This report presents findings and recommendations from a study conducted by the Maryland General Assembly examining options for increasing state formula aid and changing the distribution of aid to the state's 18 community colleges. Following a letter of transmittal providing background information on community college financing, the report summarizes key findings, including that current state funding for the colleges continues to be inadequate and that the state formula aid and distribution of that aid for community colleges leads to major funding inequities. Next, recommendations for addressing the situation are presented, including the provision of an additional $15.5 million in community college funding for fiscal year (FY) 1997 and the implementation of changes in state formula aid and distribution mechanisms. The bulk of the document consists of eight appended reports describing the role of community colleges in Maryland, the evolution of the community college funding formula, a national comparison of community college funding, options for increasing state mandated aid for community colleges, options for changing the distribution of community college formula aid for FY 1997-2000, the current community college formula using full time equivalency (FTE) counts, proposed maintenance of effort requirements, and a proposal from the Maryland Association of Community Colleges for strengthening community colleges' role in economic development. (TGI)
FINAL RECOMMENDATIONS
OF THE
COMMUNITY COLLEGE FINANCING
STUDY GROUP

Honorable Thomas V. Mike Miller, Jr., President of the Senate
Honorable Casper R. Taylor, Jr., Speaker of the House of Delegates
Honorable Members of the General Assembly

Gentlemen:

The Community College Financing Study Group respectfully submits its report for the 1995 Interim. The study group's membership consisted of the Senate Budget and Taxation Subcommittee on Health, Education and Human Resources and the House Ways and Means Education Subcommittee, with two members from the Appropriations Committee. The study group focused on two major issues during its five joint meetings: 1) to examine options for increasing state formula aid to community colleges; and 2) to explore options for changing the distribution of aid. The study group agreed early in its proceedings that without additional funds attempting to change the distribution formula would be futile.

Study group members perceive and appreciate the contributions of the eighteen community colleges in Maryland that provide diverse educational services to residents of all 24 counties. Maryland's community colleges educate over half of all undergraduates in the state. Community colleges also provide workforce training opportunities to the state's businesses, nonprofit organizations and government agencies. Yet despite the significant contributions of the colleges, we found that current state funding for community colleges continues to be inadequate.

To illustrate the dilemma of adequate funding, consider the following statistics: from 1980 to 1993, state aid to community colleges increased 82%, while local aid to community colleges increased 158%, and tuition rose by 255%. Contrast this with state aid to the 4 year public institutions, which increased 172% during the same time period. This burden of increasing tuition and fees tends to frustrate one of the most basic attributes of the community college: that is accessibility, especially for students of limited means. This problem is exacerbated by the fact that many community college students do not qualify for state financial aid because of the number of credit hours carried.

Though legislation passed in 1991 called for the state to pay 46% of the colleges' budgets by fiscal 1996, the state share of total community college revenues has declined, from 34% in fiscal 1991 to 28% in fiscal 1996. Further, the study group found that the current formula, which distributes 70% of its funds via a fixed cost grant, 27% based on a marginal cost grant, .5% on a wealth grant, 1.75% for a small sized factor, .25% for a medium size factor and .5% for challenge grants is too complicated and gives no recognition to inflationary costs.
In addition, state formula aid per full-time equivalent (FTE) student varies from a high of $3,167 at Garrett County Community College to a low of $1,122 at Anne Arundel Community College. While the economies of scale that exist at large schools might justify some variance in funding per FTE, those economies cannot account for a difference of $2,000 in state aid per FTE. The study group concluded the current formula leads to funding inequities across community colleges statewide.

As a result of these findings, the study group made major recommendations concerning the calculation of total state formula aid for community colleges as well as the distribution of that aid. The recommendations include an infusion of $15.5 million for community college funding in FY 1997. Since the FY 1996 budget includes a one-time grant of $5.5 million for community college equipment expenditures, the study group’s recommendation results in a net increase of $10 million over last fiscal year’s operating budget appropriation. This amount closely mirrors the Maryland Higher Education Commission’s request for additional community college funding. The study group believes the additional funds are necessary for the community colleges to begin to “catch-up” to Maryland’s other institutions of higher education, as well as community college systems in other states.

A summary of the major recommendations is outlined below.

- **State Mandated Formula Aid:** Committee members recommend that community colleges receive, on a per FTE basis, 22 percent of the 4-year public institutions’ funding per FTE for the first year. This percent then increases by one percentage point per year, until it reaches 25 percent by fiscal year 2000. For fiscal year 1997, this formula change translates into an additional $14.7 million, bringing the total state formula aid to $101.2 million for FY 1997 (the $14.7 million is an aggregate amount; each college’s appropriation will be calculated through a distribution formula).

- **Formula Aid Distribution Options:** The committee members voted to support a formula with a fixed cost component set at 36% of total funding, a variable component of 60% and the small size factor of 4%, beginning in fiscal 1997. The small size factor would decrease by a percentage point each year, reaching 1% in FY 2000. Likewise, the fixed cost component would increase a percentage point each year, reaching 39% in FY 2000. The seven schools that currently receive a small size grant would continue to receive one under this option.

This formula proposal eliminates the medium size grant, wealth factor and challenge grants that are part of the current formula, decreases the fixed cost percent total from 70% to 39% and increases the variable factor from 27% to 60%. The option is
simpler than the current formula and more accurately reflects community college expenditures, which are more variable than fixed.

- **Full Funding for the Garrett/WVA Reciprocity Agreement:** Committee members recommend that $501,000 be appropriated to fully fund the Garrett/WVA Reciprocity Agreement for FY 1997 and this program be fully funded in all future years. This funding should be in addition to projected formula aid increases.

- **Full Funding for Statewide Programs:** Committee members recommend that $809,200 be appropriated to fully fund statewide programs for FY 1997 and this program be fully funded in all future years. This funding should be in addition to projected formula aid increases.

Other recommendations of the study group include the following: 1) retain current definition of small-size colleges; 2) retain current maintenance of effort requirement for local governments; 3) form a Governor's Subcabinet on Statewide Workforce Training; 4) include community colleges under higher education funding for budgeting purposes; and 5) study the funding needs of Baltimore City Community College and the role of adult education in Maryland.

On behalf of all the study group members, we thank you for the opportunity to closely study the issue of community college financing. We believe this joint effort by members of both the Senate and the House of Delegates has resulted in a strong set of recommendations that will enhance the educational experience of Maryland's community college students. We ask for your support and leadership in addressing these issues, both within the General Assembly and vis-a-vis the Administration.

Sincerely,

Senator John A. Cade

Community College Financing Study Group
Summary of Final Recommendations

Background

The Senate Budget and Taxation Subcommittee on Health, Education and Human Resources and the House Ways and Means Education Subcommittee, in consultation with two members of the Appropriations Committee, have spent the 1995 interim examining the issue of community college financing. This group of legislators, comprising the Community College Financing Study Group, focused on two major areas during their five joint meetings: (1) to examine options for increasing state formula aid to community colleges; and (2) to explore options for changing the distribution of aid. The study group agreed early in its proceedings that without additional funds attempting to change the distribution formula would be futile.

In addition to these issues, the legislators studied related matters, including funding for statewide programs and reciprocity agreements, the definition of a small size school, maintenance of effort requirements for counties, a possible subcabinet on statewide workforce training and funding for Baltimore City Community College.

Community Colleges Are Under Funded by the State

Study group members perceive and appreciate the contributions of the eighteen community colleges in Maryland that provide diverse educational services to residents of all 24 counties. Maryland’s community colleges educate over half of all undergraduates in the state. Community colleges also provide workforce training opportunities to the state’s businesses, nonprofit organizations and government agencies. Yet despite the significant contributions of the colleges, study group members found that current state funding for community colleges continues to be inadequate. The following points support that finding.

- The preamble to legislation passed in 1991 called for the state to pay 46% of the colleges’ budgets by fiscal 1996 as an established state policy; however, the state share of total community college revenues has declined, from 34% in fiscal 1991 to 28% in fiscal 1996. In FY 1996, local aid will in fact comprise 34% of the total revenues, tuition will account for 36% of revenues, and 2% will come from other sources. The state’s recent unwillingness to meet its funding commitment simply continues a 20 year trend of avoiding legislatively established goals through the executive budget process.

