These materials consist of: (1) a planning and implementation handbook designed to help Head Start managers better understand, plan, and implement a more comprehensive approach to health education and health promotion— one that addresses local needs and tailors programs to the needs of the children, parents, and staff; and (2) a resource guide that suggests programs, tools, and practical strategies for assessing existing health curricula for children, parents, and staff and that provides information on materials and organizations to help Head Start programs design their own health education and further their health promotion efforts. The cases presented throughout the handbook reflect day-to-day issues and health concerns of Head Start staff and families and are based on interviews and discussions with Head Start managers and staff throughout the country. The guide suggests criteria for choosing health curricula; an annotated listing of 250 health-related resources, including print and audiovisual resources for adult personal health and resources for use with children; and subject and title indexes for all resources listed. (The handbook contains 18 references, and the guide contains 10 references.) (CK)

Introduction

The Scope of the Problem

Since 1965 the needs of the children and families served by Head Start have become more complex, as have those of our society in general. Concerned teachers report seeing children who are more aggressive, impulsive, or withdrawn than in the past (Lang, 1992). Families are stressed by greater poverty, diminished support systems, unavailable health services, and increased health, environmental, and social problems. Consider the following statistics.

- The United States has one of the highest infant mortality rates of any industrialized nation. Death rates for black children are twice as high as those for white children (Children's Defense Fund, 1991).
- Childhood injury is the principal public health problem in America today, causing more deaths than all childhood diseases combined and contributing greatly to childhood disabilities (Children's Safety Network, 1991).
- Homicide is the second-leading cause of injury death among children and adolescents. In 1988, 9 children a day (3,290 children per year) were victims of homicide in the United States (Children's Safety Network, 1991).
- Approximately 2,000 children in this country have been diagnosed with AIDS and 13,000 are predicted to develop AIDS by the year 2000 (Martin, 1992).
- The leading cause of injury to women between the ages of 15 and 44 is domestic abuse.
- Approximately one in five preschoolers lives with an adult who is abusing alcohol or other substances (Collins and Anderson, undated). Abuse of alcohol and the use of other substances are highly correlated with domestic and community violence, child physical and sexual abuse, and child neglect.
- In the U.S., an estimated one in eight children under the age of 12 (5.5 million) is suffering from hunger (Martin, 1992).
- Lead poisoning and poverty are positively correlated. Furthermore, black children under six years old have six times the rate of elevated blood levels, compared to their white peers (12.2 to 2 percent) and black inner-city children have nine times this amount (18.6 percent) (Sidel, 1992).
- If tobacco use stopped entirely today throughout the nation, an estimated 390,000 fewer Americans would die before their time each year (U.S. Department of Health and Human Services, 1990).
- An American's overall health and access to quality health care are dependent on where he/she lives, the color of his/her skin, and his/her level of education (The Nation's Health, 1993).
The health and well-being of Head Start children and families are threatened by poverty and community issues related to poverty. But people who are on the economic edge have the most to gain from health education. Health education will help them stay well.

Head Start Health Coordinator

Head Start staff members work every day with families and communities facing these problems, spending much of their time trying to find and access essential yet scarce health services for low income families. At the same time, Head Start staff members have become increasingly aware that efforts in prevention are also needed. For Head Start programs, an overarching challenge is to find ways, with the resources available, to both promote prevention and respond to the many health-related needs of children and families.

A Working Solution

Health education for children and families has always been a part of Head Start’s mandate. Comprehensive health education, an approach that goes beyond current practices, can help Head Start programs improve the health and well-being of children, families, and staff, as well.

Comprehensive health education addresses a wide range of topics related to physical, mental, emotional, and social health. It also strengthens and reinforces the skills needed to be healthy, such as skill in communication, decision-making, risk assessment, and advocacy. Such skill building is essential for fostering healthier individual behaviors, as well as changing the social and environmental factors that negatively affect health.

Comprehensive health education is based on a set of beliefs that recognizes the value of educating people about:

- prevention of injury and disease, and protection of health
- health risks and health-promoting behaviors
- the importance of modeling as well as discussing healthy behaviors
- the role of advocacy and the need to create community norms in support of health
- the broad nature of health and well-being
- the interrelatedness of all the factors that influence health
Below are some common questions and answers regarding comprehensive health education.

**Common Questions and Answers**

- **Q** We do health education programs all the time. How is comprehensive health education different than what we’re doing now?
  
  **A** Many Head Start programs are taking steps—on behalf of themselves and others—to prevent injury and disease, advocate for changes in the community and in society, and improve the health and well-being of children. For example, Head Start programs offer training sessions for staff and parents on such topics as mental health, hygiene, child care, nutrition, and health services (e.g., immunizations, lead screenings, and dental checkups). However, broadening the definition of health education allows it to be integrated into all aspects of program planning. Comprehensive health education addresses all topic areas that affect our physical, social, and emotional well-being. As such, it is a cross-component effort in Head Start. In addition, comprehensive health education addresses not only the needs of children and families, but Head Start staff as well.

- **Q** What is involved?
  
  **A** Comprehensive health education programs are tailored to meet the specific health needs of children, families, and staff in the local program. As a result, comprehensive health education looks different from program to program, and changes within programs over time. Activities might address a range of topics such as parenting, emotional health, prevention of alcohol and substance abuse, nutrition and fitness, injury prevention, violence prevention, and consumer health. An essential aspect of comprehensive health education is its focus on building and reinforcing the skills needed to be healthy throughout life. Changing individual behaviors is part of the picture. Comprehensive health education also emphasizes building advocacy and activism skills to change those environmental and social forces—such as poverty, racism, unavailable health services, and influence of community norms—that pose significant health risks to Head Start children, families, and staff.
What are the benefits?

A comprehensive, programwide approach is essential to any health-promoting program. Knowledge and skill building will empower people to better care for themselves and others, change their communities, and lead healthier and more productive lives. Comprehensive health education can have a lifelong impact on attitudes about health and wellness and health-promoting behaviors.

But do we have the time?

Head Start programs are already spending time on promoting health and providing health education to children and families. A more comprehensive approach to health education—one that is broadly defined and cross-component in its reach, focused on building skills, and integrated for children, families, and staff—might take extra time at the outset. Yet programs report that the benefits outweigh the initial costs. Everyone in the program gains when health is valued and health messages are integrated, responsive, and reinforced for children, parents, and staff. Besides, when staff model healthy behaviors, they provide a powerful health education message to children and families. Such modeling takes no extra time but reaps benefits not only to the staff who are becoming healthier, but to the families and children they serve as well.

Education for health empowers through the development of understanding, motivation, and skills.

Kreuter and Green, 1992

Head Start programs throughout the country are realizing the benefits of a more comprehensive approach to health education and the value of promoting prevention and wellness to children, families, and staff. The case on the following page illustrates these benefits.
“Personal wellness is the basis for everything we do,” says the health coordinator for a program in Idaho. “And one of the things we say a lot is that you can’t sell what you don’t have.” In an effort to help staff and parents develop healthier lifestyles, the health coordinator and her director got together with other staff members. Together, they decided that losing weight would be a “wellness” goal. Each staff member set an individual goal. Some focused on reducing fat, sugar, and salt in their diets. Others changed from drinking soda to drinking water, or started walking. They each attended a “wellness” class offered at a local community college and read up on nutrition, diet, exercise, and other information related to losing weight. The staff then offered a similar wellness lesson to each of the 238 families in the program, and developed a variety of activities to promote health.

The health coordinator comments, “It’s been fun to watch in the last few years how people have integrated [healthy habits] into their classrooms and into their own lifestyles.” Staff and parents are exercising more and eating better, and so are the children. Together, they are building healthier lifestyles. “Now it’s a part of the way we live . . . we’re role models for each other.”

Using This Handbook

This handbook aims to build on what Head Start programs are already doing to provide health education to young children and their families. It is designed to help Head Start managers better understand, plan, and implement a more comprehensive approach to health education and health promotion—one that addresses local needs and tailors programs to the needs of the children, parents, and staff. Such a comprehensive approach addresses individual program priorities, while strengthening and reinforcing the skills people need to make healthy choices and decisions throughout life.

This handbook provides a definition and rationale for comprehensive health education, practical strategies for assessing health risks and needs, and ideas for planning and implementing effective and empowering programs. It is divided into six chapters: Introduction, The Health Education Team, Planning Health Education Programs, Designing Health Education Programs, Making It Work, and Conclusion. The Addendum offers suggestions for relating health education and health promotion activities to the Head Start Program Performance Standards. The cases presented throughout this handbook reflect the day-to-day issues and health concerns of Head Start staff and families. They are based on interviews and discussions with Head Start managers and staff throughout the country.
By increasing our awareness of health education for children, we are also increasing our awareness of health education for ourselves and our families. And when we put those three groups together and make a commitment to being healthy together, we have the basis for tremendous growth, advancement, and support for each other.

Head Start Teacher and Special Services Liaison

This handbook is part of Choosing Wellness, a health education package for Head Start programs funded by Johnson & Johnson. The package also includes a promotional video and print materials, and a resource guide listing more than 250 health education materials and resource organizations. We hope that together these materials will assist Head Start programs in further reducing risk; preventing unnecessary illness and injury; becoming stronger advocates; and promoting wellness in themselves, the families and children they serve, and the communities in which they live.
CHAPTER I

THE HEALTH EDUCATION TEAM
CHAPTER I
THE HEALTH EDUCATION TEAM

The Management Team
- The Role of the Head Start Director
- Exhibit 1 (Sample Memo)
- The Role of the Coordinators

The Role of the Health Services Advisory Committee (HSAC)
- Exhibit 2 (Sample Memo)

Summary
The Health Education Team

Essential ingredients needed for successful comprehensive health education programs include the support, understanding, and promotion from the director and the management team, and a health education "team" standing solidly behind the effort. The health education team might consist of the management team (the director, with health, education, parent involvement, social services, and disabilities services coordinators) and members of the Health Services Advisory Committee (HSAC). Other members might include "frontline" staff such as teachers, cooks, and family service workers. A team representing all aspects of the program will foster staff “buy in” and help avoid logistical problems. Working cooperatively, this group will take the lead in initiating, promoting, and ensuring the success of a comprehensive health education initiative.

The Management Team

The role of the management team in instituting a new comprehensive health education campaign is to:

- Create awareness of the importance and benefits of health education and health promotion.
- Create a supportive, enthusiastic, and friendly environment to allow for the free exchange of concerns and ideas among staff, parents, and children.
- Recognize and affirm the role of all staff members in providing health education and health promotion.
- Create a thoughtful, effective, and well-planned system to assess health needs and risks, and channel issues, concerns, and ideas.
- Formulate innovative and creative activities, programs, and materials to meet the health education needs of the Head Start community.
- Recognize when additional training is needed and provide relevant training opportunities.
- Continually evaluate and assess programs, making changes when necessary.

The Role of the Head Start Director

By providing guidance and direction, the Head Start director will be able to facilitate the creation of a staff team effort, as well as encourage the participation of families and the community. The personal commitment and modeling of the Head Start director will help ensure the success of a comprehensive health education program. As one Head Start health services manager said, “Leadership is the
Education for parents cannot be narrowly defined. It needs to include parents, friends, grandparents, older siblings... anyone who cares for the child and is part of the child’s family.

Head Start
Parent Involvement Coordinator

Creating awareness of the importance, definition, and benefits of health education is a useful way to set a positive tone and help orient staff and parents. At first this may be as simple as encouraging everyone—from bus drivers to cooks, from teachers to managers—to “tune in” to the health-related concerns and risks of children, parents, and staff. This also helps send the message that communication is a key element in comprehensive health education. The director promotes health awareness by helping the staff, along with children and families, to become aware of their own health needs and risks, and by offering appropriate programs. The director encourages participation on community health or mental health boards, as well as the program’s Health Services Advisory Committee.

The director is essential in providing guidance and direction—overseeing or devising methods of assessment, planning activities and interventions, and evaluating the results. The director also incorporates input from staff (at all levels) and parents and provides information to all decision-making and advisory groups regarding the adoption and implementation of comprehensive health education. Inviting and welcoming full staff and parent input, from the beginning, is an important way to ensure success.

The director (or designee) also must introduce comprehensive health education as a worthwhile and exciting initiative. Some ways to accomplish this are:

- Conduct a well-publicized kickoff event, such as a health fair, guest speaker, or programwide project.
- Give an enthusiastic presentation about health education at a preservice orientation for new and returning staff.
- Introduce a health education activity that will respond to a specific need and have an immediate impact.
- Provide a brief overview of the program’s philosophy regarding health education in a staff memo or parent newsletter, highlighting the benefits to children’s development and educational performance.

