphasis should be placed on simplicity and usefulness. The personal plan for stress management might include

   - the student's stressors.
   - goal to work toward.
   - plan of action (such as developing a healthy lifestyle). (Use Supplement 17.)
10. As a follow-up to the personal stress management plan in Strategy 9 above, after an interval of time, the teacher may have students use the evaluation form (Supplement 15) to judge whether their personal stress management plans made a difference. Students should be encouraged to try another approach if their plan did not work. If the plan did help reduce stress, students could be encouraged to plan for managing stress in other areas of their life or to help children, other family members, coworkers, or friends to develop stress management plans.

11. Emphasize children’s ways of coping with stress which are different from adults. Skills children need to cope with stress include:

- liking themselves.
- feeling in charge of things that happen to them.
- taking responsibility for decisions.
- effectively solving problems with others.

Children lack the variety of coping mechanisms available to adults and may act “badly” for lack of knowing what else to do with stress. Emphasize that a foundation for children coping with stress is building high self-esteem and an “I can do it” attitude. Also, children need to be provided with a variety of coping mechanisms. These include allowing comfortable expression of anger and opportunities for taking some control of choices. The teacher needs to be cautious and recognize that some coping mechanisms might not be acceptable in some homes. An example of a strategy that may be used to help children cope with stress is included in Supplement 16, “Children Coping with Stress.” The teacher might discuss other examples of ways to help children cope with stress.

Suggested Student Activities

1. Review the results of self-awareness activities in Competencies One and Two to assess personal stress level and vulnerability to stress. Comment on what was learned (if appropriate).

2. Using Supplement 10, “Preparing for Stress . . . Personal Time Line,” create a personal time line showing the major stressful life events that may be faced over the next month, three months, or year. After completing the time line, identify times when several changes and/or several stressors occur at once. Then determine if any stressful events can be reduced.

3. Using Supplement 11, “Personal Plan To Manage Stressful Events,” identify a stressful event that can be controlled; then, identify other events that are out of one’s control (must be accepted and not worried about). Identify how important the stressful events are. Students can share or keep ideas private, whichever seems appropriate.

4. To reinforce one’s abilities to manage stress, underline personal strengths in Supplement 12, “My Personal Strengths Sheet,” as appropriate.

5. Identify support systems (things and people which can be of help) available to one in times of stress. Supplements 13, “Test Your Support Network,” or 14, “Building Your Support System,” can be used as a worksheet for this purpose.

6. Individual students could select and research a local source of free or inexpensive professional help for coping with stress (i.e., individuals, groups, or agencies). The following information might be included in a report: name, address, phone number of agency/individual, hours of operation, services provided, cost, contact person, how to request services, individuals served, publications, and so on. Share information and create a directory of local services.

7. Share successes in coping with stress, or interview someone who has successfully coped with stress (e.g., counselor, student, elder, pastor/priest/rabbi, teacher, friend) and share effective coping strategies discussed in the interview.
8. Bring in current newspaper or magazine articles on stress. Discuss what techniques for coping with stress were used and if these are effective or ineffective.

9. Select a source of stress (stressor) and identify a goal for reducing stress. (Supplement 5 in Competency One contains a list of common stresses for adult groups.) Students should then create a personal plan to cope with (or manage) the stress.

10. As a follow-up to Activity 9, evaluate personal plans for coping with stress. Use Supplement 15 as an evaluation instrument. If the plan is successful, the students may select other areas to develop.

11. Give examples of ways one can help children cope effectively with stress in the following areas (sample answers are given):

   **Ways to help a child like herself/himself:**
   - Be a good role model.
   - Help children learn to succeed in school (e.g., attribute nonsuccess to insufficient effort rather than lack of ability).
   - Help children select tasks they can succeed in.
   - Help children learn to reward themselves.
   - Have children give help to others (may make kids feel better about themselves).

   **Ways to help a child feel in charge of things:**
   - Be a good role model.
   - Help children make a plan of action or guide for success on a given task.
   - Teach mastery of tasks by offering lots of opportunities to make choices (i.e., give guidance and specific feedback).

   **Ways to help a child take responsibility:**
   - Be a good role model.
   - Teach making choices, guidance in accepting probable consequences of choices, and responsibility in accepting outcomes.

   **Ways to help a child effectively solve problems with others:**
   - Be a good role model.
   - Encourage children to develop understanding of self and other people.
   - Encourage children to learn the difference between thoughts, feelings, and actions.
   - Teach communication skills.
   - Help children learn how to manage strong feelings such as anger without hurting either themselves or someone else.
   - Encourage children to work together to solve problems.
12. Using suggestions given in Supplement 16, "Children Coping with Stress," identify strategies to use to help a child in coping with stress. Identify strategies which have been successful or unsuccessful. Discuss what effects various coping strategies might have on the child and on others the child relates to. For example, if a child feels stress from being laughed at for being fat, she/he could stay home from school, fight, or eat something to give comfort. (These are all negative coping strategies which could make the situation even worse.) Positive coping strategies would be if she/he could become involved in some noncompetitive activity like scouts, join a club, run for an office, or exercise to work off stress and lose weight. These strategies would build self-esteem, help to work off anger, and allow her/him to have some control over choices.
Sample Assessments

Knowledge

1. Select a stressful life situation. Write a plan of action to cope with the stress. Include a list of support systems and strategies that will help the individual cope with the situation.