- In contrast to the state share of 28% of total community college revenues, state aid makes up 40% of total unrestricted revenues at the four-year public institutions in FY 1996. Likewise, state support for students in the University of Maryland System average $6,690 per full-time equivalent (FTE) student in FY 1996, compared to $1,252 per FTE student at the community colleges.

- While community colleges enroll more than half of Maryland undergraduates, they received only 17% of state funding for higher education in FY 1996.
From 1981 to 1993, state aid to community colleges increased 82%, while local aid to community colleges increased 158%, and tuition rose by 255%. Contrast this with state aid to the 4 year public institutions, which increased 172% during the same time period.

Compared to other states, Maryland relies more heavily than most on local aid and tuition as sources of revenue for its community colleges, and its state appropriation as a percent of total funding is smaller than that of most states (see Appendix 3).

The Present Formula is too Complicated, Unrelated to the Realities of Actual Expenditures, and Leads to Major Funding Inequities Across Community Colleges

The current formula, which distributes 70% of its funds via a fixed cost grant, 27% based on a marginal cost grant, .5% on a wealth grant, 1.75% for a small sized factor, .25% for a medium size factor and .5% for challenge grants is too complicated. For example, to calculate the wealth grant, one must determine (1) whether the county share for the previous fiscal year divided by the total assessed valuation of real property in the supporting county or region is greater than or equal to the statewide median; and (2) whether the per capita wealth of the supporting county or region is less than 80% of the statewide per capita wealth or the total assessed valuation of real property in the supporting county or region is less than $1 billion.

State formula aid per full-time equivalent (FTE) student varies from a high of $3,167 at Garrett County Community College to a low of $1,122 at Anne Arundel Community College. While the economies of scale that exist at large schools might justify some variance in funding per FTE, those economies cannot account for a difference of $2,000 in state aid per FTE. The current formula leads to funding inequities across community colleges statewide.

The Secretary of the Maryland Higher Education Commission, in her testimony before the study group on August 29, discussed several problems with the formula, including: (1) no mechanism for inflationary increases; (2) unpredictable funding because formula total may increase or decrease based on enrollment changes at other institutions; (3) varying funding per FTE from institution to institution; and (4) possibility of a funding reduction at one institution if another institution either enters the formula for the first time or enters the same size or wealth category.

Systemwide, 60% of total community colleges expenditures went to instruction and student services, which are in large part variable expenditure categories (i.e., the number of professors and counselors retained by a college depends on the number of FTE students enrolled in that college). Therefore, a formula that relies on a fixed cost component of 70%, and a variable component of only 27% does not realistically reflect the expenditures at community colleges.
Conclusions and Recommendations

The study group made major recommendations concerning the calculation of total state formula aid for community colleges and the distribution of that aid. The recommendations include an infusion of $15.5 million for community college funding in FY 1997. Since the FY 1996 budget includes a one-time grant of $5.5 million for community college equipment expenditures, our recommendation results in a net increase of $10 million over last fiscal year's operating budget appropriation. This amount closely mirrors the Maryland Higher Education Commission's request for additional community college funding. The study group believes the additional funds are necessary for the community colleges to begin to "catch-up" to Maryland's other institutions of higher education, as well as community college systems in other states. Maryland has one of the lowest rates of state support in the country in the area of community college funding.

A summary of our recommendations is outlined below.

A. State Mandated Formula Aid

Committee members recommend that total state mandated formula aid be calculated by tying community college funding per FTE to prior year funding per FTE for the 4-year public institutions. This method is similar to the one used to calculate total aid for Maryland independent colleges and universities (MICUA schools); however, unlike funding for the MICUA schools, it will be used to determine an aggregate funding amount and not an amount for individual schools.

Committee members recommend that community colleges receive, on a per FTE basis, 22 percent of the 4-year public institutions’ funding per FTE for the first year. This percent then increases by one percentage point per year, until it reaches 25 percent by fiscal year 2000. For fiscal year 1997, this formula change translates into an additional $14.7 million, bringing the total state formula aid to $101.2 million for FY 1997, as shown below:

B. Full Funding for the Garrett/WVA Reciprocity Agreement

Section 16-407 of the Education Article states that a resident of West Virginia who attends Garrett Community College, under a negotiated reciprocity agreement between the states of Maryland and West Virginia, is an in-county resident for tuition purposes. The section further states that "for each full-time equivalent student participating in the reciprocity
agreement, the State shall pay to Garrett Community College an amount equal to the net State support per full-time equivalent student..."

However, the administration has not fully funded this reciprocity agreement for several years and is expected to again include $90,000 for FY 1997. This amount represents approximately 15.6 percent of the $501,000 needed to fully fund the agreement. Therefore, committee members recommend that an additional $411,000 be appropriated to fully fund the Garrett/WVA Reciprocity Agreement for FY 1997 and this program be fully funded in all future years. This funding should be in addition to projected formula aid increases.

C. Full Funding for Statewide Programs

Section 16-407 of the Education Article states that if a student is a resident of Maryland and enrolls in an instructional program designated by the Maryland Higher Education Commission as a statewide program1, the student shall pay only in-county student tuition and fees and the state shall pay any applicable out-of-county fees. Currently, all colleges except for Carroll have at least one program designated by the commission as a statewide program and qualify for state reimbursement under this section.

In recent years, the state has not paid the full amount required until this section. The expected FY 1997 appropriation of $416,000 equates to approximately 48 percent of the total amount needed. An additional $443,200 would be necessary in FY 1997 to fully fund the state’s liability under this section. Therefore, committee members recommend that an additional $443,200 be appropriated to fully fund statewide programs for FY 1997 and this program be fully funded in all future years. This funding should be in addition to projected formula aid increases.

D. Formula Aid Distribution Options

The committee members voted to support a formula with a fixed cost component set at 36% of total funding, a variable component of 60% and the small size factor of 4%, beginning in fiscal 1997. The small size factor would decrease by a percentage point each year, reaching 1% in FY 2000. Likewise, the fixed cost component would increase a percentage point each year, reaching 39% in FY 2000. The seven schools that currently receive a small size grant would continue to receive one under this option.

This formula proposal eliminates the current formula’s medium size grant (currently set at 0.25% of the total), wealth factor (0.5% of the total) and challenge grants (0.5% of the total); decreases the fixed cost percent total from 70% to 39%; and, increases the variable factor from 27% to 60%. The option is simpler than the current formula and better reflects community college expenditures, which are more variable than fixed. Please see the following eight pages for a detailed description of the option.

1 Certain high cost, academic programs, such as allied health programs, are designated by MHEC as statewide programs. Individual programs are offered at a limited number of colleges to promote efficiencies among the colleges while providing access to students across jurisdictions.
Distribution Model based on 36% Fixed, 60% Variable, and 4% Small Size Factor. The small size factor declines a percentage point each year to 1% in fiscal 2000, while the fixed cost component rises to 39%.

- Total funding for this option, on a per FTE basis, is 22% of the aid per FTE at the four year public universities beginning in FY 1997. The funding grows a percentage point each fiscal year, reaching 25% in FY 2000.

- Under this model, the small size factor is taken from the fixed cost component, lowering fixed costs to 36% of the total. The variable cost component is set at 60% of total state funds available. The fixed cost component increases by one percentage point each year until it reaches 39% in fiscal 2000. Likewise, the small size factor decreases a percentage point each year to 1% in fiscal 2000.

- Under this model, the 36% fixed cost component is allocated to each college using the current method for allocating fixed costs. Each college’s share of the total state grant from the prior fiscal year is calculated, and that share is multiplied by the total amount available for fixed costs. For example, Allegany received 3.5% of the total state grant in FY 1996. That percentage is multiplied by $36.4 million, the total amount available for fixed costs in FY 1997. Thus, Allegany’s share of fixed costs under this model is $1.3 million.

- Of the remaining state funds, 60% is allocated on a per FTE basis, while the remaining 4% small size factor is divided amongst the schools that meet the definition of a small school.