A sample memo (Exhibit I) on the following page invites Head Start families and staff to join in a kickoff “clean-up event.”
To: All staff, parents, Health Services Advisory Committee Members, Policy Council Members

From: Sandy Moller, Program Director

Re: Resuming Our Health Initiative: “Keeping Our Community Healthy”

The health education planning team met several times last year to discuss two health issues that we identified as the most pressing for our program. They are:

- **Our shape**—Most of us seem to be battling with our hips and waistlines!
- **Our community’s shape**—Specifically, the shabby and dangerous state of the Washington Street and Line Street playgrounds.

Through the hard work of the planning team and our city government, we are proud to launch the second annual kickoff of the “Keeping Our Community Healthy” program. As a first step, we will meet on **Saturday, October 17 at 10:00 a.m. at the Lincoln Avenue site.**

We will need parents, staff, and friends to:

- pick up garbage (we’ll provide gloves!)
- clean and scrub
- rake and shovel
- paint
- plant

You will receive:

- exercise and fresh air
- good company and lots of laughs
- a delicious and healthy lunch
- clean and beautiful community parks
- transportation and baby-sitting
- merit points*

* Merit points will be earned again this year by participating staff and parents to be redeemed at the end of the year for prizes and awards.

Information and sign-up sheets, with specific jobs, are posted on my office door. The coordinators and I will be calling you too! Please stop by to sign up or ask me any questions you might have. See you on the 17th!

**LET'S HAVE FUN, TAKE BACK OUR PARK, AND GET IN SHAPE!!**
Our administrator should be commended for her outstanding dedication. She serves as a role model to us all and works really hard to ensure that the children's needs are met. I guess that's why we feel we have such a great health program.

_Head Start Health Coordinator_

As the case below shows, exploring the health risks and needs for each individual Head Start program and then tailoring activities to meet the specific needs will make the initiative more appealing, clarify the process, and ease any apprehensions that may exist.

Initially, the staff of an urban Illinois program were reluctant to launch a new health education program. Two coordinators complained that they barely had time to complete the newly adopted assessment tools, and couldn't do more. The teachers felt that the problems faced by the Head Start families in the inner city were so serious and overwhelming that they could not begin to prevent anything.

However, the director and a few members of the staff were persistent; for them, reducing exposure to health risks remained a priority. One major health problem for staff was back strain, since the teachers and other staff were always bending over, lifting children, moving equipment, and sitting on children's furniture. This was a problem for many family members as well. Although the staff and parents frequently complained about this problem to one another, it never came up in meetings or reports as a health priority.

The director brought the problem to the Health Services Advisory Committee. Together, they decided to secure the services of a physical therapist for ongoing staff and parent education via a "Back School," and asked the health coordinator to rewrite the safety standards to include practices to reduce back injury. Materials, posters, and resources were purchased and made available. Periodically, the staff completed health check forms where they listed their concerns (not limited to back complaints) and other needs. In addition, plans were made to create a "recognition day" for staff and family members that would include information about wellness and a ceremony to acknowledge their efforts to reduce risk and better care for themselves.

Targeting these concerns enabled the staff to see that attention to their own health could help improve their lives. After the first year of the program, they began to participate more enthusiastically in assessing and planning programs for themselves, children, and families. Some of their fears about the extra work involved did not develop. However, even when extra effort or time was required, staff realized that the benefits outweighed the cost.
The Role of Coordinators

Because health includes physical, mental, social, and environmental health issues, all coordinators have a major role in comprehensive health education in Head Start. Once the Head Start director has established a comprehensive health education program as a priority, it is important to ensure that the entire management team works together as part of the effort.

The director and management team can stress the importance of all facets of the program working together. While the health coordinator will usually play a significant role, each component coordinator needs to be viewed as a significant contributor to a comprehensive program. By its very definition, comprehensive health education programs involve all aspects that have an impact on the well-being of children, staff, and families. The opinions and skills that other component coordinators offer are essential. Working together during all phases of the effort will also help coordinators become invested in whatever is created. Having each coordinator write a part of the health education plan is a good way to encourage cooperation and involvement.

Pertinent health information needs to be routinely shared—by memo or during weekly intercomponent meetings—among all coordinators, not just the health coordinator. This will also help underscore the comprehensive approach to health and wellness. Discussing risks to health and well-being, and health education responses, can be a prominent part of the agenda.

Health Coordinator

The health coordinator usually possesses the skills and expertise relating to a wide range of health issues, and is also most frequently in touch with children, staff, and families about health care services. He or she will most likely be the central person to assess health needs, develop strategies to meet those needs, and help to implement comprehensive health education programs.

The health coordinator provides important feedback to the health education team on traditional and current health risks, needs, concerns, and trends within the Head Start program and community. It is helpful to emphasize the health coordinator's role as a resource person—"the team quarterback"—in assessment, planning, and implementation. Sometimes the health coordinator is more comfortable with traditional health topics than with coordinating or delivering health education programs. In that case, another coordinator may be more appropriate to take the lead in coordinating or providing health education.
**Education Coordinator**

The education coordinator can also be a key player, identifying children’s cues about possible or potential health risks and concerns, and in designing developmentally appropriate strategies to be used in the classroom.

In a rural Ohio program, Maria, a teacher, and Chris, the education coordinator noticed that several children in a particular classroom were frequently absent due to a variety of respiratory complaints and stomach aches. Chris mentioned this trend to the health coordinator, who contacted a doctor on the Health Services Advisory Committee. Together, they devised a system for gathering data from records, other staff, children, and family members. By looking at the data, they discovered that some of the children had previously been diagnosed as having asthma; several others were also suffering from variations of the same condition. What had been dismissed as allergies, recurrent colds, or “nerves” (the stomach aches were a symptom of chest pain not intestinal distress) was a common illness—asthma.

Staff from all components then designed an educational program about asthma and reducing the risks of exposure for children, their families, and the staff. The education coordinator created developmentally appropriate activities for children on how to understand and recognize asthma in themselves or their classmates and how to reduce risks.

Other component staff developed training sessions for family members and staff. As a result, the janitorial staff paid particular attention to dust accumulation in the classroom and throughout the building; parents were advised about diagnosis and medication; and teachers learned what to do in case of an acute asthma attack. In addition, the education coordinator and all of the teaching staff played a lead role in health education for parents, talking with family members on a regular basis and developing activities that bridge home and school.

**Parent Involvement Coordinator**

The parent involvement coordinator and his or her staff can provide appropriate ways to stimulate and maintain parent involvement through activities such as these:

- Design take-home surveys about risks, cares, or concerns related to the well-being of parents or members of their families.

- Introduce ideas about comprehensive health education in existing parent support groups.

- Work with parents to assess health risks in their families and neighborhoods, and join together to effect changes.
• Develop a wellness library of print resources, audiotapes, and videotapes.

• Provide formal or informal discussions and educational opportunities with parents.

• Ensure that all materials are available in the languages spoken by the families and, if in print, at appropriate literacy levels.

In a rural program in Alaska, Tom, the parent involvement coordinator, overheard two parents discussing their desire to quit smoking. Tom, himself a smoker, approached them and asked if they would like to join him in an attempt to quit. Together, they implemented a 12-week program for all Head Start staff and families designed to raise awareness about first- and secondhand smoke; motivate people with incentives to try new behaviors such as buying fewer cigarettes, smoking less, and substituting a new behavior; and help people quit smoking by offering an onsite smoking cessation program, and starting a support group for participants. The program was such a success in raising awareness and changing some participants' behavior, that Tom and the two parents have agreed to offer it again.

Social Services Coordinator

The social services coordinator and staff can help assess individual, family, program, and community needs; offer information about community health concerns, environmental or neighborhood risks; and provide a link to community groups that could enhance the delivery of comprehensive health education programs. The social services coordinator can also alert the management team of particular needs within the community that can impact health risks and care, such as inadequate health care resources and environmental hazards. In this way, he or she can play a major role in identifying the social and environmental issues that need greater advocacy efforts.

In a rural program in Virginia, the social services coordinator identified a major risk to the health of many of her families who lived in substandard one- to two-room housing units and used kerosene heaters. Together with the other Head Start managers and parents, she launched an education and advocacy effort, working with other community agencies and the Health Services Advisory Committee, to obtain smoke detectors and kerosene heater barriers from a regional community health agency for every family who needed them.
Since education about health and well-being often takes place on a more personal and informal basis, the relationship between the social services coordinator and his or her staff and individual families provides an important opportunity for meeting specific health education needs and concerns. During home visits, for example, the social services staff can help raise awareness, provide information, and reinforce skills needed to prevent or reduce the risk of substance abuse, HIV infection, domestic violence, and child abuse or neglect.

At an urban program in eastern Massachusetts, alcohol, tobacco, and other drug use within the community were on the rise, and children were experimenting with drugs at an earlier age, usually about nine years old. The family services coordinator developed a “Prevention Home Visit” program, where alcohol and substance abuse prevention in children are discussed at home with families. This first step in a substance abuse prevention program has opened the door for people to learn more about prevention and intervention on a one-to-one basis, and has enabled many to disclose their concerns about themselves or their loved ones. The visit has also helped people in recovery to ask for assistance in accessing needed services. At the end of the visit, families are given written information on identifying alcoholism and substance abuse, as well as on where to get help and resources for staying in recovery.

Disabilities Services Coordinator
Since the disabilities services coordinator identifies, assesses, and provides services for children with disabilities and their families, she or he is an important resource for health education, particularly in organizing and developing materials for the staff and parents on understanding disabilities and chronic illnesses.

In conjunction with the education coordinator, the disabilities services coordinator can provide timely staff training on the needs of children with disabilities and their families, and health risks for children with specific disabilities. As an advocate for appropriate services, the disabilities coordinator can also provide useful information on access within the community, current medical practices, and how to design health education programs that address the needs of children with disabilities and their families.

A comprehensive approach to health education will strengthen the Head Start management team by providing another framework for ongoing communication, shared responsibility, and joint efforts. Other strategies designed to enhance the
To underscore the intercomponent nature of comprehensive health education, members of the Health Services Advisory Committee can be asked to "adopt a component." Each component might be adopted by one or two HSAC members. Their duties will include meeting and communicating with the staff and coordinator of the assigned component and learning from their perspectives about risks to the well-being of children, parents, and staff.

Health Educator for Head Start Programs

"team" aspect of the management team, such as role-playing exercises or activities involving cooperative learning, will also enhance intercomponent coordination. For example, Head Start component coordinators in one Texas program formed a learning group to identify the risk of lead paint exposure to the families in their program and develop strategies to reduce those risks (Pike, 1993).

The Role of the Health Services Advisory Committee (HSAC)

The HSAC advises in the planning, operation, and evaluation of the health component. Composed of a variety of health professionals, including representatives from major community agencies, private health professionals, and parents, the HSAC may include a physician, nurse, dentist, dental hygienist, nutritionist, and child psychologist or mental health representative. Health educators from local hospital "wellness" programs, health maintenance organizations (HMOs), or local chapters of national organizations such as the American Cancer Society are also useful in creating an HSAC that can assist in developing and providing appropriate health education programs.

The HSAC can be a vital resource for health education and promotion, alerting the management team about emerging health risks and needs, not only in Head Start, but in the community as well. It can also be a source for identifying and networking with local health educators, delivering or finding health education training, and providing strategies for launching health education initiatives.

Generally, the HSAC meets twice a year. To help make comprehensive health education a priority for Head Start programs, it may be helpful to hold an additional meeting to orient the HSAC members to the new health education initiative, or invite HSAC members to a programwide kickoff to focus on the needs assessment process and evaluation.

To further encourage active participation of the HSAC, the Head Start director and other coordinators may wish to make a brief report or send a letter at the beginning of the year, explaining the program's philosophy and approach toward health education, and how it will enhance Head Start's health activities. A sample memo (Exhibit 2) for a health education kickoff event appears on the following page.
Sample Memo

To: Health Services Advisory Committee
From: Tony Padre, Head Start Director
Re: Focus on Health Education and Health Promotion
Date: October 1

We are very happy to inform you that we will be focusing more on health education for children, families, and staff this year than in previous years. To begin this effort, we will be hosting a "Wellness Night" for all staff and families on Tuesday, November 17, from 7:00 to 8:30. Baby-sitting and transportation will be provided.

During the evening, we will show a 10-minute "fun" video, followed by a brief presentation on the prevention and wellness campaign we will begin this year. We will also have a short and very humorous presentation on "Well-Being in Head Start," written and performed by a few staff members and parents. Refreshments will be served (nutritious, of course!).

I hope you can join us and see some of the impact you are having! Besides, you might be inspired to make a new wellness goal for yourself.

