This directory, which is based on data collected in 1993 and 1995 through surveys distributed to employers and educational providers throughout Ohio, is designed as a resource for employers wishing to review established basic skills training programs and locate other Ohio employers who have had first-hand experience with such programs. The guide is divided into three parts. Parts 1-2 contain information about a total of 77 employer-driven basic skills programs that was obtained in surveys conducted by the Ohio Literacy Network in 1995 and 1993, respectively. Each program description contains some/all of the following: company name, address, contact person, primary type of business, and number of employees and whether those employees are unionized; program details (when the program was started, whether it is still operating, and how many individuals have been trained to date); funding sources; the program's initial assessment procedures, services, and methods; training location; program benefits; educational provider's name/address; brief narrative focusing on topics such as problems encountered/overcome, unique features of the program, and factors in its success; and advice to other employers wishing to initiate similar programs. Part 3 contains appendices listing employers by country, employers by size, and educational providers.

*Trade Secrets: A Directory* is the product of efforts of the Ohio Literacy Network (OLN) and the Ohio Bureau of Employment Services (OBES). Sarah Thompson, a VISTA Volunteer at the Ohio Literacy Network, helped design the surveys and collect data. Heidi LoRash, also an OLN VISTA Volunteer, assisted with data collection and compilation. Within the Ohio Bureau of Employment Services, Carol Kuhman provided editing and desktop publishing services; Bill Goggins designed the cover; Kathy Kildow, Dan Baechlin and Dee Karvos proofread and edited the report; and Len Proper, Director of the Office of Workforce Development, provided guidance and support.

Introduction

In recent years, employers have discovered that members of their workforces are not proficient in the basic skills necessary to perform their jobs adequately. An employee's inability to read, understand manuals, follow safety instructions, or perform mathematical calculations may hinder productivity, lead to workplace accidents, and adversely affect customer service.

Consequently, many employers are considering workplace education programs for their personnel. With this in mind, the Ohio Bureau of Employment Services and the Ohio Literacy Network collaborated to produce Trade Secrets: A Directory. We hope the directory will help employers by providing opportunities to review established programs and by providing links with employers who have expertise based on first-hand experiences.

The directory is divided into three main parts. Part I contains information about the necessity, design, implementation, and results of employer-driven basic skills programs. For the most part, the data were collected in 1995 via surveys distributed to employers and educational providers throughout Ohio. Part II contains similar information to that found in Part I and was collected in the summer of 1993 by the Ohio Literacy Network. Part III includes appendices that list employers by county, employers by size, and educational providers.

American Electric Cordsets began its workplace program to meet requirements for ISO 9002 (international quality standards), to improve basic quality, and to introduce statistical process control. Employees needed to read and comprehend the operation and maintenance manuals of sophisticated equipment to ensure safe and efficient use. Additionally, increasing teamwork and communication at all levels was important.

During the six-month planning process, the need for training was fully assessed. The project director and site coordinator met with management, supervision, and front-line employees to discuss how to meet training needs. A curriculum specialist was selected who had specific qualifications for this project. Program development began at a very fast pace. The assessment instruments were designed and administered and a task analysis was completed. Based on previously collected information, the assessment results, and the skills breakdown, the curriculum was custom designed and classes began.

American Electric Cordsets attributes the program’s success to the positive commitment of all American Electric Cordsets personnel, from management to front-line employees, as well as to the educational specialist who worked in design and delivery. The Skill Transfer Enhancement program is designed to continue and grow with the participants and is completed in steps.

---

**American Electric Cordset advises...**

Budget for funding. Grants are nice, but few. Find an education specialist who understands the needs of your specific workforce. Utilize a task analysis and assessment. Do not confuse workforce development with ABLE (Adult Basic and Literacy Education) and GED (high school equivalency). These may be part of your development, but that is not where it stops. When initiating and planning your program, involve everyone concerned -- from upper management to front-line employees. Keep your program flexible. Needs change.
Buckeye Cablevision Inc.
5566 Southwyck Boulevard
Toledo, OH 43614
Lucas County
Contact: Deion Baker, Business Operations
Staff Development Manager

419-866-7074 (fax)

Primary type of business: cable television service
Employees: 300
Unions: yes (no employees in the division receiving training are unionized)

Program details:
Began: September 1991
Start-up time: 3 months
Still operating: yes
Trained to date: 100

Funding:
employer and federal

Initial assessment:
a pre-employment test specific to the business

Services:
reading and comprehension;
communication;
math;
writing;
personal enhancement

Methods:
classroom;
individualized

Training location:
worksite

Benefits:
workers more open to new learning situations;
workers demonstrate more ownership on the job;
workers show higher self-esteem, pride, and confidence

Educational provider:
Owens Community College
Center for Development and Training
P.O. Box 10000
Oregon Road
Toledo, OH 43699
Contact: Diane Ninke
419-661-7355
Narrative: Buckeye Cablevision became aware of the need for a workplace program when staff noticed poor grammar usage during monitored phone calls, inaccurate calculations of customers' prorated bills, and illegible writing. During the three-month planning process, a pre-employment test was developed and local training resources were contacted to determine available options. The business cites two key factors as essential to the success of the program -- regular employee evaluations and established standards. Training costs challenged program implementation.

Buckeye Cablevision Inc. advises...

Don’t try to do it all at once. Evaluate and prioritize your needs, starting with the most important and working your way through. Use small test groups for new projects.
Card Pak Inc.
19220 Miles Avenue
Cleveland, OH 44128
Cuyahoga County

Program details:
- Began: October 1993
- Start-up time: 6 months
- Still operating: yes
- Trained to date: 60

Funding: employer

Initial assessment: reading and math

Services:
- reading and comprehension;
- math;
- Adult Basic Education

Methods:
- small group;
- one-to-one tutoring;
- individualized;
- self-paced

Incentives:
- unpaid attendance after work hours;
- combined paid and unpaid attendance;
- positive reinforcement;
- child care for those attending community training;
- free educational materials

Training locations:
- worksite and a local church group providing educational training, free child care, and free food

Benefits:
- workers more open to new learning situations;
- workers demonstrate more ownership on the job;
- workers show higher self-esteem, pride, and confidence;
- workers' attitudes toward one another improve
Educational provider: Great Oaks Institute of Technology and Career Development
3254 East Kemper Road
Cincinnati, OH 45241

Contact: Art Ftacnik
513-771-8925

Narrative: After beginning its nursing reengineering effort, The Christ Hospital started to recognize comprehension and basic skills deficits. During the program's six-month planning stage, the skills required in entry-level positions were evaluated. Training materials, job descriptions, and policy manuals were evaluated to determine minimum comprehension and educational level requirements.