2. Create a time line for four years of high school; list all events/changes that may produce stress. For each event, list one strategy to assist in coping with stress.

Application

1. Individually or as a group, prepare a booklet entitled "50 Ways to Tie a Knot and Hang On (How Teens Cope with Stress)." Include a section listed "Support Resources" such as booklets, counseling services, and so on that teens might find useful in coping with stress. Survey teens to identify common stressors and ways they might effectively cope. Duplicate the booklets and distribute them through FHA-HERO or Student Council.

2. Arrange to have a series of rap sessions on teen stress and how to cope. Host a different guest speaker or panel and address a different topic each session. Topics could include step-families, dating violence, body image, getting ready for college, and so on.

Preparing for Stress . . . Personal Time Line

By anticipating and preparing for events, it is possible to gain some control over the stress that comes with the events. Below is an example of a "Personal Time Line."

DIRECTIONS: On the blank "Personal Time Line" following the example, write down the major stressful events you will probably need to face over the next month, three months, or one year.

Personal Time Line Example

<table>
<thead>
<tr>
<th>Personal:</th>
<th>12/17</th>
<th>Braces On</th>
<th>12/29</th>
<th>Step-Sister Moves In</th>
</tr>
</thead>
<tbody>
<tr>
<td>11/15</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>School/Job:</td>
<td>ACT Test</td>
<td></td>
<td></td>
<td>Job Ends</td>
</tr>
<tr>
<td>Environment:</td>
<td></td>
<td>12/21</td>
<td>Winter Begins</td>
<td></td>
</tr>
</tbody>
</table>

Your Personal Time Line

Personal Plan To Manage Stressful Events

What Can You Control? How Important Is It?

To handle the stress of change most effectively you will want to decide what you can control and what you cannot control and how important each is.

**DIRECTIONS:** In the space below, or on a separate paper, identify stressful events you have faced or will face in the next few months and place them in the box according to their importance to you and your ability to control them. These are your ideas and may be different from the way everyone else thinks. You can choose to share or keep this to yourself.

<table>
<thead>
<tr>
<th>I CAN CONTROL—IMPORTANT</th>
<th>I CAN CONTROL—NOT IMPORTANT</th>
</tr>
</thead>
<tbody>
<tr>
<td>These events require action.</td>
<td>These events don't deserve much attention.</td>
</tr>
<tr>
<td>For example, &quot;I have an important report due. I have to write it.&quot;</td>
<td>For example, &quot;I will go to the teacher to explain why my report is late.&quot;</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>I CANNOT CONTROL—IMPORTANT</th>
<th>I CANNOT CONTROL—NOT IMPORTANT</th>
</tr>
</thead>
<tbody>
<tr>
<td>These events are beyond control—they require acceptance.</td>
<td>For example, &quot;My best friend has already turned in a report and received a good grade.&quot;</td>
</tr>
<tr>
<td>For example, &quot;The teacher's standards are high. Grades are based on creativity, grammar, spelling, and punctuation.&quot;</td>
<td></td>
</tr>
</tbody>
</table>

My Personal Strengths Sheet

DIRECTIONS: Underline each strength that you think you have. You might also have someone else go over the list and tell you which ones they think you have. Sometimes other people see our strengths more than we do.

able to care for self  generous  musical
able to give orders  gets along with others  never gives up
able to take orders  gets things done  observant
accepts advice  giving  often admired
admires others  goal setter  organized
average  good cook  on time
dedicates  good dancer  open
articulate  good friend  patient
assertive  good leader  peaceful
tyling  good listener  physically fit
caring  good looking  pleasant
clean  good manners  positive attitude
committed  good neighbor  quick learner
common sense  good parent  religious
communicates well  fair  respectful of authority
compassionate  good singer  respected by others
courteous  good with details  responsible
creative  good with words  risk taker
daring  good with my hands  self-confident
dedicated  graceful  self-respecting
dependable  grateful  sense of humor
diligent  happy  sensitive
disciplined  hard worker  speaks several languages
do what needs to be done  healthy  spiritual
don't give up  helpful  stand up for myself
eager to please  honest  strong
effective  humorous  team player
efficient  independent  tolerant
elegant  inspiring  trusting
e encourages others  intelligent  understanding
e enjoys taking care of others  keeps agreements  unselfish

fair  leader  warm
feeling  makes a difference  well-dressed
forceful  makes a good impression  other:
friendly  mathematical  
funny  mechanical

Test Your Support Network

DIRECTIONS: The following questions will help you decide how strong your social network is. Circle one answer for each item and record the points on the blanks at the left. Record the “Total Points” near the bottom of this page.

Points

1. How many persons do you talk to about a hassle in your life?
   (0) none (or not employed)  (4) two or three
   (3) one or two

2. How many people do you feel you can depend upon to help you?
   (0) none  (2) two or three
   (1) one  (3) four or more

3. How many friends do you have?
   (0) none  (6) several casual friends
   (2) a few casual friends  (10) one best friend

4. How often do you get together with friends and close family members?
   (0) rarely  (4) several times a month
   (1) about once a month  (8) once a week or more

5. How many friends or family members do you talk to about personal matters?
   (0) none  (8) three to five
   (6) one or two  (10) six or more

6. How often do you participate in group activities (club, church, sports)?
   (0) rarely  (2) several times a month
   (1) about once a month  (4) once a week or more

Total Points

If your Support Network score is . . .

