This guide, designed to foster self-determination in youths with disabilities, provides a detailed definition of self-determination, a discussion of the skills traditionally identified with self-determination, specific strategies for educators to use in fostering a self-determining environment, and a resource list. Key skills discussed include decision-making, goal-setting, conflict resolution, and communication, with detailed strategies provided for teaching communication and distinguishing between passive, aggressive, and assertive communication. The value of experiential learning is stressed, with suggestions provided for role-playing exercises, real-life experiences, speakers, field trips, and creative activities using videotape and design projects. Tips for making connections with parents, with students, and between students with and without disabilities are provided. The guide concludes with a glossary of key terms, a state-by-state list of self-determination projects, a list of national information and advocacy groups, and a list of print and nonprint materials. Introduction

With the positive move toward inclusion, both regular and special educators are facing a multitude of challenges in their classrooms. Challenges include limits of existing organizational structures, the reality that no one educator can control a student's entire life, the continuing demand to maintain high academic standards for all students, and the fact that comprehensive systems change is slow with few if any immediate rewards. Respecting the overwhelming complexities of all of these issues and others, we believe that educators can make a difference, even in the relatively short amount of time they spend with their students. Educators who understand and facilitate self-determination in the classroom are at an advantage in this new environment, better able to face the challenges now before them. This manual offers a variety of useful strategies for educators to foster self-determination, giving them the tools they need to be successful.

This guide is one of the products created by the Self-Determination Through Group Action Planning project of Full Citizenship, Inc. The project was funded by the United States Department of Education as a model demonstration project designed to foster self-determination in youths with disabilities, ages 14 to 21. Our project included two major components: a semester elective course taught at the high school level and an innovative planning process called Group Action Planning. This guide focuses on information and strategies gained from the class developed for the project.

This guide provides a detailed definition of self-determination, a discussion of the skills traditionally identified with self-determination, specific strategies for educators to use in fostering a self-determining environment, and a comprehensive resource list. This is not a curriculum. Rather, it is a functional guide for educators, one that they can use in their classrooms today. Our project, and therefore this guide, is designed especially for students with disabilities, in either inclusive or segregated settings. However, we feel strongly that this guide will be a beneficial tool for all students and all educators. To provide a solid foundation, we will begin by defining the term self-determination.

Defining Self-Determination

In the following paragraphs, we will outline our working definition of self-determination. We have also defined each of the specific components of our concept of self-determination. On page 18, readers can find a glossary of key terms. After defining self-determination, we will offer strategies for implementation.

Self-determination is a system of attitudes, skills, and relationships that develop over time and which are dynamic and fluid.
For an individual, self-determination consists of, but is not limited to, interdependence, self-regulation, knowledge and acceptance of self, the ability to learn from experiences, internal motivation to learn and utilize skills such as communication, goal-setting, decision-making, and conflict resolution, and most importantly the perception of control and choice in one's life. In the environment, the expression of self-determination is enhanced by responsive, informative, and non-judgmental feedback, the negotiation of constructive limits, the creation of situations that are optimally challenging for the individual, effective communication strategies, and the provision of non-controlling support.

Importance of the Environment

The environment, or the context in which the student lives, is as critical as the individual in fostering self-determination because the environment and the individual are interdependent. Characteristics of the environment can either facilitate or hinder the demonstration of acquired skills. By facilitating students' acquisition of skills that promote self-determination and creating a supportive environment in the classroom, teachers can establish a positive working relationship between the individual and the environment. When students experience success, it increases their perception of personal abilities and expectations for future successes. Students who are equipped with more skills and have more experience in effective decision-making, communication, and problem-solving will be more successful in supportive environments.

In addition to the classroom environment, one's culture frames both the definition of self-determination and the process of becoming self-determined. Self-determination is, as defined in the literature, in many ways a "white, western, linear, and product oriented" concept that consequently needs to be culturally reframed to better fit minority students with disabilities and their families. While limited space does not allow us to do justice to all the issues surrounding diversity, we will present some guidelines that have been helpful to us in reframing the concepts of self-determination.