- As the bar graph shows, only Garrett County would lose funding per FTE by the fiscal year 2000 under this option. At $2,436 per FTE, Garrett would still receive $329 more funding per FTE student than any other community college in FY 2000.

- As the summary sheet comparing the proposal to current law shows, Garrett is the only college to lose funds under this option. Garrett begins to lose funds in FY 1998 at a rate of 1.7%. The medium and large size schools show the strongest gains under this option beginning in FY 1997.

- Under this option, the spread in aid per FTE decreases about 74% by FY 2000.

Challenge Grants
TOTAL STATE AID
0
127,832,299
90,795,740

Notes:

(a) The total amount available in FY 2000 is based on the projections for FY 2000 ($90.8 m) plus an additional $37 million. The $37 million is what colleges would receive under a formula that grants community colleges, on a per FTE basis, 25.0% of the aid per FTE at the four years.

Prepared by Department of Fiscal Services, October 1995.
E. Small-size Definition

Current law defines a small sized college for formula distribution purposes as any college with an FTE enrollment less than or equal to 80 percent of the statewide median. Committee members recommend no changes be made to current law regarding the definition of a small sized college (see Appendix 6 for more details).

F. Maintenance of Effort

Current law requires that local governments match the total dollar amounts they provided for their local community college the previous year. Committee members recommend no changes be made to the current maintenance of effort requirement (see Appendix 7 for a list of all the options considered by the committee).

G. Governor's Subcabinet on Statewide Workforce Training

Committee members recommend the formation of the Governor's Subcabinet on Statewide Workforce Training. The subcabinet would promote economic development through statewide use of community colleges in workforce training and create a single point of contact for accessing community colleges. Membership should consist of the Secretaries from the Maryland Higher Education Commission; the Department of Business and Economic Development (DBED); the Department of Labor, Licensing and Regulation (DOLLAR); and the Department of Human Resources; as well as the Superintendent of the Maryland State Department of Education and a representative from the Maryland Association of Community Colleges. The subcabinet should be funded jointly by DBED and DOLLAR out of training contracts. Monthly or bi-weekly meetings would be held to create and implement a statewide business and industry training program (see Appendix 8 for more details on the Governor's subcabinet).

H. Including Community Colleges under Higher Education Funding

Committee members recommend that funding for community colleges be considered as funding for higher education—rather than local aid—when developing the budget. This is related to the recommendation tying community college funding per FTE to prior year funding per FTE for the 4-year public institutions.

I. Baltimore City Community College

Baltimore City Community College, unlike its sister schools, is a state agency with little reliance on local aid. Committee members recommend that the funding level and program offerings of Baltimore City Community College be closely examined by the administration. The administration should carefully consider the needs and mission of Baltimore City Community College while studying the issue of funding parity with other community colleges.

J. Adult Education

Committee members recommend that the Maryland Higher Education Commission and the Maryland State Department of Education study and submit recommendations in time for
consideration during the 1997 legislative session as to whether adult education should be administered through and offered by the community colleges rather than by local boards of education at local high schools.

K. Regional Incentives

Committee members looked at incentives to promote regionalization among the colleges; however, no recommendations are being made on this issue at this time.
Role of Community Colleges in Maryland

Statutory Role of Community Colleges

Generally

In 1988, the Maryland General Assembly passed legislation, Chapter 246 of 1988, which reorganized higher education in the state and included a "Maryland Charter for Higher Education". The Charter was intended to be a statement of policy for higher education in Maryland and established in statute the following role for the state’s community colleges:

“(a) The community colleges of the state shall provide a diverse range of education services, with particular emphasis on community centered programs and programs that afford open access to persons with a variety of educational backgrounds. (Emphasis Added)

(b) The community colleges of the state shall:

(1) Provide a core curriculum of general education, including courses in the arts and sciences, that should be available to all students;

(2) Provide lower level undergraduate courses, in accordance with credit transfer guidelines set by the Maryland Higher Education Commission, for students who aspire to continue their education at a senior institution;

(3) Provide technical and career education programs;

(4) Provide training in skills and fields of study of importance to the region’s business community;

(5) Provide a wide variety of continuing education programs to benefit citizens of the community;

(6) Provide developmental and remedial education for citizens with needs in these areas; and

(7) Provide public services to the community’s citizens."

In accordance with the role envisioned by the legislature, Maryland community colleges are comprehensive institutions serving their immediate communities and, in some cases, broader constituencies. These institutions offer a flexible, lower cost higher education alternative to accommodate the needs of a wide variety of students
and provide training and re-training services to business and industry in the region. Every community college in Maryland provides custom-designed and regularly scheduled programs for businesses, government agencies, and professional and labor organizations in their regions. These programs include specific fields of vocational, technical and apprenticeship training, quality management training for all levels of supervisors, retirement planning, basic skills training, and certification courses for many professional organizations and career areas.

Chapter 246 required the president of each public institution of higher education, including each community college, to develop a mission statement to be submitted to the institution’s governing board. The governing boards are required to review and adopt the mission statement and then submit the statement to the Maryland Higher Education Commission. The Commission is required to review the mission statement and approve the statement as long as the statement is consistent with the Charter and statewide plan for higher education, will not result in the unreasonable duplication of academic programs, and will promote the efficient and effective use of the state’s higher education resources.

Baltimore City Community College

Although the role outlined above applies to all community colleges in Maryland, including Baltimore City Community College, the law also contains provisions that are unique to this institution. In the 1990 Session, the Maryland General Assembly passed legislation (Chapter 220 of 1990) that created the New Community College of Baltimore as a state-funded institution to replace the City-funded and governed Community College of Baltimore. The passage of this legislation was based on the conclusions of the Greater Baltimore Committee and others that the Community College of Baltimore was no longer able to meet the needs of the community and that a viable higher education system is essential to the City and the state’s economic and social well-being. The legislation creating the New Community College of Baltimore contained a provision that would have required the institution to terminate after three years unless the General Assembly acted to continue it. Additionally, the 1990 legislation required the development of a comprehensive plan for the future organization and responsibilities of the New Community College of Baltimore.

In accordance with those requirements, at the end of 1991, the Maryland Higher Education Commission developed a comprehensive plan for the future of the New Community College of Baltimore. During the 1992 Session, the General Assembly passed legislation (Chapter 208 of 1992) that renamed the New Community College of Baltimore as the Baltimore City Community College and provided for its continuance as a public two-year institution of higher education. Chapter 208 also provided the Baltimore City Community College with auxiliary facilities bonding authority in the amount of $15 million and required the City of Baltimore to be responsible for providing at least $600,000 annually to support education at the
Chapter 220 of 1990 set forth the following findings and policies:

"(1) Public higher education should be accessible to all those who seek and qualify for admission.

(2) There is a need for an effective comprehensive urban community college in Baltimore City offering educational programs that will stimulate the participation of individuals, be responsive to the needs of the community, and afford open access to individuals with a variety of educational backgrounds.

(3) Businesses in the Baltimore metropolitan area are undergoing an economic transition and need and must be ready to make extensive use of and provide financial support for an effective, well-managed urban institution to train and educate their employees and prospective employees in skills and fields of study of importance to the region’s business community.

(4) A partnership between the state and business community is essential to attain the requisite level of financial support to create and sustain a quality institution that is responsive to the technological and continuing education needs of businesses."

Additionally, Chapter 220 provided that the purpose of the College is to provide quality, accessible, and affordable education to the citizens of Baltimore in the areas of basic skills, technical and career education, continuing education, and the arts and sciences. The law also requires the College to provide the services and programs generally required of all community colleges in the state as set forth in the Maryland Charter for Higher Education, outlined above.

Organization and Governance of Community Colleges

There are 18 community colleges in Maryland (Exhibit 1.1). There is a board of community college trustees in each county that has one or more community colleges. Each board of trustees is responsible for the exercise of general control over the community college, including the appointment of a president, the fixing of salaries and

tenure of the president, faculty, and other employees of the community college, and
the acquisition and disposition of property. Subject to the minimum standards of the
Maryland Higher Education Commission, each board of trustees may determine
entrance requirements and approve offerings that consist of transfer programs, career
programs, and continuing education programs. Each board of trustees may charge
students reasonable tuition and fees set by it with a view to making college education
available to all qualified individuals at low cost.