The program's success is attributed to: ongoing communication about the need for improved skills as the field of health care changes; on-site training with trained professionals; and developing policy to provide job security for one year after a position is designated for elimination. A full-time career transition facilitator works directly with employees whose positions are affected because of required skill upgrading; whose positions may be eliminated; or who may be moving to new areas. For some employees, the basic skills assessment determined if they qualified for positions associated with the reengineering effort.

The Christ Hospital advises...

Communicate the need to provide basic skills training on site. Do a lot of pre-planning and communicating before implementation. Provide recognition and incentives for employees in the program. Avoid tying the requirements to a reengineering effort.
Chrysler Toledo Assembly Plant
1000 Jeep Parkway
Toledo, OH 43657
Lucas County

419-470-6707
419-470-7560 (fax)

1991 Governor’s Workforce Excellence Award

Primary type of business: auto assembly
Number of employees: 5,000
Unions: yes

Program details:
Start-up time: 6 months
Still operating: yes
Trained to date: approximately 1,000

Funding:
a joint venture between Chrysler and United Auto Workers (UAW)

Initial assessment:
a literacy audit determined the skill levels needed to perform effectively in various departments

Services:
reading and comprehension;
math;
writing;
computer literacy;
academic advising;
GED (high school equivalency)/GED preparation;
Adult Basic Education;
English as a Second Language

Methods:
classroom;
small group;
one-to-one tutoring;
individualized;
computer-based;
job-related curriculum

Incentives:
unpaid attendance after work hours;
flexible scheduling;
positive reinforcement;
achievement certificates;
family participation

Training locations:
training facilities at both plants, at the local union house, and at the Chrysler-UAW Regional Training Center
Benefits:
- reduction in absenteeism;
- reduction in scrap or reworking;
- workers more involved in company activities;
- workers show higher self-esteem, pride, and confidence;
- workers' attitudes toward one another improve

Educational provider: not used

Narrative:
The Chrysler-UAW negotiating teams identified the need for training during the collective bargaining process in the mid-1980s. Each plant and depot was given the responsibility to develop, implement, and operate its own training program. During the six-month start-up time, Chrysler-UAW worked out logistics, developed a relationship with the University of Toledo, and acquired funding. Instructors were trained to relate to adult students in the workplace environment. To ensure acceptance by the workforce (students), instructor training also was provided in labor/management joint initiatives and plant culture.

The program's success is attributed to: strong support of top levels of management and the union at both corporate/international and local levels; the large selection of training programs for personal development beyond basic skills; providing recognition; having award ceremonies; and training the coordinator and instructors in adult development.

Marketing basic skills is challenging because of the negative experiences some employees have had with formal schooling or previous training. Demands for continuous overtime severely limit available employee training time.

**Chrysler Toledo Assembly Plant advises...**

Research available start-up grants. Develop partnerships with local community colleges, boards of education, and private industry councils. Seek advice from professional organizations, i.e., American Society for Training and Development. Perform a thorough needs assessment. Develop relevant objectives. Maintain ongoing evaluations of the programs.

- promotability;
- quality work

**Educational provider:**

Cincinnati State Technical and Community College - Office of Continuing Education
3520 Central Parkway
Cincinnati, OH 45223-2690

Contact: Dr. David Buzzard
513-569-1459
Narrative:

Cinpac became aware of the need for a workplace program several years ago. The business had a limited number of promotable employees due to low skill levels and received incomplete employment applications. Many job applicants have no high school diplomas and are unable to communicate effectively during the interview.

Cinpac’s challenges include marketing the program to employees, employee participation and response, and funding.

Cinpac advises...

Develop an educational committee with employee representation. Establish goals and the direction of the program. Know what you want to achieve. When developing a program, having examples of other programs’ successes and failures is helpful.
City Machine and Wheel Co.

- reduction in scrap or reworking;
- workers take more responsibility;
- workers more open to new learning situations;
- workers demonstrate more ownership on the job;
- workers more involved in company activities;
- workers show higher self-esteem, pride, and confidence;
- workers' attitudes toward one another improve

Educational provider: not used

Narrative:
The City Machine and Wheel Co. became aware of the need for a workplace program when employees attended a communications workshop and could not read written materials or do math at expected levels. During the program’s one-year start-up time, the company evaluated computer programs, written materials, the location of the center, staffing, types of tests, needs, and goals. The company also began planning with employees.

The success of the program is attributed to: the highly supportive management; program attendance on company time; individualized computer-assisted education; confidentiality and privacy; accommodating employees' learning styles; and focusing on what employees want to learn.

Several factors challenged the program’s implementation. As the basic skills of the workforce improved, the program had to grow. Course work in technical skills, total quality management, statistical process control, and other areas were added. Additional challenges included funding; the need for a flexible program to meet the production schedule; and employees' fears of learning, failure, and management’s discovery of their skill levels.

City Machine and Wheel's Learning Center encourages family participation. Every summer, computer camp is held for employees' children. Family members are given special gift certificates when courses are completed. Also, awards are given to employees' children for good grades at local schools.

City Machine and Wheel Co. advises...

Visit other programs. Pick the best ideas and tailor them to meet your needs. Involve employees in the planning, and involve the union if you have one. Set goals. Top management must back the program 100 percent for success.
Primary type of business: manufacture of railroad trackwork and hardware

Number of employees: 310

Unions: none

Program details: Began: 1993
Start-up time: 6 months
Still operating: yes
Trained to date: 65

Funding: employer

Initial assessment: interview

Services: reading and comprehension;
communication;
math;
writing;
computer literacy;
GED (high school equivalency)/GED preparation;
English as a Second Language

Methods: classroom;
small group;
one-to-one tutoring;
individualized;
job-related curriculum

Incentives: combined paid and unpaid attendance;
positive reinforcement;
achievement certificates

Training location: worksite

Benefits: workers more open to new learning situations;
workers show higher self-esteem, pride, and confidence
Cleveland Track Material became aware of the need for training when new employees did not possess the basic skills needed to progress and move the company forward. Many new employees need English as a Second Language to permit good communication.