- Considering the students and their families' cultural context, including number of generations living in the dominant culture, family composition, and supports within their community is helpful in reframing self-determination. Are the self-determination skills the students are learning congruent with their cultural values? Will these skills be appreciated as self-determination when expressed in a culturally relevant manner?

- Staying flexible in the expectations and presentation of problem-solving strategies is important, for individual families may approach problems, set goals, and make decisions in unique ways. Honoring how the family has successfully initiated positive change in the past is the best predictor of future success. What has worked? Who have been the key players? Identifying the unique change process of a given family may not be easy. Reflecting on the family's context and responding in a manner congruent with the family's values may facilitate this identification.

- Finally, teachers can recognize how students' culturally-relevant skills can be used successfully within the dominant, mainstream culture. We believe that "...minority students with disabilities..., like their parents and families, stand with one
foot in their family culture and another foot in the dominant culture"². How can individuals and their families successfully utilize newly-acquired skills in the larger social context while still acknowledging the validity of their family-cultural context? Facilitating an adaptation to the dominant culture while preserving family-cultural traditions is a complicated task for educators, often requiring creativity and a willingness to learn about students' families and cultures from the students themselves. Interestingly, such an approach benefits students and educators from both dominant and minority contexts by widening the array of perspectives and options available.

In summary, educators have the opportunity to teach students the skills necessary for self-determination as well as the capability to provide a supportive environment. Our goal is to complement teachers' current efforts by offering new and alternative strategies for fostering self-determination. We have outlined necessary skills and strategies in the following sections.

Skills Necessary for Self-Determination

There are several skills traditionally identified with the concept of self-determination, and all are vital tools for students. Basic skills such as decision-making, goal-setting, communication, and conflict resolution are important aspects of self-determination. Students who possess these skills are more likely to be successful in every area of life, even in environments which are not supportive. Following are brief descriptions of these important skill elements of self-determination.

Decision-Making

There are many resources available on decision-making, many of which are listed in the resource section of this guide. We have outlined a simple process that students can learn and use as they refine their decision-making skills (see Figure 1). While students are ultimately responsible for this process and its outcome, teachers can prompt consecutive steps and ensure that all of the options have been identified. As students learn and work through the decision-making process with educators, they gather valuable knowledge about themselves, their desires and needs, and their preferred modes of interacting with others. They also create situations and experiences where they will gather valuable knowledge about their ability to implement the decision-making process. Possessing decision-making skills provides students with a method for responding to experiences of success or failure. This framework facilitates increased control and choice in the students' lives. Students are encouraged to make decisions in a personal and meaningful way. Whether they experience success or failure, they have acquired skills they can use throughout their lives.

---

**Figure 1**

**Identify the Issue**
Identify the real issue. Some issues are complex and have many layers so it may be best to deal with one issue at a time. Assess the level of risk or important of the issue.

**Brainstorm Options**
Set a specific amount of time for your brainstorming session. Within that time frame, participants should list as many ideas as possible. Remember not to judge or try to explain the ideas. Be silly and have fun with it—let your creativity go! Be sure to write down all of the ideas for discussion later.

**Evaluate Options and Weigh Alternatives**
Look at the advantages and disadvantages of each option. Identify potential obstacles and consequences. Remember that every decision has both positive and negative consequences.

**Make and Implement Plan of Action**
Outline tasks, person(s) assuming responsibility for certain tasks, and a timeline.

**Evaluate the Outcome**
How did you do? Celebrate your successes! What would you do differently next time? What did you learn from the experience? Do you need to revise your plan?

**Assert Preferences**
What do you really want to do? What decision has the positive consequences?
Goal-Setting

Goal-setting takes students from the classroom to the future. Educators can work with students to help the students envision their future and gain the skills to achieve that vision. Students can work on the goal-setting process either with short-term or long-term goals. Educators can facilitate the process with the following easy steps. Encourage students to envision the process, working their way back from their vision to their current situation.