Less than 15: Your support network has low strength and probably does not provide much support. You need to consider making more social contacts.

15-29: Your support network has moderate strength and likely provides enough support except during periods of high stress.

30 or more: Your support network has high strength and it will likely maintain your well-being, even during periods of stress.

Adapted from Journeys A personal approach to handling change (p. 14) (1990) Beaverton, OR: Great Performance, Inc. Used with permission.
Building Your Support System

List THREE people in your home, work, school, or other worlds who either do or could do one of these things for you.

Someone who . . .

1. will listen without giving advice.

2. is an expert in any field and who you can trust.

3. helps you see how you could improve yourself.

4. is willing to be on your side in a difficult situation even if she/he is not in total agreement with what you are doing.

5. is enough of a friend to question your weak excuses.

6. shares your feelings and ideas.

Adapted from Ohio Department of Education (1989b). Family and career transitions resource guide (p. 267). Columbus: Division of Vocational and Career Education. Used with permission.
Personal Stress Reduction Plan

Evaluation Form
Put your personal stress reduction plan into action for a period of one week. At the end of this time, rate yourself as to your ability to cope with or reduce the stress of the situation.

I believe my ability to cope

___ was greatly increased.
___ was somewhat increased.
___ remained about the same.
___ was somewhat decreased.
___ was greatly decreased.

Why do you think and feel this way?

__________________________________________________________________________

__________________________________________________________________________

After putting my plan into action, I believe my stress

___ was eliminated.
___ was greatly reduced.
___ remained about the same.
___ was somewhat increased.
___ was greatly increased.

Why do you think and feel this way?

__________________________________________________________________________

__________________________________________________________________________

Note: If your coping or stress reduction plan was successful, continue the plan. If your plan was unsuccessful, ask the teacher to help you devise a new plan for coping with or reducing stress in your life.

To help a child handle STRESS, I need to remember . . .

- Children can be bothered by stress.
- High self-esteem helps a child handle stress.
- Identify and express feelings to avoid stress build-up.
- People may not know how you feel unless you tell them.
- How we feel and how we act are related.
- Help a child feel better without hurting anyone.
- Don’t sweat the small stuff!
Positive and Negative Coping Strategies

Positive
1. Develop a realistic picture of yourself. Know what you are feeling and why.
2. Set realistic goals for yourself.
3. Ask for help when it is needed.
4. Develop a personal support system.
5. Have hope.
6. Maintain an active social life outside of work.
7. Take timeouts when you need them.
8. Maintain a routine of proper nutrition and physical exercise.
9. Think positive.
10. Develop self-therapies such as meditation, biofeedback, and relaxation response.

Negative
1. Deny that change is taking place.
2. Belittle your abilities and foster feelings of inadequacy.
3. Increase drinking.
4. Avoid the problem.
5. Withdraw from friends.
6. Express anger at the situation or at individuals.
7. Use excessive work as an escape or a solution.
8. Be defeating and depressed. "I will never be able to . . . ."
9. Make excuses and try to figure out why this is happening to you: "What did I do wrong to deserve this?"
10. Have an "I don't need any help" attitude.

Adapted from Ohio Department of Education. (1999b). Family and career transition resource guide (p. 204). Columbus: Division of Vocational Education. Used with permission.
Employ a Conflict Management Strategy in a Life Situation.

Student Outcomes

- Identify life situations that can cause conflict.
- Identify ways to manage anger as a means of resolving conflict.
- Given case examples, evaluate outcomes of conflicts.
- Demonstrate effective communications skills as a conflict management strategy.

Key Ideas

Conflicts are a natural part of relationships. People are different and these differences may become the basis for conflict.

Conflict may happen when (1) someone behaves in a way that keeps another person's needs from being met, and (2) values do not match.

Conflict is not always harmful. Conflict can be constructive when issues are brought out into the open and resolved to the satisfaction of the individuals involved.

People sometimes show anger when they do not know what else to do with strong feelings. Management of anger may be necessary in order to resolve conflict. Anger can be directed into helpful, not hurtful expressions. Anger can be controlled by taking time to cool down, admitting angry feelings, talking about one's feelings, sticking to an issue, asking for feedback from another person (and listening to what she/he says), and letting go of the anger once it is expressed.

Effective use of communication can be a tool for resolving conflict. Effective communication depends upon sending a clear message (verbal and nonverbal), careful listening for words and feelings, and mutual respect.

The kind of communication that results in divorce, child abuse, runaways, family violence, and riots is called "nontherapeutic" or destructive communication. The messages sent in destructive communication tend to make people feel judged or guilty. Destructive communication may prevent one from meeting another individual's need for love and acceptance and thus lead to conflict.