You are important members of our team as we move to make health and well-being a main focus for us all. Again, thanks for your support and assistance.
Communication with HSAC members can be accomplished on a continuous as well as annual basis. Stress to HSAC members that their expertise uniquely qualifies them to help with the assessment process and to provide important insights about health risks and concerns, based on their observations, interactions, and medical or psychological treatment of Head Start children and their families. HSAC members can play a critical role in educating program staff about national trends in the major causes of illness, injury, and death broken down by age and ethnic group. They can target the health objectives of Healthy People 2000, a report that sets forth the national health promotion and disease prevention objectives for the year 2000.

Encouraging feedback and participation from HSAC members can be facilitated in other ways:

- Enlist them to review needs assessment results and help form recommendations for priorities for the year.
- Invite them to develop strategies with program staff that ensure successful program outcomes.
- Keep members informed with phone calls, memos, reports, parents' newsletters, subcommittee meetings, and invitations to other Head Start activities.
- Ask members to share and disseminate information from publications such as the National Health Services Newsletter and the U.S. Department of Health notices.
- Have members review and interpret health-related information reported in the national or local media (e.g., the benefits of drinking milk or the dangers of e coli bacteria).
- Suggest that members use professional affiliations and memberships to advocate for improved health services to the community.
- Inquire about issues the HSAC may want to address, such as risks and needs related to physical, emotional, social, and environmental concerns.
- Schedule “check-in” calls at regular intervals (e.g., monthly, every three months) by the director or other manager to discuss trends and other health-related concerns.
- Suggest that members invite other health education, public health, or adult education professionals to join or participate in the HSAC.
- Ask members to participate in the program’s annual evaluation efforts and to make recommendations for program goals.
CHAPTER 1

Summary

Tips for Your Health Education Team

• Identify your team.

• Look to your Head Start director for guidance, commitment, and enthusiasm.

• Encourage coordinators and other members to work together for the common goal of implementing a comprehensive health education program.

• Try strategies such as cooperative groups to enhance your team activities.

• Enlist the expertise of the Health Services Advisory Committee.

• Consider a "fun" activity to kickoff the program.

• Keep parents, staff, and community members involved!

The Planning Process

Summary

Exhibit 7 (Health Education Planning Tool)
Assessing Risk, Need, and Interest

To assess and evaluate health risks, the management team can use data gathered from existing assessment tools. Interpreting and analyzing the data generated will help the management team to set priorities, allocate resources, and design programs and learning opportunities that are appropriate, accessible, and popular.

Many tools already exist within Head Start, including:

- Community Needs Assessment
- Program Information Report
- Program self-assessment
- Family needs assessment
- Enrollment data, child, and family records

Other resources available (or easily created) may include:

- Health Services Advisory Committee
- State and local health departments
- Media reports
- Parent and staff surveys

The management team can review existing tools and resources to determine whether or not they contain the information needed to prepare and design comprehensive health education programs.

Some of the written tools may need to be slightly altered by adding or rephrasing questions. These may be open-ended and general (e.g., "What do you think are the biggest risks to your well-being?" "What are the issues that concern you most about your family's health and well-being?") or more specific ("Do you smoke?" "Is your neighborhood or your neighborhood playground safe for children to play in?"). Answers to questions such as "What area of personal health do you most want to focus on this year?" will give staff a sense of priorities from an individual's point of view. Managers may also consider creating new tools such as interest and need surveys for staff and family members, to provide additional data.
To help the management team coordinate the data from various existing and new sources, a simple, comprehensive form to summarize and prioritize needs is provided at the end of this section (see Exhibit 7, Health Education Planning Tool). Staff can complete the form annually, providing the information they have collected through various tools and resources. Priorities can then be set and activities developed to meet those identified needs.

**Using Existing Tools to Identify Risks and Needs**

Exhibit 3 describes existing tools and suggests ways they can help programs better understand local health needs and risks.

### Community Needs Assessment (CNA)

Each Head Start grantee must conduct a Community Needs Assessment within its service area once every three years. Among other data, the CNA must include the collection and analysis of the following information about a grantee's service area: the demographic makeup of Head Start-eligible children and families; other child development and child care programs serving Head Start-eligible children; the estimated number of children with disabilities four years old or younger; and information regarding the education, health, nutrition, and social services needs of Head Start-eligible children and their families.

The CNA is an ideal tool with which to examine the risks to health and well-being and the health education needs of Head Start children and their families. It can help identify and establish priorities for current (e.g., an increase in community violence, more cases of tuberculosis, new cases of asthma), as well as long-standing (e.g., inadequate immunizations or health services, lead paint poisoning) health problems. It can also help establish goals for healthier lifestyles and highlight existing resources such as community hospitals, local businesses, civic organizations, or community activists who can be contacted to help develop health education programs.

### Program Information Report (PIR)

Annually and nationally, all Head Start programs respond to the PIR, a standardized reporting tool of more than 25 fields of information. It includes, for example, important data on staffing, agency organization, and characteristics of children and the services delivered to them. From the responses to a PIR, programs can assess areas that need attention and can develop plans to improve program services.
For example, programs report on the number of children who have completed a professional dental examination during a program year. If program statistics indicate fewer than 100 percent examined, the program is not meeting the Head Start Program Performance Standards, and the management team will need to address the problem. Possible solutions may include a programwide advocacy effort to encourage more dentists to provide services to families with low incomes, or establishing health education on dental health and accessing dental services as a priority for children, parents, and staff.

**Program Self-Assessment**

Each year the Head Start program must carry out a self-assessment to examine all levels of program operations to determine strengths and weaknesses in managing its grant, complying with federal requirements, and providing services to children and families. This information helps the director, other administrators, staff, and parents to focus their energies where they are most needed.

In conducting a self-assessment, risks to health and well-being will emerge as the particular needs and problems of the community and the program are identified. In addition, the self-assessment process expands and improves communication and teamwork between staff and parents, and generates opinions and suggestions from a variety of viewpoints. These benefits apply to the specific development of health education programs as well.

**Family Needs Assessment (FNA)**

The FNA is designed to provide information on many issues related to health and well-being, such as risks to physical and emotional well-being, and social and environmental threats. For example, the FNA might help identify risks to children such as dangerous substances or debris in the neighborhood and the playgrounds, domestic violence, and cultural views on health and using health providers.

The FNA helps staff and family members work together over time to identify strengths, needs, and goals, and to create strategies to meet those goals and obtain needed services and resources. Ideally, it is not merely a data gathering tool, but rather an ongoing process.

**Enrollment Data**

Health screenings, and dental and physical examinations, conducted upon enrollment, can also provide valuable information about health and well-being. For example, if the height and weight information about incoming children indicates that the majority of children are overweight, staff may develop a fitness program for children; monitor their diets more carefully; and offer programmatic seminars on fitness, nutrition, and cardiovascular health and risk.
Other Sources

In addition to using existing tools, Head Start programs can use other sources of information to assess, analyze, and set positive health goals. These sources, often more informal, can be as important as existing assessment tools. Incorporating them into the planning process may only involve noting, recognizing, or recording them, since they are often part of the conversation, interactions, and daily activities of the staff, parents, and children.

While gathering information for their community needs assessment, staff from a Southeast program discovered that automobile crashes and injuries were on the rise in their city. Informal discussions among children, family members, and staff later revealed that many adults were not wearing seat belts and many children were either being placed in car seats inconsistently or not at all. The program embarked on a month-long “buckle up” campaign with promotional materials, speakers to raise awareness and motivate people to change their behavior, and a concerted effort on the part of everyone to remind each other to “buckle up.” The program later established a lending library with approved used infant and child car seats, and sponsored a day when families and staff could bring in their cars to have their seat belts checked and repaired.

Health Services Advisory Committee

The HSAC can provide valuable and essential information about program, neighborhood, and community health risks as well as trends in national health problems and health care. As providers and educators in the community, they have firsthand knowledge about needs, as well as the expertise to help set priorities about issues of concern.

State and Local Health Departments

State and local health departments are perhaps the best source of data about health risks and trends in the community. These agencies are able to share information that will support issues found from other data sources or will highlight emerging issues.
The Media

Head Start programs frequently use national and local newspapers, newsletters, magazines, television, and radio to identify health risks and trends nationally and in their immediate area. Whether it's the importance of exercise, the effects of secondhand smoke, an increase in the rate of breast cancer in a particular community, or an upsurge in cases of tuberculosis, articles and reports about health concerns are readily available in the popular media.

The management team, Health Services Advisory Committee, staff, and parents can be encouraged to bring in relevant information and concerns. Sometimes programs get confusing or conflicting health information from the newspapers, magazines, or television. In such circumstances, it's a good idea to call the local health department or consult an expert on the HSAC and make sure the information is accurate before it is distributed.

The HSAC can also provide important assistance in assessing the accuracy of reports in the popular press. Appropriate print material can also be kept on hand for a health education resource library, bulletin board, future planning, and use in lectures, workshops, and seminars.

Staff Surveys

The observations of all staff who interact with children and their families during the normal course of the day are crucial in determining health risks and health-related interests. While riding on the bus, playing in the classroom, eating meals, or being picked up at the end of the day, the casual conversations and interactions between children and their families provide important clues about not only troubling or distressing health trends, but about their health needs and interests as well. Encourage staff to share their observations, conversations, and other interactions; this can be helpful in identifying and assessing needs. Staff surveys are also an important source for identifying health risks, interests, and needs for staff themselves.
At the end of the day in a suburban program, the teachers and children gathered for circle time. During “sharing time,” Manny stood up and announced that his uncle had died. When another child asked how, Manny said that his uncle had AIDS. This was the first time a child had spoken about AIDS in the classroom. No one asked any more questions, and the teachers felt uncomfortable and unsure of what to say.

Later, the two teachers discussed the matter with the education coordinator, who suggested inviting the parent involvement, social services, and health coordinators to join in the discussion. They also contacted the mental health specialist to observe and speak with Manny to determine if he or his family needed additional help. In turn, the coordinators brought the issue to the weekly management meeting where HIV and AIDS were identified as increasing risks in the community. At the next Policy Council meeting, which the director asked the teaching team to attend, a subcommittee was formed to plan widespread health education on the prevention of HIV, with other efforts initiated to help children, parents, and staff deal with HIV and AIDS, as well as issues related to death and dying.

Depending on the size and structure of the Head Start program, it may be necessary to provide a thoughtful, planned, and systematic way for staff to report ideas and impressions. This may require methods such as these:

1. Bring up work-related health issues or topics at staff or team meetings.
2. Conduct regularly scheduled forums to discuss health-related risks and concerns.
3. Create a clear chain of intra- and intercomponent communication.
4. Provide training so that staff are better able to react to potential health issues and concerns heard in the classroom and in discussions with families.

Sample staff surveys (Exhibits 4 and 5) follow.
Sample Staff Survey

Hill Head Start Program
As you know, the Hill Head Start is developing a new health education program—we want to help everyone become healthier! Please help by completing the form below. Your responses will help us create a program that best meets our needs. Feel free to come and discuss these questions and/or your responses with LaVonna Hart, the director.

1. What are the 2 biggest risks (at home or in Head Start) to the health, safety, and well-being of the children in our program?

2. What are the 2 biggest risks to the health, safety, and well-being of the families in our program?

3. Overall, what are the 2 biggest risks to the health, safety, and well-being of our staff?

4. What are the 2 biggest job-related or program-related risks to your health, safety, and well-being?

5. What issue(s) should we tackle first as part of a comprehensive health education program for children, families, and/or staff?
Sample Staff Survey

Hill Head Start Program
As you know, the Hill Head Start is developing a new health education program—we want to help everyone become healthier! Please help by completing the form below. Your responses will help us create a program that best meets our needs. Feel free to come and discuss these questions and/or your responses with LaVonna Hart, the director.

1. What health goals do we want to set for us (staff) this year?

2. What will help us achieve these goals?

3. What barriers will we face?

4. How can we overcome them?

5. Who else can help us?
Parent education should focus on promoting health and wellness, be positive, and address the question: What is needed to improve your well-being?

Head Start Parent Involvement Coordinator

**Parent Surveys**

Invite parents and other family members to share their interests and concerns during home visits, casual conversations, and through parent surveys.

Parent surveys should be brief, in the appropriate language and literacy level of the families, and account for the cultural factors that influence health behaviors and choices. Similar to the staff survey, they may take the form of an open questionnaire or list several suggested topics, asking respondents to check off topics of interest. Other information can be gained by asking questions about neighborhoods, such as “Who gets hurt in the neighborhood and why?” or “Have you or a family member needed to visit the emergency room in the last six months? If yes, what was the reason for the visit?” These questions—and answers—can result in health education and promotion programs targeted at reducing exposure to immediate risks.

Staff and parents in an urban program in Baltimore realized that the children were exposed to significant risks in local parks and playgrounds from broken glass and syringes. Together they worked on a variety of measures that would alleviate this risk: cleaning up the play areas, teaching children and adults about safety and injury prevention, and advocating with local officials to keep the playgrounds safe and free of hazards.