• Identify the Goal
  Teachers and students should spend a lot of time envisioning the future. Educators can ask students, “What are your dreams?” “Where do you want to be five years from now?” Let go, create a perfect world and dream of the future. With the vision in the forefront of everyone’s minds, trace the way back to today. Tie a string to the vision so as not to lose it and work back. Goals should be achievable, but that does not mean traditional or limited.

• Identify Objectives
  Educators can ask students, “How do you get to your vision?” “What things need to happen now? Six months from now? Next year? By graduation?” “Are there primary or immediate concerns that need to be dealt with right away, or is there a need for steady movement along a certain path?” “How do we get there from here?” Prioritize goals and remain flexible, allow for change or modification. This is a supportive and safe time to try something new.

• Identify Key Players
  Looking at each goal and objective, identify key supporters. Teachers can ask, “Who do you know that can help you achieve your goals? Family members? Teachers? Friends? Counselors?” Don’t be afraid to invite new people to support the student. A broader support system provides more support, resources, options, and a variety of perspectives. Inviting more supporters to be involved is often beneficial.

• Timeline
  Outline a reasonable and achievable timeline to meet goals and objectives. The timeline needs to be realistic, and people should know they will be held accountable for their part of the plan. It is often helpful to put deadlines in writing, knowing that the plan can be revised as needed.

• Possible “Knots in the String” and How to Untie Them
  Identify potential “knots” that could interfere with students' visions of the future and their identified goals. Consider any obstacles early in the process and identify possible solutions so as not to get “tied up.” Utilize resources and the support system that has been developed. Everyone runs into “snares.” Don’t see a snare as a failure but as an opportunity for growth and a chance to learn more about the process.

• Create and Implement Plan of Action
  After envisioning the process, make it a reality! Create the plan of action, and “lasso” that goal!
Effective communication skills facilitate the expression of self-determination by allowing students to express their needs, wants, and desires in a manner that increases the likelihood that their requests will be honored. Effective communication is clear, direct, honest, and fair to self and others. Three styles of communication are generally described in the literature: assertive, passive, and aggressive.

**Assertive Communication**

Assertive communication is generally the most effective way to communicate and involves standing up for your rights in a way that demonstrates respect for the rights of others. It is an honest, direct, and appropriate expression of feelings and opinions. It communicates respect rather than submission. Interpersonal feedback is focused on behavior rather than criticism of the person. Pearson (1992) describes assertiveness as "...display[ing] us at our 'best' when we are feeling comfortable in ourselves. We feel self respect and respect for those around us. We realise we are ordinary human beings full of contradictions and work toward being open about them as well as trying to 'do better next time.'"

**Passive Communication**

Passive communication is "...characterized by our avoiding taking responsibility for making choices." Often passive communication accompanies being withdrawn from, or feeling hurt and frustrated because goals have not been achieved.

**Aggressive Communication**

Aggressive communication "...occurs when we may be too forceful and put other people down. We may be seeking personal aggrandisement and thus belittle others' thoughts and values. It is a behavior which expects to be superior." Aggression is frequently an over-reaction resulting from pent-up anger. Expressing angry feelings when they occur is assertive. Holding other people responsible for anger or humiliating them because you are angry is aggressive behavior.

**LADDER**

There are many strategies for teaching assertive communication. Teachers may want to explore several of these strategies to identify the best approach for their students. We will briefly outline one helpful approach described in *The Relaxation and Stress Reduction Workbook*. This approach has six key components that are represented by the pneumonic, LADDER:

- Look at your rights, what you want, what you need, and your feeling about the situation.
- Arrange a convenient time and place to discuss your problem with the other person.
- Define the problem situation as clearly as you can.
- Describe how you feel about the situation using "I messages."
- Express your request in a few, clear, concise, but firm statements.
- Reinforce the possibility of getting your request met by highlighting the benefits the other person will receive by cooperating.

The LADDER approach is helpful in that it offers a structure or script that students can use in a variety of situations. Offering examples illustrating the use of this approach and then role-playing difficult situations can be a fun and useful classroom activity (see the Sample Assertive-
ness Role-play Scenario below. Students may feel more comfortable when teachers actively participate in roll-plays. Role-playing scripts in class provides students with practice and feedback before venturing out with their new assertive behaviors!