Coordinating Community Colleges

Since July 1, 1992, the Maryland Higher Education Commission has been
responsible for the statewide coordination of community colleges and for establishing
general policies for their operation. Prior to July 1, 1992, the former State Board for
Community Colleges was charged with this responsibility.

The 1991 legislation which transferred the responsibility for the coordination of
community colleges to the Commission set forth the following duties and
responsibilities:

"The Commission:

(1) May provide grants-in-aid for the planning of new community
colleges and new programs in existing community colleges;

(2) Shall administer programs of state support and financial assistance
for the community college;

(3) Shall assist and represent the community colleges in seeking and
administering federal moneys available to them;

(4) May designate any community college instructional program as a
statewide or regional program;

(5) Shall assure that courses and programs offered are within the scope
of the mission of the community colleges;

(6) Shall assure that state funds for community colleges are spent
prudently and in accordance with state guidelines;

(7) Shall provide centralized data processing assistance; and

(8) Shall coordinate relationships between the community colleges, the
state and county public school systems, and the private high schools.

19
(i) Facilitate cooperation among them in the guidance and admission of students to the community colleges; and

(ii) Arrange for the most advantageous use of facilities."

Evolution of the Community College Funding Formula

Flat Per Full-time Equivalent Student Grants

The state began funding community colleges in 1946 when Hagerstown and Montgomery Community Colleges were established. State support began as a system of flat grants to each community college. From 1949 through the present, state aid has been distributed in accordance with a formula largely based on enrollment. The 1949 formula limited the maximum rate of state aid to $100 per full-time equivalent student (FTE). Exhibit 1 below shows increases in the maximum rate per full-time equivalent student amount for most colleges by year of enactment.

Exhibit 1

A separate formula was established for small and regional colleges in 1972. In 1972, state aid per FTE for community colleges with small enrollments (less than 500 FTEs), as well as regional colleges characterized by the same small enrollments, was raised from $700 to $875. The rationale for a higher aid rate for small and regional colleges was to help defray the fixed costs associated with a small college and to encourage counties to establish regional colleges. The 1972 change affected only Chesapeake and Garrett Community Colleges. In 1977, Wor-Wic Community College was brought into the regional aid classification, but at an aid level of $1,250. In 1978, Cecil Community College was brought into the small college classification at $1,485. Exhibit 2 below shows increases in the maximum rate per full-time equivalent student amount for small and regional colleges by year of enactment.

Funding For Fixed Costs, Part-Time Students and Low Income Students

During the 1981 legislative session, the funding formula for community colleges was supplemented with a $200,000 grant to each board (Cecil, Garrett, Chesapeake, and Wor-Wic were excluded from these new grants because their aid per FTE continued at a higher level) and an additional $10 for each part-time credit student. The rationale for the flat grant was to help support the fixed operating costs of mid-size colleges. The idea behind the amount per part-time student was to help provide for the costs associated with increasing part-time student population.

During the 1984 legislative session, the General Assembly, acting upon the recommendations of the Governor, increased the aid per full-time equivalent student by $32 (small and regional colleges by $101), the annual flat grant by $70,000, and the grant per part-time student by $4.

In 1984 the Special Joint Subcommittee on Community College Financing, chaired by Delegate Rawlings, examined community college funding. The joint subcommittee recommended an increase in the formula and the addition of a low income student grant for each Pell Grant recipient served by the college. Legislation enacted in 1985 increased the aid rate per full-time equivalent student from $910 to $980 (small and regional colleges from $1,720 to $1,865), increased the annual flat grant from $280,000 to $350,000, and implemented a new low income student grant of $115 per Pell Grant recipient. The grant per part-time student increased $14. There were no further changes to the formula until it was completely revised in 1988.

Further Modifications

In 1988, the legislature acting upon the recommendation of the Committee on the Future of Maryland Community Colleges (Blueprint for Quality), adopted a new funding formula for community colleges. The new formula eliminated the flat grant, the higher FTE grants for regional and small colleges, the Pell Grant, and the part-time student grant components of the previous funding formula. The new formula consisted of three components:

(1) An amount per FTE student to address variable costs associated with enrollment changes. All colleges received the same amount per FTE.

(2) An annual base grant to address the issue of institutional fixed costs and size. Smaller colleges received relatively more under this component than larger colleges. This component, therefore, substituted for the higher FTE grant for smaller colleges and the flat grant under the previous formula.

(3) A supplemental grant to address equalization for poorer subdivisions (Allegany, Baltimore City, Cecil, Garrett and Hagerstown received aid under this component).
Although the Committee on the Future of Maryland Community Colleges recommended annual inflation adjustments, the formula did not include an inflation adjustment provision.

Legislation passed during the 1990 session resulted in Baltimore City Community College (BCCC) becoming a state agency, effective July 1, 1990 (fiscal 1991). BCCC is discussed later in the presentation.

Current Funding Formula

In 1991, the legislature approved the current community college funding formula (See Appendix 1). The current formula took effect in fiscal 1993. The current community college funding formula distributes general funds on the basis of five factors: (1) fixed cost grant; (2) marginal cost grant; (3) a size factor; (4) a wealth factor; and (5) challenge grants. The full-time equivalent enrollment used in the calculation of the formula are audited FTEs in the fiscal year 2 years prior to the fiscal year for which the state share is calculated. The enrollment used in the fiscal 1996 formula calculation are audited fiscal 1994 FTE enrollment.

Fixed Cost Grant - 70% of total state aid is distributed based in proportion to each college’s total formula aid (exclusive of challenge grants) in the previous year. For example, Allegany Community College received 3.5 percent of the fiscal 1995 direct grant of $88.7 million. In fiscal 1996, Allegany Community College will receive 3.5 percent of the fiscal 1996 fixed cost allocation of $61.7 million, or $2.1 million.

Marginal Cost Grant - 27% of total state aid is distributed based on the total number of full-time equivalent students (FTE) at each community college. The fiscal 1996 rate per full-time equivalent student is $339.8 (Marginal cost allocation of $23,792,843 divided by FY 1994 FTEs of 70,021). Example: Allegany Community College’s marginal cost allocation of $570,057 is calculated by multiplying 1,678 FTEs by the rate per FTE of $339.8.

Size Factor - 2% of total state aid is distributed on the basis of size. Colleges with FTE enrollment less than or equal to 80% of the statewide median receive 1.75% of the total formula, divided evenly among those which qualify. 80 percent of the statewide median FTE enrollment (2,492 FTE) used in calculating the fiscal 1996 "small size" allocation is 1,994 FTEs. In fiscal 1996, $1.5 million will be divided evenly among Allegany, Carroll, Cecil, Chesapeake, Garrett, Hagerstown, and Wor-Wic Community Colleges. Each college receives $220,304.

For colleges with FTE enrollments between 80% and 200% of the statewide median, 0.25% of the total formula aid is evenly distributed. 200 percent of the statewide median FTE (2,492 FTE) used in calculating the fiscal 1996 "medium size" allocation is 4,984 FTEs. In fiscal 1996, $220,304 will be divided among Charles, Frederick, Harford, and Howard Community Colleges.
Wealth Factor - 0.5% of total state aid is distributed based on wealth. A county or region is eligible for a wealth factor component if the following criteria are met:

1. The county share for the previous fiscal year divided by the total assessed valuation of real property in the supporting county or region is greater than or equal to the statewide median; and

2. The per capita wealth of the supporting county or region is less than 80 percent of the statewide per capita wealth or the total assessed valuation of real property in the supporting county or region is less than $1 billion.

In fiscal 1996, Allegany, Garrett, and Hagerstown Community Colleges will each receive $146,869.

Challenge Grants - 0.5% of total state aid is distributed on a competitive basis to community colleges. The purpose of the challenge grant component is to address statewide initiatives and economic development needs. In fiscal 1995, challenge grants were awarded for initiatives related to distance education. Seven colleges received challenge grants in fiscal 1995.