A sample parent survey (Exhibit 6) can be found on the following page.
Sample Parent Survey

Hill Head Start Program

Dear Parents,

We are gathering information on your interests and concerns about the health, safety, and well-being of your children, your families, and your neighborhood. Some common concerns might be:

- keeping your child safe in the neighborhood
- preventing injuries at home and in the neighborhood
- helping your child solve problems without fighting
- learning how to advocate for yourself
- getting good medical care for yourself and your children

Please help us by filling out this survey. We want to hear what you think! Feel free to also discuss any of your personal interests (weight loss group or smokers group, for example) and concerns with your child’s teacher or LaVonna Hart, the director.

1. What would you like to improve about your children's health and well-being?

2. What would you like to improve about your family's health and well-being?

3. What would you like to change for the better about your own health and well-being?

4. What would you like to improve in the neighborhood? In the program?
The Planning Process

Assessing health risks is a first step in creating comprehensive health education programs. Data from all sources within Head Start—including the community needs assessment, family needs assessments, parent and staff surveys—will help provide a picture about issues and risks for individuals, families, neighborhoods, specific sites, the program, and the community.

Once data are collected, assemble a team to discuss the information gathered as it relates to major health issues (such as building relationships, prevention of community violence, parenting, nutrition, disease prevention, and environmental health). The team might consist of the director and coordinators; ideally it will also include parents, staff from different levels within the program, and members of the HSAC.

A sample tool to help programs discuss data and establish priorities is provided at the end of this chapter (Exhibit 7). A way to use the tool to help analyze issues and set priorities might be:

- Distribute a copy of the form to all participants before the group meets to help them think about health risks and goals for children, families, and staff in the program as well as broad issues in health education.

- Have individuals identified ahead of time to review information from one or two data sources and be prepared to summarize issues for the group. For example, the social services coordinator might share with the group the results of data gathered with the family needs assessment process and the community needs assessment, while the parent involvement coordinator reviews and summarizes data from the parent and staff surveys.

- At the beginning of the meeting, have the assigned individuals briefly summarize the major risks or needs that surfaced in the data source(s) that they reviewed.

- The team then uses the tool (or one the program develops) to guide discussion as members combine the information they have gathered about health risks first to children, then families, and then staff, and brainstorm resources or programs available to address issues.
• The team chooses up to three broad issues (column 2) as priorities for the program year. Issues might be chosen as priorities because they are judged by the group to be pressing concerns (environmental hazards) with insufficient community resources to address them, new trends that need attention (rise in preventable diseases), or issues that involve a wide audience and are likely to generate enthusiasm for the health education program immediately (personal health and wellness).

This type of planning process will help programs identify annual priorities, evaluate past efforts, and develop short-term and long-term goals. After priorities are chosen, the team might want to present their findings to all groups—all staff, policy council members, and members of the Health Services Advisory Committee—to get feedback and create interest and enthusiasm.
Summary

Tips for Planning Health Education Programs

• Gather information you already have available, such as:
  — Community Needs Assessment
  — Program Information Report
  — Program self-assessment
  — Family needs assessment
  — Enrollment data and child and family records

• Collect information from other sources, such as:
  — Health Services Advisory Committee
  — Your state or local health department
  — Local or national media
  — Staff or parent surveys

• Assemble a team to discuss the health information you’ve gathered.

• Use the Health Education Planning Tool (Exhibit 7) to help your team identify priorities and plan your next steps.
**Exhibit 7**

**Health Education Planning Tool**

**Instructions to Planning Team Members**

1. List the specific health-related interests and risks that you have identified under the appropriate issues in column 2.

2. Note the data source(s) that indicate these as needs in column 3.

3. Indicate the appropriate audience(s) (children, families, and/or staff) in column 4.

4. Record the resources (materials, programs, personnel) currently available to help with the effort (in the program and in the community) in column 5.

5. Record resources still needed (materials, personnel, financial) in column 6.

6. In column 1, note up to three priority issues for health education efforts for the year.

7. In column 7, record the person who will take lead responsibility for each priority area.

Priorities might include issues judged as needing immediate attention, issues identified as important by a number of data sources from within the program, or issues that staff and parents feel will help get the initiative underway. For example, personal health and wellness may not surface as a pressing need, but may be selected as a priority because of the value it has in promoting health programwide and encouraging participants to be involved.

The examples listed within each issue area are presented to give you ideas. Your program will probably have different and/or additional specific topics to address.

Summary

53
Designing Health Education Programs

Once the assessment process has been completed and priorities and resources are identified, it is time to design a health education program. What needs to be considered to ensure a more successful health education effort? First, program managers might want to assess where adults are in the process of change. Do participants know certain behaviors are unhealthy? Are they ready to take action? What type of health education program would move them to the next step? For example, a smoking cessation program would not reach people who feel their moderate smoking is not a health problem. Sometimes the program content, activities, and leader are excellent but the effort fails because of a mismatch between what is delivered and the audience’s readiness to learn about the topic.

Once the audience’s needs have been assessed, program managers will need to locate and assess print and audiovisual resources to support the health education and promotion effort. Are curricula or other materials readily available to help address the priorities selected? Are they appropriate for Head Start children, parents, and staff? Do they fit the adults’ stage of readiness for change?

This chapter provides information to help Head Start programs think about audience needs and adapt materials to facilitate change.

The Process of Change

To successfully promote health and positive changes in health-related behaviors, interventions need to be tailored to match the participants’ stage of readiness to change.

Researchers now believe that most people go through a predictable sequence of stages before they voluntarily change unwanted behavior (Prochaska, DiClemente, and Norcross, 1992). Exhibit 8 summarizes these stages.
Exhibit 8

Stages of Change

Stage 1  Precontemplation
“My smoking isn’t a problem.”

In this stage, people do not realize or believe that their behavior poses a problem. For example, a moderate smoker might believe that his or her smoking poses no health risk.

A “precontemplator” might benefit from a program designed to provide basic information, raise consciousness, and promote self-understanding about smoking. Such a program might move the “precontemplator” to the next stage of change.

Stage 2  Contemplation
“I’ll probably quit someday.”

In this stage, people recognize that a certain behavior is, in fact, causing a health problem. The “contemplator” is seriously considering changing the behavior sometime in the foreseeable future.

At this point, a program designed to raise awareness, provide opportunities for self-understanding and support, and foster insight regarding how one feels and thinks about smoking, might help move the “contemplator” to the next stage of change.

Stage 3  Preparation
“I’m going to quit after the party in two weeks.”

In this stage people take small steps toward their goal, intending to change their behavior within the next month or so. The smoker might try to cut down on the number of cigarettes a day, or switch to a lighter brand. He or she might then begin learning about smoking cessation products or programs. “Preparers” begin to act—not just think and feel—taking steps to set goals, target dates, or to change their environment.

At this stage, the most useful interventions help participants set targets; assist them as they choose to act; encourage belief in their ability to change; and help them begin to evaluate and control the situations that trigger the behavior.
Stage 4  
**Action**

“I can do it.”

In this stage, the person eliminates the habit. This is usually accompanied by the substitution of a new one, removal of temptations, and turning to others for help. The smoker may choose chewing gum or exercise, throw out his or her cigarettes, and join a support group.

A person in the action stage needs to develop skills to control the forces that prompt the behavior. Beneficial programs are designed to help participants with stimulus control. The action stage is a stressful one, since the behavior has been eliminated; therefore, support and understanding from helping relationships—counseling, friends, support groups—can help people move to the next stage.

Stage 5  
**Maintenance**

“I’m here to prevent myself from starting to smoke again.”

In this final stage people use strategies to ensure continued freedom from the unwanted behavior. Although this stage receives little attention because the unwanted behavior is gone, it nonetheless is an important step in the process of change.

Participants need support to avoid “cycling back” and resuming unhealthful behavior. Maintenance programs help people identify conditions under which they might cycle back and offer them alternative forms of coping. Support groups are helpful in this stage, as is praise for continued stability.
Health education promotes self-sufficiency and empowerment—two goals of Head Start.

An interesting aspect of this research is the finding that it takes most people about five tries before they are successful in eliminating the habit. In other words, relapse is the rule rather than the exception. The process of trying over and over again is part of being able to change behavior for good. In this context, the word “relapse” is not useful; it connotes failure, and may even diminish one’s desire to change. More accurately, there is no “relapse.” Cycling back to an earlier stage is not failure but part of the process of achieving success. This is an empowering notion for people who are struggling to change their unwanted behaviors.

This model of change is helpful for those implementing a comprehensive health education program for parents and staff. It provides the context and language for discussing change and changing unwanted behaviors in a non-blaming way; views the process as predictable and similar for the majority of adults; provides a map for acknowledging steps, however small, taken to achieve success; and empowers by viewing cycling back to earlier phases as a part of the process, rather than a failure.

Being aware of and sensitive to different levels of readiness will help Head Start programs develop activities that match the audience’s needs. For example, some Head Start parents and staff might perceive domestic violence as a prevalent problem in a particular community. However, if the majority of the Head Start parents and staff are precontemplative (e.g., they do not believe there is a problem), they might not be interested in educational activities on “preventing domestic abuse.” “Violence prevention,” however, might attract a wider audience and heighten awareness of domestic abuse. Such an intervention is targeted to where people are (precontemplators) and moving them to the next stage.

The Resources Available

Head Start programs are usually rich with people resources. Staff members routinely provide health education for children, parents, and staff. And many component coordinators (as well as other staff) are experienced and accomplished at developing and adapting materials into training activities, and delivering training to parents and staff. Similarly, teachers are experienced and skilled at adapting health-related content into developmentally appropriate experiences for children in their classrooms. Through active community involvement and networking, Head Start programs can also access community experts who can provide resources or deliver training sessions.
Print and audiovisual resources for developing a comprehensive health education program pose somewhat of a challenge, however. Comprehensive health education is an evolving field and most materials currently available are on single health-related topics for children, parents, or staff. Many provide information only and do not suggest ways to build skills that lead to behavior change or advocacy to change the system. While new materials and curricula are entering the market, a comprehensive health education curriculum that builds skills and is appropriate for all three audiences—Head Start children, parents, and staff—may be difficult to find.

The Choosing Wellness: Comprehensive Health Education Resource Guide, a companion to this handbook, lists a limited number of curricula that address health education topics comprehensively for preschool-age children; but none address the health education needs for children, parents, and staff simultaneously. In developing a comprehensive health education program, integrated for all three audiences, Head Start programs may consider the following options:

- Begin with a comprehensive health education curriculum for preschoolers and supplement it with curricula and other materials on single topics to address the health needs of parents and staff. In choosing this option, programs need not limit themselves to one comprehensive child curriculum, but rather may choose to combine parts of two or more comprehensive child curricula to address the health topics affecting their children and families.

- Use the many curricula available for children, parents, or staff on single health-related topics (nutrition, mental health, violence prevention, etc.) to piece together a more comprehensive curriculum for all three audiences based on the program’s health needs.

- Use a combination of existing curricula and other health-related print and audiovisual materials to develop a new comprehensive health education curriculum for children, parents, and staff.

The companion resource guide lists more than 250 health-related curricula, print, and audiovisual materials, and resource organizations that can offer assistance in adapting and developing health education curricula for children, parents, and staff. The guide also provides tools for assessing existing health education curricula to ensure that they are appropriate for and meet the needs of individual Head Start programs.
By building a framework for health education, based on the importance of prevention and building skills to lead healthier lives, any content will be more easily adapted and incorporated into the health education program. Beyond the program content, individual Head Start programs will need to decide which skills they want to introduce and reinforce. What are the skills needed to address the underlying issues in your community? Advocacy? Decision-making? Assertiveness? Refusal skills?

Given the limited time and resources available for most Head Start staff, and the multiple risks, needs, and interests of families living in poverty, narrowing the program focus is an initial key to success. Taking one step toward prevention—guided by a vision of where the program wants to go—is critical to success. Health education efforts frequently start small, gain momentum, and then address a more comprehensive set of issues once participants are involved and committed, and the program is in place.

Lessons from the Field

As Head Start programs begin to design health education activities for staff, parents, and children, they will not only select priority issues and skills to focus on, but will also select from a range of strategies (e.g., home visits, mentoring, workshops) available for the delivery of health education. Health education activities—steps toward comprehensive health education for staff, families, and children—from across the country are described below.

Health Education for Staff

Moving toward health, safety, and wellness is important for all of us. While the Head Start Program Performance Standards mandate health education for children and parents, an awareness is growing that health education is critical for staff, as well.

Staff reap the benefits of learning about their own health and ways to improve their health-related behaviors. Many staff will become healthier and have a greater sense of well-being. Staff also serve as role models for parents, demonstrating the importance of caring for oneself. As one health coordinator remarked, “Parents learn as much from what we do as what we say.” In addition, the bonds between parents and staff can be strengthened as together they struggle with many of the
Health education for staff goes well when the leadership truly cares about staff health and well-being, values health education for all staff members, and encourages participation in the programs offered. This includes emotional support as well as logistical support, such as activities offered during work hours.