"Therapeutic" or constructive communication has a healthy effect on people. Constructive communication may help people feel better, encourages them to talk, helps them express feelings, fosters a feeling of self-worth or self-esteem, reduces threat or fear, and aids in growth and constructive change. Constructive communication may help in people meeting needs and may help to prevent or to resolve conflict.
There are three possible outcomes of conflict: (1) "lose-lose," (2) "win-lose," and (3) "win-win."

First, when a conflict results in a lose-lose outcome, physical violence may occur or feelings will get hurt, the outcome may be worse than ever; both people may disrespect themselves and each other. Second, in a win-lose outcome, physical violence or verbal abuse may occur, one person gives in or runs away; the disagreement may be settled, but both people may disrespect themselves and each other. Third, a conflict may result in a win-win outcome where nobody ends up getting hurt; the disagreement gets settled through compromise; each gives up something to get something; and both people respect each other. This is the best way to resolve conflict.
Teacher Strategies/Methods

1. Reinforce the idea that some conflict is a normal part of getting along with people. Discuss with students where conflicts may arise in relationships with family, classmates, friends, and coworkers. Ask students for examples.

2. Emphasize that people often act in ways to meet their needs. Discuss how not having one's needs met results in conflict. For example, a parent's need to feel worthwhile may interfere with a teenager's need to show independence. Conflicts may result when a parent needs to control a teenager's social life and the teenager needs to feel free to lead her/his own life.

3. Conflict can occur when values do not match. The teacher should be ready to discuss values, why they are important, and how differing values may lead to conflict. Emphasize that values are what people believe in or principles by which we live. Values affect what people consider good and bad, right and wrong. Use ads, clippings, television commercials, or cartoon strips to identify values being portrayed. Then, discuss examples of values that clash or conflict. Supplements 18, “What Do I Value in Life?,” and 19, “Values-in-Conflict Case Studies,” can be used to clarify values, how values differ among people, and how clashes in values may result in conflict. Emphasize that people differ and these differences may result in conflict.

4. Effective communication can be used as a tool to resolve conflict. The teacher should help students understand the difference between constructive communication and destructive communication in resolving conflict. Emphasize that constructive communication has these probable outcomes:

- helps focus on the issue or problem
- encourages cooperation; helps the other person feel “okay”
- contributes to conflict resolution

Destructive communication has these probable outcomes:

- involves attacks on the people who are in conflict
- tends to make people feel bad and frightened or withdrawn
- may make a conflict worse or prevent conflict resolution

Ask students to give examples of probable outcomes of constructive and destructive communication. Ask, for example, what if someone were called a “slob”? How would she/he feel? What would she/he do? Use examples given in Supplements 21, “Constructive or Destructive?,” or 22, “Choose Your Words Carefully for Constructive Communication,” to distinguish between constructive and destructive communication. Encourage students to change destructive statements into constructive statements. Students could make up additional examples.

5. Help students recognize that anger is an emotion felt by everyone at some time. Anger can be expressed in a variety of ways from a mild reaction to rage (out of control). Anger, if not managed, can lead to physical harm or injury and violence. Expressing anger in hurtful ways can make a conflict worse, or result in physical harm or injury and violence. Discuss three ways people control anger:

- Repress it (e.g., deny true feelings, become withdrawn or depressed, eventually explode in an inappropriate way)
- Escalate it (e.g., make the conflict worse by blaming and calling names, fail to take responsibility for feelings and actions).
- Direct it (e.g., express true feelings in an honest, open, yet kind manner).

Emphasize that to effectively control anger is to direct it. Anger can be directed by (1) taking time to cool down, (2) admitting angry feelings and talking about one’s feelings, (3) sticking to an issue instead of attacking a person, (4) asking for reactions from the other person and listening to both words and feelings, (5) letting go of the anger once it has been expressed. Example: “I feel really angry when you don’t come home when you say you will because it seems like you don’t love me!”
6. Illustrate ways people control anger by using examples taken from television shows, movies, and newspaper or magazine articles.

7. Supplement 20, “Anger Test,” may aid students in identifying how they handle anger. Ask the following questions:
   - How do people express anger?
   - What kind of feelings would a person have after getting angry enough to lose control?
   - How can people express anger but make themselves feel better without hurting others?

8. Emphasize that communication skills include sending clear messages, active listening, and positive use of body language. Communication skills are tools that may prevent or help in resolving conflict. Using Supplements 21, “Constructive or Destructive?” or 22, “Choose Your Words Carefully for Constructive Communication,” have students identify what messages are being communicated, what words and feelings are being expressed, and whether the communication is constructive or destructive. Supplement 22A includes samples of ways to revise statements for constructive communication.

9. Use Supplement 24, “Ten Commandments for Good Listening,” to emphasize the importance of developing listening skills in communication. Discuss the value of each commandment. Ask students to give examples of situations where these commandments can be carried out.

10. Use Supplement 25, “Listen Kit,” as a motivational activity to illustrate or summarize points made about listening.

11. Use Supplement 26, “Getting the Message,” to illustrate the use of body language. Body language (also called nonverbal communication) includes gestures, facial expressions, body posture, and tone of voice.

12. Referring to Key Ideas, discuss three possible outcomes of conflict. One example that could be used is a mother who thinks her daughter’s skirt length is too short to wear to school.