Nonverbal and Verbal Behaviors Associated with Passive, Assertive, and Aggressive Communication

<td>Empathetic, statements of interest (What do you think?, What do you feel about . . .?)</td>
<td>Threats (You'd better . . ., If you don't watch out . . .) calling names, demanding, accusing, put-downs, judgmental, sarcastic, evaluative comments (should, bad), sexist or racist terms</td>
</tr>
</tbody>
</table>

Sample Assertiveness Role-playing Scenario

Your friend has just arrived an hour late for dinner. She did not call to let you know that she would be detained. You are annoyed about her lateness. You say:

a. Come on in, dinner’s already on the table.
b. I’ve been waiting for an hour. I would have appreciated your calling to let me know you would be late.
c. You’ve got a lot of nerve showing up this late! That is the last time I’ll ever invite you to anything!

Answer key: (a) Passive (b) Assertive (c) Aggressive
Conflict Resolution

Conflict is inevitable between students in any classroom. Disagreements and misunderstandings provide an excellent opportunity to practice conflict resolution skills. Problem solving is negotiation. Sears (1994) defines negotiation as a “back and forth discussion designed to reach an agreement when both parties have interests, some shared, some in opposition.” She explains that it is a process which yields results “beneficial to both parties, results which preserve the relationship, and results that are better than an imposed solution.” Good negotiation requires preparation, communication skills, and a good negotiation model.

Before Negotiating . . .
• Be prepared before entering into the negotiation.
• Identify your interests. What do you perceive as the real issues? What do you hope to gain by going through this process?
• What are the other person’s interests?
• What do they perceive as the real issues? What do they hope to gain?
• How have you successfully negotiated in the past? What has worked for you? This is your negotiation style. Know your strengths and weaknesses before entering the process. Know the other person’s negotiation style as well.
• What’s your time frame? Are you under a deadline?
• Develop your strategy before entering into the negotiation.

During the Negotiation . . .
• Open the discussion by stating your interests and agreeing on the ground rules for discussion.
• Explore both your needs and theirs, share information, listen, acknowledge each other’s perspective, ask questions.
• Explore options, get beyond the first few ideas, keep an open mind.
• Summarize the key points, decide on the next steps and a timeline for results.

After the Negotiation . . .
• Evaluate the process.
• Let it go. Work with the solution.
• At some point you may re-enter the “negotiation arena,” but for now try out what was agreed upon.

Common Mistakes
• Perception that the other side has all of the control and power.
• Not recognizing your own strengths.
• Getting “hung up” on one issue or one aspect of the process.
• Failing to see more than one option.
• Having win/lose mentality.
• Short-term thinking.
• Accepting an opinion or feeling as fact.
• Accepting a position as final.
• Talking too much, listening too little.
• Being in a hurry.
Getting Started...

Discussion Suggestions

- Tackle the easy issues first.
- Acknowledge without committing:
  "You make a good point."
  "I have not looked at it that way."
- Present other viewpoints without attack:
  "Yes ... and" (instead of yes, but)
  "Critics of your position would say..."
  "How would you respond?"
- If you disagree, give a reason and restate your interest.
- Offer choices between alternatives.
  Avoid offering choice between something and nothing.
  Test the waters. Give others an opportunity to voice objections.
  "Have we talked about all of your concerns?"
- Allow for face-saving — permit others to act in accord with their principles, past words and deeds.
- Stress the desirability of reaching an agreement.
- Present both sides of the issue instead of just one.

6 Adapted from information presented by Jolanta Sears, Program Director, Employer Education Services, Industrial Relations Center, Carlson School of Management, University of Minnesota, Minneapolis, MN (1994).
The following section offers specific strategies for fostering self-determination. Strategies are organized according to suggestions for inside the classroom, the role of experiential learning and trips outside the classroom, and making connections between students, families, and others.