Head Start Health Coordinator

same health-related issues and challenges. As one director commented, “In the area of adopting healthy behaviors and changing unhealthy ones, we know we’re all the same here.” Finally, health habits of parents and staff play an important role in the development and reinforcement of children’s health skills.

Staff are often at different stages in perceiving their own needs or interests. For example, some staff devalue their own needs because they are so busy taking care of the needs of others. Head Start programs need to offer health education and prevention activities for staff that not only help them do a better job, but improve their general understanding and maintenance of their own good health as well.

By developing these programs, Head Start sends a powerful message to staff—that they are valued not only for what they do but for who they are.

Industry has made great strides in fine tuning worksite health education, health promotion, and safety for employees. Head Start programs can learn from such efforts by incorporating relevant aspects of “best practice” (Mason, 1993) in worksite health education and promotion into their health education efforts with staff, by ensuring:

- demonstrated management commitment
- strong program leadership
- a system for assessing employee health
- comprehensive programming with the ability to reach out to nonparticipants and high-risk employees
- opportunities for physical exercise
- a strong health partnership (via the benefits department or health provider)
- environmental support programs (marked walking paths, healthy foods available, policies for a smoke-free environment)
- tracking and evaluation
Health education for staff is important because staff are important...as human beings.

A Head Start program in Michigan implemented a voluntary staff wellness program accompanied by a child health program. It developed slowly, over a period of years. A key feature is an incentive program, where staff accumulate points, based on the honor system, for involving themselves in health-promoting activities. These include participating in a confidential, computerized health assessment and screening; attending health-related lunchtime presentations featuring outside speakers; engaging in physical activities such as walking or strenuous housework; and taking advantage of preventative measures such as having a mammogram.

A day is set aside at the end of the year when all participants receive pins and vouchers for a physical (all staff are required to have physicals at their own expense every other year), gift certificates for department stores, or dinner. All staff are invited to the day-long event. The program has been so successful, it is now designed to reach parents and other family members as well.

This program's Health Services Manager suggests the tips in Exhibit 9 (Hosner, 1991) for starting a wellness program in Head Start.
Tips for Starting a Wellness Program for Staff

- Survey staff to assess what they want and need.
- Involve everyone by offering individualized health assessments.
- Institute a wellness committee, comprised of staff from all levels to decide on: ways to promote staff health and wellness, specific activities that can earn points, allocation of points, incentives, and problems as they arise. This allows for leadership and "ownership" of the program by participants.
- Network with wellness associations and organizations (e.g., local hospitals with staff wellness programs, local companies with worksite health initiatives) to learn about other programs.
- Investigate sources for funding a wellness program.
- Use marketing and incentives, "gimmicks" to promote the program, keep the ideas alive, and keep it fresh (e.g., an apple on the chair of each staff member along with a copy of the health newsletter).
Each Head Start program is unique, however, and programs will want to develop a health education effort for staff that meets specific needs, addresses specific risks, and responds to the staff and "culture" of the particular program. What is important is to get started. Programs throughout the country have reported that having a vision and then taking the first step gets the momentum going, and gets other activities on their way.

In addition to wellness programs, the following examples demonstrate some of the ways Head Start centers have used needs assessments to help create programs that enable staff to adopt lifelong health promoting habits. These examples illustrate the variety of strategies Head Starts can use to deliver health education for their staffs.

The staff of an urban center in New Jersey participate in a program designed to promote good health. Annual physicals for each staff member are required. At the annual health fair, a variety of screenings for diseases is provided, as well as a free half-hour massage. All staff members also have free access to mammograms, along with lectures on prevention.

A suburban Head Start program in California is addressing staff stress. The center provides three to six free counseling sessions for staff if needed. Staff can also take some of their sick days as "mental health or personal" days.

At a Michigan program, staff members keep "wellness calendars" on an honor system. Each month staff earn incentive points for a half-hour or an hour of different activities, from walking to rowing to extensive house cleaning. They also earn points for getting a mammogram, or attending a stress management class. Accumulated points can earn them a family portrait at Sears, early leave time, a makeover at a department store, or a subscription to a health magazine, among other rewards.

Designing programs to reach specific staff needs, readiness, and interests is essential. Varying health education activities in format and style will help reach different people and keep the program interesting. Ensuring cultural appropriateness is also essential. These are critical aspects of delivering developmentally appropriate programs for adults.
Three types of activities are essential to the success of health education and promotion programs for staff: awareness raising, motivation, and behavior change.

**Awareness Raising**
- Provide health-promoting materials, images, and messages throughout the program over and over, and through many channels.
- Sponsor talks and panel discussions by local health providers, health educators, or specialists in worksite health programs.
- Circulate health-related materials such as books, articles, brochures, pamphlets, flyers, and videos.
- Plan holiday celebrations, potluck meals, and other get-togethers that emphasize healthy nutrition and foods. Distribute brochures, recipes, and other handouts on vitamins, balanced meals, etc., to take home.

**Motivation**
- Ask individuals to take a step and modify their behavior.
- Provide incentives for “trying out” the behavior change.
- Give participants ongoing feedback, acknowledging the steps they have taken and encouraging continued effort.
- Celebrate achievement—regardless of how minor the successes may appear to others, they are usually major successes for the person who is changing.
- Sponsor pre- and post-health screenings or individualized health assessment tools so participants receive feedback about changes they’ve made.

**Behavior Change**
- Sponsor workshops and other educational opportunities featuring hands-on activities.
- Offer participatory ongoing classes, such as weight reduction, smoking cessation, cooking, communication, nutrition, stress management, building healthy relationships.
- Initiate support groups (to help maintain the changes that have been made—weight loss, exercise, smoking, etc.).
- Provide one-on-one interactions, such as peer support, mentoring, counseling sessions, nutritional consultation.
- Provide emotional support and create a safe environment for participants to share their experiences and take risks.
Health Education for Families

Programs throughout the country report that staff interest and enthusiasm are essential to involve parents and other family members in health education. Being aware of the linguistic, literacy, and cultural needs of the Head Start families is also crucial in creating relevant programs. If, for example, brochures on a particular topic are only available in English, ask a parent, staff member, or member of the HSAC to help locate someone to translate the information and adapt the material to be culturally appropriate.

Many programs use the same strategies for encouraging parent participation and enthusiasm as they do to invite staff participation. (The methods described for staff, above, may also be used for parents.) In fact, many Head Start programs design health education activities for staff and family members together. Health fairs and wellness days are ideal ways to introduce parents to a variety of health education topics, and to raise awareness about prevention, risks, and resources. Feedback gathered from such health events can be used to develop specific programs.

Other methods that have been used for families are described below.

**Awareness Raising**

- Distribute a parent newsletter that includes information on health issues for adults and children, and focuses on prevention.
- Provide a health and wellness bulletin board in the parent room, with clippings from local and national media on health-related issues, local risks, and new resources.
- Sponsor lectures by local health providers to increase understanding of health-related topics.

**Motivation**

- Provide activities tied to classroom curriculum for children, such as sending toothbrushes home for the entire family after teaching dental hygiene, or sending nutritious recipes home that children and parents can cook together.
- Sponsor field trips to supermarkets with lessons on smart shopping; local branches of national health organizations (e.g., the Multiple Sclerosis Society); and health care providers (doctors, dentists, emergency rooms). Provide incentives for participation or engaging in follow-up activities.
For many parents, health education on more sensitive topics is more appropriately done individually once the parent has developed a trusting relationship with a staff member.

Design programs where parents train parents to provide health education within the community.

Encourage parents to set a target—a first step—and then support their efforts to reach it.

**Behavior Change**

- Initiate a mentoring program (parents provide support and information to one another using a buddy system).

- Create a space that is safe and supportive and where confidentiality is ensured.

Programs throughout the country have developed health education activities for parents to address very specific risks and needs in their communities, such as asthma, baby bottle tooth decay, tuberculosis, domestic violence, firearm safety, and AIDS. This ensures relevant content; appropriateness in terms of language, culture, and readiness to change; and sensitivity to the experiences of particular families.

The examples below illustrate some of the many ways Head Start programs are providing health education for parents.

At an urban center in Alabama, parents are offered a series of health education classes on a variety of topics such as consumerism (when to see a doctor, how and when to ask a pharmacist questions), injury prevention, and parenting. “I try to make the sessions practical and hands-on,” the health educator explains. “In one session I handed out M&Ms, peanut butter, and other foods and asked parents to decide which foods might cause children to choke. Then we talked about what foods are safe for infants, toddlers, and preschoolers to eat and why.”

At an urban program in Baltimore, male staff members realized that men were not being reached by the Head Start program and had no place to discuss important issues—including parenting. They started a men’s group for staff, parents, and other family members, open to all males important in children’s lives—fathers, brothers, friends, uncles, grandfathers. While the focus is on learning how to take care of themselves and their children responsibly, the men address topics important to them, including risks to health, lifestyle issues, HIV, self-esteem, taking back their communities, and building healthy relationships.
A program in Texas sponsors sessions on nutrition where parents and children cook and eat together. The parents are invited to the classroom in the morning, where they prepare a snack or lunchtime meal with their children, under the guidance of the teachers and the nutritionist. Then recipes are provided to take home.

Staff from a Native American Head Start Program noticed a cultural stigma attached to reporting domestic violence or discussing other family problems. The program brought in a Native American mental health consultant who organized a parent group that meets onsite two times a week to discuss a variety of issues including cultural and family norms around violence and seeking help.

A suburban California program realized the need for building support networks for parents. Currently, they are successfully running groups for women, men, foster grandparents, and parents of children with disabilities. These groups are designed to heighten awareness about common issues that affect well-being, provide emotional support to group members, and offer practical assistance in increasing knowledge and skills needed to enhance wellness in themselves and their families.

Health Education for Children

As with other curricula developed for use in the Head Start classroom, comprehensive health education for children must provide health-related information and skills in a developmentally appropriate way. This includes, among other things:

- using experiences related to a child's everyday life
- providing opportunities for hands-on, child-initiated activities
- ensuring that the language and format are appropriate and individualized for each child's interests and skills

An important aspect of providing comprehensive health education to children is training staff and parents to be alert to "golden opportunities"—circumstances that provide ideal moments to teach children about good health habits. These occur during the normal day's activities, as children interact with each other and their world. Throughout the day and in many ways, children can learn about caring for themselves and others (hygiene, nutrition, self-esteem, safety) and getting along with others (accepting differences, respect, conflict resolution).
Making exercise fun has been one of the ways a Head Start program in the Northwest has offered health education in the classroom. After a long bus ride the children come in and do a few minutes of teacher-led activities that include bending, stretching, and jumping, and most of all, having fun.

At a program in northern Maine, the local dental hygienist donated a portable chair, which is taken to all the centers to help children experience what it's like to sit in a dentist's chair and thus help alleviate related fears.

In a Michigan program, there is a formal health education campaign called "Get a Health Start with Head Start" and the "spokesbear" is Scrubby Bear. He is used to teach children about a variety of health-related issues. The Scrubby Bear campaign is used throughout the program, with families and staff as well, to make health education interactive, fun, and integrated.

A teacher in a rural program in Idaho adapted an activity she had observed in a kindergarten to help children understand the concept of germs and the importance of washing their hands. "I took orange tempera paint (powdered) and put it on a toy. After playing with the toy for a little while I made myself a peanut butter sandwich, then rubbed my eye, touched somebody else's hand, and pretty soon there was orange paint all over everything." This helped convey the concept of germs and why cleanliness will help to prevent the spread of germs that cause colds and other illnesses. Instead of tempera paint, the teacher suggests flour, cornstarch, or baby powder. "Perhaps these are not as dramatic as paint, but they are much easier to clean up!"

A teacher in a New England program describes the approach she and many other early childhood educators take as an early step in violence prevention. In her program, staff use a variety of strategies to reduce conflicts. They organize the classroom to reduce stimulation and minimize aggressive behavior. They try to have multiple sets of the more popular manipulatives available to reduce conflict. And they teach children the skills they need to resolve conflicts themselves. This includes helping children be aware of their own feelings when they are hurt as well as when they "use their hands" against others; and reinforcing the idea that they must try to use their words, not their hands to settle differences. Staff give many children the words to express how they feel. Acknowledging feelings, reducing aggressive behavior, and teaching and reinforcing appropriate behaviors are seen as the building blocks for violence prevention skills needed later in life.
Summary

Tips for Designing Health Education Programs

• Match your program to the participants' level of readiness.

• Use your available "people" resources.

• Combine written curricula and resources as needed to develop a comprehensive program that meets your program's needs.

