Magnificent Mum Education Program is a theme-based program developed around the garden mum. With its bright colors, various flower forms, perennial life cycle, and easy propagation, the garden mum is ideal for classroom use and community planting programs. The mum-theme lessons can be integrated into all subject areas including science, math, reading, social studies, language arts, art, and environmental studies. This program is not meant to replace core curriculum but rather to reinforce basic concepts and to enrich lessons. Intended for grades 4-5 lesson plans cover the following topics: structure, function, and size; identification, comparison, and classification in the mum family; diversity and development; the life cycle of the mum; planting, pinching, and propagating; light and temperature; soil and soil helpers; water; plant helpers and plant harmers; getting to know the garden; and garden decisions and design. Basic information and tips for the teacher, creative projects, enrichment ideas, school and community projects, and reproducible worksheets are also included. The teacher resource kit includes stickers, a poster, and fact sheets. (JRH)
THE MAGNIFICENT MUM EDUCATION PROGRAM

Grades 4-5

Featuring The Mum Kids
Background of the Program Sponsor
Yoder Brothers, Inc.
Barberton, Ohio

The development of materials for teachers and their students is consistent with the position Yoder Brothers, Inc. has achieved as one of North America's, and the world's, most respected horticultural firms.

From modest beginnings — a partnership of two, hard-working tenant farmers, Menno and Ira Yoder — the company has grown to be a leader in plant research and breeding. Today, G. Ramsey Yoder, Menno's grandson, heads a company of more than 2,200 employees that spans the globe.

World headquarters is in a former dairy barn, a historic landmark and one of the few remaining buildings of industrialist O.C. Barber's estate in Barberton, Ohio, where the brothers worked. The estate's 102 buildings included the largest greenhouse complex in the world at the time. With Barber's death, the brothers bought the greenhouses and in 1921 founded the company which bears their name.

Early crops consisted primarily of fruits, vegetables and some flowers. But with the discovery that fall-blooming chrysanthemums could be made to flower year-round in the greenhouse by manipulating daylight hours, Yoder's focus turned exclusively to flowers. As demand for quality floral products increased, Yoder phased out other crops and became one of the first horticultural companies to specialize in plant breeding.

The company is the world's leading breeder and propagator of high-quality chrysanthemum varieties. While mum cuttings — rooted and unrooted stems which Yoder sells to growers to nurture into finished flowering plants — remain the number one crop, the company also produces asters, azaleas, carnations, hibiscus, poinsettias, and other flowering plants.

Over the years, Yoder has provided generous quantities of information for growers and the public through colorful posters, brochures, booklets, push-on tags and consumer care and handling sheets. Articles about Yoder and Yoder products have appeared in national magazines, regional publications and newspapers throughout North America and many other parts of the world.

Background of the Authors and Artist
McGreen Wisdom, Inc.
Pittsburgh, Pennsylvania

The motto at McGreen Wisdom, Inc. is "knowledge to grow by." The company is dedicated to developing plant awareness and skills. Horticulture is viewed as a practical life skill rather than a hobby. It is a skill that should be strengthened along with the skills of science, math, and reading so that children can not only understand the growing world in general, but help it and communicate about it as well. To that end, the company produces practical materials to help children grow as students and, together with their families, grow as plant-smart citizens and earth stewards. McGreen Wisdom strives to bring together horticulture professionals and educators in cooperative programs that help to get practical materials and information into the hands of children.

McGreen Wisdom has a team of dedicated and experienced horticulturists. Christy Holstead and Pamela Linder are recognized for their knowledge of the technical and creative aspects of horticulture. Holstead has a master's degree in horticulture from Ohio State University and Linder is a member of the American Institute of Floral Design. They have co-authored a series of textbooks for Redbook Florist Services as members of its educational advisory committee and have written numerous articles for horticulture trade and consumer publications such as SuperMarket Floral and The Kid's Korner for Houseplant Magazine. Artist Bob Arlt is a graduate of the Art Center College of Design and brings a rich array of creative talents and a lifetime interest in nature to McGreen Wisdom. Prior to creating the Magnificent Mum Education Program, the McGreen team published a children's coloring and activity book, "Learn About Growing Friendships with Little Bud," along with a supplementary Teacher's Guide. This was followed with the "Friendship Activity Book" to help horticulture educators at arboreta and other public gardens teach the concepts of being friends to flowers, plants, and trees.

INTRODUCTION AND TIPS FOR THE TEACHER

Welcome to the Magnificent Mum Education Program! This is a theme-based program developed around the garden mum — nature's most popular fall flower. With its bright colors, various flower forms, perennial life cycle, and easy propagation, the garden mum is ideal for classroom use and community planting programs. The mum-theme lessons can be integrated into all subject areas, including science, math, reading, social studies, language arts, and art, as well as environmental studies and even fitness. We hope this program will inspire you to expand your use of all kinds of plants in teaching all kinds of subjects!

The Magnificent Mum Education Program is not meant to replace core curriculum but rather to reinforce basic concepts and to enrich lessons. What's nice about mums is that there are opportunities for year-round, plant-based activities. The Magnificent Mum Education Program can also be taught with a team-teaching approach. Teachers in different subject areas can utilize mum-based lessons. There are books available for three grade levels as well, K-1, 2-3, and 4-5, so that teachers in different grades can reinforce and build upon lessons from previous years.

Here are seven tips that will help to optimize the usefulness, efficiency, and impact of the program.

1. Don't be afraid of using plants as teaching tools. Even if you don't consider yourself a green thumb, you will be amazed at how well you will get along with mums. Everything you need to know to get started is included in the Magnificent Mum package.

2. Keep it simple. Gardening and other growing activities do not have to be expensive or time consuming. Many everyday items can be used as tools and planting containers so that you don't have to invest large sums of money in equipment. The children will be eager to help, too. They are fascinated by planting-related activities and will be glad to help with setup and cleanup.

3. Be creative with space. It is not essential to have lots of excess space to do planting activities. Just a sunny windowsill in the classroom or a nearby room is needed to get started. For outdoor planting projects, a small sunny patch of ground is all that is needed.

4. Ask for assistance. Cooperation is an important theme that is stressed throughout this book. Cooperation between classrooms, between the school and community groups, and between the school and horticulture professionals. We encourage you to approach local businesses, including garden centers, supermarkets, and florists, to ask for support in the form of funds, materials, presentations and professional advice. Show them a copy of this book and share ideas on planting and beautification to help strengthen your request for support. We also stress the importance of working with other children and adults to foster a spirit of cooperation. It makes the activities easier and more fun as well.

5. Make use of the MUM KIDS. Millie, Minnie, and Moe help bring lessons to life and make them fun. Let them serve as ambassadors to help inspire the children to appreciate plants and help beautify their world. Extend their use to writing stories, developing plays, creating posters, and even conducting contests. They can help to bring a multicultural message into the classroom as well.

6. Reward the children. Help establish “green self esteem” by rewarding children for finishing mum activities and expanding their plant knowledge. Use stickers to complete the certificates at the end of the program. Use stickers to reward exceptional projects and extra plant-related efforts as well. A local garden center might also want to help reward the children. Perhaps children can bring their completed certificates in to the store for a free plant or other special item!

7. Get parents involved. Try to encourage plant-related family discussions and activities to help reinforce lessons and make them more meaningful. Use the reproducible Parent's Pages to inspire parental involvement. Some parents will be glad to provide assistance with mum projects. This will be especially helpful during outdoor planting activities, festivals, and community projects.

Keep in mind: Everyone can grow plants! Plants don’t need a lot of money, time, or space — just a basic understanding of their care and the sincere concern to want to nurture them. In turn, mums and other plants will beautify the land, enrich our lives, and teach us many lessons. Have lots of Mum Fun!
**GETTING STARTED**
*Supplies, Resources, Learning Center Setup*

**Plant Learning Center**
A learning center provides a place for the storage and display of plants and supplies as well as a place for individual and small group hands-on learning.

**Learning Center Tips**
- Set up a display board on a long table. Fabric on the board can be changed with the seasons. Plants and books can be placed on the table. Supplies can be stored under the table.
- Display class art and signs of the seasons on the board. Have other signs of the season on the table (including stems from a garden mum in water) for children to touch and observe.
- Keep Mum Books, Mum Boxes or Mum Bags, and Mum Badges stored at the center.
- Make Mum Markers to keep track of each child at the learning center. Make a large, full-page daisy pattern and reproduce enough to have one for each child. Write lesson numbers and a child’s name on each Mum Marker. Children can circle the appropriate number when they complete a lesson.
- Start a Classroom Plant Collection and keep it on display in a sunny spot near the center. Teacher and children can bring in plants and cuttings from home so everyone can observe and enjoy them.

**Supplies**
A partial list of supplies to get you started is included. You will likely add your own supply suggestions along the way. You will also discover that many everyday items can become garden supplies. An old spoon can become a trowel. An old pot can become a planter. To obtain supplies, send a note home asking if parents have any old supplies to donate. Contact local growers and garden centers to find out if they would be willing to donate supplies. (Tell them that their names will be mentioned in articles submitted to school and community publications.)

**A Starter List**
Drip trays and saucers; Old nursery flats; Plant sprayers; Scissors; Commercial potting mix; Components to make-your-own-mix (peat moss, perlite, vermiculite); Trowels; Shovels; Flower pots and assorted containers (from yogurt cups to coffee cans); Plant labels; Watering cans (or old pitchers); Buckets; Hose; Garden twine/string; Wheelbarrow; Compost; Fertilizer; Magnifying glasses; Old spoons and forks; Thermometers for soil and air; Measuring spoons and cups; Popsicle sticks; Marker pens; Garden sticks for staking; Scale; Rulers; Newspapers; Butcher paper.

**MUM MEMO #1**
A Classroom Chrysanthemum Cuttings Kit is available from Yoder Brothers, Inc., to supplement activities in this book. The kit contains 50 rooted garden mum cuttings. The first kit is FREE with the purchase of this book. Simply return the order form in the Teacher Resource Kit to get your Cuttings Kit. In future years, Classroom Chrysanthemum Cuttings Kits can be purchased by sending a check for $9.95 to: Customer Service, YODER BROTHERS, INC., P.O. Box 230, Barberton, OH 44203. Please order Cuttings Kits by January 15 so that they can be shipped between March 1 and March 15. This is the only time of year cuttings will be shipped.

**MUM MEMO #2**
A good source for an assortment of cut mum flowers and mum flower relatives (for Lesson 2, Lesson 3, and other activities you develop) is a florist’s shop or supermarket floral shop. Inquire whether they would be interested in donating some fresh product for classroom use, or at the least, some product that is past its prime and will soon be discarded. Mum flowers can also be cut from a garden mum or pot mum plant that is being used for classroom activities.

**Resources**
Resources, such as books, catalogs and magazines, enrich plant lessons. Lessons would be less exciting and less enriching without them. A thorough list is provided with the *Teacher Resource Kit*. The resources are popular ones that are well-suited to beginning gardeners and are widely available at libraries, bookstores, and newsstands. Catalogs are frequently available free of charge from garden suppliers and offer a wealth of information and color pictures. A wonderful source, jam-packed with everything from lists of associations to garden supply companies, is *Gardening By Mail* by Barbara J. Barton, Houghton Mifflin Co., Boston.
MUM TERMINOLOGY FOR THE TEACHER

**Annual**: A plant that completes its life cycle, from seed to seed, in one growing season (e.g. sunflower).

**Biennial**: A plant that completes its life cycle in two years. The first year, energy goes into forming roots and flowering takes place the second year.