**Inside the Classroom**

**Real Decision-Making Power for Students**

- Allow as much decision-making power for students as possible. When possible, let students decide what they will study and learn, if not for the entire semester maybe a portion of it, or one day a week. Let students choose between two or three things that they need to study. Students can also choose the order in which the class will study the topics.

- Allow students to be responsible for a certain lesson plan. Give students the topic and certain guidelines which they need to follow, and let them plan and teach the class a certain topic.

- Let students be responsible for the classroom environment. Let them decide what is appropriate classroom behavior and what the consequences will be if rules are broken. Surprisingly, students often come up with harsher consequences than teachers.

- Allow for decision-making and problem-solving opportunities at every chance. Acknowledging students' control and responsibility in the classroom environment communicates and affirms their investment in the process, ownership of the outcome, and mutual respect.

- Utilize students as contributors and leaders. If students express an interest in a certain topic or show expertise in a certain

</tr>
</tbody>
</table>
skill area, allow them to lead a discussion or a role-play for the rest of the class. Have students work with other students who are having a harder time learning that topic or skill.

- Individualized Education Plan (IEP) meetings are an excellent place for students to practice their self-determination skills. The IEP should incorporate many of the major skills and concepts associated with self-determination, such as goal-setting, decision-making, communication, and conflict resolution. Other self-determination projects have designed curricula specifically addressing the IEP process (please refer to our resource section on page 20).

- Consider providing the opportunity for students to participate as teaching assistants for future classes. This benefits both the teaching assistant and the students; it gives the teaching assistant a chance to be a positive role model for peers, and it allows the students to witness the benefits of becoming more self-determined.

Goal-Setting and Problem-Solving as a Class

Set goals and objectives for the class. As examples, set a goal to achieve an overall class effort, set a goal to cover a certain amount of topics, or set a goal for attendance. The class could also set a desired amount of hours to volunteer, to participate in a parade or a competition. The goal can be anything the class can do as a whole or that the class can celebrate together.

- If the class has a problem or an issue arises, take time to go through the problem-solving process as a class. If the class is not completing homework, if a class is too noisy, or some other issue is disrupting the class, work together to find the solution. Make the class as a whole responsible for solving the issue.

- Group goal-setting and problem-solving can be especially useful if there is a student with a disability who is new to the class or who is having a hard time adapting to the new environment. Teachers and key players can meet prior to the class meeting to discuss a variety of issues, explore their feelings about a given situation, and assess the benefits and risks of all options. The student may choose not to be involved in the initial meeting if the environment is hostile or if participation might be detrimental. Often, other students can ease the transition for a student with a disability. Discussing how the class as a whole can ensure a smooth transition for all members may be helpful. Students with communication issues may benefit from problem-solving with their new classmates about programming their communication devices — what “lingo” and phrases will be most helpful for a given class. Open discussions and pre-planning can promote successful inclusion.

For example, a speech therapist had programmed one student's communication device to address people with, "Hello. How are you?" Other students quickly pointed out that it was not "cool," and helped the student re-program the device to say, "Hey! What's up?"

- Don't forget to celebrate successes! Acknowledging accomplishments is very important. Celebrating helps motivate everyone and keeps them moving toward
their goals. Even if progress is slow, be sure to recognize even the smallest accomplishments. Plan a party as a class, or have a special system of rewards for students. Be sure to give the students the encouragement that they need.

Recognizing Behavior as Communication
- Recognizing behavior as communication is important. Students communicate in many different ways. Educators need creativity, flexibility, and patience in order to understand the messages behind the behaviors. If a student is acting out, is he telling us that he is frustrated? Is he having a hard time following the lesson? If a student is late to class, is she telling us that she is lost? Or is she having a hard time adapting to her new schedule or new environment? Consider the student's behavior from a number of perspectives before attributing motivations or making assumptions. What is the student's point of view? Take a holistic look at the situation and evaluate all possible factors. What is the student really trying to say?

• Once educators understand what the student is trying to communicate, they may need to adjust their actions. Maybe an alternative approach is needed. Maybe a different way of providing feedback would help. Work with the student, the family, and others involved to find a solution.