• Start small and build on your successes.

• Develop a program for staff health, safety, and wellness.

• Provide culturally appropriate health education programs for families that raise awareness, provide motivation, and encourage behavior change.

• Identify ways for the health education program to promote healthy behaviors by taking advantage of "golden opportunities" with children, parents, and staff.
CHAPTER 4

MAKING IT WORK

Focusing on Logistics

Reaching Participants

Keeping the Momentum Going

Evaluating Comprehensive Health Education Programs

Summary
You can have all the best information in the world, but if you don't know how to deliver it or get people to access it, it won't matter.

Head Start
Parent Involvement Coordinator

What else makes a health education program work? In part, the success depends on marketing strategies that attract participants, create good publicity, and keep interest and visibility high. The more ways health promoting messages and images are infused throughout the Head Start program, the more effective health education programs and activities will be. Health content, skill building, and health promotion images and messages must be built into all that goes on.

Focusing on Logistics

Paying attention to logistical details of group sessions can sometimes make a huge difference between a well-attended or poorly attended program. Providing child care and transportation, scheduling the program at a convenient time, giving advance notice and reminders, finding a comfortable setting, and offering refreshments are incentives for families and staff. It is important to have handouts to remind participants of key points, making sure printed materials are at the appropriate literacy level (fifth grade is suggested) and in the language of the participants. To ensure success, make sure that group activities are fun and supportive, and that the presenter hired is engaging, enthusiastic, and respectful of the audience.

Reaching Participants

Several strategies for reaching participants and encouraging their involvement are listed below.

• Use incentives. These range from offering door prizes (e.g., a shopping spree at the program's "second-hand" shop, toiletries, or detergent) to having parents and/or staff accumulate training points that lead up to a prize or an award. Local businesses may be willing to donate merchandise, gift certificates, or services.

• Include hands-on activities. Typically this might be something creative—jewelry, a craft, or cooking project. Take-home items—brochures, recipes, tips, a completed project—appeal to participants and help them remember the information presented.

• Feature children in the session. Parents and staff love to participate in activities where children are part of the program! Parents will often come to see their children perform. Children can also convey information to their families and staff about reducing or preventing health risks. For example, if children are taught to always "buckle up" and encouraged to ask other family members to also use safety belts, the entire family will gain safety information.
Create a health library. Collect easy-to-use books, magazines, articles, brochures, audiotapes, and videotapes on a range of health-related topics. Make sure parents and staff know about the library, and put it where it's easily and often noticed. Keep information current and up-to-date, and make it easy for people to borrow and return materials.

Start a wellness program. Once staff and parents experience and are enthusiastic about the benefits, they can more easily sell health promotion programs to others in Head Start and in the community.

Keeping the Momentum Going

Marketing is perhaps as important as content, focus, and attracting participants. Marketing keeps the momentum going, keeps the message of prevention, health, and well-being "alive."

Ways to keep the prevention and wellness message "alive" and in the forefront include these activities.

- Create an image or a logo. People will begin to identify it with health-related topics and information. Have the logo, ideas, and messages repeated throughout the program in a variety of ways.

- Focus on wellness and prevention. Repeat the message that we all can do something to improve our health and the health and well-being of others.

- Tie in health education topics to other activities that are offered on the local, state, or national level, such as the American Cancer Society's "Great American Smokeout" or a "Take Back the Night" candlelight march, which raises awareness about violence against women. This can bring support from other organizations, access to materials and speakers, and media coverage. Such tie-ins reinforce the messages the audience is already hearing in the media and the community.

- Encourage staff to be enthusiastic about the programs. "For parents, staff enthusiasm and attendance can be a key element," a Head Start director commented. "By letting parents know 'I'm going to be there,' you are signaling that you think the program is worth your time and effort."

- Create a year-long calendar and display it publicly. Highlight the prevention topic to be focused on for each month, tying them into local or national campaigns.

- Recruit "morale officers" (parents and staff) interested in health education. They can think about ways to keep the message alive—using gimmicks and special efforts, not necessarily costly—to keep the message in the forefront. Some Head Start programs have distributed apples, health notes or reminders, check stuffers, newsletters, balloons, saturated fat counters, etc., periodically and without warning to keep people thinking about prevention and involved in health education.
Evaluating Comprehensive Health Education Programs

It's essential to evaluate and document the effectiveness of programs or materials offered. By evaluating the health education activities, informally and formally, programs will understand better what works and what doesn't work; what needs and interests are and aren't being addressed; and which areas are strong and which need improvement. By having an evaluation system in place, programs can refine and strengthen their efforts in health education in a way that makes the most sense for the program.

Head Start programs can use a variety of methods for evaluating the effectiveness of their efforts:

- Collect satisfaction surveys from all participants or recipients. Such surveys provide comments on the topics, presenters, and format. Surveys may be taken through simple questionnaires, informal interviews, and phone calls.
- Use local or regional resources, such as students from community colleges or universities, to help design and carry out an evaluation of the health education program.
- Conduct pre-post annual health assessments or health-risk appraisals.
- Use quantifiable objectives in program planning.
- Report back to the target audience on accomplishments.
- Have the Health Services Advisory Committee review program accomplishments on a regular basis.

After collecting the comments, reexamine the content, approach, and format of the activity or the entire program. Staff may also need to reconsider the methods used in collecting the data and revise them accordingly. Don't get discouraged! Even if the initial program isn't a roaring success, be patient. It may take time for the philosophy or approach of comprehensive health education to catch on.

Evaluation is an ongoing process. As new topics and issues arise, new families join, or other changes affect the children and families, be aware of possible changes needed in the content, format, or delivery of health education and promotion. Make sure that existing programs are constantly reevaluated and improved.
Summary

Tips for Making It Work

• Pay attention to the details that make programs accessible, comfortable, interesting, and fun.

• Use a variety of strategies to encourage participation.

• Jazz up your marketing efforts.

• Develop a plan for evaluating your comprehensive health education programs.

• Evaluate and refine health education activities or the health education program on an ongoing basis.
CONCLUSION
Conclusion

I want to change the way we think about health—by putting prevention first. I want to change the behaviors and attitudes of Americans by promoting programs and policies which will enable us to be responsible for our own health. I want to be the voice and the vision for the poor and the powerless. I want to change concern about social problems that affect health into commitment.

Dr. Joycelyn Elders, former United States Surgeon General

Dr. Elders’s words echo the vision of health education held by many Head Start programs. By building on program accomplishments—expanding health education to become comprehensive, prevention focused, and integrated—Head Start will continue its mission as a leader in improving the lives of children, families, and staff. The guiding principles of a comprehensive health education approach are:

- integration of comprehensive health and wellness into the program’s philosophy
- promotion of prevention and health education activities for children, families, and staff in the program
- support and commitment to a comprehensive health education approach from the program’s leadership
- commitment to building skills needed to change personal health behaviors as well as the social and environmental forces that negatively affect health
- care to tailor program content and format to meet the documented needs of staff, children, and families
- provision of continuous evaluation and modification to meet the needs and interests of the local program
Using these guidelines will help make comprehensive health education and promotion not merely an "add-on" but an integral and powerful part of Head Start. By improving the health of children, children will be ready and able to learn. By increasing health awareness among those who care for children—staff and families—well-being is enhanced for all.

Health education can enhance each individual’s knowledge, attitudes, and behavior to make health-promoting decisions and to tackle health risks and problems. Most important, it improves the quality of lives and reduces suffering, thus ensuring the ultimate success of children, families, and staff to be ready to learn, to realize their full potential, and to achieve all they can in our increasingly complex and challenging world.

Relating Health Education Activities to the Head Start Program Performance Standards

The following pages offer some practical suggestions for integrating health education activities into each of the Head Start components. Following the organization of the Head Start Program Performance Standards, each section contains tips for implementation and documentation.

Management teams can use this material in a number of ways to make their jobs easier:

- to develop component plans
- to illustrate the cross-component nature of health education
- to assist in the annual self-assessment process
- to help develop programwide training plans

This section is designed to reflect the changes in the state of the art of health education as well as the changes in the stressors that Head Start children, families, and staff face since the Performance Standards were first published.

Comprehensive Health Education

Education Services Objectives

Important goals of the education component include enhancing the role of the parent as the child's primary educator, reinforcing the concept that learning is an ongoing process, and creating a bridge of activities between the home environment and the program.

Today's best practice in health education and health promotion will meet with optimum success when it is offered to parents, staff, and children and is designed to meet the needs and interests of all three audiences.

A comprehensive health education program for children is based on developmentally appropriate practice. It is responsive to children's needs and interests; provides opportunities for children to choose activities in which they actively explore concrete materials; and provides opportunities for success, aimed at making children feel good about themselves and developing positive attitudes toward learning. A health curriculum's primary focus is to help young children develop skills they will need to live healthy, productive lives and avoid unhealthy behaviors.
Appropriate content areas for health education activities for children might include, but not be limited to, information regarding expression of feelings and the development of self-esteem, visits to the doctor or dentist, personal health and hygiene, and skill building in such areas as decision-making and conflict resolution. Health education for children reflects best practice if it increases knowledge, heightens awareness, and leads to skill development that enables children to adopt and maintain healthy behaviors.

Providing health education to parents can occur in many ways. Home visits provide an ideal setting to share what children are learning and to strategize how parents can support the learning at home. Such visits can also be a way to provide health education on the personal health and well-being of parents themselves. Home visits are an ideal time for discussing health risks and needs, and strategies for prevention.

Formal and informal training sessions can be organized to support, strengthen, and reinforce parenting skills, as well as the skills needed to lead healthier lives. Information can be shared in newsletters, memos, and bulletin boards; can be written to meet the literacy, cultural, and linguistic needs of families and staff; and can respond to their readiness to accept health prevention strategies. All staff can reinforce family strengths and sound wellness practices that are already occurring in the home.

It is advantageous for staff to be a part of a comprehensive health education program as well. Training might include the basics for providing a safe and healthy environment in Head Start as well as issues around personal health and healthy decision-making for staff.

Comprehensive health education for staff and parents might address topics such as personal health and wellness, emotional health, managing stress, substance abuse prevention, HIV infection prevention, violence prevention, relationship building, conflict resolution, environmental health, and consumer health.
Education Services Plan Content: Operations

In preparing the education plan, Head Start programs can solicit input from various health experts. The plan requires close collaboration between all Head Start components and should be reviewed by the program's Health Services Advisory Committee.

In considering how to meet the standards, the education plan could include the following elements:

- how the curriculum assist children in developing lifelong patterns of healthy behaviors and attitudes including the development of self-esteem and skill building in areas such as decision-making, social interaction, and problem solving
- the role of all components in reviewing and developing the education plan
- the role of community health experts in areas involving physical, mental, emotional, social, and cultural factors

Health education activities can be woven into all learning centers in the classroom environment and all aspects of the daily routine. For example, multicultural props, books, dolls, and signs will encourage self-acceptance, self-esteem, and acceptance of differences; props from health clinics, hospitals, or doctors' offices can be included in the dramatic play area; and children's books that deal with such topics as feelings, conflicts, illness, the birth of a new sibling, or the absence of a parent, can be included in the library area. The program's schedule should reflect opportunities for children to make decisions, express their feelings, and settle differences.

The program's daily menu for children and families, as well as food served during trainings and meetings, can reflect best practices in nutrition while including foods that are part of families' cultures. Regular tooth brushing must be an essential part of the daily routine.

Gross motor activities can be incorporated into the daily schedule and staff might want to explore such techniques as relaxation and deep breathing to reduce stress levels, encourage skill development, and promote sound physical and mental health in children. Parents and staff should think of activities to encourage outdoor play at home as well as at the program.
Education Services Plan Content: Facilities

Best practices suggest that facilities reflect an understanding of a safe and healthy environment and meet the needs of children and adults with disabilities. Centers, including classrooms and meeting space as well as space used for home-based group socialization activities, should meet the safety and health needs of the children and adults. If the state or local jurisdiction requires licensing of center-based or socialization space, programs must comply. Where no licensing is required, the grantee can request assistance from local fire and health departments to determine safety standards. Both staff and parents might receive information and assistance that will enable them to keep play areas (both inside and outside, at home and at the program) free of all hazards. Other areas that staff and parents can tackle on a local level might include creating “smoke-free” zones, improving the quality of drinking water, and addressing safety and accessibility issues in parking lots and playgrounds.

Purpose and Scope of Disabilities Service Plan

The Head Start grantee and delegate agency must use the disabilities service plan as a working document which guides all aspects of the agency’s effort to serve children with disabilities. This plan must take into account the needs of the children for small group activities, for modifications of large group activities and for any individual special help.

Staff need to make every effort to address and integrate within their daily curriculum an appreciation of differences. Both children and adults may need information to help them understand disabilities in the hopes of improving attitudes and increasing their knowledge base about disabilities.