**Botanical Name**: This is also known as the scientific or Latin name. It is a two-part name, with the first part being the genus and the second part being the species (also known as specific epithet). Botanical names are helpful because they do not vary, whereas common names can vary between catalog sources, regions of the country, and so on.

**Common Name**: The frequently used plant names. Often colorful and descriptive. May vary with usage, so botanical names are used for accuracy.

**Compost**: A mixture of organic matter, such as leaves, chipped wood, and lawn clippings, that has decayed into a dark, nutrient-rich mixture that enriches the soil and makes it more crumbly.

**Cutting**: Part of a plant that is cut off and rooted to produce a new plant as a form of vegetative propagation. Cuttings can be made from roots, stems, and leaves, depending on the plant.

**Division**: The process of dividing overgrown perennial plants into smaller sections. Garden mums should be divided every other spring.

**Florets**: Each small individual flower that makes up the flower head of composite flowers, like mums. (Florets may be mistakenly referred to as only petals, but they are complete flowers.) A daisy mum has disk florets in the center which are compressed and short to give the appearance of an eye. Longer, showier ray florets radiate out from the disk. A decorative mum may be composed almost exclusively of ray florets. An anemone has elongated disk florets which form a prominent center cushion.

**Flower Form**: Flower forms are variations in form due to variations in numbers, sizes, shapes, and arrangements of the individual florets. The four main flower forms for mums include anemone, daisy, decorative, and spider.

**Loam**: The ideal, well-balanced garden soil, it contains fairly equal proportions of the different particle sizes of sand, silt, and clay. It is sometimes referred to as “friable” because it breaks up easily, holds moisture well, and encourages organic activity.

**Mulch**: A substance spread like a blanket or covering over the ground around plants to maintain soil temperature, conserve moisture, add nutrients, and prevent soil from compacting. Common mulching materials include organic materials such as wood chips, straw, shredded leaves, and pine needles.

**Organic Matter**: Natural material used to enrich and improve the soil. Examples include compost, leaf mold, and peat moss.

**Partly Shady**: A partly shady location is a spot that receives three to six hours of direct sunlight per day.

**Perennial**: A plant, such as the garden mum, that completes its life cycle over the period of many years. Within each year, the plant dies back to the roots in the fall, the roots survive the winter, new shoots form in the spring, buds are formed and flowering occurs, then the top dies back again. A more accurate term for garden mums is actually “tender perennial” because they can be damaged by freezing temperatures and drying winds if not properly planted and protected.

**Photoperiod**: Term used to refer to the phenomenon of plants flowering in response to day length. Mums are known as short-day plants because they flower when the days are shorter. (There are twelve or more hours of darkness per day.)

**Pinching**: The practice of removing the growing tips from shoots to encourage branching and development of compact bushy plants.

**Shady**: A shady location is a spot that receives two hours or less of direct sunlight per day.

**Sunny**: A sunny location is a spot that receives six hours or more of direct sunlight per day.

**Variety**: The variety is a subdivision of the species. Also called “cultivar.” It is used to indicate variations (such as color and form) that have been developed in the wild or as a result of hybridizing (breeding) activities by people. The names may be descriptive or may even be people’s names.

**Vegetative Propagation**: The act of producing a new, complete plant from part of another one using roots, stems, and even leaves.
Plant Classification

For many years, the scientific, Latin, or botanical name for chrysanthemum was *Chrysanthemum x morifolium* (Chrysanthemum being the genus and morifolium being the species). This name will be seen in most field guides and gardening books used by the class. Actually, someone made a mistake in classifying and naming the chrysanthemum several centuries ago. This was corrected recently and the mum was reclassified and renamed by botanists as *Dendranthema grandiflora*. The class may come across this new name in some sources. Most people still use the genus name Chrysanthemum, however, and the common or popular name "mum" will continue to be widely used. There are different types of mums. Mums that have been bred for use in outdoor gardens are "gard_a mums" and those that have been bred for indoor enjoyment are "pot mums." There are also mums which flower on long stems and are used for flower arranging. These are called "cut mums." Pot mums and cut mums are typically grown in greenhouses. Pot mums and cut mums are not hardy enough to survive winters outdoors in parts of the country with cold winters.

Mum Relatives

The mum is in the Compositae Family (also spelled Composite) or Daisy Family because of the arrangement of its flowers. The flower head is a composite of many individual flowers (florets) tightly packed together. A newer name for this family is the Asteraceae Family, however you will still most likely encounter the name Compositae Family in books used in the classroom. Close relatives in the same family include the ox-eye daisy, Shasta daisy, feverfew, and tansy. Their flowers look very similar to the mum. More distant relatives in the same Composite Family include the yarrow, aster, bachelor’s button (cornflower), coreopsis, calendula, cosmos, dahlia, English daisy, thistle, strawflower, sunflower, black-eyed Susan, purple coneflower, marigold, and zinnia, plus many wild weeds such as dandelion, goldenrod, and fleabane. The accompanying diagram depicts the relationship between these flowers.

Mum Life Cycle

Garden mums are put in the general category of perennials. A perennial plant completes its life cycle each year over a period of many years. Within each year, the plant dies back to the roots in the fall, the roots survive the winter, new shoots form in the spring, buds are formed and flowering occurs, then the top dies back again. The accompanying diagram illustrates this life cycle. A more accurate term for garden mums is tender perennials, meaning they are prone to freezing and drying in the winter if not properly protected. They are not as hardy as some other perennials. Information on the next page explains how to properly plant and protect garden mums to help them survive and return each year as a perennial to provide beautiful, blooming enjoyment.
BASIC MUM INFORMATION FOR THE TEACHER
Using the Classroom Chrysanthemum Cuttings Kit

MUM MEMO
Order a Classroom Chrysanthemum Cuttings Kit from YODER BROTHERS, INC. by January 15. See instructions on Page 3, Mum Memo #1.

Planting New Cuttings For Classroom Use
Cuttings should be planted within 48 hours of arrival in the classroom. The following schedule outlines planting, pinching, and flowering dates for the spring:

Plant Rooted Cuttings: March 1 to 15.
Pinch: Approximately two weeks after planting.
Flower: Approximately seven to nine weeks after planting.

Prepare the growing mix. Use a commercial bagged soilless mix. Or, mix your own. (This can incorporate math.) Prepare your own mix using two parts peat moss, two parts vermiculite, and one part perlite. Have children moisten the mix by sprinkling it with water and mixing it around with their hands.

Fill pots three-fourths full.

Using a finger or pencil, poke a hole big enough to hold a cutting in the center of each pot.

Carefully place a cutting into each hole. Make sure the leaves stay above the surface of the soil. Gently push the mix around the cutting and gently pat it down around the stem. (NOTE: Each child should plant a cutting and be in charge of that cutting. Plant extra cuttings to use in plant investigations throughout the book.)

Carefully sprinkle room-temperature water on the mix around the cuttings. Let water run out the bottom of the pots.

Label a Popsicle stick for each child: child's name, date, MUM PLANT. For extra plants, include a stick with the date and MUM PLANT. Have children draw pictures of their mum cuttings for their Mum Books. Record mum planting day on the class calender.

Place the plants in a tray and put them in a bright location, preferably one that receives natural light. If a window faces south, keep cuttings a few feet away from the window out of direct hot sun during the first two weeks. Have children take turns recording the daily weather.

Check the Magnificent Mum cuttings daily. Have children poke their fingers in the soil every couple days to do a Mum Moisture Check. When the top half-inch feels dry, gently sprinkle room-temperature water on the soil until it just starts to run out the bottom.

Planting Outdoors
These pointers apply to rooted garden mum cuttings that have been flowered in the classroom in the spring or to flowering garden mum plants that have been purchased or donated to the class in the spring.

Plants that have been started indoors need to be "hardened off" or gradually prepared for the outdoors. Start in May by putting them outdoors in a partly shady spot for a few hours each day. After a week, put them in a sunny spot. Keep them outdoors for a few nights overnight. Then, they are ready to plant.

Plant young plants or larger blooming plants 18 to 25 inches apart in a sunny location (six hours or more of strong, direct sunlight).

Plant in fertile, well-drained soil. A good soil mixture is made up of a series of "crumbs" or particle sizes. See Lesson 7 (Page 14) for more details. If the soil feels hard and is not crumbly in the hand, add compost, peat moss, or other organic matter. Spread about 2 inches of loosened soil on top and mix it in with a shovel.

For gardening in containers, it is best to avoid using soil from the yard because it is heavy and doesn't drain as well in containers. It's easiest to use a commercially prepared soilless potting mix from the garden store.

Cut back stems halfway after you have enjoyed the flowers in the spring.
BASIC MUM INFORMATION FOR THE TEACHER
General Garden Practices

Pinching
To encourage branching and development of compact bushy plants, it is very important to pinch back your garden mums in the spring as soon as the new growth is 4- to 6-inches tall. Use your thumbnail and index finger to remove or “pinch” about one-half of the new growth at the top of each and every shoot. Repeat this procedure through the summer whenever new shoots are 3- to 5-inches long. In northern states, stop pinching around July 10 to 15. In southern states, stop pinching around July 20 to August 1. (See accompanying illustration on pinching.)

Fertilizer
- During the growing season and for garden mums planted in the spring, incorporate into the soil a general purpose dry fertilizer such as 5-10-5 at the rate of a half pound per 100 square feet (another good Mum Math Challenge). Repeat monthly until August. Liquid fertilizer, such as Miracle Gro, is preferred by many people and may be used instead. Mix and apply according to package directions.
- Do not over fertilize.

Special Note: Flowering garden mums planted outdoors in the fall do not need any fertilizer until they begin to grow the following spring.

Winter Protection
- Keep your garden mums’ soil moist as winter approaches.
- There is no need to prune plants until the following spring.
- Mulch the plants after several hard frosts with straw or evergreen branches, etc.

Watering
- Always thoroughly water freshly planted garden mums. Check them for wilting every day for seven to 10 days.
- Rainfall in many areas is sufficient to keep your garden mums growing well. During dry spells, water as needed to keep plants from wilting.
- The soil in containers will dry out faster than soil in the ground. During especially hot or dry spells, containers may need to be watered every day. Check the soil and the status of the plants every morning.
- Water plants in the morning so they have moisture to get them through the day. Avoid watering in the heat of the day.
- Putting a layer of mulch on the surface of the soil around the plants will help minimize water loss and reduce watering frequency.

Spring Preparation
- In the spring, remove any old garden mum stems and gradually remove the mulch which is covering the plants (a rake works fine).
- Garden mums should be divided every couple of years. The best time to dig up the mums is after they have been cut back and new growth begins to develop. Discard the old center portion of the root mass. Separate young offshoots and plant each 18 to 25 inches apart. Water thoroughly, then apply general purpose fertilizer as indicated above.
LESSON 1: GET TO KNOW A MUM
Structure, Function, Size

I. Mum - Under-The-Microscope

Skills: Observe, Compare

Materials: FOR THE CLASS: Mum plant, slides, microscope (a magnifying glass is fine). FOR EACH CHILD: Shoe box, paper grocery bags, yarn, colored markers, two 8½ - by 11-inch sheets of cardboard, REPRODUCIBLES: Mum Kids Page, Mum's The Word Page

MUM MEMO
It is preferable to use a garden mum plant for this activity, but a pot mum can be used instead.

Procedure:

1. Introduce the children to a chrysanthemum. Chrysanthemums are also known as "mums" for short and in these exercises they are fondly known as Magnificent Mums. Gently pull the plant, or a small portion of it, out of the pot. Have volunteers point out the various plant parts.