   Discuss the possible outcomes for each of the following:
   - **lose-lose** (An argument with name-calling; daughter is grounded from school activities for one month; daughter lies to mother about where she goes.)
   - **win-lose** (In order to go to game, daughter changes to longer skirt mom chooses; or daughter insults mom, cries, brings up lots of things mom should be ashamed of, mom gives in, and daughter wears the short skirt.)
   - **win-win** (Mom and daughter look through fashions both like; discuss why each feels as she does and determine if conflict is really an issue of morals, fashion, or parent control; daughter wears a new pair of pants to the game.)

13. Use Supplement 28, “Rules To FIGHT By,” as a transparency to review ideas on how to resolve conflict. Ask students to provide an example of conflict and develop a strategy to resolve the conflict in a win-win outcome using appropriate communications skills.

14. Use the worksheet in Supplement 29, “Steps in Resolving Conflict,” to help students think through a process of resolving conflict using communication skills.
Suggested Student Activities

1. Identify a number of situations where conflicts arise among friends, family members, and coworkers. Students could share personal experiences or examples from soap operas, movies, cartoons, newspapers, and magazines.

2. Individually or in groups, use conflict situations above to identify needs people may have.

3. Use Supplement 18, "What Do I Value in Life?" to identify important values. If appropriate, share top values and note similarities and differences.

   Have family members fill out Supplement 18 and compare answers. Discuss how differences in values may result in conflict.

4. Bring in examples from commercials, cartoons, newspaper clippings, or magazine articles to represent values held by people. (An ad directed toward grooming might be an example.) Discuss situations where values clash and how this may lead to conflict. Examples are returning lost money, or telling the teacher about a classmate cheating on a test.

5. React to situations in Supplement 19, "Values-in-Conflict Case Studies," to identify conflicting values.

6. Determine how students express anger. Discuss effective ways to direct anger after completing Supplement 20, "Anger Test." Role play conflict situations to illustrate ways to direct anger.

7. Clarify the difference between constructive and destructive communication using Supplements 21, "Constructive or Destructive," or 22, "Choose Your Words Carefully for Constructive Communication."

   If Supplement 22 is used, revise destructive statements into constructive statements.

8. Complete the "Interpersonal Communication Inventory" in Supplement 23. Discuss the important communication skills (sending clear messages, active listening, and body language) referred to in each statement.

9. After reading Supplement 24, "Ten Commandments of Good Listening," give examples of how these might be used in communication and conflict resolution.

10. Volunteer to role play an activity in Supplement 26, "Getting the Message," to be aware of the effects of nonverbal communication (body language). Identify the effects of nonverbal communication on resolving conflict.

12. Use conflict situations in Supplement 27, "Conflict Situations," to identify the probable outcome (lose-lose, win-lose, win-win) for each action taken.

Sample Assessments

Knowledge

1. Make a list of ten conflict situations. For each conflict, identify whether it represents
   a. behavior that keeps a person from meeting her/his needs.
   b. values that do not match.

2. List three techniques for effective communication (e.g., sending a clear message, careful listening for words and
   feelings, and mutual respect). Give an example of each technique.

3. Give one example of how a person might use each of the following ways of managing anger (e.g., ask question to
   clarify, give facts, be quiet when another person is speaking, avoid insults):
   a. taking time to cool down
   b. admitting angry feelings
   c. talking about feelings
   d. sticking to an issue
   e. asking for feedback (and listening)
   f. letting go of anger

Application

1. As a group or individually, role play and/or make a video showing how a conflict situation could result in a lose-lose,
   win-lose, and win-win situation. Parents could be asked to help identify life situations that cause conflict and to play
   some of the roles.

2. Write a dialogue of a conflict situation. For each statement, identify whether the comment is “constructive” or
   “destructive.” Rewrite the dialogue so every comment is constructive, and the conflict is resolved as a win-win
   outcome.
Supplementary Resources

Videos

The following three videos are available on free loan from Illinois Coalition Against Domestic Violence (ICADV), 937 S. Fourth Street, Springfield, IL 62703. (217) 789-2830:

*Talk to me.* (1988). 20 minutes.

**Anger: You can handle it.** (1994). A 25-minute video and teacher guide that is directed at how teens can use skills for coping with anger in themselves and others. Available from Sunburst Communications, 39 Washington Avenue, P.O. Box 40, Pleasantville, NY 10570-0040. (800) 431-1936. Purchase price: $169.00.

**Body Language:** An introduction to non-verbal communication. A 25-minute video available from The Learning Seed, 330 Tesler Road, Lake Zurich, IL 60047. (800) 634-4941. Purchase price: $89.00.

**Gender and communication: She talks, he talks.** (1994). A 22-minute video available from The Learning Seed, 330 Telser Road, Lake Zurich, IL 60047. (800) 634-4941. Purchase price: $89.00.

**Student workshop: Resolving conflict.** (1994). A 30-minute video and workshop that takes students through the conflict resolution process. Handouts and group activities get students involved in hands-on practice in vocabulary and skills in conflict resolution. Available from Sunburst Communications, 39 Washington Avenue, P.O. Box 40, Pleasantville, NY 10570-0040. (800) 431-1936. Purchase price: $199.00.
What Do I Value in Life?