Structure and Set-up
- Place chairs in a large circle in the middle of the classroom. Sitting in a circle, including the teachers and all other assistants, allows for open and non-hierarchical communication.

- Ensure that the environment is comfortable and accessible for all students. Students who use wheelchairs or other assistive technologies may need more room to get around, and the traditional set-up with desks placed in narrow rows may not be conducive to their participation and involvement in the class.

- Use time creatively. Are there times during the class period that are better for certain activities? Should a difficult lesson be broken into smaller chunks? Consider using the beginning of the class as a debriefing time or as a time to talk about the day’s or week’s events.

Lessons to be Learned
Self-Advocacy Training
- Self-advocacy involves speaking up for your rights, speaking up for yourself and others. The self-advocacy movement is analogous to the civil rights movement in that it has been an active and dynamic force for initiating positive change in the lives of people with disabilities. Study the self-advocacy movement and the advances the disability community has made.

• There are many local self-advocacy groups as well as state coalitions and national organizations. Invite members from a self-advocacy group to speak to the class or lead a discussion about individual rights.
Self-advocates often have powerful stories to share with students.

- In recent years people have developed curriculum and training guides for self-advocacy. These guides could be beneficial tools in the classroom. Educators and students can explore existing self-advocacy groups in their communities or start a self-advocacy group at their school.

Self-Esteem
- Self-esteem and self-determination go hand in hand. One of the primary influences on self-esteem is the experience of meeting high standards and overcoming obstacles through personal effort. There are many ways to enhance positive self-esteem (see the resource section, page 20). Encourage expression of ideas, notice and affirm special talents, communicate acceptance, respect privacy, space, and possessions, provide opportunities for students to express what they think are special characteristics about themselves, and help them find effective ways to express themselves.

Accessing Community Resources
- Do your students know how to access community resources? Do they know how to find an apartment, a bank, emergency services or crisis intervention agencies? The ability to access the community is a tool all students need. Consider including a community resources component in all appropriate lessons.

Transitional Skills for Adult Life
- Students entering adulthood face a number of transitions. Acquiring skills pertaining to employment, finances, residential options, transportation, and social relationships lead to a more successful life after high school. Teachers can work with students while they are still in school to prepare for the challenges they will soon face.

Transitions to Adulthood
- employment
- finances
- residential options
- transportation
- social life
- post-secondary education

The Importance of Experiential Learning

Role-playing
- Role-playing provides students with the opportunity to experiment and explore new skills in a safe environment. Watching others role-play and participating in role-playing is an excellent way to learn. Role-playing should be used as often as possible to demonstrate a new skill or behavior. For instance, if the class has set some new rule, role-playing a relevant situation can help assess the effectiveness of their plan of action.

Real-life experiences
- Draw your lesson plans from the day-to-day struggles and accomplishments of your students. Concepts drawn from these experiences are concrete and real, not abstract or meaningless. Remember students are more likely to be internally motivated if they perceive the lesson or skill to be meaningful.

- Outside speakers can be another beneficial tool in the classroom. There are many community agencies and resources that
educators can use as speakers to enhance a lesson. Community agencies, local law officers, government officials, other students or faculty, and other groups or individuals can come to the classroom to speak on a topic. Many agencies have speaker bureaus or panels that would love to speak to a group of students. This is a wonderful way to enhance any lesson in the classroom.

- Non-fiction articles or books are another resource educators can call on to provide a real-life perspective. If students express interest, suggest a book or an article that relates to the topic or lesson being reviewed. Follow the reading with either large or small group discussions, bringing the authors' experiences into the classroom and the students' lives.

- Educators can make up games and activities which creatively bring the lesson to life. One game we used in the classroom was called “The Bank Game.” Students earned “dollars” for attendance. Each student received a “paycheck” at the end of the month. Each student then endorsed and deposited their “paycheck,” balanced their “checkbooks,” and purchased what they could afford at our “store.” We provided fun things the students could buy, and there were stiff penalties if a student bounced a check! It was a great way for students to work on practical math skills.