2. Put the children into cooperative groups of four or five each. Challenge them to brainstorm and develop a list of 20 questions that will help them get to know the mum better through observation. As a class, work together to answer the questions. Have volunteers come up to inspect the plant and help determine the answers. Next, develop a list of 20 Mum Descriptive Words to use in art and language art activities.

3. Have the children get an even closer look at the mum plant with a microscope or magnifying glass. What will they look for? Help the children prepare slides of sections taken from different plant parts. Have them view these slides under a microscope and draw what they see on a page titled "Mums-Under-The-Microscope." Include this page in the Mum Books made in the following step.

4. Finish with the following fun activities:
   a. Introduce the children to the Mum Kids. Explain that each Mum Kid looks a little different just like each of us looks a little different. We all have mouths and ears and they have petals and leaves. Explain that the Mum Kids will help show that mums, and all flowering plants, can be interesting and fun. Introduce the idea of the Mum's The Word newsletter. Put the children into cooperative groups and have each group write about a different topic during the Magnificent Mum Education Program.
   b. Have the children make Mum Boxes and Mum Books to use during the Mum Activities in this book.

   • Make the Mum Boxes by having the children cover shoe boxes with brown paper and decorate them with Mum Kids cutouts from the Mum Kids Page. Use the Mum Boxes to collect items during Mum Patrol activities.

   • Make the Mum Books by using sheets of cardboard for the "covers." Have children decorate the front and back and hand letter the title "MY MUM BOOK" with their names. Punch three holes down the left margin and connect with yarn. Add Mum Worksheets, Mum Journal Pages, and artwork as completed.

Extension:

• Science: Use the mum plant to enrich lessons on photosynthesis. Ask the children what kind of experiment could be done to prove that leaves are the parts that capture sunlight. Try the Mum Leaf Coverup to learn more about leaves and photosynthesis. Use the mum plant from this lesson:
   a. Carefully cover several leaves with black paper. Hold the paper together with paper clips.
   b. Put the plant in a bright window but out of hot, direct sunlight. Water the plant when the top half inch of soil feels dry to the touch or every other day.
   c. Wait two weeks and remove the paper. Discuss the results. What Mum Conclusions do you make? What does this show about the importance of leaves for capturing sunlight for photosynthesis? To finish, have children imagine they are small enough to climb inside the mum plant and tour the photosynthesis factory. Have them draw what they would see. Add the page to their Mum Books.
LESSON 2: GET TO KNOW THE FAMILY
Identification, Comparison, Classification

I. The Mum Kids Family Tree

Skills: Observe, Sort, Classify

Materials: Mum plant and related flowers — photos or actual flowers if available (See list of relatives on Page 5.), identification guides: (simple picture guides and field guides — see Reference List in Teacher Resource Kit), garden catalogs, magazines

Procedure:

1. Explain that plant scientists use the characteristics of leaves and flowers to sort and classify plants. That is how they find out which plants are related to each other. The study of plant parts and plant life is called botany. The study of plant identification and classification is called taxonomy. Challenge students to become beginning taxonomists. Put the children into small groups and give each group a set of flowers or pictures. Have them sort the flowers into groups based on common characteristics.

2. Have each group explain its sorting and classification system. Did they find any relatives of the mums? How can they tell? Explain that mums are in the Composite Family. It is so named because what looks like a flower is actually a composite or mass of many flowers tightly-packed into a flower head. The Composite Family is actually the largest family of flowering plants.

3. Use a simple picture identification guide, such as The Golden Guide To Flowers, to explain one way of identifying flowers. Can you find the chrysanthemum? Depending on the book, you may see that each flower has two names, the common name and the botanical name. Tell the children that the chrysanthemum you are studying is known scientifically as Dendranthera grandiflora (the older classification is Chrysanthemum x morifolium). The common name is "mum." Extend this identification and classification practice to using a field guide. Many field guides use a system of an ordered series of questions which lead you to the identification of a given plant. Such systems are called "keys" and the process of answering the question is called "keying," presumably since you "unlock" or discover the identity of the plant. Try using a field guide to identify a garden mum and other plants which are being observed.

4. Review the plant classification terms and family tree diagram given on Page 5. Perhaps you will find other flowers that used to be classified in the genus Chrysanthemum. Do they look similar to the mum? (They should look quite similar.) How about flowers from other genera in the Composite Family? Do all the flowers in the Composite Family look like Millie Mum Kid, which is a daisy? (No, some are more like a cushion, such as the dandelion, and mums like Moe Mum Kid and Minnie Mum Kid.)

5. Can you find other relatives in the Mum Kids' family tree (members of the Composite Family) on nature walks or in garden catalogs or magazines?

6. Have the children draw and label a mum flower and the flower of one relative on a page entitled "The Composite Family: Mum And A Relative." Add this page to their Mum Books.

Extension:

Science/Art: Make a Mum Family Tree Mural. Cover a bulletin board with brown paper. At the top, write "The Composite Family: The Magnificent Mum and Relatives." Cut out pictures of mums and their relatives from old magazines and garden catalogs. Glue pictures on construction paper and write the flower name underneath each picture. Mount the "family portraits" on the board to make a mural. (Refer to Page 5 for a diagram of the family tree.)

Science: Have Classification Contests. Put the children into small cooperative groups. Give each group the same set of flowers and a field guide. Which group can correctly classify the most flowers in a specified time period?
LESSON 3: MAGNIFICENT MUM FLOWERS

Diversity and Development

I. So Many Mums!

Skills: Observe, Sort, Classify

Materials: Mum flowers (See Mum Memo #2 on Page 3 for tips.), REPRODUCIBLES: Flower Forms Page, Mum's The Word Page, TEACHER RESOURCE KIT: Mum Color Poster, Mum Variety List, Reference List, Mum History and Stories

Procedure:

1. Review the structure of a Composite flower by using a daisy (like Millie Mum Kid) as an example. (Use the diagram on Page 5 as a reference.) Tell the children that a mum is many, many individual flowers packed together to resemble a single large flower. Explain that a daisy is actually “two kinds of flowers in one.” These individual small flowers are called florets. The outer florets (what we call petals) are ray florets and the florets in the center are called disc florets.

2. Explain that there are other kinds of mum flower forms in addition to the daisy. These forms have different numbers, sizes, and arrangements of the individual florets. All have both ray and disc florets. Sometimes the disc florets are not very prominent. Show the children pictures of different flower forms, using the Flower Forms Page and garden catalogs. Ask if they can figure out why each type has its particular name. Tell the story of the pompon—a mum in a hat. (See Mum History and Stories.) What kind of flower forms are the Mum Kids? (Minnie-button; Millie-daisy; Moe-decorative).

3. Reproduce the Flower Forms Page. Have children color and label the page for their Mum Books. Show them actual photos from the Mum Color Poster.

4. Explain that there are hundreds of different mums in different combinations of flower forms and color. Each different one is called a variety of the mum. To make it less confusing, each variety is given a name. Give the children a chance to review the variety list from the Teacher Resource Kit. Is there a variety with the same name as someone in the class?

5. Assign one group to write about Multicultural Mums for the Mum’s The Word newsletter, (e.g., “The Many Faces Of The Mum” or “Multicultural Mums Make A Beautiful World.”)

II. Trick-A-Mum

Skills: Observe, Communicate, Compare, Infer, Analyze

Materials: Four rooted mum cuttings (from Lesson 5, Page 12), closet, box, table lamp, timer

Procedure:

1. Ask the children if they know what makes a plant like a mum start to flower. Explain the photoperiod concept. (See Page 4.) Many professional growers actually trick plants to flower at different times other than their natural bloom dates in order to have them ready for a holiday. They do this in a greenhouse by artificially providing light or dark conditions, depending on the time of year. Challenge the children to investigate the photoperiod response and Trick-A-Mum. Have them brainstorm some ideas on how this can be done. Help them design the following experiment.

   a. Label two potted cuttings “EXTRA LIGHT” and two cuttings “COVERED.” Place these cuttings in the same location as the other class cuttings. At the end of the school day, place the “EXTRA LIGHT” plants in a different room under a table lamp that is set on a timer to come on from 10 p.m. to 2 a.m. Every morning put these plants back with the others in the classroom. The “COVERED” plants must be placed in a completely dark location at the end of each day, such as under a box in a closet that will not be opened at night. Put them back with the other plants in the morning. Follow the same watering and pinching schedule for the test plants as used for the other plants.

   b. Draw some Mum Conclusions when the Plant-A-Mum-Project plants are showing buds. What differences do you see in plant size, leaf form, and flowering time? Discuss how this information could be put to use by a professional plant grower.

   c. Have the children illustrate the photoperiod or Trick-A-Mum response and add the page to their Mum Books.
LESSON 4: THE LIFE AND TIMES OF THE MUM
The Life Cycle Story

I. Mums and The Seasons
Skills: Observe, Communicate, Organize
Materials: Camera, art supplies, Mum Patrol Materials

The teacher should review the Mum Life Cycle on Page 5 before doing this lesson.

Procedure:

1. At least once during each season, talk to the children about how nature is growing and changing around them all the time. Use Mum Observation And Discussion as the starting point for a discussion about "the bigger picture." Look at mums and other plants in the Class Plant Collection. Are there some plants that are very young (e.g., cuttings or sprouts)? Do the children remember what the mums looked like a month ago? How do they look different now?

2. Turn into the Mum Patrol. Get Mum Boxes and take a Mum Patrol Stroll outdoors to look for different life stages of plants. Point out plants that are sprouting, flowering, or dying. What stage are garden mums in right now? How do the trees look? Look for dandelions which are a mum relative also in the Composite Family. Can you find some dandelions in the bud, flower, or seed stage? If an outdoor walk is not possible, observe the world from your windows. Explain that growing and changing is a part of nature. Sometimes plants die because they aren't healthy. Other plants are turning brown and producing seeds so that more new plants can grow. Many plants, like mums and trees, will turn brown in the fall, then take a rest in the winter so that they can bloom healthy and strong again the following year.

3. Draw a circle on the blackboard and write the word "circle" underneath. What is a circle? Write the word "cycle." What is a cycle? Note how similar the two words are. The word "cycle" actually comes from an old word meaning "circle." Cycles are repeating circles. What examples of cycles did you observe outdoors? To emphasize the concept, make a Mum Seasons Circle. On a bulletin board, make a circle shape. Label the seasons in order around it.

Start by mounting a picture or photo illustrating the weather for each season.

4. Try these other activities to emphasize the life cycle concept during the year:
   - Create a Chrysanthemum Collector's Corner. This may be done near the Classroom Plant Collection. Cover a display board with fabric or paper in a season-appropriate color. Label the board for the appropriate season. Discuss the season with the children. What changes are taking place with outdoor plants? How have garden mums planted outdoors around the school or in neighborhood gardens changed? Have the children name some other objects they would expect to find outside during the present season. Get Mum Boxes and go outside for a Mum Patrol Stroll. Observe garden mums planted outdoors. Put the children into groups and have each group collect two objects that are characteristic of the current season. Indoors, put these items in the Chrysanthemum Collector's Corner. Have the children write about their observations in issues of the Mum's The Word newsletter.
   - Have children create a chapter in their Mum Books entitled "The Life And Times Of The Mum." On the first page, have them draw a Mum Seasons Circle. Then, each season have them write a few paragraphs about how a garden mum and other plants grow and change.
LESSON 5: MUM THREE P’S
Planting, Pinching, Propagating

I. Plant-A-Mum-Project
Skills: Observe, Communicate, Compare, Infer, Analyze
Materials: Classroom Chrysanthemum Cuttings Kit, 50 small flower pots or similar containers with drainage holes poked in the bottom, drip saucers or trays, potting mix, water, 50 Popsicle sticks, marking pens, REPRODUCIBLES: Mum Journal Page, Mum’s The Word Page

MUM MEMO
This lesson should be done in the spring based on desired flowering time. Review the schedule on Page 6 before starting. Be sure to order a Classroom Chrysanthemum Cuttings Kit, with 50 cuttings, from YODER BROTHERS, INC., by January 15. See Page 3, Mum Memo #1 for details.