DIRECTIONS: Read through the list below. Put an "X" on the blank beside each of the words or phrases that is important to you. Then go through the list again and write in order the five most important words and the five least important words on the blanks near the end of this Supplement.

___ Getting things done
___ Being good-looking
___ Having a job that will get me somewhere
___ Being able to help others
___ Caring about people
___ Being nice to other people
___ Being creative
___ Keeping at something until it is done
___ Feeling like I’m okay
___ Having enough money
___ Experiencing freedom
___ Being healthy
___ Being honest
___ Being independent
___ Being sincere
___ Seeing that things are fair
___ Knowing lots of things
___ Being loved
___ Loving somebody
___ Doing things because they are “right”
___ Having new experiences
___ Feeling pleasure
___ Having power
___ Having people know who I am

61
Being a part of things  
Being religious  
Being looked up to  
Being in charge  
Having a satisfying family life  
Feeling like life is okay  
Controlling myself  
Doing something well  
Being able to put up with people and things  
Having lots of money  
Other  
Other

Rank five most important words:
1. 
2. 
3. 
4. 
5. 

Rank five least important words:
1. 
2. 
3. 
4. 
5.
Values-in-Conflict Case Studies

DIRECTIONS: Read the following case studies and answer the questions to determine how values differ and how clashes in values result in conflict.

1. Sara is one of the popular girls in school, but she feels she must always work to maintain her popularity by wearing the right clothes, talking to the right boys, going to the popular social hangouts, and so on. She gets tired of always trying to keep up with the rest of the group. Sara is very close to her family. Her parents have taught her important attributes like honesty, respect, and dependability. One day while in the mall, her closest “friends” dared her to steal a bottle of perfume. They tell her they won’t invite her to their party next weekend if she doesn’t do it. Sara slips the perfume in her purse, and they leave the store without being noticed.

   a. What does Sara value?
   b. How do Sara’s values, her family’s values, and her friends’ values differ?
   c. How may clashes in values result in conflict?
   d. What would you advise Sara to do?

2. Jordan and his parents have recently moved to a small town in rural Colorado. Jordan is attending a new, much smaller school in which he is the only black student. The “jocks” are very interested in being friends with Jordan until they find out that he is a whiz kid at science and doesn’t care too much for sports. Mike, who is on the basketball team, thinks Jordan is a pretty nice guy who likes his favorite subject, science. Mike values having an open mind, equality, fairness, and good friendships. He decides to risk being ridiculed and perhaps losing his position in the “clique” of athletes to become best friends with Jordan.

   a. What are Jordan’s values?
   b. How do Jordan’s values, the athletes’ values, and Mike’s values differ?
   c. How may clashes in values result in conflict?
   d. What would you advise Jordan to do?
Anger Test

DIRECTIONS: Check (✓) the following statements as “true” or “false.” Be honest!

1. T  F  I don’t show my anger about everything that makes me mad, but when I do—look out!
2. T  F  I still get angry when I think of the bad things people did to me in the past.
3. T  F  I fly off the handle easily.
4. T  F  I often find myself having heated arguments with the people who are closest to me.
5. T  F  I sometimes lie awake at night and think about the things that upset me during the day.
6. T  F  When someone says or does something that upsets me, I usually don’t say anything at the time, but later I spend a lot of time thinking up cutting replies I could and should have made.
7. T  F  I find it very hard to forgive someone who has wronged me.
8. T  F  I get angry with myself when I lose control of my emotions.
9. T  F  People really irritate me when they don’t behave the way they should.
10. T  F  If I get really upset about something, I have a tendency to feel sick later, either with a weak spell, headache, upset stomach, or diarrhea.
11. T  F  People I’ve trusted have often let me down, leaving me feeling angry or betrayed.
12. T  F  When things don’t go my way, I feel depressed.
13. T  F  I am apt to take frustration so badly that I cannot put it out of my mind.
14. T  F  I’ve been so angry at times that later I couldn’t remember things I said or did.
15. T  F  After arguing with someone, I hate myself.
16. T  F  I’ve had trouble at home, school, or work because of my temper.
17. T  F  When riled up, I often blurt out things I later regret saying.
18. T  F  Some people are afraid of my bad temper.
19. T  F  When I get angry, frustrated, or hurt, I comfort myself by eating, using alcohol or other drugs, or sexually acting-out.
20. T  F  When someone hurts or frustrates me, I want to get even.
21. T  F  I’ve gotten so angry at times that I’ve become physically violent, hitting other people or breaking things.
22. T  F  At times, I’ve felt angry enough to be violent.

64
T__ F__ 23. Sometimes I feel so hurt and alone I think about committing suicide.

T__ F__ 24. I'm a really angry person, and I know I need help learning to control my temper and angry feelings because it has already caused me to have many problems.

If you answered true to 10 or more, you are seriously prone to anger problems. It's time for a change.

If you answered true to 5 questions, you are about average in your anger feelings, but learning anger management techniques can make you happier.

If you answered true to even one of the last four questions, your anger has reached a danger level!

Choose Your Words Carefully for Constructive Communication

DIRECTIONS: Read each statement at the left. Revise the statement for constructive communication. Use the blank provided.