During the program's six-month start-up time, Cleveland Track Material determined that due to the required time commitment its own staff could not provide the training. The business evaluated available community services and located space for classrooms.

The success of the program is attributed to the cooperation of all parties and the strong desire and commitment to make the program succeed. Challenges have included the reluctance of line supervisors to release employees for classes due to production schedule demands and finding available space for classrooms for the increasing number of participants. Progress in the English as a Second Language class has been slower than expected since employees are reluctant to use English outside of the classroom. Many employees are afraid to try and become discouraged very early in the classes.

There must be a strong management commitment to make the program succeed. Employees must also commit their time. Cleveland Track Material pays for two hours of training each week, and the employees contribute two additional hours per week. Progress of English as a Second Language classes will be slow. Other classes show faster results. The company and teachers must work together and adjust the curriculum as required.

Wooster, OH 44691

Contact: Jean Opliger
800-647-8283

Diamonite Products became aware of the need for a workplace program because of increasing scrap and scrap dollars spent; errors on time cards, paperwork, and reports; the inability of employees to use measurement equipment accurately; math errors; incorrect part counts; and misunderstandings of written and oral messages and instructions.

In training design and curriculum content, Diamonite Products obtained as much input as possible from employees and a curriculum committee. The program was designed to be specific to Diamonite’s needs. Employees valued the training because they saw a direct relationship between what was taught and how it would be used on their jobs.

The success of the program is attributed to: 100 percent backing from top management; publicity in newsletters, in memos on bulletin boards, and at employee meetings; sticking to the original plan; and follow-through. Scheduling class time for some employees on rotating shifts challenged program implementation.

---

Diamonite Products advises...

Prepare ahead as much as possible. Do not jump in blindly. Be willing to work out problems to keep the program going. Do not give up and stop the program prematurely. Some results are long in coming. Be patient. Do what you say. Give the opportunity to everyone.
Drake Center, Inc.
151 West Galbraith Road
Cincinnati, OH 45216
Hamilton County

Contact: William R. Huber, Manager, Human Resources

513-948-2619 (fax)

Primary type of business: rehabilitation hospital and long-term care facility

Number of employees: 740

Unions: none

Program details: Began: January 1995
Start-up time: 6 months
Still operating: yes
Trained to date: 28

Funding: employer

Initial assessment: Test of Adult Basic Education (TABE)

Services: reading and comprehension;
math;
writing;
computer literacy;
GED (high school equivalency)/GED preparation;
Adult Basic Education

Methods: classroom;
small group;
one-to-one tutoring;
individualized;
self-paced;
job-related curriculum

Incentives: unpaid attendance during work hours;
flexible scheduling;
positive reinforcement;
achievement certificates;
family participation

Training location: worksite
Benefits: workers take more responsibility; workers more open to new learning situations; workers show higher self-esteem, pride, and confidence; opened lines of communication between previously non-interactive departments

Educational provider: Great Oaks Institute of Technology and Career Development 3254 East Kemper Road Cincinnati, OH 45241

Contact: Art Ftacnik 513-771-8925

Narrative: As Drake Center, Inc. moved ahead with its quality management/improvement program, many employees did not understand the information needed to participate in the quality effort.

During the program's six-month start-up time, Drake Center formed in-house committees; met with a Great Oaks Institute representative; secured full administrative support; visited literacy centers in the area; secured space in the facility for a classroom; and remodeled and furnished the classroom area.

The Drake Center attributes its success to: the assurance of confidentiality; the private classroom facility; excellent support from Great Oaks Institute and management staff; the excellent, caring, and dedicated instructor; strong, ongoing internal marketing efforts; the flexibility of the class schedule; and word of mouth. The single, greatest success factor is an excellent, dedicated task force that promotes the program. Challenges to the program include negative perceptions attached to taking classes and the constant need to reinforce the idea that the training is skill-building, rather than adult basic education.

Drake Center, Inc. is now planning computer training. The company hopes to offer literacy classes as early as winter 1996.

Drake Center, Inc. advises...

Involve employees from all organizational levels when forming program ideas. Make classes voluntary. Be flexible. Concentrate on marketing. (Drake Center had a lot of fun with this end of it!). Study mandatory versus voluntary attendance options closely. Before you start, know specifically what your goals are, the kind of support you have from management, and how much funding you have available.

Benefits:
- reduction in absenteeism;
- reduction in scrap or reworking;
- workers take more responsibility;
- workers more open to new learning situations;
- workers demonstrate more ownership on the job;
- workers more involved in company activities;
- workers show higher self-esteem, pride, and confidence;
- workers' attitudes toward one another improve.

Educational provider:
Great Oaks Institute of Technology and Career Development
3254 East Kemper Road
Cincinnati, OH 45241

Contact: Art Ftacnik
513-771-8925

Narrative:
The Dupps Co. became aware of the need for training when geometric tolerancing and higher quality standards were introduced and rework and scrap rates increased.

During the six-month start-up time, The Dupps Co. identified the goals it wished to accomplish during the initial training and formulated a plan for the subsequent training phases. Scheduling and class sizes were determined, as well as training locations. To accommodate the training, The Dupps Co. rented a 12' x 60' trailer as a mobile office.

The program's success is attributed to: total management commitment and financial support; the work by the staff from Miami Valley Career Technology Center; notifying employees well in advance of training plans; and giving employees a voice in future training programs. The logistics of scheduling training was a challenge due to work loads and different shifts.

---

The Dupps Co. advises...

Top management must be 100 percent committed. Choose a good educational partner. Inform all employees on training plans. Understand that training should be ongoing.
G.E. Medical Systems

workers demonstrate more ownership on the job;
workers more involved in company activities;
workers show higher self-esteem, pride, and confidence;
workers' attitudes toward one another improve

Educational provider:
Penta County Vocational School
30095 Oregon Road
Perrysburg, OH 43551

Contact: Joe Thomas
419-666-1120
Narrative:

In 1989, Green Manufacturing noticed wasted time and lost productivity as operators complied with a first-item inspection procedure. The quality assurance supervisor tested each employee's inspection skills and found only a few who passed. The majority failed due to a lack of reading and math skills. To continue growing and expanding markets, the company had to overcome this lack of basic skills.

During the program's nine-month start-up time, employees were surveyed to see if they were high school graduates and, if not, how much schooling they had completed. Penta County Vocational School administered the Test of Adult Basic Education (TABE) and a locator test for math and vocabulary skills to all employees.