Procedure:
1. Explain vegetative propagation to the children as defined on Page 4.
2. Hold up a mum cutting and tell the children that it is a stem cutting which was cut from one plant in order to make another plant. It is an example of vegetative propagation. Discuss the cutting. Have the children point out the leaves, stem, and roots.
3. Follow the directions for planting the cuttings as given in Basic Mum Information for the Teacher on Page 6.
4. Allow mum cuttings to get established for two weeks. After two weeks, have the children pull very gently to see if their cuttings have established new roots. When they feel resistance, new roots have begun to grow. Signs of new top growth will also indicate new root growth.
5. When roots are established, cuttings can be moved to a brighter spot if necessary. This should be done particularly if stems are starting to look thin and leggy. Some cuttings may be removed and used for Plant Investigations. (See Lessons 6 through 16.) The remaining cuttings can be grown according to the schedule on Page 6. Write about these activities in the Mum’s The Word newsletter.
6. The children should continue to observe their mum plants daily and water every other day. Turn plants one quarter turn daily to prevent crooked plants as they grow toward the light. Once a week, have the children draw a picture and record the height on a Mum Journal Page in their Mum Books. As a class, plan what you will do with the Magnificent Mums. Send them home for outdoor planting? Have a plant sale? (See Page 21.) Plant the mums to beautify the school or community? (See Page 22.)

II. Pinch-A-Mum Experiment
1. Start by referring to Page 7 for pinching pointers. Show the children a blooming mum plant or a picture of one. (See the Mum Color Poster from the Teacher Resource Kit.) Discuss the mounded, bushy form of the plant and the abundance of flowers. Explain that pinching is a plant grower’s way of getting the plants to look this good.
2. Have the children brainstorm some ideas for how they could test whether pinching really makes a difference or not. Try this experiment:
   a. Using four young mum plants from the previous activity, label two plants A and two plants B. Plant Pair A will not be pinched; Plant Pair B will be pinched according to the regular schedule as followed for the Plant-A-Mum-Project. Otherwise, give plants the same growing conditions and care as those in the Plant-A-Mum-Project.
   b. Make Mum Observations weekly and have children do drawings on a Mum Journal Page in their Mum Books entitled To Pinch Or Not To Pinch. What are their Mum Conclusions after six weeks? What other plants would benefit from regular pinching? (Many house plants, including ivy and coleus.)

Extension:
☆ Art: Allow children to take photos of each other with their new Magnificent Mums. Create a Mum Project Class Collage.
LESSON 6: LET'S INVESTIGATE
Light and Temperature

I. Mum Patrol

Skills: Observe, Communicate, Compare, Infer, Analyze

Materials: Mum Patrol Materials, thermometers, gardening books

Procedure:
1. Review what mums and other plants need to grow. Write the list on the board, "WHAT MUMS NEED TO GROW," e.g., light, warmth, soil, nutrients, water, and air. Keep it posted throughout the Mum Investigations. Explain that mums have certain light and temperature requirements. Specifically, they should be in a spot that is sunny and warm. Explain the definitions of "sunny" and "shady" on Page 4.

2. Challenge the children to investigate light and temperature in different spots so they can judge what is best for the Mum Kids. Get Mum Boxes and take a Mum Patrol Stroll outdoors to look for spots that are sunny and shady. Find a spot that is shady all day and one that is sunny most of the day. Leave a thermometer in each spot for 15 minutes. Which spot is warmer? Are there different kinds of plants in each spot? Does one spot have a greater number of colorful flowers and leaves than the other spot? Do plants of the same species grow more sparsely in one spot compared to another? Collect a few leaves from plants of the same species growing in sunny and shady spots. Do the leaves look different? Often, the leaves will be larger in shady places so they have more surface area to collect light.

3. Using a gardening book, find pictures of plants that generally grow in shady spots and in sunny spots. Did you find a picture of mums?

II. Plant Investigations: Amount of Light

Skills: Observe, Communicate, Compare, Infer, Analyze

Materials: Two pairs of young mum plants that have established roots (from Classroom Chrysanthemum Cuttings Kit, see Page 12), REPRODUCIBLE: Mum Journal Page

Procedure:
1. Find a sunny windowsill (one that is sunny most of the day) and a shady spot (one that is shady most of the day). Have children make a Mum Prediction: Does the amount of light a mum gets affect its growth? Label the plants in one Plant Pair "SUNNY - MORE LIGHT" and plants in the other Plant Pair "SHADY - LESS LIGHT." Measure their height and put them in the appropriate spots. Follow the same watering schedule for all plants.

2. Once a week, make Mum Observations and measure each plant's height. Record findings on Mum Journal Pages.

3. After one month, bring the plants together in the classroom to discuss the Mum Results. Which Plant Pair grew the most? Which Plant Pair has the most new leaves? The deepest green color? (NOTE: Plants in the shady spot may appear to have grown more in height but actually were stretching toward the light source. Thus, compare the nature of the growth itself. Plants in the shade will likely have a more spindly, pale appearance.) What does this tell us about sun-loving flowering plants grown in a sunny spot compared to a shady spot? Pose this Mum Kids Challenge Question: How would a Mum Kid like to grow in a bright, sunny spot in the garden compared to a shady spot under a tree that doesn't get much light? Remind the children that mums should be planted in a location that receives at least half a day of sun (six hours or more of strong, direct sunlight is best).

Extension:

- Science: Obtain a simple hand-held light meter from a science department or garden center. Use the meter around the classroom and school grounds.

- Art/Science: Have children create a Light Guide Page to define and illustrate the terms "sunny" and "shady." Add the page to their Mum Books. Dedicate a special issue of the Mum's The Word newsletter to the importance of light for plants.
LESSON 7: LET’S INVESTIGATE
Soil and Soil Helpers

I. Mum Patrol

Skills: Observe, Communicate, Compare, Infer, Analyze

Materials: Mum Patrol Materials, shovel, one-gallon plastic bags, identical flower pots (one for each soil sample), butcher paper, plastic spoons, magnifying glasses, marking pens

Procedure:

1. Refer to the “WHAT MUMS NEED TO GROW” list and point out soil. Have the children ever really thought that much about working with “dirt”? Remind them that “soil” is actually a more accurate term than “dirt.” Soil is the top layer of the earth’s surface used to support plant life, animals, humans, and the structures we build. Dirt is not a real soil term. “Dirty” may be used to describe your hands once you’ve worked with soil. Explain to the children that in order for the Mum Kids to grow big and magnificent, they need more than just any kind of soil.

2. Challenge the children to do some soil investigations so they can figure out what is best for the Mum Kids. Get Mum Boxes and take a Mum Patrol Stroll to look at soil in different locations: in a garden, under a tree, on the playground, next to a sidewalk or parking lot, near a rocky spot or outcropping. Explore the soils.

3. Collect soil samples from each spot to take back to the classroom. Get a couple shovelfuls of each. Put each sample in a plastic bag and mark with location. Plan to do the following Soil Investigations right away.

4. Fill a pot with a portion of each soil sample and label each pot. Save these samples to do Water Investigations (See Lesson 8 on Page 15.) Explain to the children that understanding and classifying the remaining portions of samples collected from outdoors will give an idea of how hard or easy they will be to work with for planting and gardening purposes.

5. Investigate remaining portions of samples collected in the previous step. Try these activities:

   - Spread a portion of each sample out on white paper. Use plastic spoons to sort each sample into piles of different particle sizes. Which sample has the biggest assortment of particle sizes? Which one has the most bits of bark, leaves, and other organic matter?

   - Make soil shakes. For each soil sample, fill a one-quart jar halfway with soil. Add water until the jar is almost full, cover tightly, and shake carefully. Let the jars stand for 24 hours, observe them, and compare the results with the diagrams on Page 6. Can you classify your soil samples? Emphasize that all soils are mixtures of particle sizes of sand, silt, and clay. The proportion of these components varies with each soil and the ratio determines the type of soil you have. It is ideal to have a series of crumb sizes so that soil mix holds water but also drains for aeration.

6. Discuss your findings. What do these activities reveal about the suitability of the soil samples for planting? Pose this Mum Kids Challenge Question to the class: Which soil do the children think the Mum Kids would like best in order to grow big and magnificent? Have the children draw and describe a good mum soil. Put the page in their Mum Books.

Extension:

- Science: Divide the class into four cooperative groups. Assign each group one of the following topics: compost, fertilizer, mulch, worms. Each group must research the assigned topic, gathering information on how the material works to help the soil and the mum plants and how it can be used properly in the garden. Students must create posters to diagram these processes and develop reports that will be presented in written and oral formats.

- Science: Obtain a simple soil testing kit from a local garden center and use it to test the chemistry of soils from different locations on the school grounds. Have students bring in soil samples from home for testing. Contact the local agriculture extension office to find out about soil testing in your area.
LESSON 8: LET'S INVESTIGATE
Water

I. Water Investigations

Skills: Observe, Communicate, Compare, Infer, Analyze

Materials: Soil samples from Soil Investigations Lesson (page 14), butcher paper, watering can, water, identical flower pots (one for each soil sample)

Procedure:
1. Refer to the "WHAT MUMS NEED TO GROW" list and point out water. Explain to the children that in order for the Mum Kids to grow especially big and magnificent they need plenty of water. While nature can provide water through rainfall, there are times when we need to help and add more, such as at planting time and during dry spells. Explain that sometimes plants in one area of the yard need to be watered more often than plants in another area. Do the children know why? Tell them to think about puddles. Sometimes puddles stay around in one spot longer than they do in another spot. Sometimes one area of the yard stays wet and mushy longer than another. This has something to do with the soil. You are going to do some investigations to try to figure it out.

2. Try some Water and Soil Tests. First, ask the children what they think is meant by the terms "dry," "moist," and "wet." Put samples into metal or plastic containers to find out. First, allow samples to dry out. (Soil that is dry crumbles when it is squeezed.) Sprinkle samples with water to make them moist. (Soil that is moist or "just right" sticks together but doesn't ooze.) Add more water so samples are quite wet and feel them. (Soil that is too wet oozes.) Develop a list of descriptive soil terms.

3. Check drainage ability. Put the soil samples into identical flower pots. Add the same amount of water (start with half a quart) to each potted soil sample, one sample at a time. Check how long it takes for water to drip out the bottom. Does it take longer for some soil samples than for others? Does the water sit on top of some samples for a while? Relate this back to the "puddle situation" in Step 1. Some soils naturally drain faster than others.

II. Plant Investigations

Skills: Communicate, Compare, Infer, Analyze

Materials: Young mum plants that have established roots (from Classroom Chrysanthemum Cuttings Kit, see Page 12), assortment of soils, REPRODUCIBLE: Mum Journal Page

Procedure:
1. Try some Plant Pairs Investigations to test for the best conditions and practices to grow mums. First, brainstorm a set of soil and water conditions to test. All other conditions will be kept the same. Plan to use two pairs of plants for each test (e.g., solution A and B). Have the children develop a Mum Prediction for each test. Then, do Mum Observations throughout the test. After one month, compare growth rate and evaluate roots. Develop a Mum Conclusion for each investigation. Record all of these on Mum Journal Pages. Suggested investigations include:
   - Growing a plant in dry conditions (allow soil to dry out completely) compared to growing in moist conditions (water when top half inch feels dry).
   - Using just enough water to moisten the soil at each watering (about one-fourth cup) versus using enough so it drains out the bottom of the pot (about 2 cups).
   - Using another liquid (e.g., tea or soft drinks) to "water" plants compared to plain water.