State/Local/Student Share of Funding (Appendix 2)

From the outset, the state, local political subdivisions, and students have shared the responsibility of funding community colleges. Until 1969, the general principle remained that the state, political subdivisions, and students should each contribute one-third of the costs in equal shares. In 1969, the respective theoretical shares were shifted to 45-30-25 percent. In 1971, the goal of 50-28-22 percent distribution from the state, the political subdivisions, and students was promulgated. In 1980, the state share was altered for small and regional colleges from 50 percent to 55 percent of the current expenses. The county share of current expenses for Cecil, Garrett and Chesapeake Community Colleges was increased from 30 to 32 percent in 1985. It should be noted, however, since the state funded a maximum amount per full-time student, the state aid goal was not met for most colleges.

The preamble of the 1991 legislation establishing the current funding formula included the following statement:

"It is the state's objective that by Fiscal Year 1996 the percentage of state support for the operating costs of community colleges, including state paid fringe benefits and challenge grants, shall be 46% of the community colleges' operating budget."

The 46 percent target was linked to the level of support provided four year colleges and universities in 1990. The administration's testimony in support of the bill included the assumption that the state would fund 40 percent of the operating costs in fiscal 1993 at a cost of $19.3 million. The state would increase its share 2 percent
per year between fiscal years 1993 and 1996, reaching the 46 percent goal in fiscal year 1996. In fiscal year 1996, the state share is at 28 percent.

There are maintenance of effort requirements that the state and local governments must adhere to with regard to the funding of community colleges. Statute states that "the total operating fund per full-time equivalent student to the community colleges for each fiscal year as requested by the Governor shall be not less than an amount equal to the total state operating fund per full-time equivalent student in the previous fiscal year".

By statute, in order for a board to receive an increase in the state share of support, each county that supports the community college or colleges must provide operating fund appropriations to the board in an amount not less than the county provided in the previous fiscal year. This maintenance of effort requirement was waived during the state's fiscal crisis (Fiscal 1992 - 1994).

As indicated in the administration's 1991 testimony, reducing the students' share of the cost was a central goal of the legislation. Unfortunately, state cost containment actions in fiscal 1991 ($5.8 million), fiscal 1992 ($28.8 million), and fiscal 1993 ($8 million), due to the fiscal crisis led to significant increases in tuition with a decline in the state share of support (See Appendix 3). Tuition and fees have increased from approximately 34 percent of the total system wide budget in fiscal year 1992 to 36 percent in fiscal year 1996.

Other Forms of State Support

In addition to state funding through the formula, the state provides support for teachers' retirement, capital improvement projects, interstate and regional tuition agreements, and statewide programs. In fiscal 1996, the state will provide $23.8 million for teachers' retirement contributions, $20.4 million in general obligation bond and "PAYGO" funding for capital improvement projects, $180,000 for interstate and regional tuition agreements, and $416,000 for statewide programs.

Teachers' Retirement - Up until fiscal 1994, the state provided funds for teachers' retirement and social security contribution payments. Beginning in fiscal 1994, the colleges or local governments assumed responsibility for payment of social security contributions. This action resulted in the shifting of approximately $8 million in costs to the colleges.

Capital Improvement Program - The state shares the cost of capital improvement projects with local governments. The state provides at least 50 percent of a project's total cost. The state share is dependent on the wealth of the county. In recent years, the state general obligation bond appropriation for community college capital improvement projects has increased from a level of $7.8 million in fiscal 1992 to $24.7 million in fiscal 1995; an increase of 217 percent. In fiscal year 1996, a
total of $20.4 million is provided for capital improvement projects ($16,350,000 in general obligation bonds and $4 million in "PAYGO" funding).

**Somerset Grant** - The state provides funds for Somerset County residents to attend Wor-Wic Community College at in-county tuition rates. The state pays 50 percent of the applicable out-of-county fee, provided that Somerset County pays the other 50 percent. $90,000 is budgeted for this program in fiscal 1996.

**West Virginia/Garrett Agreement** - Garrett Community College has a reciprocity agreement with West Virginia. Under this program, the state is required to pay to Garrett Community College an amount equal to the formula state support per FTE for each West Virginia FTE at the College under the reciprocity agreement. $90,000 is budgeted for this program in fiscal 1996.

**Statewide Program** - Under this program, state residents enrolled in community college instructional programs designated by the commission as a health manpower shortage program or a statewide or regional program pay only in-county tuition and fees. The state pays the differential between this amount and any applicable out-of-county tuition and fees. $416,000 is budgeted for this program in fiscal 1996.

**Baltimore City Community College (BCCC)**

**Historical Data**

Due to legislation passed during the 1990 session, BCCC became a state agency effective July 1, 1990. The legislation abolished the Community College of Baltimore and created the state controlled BCCC for a period of at least three years.

The state take-over of BCCC was predicated by management inefficiencies, ineffective resource allocation, a lack of quality in teaching and a curriculum that did not meet the current needs of the student body.

BCCC's newly approved mission emphasized a curriculum focusing on career programs, built upon a foundation in liberal arts and the sciences. Specifically emphasized were programs in nursing, computer information systems and human services.

Currently, BCCC continues to operate on two Baltimore City campuses at Liberty and the Inner Harbor. The college's administrative and academic control differs from others in the state due to the fact that no local funding is provided to the college. Beginning in FY 1992, the college's operating and capital budgeting process became similar to the state's public four-year higher education institutions, as indicated by funding trends in Exhibit 3. The exhibit indicates that state general funds continue to comprise the majority of the college's funding from FY 1991 through FY 1996. However, both restricted funds and unrestricted funds have continued to increase on an average basis during the same time period.
Restricted funds consist of federal, state and local contracts and grants, as well as endowment income and sales and services of educational products. Unrestricted funds consist of tuition and fees, and sales and services of auxiliary enterprises such as cafeteria and bookstore sales.

BCCC's current curriculum serves students seeking associate degrees in technical and transfer programs, plus customized training for business and industry. The curriculum includes specialties in health care, human services and business programs, in addition to life sciences programs.

BCCC's FY 1996 operating budget is $40.1 million. The state contributes 64% of current unrestricted funds. The FY 1996 capital program includes funds of $15.6 million related to the construction of a new Life Sciences Building. The college is authorized 396 positions, including 118 full-time faculty.

Joint Legislative Workgroup on Community College Financing

During 1994, the Joint Legislative Workgroup on Community College Financing met to evaluate and consider changes to the community college funding formula and to examine the state's responsibility to adequately fund Baltimore City...
Community College. In light of a myriad of options presented to the workgroup and insufficient time to carefully consider each option, the workgroup recommended the implementation of 3 interim measures. The workgroup recommended that any additional money available to community colleges over and above the statutory formula in fiscal year 1996 be distributed on a priority basis as follows:

1. Fund a hold harmless provision, so that no institution receives less money than it received in the previous year.

2. Fully fund "statewide programs." These programs give in-county tuition and fees to out-of-county students for high-cost academic programs and programs in allied health fields with labor shortages.

3. Any remaining funds should be distributed to colleges on a full-time equivalent student basis.

None of the recommendations of the Joint Legislative Workgroup on Community College Financing were implemented. The Governor did include an additional $5 million for community colleges; however, the funds are to be used to fund one-time instructional and research equipment grants to the community colleges. The distribution of funding is found in exhibit 4.

### 1995 Session Developments

During the 1995 Session, several bills concerning community colleges were introduced. A summary of these bills follows:

**HB 696:** This bill would have implemented the recommendations of the Joint Legislative Workgroup on Community College Financing. This bill died in committee.
HB 897: This bill would have placed in statute a hold harmless for all community colleges for fiscal years 1996 and 1997 only. This bill passed both chambers but was vetoed by the Governor.

HB 943: This bill, referred to as the “level playing field” bill, would have based community college aid on state general fund support per student for the public higher education institutions. This bill died in committee.