**Field trips**

- Traveling outside of the classroom can be a wonderful addition to any lesson plan. Field trips to local businesses can enhance a lesson on employment, a supermarket is a wonderful place to learn basic math, the capitol or city government buildings can be helpful with civics or history, and any natural setting or park is a great place for geography or biology. Explore your community with your students, incorporating as much as you can into every lesson.

**Creative Expressions**

- Video cameras offer students a chance to express themselves in many different ways. Using video in the classroom gives students a chance to express their creativity, either behind the camera or in front of it. Students can choose to use the camera for personal expression or to express a skill they have learned from the class. Videos also double as communication strategies. Students can show their video to whomever they choose, and if the class works on a video together, they can show it to other classes and faculty, their friends and family and more. Use the video as a project and show it to the whole school — show off your new environment, your new skills, your collective self-determination.

- Another form of creative expression can be in the form of design and writing. Give the students a notebook and have them design a cover that expresses who they are. Students can draw or make a collage by cutting pictures and words out of magazines. Inside the notebooks, students can collect their homework, lessons, information that is of particular interest to them, handouts, and journals of their progress toward self-determination.
Networking and Making Connections

With Parents

- Families are a critical success factor in the equation of self-determination. The relationship between educators and parents is important, especially when the student has a disability. For students to succeed, family members must be supported and given the information and tools they need to succeed. We understand that sometimes it can be very difficult to have regular communication with families, especially when the family is isolated and has been left out of the educational process in the past. Frequently these families require consistent and respectful contact in order to establish trust with teachers and other service providers. Fostering a supportive relationship with the parents and other family members is possible.

- Parent-teacher conferences can be a great opportunity to have the students involved and to build a relationship with the entire family. Have students plan parent-teacher conferences. Each student can outline strengths. The class as a whole can plan for refreshments, decorations, and whatever else they would like their parents to see at the conference. Educators can meet with the families, who are much more willing to come when their son or daughter is involved, to discuss the class and their child's progress.

With Others Involved

- Often there are outside people who provide support to students. Educators can access support networks to help them work with the students. Students with disabilities often have a planning team or a group of people identified to help with their education plan. Educators can attend their planning sessions or contact other group members for support.

- Community organizations and others outside the school can also play a key role in supporting both the educator and the student. Be sure to access all available resources for the classroom.

With Students

- Accessing student organizations within the school is a good way to network with students and peers. Student organizations offer a structured way for students to interact. Students make connections through common interests, therefore expanding their social network and resources. Participation in student organizations provides an opportunity for students to demonstrate skills and strengths that may not be observed in the classroom.
Students have a multitude of recreational opportunities available outside the classroom. Educators can facilitate relationships with students outside the classroom by announcing upcoming activities, giving students credit for participating, or providing special supports to make these activities accessible. Often, a little creativity and problem-solving can open opportunities for students with disabilities to expand their horizons.

Between Students
With and Without Disabilities
• Exploring disability awareness through popular films is a wonderful way to facilitate an open and honest discussion of disability-related issues. After watching a movie, the class can discuss major themes and relevant issues. This process helps students with and without disabilities experience disability in a safe context. Students with disabilities are able to experience disability from a more objective perspective, giving students a broader understanding of themselves and their abilities. Students without disabilities gain understanding, insight, empathy, appreciation, and respect for others with disabilities.

Films for semester
Mask
What's Eating Gilbert Grape
The Man Without a Face
Educating Peter
The Secret Garden
Benny & Jiggs
Edward Scissorhands
Brodie's Keeper
Rainman

Use team-building exercises to encourage cohesion. Students become united to obtain goals and discover solutions. Given a common goal, students learn to work together. They then are able to generalize those skills and experiences into the classroom and beyond.
Self-Determination:
Self-determination is a system of attitudes, skills, and relationships that develop over time and which are dynamic and fluid. For an individual, self-determination consists of, but is not limited to interdependence, self-regulation, knowledge and acceptance of self, the ability to learn from experiences, internal motivation to learn and utilize skills such as communication, goal-setting, decision-making, and conflict resolution, and most importantly the perception of control and choice in one's life. In the environment, the expression of self-determination is enhanced by responsive, informative, and non-judgmental feedback, the negotiation of constructive limits, the creation of situations that are optimally challenging for the individual, effective communication strategies, and the provision of non-controlling support.