2. Discuss your findings. How can this information be used when planning mum plantings for the home, school, and community? Which conditions would be best for the Mum Kids to grow big and magnificent?

MUM MEMO

Remind the children that water-conserving practices can take place outdoors in the yard and garden as well as indoors in the house. Have the children brainstorm a list of practices, then have them pick one to illustrate for their Mum Books.
I. Mum Patrol

**Skills:** Observe, Communicate

**Materials:** Insect resource material (see suggestions on Reference List in Teacher Resource Kit), magnifying glasses, Mum Patrol Materials, REPRODUCIBLE: Mum's The Word Page

**Procedure:**

1. Have the children brainstorm to develop a "WHAT MUMS DO NOT NEED TO GROW" list of things that can harm them or hinder their growth, e.g., disease, insects, animals, careless people, and bad weather. Explain that while there are harmful insects, there are also helpful insects. The following can be plant helpers because they eat insects: ladybugs, praying mantises, snakes, butterflies, spiders, dragonflies, toads, and some birds. Bees are important because they help fertilize and propagate plants. Insects that can be plant harmers are generally of the munching kind, such as aphids, mites, leafminers, thrips, and some caterpillars. Damage signs include chewed leaves, sticky leaves, and very wilted leaves. Leafminers leave little narrow "mines" or squiggly lines all over the leaves. Look for pictures of plant helpers and plant harmers in insect books. Can you find any plant helpers or plant harmers outdoors?

2. Get Mum Boxes, gather an assortment of insect field guides, and take a Mum Patrol Stroll. Look for signs of plant damage. Use magnifying glasses to look closely at leaves. Look on the undersides of leaves. Look in leaf "axils" where leaves join the plant. Gently shake plants to see if there are insects flying around. Are there signs of damage? Collect samples of any damaged flowers or leaves. Try to collect and identify five plant helpers and five plant harmers for a classroom collection.

3. Look at the collected plant samples. Talk about how you get rid of plant harmers. Remind the children that some chemical sprays can harm plant helpers as well as people. Are there some other ways to get rid of harmful insects? Look in organic gardening books or magazines to find out. Make a list of five alternate ways to control insects.

II. Mum Health Check

**Skills:** Observe, Communicate, Infer

**Materials:** Mum plant, magnifying glasses, care tag (with Teacher Resource Kit)

**Procedure:**

1. Explain to the children that the inspection and observation skill that they have developed are very important. Do they know why? It helps them to be Plant Doctors when they are obtaining and maintaining plants for the home and the garden. Explain that it is important to start out with healthy plants as well as to keep plants healthy throughout the growing season.

2. Explain that they are going to learn how to give a Mum Health Check. Think of it as giving the plants a “physical,” just like the children would get a physical before starting something strenuous. Have the children brainstorm a list of what they think should be checked during a Mum Health Check, (e.g., color of leaves, firmness of leaves, presence or absence of leaf damage, length and strength of stems, roots long and healthy and white in color). Explain that the Mum Health Check is a 1-2-3 process. Check the plant from top to bottom: (1) flowers, (2) leaves and stems, (3) roots and soil. **Be careful not to damage the plant when you do this!** Put the Mum Health Check into practice on a classroom plant. Encourage children to practice giving plants a Health Check together with their parents whenever they are visiting a garden center or other plant store.

3. After completion of investigations in this and the previous two lessons, have the children develop a page in their Mum Books entitled "Caring For Th. Mum Kids." They must describe the conditions they have determined as best for growing Magnificent Mums (specific light, water, temperature, soil, and fertilizer conditions). Also, describe how to give a Mum Health Check to determine the health of the plant. Have the children design a Mum Care Tag which briefly summarizes this information. Refer to the tag in the Teacher Resource Kit for ideas.
LESSON 10: MUM TERRITORY
Get-To-Know The Garden

I. Mum Patrol

Skills: Observe, Communicate, Cooperate, Measure

Materials: Mum Patrol Materials, yardsticks, field guides, garden reference material, butcher paper, colored pens and pencils

Procedure:

1. Tell the children that the skills and knowledge they have developed from the previous activities can be put to use in the garden. Remind them that each and every one of them can be a good gardener. Everyone can grow plants to help make the world a healthier, prettier place! These exercises will show them how to use their new skills in order to Get-To-Know The Garden.

2. Help the children brainstorm a list of 25 questions that will help them get-to-know the garden territory. For starters, it helps to determine which way is north, south, east, and west. You should also determine where the sunny and shady spots are. Other questions should range from size and shape of natural and man-made features to the colors, textures, and sizes of surrounding plant material. It helps to learn about climactic and territorial conditions as well. Is the terrain flat or hilly? What are the average weekly temperatures?

3. Challenge children to become the Mum Patrol in order to "learn the territory." Get Mum Boxes and take a Mum Patrol Stroll. Familiarize yourselves with the "territory" (school yard or community spot) surrounding where the Mum Garden Site will be. Take walks at various times of the day for two weeks. Try to get answers to the 25 familiarization questions. Use field guides to identify trees, shrubs, and plants in the garden territory.

4. As a class, make a diagram of the garden territory. Include the features observed in the previous step. Label plant material on the diagram with names as identified with the field guides.

Note: This would be a good opportunity to label trees and plants outdoors on the school grounds for the interest and enjoyment of others.

II. Garden Beginnings

Try these enrichment activities to help make the children comfortable with garden materials and practices.

★ Do some garden writing. Develop a "Spring Garden Special" and a "Fall Garden Special" issue of the Mum's The Word newsletter. Include information on local weather, planting tips, and plant lists. Ask local garden centers and garden writers for assistance.

★ Do some garden reading. Plan Garden Reading Sessions for the children. Make various gardening books, magazines, and catalogs available. Encourage children to look up mums and their relatives. Get a copy of the Old Farmer's Almanac for class reference. Look up and read something to the class daily.

★ Learn some garden terms. Review garden terms presented on Page 4. Look for examples of these terms, such as mulch, in the garden territory. Make Garden Vocabulary Cards out of 3-by-5-inch index cards. Print the garden term on the front and definition on the back. Laminate the cards. (Another option is for children to look up definitions in the dictionary on their own.)

★ Do Plant Health Checks. Practice Plant Health Check skills on already established plants on the grounds as well as on mums to be planted and plants in the stores.

★ Do some Mum Maintenance. If there are already some mums planted on the grounds from previous years, give children the opportunity to practice plant skills. In the spring, try some Mum Maintenance, such as dividing plants, removing mulch, pruning back old brown growth, or pinching back new growth. In the fall, pinch off "spent" (shrivelled, dying) flowers and yellowing leaves which are unsightly.

★ Create garden sculpture. Put the children into cooperative groups of five or six and have them create garden sculpture out of stone, wood, or recycled materials. Get books on Japanese gardening from the library and review the meaning of different shapes.
LESSON 11: PICKING AND PLANTING THE MUM SPOT
Garden Decisions and Design

I. The Mum Spot
Skills: Observe, Communicate, Cooperate, Infer, Measure, Analyze
Materials: Shovels, planting spot in ground or a container filled with potting mix, organic matter, mum plant(s), watering can or hose, yardsticks, REPRODUCIBLES: The Garden Spot, Mum's The Word Page

MUM MEMO
The teacher should review mum planting and care information on Pages 6 and 7 before starting this lesson.

Procedure:
1. Continue to strengthen the skills practiced in the previous lesson. Explain to the children that creating even the smallest garden requires planning and decision making. Remind the children that in order to plan a Mum Spot where the plants will grow into Magnificent Mums they must keep in mind the needs that were discovered during the Plant Investigations. Review these needs. (Note: This would be a good time for a field trip to a mum garden or garden center to get ideas. Also, consider bringing in a landscaper or garden designer to speak to the class.)

2. Pick-A-Spot. Take a Mum Patrol Stroll around the school grounds or other area to be planted to pick a spot. Put the skills into practice that were developed in the previous lessons. Look for a prominent spot that could use a splash of color. Gather information to complete The Garden Spot Worksheet. If planting space is at a minimum, consider container gardening. One or more containers can be placed and planted in a sunny spot. They should hold at least 1 to 1½ gallons of soil and should have drainage holes in the bottom. (Use a gallon milk jug to measure.)

3. Plan-The-Spot. If more than one plant is involved, what colors should be placed together? Will there be groupings of plants or any other pattern? Review photos in books or walk past local gardens for ideas. Fill in the blanks and color The Garden Spot Worksheet.

4. Prepare-The-Spot. This is a good chance for a group effort. Invite some parents to come and help. Be the Mum Team on a Mum Mission to beautify the land! Make sure everyone has a duty in the preparation process. First remove any weeds. Then start digging and loosening up the soil. Dig it about a foot deep and break up all the hard clumps. Spread about 2 inches of organic matter, such as compost on top and mix it in. If planting in a container, fill with a commercial planting mix.

5. Plant-The-Spot. Make it a fun experience. Have members of the Mum Team dig a hole for each plant, making the hole slightly larger than the container the plant is currently planted in. Put the plant in the prepared hole and replace the soil. Gently firm it down around the plant, but don't push out all the air. Then gently add one or two gallons of water (measure with milk jugs) to the soil around the plants. For the best finishing touch, add 1 to 2 inches of mulch, such as straw or bark chips. Indoors, celebrate Mum Planting Day with a party and mark the day on the class calendar. Have children illustrate Mum Planting Day in their Mum Books. Write a review for the Mum's The Word newsletter.

6. During the first week after planting, visit the mums every day and add water each day that it does not rain. After that, set up a Mum Care Schedule so the mum plants are checked and cared for weekly. Remind your Mum Team that making Magnificent Mums takes some effort but can be fun and rewarding. The planting helps the earth and makes it more beautiful. If planted in the spring, decide who will pinch, fertilize, and water plants over the summer. Refer to the yellow care and handling sheet in the Teacher Resource Kit for recommended care in the garden.
Here are suggestions for more creative projects to enrich mum lessons, enhance room decor, and enliven school or community projects.

* Magnificent Mum Banners. Have the children create mum-theme banners using fabric scraps on old sheets, or crayons and paint on brown paper. Hang banners in the room or throughout the school.

* Mum Kids Posters. Have the children create posters using the Mum Kids characters. Encourage them to create slogans, such as “Mum Kids Save The Earth” or “Have Fun With Mums.”

* Mum Family Scrapbook. Create a class scrapbook with photos and drawings of the various mum activities. Include drawings of the Mum Kid: as well as photos of mums and relatives clipped from old magazines and garden catalogs.

* Mum Art. Mums can be found extensively in Oriental art as well as in Dutch, Flemish, and English paintings. Do some art history research to find examples of Mums In Art. Give the children the chance to create their own Mum Art with water colors or other material. Hang paintings in the hallway for all to enjoy (if permitted).

* Mum History And Culture. Read the summary of Mum History provided in the Teacher Resource Kit. Have the children do further research into the prominence of mums in Chinese and Japanese history. Have a Japanese Tea Festival with mums and teas to celebrate. For something different, invite a professional floral designer to demonstrate “Ikebana,” i.e., Japanese floral design. Another approach to this activity could be The Mum Kids Go To Japan.