HB 1054: This bill requires the state to make grants to all community colleges (including Baltimore City Community College) that provide instruction and services to students enrolled in an English for Speakers of Other Languages (ESOL) program. The grant can be up to $800 per student, with a $1 million appropriation cap ($200,000 for BCCC). This bill was signed by the Governor (Chapter 434 of the Acts of 1995).

Community College Funding Overview: A National Comparison

Appendix 3

August 1995

Department of Fiscal Services
Community College Funding Overview: A National Comparison

Introduction

Unlike primary, secondary and four year higher education funding, few national studies exist in the area of community college funding. This paper examines the limited available data on states' community college system size, funding methodologies and revenue sources (a state by state profile is attached as Appendix 1).

Most of the information in this report came from a document entitled Forty-Nine State Systems, 1992 Edition, which is published by the American Association of Community Colleges (AACC), and An Analysis of Formula Funding Differentiation Between Comprehensive Community Colleges and the Lower Divisions of Senior Institutions edited by the South Carolina State Board for Technical and Comprehensive Education.

Community College System Size - Maryland Falls in the Middle

Every state but South Dakota has at least one community college. They range in size from Delaware's one community college (with 4 branch campuses) to California's 107 community colleges. Maryland joins 21 other states that have between 10 and 20 community colleges. Sixteen states, or 32.7% of the total, have fewer than 10 community colleges, while 11 states offer classes at more than 20 community colleges statewide. Not surprisingly, states like California, Illinois, Michigan, New York and Texas, which have both large populations and geographical areas, have the greatest number of colleges.

Funding Methodologies Vary Across States

The states use different funding models to distribute aid to the community colleges. These models include the state budget process, a unit rate model (often cost per full time equivalent student), and a base plus increment funding methodology, as well as other unique approaches.
State Budget Process is Used by States Which Rely on Little or No Local Assistance

This model involves budget negotiations between the community colleges, the executive branch and the legislature. Budget requests are based on actual program costs. The state usually provides the majority of funds, though student tuition and fees, as well as special funds, are sources of revenue. Connecticut, Delaware, Hawaii, Maine, Montana, New Hampshire, and Vermont use this funding methodology. While revenue sources were not available for three of these states, Hawaii, Maine, New Hampshire and Vermont do not rely on local funding sources to support their community colleges. This funding model applies to one of Maryland’s community colleges, Baltimore City Community College.

A Unit Rate Model is Used by 18 States

This model provides a rate of support based on units of production, such as cost per full time equivalent (FTE) student or cost per credit hour by program. Maryland relied entirely on this funding methodology from 1949 until 1982. Under this system, different rates for instructional categories are sometimes used. Eighteen states currently fund their community colleges on an unit rate basis. Of these states, nine have different rates by instructional category (this information was unavailable for the remaining nine states). Some states use higher rates for health or vocational programs. New York provides supplemental aid for business and technical students, while Alabama provides additional funding for students in health related fields.

Base Plus Increment(s) Funding is Favored by 14 States

Some community college systems provide a base level of funding and then add "increments" - inflation factors, enrollment factors, productivity factors, maintenance costs, college size factors or special program costs, for example. The “base” of this funding may reflect fixed costs, past budgets, a fixed proportion of total funds, or past enrollment, and appears to be a relatively stable source of revenue for the colleges from one year to the next. Fourteen states, including Maryland, use some form of this model. Under Maryland’s formula, 70% of a community college’s total state aid is allocated in the proportion as was received in the prior year, while the remaining funds are distributed according to a cost per FTE factor, a college size factor, a wealth factor, and challenge grants.

The “base plus increment” model varies from states to state. In 1995, Arkansas moved to a base (using past enrollment) plus incremental funding for inflation, productivity, special programs, and maintenance. A state official in Arkansas indicated that the legislature will probably add an FTE factor this legislative
session, to recognize major enrollment gains or losses. Colorado recently changed its formula to a base plus funding for five different categories set by the legislature each year. Oregon allocates its funding for community colleges on a 49\% adjustable base, with the remaining 51\% allocated by cost per FTE.

Other Funding Methodologies

Some states do not fit neatly into a funding category. Missouri provides its community colleges with flat grants based on programs, workforce preparation, performance and inflation. Rhode Island bases its funding methodology on the historical proportion of the community colleges in the total budget for higher education (around 23\%). Massachusetts funds its community colleges using factors such as faculty-student ratios, physical plant needs, and enrollment. Seven states did not provide enough information to adequately label their funding methodologies. Some are in the midst of change; for example, Georgia is revising its funding methodology and expects to move from a block appropriation to costs by discipline, while appropriations to all of Minnesota’s higher education institutions will be 35\% fixed cost, 63\% variable, and 2\% reward-based.

Maryland Appears To Be the Only State That Includes a Wealth Component in Its Funding Formula

An examination of the available information on community college funding (see Appendix 1) shows only one state with a wealth factor in its funding formula - Maryland. While the descriptions of the funding formulas are limited, they do include mention of such factors like inflation and maintenance, so usage of a wealth factor appears limited. One of the editors of 49 State Systems does note that states can equalize funding among jurisdictions indirectly through state aid. The more state aid a community college receives, the less reliant it becomes on local contributions and a local jurisdiction’s ability to raise local revenue for community colleges.

Performance/Productivity Measures Are Gaining Popularity as States Revise Formulas

In recent years, several states have included performance and productivity measures in their revised formulas. Examples of these measures include graduations rates, grade point averages, and job placement success. Missouri, Arkansas and Minnesota have adopted such measures within the last few years.
Sources of Revenue - Maryland Relies on Tuition and Local Contributions More Than Most States

Sources of funding for community colleges vary widely by states. As Appendix 1 shows, some states rely almost solely on state appropriations (for example, Hawaii), while other states utilize combinations of state assistance, tuition and fees, and local aid. Federal funds may comprise from 4% (Iowa) to 16 percent (Alabama) of a community college systems' total revenue sources.

Maryland relies on a combination of revenue sources, with 30% of its revenue from state appropriations, 35% from tuition and fees, 33% from local sources, and 2% from “other” in fiscal year 1994. The state appropriation and local share have declined since FY 1991, from 33% to 30%, and 37% to 33% respectively, while tuition and fees increased from 29% of total revenue in FY 1991 to 35% in FY 1994. Compared to the other states that provided data on their sources of revenue for community colleges, Maryland tends to rely more on local aid and tuition than most states.

It is important to note that the reports used to provide revenue information precede the national recession of the early 1990s, and many states may have subsequently increased their tuition and cut state aid, following Maryland’s example.

Maryland Relies Less on State Appropriations Than Most States

Of the 29 states that provided information on their FY 1991 state appropriation as a percent of the total budget (see Appendix 1), 31 percent, or 9 states, relied on state appropriations for at least 60 percent of their community college budget. Fourteen state community college systems (48% of the total respondents) saw state appropriations make up 40-60% of their budget, while only 6 of the 29 states responding relied on state aid for less than half their budgets. Maryland was one of those states, and fits in this category regardless of whether FY 1991 or FY 1994 data is used.

A Majority of State Community College Systems Rely on Tuition and Fees for Less Than a Third of Their Total Funding

Of the 27 states that provided data on FY 1991 tuition and fee collections as a percent of total revenue, 12 states, or 44% of the respondents relied on tuition for less than 20% of their total funding. A third of the states relied on tuition for 20-30% of their revenue, while 4 states expect tuition to make up 30-40% of their total allocation to community colleges. Only two states, New Hampshire and Vermont, realize more than 40% of the revenue from tuition. Neither of these two state systems
receive any local funding. Using current FY 1994 data Maryland ranks high on tuition, using it for 35% of total revenues (note: In FY 1991, Maryland relied on tuition for 29% of revenues).

Few States Expect More Than a Third of Their Funding To Come From Local Contributions

Twenty-six states responded to a request for information on local contributions as a percent of total revenue. Nine of the states had no local contribution. Half of the states relied on local sources for up to 30% of their revenue, while four states, including Maryland, rely on local contributions for more than 30% of their total funding for community colleges.