The success of the program is attributed to: the commitment of top management; the commitment of employees; the constant encouragement to value lifelong learning; the dedication of financial resources; and employee promotions. Most positions are filled from within the company, and many factory workers now hold salaried positions.

Challenges to the program have included time, money, and some lack of motivation to become involved in the learning process. Encouragement is needed because employees are apprehensive and afraid to fail.

Penta County Vocational School was instrumental in helping develop and implement the program. "We could not have done it without their support," a Green Manufacturing representative praised.

Green Manufacturing, Inc. advises...

Be patient. Start small, concentrating on a small group of individuals and a specific literacy problem. RECOGNIZE EMPLOYEE SUCCESSES! Don't expect to see a return on your investment overnight. It takes time, patience, and commitment. Realize that the reason employees might not be excited about getting involved in a workplace literacy program is not because they don't want to learn, but because they are afraid of failing. Point out the advantages of learning and that employees will not be penalized if they don't excel in the training. Take advantage of your local vocational school and other outside resources.

worksite (classrooms and computer labs)
Benefits: workers more open to new learning situations; workers demonstrate more ownership on the job; workers more involved in company activities; workers show higher self-esteem, pride, and confidence; workers' attitudes toward one another improve; on-the-job training is more understandable; greater understanding of job processes because of increased reading and math skills.

Educational provider: The Pace Group
10945 Reed Hartman Highway
Suite 215
Cincinnati, OH 45242
Contact: Carl Beer
513-793-0550

Narrative: Honda of America Mfg., Inc. became aware of the need for a workplace program when several associates expressed their interest. Departments were surveyed, and many associates felt they would benefit from a program. Also, some test scores from the Test of Adult Basic Education (TABE) showed a problem.

The success of the program is attributed to: the flexibility of hours and curriculum; financial backing from the tuition reimbursement program; the desire of associates to grow; and the opportunity for personal and career growth. Challenges to the program include the demands of time on associates, busy schedules, and the reluctance of associates to admit needs.

Honda of America Mfg. Inc. advises...

Assess needs of your company first, and build programs based on those needs. Make sure confidentiality is maintained. Obtain quality instructors. Training is an area that may continue to expand as new technology increases. The division between the trained and untrained may increase as the educated become more educated. These programs become vital for anyone who has many years left in the job market.

Educational provider: Cleveland Public Schools
The Office of Adult and Continuing Education
Cleveland Skills and Career Center
2850 Euclid Avenue
Cleveland, OH 44115

Contact: Pat Heller
216-523-8003

Narrative: Joseph T. Ryerson & Sons Inc. became aware of the need for a workplace program when employees had difficulty reading and understanding order instructions. When implementing the ISO 9000 Series Standard (a set of international standards developed to satisfy customer quality requirements), work instructions had to be read and understood by the individuals in all job positions.

During the program's four-month start-up time, Joseph T. Ryerson & Sons contacted the Cleveland Public Schools; discussed skills training plans with the steelworkers' union representatives and asked for their support; and reviewed paperwork with Cleveland Public School teachers to develop a curriculum.

The program's success is attributed to: using company paperwork as part of the curriculum; union support; management involvement; a plant tour with all the teachers involved; and classes for measuring and answering on-the-job questions held on the floor at employee work stations. Challenges include resistance to going back to school, time away from the job, and scheduling.

Joseph T. Ryerson & Sons would like to expand the program for salaried personnel if time and money permit.

---

Joseph T. Ryerson & Sons Inc. advises...

Enlist support for the program. Explain why the company is sponsoring classes and what will occur.

**Benefits:**
reduction in absenteeism;
reduction in scrap or reworking;
workers take more responsibility;
workers more open to new learning situations;
workers show higher self-esteem, pride, and confidence
Kidron Inc. became aware of the need for a workplace program when employees had difficulty meeting quality standards and products were produced that needed to be reworked. After an analysis was performed, it was determined some employees had difficulty interpreting blueprints and doing the math required to convert blueprints into products of the correct dimensions.

During the program’s six-month start-up time, a provider was selected; the curriculum and assessment instruments were developed; and the initial assessment of math and blueprint skills was performed. The program’s success is attributed to: top management support; the need for successful class completion for advancement opportunities; and holding classes no matter how busy the business is.

Kidron Inc. advises...

Do an initial skills assessment for all employees. Develop minimum requirements that employees must attain to be considered proficient or to not take particular courses. Give employees certificates that indicate skill proficiency and successful course completion. Give employees public recognition.

Kirkwood Industries became aware of the need for a workplace program through customer requirements and ISO certification (international quality standards). During the program's six-month start-up time, Kirkwood Industries completed a needs assessment with supervisors and managers; investigated educational providers and sources of funding; developed class outlines; developed a training proposal and grant application; and performed trainee skills assessments.

The success of the program is attributed to: the buy-in from top management to fund the training program; the requirement that supervisors and managers release employees to attend class; and the requirement that employees attend class as a condition of employment. Challenges include supervisors' frustration over losing employees from the floor, the need for overtime work, and employees who resisted class attendance.

Kirkwood Industries, Inc. advises...

Make sure that the plan is completed and approved before proceeding. Nothing is worse than a false start.

1995 Governor's Workforce Excellence Award

Primary type of business: manufacture of food bases, gravies, etc.

Number of employees: 160

Unions: none

Program details:
- Began: January 1994
- Start-up time: 5 months
- Still operating: yes
- Trained to date: 25

Funding: employer

Initial assessment: With the assistance of Project: LEARN, the entire workforce was assessed in the areas of reading, math, and writing.

Services:
- math;
- writing;
- GED (high school equivalency)/GED preparation;
- Adult Basic Education;
- English as a Second Language

Methods:
- classroom;
- small group;
- self-paced

Incentives:
- paid attendance during work hours;
- paid attendance after work hours;
- achievement certificates;
- family participation

Training location: worksite

Benefits:
- fewer injuries;
- reduction in scrap or reworking;
- workers show higher self-esteem, pride, and confidence;
- increased efficiency
Educational provider: Cleveland Public Schools
The Office of Adult and Continuing Education
Cleveland Skills and Career Center
2850 Euclid Avenue
Cleveland, OH 44115

Contact: Pat Heller
216-523-8003

Narrative:

L.J. Minor became aware of the need for a workplace program when simple counting errors were made. The business planned to introduce statistical process control and wanted to be sure employees would understand the concepts. Also, damage to equipment due to "negligence" was an issue.