* Mums-In-The-News. Assign children to look for mums and other plants pictured and written about in ads, photos, and articles in newspapers and magazines. Give children the chance to present news items to the class. Make a Plants-In-The-News Scrapbook. Consider starting a Plant Column in the school paper. Perhaps it could be a question and answer format.

* Mum Business. For a real challenge, have children create a business to grow and sell mums. Divide the class into small groups. Each group will develop a business. Have children interview local growers and retailers to gather information on planning, facilities, and selling. Have them create a Mum Business Plant, complete with business name, location, planting and buying schedules, and marketing ideas (advertising, special sales, open houses, and other celebrations).

* Mum Advertising. Have children create a print ad for Magnificent Mums to appear in a newspaper.

* My-Favorite-Mum Studies. Give children practical experience in consumer studies. Have them set up, conduct, and evaluate studies to test consumer mum preferences. For example, a study could be conducted to test for favor: color by setting up a table in the cafeteria. Place a garden mum of each color (pink or lavender, yellow, white, and bronze) on the table along with a “ballot box” in front of each and a sign reading “VOTE FOR YOUR FAVORITE MUM.” The study could be expanded to a local supermarket or garden center using their plants.

* Do Mums Make You Feel Better? Research has proven that plants are psychologically beneficial to people. Plants help improve attitude and hasten healing. For more information on the subject, contact the People-Plant Council at Virginia Polytechnic Institute and State University, Dept. of Horticulture, Blacksburg, Va. 24061-0327. Though difficult to reproduce the same research, students could do a project involving placement of pot mums or cut mums indoors in sitting areas of health facilities or on restaurant tables. In the facilities, ask staff members if patients seem to feel better. In restaurants, use questionnaires for customers to fill out.

* Mum Fitness Fun. Plan some special Mum Fitness events for a Spring Festival or other special celebration. Have the Mum Dash — the 50 yard or 100 yard dash with the start and finish lines being a line-up of mums; the Mum Run — a run through the school grounds, park, or community passing mum plantings along the way (This can be turned into a Mum Walk event on a weekend, suitable for families); the Mum Jump — a long jump, jumping toward the Mum Garden; or the Mum Pot Relay — team members must run a distance with plastic mum pots on their heads and if the pots fall off, they must start over. See, MUMS CAN BE FUN!!!
Suggestions are given for enrichment ideas based on the Mum Theme. Use the ideas to reinforce concepts and enrich Mum Lessons.

Field Trips: Field trips are an excellent way to get a one-stop, hands-on view of an abundance of plants, including mums, as well as garden supplies and even plant-care activities. Many businesses welcome youth groups. Some will even plan special activities, such as take-home planting projects.

- Suggested spots for field trips include garden centers, nurseries, arboretums, and botanical gardens.
- Special field trips can also be taken to mum plantings in parks and other public places as well as to private gardens near the school. The private garden tour is an especially desirable option in areas where funding for field trips is minimal.

Some Suggested Field Trip Activities for Spring and Fall

- Identify mum plants. How many colors can you find? How many flower forms can you find?
- Look for mum relatives (other plants in the Composite Family).
- Check to see if mums are planted in the ground or in containers. What kind of containers were used? Are the plantings all one color or mixed colors? Is there a pattern to the plantings?
- Find out if there is a greenhouse where cuttings are rooted. Can you see if any cuttings are being rooted at that time?
- Find out what mum care procedures are followed by the staff.
- Have someone demonstrate how to water the mums.
- Try to identify the tools in the tool section.
- Find these other items: pots and decorative containers, growing mixes, fertilizers. How many different kinds of each do you see? Have the staff explain the differences between different mixes and fertilizers.
- Ask for permission to take photos and write a review for the school/district newsletter or the local newspaper.
- SEND THANK-YOU NOTES FROM THE CHILDREN AND THEIR TEACHER!

Speakers: Plant professionals and hobbyists can help to bring lessons to life by sharing practical tips and fun stories. They can shed much more light on the subject of mums than can be covered in this book.

- Suggested speakers include: professional plant growers (greenhouse and field); certified Master Gardeners; garden center and nursery operators; other plant retailers such as florists and supermarket floral directors; landscape professionals; arboretum and botanical garden growers and educators; garden writers; garden photographers; horticulture therapists; professional gardeners for estates, zoos, parks, and communities; garden hobbyists, such as garden club members.

Tips for Working With Speakers

- Ask if the intended speaker has ever worked with children in your age group.
- Ask if the speaker can bring actual plant material, plant care supplies, and other tools of the trade.
- Encourage the speaker to bring slides or a picture portfolio.
- Three weeks prior to the presentation, have the children brainstorm a set of questions and send the list to the speaker.
- Ask if the speaker has any items he/she would like to give each class member.
- Ask if the speaker would mind if you took photos and wrote a review for the school/district newsletter or local newspaper.
- SEND THANK-YOU NOTES FROM THE CHILDREN AND THE TEACHER!

Bulletin Boards: Bulletin boards help to reinforce lessons and set a Mum Mood in the classroom.

- Some bulletin board ideas include: The Many Faces Of The Mum (mum forms and colors); Caring For The Mums; The Mum Family Tree; Mum Math; We’re In The Mood For Mums; Mad About Mums; Reading With Mums; The Mum Kids Go To Japan (history and culture); The Mum Kids Help The Community (beautification theme); Mum Memories (photo collage of children participating in mum activities in this book).
Extending mum projects throughout the school and the community can help to teach the children important cooperative working skills and lessons in civic pride. As Mum Ambassadors, they can help to beautify the land with mums and share an appreciation for plants with their friends and family. For community projects, take the approach The Mum Kids Help The Community to make projects inspiring and fun for children. Planting projects can be done in the spring with young plants or in the fall with larger plants. Suggested projects include:

- **Mum Grow-And-Sell Project.** One option for those mum cuttings that are planted and tended by children but not used for plant investigations is to make them part of a Mum Grow-And-Sell Project for the spring. Consider doing this along with another class in the same grade. Follow the schedule for spring flowering and grow the plants for a May Mum Sale. Along the way, children can get lessons in planning, Mum Math (costs, profits, etc.), and advertising. The Plant Sale can be held for the public on a Saturday morning, with children working in shifts at different jobs (get parent volunteers to help, too). You might even want to work in cooperation with the local PTA. Have tables for a display, a cashier, and care information handy. Another idea is to have children decoratively paint clay pots to sell. Use acrylic paint for these. (Even if people decide to plant their mums in the ground, they can put another plant in the pretty pot.) Seed packets can also be made available for sale. Fund-raising with seeds and plants can promote environmental stewardship much better than with candy!

- **Plant-A-Flagpole.** The base of a flagpole is a good place for a first planting project. This area can be planted in spring with young plants from the Plant-A-Mum project (see Lesson 5) or with small flowering plants purchased or donated from a local garden center. Or, the area can be planted in the fall with mature flowering plants that have been purchased or donated. Work as a Mum Team on a Mum Mission to beautify the land. First, plan the design as a cooperative class activity (see Lesson 11). Follow directions on Page 6 for preparing the soil. Be sure to add peat moss, compost, or other organic matter to the soil to help add nutrients and open it up for better aeration. Compost will also add beneficial nutrients. When finished, mulch the soil with bark chips to help minimize water loss and weed growth. Take a photo of the class in front of the newly planted pole.

- **Plant-A-Spot.** If the flagpole is already planted or it is attached to a wall, consider planting a different spot. Or, you may just want to plant spots in addition to the flagpole in order to add more color around the school. Be sure the spot is sunny and warm as described on Page 6. Generally, spots under a tree should be avoided since there won't be enough sunlight. Some Mum Spots to consider at the school include the base of the school sign or marquee, at the entrance to the school driveway, next to the front steps, or at the corner(s) of the building. Similar spots can be considered around buildings in the community, such as a library, general offices, or bank. Why not plan a project to Plant-A-Spot in the town square?

- **Make-A-Mum-Container.** Container gardening can be fun and rewarding. One option is to make your own containers out of wood scraps or boards. Why not work together cooperatively with a shop class at the junior or senior high school? For lots of ideas and helpful tips, check out Gardening In Containers from Ortho Books, found at many garden centers and bookstores.

- **Make-A-Mum-Display.** Create a display for the enjoyment and education of the public at a community place such as the library. Have the children help to plan, create, and maintain the display. The theme can be a general mum topic, such as “You Can Grow Mums,” “The Magnificent Mum,” or “Mad About Mums.” It can also highlight class activities, such as “Mum Fun In Room 502” or “Planting For A Blooming, Beautiful Future.”

- **Mums Between The Generations.** Mums and other plants provide a wonderful basis to generate conversations and activities between children and the elderly. Have the children take Mum Messages out into the community by visiting a local retirement home or nursing facility. Children can share Mum Tales, Mum Myths, and other readings. Follow-up with some small group conversations, with each group sharing a Mum Plant Friend and plant stories. Then, have the children (and adults if permissible) cooperate in a Mum Planting Project. Be sure to capture the Mum Memories with photographs and have students send thank you notes after the event.
MUM BEAUTIFICATION PROJECTS

In this day of environmental awareness and concerns, beautification activities are increasing in popularity. They provide a positive experience for everyone. Children get to enjoy the outdoors, practice gardening, and learn skills of working cooperatively. Their civic pride and environmental enthusiasm will flourish as the land turns from bland to blooming. Parents will be pleased that their children are learning practical skills and enjoying the outdoors. And, citizens in the community will be thrilled with the colorful transformation that takes place.

Suggested Mum Beautification Projects

🌟 Brighten a bare spot in a new office complex.
🌟 Transform a weedy spot in the park.
🌟 Clean up and plant a prominent roadside area.
🌟 Add a special touch outside a homeless shelter or community hall.
🌟 Bring some budding hope to the grounds of a nursing home or veteran’s hospital.
🌟 On a larger scale, try some special theme plantings for a grand splash. Try a Mum Quilt (mums planted in squares of color), a Mum Symbol (mums planted in a letter shape or an emblem pattern), or even a Mum Animal (mums planted in an animal shape).

Mum Beautification Project Tips

🌟 Use mums that are in flower. Large, full mums available in the fall will have the most immediate impact. (Perhaps the class can work with local corporations to get funding to obtain plants.) In the spring, young flowering plants from the class planting project can be used.
🌟 Consider working with other classrooms and community groups (such as garden clubs and environmental organizations). This will provide more helpful hands as well as the experience of working together.
🌟 Also consider the experts. Talk to plant professionals at a local nursery or garden center to review planting ideas and recommendations. Perhaps their companies will be interested in donating time and materials as part of a public service.
🌟 When planting, place plants at the closer spacing (16 inches apart) so the design will fill in faster and provide a dense mass of color.
🌟 Make sure the design is well-planned, diagrammed, and labeled before planting day so there is less confusion. It also helps to prepare the planting area prior to the main planting day because the actual planting will probably take longer than estimated.
🌟 Keep maintenance in mind. Remember that garden mums require some maintenance such as pinching, pruning, dividing, fertilizing, and mulching. They will also need to be watered during dry spells. Keep in mind that garden mums are tender perennials. With proper care and winter protection, they can potentially rebloom for many years to come. Before planting, develop a maintenance plan. Consider approaching a local garden club or garden business about the maintenance requirement. Perhaps they would consider it as part of a public service. The teacher should also plan to take the class back to the spot at least one more time (if planted in the spring) or a few more times (if planted in the fall) during the school year. Future classes can be taken to the planting as part of Mum Learning Activities.
🌟 Try to get press coverage on Mum Planting Day. Contact local media (newspaper, radio, television) a few weeks before the event.
🌟 Put a sign in the planting area. The sign should include the following information: Mums planted by ________________; Material donated by ________________; Garden maintained by ________________.