Summary

Compared to all states' community college systems, Maryland falls near the median in system size. While a unit cost funding formula is the favored methodology of 18 states, Maryland joins 14 other states that chose a "base plus increment" funding methodology (note: a wide variety of approaches to funding exist within this model). Given the available data, Maryland appears to be the only state that includes a wealth factor in its formula. Maryland also relies more heavily than most states on local aid and tuition as sources of revenue for its community colleges, and its state appropriation as a percent of total funding is smaller than that of most states.

</tbody>
</table>
STATE MANDATED REVENUE OPTION:
PERCENT OF 4-YEAR PUBLIC

1996 AID PER FTE AT 4-YEAR PUBLIC : $6,690.56
1996 FORMULA AID PER FTE FOR COM. COLLEGES $1,258.50
CURRENT PERCENT 19%

THE ATTACHED OPTIONS SHOW SEVERAL EXAMPLES OF THE EFFECT OF INCREASING THE COM. COLLEGE'S PERCENT OF 4-YEAR PUBLIC AID PER FTE.
FOR COMPARISON A 4TH OPTION BASES AID ON THE GROWTH IN INFLATION.

THE ASSUMPTIONS USED IN THE FOLLOWING OPTIONS ARE:

1. GROWTH IN 4 YEAR PUBLIC ENROLLMENT: AVG. INCREASE OF 1.4%
2. GROWTH IN STATE SUPPORT FOR 4 YEAR PUBLIC SCHOOLS: 3.5%
3. GROWTH IN COMMUNITY COLLEGE ENROLLMENT: AVG. INCREASE OF 1.6%
4. NUMBERS USED FOR COMMUNITY COLLEGE FTES ARE TWO YEARS PRIOR
5. NUMBERS USED FOR STATE SUPPORT FOR 4-YEAR PUBLIC ARE ONE YEAR PRIOR
Three options use % of 4 year public; Fourth option uses inflator

1. Increase the percent of 4-Yr Public by 1% per year: \((C\times B)\times A = D\)

<table>
<thead>
<tr>

**NOTE:** IPD estimate from the Bureau of Revenue Estimates, July 1995
Options for Changing the Distribution of Community College Formula Aid

FY 1997-FY 2000

Total Funding is a Percent of the Four Year University Funding Per Student - 1% Annual Increase

Presented to
Senate Budget and Taxation Committee
Health, Education and Human Resources Subcommittee
House Committee on Ways and Means
Education Subcommittee

Department of Fiscal Services
November 1995
Summary

This document includes five formula distribution options for community college funding. Total funding for each option, on a per FTE basis, is 20% of the aid per FTE at the four year public universities beginning in fiscal 1997. The funding grows a percentage point each fiscal year, reaching 23% in fiscal 2000. Each option includes:

- bulleted highlights;
- a bar graph showing funding per FTE in the year 2000 under the proposed option versus funding per FTE under current law at current funding levels;
- a summary showing the effect of the proposed option compared to current law; and

The five distribution options are:

- A 40% Fixed and 60% Variable Basis (Model 1);
- 35% Fixed, 60% Variable, and 5% Small Size Factors (Model 2);
- Variation of 35% Fixed, 60% Variable, and 5% Small Size Factors. The small size factor declines a percentage point each year to 2% in fiscal 2000, while the fixed cost factor rises to 38% in fiscal 2000 (Model 3);
- An Equal Base ($1,150,000 in fiscal 1997), Allocating the Remainder on an FTE Basis (Model 4); and
- Hold Harmless at FY 1996 Levels, Distributing the Remainder on an FTE Basis (Model 5).
State Funds Distributed on a 40% Fixed and 60% Variable Basis (Model 1)

- Under this model, 40% of the total funds available are distributed on a fixed cost basis. This 40% is allocated to each college using the current method for allocating fixed costs. Each college’s share of the total state grant from the prior fiscal year is calculated, and that share is multiplied by the total amount available for fixed costs. For example, Allegany received 3.5% of the total state grant in FY 1996. That percentage is multiplied by $36.8 million, the total amount available for fixed costs in FY 1997. Allegany’s share of fixed costs under this model is $1.3 million.

- The remaining 60% in state funds is allocated on a per FTE basis ($803 per FTE).

- Under Model 1, the small schools lose state funds each fiscal year (as compared to the current distribution method). The bar graph for this option shows that Allegany, Cecil, Chesapeake, Garrett, and Hagerstown would all lose funding per FTE in fiscal year 2000. The summary sheet shows their percent losses from the current formula.

- Under this option, there is little variation in aid per student by fiscal 2000 (aid varies from $1,613 at Howard to $1,678 at Garrett).

- The large and medium size schools all fare well under this model, showing gains of around 40% in fiscal 2000 (as compared to projected current funding levels in the year 2000).
Option 1 - 40% Fixed, 60% Variable

Notes:

(a) The total amount available in FY 2000 is based on the projections for FY 2000 ($90.8 m) plus an additional $26.8 million. The $26.8 million is what colleges would receive under a formula that grants community colleges, on a per FTE basis, 23.0% of the aid per FTE at the four year public.

Prepared by Department of Fiscal Services, October 1995.
Distribution Model based on 35% Fixed, 60% Variable, and 5% Small Size Factor (Model 2)

- Under this model, the small size factor is taken from the fixed cost component, lowering fixed costs to 35% of the total. Variable costs are set at 60% of total state funds available.

- As the bar graph shows, each community college gains funding per FTE under this option. Option 2 does not significantly narrow the spread in funding per FTE between the small colleges and the medium and large size schools.

- No college loses funds under this option.
Option 2 - 35% Fixed, 60% Variable and 5% Small Size Funding Per FTE Student - FY 2000

Challenge Grants
TOTAL STATE AID

| 453,379        | 90,795,740   |

Notes:
(a) The total amount available in FY 2000 is based on the projections for FY 2000 ($90.8 m) plus an additional $26.8 million. The $26.8 million is what colleges would receive under a formula that grants community colleges, on a per FTE basis, 23.0% of aid per FTE at the four years.

Prepared by Department of Fiscal Services, October 1995.
Distribution Model based on 35% Fixed, 60% Variable, and 5% Small Size Factor. The small size factor declines a percentage point each year to 2% in fiscal 2000, while the fixed cost component rises to 38% (Model 3)

- Under this model, the small size factor is taken from the fixed cost component, lowering fixed costs to 35% of the total. The variable cost component is set at 60% of total state funds available. The fixed cost component increases by one percentage point each year until it reaches 38% in fiscal 2000. Likewise, the small size factor decreases a percentage point each year to 2% in fiscal 2000.

- As the bar graph shows, only Garrett County would lose funding per FTE by the year 2000 under this option. Garrett would still receive $2,592 per student, approximately $470 more per student than any other community college.

- As the summary sheet shows, Garrett is the only college to lose funds under this option, beginning in fiscal 1998 with a 1% loss. Four of the small schools (Carroll, Cecil, Chesapeake and Wor-Wic) have the strongest gains in the first fiscal year of this option. By fiscal 2000, as the small size factor declines in value, medium and large schools show the best gains under this option.

- Under this option, the spread in aid per FTE decreases about 60%.
Option 3 - 38% Fixed, 60% Variable and 2% Small Size
Funding Per FTE Student - FY 2000

Maryland Community Colleges

- FY 2000 - Current Law
- FY 2000 - Option 3

Small size factor is 5% in FY 1997; decreases a percentage point each year to 2% in FY 2000.

Prepared by Department of Fiscal Services, November 1995.
### SUMMARY

**Model 3**  
Community College Funding  
Distributed by 35% Fixed, 60% Marginal (Per FTE) and 5% Small Size Factor  
(Size Factor Decreases to 2% by FY 2000, Fixed Grows to 38%)

#### Percent Increase (Decrease) Over Current Law Estimates  
FY 1997 - 2000

Notes:

(a) The total amount available in FY 1997 is based on the request for FY 1997 ($88,533,252) plus an additional $5.5 million. The $5.5 million is what colleges would receive under a formula that grants community colleges, on a per FTE basis, 20.0% of the aid per FTE at the four years.

Prepared by Department of Fiscal Services, October 1995.