During the program's five-month start-up time, L.J. Minor performed a workplace assessment of basic skills, recruited an instructor, and solicited volunteers. The success of the program is attributed to the enthusiasm of participants, the support of upper management, and the availability of classes during work time. Challenges included difficulty in attracting employees with training needs and lack of support to attendees by first-line supervisors and line employees.

L.J. Minor advises...

Go slowly. Include all employees at all levels in the assessments. Ensure confidentiality. Have the support of upper management.

Benefits:
workers show higher self-esteem, pride, and confidence:
workers' attitudes toward one another improve
Lima Memorial Hospital became aware of the need for a workplace program when associates expressed their interest in educational opportunities. During the program's four-month start-up time, the hospital learned what associates hoped to gain from training; looked at what other organizations were doing; worked with the school system to set up the program; and worked with associates to determine class schedules.

The success of the program is attributed to: participants who wanted to attend and learn; managers who were very involved, changed work schedules, and encouraged participants to attend; the administrative team that supported the program; and an excellent teacher who could relate to participants. It was difficult deciding on a program name that was not demeaning to potential participants. *People in Progress* was chosen.

**Lima Memorial Hospital advises...**

Find out what people want to learn. Use practical examples in class. Be flexible with work schedules to give people time to attend. Explain the benefits of attending. Be sure to have a teacher who is compatible with the participants.

- experiential (job shadowing);
- self-paced;
- job-related curriculum (off-campus technical classes)
Incentives:
- unpaid attendance after work hours;
- flexible scheduling;
- positive reinforcement;
- achievement certificates;
- family participation;
- on-site Employee Assistance Program when needed;
- Marion Technical classes at hospital's campus;
- on-site registration;
- financial reimbursement from hospital;
- employees may pursue education in non-healthcare field

Training locations:
- worksite; college/university; public schools

Benefits:
- workers take more responsibility;
- workers more open to new learning situations;
- workers show higher self-esteem, pride, and confidence;
- workers' attitudes toward one another improve;
- customer satisfaction improves

Educational provider:
- Marion Technical College
  1467 Mount Vernon Avenue
  Marion, OH 43302

  Contact: Jay McCreary
  614-389-4636

Narrative:
Traditionally, hospitals focus educational opportunities on licensed employees. However, informal discussions with non-licensed employees indicated interest in pursuing educational opportunities. A hospital-wide survey of both licensed and non-licensed employees verified the need for educational services. MedCenter Hospital's workplace program strives to increase the academic levels of participants, support career changes, improve employees' places in life, and have positive impacts on job satisfaction and workplace environment.

During the program's 23-month planning stage, MedCenter Hospital formed a task force that included management, employees and, later, a Marion Technical College consultant. The hospital surveyed employees; contacted several local educational providers to see how they could meet the hospital's needs; developed the mission statement of the Opportunity Center; determined development areas that the Center would address (vs. the hospital's Education Department that deals with licensure updates); interviewed and hired a coordinator; visited Mount Carmel's Center for Human Empowerment; and surveyed other hospitals to see if they had models in place.
The success of the program is attributed to: the support of management; the support of Marion Technical College in providing courses and consulting input; acceptance and usage of the Center by employees; wide offerings of topics (basic skills, managerial skills, personal development, career information); wise use of financial resources; the background of the coordinator; and the ability to coordinate with providers who can deliver needed services.

Challenges have included limited funding that does not allow for the desired expansion of services and the materials library; marketing services to employees with lesser educational backgrounds without creating a “for dummies only” image; simultaneously developing training opportunities in academics, career information, and personal development; and having a part-time coordinator when a full-time position is needed.

MedCenter Hospital would be happy to communicate with other companies and businesses about the joint Marion Technical College and MedCenter Hospital endeavor, either in person, by phone, or by correspondence.

---

MedCenter Hospital advises...

Thoroughly research: what is wanted from both the employer’s and the employees’ standpoints; available providers, models, and on-site classroom space; background of coordinators, instructors, and providers and their experience in dealing with adults; and the flexibility of all involved in the program to adjust to the needs of the participants. Be prepared to commit to the program financially, managerially, and for the long term. Continuously seek employee input when selecting course offerings.

Delaware Joint Vocational School
1610 State Route 521
Delaware, OH 43015

Contact: Sally Sutton
614-363-1993

Narrative:

Continuous problems filling out labor tickets and forms led Midwest Acoust-A-Fiber to consider starting a workplace education program. The development of employees' basic math and reading skills was important for accuracy and efficiency on the production floor. The company is geared toward quality, prompt service, excellent quality parts, and ISO 9000 (international quality standards).

During the program's three-year start-up time, staff managers were exposed to the initial training and development classes. A training plan was established for all employees and is evaluated on an ongoing basis. The success of the program is attributed to people working together to accomplish the goals of success, self confidence, operating as a team, and respecting one another. Learning is always necessary for growth and change. Program challenges have included learning to study, read, and listen, and fear of the unknown.

Northern Cross Steel Company's workplace program was offered originally as an employee incentive and had the goal of raising the educational levels of employees so they could increase their earning power. Northern Cross Steel felt both the employees and employer would benefit from the program.

During the six-month start-up time, the program was coordinated with the Strongsville Adult Education Program. The success of the program is attributed to: the individualized attention available in small-group instruction; self-paced learning; and pertinent educational areas covering the skills employees use on the job. It was difficult to coordinate the first, second, and third shift employees so that they could take training at one common time.

Northern Cross Steel Co. advises...

Promote the program extensively before implementation.

Contact: Helen Jane Wilson
330-296-2892
While providing on-site training in statistical process control and measuring in metrics, the OEM/Miller Corporation realized employees lacked adequate math skills and that an educational program was needed. During the program's five-month start-up time, Maplewood Area Joint Vocational School assessed the job-specific skills needed to perform satisfactorily in most positions.

The success of the program is attributed to: management support at all levels; continual promotion of the program; and informing employees how the program will continue. Challenges have included the small number of employees who are negative; their comments that sometimes adversely affect others considering the program; and the fact that good news spreads slowly.

OEM/Miller Corporation advises...