🌟 THANK-YOU NOTES SHOULD BE WRITTEN TO ALL PARTIES BY STUDENTS AND THEIR TEACHER.
FALL MUM FESTIVAL

Fall is the traditional time for mums. The bright mums, together with the crisp air and signs of the harvest, provide the perfect backdrop for a festival. Plan a festival for a weekday afternoon or a Saturday afternoon in late September or early October so that preparation activities can be done in early September when school begins. Invite the whole community! The Fall Mum Festival also provides a fun tie-in to classroom mum learning activities in all subject areas. How exciting it is to look forward to the festival while doing Mum Math and making a Mum Family Tree! Plan a mum-themed activity for each day leading up to the event. Help to get schoolmates In The Mood For Mums by displaying Mum Art around the school.

Mum Decorations To Make And Display

- Mum plants in fun planters — Make Pumpkin Pots by scooping out pumpkins and placing mums, pot and all, inside pumpkins for fun temporary containers that can last for a few days.
- Mum Mobiles
- Mum Banners
- Mum Chains — string mum shapes copied from the reproducible Flower Forms Page.

Mum Projects To Do And Display

- Plant Learning Center
- Mum Spot Planning and Planting
- Mum Books
- Mum Bags or Mum Boxes
- Mum Badges
- Mum Kids Posters
- Mum Kids Family Tree
- Mum Paintings
- Mum Photos
- Mum Mural
- Mum Puppets
- Mum T-Shirts
- Mum Math Papers
- Mum Writings (poems, myths, tales)

MUM MEMO

Make Mum Invitations for families and Mum Posters to hang around the community.

MUM MEMO

Make Mum Jewelry and decorated flower pots to use as fund raisers.

Fall Mum Festival Menu

- Mum Cookies — For each cookie, put frosting on a plain sugar cookie, stick candy corn around the outer edge with points facing out, and put sprinkles in the center. Keep covered so frosting doesn’t harden. You can try this design on cupcakes too!
- Pumpkin Bread or Nut Bread
- Apple Slices with peanut butter and raisins
- Roasted Seeds (Pumpkin and Sunflower) — Put into small paper cups.
- Apple Juice or Apple Cider

Fall Mum Festival Fun Activities

- Have a Mum Raffle — sell tickets to win plants displayed in “Pumpkin Pots.”
- Have a Mum Parade — Dress up like the Mum Kids.
- Have a Mum Walk — Walk around the school grounds to see mum plantings.
- Put on a Mum Puppet Show.
- Play Mum Games — Mum Scavenger Hunt — look for hidden mums; Mum Relay Races — runners must balance empty mum pots on their heads with no hands; Milk Jug Mums — try to toss pennies to land in empty plastic milk jugs that have the tops cut off, decorate milk jugs by gluing on pictures of mums.
- Make Mum Masks — Use paper plates to create Mum Masks. Let students draw the Mum Kids faces on the plates and cut out the eyes. Paste or tape the masks onto large Popsicle or craft sticks which students can use to hold the masks up to their faces.
- Have Mum Face Painting.

MUM MEMO

Contact the media (newspaper, radio, television) a few weeks before the event.
MAKE MAY MUM MONTH

While fall is a time to celebrate the colorful harvest, spring is the time to celebrate the rebirth of nature and to show us appreciation with new plantings and lots of learning activities. It is a time to have Plant Fun and to share Plant Enthusiasm with our friends and family.

In The Classroom

- Plan the Mum Planting Project so mums come into flower in May. Use them for take-home projects, fund raising, or planting projects. (See below.)
- Mums For Mom. Have the children take home Mum Project Plants for their mothers. Have children make “name tags” to go on the mums. As a class, develop a care sheet to send home to Moms. Invite Moms to school for a Mums For Moms Celebration.
- Plan out Mum Plantings for school or community areas.
- Decorate everywhere! For starters, try the following ideas.
  - Daisy Chains. Have children color the daisy shapes from the Flower Forms Page and string on to green yarn. Hang them around the door and around the room.
  - Mum Mobiles. Suspend mum shapes reproduced and colored from the Flower Forms Page.
  - Mum Watercolor Portraits. Make portraits of a Mum Kid or of a specific mum variety.
  - Do Mum Reading And Writing. Read and write garden stories; write about what it’s like to be a mum waking up in the spring.
  - Wear Mum-Wear! On May Day, wear Mum T-Shirts and Mum Badges all day. After that, have one day each week be a Mum Color Day. On that day, everyone must wear an item of clothing in that color (pink, coral, purple, yellow, bronze, red, or white). Or, wear clothing with mum flowers on it.
  - Bring Mum Speakers to class. How about a garden writer, a garden photographer, or a landscaper?

- Propagate some other plants in the same way as mums (as stem cuttings). Try coleus, English ivy, impatiens, Jade plants, and Swedish ivy.

School Activities

- Go on Mum Explorer or Mum Patrol Walks every day.
- Try some other Mum Fitness activities. (See Page 19, Creative Mum Projects.)
- Make a Mum Mural for the school entrance.
- Have a Mum Fund Raiser. Sell plants from the Plant-A-Mum Project.
- Have a Daisy Scavenger Hunt. Hide daisy shapes (reproduced from the Flower Forms Page) around the school building or the school grounds. Which child can find the most daisies?
- Do Mum Chalk Drawings on the playground or a sidewalk for others to enjoy. (Check with administration first.)

Community Activities

- Take a Community Mum Walk on May Day.
- Pick a spot for a beautification activity. Have a Mum Spot Cleanup sponsored by the Mum Kids.
- Plant some mums from the Plant-A-Mum Project in containers in front of a community building. (Plan the event close to Memorial Day and call it Mums For Memorial Day.)
- Do Mum Chalk Drawings on a sidewalk where many people can enjoy them. (Check with the community first.)
- Challenge children to Do Good Daisy Deeds for the community this month. Deeds can range from picking up litter to learning a new community fact. Reward each deed with a Daisy Flower (made from reproducing the Flower Forms Page). The child with the most Daisy Flowers at the end of May wins a plant to take home.
- Plan a Mum Family Walk. This can be a Saturday walk through a park or other community area with mum plantings. Look at the mums and other plants with new green shoots. Enjoy the spring weather together!

MEET THE MUM KIDS

The Mum kids show us that mums are fun.

The Mum kids show us that mums have many faces.

The Mum kids show us that mums can help make the world beautiful.

The Mum kids teach us that plants need care.

The Mum kids teach us that we can all grow plants and enjoy plants together.
MUM'S THE WORD
THE GARDEN SPOT

1. Is the garden spot sunny? __________________________
   How many hours of direct sun does it receive daily? __________________________

2. What shape is the garden spot? __________________________

3. How many square feet of planting area are in the garden spot? __________________________
   a. If it is a square or rectangle, it is ____ feet wide and ____ feet long.
   b. If it is a circle, it is ____ feet in diameter.
   c. If it is a container, it holds ____ gallons.

   (NOTE: A pot 12 inches in diameter will have about one square foot of area for plants. An eight-inch or ten-inch pot will have less room. An 18-inch pot will have about two square feet of area for plants.)

4. How many plants will be planted in the garden spot? __________________________

   BONUS: If plants are placed one foot apart, how many will fit in the garden spot?
   How many if they are planted two feet apart?

5. If more than one plant is used, will they be planted in a straight line or in a pattern? ______  ______
   If in a pattern, what kind? (such as a half-circle or S-shape) __________________________

6. What are the flower colors? __________________________

7. If there is more than one color, what colors will be grouped together? __________________________
   Why? __________________________

8. Before planting, draw and color your garden spot above.

   BONUS: On the back of the page, draw what your garden will look like next spring when the plants are just beginning to send up new green shoots.

Dear Parent:

You will soon be meeting Millie, Moe, and Minnie, the three "Mum Kids" who are helping to stimulate your child's interest in science, horticulture, and other subjects. The Mum Kids are the principal characters in the Magnificent Mum Education Program which is getting underway in our classroom. We are going to be doing hands-on experiments, plant-growing projects, and creative activities with chrysanthemums as the theme. We will also be learning how mums and other plants can help to beautify the school grounds and other places in the community.

As part of the Magnificent Mum Education Program, we are going to "Make May Mum Month." The month will be filled with important lessons and fun activities. You are welcome to stop by to see our mum decorations and mum plantings. We would be glad to have your assistance during our mum activities, whether you consider yourself a green thumb or not. Please send a note to school with your child if you would like to help.

You can also help inspire mum fun and plant appreciation at home. Ask your child what he or she has learned from the Mum Kids. Review your child's Mum Book at home. Try some of the activities from the following list. Also, do some plant-helper tasks together, such as watering or weeding, whenever you get the chance.

Thank you for your continued support.

Sincerely,

Your child's teacher

Mum Activities

1. Take walks together around the yard or the neighborhood. Look for plants that are showing buds and flowers. Discuss the fact that some outdoor plants bloom in the spring, some in the summer, and some (like the garden mum) in the fall.

2. Stop in the plant section at a garden center or supermarket. Look for garden mum plants and pot mum plants. Can you find any other flowers that look like daisies (a common mum flower form)? Look for three different items that are used to care for plants.

3. Practice giving health checks on plants in the store and at home. Sharpen observation skills with this 1-2-3 process: Check (1) flowers, then (2) leaves and stems, and then (3) take a peek at the roots and soil. Be careful not to damage a plant when you do this. Some things to look for include color and firmness of leaves, presence or absence of flower and leaf damage, length and strength of stems, and long roots with a healthy white color.

4. New mum plants are created by taking stem cuttings from the stem tips of older mum plants. Other plants can also be propagated this way, including angel-wing begonia, coleus, English ivy, geranium, impatiens, and jade plants. Take stem cuttings from one or more of these plants and watch them root in a glass of water. Try rooting some in small pots of potting soil. Which way do cuttings root fastest?

5. Work on reading skills together by studying plants-in-the-news. Look for articles on plants in the home and garden sections of magazines and newspapers. Read and discuss the articles.
Dear Parent:

You will soon be meeting Millie, Moe, and Minnie, the three "Mum Kids" who are helping to stimulate your child's interest in science, horticulture, and other subjects. The Mum Kids are the principal characters in the Magnificent Mum Education Program which is getting underway in our classroom. We are going to be doing hands-on experiments, plant-growing projects, and creative activities with chrysanthemums as the theme. We will also be learning how mums and other plants can help to beautify the school grounds and other places in the community.

As part of the Magnificent Mum Education Program, we are going to have a Fall Mum Festival. The festival will be held on __________________ ______ at __________________________. It will be a mum-filled day featuring mum plants, a mum parade, and other fun mum activities. Mum creations made by children in the class will be on display. You are welcome to come to the festival with your family. You are also welcome to stop by our classroom throughout the month to observe our other mum projects. In fact, we would be glad to have your assistance during our mum activities, whether you consider yourself a green thumb or not. Please send a note to school with your child if you would like to help.

You can also help to inspire mum fun and plant appreciation at home. Ask your child what he or she has learned from the Mum Kids. Review your child's Mum Book at home. Try some of the activities from the following list. Do some plant-helper tasks together, such as watering or weeding, whenever you get the chance.

Thank you for your continued support.