0 453,979

117,605,715 90,795,740

Notes:

(a) The total amount available in FY 2000 is based on the projections for FY 2000 ($90.8 m) plus an additional $26.8 million. The $26.8 million is what colleges would receive under a formula that grants community colleges, on a per FTE basis, 23.0% of the four year publics.

Prepared by Department of Fiscal Services, October 1995.
Distribution Model Using an Equal Base and Allocating the Remainder on an FTE Basis (Model 4)

- Under this model, $1,150,000 is given to each college in fiscal 1997, and the remainder is allocated on a per FTE basis. The base increases by $100,000 each year.

- The bar graph for this option shows that every college gains funding per FTE by fiscal 2000, though the large schools have proportionately smaller gains than some of the small and all of the medium size schools.

- Allegany would lose funds under this option in the first two fiscal years (1997 and 1998). As noted above, medium size schools do very well under this option; Frederick and Charles would gain 58% and 47% over current funding by fiscal 2000.

- There is a slight decrease in the variation in aid per FTE between the small and large colleges and an increase in variation in aid per FTE between the medium and large colleges.

**Notes:**
(a) The total amount available in FY 2000 is based on the projections for FY 2000 ($90.8 m) plus an additional $26.8 million. The $26.8 million is what colleges would receive under a formula that grants community colleges, on a per FTE basis, 23.0% of the aid per FTE at the four year publics.

Prepared by Department of Fiscal Services, October 1995.
Distribution Model that Holds Each College Harmless at FY 1996 Levels and Distributes Additional Funds on a Per FTE Basis (Model 5)

- Under this model, each college receives the same state grant it received in fiscal 1996. Any additional funds would be distributed on a per FTE basis. The fiscal 1996 grant becomes the base for future years.

- No college loses funding per FTE under this option by the year 2000.

- No college loses funds under this model in the first fiscal year. Garrett would have small gains in fiscal 1997 and 2000, with small losses in fiscal 1998 and 1999. Garrett would still receive more funding per FTE than any other college.

- The other colleges gain from 12% to 39% in fiscal 2000 over projected funding under current law.

- Under this option, the spread in aid per FTE is reduced by about a third.
Option 5 - Hold Harmless at FY 1996 Levels Plus Per FTE Funding
Funding Per FTE Student - FY 2000

**Notes:**

(a) The total amount available in FY 2000 is based on the projections for FY 2000 ($90.8 m) plus an additional $26.8 million. The $26.8 million is what colleges would receive under a formula that grants community colleges, on a per FTE basis, 23.0% of the aid per FTE at the four year publics.

Prepared by Department of Fiscal Services, October 1995.

**Definitions under current law (as shown by bold lines):**

- **Small School:** FTE enrollment less than or equal to 80% of the statewide median.
- **Medium School:** FTE enrollment between 80% and 200% of the statewide median.

Prepared by Department of Fiscal Services, October 1995.
PROPOSED MAINTENANCE OF EFFORT REQUIREMENTS FOR COMMUNITY COLLEGE APPROPRIATIONS BY LOCAL GOVERNMENTS

CURRENT LAW: REQUIRES LOCAL GOVERNMENTS TO MATCH TOTAL DOLLAR AMOUNTS FROM PREVIOUS YEAR.

ALTERNATIVE #1: WOULD REQUIRE LOCAL GOVERNMENTS TO MATCH A PER PUPIL DOLLAR AMOUNT FROM THE PREVIOUS YEAR, OR TOTAL DOLLAR AMOUNT IF ENROLLMENT DECLINES. THIS ALTERNATIVE IS SIMILAR TO THE MAINTENANCE OF EFFORT REQUIREMENT UNDER THE BASIC CURRENT EXPENSE FORMULA.

ALTERNATIVE #2: WOULD REQUIRE LOCAL GOVERNMENTS TO MATCH A SET PERCENTAGE (I.E., 50%) OF THE STATE INCREASE IN THE MANDATED FORMULA AMOUNT IN ORDER TO RECEIVE ANY INCREASE IN THE STATE APPROPRIATION.

ALTERNATIVE #3: RECOGNIZING THAT THE STATE IS INFUSING A SUBSTANTIAL INCREASE IN THE FIRST YEAR, POSTPONE THE IMPLEMENTATION OF ALTERNATIVE #2 UNTIL THE SECOND YEAR; CURRENT LAW OR ALTERNATIVE #1 COULD APPLY IN THE FIRST YEAR.

ALTERNATIVE #4: ALTERNATIVE #2; HOWEVER, IF A LOCAL GOVERNMENT FAILS TO MEET ITS REQUIRED INCREASE, ITS SHARE OF THE STATE INCREASE IS LOWERED. FOR INSTANCE, IF THE STATE'S SHARE INCREASES BY 15%, LOCAL GOVERNMENTS WOULD NEED TO INCREASE THEIR SHARE BY 7.5% IN ORDER TO RECEIVE THEIR FULL SHARE OF THE STATE INCREASE. IF A LOCAL GOVERNMENT ONLY INCREASES ITS SHARE BY 5%, THEN IT WOULD ONLY RECEIVE 10% OF THE STATE INCREASE.

ALTERNATIVE #5: CURRENT LAW FOR YEARS 1-5; STARTING IN YEAR 6, LOCAL GOVERNMENTS WOULD BE REQUIRED TO MATCH 33% OF THE STATE INCREASE OF MANDATED FORMULA AID.

MACO RECOMMENDATION: CURRENT LAW
MACC RECOMMENDATION: CURRENT LAW
Proposal to Secretary Brady for
Strengthening Community Colleges' Role in Economic Development

In response to your request, the Maryland Council of Community College Presidents (MCCCP) developed the following statement and proposal, which has been approved by the MACC Executive Committee.

The nation has moved from a domestic economy to a world economy. As the nation goes, so goes each state. New and improved technology, communications, and transportation have put the pressure on companies for continuous change to keep up in the marketplace. The world of work has experienced massive restructuring, layoffs and retraining at an unprecedented level. Within each state these rapid changes require the support of a highly competent educational infrastructure that can train and retrain its workforce.

Maryland's community college system has evolved into a strong educational network with tremendous potential for affecting the total economic development of the state. It is a system of eighteen institutions that serve the citizenry of Maryland from Garrett County to Wicomico and from Harford to Worcester. The community college is the educational and technical hub within each county and/or region. It is the place where community forums come together and are heard, where learning draws an eclectic group of students (age, ethnicity, economic, etc.) And where businesses now, more than ever, are realizing the rich resources contained within its domain.

Over the past ten years the borders surrounding each community college have expanded, linking one to another in educational partnerships and common community initiatives. In this link lies its strength - that is its strength in numbers. It is a network that succeeds because of its responsive nature both individually and collectively, to its publics. In 1993 alone, Maryland's community colleges delivered customized instruction to 1600 businesses throughout the state. It is a resource that is perched at Maryland's economic development doorway.

RECOMMENDATION:

Create a permanent linkage/infrastructure among the state's community colleges, the Department of Business and Economic Development (DBED), the Department of Labor, Licensing, and Regulations (DOLLAR) and the Maryland Higher Education Commission (MHEC) in the form of a subcabinet: The Governor's Subcabinet on Statewide Workforce Training.
PURPOSE:

To promote economic development through statewide use of community colleges in workforce training and to create a single point of contact for accessing community colleges.

MEMBERSHIP:

Appropriate MHEC Secretary
Appropriate DBED Secretary
Appropriate DOLLAR Secretary
MACC Representative

FUNDING:

To be funded jointly by DBED and DOLLAR out of training contracts.

MEETINGS:

Monthly or bi-weekly

TASKS:

1. To create and implement a statewide business and industry training program analogous to North Carolina's, to include:
   - Emphasis on providing a technically competent workforce
   - Assessment of workforce needs
   - Participation on recruiting trips and site visits
   - Creation and dissemination of promotional materials
   - Identification of strong training programs throughout the State

2. To create and implement a mechanism for use of training funds at community colleges (e.g. voucher system for small and large businesses, etc.)

STRATEGY:

Get the Governor to issue an Executive Order establishing the Governor's Subcabinet on Statewide Workforce Training.