Continued positive promotion is needed. Get employees more involved with the planning process.

reading and comprehension; communication; math; writing; computer literacy; academic advising; GED (high school equivalency); GED preparation; Adult Basic Education; English as a Second Language
Program details: Began: January 1992
Start-up time: 1 year
Still operating: yes
Trained to date: 80

Funding: state and employer

Initial assessment: developed assessment tools from task analyses for specific job classifications

Services: reading and comprehension; communication; math; writing; computer literacy; academic advising; GED (high school equivalency)/GED preparation; Adult Basic Education

Methods: classroom; small group; one-to-one tutoring; individualized; computer-based; experiential; self-paced

Incentives: paid attendance during work hours; unpaid attendance during work hours; unpaid attendance after work hours; flexible scheduling; positive reinforcement; gift certificates; achievement certificates; family participation

Primary type of business: health care in a hospital setting
Number of employees: 4,000
Unions: yes
Training location: worksite

Benefits: reduction in absenteeism; fewer injuries; workers take more responsibility; workers more open to new learning situations; workers demonstrate more ownership on the job; workers show higher self-esteem, pride, and confidence; workers' attitudes toward one another improve.

Educational provider: In-house instruction. Used an advisor in adult education.

Narrative: The Ohio State University Medical Center became aware of the need for an on-site educational program when concerns mounted about employees' abilities to: read and complete paperwork for their benefits; read hazardous labels; read and understand information regarding infectious diseases; and participate in continuous quality improvement groups.

During the program's one-year start-up time, a task force studied literacy education and designed a program to meet the needs at the Medical Center. The success of the program is attributed to: having students, managers, tutors, instructors, and human resources coordinators on an advisory committee; releasing employees to attend class or tutoring during work time; support for the program by the highest administrators; and voluntary attendance in class and for tutoring. One challenge has been the need for front-line managers and supervisors to schedule staff who want to attend the program.

The Ohio State University Medical Center advises...

Hire an experienced consultant to guide you through the process. Research the needs for basic skill instruction in your workplace. Have an advisory committee that represents all of the stakeholders. Gain the support of administrators and managers. Involve the union as a partner. Assign responsibility for program coordination to an employee with experience in adult education.

Contact: Jim Frazier 513-771-8925

Narrative: OPW Fueling Components became aware of the need for a workplace program after part of its operation closed and employees were transferred to areas requiring higher basic skill levels. In addition, the business needed to prepare employees for changes in technology. During the program's three-month start-up time, OPW Fueling Components identified the need for training, employees interested in attending, and an educational provider. The success of the program is attributed to: employer sponsorship; voluntary employee involvement; down to earth, casual classes; and classes with job-related components.

OPW Fueling Components advises...

Returns -- quantitative, qualitative, and morale-wise -- are well worth the investment.

**Incentives:**
- unpaid attendance after work hours;
- flexible scheduling;
- positive reinforcement

**Training location:**
- worksite

**Benefits:**
- not known at time of survey

**Educational provider:**
- not used
Narrative:

PPG Industries became aware of the need for a workplace program when supervisors and workers indicated some employees had inadequate basic skills. During the two-year start-up time, the business tried various training methods, then settled on computer-based training.

Although PPG Industries believes it is too soon to be sure, it believes privacy, self-pacing, and the ready availability of computer-based training are essential to the success of the program. Challenges have included costs and getting out the word.

PPG Industries advises...

Training must be available when employees want it.

216-953-7312

Narrative: Precision Metalsmiths Inc. became aware of the need for a workplace program through customer requirements, paper work errors, and a high percentage of scrap. During the start-up time, the business determined top training priorities. The success of the program is attributed to the desire of employees to learn as much as possible. The scrap rate and number of paper work errors are both improving. Challenges have included employee turnover and making time to have training.

Precision Metalsmiths Inc. advises...

Be patient. Have everything in order and stick to a schedule. It is very easy to keep postponing. Training is very necessary today. Keeping all employees prepared to meet today's needs is very important.

Narrative:
Reckitt & Colman learned of the need for workplace programs through an Association for Quality and Participation conference and various newspaper and other articles. During the one-year start-up time, the business had small group meetings with employees and a kickoff meeting advertising the program and the need for a program. The success of the program is attributed to the kickoff and the fact that the program was developed and managed by employees. Challenges have included overtime, nonpay of employee time, and other, more pressing problems.

Get employees involved early in the design and implementation of the program. Contact an educational provider that works with adult learners.
Sauder Woodworking Co.

Training location: worksite

Benefits:
workers more open to new learning situations;
workers more involved in company activities;
workers show higher self-esteem, pride, and confidence;
workers’ attitudes toward one another improve
The Sauder Woodworking Co. was aware that some employees had not completed high school. The company published in its newsletter an offer to help any employee interested in earning a GED or learning reading, writing, or math. When some employees expressed an interest, a company-wide survey was done.

During the four- to six-month start-up time, Sauder Woodworking obtained ideas from employees and other organizations that already had programs in place. The success of the program is attributed to employees' realizations that continued learning is important to career advancement and that GEDs and college educations expand opportunities. Six employees have already earned their GEDs. Employees are excited about on-site college classes.

--- Sauder Woodworking Co. advises... ---

Offer the program to all employees, and make them feel a part of something good that is happening for the company. They have to buy into it. Once you have one success, the rest will follow.

Marysville, OH 43040

Contact: Cheryl Haggerty
513-644-8168
Scioto Valley Janitorial Services became aware of the need for a workplace program when it realized many employees lacked math and literacy skills and when articles were read about other companies that provide training. During the three-month start-up time, the business had discussions with the program coordinator and purchased educational materials.

The success of the program is attributed to the excellent program coordinator and support from company and the participants. One challenge was poor participation from employees.

**Scioto Valley Janitorial Services advises...**

Understand that there is an investment, both initial and ongoing. Realize that employees become discouraged and will not participate from time to time. Mandating training is very difficult if employees see no relation between improving skills and their jobs.
Program details: Began: January 1993

P.O. Box 10000
Oregon Road
Toledo, OH 43699

Contact: Linda Stacy
419-661-7425

Narrative:

The Ohio Department of Administrative Services became aware of the need for a workplace program when national and state statistics were examined and when state records indicated a number of employees without high school diplomas. During the one-year start-up time, a labor-management steering committee was formed, the program's scope was determined, requests for proposals were developed and reviewed, and policy and procedure were formed.