Sincerely,

Your child's teacher

---

Mum Activities

1. Take walks together around the yard or neighborhood. How many mum plants do you see? Look for leaves changing color and other signs that the season is changing.

2. Take a family trip to view a mum display at a botanical garden, park, or other public place. How many different color mums do you see?

3. Stop in the plant section at a garden center or supermarket. Look for garden mum plants and pot mum plants. Can you find plastic care tags in the pots? Look for the variety names of the mums on the tags. The variety name can often be a girl's name or other descriptive name. Is there a mum with the same name as someone in your family?

4. Practice giving health checks on plants in the store and at home. Sharpen observation skills with this 1-2-3 process: Check (1) flowers, then (2) leaves and stems, and then (3) take a peek at the roots and soil. Be careful not to damage a plant when you do this. Some things to look for include color and firmness of leaves, presence or absence of flower and leaf damage, length and strength of stems, and long roots with a healthy white color.

5. Encourage your child to create mum art. Develop a fall "still life" with pumpkins, corn, and mums and suggest drawing or painting the still life. Paint clay pots with Halloween scenes and insert garden mums.

6. Encourage your child to share a mum plant or mum art with someone less fortunate. Brighten someone's day by placing a garden mum outside their door or slipping a pretty mum painting in their mailbox.
Review Panel for the Magnificent Mum Education Program

Horticulture: A Life Skill and Career for Today and Tomorrow

Horticulture is becoming increasingly important with today’s rising environmental awareness and concerns. Horticultural practices can and should be a part of everyday life. Gardening is an enjoyable form of exercise for many people and the presence of plants can help soothe our minds and boost our spirits as well.

In the classroom, horticulture can help teach a variety of subjects. Plant-theme lessons can be integrated into all subject areas, including science, math, reading, social studies, language arts, and art, as well as environmental studies and even fitness. Plant-based learning provides fun and hands-on opportunities for children that can be used to teach practical skills they can use in their everyday lives. Plant studies can even help teach children skills for being good citizens and consumers. Their social skills and civic pride can bloom right along with their science, math, and reading skills.

With increased focus on the world's environment, horticulture is becoming more valuable as a career choice. Options are expanding in sales and technical areas as well as in growing operations. Possibilities range from selling plants, flowers, and supplies to developing computer software for greenhouse ranges or overseeing a research laboratory. Other technical areas include plant breeding and microscopic production of plants from minute plant parts (tissue culture). For those interested in growing, the list of possibilities is long, including the production of cut flowers, blooming plants, green plants, trees, shrubs, fruits, vegetables, herbs, and even specialty items like edible flowers. "Hydroponics" is a fascinating technical growing method that involves growing crops in special solutions rather than soil. There are interesting opportunities as hydroponics become more popular.

Opportunities are just as numerous for floral designers, landscape architects, and professional garden writers and photographers. One newer segment of horticulture that is full of promise and special rewards is horticulture therapy, or helping people with special needs and challenges to enjoy gardening and other growing activities. Indeed, the world of horticulture is rich with opportunities. Many more enthusiastic and dedicated people are needed in horticulture to help keep our world growing and beautiful and our people healthy.

LIMITATION OF WARRANTY

Yoder warrants to the purchaser that Yoder Products sold shall conform to the description on the face of this document, and with respect to plants, Yoder warrants that such plants will be viable when received. ALL OTHER WARRANTIES, WHETHER EXPRESSED OR IMPLIED AND INCLUDING, BUT NOT LIMITED TO THE WARRANTY OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE ARE EXCLUDED FROM THIS CONTRACT OF SALE. PURCHASER SHALL BE LIMITED TO THE AMOUNT OF THE PURCHASE PRICE OF ANY YODER PRODUCT ON WHICH CLAIM IS MADE AS ITS EXCLUSIVE REMEDY FOR BREACH OF THE WARRANTY EXPRESSED HEREIN AND FOR NEGLIGENCE AND OTHERWISE. UNDER NO CIRCUMSTANCES SHALL YODER BE LIABLE TO PURCHASER OR ANY OTHER PERSON FOR CONSEQUENTIAL OR INCIDENTAL DAMAGES.
Mum History and Stories

‘Golden Flower’ Comes in Many Colors

The showy chrysanthemum, the most versatile of all blooming plants, gets its name from the Greek word *khrusanthemon*, which means golden flower. Contrary to what the name implies, chrysanthemums aren’t just golden and can be found in almost every color but blue.

Mums Around the World: A Quick Overview of History

Mums have been in cultivation in Japan and China for more than 3,000 years. Dutch explorers probably brought the first mums to Europe. Records indicate that half a dozen varieties were grown in Holland in the eighteenth century. Most Europeans, except the French Huguenots, took little interest in the exotic flower. The agriculturally minded Huguenots imported a variety of forms and developed Old Purple, one of the basic mums of European gardens.

In 1764, Phillip Miller of the Chelsea Gardens in England logged the arrival of the yellow Chinese chrysanthemum and its subsequent death. No one seemed to care. Old Purple, the French Huguenots’ variety, arrived at the Royal Botanic Gardens at Kew in 1793. Again, few people in England seemed to care. Years later, Robert Fortune, one of England’s great plant hunters, brought the Chusan daisy from China in 1846. The English, once again, paid no attention.

The French did take notice of the Chusan daisy and therein lies a fun French tale of *The Pompon-A Mum in a Hat*. The French improved the Chusan daisy and named its flower form a pompon because it reminded everyone of the wool pompons on French soldiers’ hats.

Back in England, Robert Fortune, the plant hunter, tried again. This time he brought a large, shaggy hybrid Japanese mum to English gardens in 1861. At that time, the pompon was finally gaining popularity in England. But it was not until the twentieth century, with the development of the perennial garden mum, that the English accepted the chrysanthemum.

Mums did gain popularity and prosper in the New World. In North America, the Old Purple chrysanthemum was imported in 1798 by John Stevens, a nurseryman in Hoboken, New Jersey. The Chusan daisy was well established by 1850 and the Chrysanthemum Society of America was founded and held its first exhibit in 1902. In 1921, the company that is today the world’s leading breeder and propagator of high-quality chrysanthemums, was founded in Barberton, Ohio by Menno and Ira Yoder. The brothers were Mennonite tenant farmers who bought the greenhouses where they worked to start a business. The company was named Yoder Brothers, Inc. and began as a seasonal business, producing fruits, vegetables, and some chrysanthemums in the fall. During the 1930s Yoder started breeding mums. Then, with the discovery that fall-blooming chrysanthemums could be made to flower year-round in the greenhouse by manipulating daylight hours, Yoder’s focus turned exclusively to flowers.

Chrysanthemums are now the most popular year-round flowering potted plant in North America. Today’s chrysanthemums are far healthier, have stronger stems, and come in a vastly wider range of colors and flower forms than the earlier varieties.

Tales From the Orient

Nowhere outside of North America is the chrysanthemum as popular as in Japan. The tales of how the chrysanthemum attained such notoriety in Japan are fascinating. A Japanese legend tells of a boat filled with 12 maidens and 12 boys who left China seeking the herb of youth to sustain the life of their revered emperor. The voyagers carried a bamboo basket full of golden chrysanthemums, China’s most important product, to trade for the life-enhancing herb.

A terrible storm upset their plans, however, tossing them onto one of the islands in the Japanese archipelago. Finding the island uninhabited, the travelers settled down to build an empire. They planted the chrysanthemums, so the legend goes, which may account for the first Japanese garden and the skill and devotion of Japanese gardeners. As legends often contain elements of truth, the story puts the birthplace of mums in China and explains the tradition that the mum was the exclusive possession

(continued on back)
of the Japanese emperor. In 910 A.D., at the first Imperial Chrysanthemum Show, the emperor named the chrysanthemum the national flower of Japan. In 1876, the emperor created the Order of the Chrysanthemum, the highest honor he could bestow. Even today, it is still Japan’s highest and most exclusive honor.

World War II democratized the chrysanthemum for the Japanese. Now everyone may grow it and does. It is no longer reserved just for the aristocracy, although it is still a royal symbol.

Even today, when the Japanese say “kiku” — or chrysanthemum — they are as likely to be referring to the imperial crest of their emperor as to the flower. The royal symbol, with its traditional 16-petaled chrysanthemum design, and the flower remain synonymous. Annual chrysanthemum festivals are celebrated in communities throughout Japan each fall, much on the scale of the Oktoberfest in Germany and other harvest festivals throughout the world.

Chrysanthemums...
America’s Most Popular Perennials
Throughout North America, garden mums are known and appreciated as the plant for fall blooming. Untold millions of garden mums are planted each spring, summer and fall. With proper care and a bit of help from Mother Nature, garden mums offer the potential to flower again and again every autumn.

VERSATILE USES

BEDDING PLANTS — Garden mums, especially those in the elite Prophets series, are superb for use as specimens in foundation plantings, massed in beds or grouped in plantings of 3 or 5 for colorful and dramatic focal points in the landscape. Versatile garden mums can be planted either as young plants in the spring or as flowering plants in the fall.

HANGING BASKETS — Beautiful garden mum hanging baskets are the talk of any neighborhood or building they decorate. They add a finishing touch to any landscape. Garden mum hanging baskets can be started in the late spring or early summer from young plants, or purchased in bloom for a stunning display of beauty.

PATIO PLANTS — Since the varieties of Prophets garden mums grow into wonderful mounds of flowers, they are perfect for use in containers. Use garden mums on patios, decks, front door steps, in window boxes and by the pool. Garden mums are easily planted while in bud and in bloom into urns, barrels and other attractive containers.

Garden Mums
Recommended Care

GENERAL CARE

PLANTING
- Plant young plants in sunny location (at least a half-day of sun)
- Plant in fertile, well-drained soil. Soils can be improved by adding compost, peat moss or other organic matter.
- Flowering plants can be placed in any location where a splash of color is desired. But will grow best in a sunny location.

WATERING
- Rainfall in many areas is sufficient to keep your garden mums growing well. During dry spells water as needed to keep plants from wilting.
- Always thoroughly water in any freshly planted garden mums.
- Garden mums planted outdoors in the fall do not need any fertilizer until they begin to grow the following spring.

FERTILIZING
- During the growing season, incorporate into the soil a general purpose fertilizer such as 5-10-5 at the rate of 1/2 to 1 pound per 100 square feet. Repeat monthly until August. Liquid fertilizer may also be used.

PINCHING
- To encourage branching and development of compact bushy plants, it is very important to pinch back your garden mums in the spring as soon as the new growth is 4- to 6-inches tall. Use your thumbnail and index finger to remove or "pinch" about 1/2 of the new growth at the top of each and every shoot. Repeat this procedure through the summer whenever new shoots are 3- to 5-inches long. In northern states, stop pinching around July 10th to 15th. In southern states, stop pinching around July 20th to August 1st. (See the illustration on pinching.)

WINTER PROTECTION
- Keep your garden mums soil moist as winter approaches.
- There is no need to prune back plants until the following spring.
- Mulch the plants after several hard frosts with straw or evergreen branches, etc.
- In the spring, remove any old garden mum stems (a rake works fine) and gradually remove the mulch.
New Prophets® garden mums have been bred and selected for superior garden performance.

Cultural Tips: Late Spring — transplant outside into well drained soil in a sunny location. Between Spring and mid-July pinch back new growth 2-4 times. Summer — fertilize monthly until buds begin to show color. Fall — prepare the soil well before planting. Water newly planted garden mums to help establish new roots. Add new Prophets® garden mum varieties each year to your collection. Winter — much prune when the soil begins to freeze. Early Spring — remove much gradually and cut back old branches.