Example:

1. You never call me. 1. I wish you would call me more often.

2. You’re always late. 2.

3. That is stupid! 3.

4. Nobody in this place cares about my homework. 4.

5. You always ignore me. 5.

6. Don’t yell at me! 6.

7. You shouldn’t do that. 7.

8. You always have to have things your way. 8.

9. You never listen to me. 9.

10. Get out of here and leave me alone. 10.

Choose Your Words Carefully for Constructive Communication
(Teacher's Guide)

DIRECTIONS: Read each statement at the left. Revise the statement for constructive communication. Use the blank provided.

Example:

1. You never call me. 1. I wish you would call me more often.
2. You're always late. 2. When you are not on time, I feel hurt.
3. That is stupid! 3. I am not sure that idea would work; let's explore it.
4. Nobody in this place cares about my homework. 4. I wish I could get more attention about my homework.
5. You always ignore me. 5. I wish you would talk to me more when we go out.
6. Don't yell at me! 6. When you yell at me, I feel like pulling away from you.
7. You shouldn't do that. 7. I feel angry when you do that.
8. You always have to have things your way. 8. I feel hurt when you don't consider my ideas.
9. You never listen to me. 9. I get hurt when I feel no one is listening to me.
10. Get out of here and leave me alone. 10. I would really like to be by myself for a while.
Interpersonal Communication Inventory

**DIRECTIONS:** Place an "X" in the column which best describes how you communicate.

<table>
<thead>
<tr>
<th>Question</th>
<th>No</th>
<th>Sometimes</th>
<th>Yes</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. In talking with people, do your words come out the way you would like them to?</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>2. When a question that is not clear is directed to you, do you ask the family member to elaborate further on the question?</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>3. Do you assume other people know what you are trying to say without explaining what you really mean?</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>4. Do you ever ask people to tell you what they think about what you are saying?</td>
<td></td>

Ten Commandments for Good Listening

1. **Stop talking.**
   You cannot listen if you are talking.

2. **Put the person talking at ease.**
   A person needs to feel free to talk.

3. **Show that you want to listen.**
   Look and act interested. Try to understand.

4. **Remove distractions.**
   Don't doodle, tap, or shuffle papers.

5. **Empathize.**
   See the other person's point of view.

6. **Be patient.**
   Allow plenty of time. Do not interrupt.

7. **Hold your temper.**
   An angry person gets the wrong meaning.

8. **Go easy on argument and criticism.**
   Don't argue; even if you win, you lose.

9. **Ask questions.**
   Questions show you are listening.

10. **Stop talking.**
    First and last; all others depend on it.
Listen Kit

DIRECTIONS: The following tools in a "listen kit" can remind us of important things to remember about listening. Include the following in the kit:

Hand mirror - Try to put yourself in the other person's place.

Zipper - Stop talking. You cannot listen while you are talking.

Door knob, latch, welcome mat - Use "door openers" to help people begin.

Large cardboard question mark - Ask questions and listen to the answers.

Sign that says "I know, I have all the answers!" - Don't guess what the other person is going to say and answer that without really listening to what's said.

Stop sign - Stop to make sure you understand what the other person means.

Gavel - Try to avoid judging the other person.

Getting the Message

DIRECTIONS: Divide the group into pairs. Identify one person in each pair as the Sender (the person speaking) and the other as Receiver (the person spoken to). Do each of the following exercises discussing the questions listed immediately after each one is completed.

1. Sender - Talk about any topic you want.
   Receiver - Pay no attention to the Sender in any way. Doodle, look around, thumb through papers, but do not look at all at the person speaking. Reverse roles.
   a. Discuss how it felt to be the person talking.
   b. What difference might this kind of inattention have on relationships with others.

2. Sender - Talk again about any topic you want.
   Receiver - Look at the Sender for a few seconds, then glance away, look at your watch, shuffle papers, look back at the Sender, say "I'm listening", and so on. Reverse roles.
   a. How did it feel to have "make believe" attention of a listener?
   b. What might this behavior do to a relationship?

3. Sender - Talk again about any topic you wish.
   Receiver - Look at the Sender with a poker face, the face of a stern father or school principal. Cross your arms. Reverse roles.
   a. How did it feel to receive negative judgment attention?
   b. How might this affect a relationship?

4. Sender - Talk about something that means a lot to you, makes you happy or sad, and so on.
   Receiver - Look directly at the Sender, listen carefully, listen for feelings, show in your face the feelings expressed. Reverse roles.
   a. How did you feel as the speaker? Understood?
   b. How might this way of listening affect a relationship?

5. Receiver - Talk about something that is significant to you, interesting and meaningful.
   Sender - Look at the Receiver, try to capture the feelings in facial expressions, but this time accent your listening with a few words such as "yes," "I see," "okay," and "uh-huh." Ask questions for clarification or elaboration. Reverse roles.
   a. Did you feel that your partner was interested, seemed to understand?
   b. How might this way of listening affect a relationship?

Conflict Situations

DIRECTIONS: Some conflict situations are described below. For each, several actions one might take are listed. For each action, identify whether the probable outcome might be "lose-lose," "win-lose," or "win-win." The first conflict situation is an example.

YOU OTHER

1. Your friend wants to go to a movie, but you want to watch TV. Do you . . .

   - win
   - lose
   - insist on your own way?
   - give in and pout?
   - give in and enjoy yourself?
   - go nowhere?