In addition, education staff may want to work closely with the program’s disabilities services coordinator and Health Services Advisory Committee to alter their individual classroom’s daily schedule to accommodate all children, including children with disabilities, in the least restrictive manner. This may entail altering and/or eliminating large-group activities in favor of working with smaller groups to maximize success and support growth and learning.
The disability service plan must contain:

- assurances of accessibility of facilities
- plans to provide appropriate special furniture, equipment and materials if needed

Programs can look at their facilities and renovate overall space and/or classroom and bathroom space to ensure safety and accessibility for children with disabilities. This might include the need to alter classroom space to cut down on distractibility or to ensure that floor surfaces facilitate safe mobility.

Health Services General Objectives

All members of the Head Start community including children, parents, and staff can have the opportunity to participate in health education activities. The linkage between the program and the home needs to be strong and consistently reinforced. Parents should have all of the positive steps they already take to promote health and well-being for themselves and their children reinforced.

In areas where health services are scarce, programs need to work with existing providers to advocate for their families and children. Health education for parents can provide information on finding and using existing medical services as well as appropriate and effective advocacy methods to increase or alter systems that are not responsive to their health needs. One goal of health education is to link families to the health care system so that they can continue to receive comprehensive health care after leaving the program.

Health Services Advisory Committee

Broad-based representation on the Health Services Advisory Committee can strive to be inclusive and reflect the diversity of the community. Programs may want to analyze their needs during their annual self-evaluation and determine if their community wellness needs are being met by current representation of the committee. Head Start programs will want to make every effort to recruit members from the fields of health education and adult education to serve as members of the HSAC.
In addition, communities might consider local health problems when recruiting membership for their HSACs. For example, if a program is located within an area with a high incidence of HIV infection, the program might invite staff from the clinics or hospitals where their families seek and receive treatment, to be members of the HSAC.

The roles of the HSAC might include assisting with health education efforts by identifying community and program needs for health education; targeting interventions; locating or supplying resources or trainers for health education efforts; and volunteering to provide training in areas in which they have expertise.

Medical and Dental History, Screening, and Examinations
The accumulated collection of medical and dental information affords children, parents, and staff significant opportunities to actively participate in identifying specific health needs of children, offering learning opportunities on relevant topics to access preventative services, obtaining necessary immunizations, providing for early interventions, and encouraging the adoption and maintenance of healthy behaviors.

A whole spectrum of health education activities can be provided for parents to promote a better understanding of medical and dental screenings, with a focus on establishing relationships with community providers that can promote health for the whole family on an ongoing basis. Information might also be shared on the developmental stages of children, community and environmental hazards to health, and establishing and maintaining health records. Effective training will be skill focused and provide hands-on experiences for parents.

A key element of health training for staff is to maintain systems of recording, documenting, understanding, and evaluating health records to best determine program direction and identify broad areas of need for program planning. Staff and parents may want to focus their energies in advocacy efforts to gain access to health services within their communities, to foster an understanding of the parent's role as the primary catalyst for meeting children's health needs, and to assist parents in their negotiation through existing health systems.
Medical and Dental Treatment
Health education for children, parents, and staff can occur before, during, and after children receive health services. For example, a program might develop a dental week with planned activities for children, parents, siblings, and staff, and schedule the events before a local dentist performs examinations on the enrolled children.

Parents can also benefit from information on how to be more effective consumers of medical and dental treatment. By including and assisting parents in the process of obtaining services, programs provide parents a learning opportunity to assess and access services, lay the groundwork for community advocacy, and develop skills needed to obtain adequate health services for themselves and their children.

Health Education
Programs will want to design a health education and promotion program that covers a wide range of issues to meet the emerging needs of children, parents, and staff. Health and wellness education can be comprehensively presented for children with materials that are well integrated into the daily schedule and are presented at an appropriate developmental level. (See guidance for the Education Performance Standards for a more thorough discussion of health education for children.)

Head Start staff and parents may need support and training in the implication of health findings for individual children and/or families and for program policies. The Health Services Advisory Committee can be used for guidance and training in these areas.

There are a variety of vehicles for providing parents information related to health issues and resources. For example, staff might use an outbreak of chicken pox in the classroom to informally talk about infectious diseases. Social services staff can assist parents in understanding their primary role in obtaining needed health care for the family, assist parents in locating health care providers, and support the parent's role by accompanying children to health care provider appointments.

To be comprehensive and effective, health education programs need to be inclusive and involve the entire Head Start community of families, staff, and children. Best practices in health education for parents dictate that materials be tailored to meet parents' backgrounds, developmental levels, personal needs, interests, and readiness to change. Topics for parent and staff health training can include prenatal...
and postnatal health, personal health, parenting, injury prevention, fitness, managing stress, preventing community violence, building self-esteem, developing healthy relationships, dealing with transitions, and substance abuse prevention. The health education program should also include community health problems such as HIV transmission and strategies for supporting people with HIV infection; environmental health risks such as lead and air quality; neighborhood violence; lack of access to health services; and any other relevant health problem that is prevalent in local communities.

The approach to health education for staff can support their roles as professionals in a comprehensive preschool program as well as promote their own health and wellness. Staff serve as role models and need to be supported in their health needs. Because Head Start is a community-based program, staff composition generally reflects the communities in which they serve. Consequently, staff often confront issues similar to that of parents and need support and assistance in such areas as managing stress, learning how to care for themselves, coping with street and family violence, and preventing substance abuse.

Disabilities/Health Services Coordination

The grantee must ensure that the disabilities coordinator and the health coordinator work closely together in the assessment process and follow up to assure that the special needs of each child with disabilities are met.

Intercomponent coordination systems need to be in place and functioning to serve children with disabilities effectively. The health and disabilities services coordinators will need to communicate regularly concerning children with health impairments. For example, children with recurrent middle ear infections will need to have regular retests to ensure that they receive required medical treatment to prevent potential speech and language delays.

Mental Health Objectives

Programs provide learning opportunities for children, parents, and staff to promote mental health. Local programs can assess those mental health issues that affect the families and children they serve and make every effort to include and integrate education and training on these topics. Staff may need to receive training on the importance of mental health and its effect on overall wellness.
Programs will want to set a tone that promotes sound mental health practices. Effective mental health activities support family strengths, promote wellness, and encourage prevention strategies.

Mental Health Services
The mental health professional is a valuable resource for educating children, parents and staff about ways to strengthen their health and well-being.

Mental health education activities might include:

- both preservice and inservice training for staff and parents
- regular consultation with teaching teams and/or home visitors or other staff about ways to incorporate mental health concepts into learning opportunities
- advice and information to parents and staff about mental health services and being wise consumers
- one-to-one counseling for children, parents, and staff

Topics for mental health training can include, but are not limited to, building self-esteem, personal health and wellness, guidance, childhood fears, complex family problems, physical/sexual abuse, family systems, community and family violence, substance abuse, and the impact of catastrophic illnesses on the family (e.g., HIV). Mental health training can include topics that overlap with other components such as identifying and discussing child development, features of healthy families, and building satisfying relationships.

Disabilities/Mental Health Services Coordination

The grantee must ensure coordination between the disabilities coordinator and the staff person responsible for the mental health component to help teachers identify children who show signs of problems such as possible serious depression, withdrawal, anxiety or abuse.

The disabilities services coordinator, the mental health consultant, and staff members should coordinate their efforts to identify children with a disability in the social/emotional area. Staff will need information and training regarding those behaviors to determine which incidents are appropriate to document to
assist the mental health consultant to provide appropriate services. The mental health coordinator may want to bring parents and children with disabilities together to provide needed support and to bring forth issues of mutual concern.

**Nutrition**

**Nutrition Objectives**
The nutrition objectives include supporting and supplementing the nutritional needs of children; providing opportunities for staff and parents to learn about children's nutritional requirements; and creating opportunities for children, parents, and staff to explore healthy nutritional behaviors that reflect the diversity of the local community.

To that end, programs need to analyze the data collected to determine the nutritional strengths, patterns, and needs of the families and the community.

**Nutrition Services**
The planning of the nutrition services component is an inclusive process, involving an active role for staff, parents, community health representatives, and the Health Services Advisory Committee. The program should provide opportunities for practical application and skill building for parents and staff in the areas of menu development, nutritional requirements of children and adults, and community nutrition issues.

Staff training can stress the importance of staff addressing personal nutritional issues and can support staff knowledge, attitudes, and development of skills for healthy nutritional choices.

The nutritional experiences of children in the program can expand beyond designated meals and snacks to include classroom experience with preparation, exposure to a variety of nutritional foods that represent the cultural diversity of the population, and the development of an awareness of healthy nutritional choices.

Parent training can include a strong focus on consumerism to reflect budgeting skills; healthy menu planning such as low salt, low fat, or other menu adaptations; and access to food services and supports such as WIC, food banks, and cooperatives if appropriate. Training sessions might address factors such as family and cultural values as well as community preferences.
Disabilities/Nutrition Services Coordination

The disabilities coordinator must work with staff to ensure that provisions to meet special needs are incorporated into the nutrition program.

It is beneficial if programs provide staff with training that will assist all children, including children with disabilities, to participate in the nutrition program. The program may seek specific guidance from specialists such as physical therapists, occupational therapists, nutritionists, or dietitians to help staff and parents as they work with children who have problems with chewing, swallowing, and feeding themselves. Staff might need assistance in providing opportunities for children with disabilities to participate in meal and snack times with their peers.

In addition, programs should provide parents and staff guidance and training on menu planning for special dietary considerations.

Social Services Objectives

The social services component of Head Start describes an organized method of assisting families to assess their needs and strengths. Programs can assess information gathered through family and community needs assessments to determine family health issues that have implications for health education activities for children, families, and staff.

Assessing family needs is a joint effort between staff and family members and allows programs to learn about the lives of their parents and children, including such factors as lifestyles and the circumstances that impact family health and well-being. It is an opportunity to recognize the strengths of individual families and to mutually establish goals. The family needs assessment is the basis of work with families and is a living document that begins at the time of enrollment, continues throughout the program year, and does not end until the family leaves Head Start.

Social Services Plan Content

Programs need to annually establish their recruitment and enrollment practices. The program definition of "most disadvantaged" or "neediest of the needy" may include those families and children coping with issues of health that are most prevalent in their communities. The recruitment and enrollment processes should
seek out children and families systematically. While priority must be given to those families and children from economically disadvantaged homes, there are other enrollment criteria that may be locally considered, within income guidelines, such as substance abuse, community violence, terminal illness, and the need for parenting skills.

1 Providing or referring for appropriate counseling

All staff can be provided with guidance that assists them in identifying and working with children and families with problems in health and wellness and providing assistance. Training can provide guidance in deciding when to provide health education versus when to make a referral to appropriate community agencies. These problems can cover a wide spectrum of issues including alcohol, tobacco, and other drug use; family violence; homelessness; lead poisoning; and HIV infection.

2 Advocacy

Head Start programs can be participants in community-based strategies developed to increase a variety of services needed by low-income families and their children. A key focus can be to increase the availability and accessibility to a whole range of services such as affordable and adequate housing, tenants rights, health services, police protection, and employment. Advocacy efforts might also focus on medical, visual, and dental services for low-income people on Medicaid and/or with no medical coverage or insurance. Health education for staff and parents might include opportunities to learn about the environmental and social forces that are negatively affecting their and their families’ health and well-being, and developing the advocacy skills to change them.

Local programs will need to assess areas of needed advocacy based on the problems of their community. Participation on local, county, and state councils, committees, and partnerships will increase Head Start’s visibility within the community and bring issues of access and availability to the forefront.
Record keeping and documentation

Information collected about family and community needs is a valuable resource for Head Start programs. Programs can establish a systematic method of analyzing these data and using them to identify and strengthen program activities including comprehensive health education.

To ensure that the health education program accurately meets the needs of children, parents, and staff, programs can use already existing data from assessing family and community needs and using such tools as the Program Information Report (PIR) and the program’s annual self-assessment process. Program staff may need to be trained in issues of record keeping and documentation including such areas as developing interviewing techniques and analyzing data for pertinent information.

Recruitment and Enrollment of Children with Disabilities

The grantee or delegate agency outreach and recruitment activities must incorporate specific actions to actively locate and recruit children with disabilities.

As a program’s management team and parent policy group meet annually to evaluate their recruitment and enrollment strategies and criteria, special attention needs to be given to outreach strategies to locate children with disabilities who meet eligibility requirements and whose parents desire the child’s participation. Defining the “neediest of needy” will reflect the needs of local communities and appropriate services available, with an understanding that including children with severe disabilities for whom Head Start is an appropriate placement, is a goal and priority.