The success of the program is attributed to: sponsorship by both labor and management; the voluntary and confidential nature of the program; classes scheduled during work hours; paid release time to attend; and the developmental education credits awarded. The hesitancy of supervisors to facilitate employee participation challenged the program's implementation.

Ohio Department of Administrative Services advises.

Involve the union during initial planning and throughout program development, implementation, and evaluation.

Retraining America
16127 Tana Tea
Fort Mill, SC 29715

Contact: Judy Forrest
803-547-7728

Narrative:
The Timken Company created a training task force to build, staff, and operate a learning resource center. Retraining America provided the initial training and gave the company a process to open and maintain the center. The Timken Co. read many articles and attended informative seminars that showed the benefits of a workplace program.

The company found: individuals often are not motivated to get training outside the workplace; to build self-esteem, employees need to be recognized for personal achievements; when people feel better about themselves, they feel more capable of the jobs they can do for the team and the company; and the company is as successful as its team members.

During the eight-month start-up time, The Timken Co. did "everything!" The company had the initial training; wrote a mission statement; performed assessments and interpreted results; developed prescriptions for individual training; prepared the site; purchased hardware, software, and courseware; and debugged related equipment. Additional preparation included scheduling, communication, weekly meetings of the teams, hiring of instructors, and planning, planning, planning!
The Timken Co. said of program's success, "Let the people do it. Let them make the decisions given as much information as possible. It's their facility. Encourage, promote, recognize their accomplishments. Publish their efforts. Celebrate." A challenge to the program's implementation was the negative response from union management. The team was disappointed but did not let this setback stop them in its mission.

The Timken Co. advises...

Start right by following a proven plan. Have your instructors, who realize the importance of training, as part of your team. Get top management support at the beginning.

1991 Governor's Workforce Excellence Award

Primary type of business: hospital

Number of employees: 4,500

Unions: none

Program details:
Began: 1991
Start-up time: 10 months
Still operating: no
Trained to date: 150

Funding:
state

Initial assessment:
reading, writing, and math

Services:
reading and comprehension;
math;
writing;
GED (high school equivalency)/GED preparation;
English as a Second Language

Methods:
classroom;
individualized;
self-paced

Incentives:
paid attendance during work hours;
unpaid attendance during work hours;
family participation

Training location:
worksite

Benefits:
workers take more responsibility;
workers more open to new learning situations;
workers show higher self-esteem, pride, and confidence
The Toledo Hospital became aware of the need for a workplace program when members of quality improvement teams needed to enhance basic skills to solve workplace problems. During the ten-month start-up time, the hospital documented the training need; secured organizational support and funding; organized the format and curriculum; and recruited participants.

The success of the program is attributed to: supervisor support; on-site classes; recognition by administration of training’s value to the organization; and involvement of participants in program marketing. When many participants became ready for college level courses, the hospital offered on-campus credit courses at several colleges. Program challenges included the elimination of paid work time for class attendance and the reluctance of potential participants to acknowledge the need for skills upgrading.

The Toledo Hospital advises...

Target candidates through supervisors and human resources. Actively guide them into basic skills training. Promote continuous development.

Narrative:
When the UAW-Ford Lima Engine Plant became aware of the need for a workplace program, it considered several issues: the median age of the plant personnel; their years of service; and the skills required to operate technologically advanced machinery. To confirm the need, union and company officials cooperated in a joint venture to establish a core curriculum.

Partners included the local union, the National Education, Development and Training Center, and the plant’s Education, Development and Training Program. During the year and a half start-up time, they worked with local educational institutions to choose an educational provider for the program, identify the program’s focus, and select the avenues that would ensure the growth and success of participants.
The cooperation between the union and the company has been instrumental to the success of the Skills Enhancement Program at the Lima Engine Plant. Undoubtedly, the cooperation and commitment of the employees are the most important success factors! The UAW-Ford Lima Engine Plant leadership feels very fortunate to provide services that enhance the personal growth of employees. The plant recognizes the positive effect the training has on the quality product produced.

Negotiation of costs was the greatest challenge to implementation.

UAW-Ford Lima Engine Plant advises...

Establish a cooperative effort among all parties. Make sure the union (if you have one) is involved. Ensure that the educational provider understands your particular needs and is prepared to fulfill those needs. Maintain ongoing evaluations of needs as they relate to the plant. Keep your sense of humor.

UC employees volunteer to tutor others during and after class

Incentives:
paid attendance during work hours;
positive reinforcement

Training location: worksite

Benefits: workers show higher self-esteem, pride, and confidence.
The University of Cincinnati became aware of the need for a workplace program when first-line supervisors in the housekeeping department noticed employees having problems filling out forms for vacation and sick leave. Other employees ignored written instructions for job duties.

During the three-month start-up time, the University determined the overall needs of employees and contracted with Great Oaks Institute of Technology and Career Development to provide adult education. The success of the program is attributed to: using Great Oaks as the service provider; the confidentiality of the student's files; winning the 1992 Governor's Workforce Excellence Award; and the number of volunteer tutors who work with the students.

1992 Governor's Workforce Excellence Award

**Primary type of business:** hospital

**Number of employees:** 3,000

**Unions:** yes
Educational provider:  Great Oaks Institute of Technology and Career Development
3254 East Kemper Road
Cincinnati, OH  45241

Contact:  Art Ftacnik
513-771-8925

Narrative:

The University of Cincinnati Hospital became aware of the need for a workplace program when it realized a high percentage of employees in housekeeping, dietary, and laundry did not have high school degrees. The success of the program is attributed to: the convenience of the training's location and time; tutoring done by fellow employees; and the encouragement of teachers, students, and coworkers. Decreasing funds have reduced the number of sessions offered each year.

University of Cincinnati Hospital advises...

Combined paid and unpaid attendance seems to attract the most motivated students and yet makes the class easily accessible.
Program details:  
- Began: September 1993
- Start-up time: 1 year
- Still operating: yes
- Trained to date: 100

Funding:  
- state and employer

- achievement certificates

Training locations:  
- worksite and college/university

Benefits:  
- workers more open to new learning situations;
- workers more involved in company activities;
- workers show higher self-esteem, pride, and confidence

Narrative:  
US Precision Glass believed that employees' basic skills needed to be upgraded as part of efforts to modernize operations. When Miami Valley Career Technology Center assessed the employees' skill levels, the beliefs were confirmed.
The success of the program is attributed to planning and financial support from the Ohio Industrial Training Program. Organizing production and scheduling employees on all three shifts has been challenging.