YOU OTHER

2. You tell a toddler to pick up the toys on the floor. The toddler does not want to pick up the toys. Do you . . .

   - tell somebody else to pick up the toys?
   - pick up the toys yourself?
   - force the toddler to do as you asked?
   - give the toddler a cookie after picking up the toys?

YOU OTHER

3. Your friend wants you to drink beer with her/him. You are not interested in drinking beer. Do you . . .

   - refuse to drink, but encourage your friend to go ahead?
   - refuse to be with friend if she/he intends to drink?
   - give in and drink?
   - encourage your friend not to drink, but drink every once in a while with her/him?

YOU OTHER

4. A supervisor calls you in and accuses you of not cleaning up your work mess, even though she/he didn’t see you leave your area without cleaning it. You had not put three tools away. Do you . . .

   - threaten to report your supervisor to the head manager for making accusations without proof?
   - deny all charges?
   - admit your guilt and explain how serious the problem was?
   - tell the supervisor that your coworker left the tools?
   - get your coworker to tell the supervisor that you didn’t leave your tools out?

YOU OTHER

5. You discover that your friend has told a secret of yours and now half the students at school know it. Do you . . .

   - refuse to speak to or be around your friend?
   - tell a secret of your friend’s all over the school?
   - try to find out why your friend betrayed your secret?
   - blow up and tell off your friend?
   - tell others what a terrible person your friend is?
Rules To Fight By

CLARIFY
- Be sure you know what the real problem is. Ask questions.

OUTCOME
- Work for an outcome where everybody wins.

NEEDS
- Know the needs of the people involved.

FACTS
- Give the facts and stay on the issue. Avoid insults.

LISTEN
- Really listen to words and feelings.

“I”
- Start sentences with “I,” not “you.”

CHANGE
- Decide what you could give up. Give some control to the other person.

TEAMWORK
- Think of the other person as a team member and try to work together.

... if you really want to resolve conflict!
Steps in Resolving Conflict

DIRECTIONS: Select a conflict. Then, follow the steps to show how you might use communication skills to resolve the conflict.

1. What is wrong?
2. What could we do?
3. What do we think/feel?
4. What do we do?
5. Who does what?
6. Did it work? Or, do we try again?
7. Or, do we try again?

Improving Responses to Individual and Family Crises – Notes
WORLD-CLASS EDUCATION FOR THE 21ST CENTURY: THE CHALLENGE AND THE VISION

VISION STATEMENT

As we approach the 21st century, there is broad-based agreement that the education we provide for our children will determine America's future role in the community of nations, the character of our society, and the quality of our individual lives. Thus, education has become the most important responsibility of our nation and our state, with an imperative for bold new directions and renewed commitments.

To meet the global challenges this responsibility presents, the State of Illinois will provide the leadership necessary to guarantee access to a system of high-quality public education. This system will develop in all students the knowledge, understanding, skills and attitudes that will enable all residents to lead productive and fulfilling lives in a complex and changing society. All students will be provided appropriate and adequate opportunities to learn to:

- communicate with words, numbers, visual images, symbols and sounds;
- think analytically and creatively, and be able to solve problems to meet personal, social and academic needs;
- develop physical and emotional well-being;
- contribute as citizens in local, state, national and global communities;
- work independently and cooperatively in groups;
- understand and appreciate the diversity of our world and the interdependence of its peoples;
- contribute to the economic well-being of society; and
- continue to learn throughout their lives.

MISSION STATEMENT

The State Board of Education believes that the current educational system is not meeting the needs of the people of Illinois. Substantial change is needed to fulfill this responsibility. The State Board of Education will provide the leadership necessary to begin this process of change by committing to the following goals.

ILLINOIS GOALS

1. Each Illinois public school student will exhibit mastery of the learner outcomes defined in the State Goals for Learning, demonstrate the ability to solve problems and perform tasks requiring higher-order thinking skills, and be prepared to succeed in our diverse society and the global work force.

2. All people of Illinois will be literate, lifelong learners who are knowledgeable about the rights and responsibilities of citizenship and able to contribute to the social and economic well-being of our diverse, global society.

3. All Illinois public school students will be served by an education delivery system which focuses on student outcomes; promotes maximum flexibility for shared decision making at the local level; and has an accountability process which includes rewards, interventions and assistance for schools.

4. All Illinois public school students will have access to schools and classrooms with highly qualified and effective professionals who ensure that students achieve high levels of learning.

5. All Illinois public school students will attend schools which effectively use technology as a resource to support student learning and improve operational efficiency.

6. All Illinois public school students will attend schools which actively develop the support, involvement and commitment of their community by the establishment of partnerships and/or linkages to ensure the success of all students.

7. Every Illinois public school student will attend a school that is supported by an adequate, equitable, stable and predictable system of finance.

8. Each child in Illinois will receive the support services necessary to enter the public school system ready to learn and progress successfully through school. The public school system will serve as a leader in collaborative efforts among private and public agencies so that comprehensive and coordinated health, human and social services reach children and their families.

Developed by citizens of Illinois through a process supported by the Governor, the Illinois State Board of Education and the Illinois Business Roundtable. Adopted as a centerpiece for school improvement efforts.