Interdependence:
Individual is neither completely dependent nor isolated, but acknowledges and accepts the need for support from others; he or she is able to maintain a sense of self within the context of reciprocal support. Person actively seeks out appropriate support from others.

Attitudes:
Beliefs about one's self-efficacy, the expectation that one's behavior will lead to a certain outcome, perception of contingency between personal actions and outcomes.

Self-regulation:
The individual is able to govern himself or herself. The person who is self-determining uses information and knowledge to regulate himself or herself in pursuit of self-selected goals. Whitman³ (1990) defined self-regulation as a “complex response system that enables individuals to examine their environments and their repertoires of responses for coping with those environments to make decisions about how to act, to act, to evaluate the desirability of the outcomes of the action, and to revise their plans as necessary” (p. 373).

Skills:
Problem-solving, decision-making, goal-attainment, assertive communication, self-organization.

Knowledge of Self:
Ability to recognize strengths, weaknesses, preferences, attributes, and characteristics of self.

Acceptance of Self:
Possessing self-knowledge as well as affirming, appreciating, valuing, honoring, and/or respecting oneself. Guess, Benson, and Siegel-Causey⁶ (1985) suggested that the opportunity for choices and decision-making “reflects favorably upon one's perceived independence, dignity and self-worth....” (p. 79).

Relationships:
Systems of support, circles of friends, family, and others.

Dynamic and Fluid:
Changes over time, relationships are interactive, process is developmental, a lifetime process that waxes and wanes.
The Ability to Learn from Experiences:
Ability to respond to success or failure in an adaptive manner that encourages further experimentation and risk-taking but from a more informed position.

Internal Motivation to Learn and Utilize the Skills Traditionally Identified with Self-Determination:
Internal motivation, not to be confused with intrinsic or innate motivation, is the desire within the individual to achieve goals, make changes, and/or initiate movement in order to meet the individual’s needs or wants. Students need to be motivated to problem solve, to set goals, and to communicate more effectively. They must perceive these skills as beneficial and useful in their lives.

Perception of Control and Choice in One’s Life:
The perception, optimally but not always the reality, that one has the power to regulate and direct one’s life and that one has the power to select among various options. Perception of lack of control can have detrimental effects on task performance. The belief that a person can determine his or her fate is critical in determining the ways in which he or she copes with stress and meets challenges.

Responsive Feedback:
Replying to student’s verbal communication and/or behaviors in a sensitive manner that demonstrates an attempt to understand the student’s intent prior to replying.

Non-Judgmental Feedback:
Replying to student’s verbal communication and/or behaviors without finding fault, blaming, or criticizing.

Informative Feedback:
Replying to student’s verbal communication and/or behaviors by providing knowledge that will benefit the student in achieving his/her goals.

Negotiation of Constructive Limits:
Interacting with the student in defining roles, rules, and boundaries in which that individual lives. These limits let the person feel safe and cared for while still providing opportunities to experience and learn from success and failure.

Creation of Situations that are Optimally Challenging for the Individual:
Providing decision-making and problem-solving situations that challenge the person, facilitate growth, and foster self-determination. Involves structuring the environment in a way that (1) exceeds student’s present level of functioning while still being within the student’s ability to succeed, and (2) ensures a multitude of choices including student-initiated activities and choices.

Effective Communication Strategies:
Ability and willingness to express needs, wants, opinions, concerns in an assertive manner, as opposed to a passive or aggressive manner, while maintaining respect for other’s needs, wants, opinions, concerns.

Provision of Non-Controlling Support:
Providing information, assistance, and encouragement for person’s visions, goals and objectives without imposing restrictions, restraints, and/or influence based on another’s personal agenda.