**US Precision Glass advises...**

Prepare yourself to meet resistance from many obstacles, but do not let up. Try very hard to get employees involved. In today's changing workplace, your best asset is a trained, involved employee who will grow and change with the company and times.

- workers show higher self-esteem, pride, and confidence
Wayne Steel became aware of the need for a workplace program when employees indicated a desire to improve their job performances; shortcomings were identified in reports and meetings; and computerization and jobs became increasingly more complex. During the nine-month start-up time, the business identified employees' needs, company requirements, class locations, teachers, schedules, and costs.

The success of the program is attributed to: starting on a small scale; involving employees; getting top management approval; obtaining a coordinator; and establishing a written program. One program challenge was allocating training time in a way that minimized personnel conflicts and the interruption of production.

Wayne Steel, Inc. advises...

Start with a small program, something you can sustain. Be prepared to see few immediate results. This is a long-term endeavor. Do not train just to train. Analyze your requirements and fulfill those, then allow individuals to fulfill their needs and desires. Provide some training on a regular basis and other training only when needs become apparent.

Educational provider:
Vanguard Sentinel Schools
Adult Education
1306 Cedar Street
Fremont, OH 43420

Contact: Jody Angelone
419-332-2626

Narrative:
In 1992, Whirlpool Corporation's Clyde Division began including the concept of self-directed work teams in its manufacturing plan. During implementation, deficiencies in employee basic skills were discovered. To complete its world-class manufacturing plan, Whirlpool needed a workforce that could solve problems and make decisions. The need for both basic skill training (reading and math) and more advanced training (computer literacy and statistical know-how) was defined. Whirlpool management realized that a training program would benefit the employees, the company, and other stakeholders.

During the three-month planning stage, a program was initiated to explore employee interest, a room was remodeled, and supplies were ordered. Lifelong Learning was marketed through advertising in the LINK, a daily communication distributed to all employees. Posters were placed throughout the plant, and small group meetings were held to explain the nature of the program.

Lifelong Learning has been a success because Whirlpool management is supportive of the program and encourages all Whirlpool families to participate in classes. Lifelong Learning constantly changes and upgrades classes to meet the needs of customers. The quality of instruction is important. Instructors are encouraged to mentor each of their students and to help each student reach individual goals.

The most challenging part of the program's implementation is keeping the students interested in attending classes. Students attend on their own time. The administrator of Lifelong Learning remains in contact with management to keep them informed of progress and to ascertain what classes are needed.
The need for basic education, including computer education, is needed in any plant, no matter what size. Believe in your employees, trust them, and encourage them to improve themselves. If ALL LEVELS of management do not support a program, do not start one. The program will be doomed if you do not have support from the top down. Most adults want to learn, but are afraid of making mistakes. Provide a comfortable room, pleasant and knowledgeable instructors, and encouragement. You will be amazed at the number of adults who will attend. Build a good program, and they will come.

Narrative: Whirlpool Corporation’s Marion Division created a strategic plan in the early 1990s and recognized that the organization soon would require employees with a much different set of skills. An informal assessment of the organization revealed that there was a clear and present need for training.

The success of the program has been attributed to: an on-site program; scheduling classes to meet the time needs of employees; employees playing a large role in determining kinds of classes offered; having classes with definite beginnings and ends; and maintaining a friendly atmosphere in the plant. One factor that challenged the program’s implementation was recruitment.

Whirlpool Corporation - Marion Division advises...

It doesn’t become a success overnight.

Educational provider: University of Akron - Wayne College
1901 Smucker Road
Orrville, OH 44667

Contact: Amy Mast
330-684-8982

Narrative: The Will-Burt Co. became aware of the need for a workplace program when applicants were not prepared for work-related problems. During the year and a half start-up time, many trial-and-error sessions were held before the right course of action was identified. The success of the program is attributed to top management support, persistence, patience, and determination. The cost of the program was a challenge. In addition, getting buy-in from people forced to go to math and basic education classes was difficult. Animosity stopped after the completion of core classes.

Will-Burt Co. advises...

Use outside assistance. Set goals for education levels. Be patient for an excellent return on your investment. Include concepts on teams and value systems within your training.

Cleveland Public Schools
The Office of Adult and Continuing Education
Cleveland Skills and Career Center
2850 Euclid Avenue
Cleveland, OH 44115

Contact: Pat Heller
216-523-8003
Narrative: Nineteen percent of Yuasa-Exide, Inc. employees use English as their second language. An assessment in May 1993 showed an overall reading level of seventh grade plus nine months and confirmed the business's belief that refresher courses were needed.

After the assessment, Yuasa-Exide interviewed providers. Shortly before start-up, plans to participate in a program funded by a National Workforce Literacy grant at a local community college were cancelled when the grant was not awarded to the college. Yuasa-Exide then contacted the Cleveland Public Schools’ Office of Adult and Continuing Education and made plans to start.

The success of the program is attributed to calling classes “refresher” math, English, and spelling, instead of basic skills. Of its 120 employees, Yuasa-Exide had hoped for 10 volunteers. Instead, 26 employees volunteered. The good response was attributed to a presentation by the provider and to emphasizing the benefits of continuous learning. Some employees, however, feared they would be looked down upon because they lacked basic reading or math skills.

Yuasa-Exide, Inc. advises...

Begin by stressing program confidentiality to employees. Do an assessment, followed by a presentation to all employees asking for volunteers to take part in the class. The first class offered should be math and should be referred to as a “refresher” math course. Avoid calling the program basic skills. Get buy-in from the union and employees.

Benefits:
fewer injuries;
workers take more responsibility;
workers more open to new learning situations;
workers demonstrate more ownership on the job;
workers more involved in company activities;
workers show higher self-esteem, pride, and confidence;
workers' attitudes toward one another improve
As Zaclon, Inc. began to move toward self-managed teams, the need for enhancement of communication and other skills became apparent. The business continues to work at improving skills on an ongoing basis.

During the three-month start-up time, Zaclon worked on basic curriculum development and scheduling. The success of the program is attributed to: getting buy-in for the need to improve skills; providing time during working hours for education and training; and making organizational changes while simultaneously improving skills. Program challenges have included individuals who saw no need for change, the long payback, and the difficulty in measuring training’s short-term impact.

Zaclon, Inc. advises...

Be committed to the program. The pay backs are long-term. Unfortunately, the costs are immediate.