Parent Involvement

Parent Involvement Objectives

Head Start program philosophy is based upon the concept that parents are the primary and most important educators of their children. Staff may need to place emphasis on developing and expanding the role of the parent. Parent participation in health education can be encouraged in a variety of ways including planning, participating in, and evaluating health education efforts; co-leading health education activities for children, other parents, or staff; volunteering in agency activities such as health fairs, or assisting in measuring heights and weights.
representing the program on policy groups, the Health Services Advisory Committee, community boards of directors and committees; making contact with community agencies and organizations; and serving as advocates for the Head Start agency.

Parent Involvement Plan Content: Parent Participation
Head Start staff should be available if parents need guidance, information, and support in parenting, health, and personal development. Learning opportunities for parents can occur during home visits, training, parent meetings, discussion groups, information dissemination, and group socialization/center activities. Head Start staff help parents participate in parent education opportunities by providing adjunct services such as space, transportation, and child care. Parent education activities should be planned and delivered in a manner that is consistent with sound adult learning principles such as creating interactive sessions and encouraging participants to share their knowledge and life experiences.

In collaboration with the social services staff, parents can be provided with information regarding available community resources, such as health, mental health, and dental services; adult classes in consumer education; financial assistance programs; family and employment training and counseling; emergency food sources; and housing agencies. Effective parent training will include a skill-building focus so that parents gain the skills needed to effectively use available resources.

Parent Involvement Plan Content: Enhancing Development of Parenting Skills
Parenting training and education can be comprehensive and can include opportunities for personal development and skill building around issues including understanding the developmental continuum of children's growth, learning conflict resolution and decision-making skills, and helping children develop self-esteem through nurturing and positive reinforcement.
Parent Participation and Transition of Children into Head Start and from Head Start to Public School

Program staff, assisted by appropriate service professionals, can provide parents with information on how to foster and support the development of their child with disabilities. They can also provide follow-up activities to bridge and reinforce program activities at home. Parents may need assistance in locating available resources including Supplemental Security Income (SSI); Early and Periodic Screening, Diagnosis, and Treatment (EPSDT); and any other resource that might help them with either services and/or monetary support. The assistance provided to parents can be geared to empowering parents to become the first and primary advocates for the rights of their children and themselves.

Acknowledgements

Over the past two years, many people have generously contributed their vision, expertise, and time to the development of the products of Choosing Wellness. We are grateful to Johnson & Johnson, and particularly to Frank H. Barker; Jonathan E. Fielding, M.D., M.P.H.; Terry Mason, M.P.H.; Christopher DeGraw, M.D., M.P.H.; and Martha Naismith, whose vision and commitment made this effort possible. We also appreciate the efforts of Marlys Gustafson Bell, M.S.; Madelyn Cahn Schultz, Ph.D.; Susan A. Weber, M.P.A.; Robin Brocato, M.H.S.; and James O’Brien, Ph.D. from the Head Start Bureau who provided direction and support throughout the project. We extend our heartfelt thanks to Joanne P. Brady, our mentor at EDC, whose intelligence, humor, and commitment to excellence and integrity were instrumental to the successful completion of this project.

We especially thank the members of our Working Group who gave countless hours to the project. The following people met with us for several days, critically reviewed and contributed to all of our products, and helped us apply the principles of comprehensive health education to the realities of Head Start staff and families. Choosing Wellness benefited greatly because of the commitment and expertise of the following professionals:

Laurie Danahy
Teacher and Special Services Liaison
Moscow Head Start Program
Moscow, Idaho

Twila Hanchey
Health Coordinator
South Central Head Start
Twin Falls, Idaho

Cathleen Hosner
Health Services Manager
Tri-County Head Start
Paw Paw, Michigan
Tim King
Family Services Coordinator
Southeast Community Organization (SECO) Head Start
Baltimore, Maryland

Linda Likens
Director of Government Affairs
National Head Start Association
Alexandria, Virginia

Clarence Montgomery
Health Coordinator
Metro-Dade County Community Action Agency Head Start and Family Services
Miami, Florida

Donna Pike
Project Director
Rocky Mountain Center for Health Promotion and Education
Lakewood, Colorado
We gratefully acknowledge the contributions of our colleagues for assistance in developing *Choosing Wellness*:

Introduction

The Scope of the Problem

Since 1965 the needs of the children and families served by Head Start have become more complex, as have those of our society in general. Concerned teachers report seeing children who are more aggressive, impulsive, or withdrawn than in the past (Lang, 1992). Families are stressed by greater poverty, diminished support systems, unavailable health services, and increased health, environmental, and social problems. Consider the following statistics.

- The United States has one of the highest infant mortality rates of any industrialized nation. Death rates for black children are twice as high as those for white children (Children's Defense Fund, 1991).

- Childhood injury is the principal public health problem in America today, causing more deaths than all childhood diseases combined and contributing greatly to childhood disabilities (Children's Safety Network, 1991).

- Homicide is the second-leading cause of injury death among children and adolescents. In 1988, 9 children a day (3,290 children per year) were victims of homicide in the United States (Children's Safety Network, 1991).

- Approximately 2,000 U.S. children have been diagnosed with AIDS and 13,000 are predicted to develop AIDS by the year 2000 (Martin, 1992).

- The leading cause of injury to women between the ages of 15 and 44 is domestic abuse.

- Approximately one in five preschoolers lives with an adult who is abusing alcohol or other substances (Collins and Anderson, n. d.). Abuse of alcohol and the use of other substances are highly correlated with domestic and community violence, child physical and sexual abuse, and child neglect.

- In the U.S. an estimated one in eight children under the age of 12 (5.5 million) is suffering from hunger (Martin, 1992).

- If tobacco use stopped entirely today throughout the nation, an estimated 390,000 fewer Americans would die before their time each year (U.S. Department of Health and Human Services, 1990).

Head Start staff members work every day with families and communities facing these problems, spending much of their time trying to find and access essential yet scarce health services for families with low incomes. At the same time, staff members have become increasingly aware of the need for prevention. For Head Start programs, an overarching challenge is to find ways, with the resources available, to promote prevention and respond to the many health-related needs of children and families.
A Working Solution

Health education for children and families has always been a part of Head Start’s mandate. Comprehensive health education—an approach that goes beyond current practices—can help Head Start programs improve the health and well-being of children, families, and staff.

Comprehensive health education addresses a wide range of topics related to physical, mental, emotional, and social health. It also strengthens and reinforces health-promoting skills in communication, decisionmaking, risk assessment, and advocacy. Such skill building is essential for fostering healthier individual behaviors as well as changing the social and environmental factors (e.g., poverty, racism, unavailable resources) that pose significant health risks to Head Start children, families, and staff.

Comprehensive health education is based on a set of beliefs that recognizes the value of educating people about prevention of injury and disease, health risks and health-promoting behaviors, the broad nature of health and well-being, and the interrelatedness of all the factors that influence health. Its aim is to have a lifelong impact on attitudes about health and wellness, and health-promoting behaviors.

Using this Guide

How do Head Start staff and parents begin to develop a comprehensive health education program? What resources can they draw on to create a program that responds to the current and changing needs of their community? And how do they assess what’s “out there”—health curricula and other materials currently available?

This guide will provide answers to some of these questions. It suggests programs, tools, and practical strategies for assessing existing health curricula for children, parents, and staff. It also provides information on materials and organizations to help Head Start programs design their own health education and further their health promotion efforts.
This guide is divided into three main sections:

- a discussion on choosing health curricula
- an annotated listing of 250 health-related resources, including print and audiovisual resources for adult personal health and well-being; resources for parents and staff to use with children; resources for children; curricula; and health-related resource organizations
- subject and title indexes, for all resources listed

This guide is part of Choosing Wellness, a comprehensive health education package designed for Head Start and funded by Johnson & Johnson. The package also includes a promotional video and print materials, and a health education planning and implementation handbook. We hope that together these materials will assist Head Start programs in further reducing risk; preventing unnecessary illness and injury; becoming stronger advocates; and promoting wellness in themselves, the families and children they serve, and the communities in which they live.

Health Curriculum for Children
Health Education Curriculum Assessment Form
Child Curricula
A curriculum is a set of instructional materials or guides designed to meet specific learner objectives through a series of experiences, activities, or exercises. Head Start programs can use and adapt many existing health curricula to meet the needs of children, families, and staff. This chapter is designed to help staff and parents systematically assess existing curricula to select the most appropriate materials for their program. Among the factors programs might consider are whether a curriculum:

- meshes with Head Start philosophy
- promotes best practice in health education
- is developmentally appropriate
- emphasizes the role of parents as prime educators of their children
- reflects an understanding of adult learning styles
- meets the needs of the local community
- represents the community's racial, cultural, and ethnic groups
- provides for relevant program options
- is affordable in cost

The assessment tools on the following pages were adapted from sections of “Criteria for Comprehensive Health Education Curricula” (English, et al., 1990) with help from Head Start staff and health education professionals throughout the country. These tools provide curricula reviewers with a framework for rating each factor and recording comments about strengths and weaknesses.

Keep in mind that very few health curricula, if any, can meet all of a program’s criteria. Most curricula cover single issues such as safety, mental health, dental health, or parenting, for example, although a few curricula for children do address health education topics more comprehensively. And, to date, no curriculum focuses on the health issues of children, parents, and staff in a coordinated and reinforcing manner. Therefore, programs will need to combine and adapt parts of several curricula to create a comprehensive curriculum that reflects their program’s own health needs.

When choosing curricula, involve a number of people—direct line staff, management staff, parents, and interested members of policy groups such as your program's Health Services Advisory Committee. By involving everyone in the decisionmaking, programs will be able to create a curriculum that meets the specific health needs of children, families, and staff.
Health curricula for parents may address taking care of their children, as well as their own personal health and wellness. In selecting a health curriculum for parents, it is critical that materials be based on sound and current health information and practice. All health curricula developed or used should be reviewed by the health coordinator and all members of the Head Start management team, the mental health consultant, and the Health Services Advisory Committee to assure that the health content is sound and up-to-date.

Below are nine additional key factors to help your program choose health education curricula for parents, along with indicators for each key factor. A sample tool for assessing or adapting parent curricula follows this section.

**Key Factors to Consider**

1. **The curriculum builds on strengths and views parents as interested, capable adults** if it:
   - includes sound adult education principles that promote the active involvement of parents
   - acknowledges parents’ and families’ individual differences, attitudes, beliefs, and personal situations
   - builds on prior knowledge and respects life experiences
   - acknowledges parents’ cultural differences and values, and the impact of these on child rearing
   - provides brief, self-contained, interactive sessions, in recognition of the time demands on parents

2. **The curriculum encourages a positive approach to health education and promotion** if it:
   - provides experiences that promote feelings of success, competence, and enjoyment of learning
   - encourages parents to identify their own health needs and interests and to tailor health education activities to meet those needs
   - provides parents with strategies for observing their child’s growth and development
   - provides information on the general health needs of children, such as nurturance, consistency, hygiene, adequate nutrition, rest, sleep, discipline, and play
   - provides strategies for accessing resources such as child health services, adult health services, respite, and dental care
The curriculum **supports and enhances the parental role as the principal influence on a child's development** if it:

- acknowledges and reinforces the primary role of parents in both its content and tone
- reflects an awareness of the impact of parental attitudes and behavior on child development
- reinforces what the child is learning in the program about health
- provides information on relevant child development issues that enables parents to have appropriate expectations of their children
- provides information on identifying signs and symptoms of illnesses in children and responding appropriately to them

The curriculum **emphasizes knowledge, attitudes, and skills** if it:

- provides activities designed to achieve cognitive, emotional, and behavioral objectives
- enhances skills through exercises such as role play, simulation, problem posing, and practice
- provides hands-on, interactive exercises
- encourages interaction among parents and links them with peers and supportive staff, as colleagues and/or mentors

The curriculum **helps meet or exceed the Performance Standards** if it:

- promotes the role of parents as partners to staff and as the primary educators of their children
- provides information regarding social and emotional well-being
- provides guidance on familiarizing parents with children's health screening information
- promotes and supports parents' roles in selecting appropriate health providers and obtaining preventive care for the family
- provides guidance on familiarizing parents with the linkage between sound nutritional practices and health
- provides parents with opportunities to be involved in food preparation for children, recognizing and encouraging cultural, racial, and ethnic differences
The curriculum content and approach are relevant to the needs of Head Start parents if they:

- take into account a range of literacy skills
- acknowledge the importance of providing parents with practical support such as transportation, child care, and a comfortable setting to encourage parent participation
- provide ways to present information on such potentially sensitive subjects as the use of tobacco, alcohol, or other substances; HIV infection; domestic violence; or child abuse and neglect
- provide materials that are relevant to the needs of families and children from diverse backgrounds and living in poverty

The curriculum provides guidance, support, and resources for implementation if it:

- promotes sound adult learning principles
- provides materials and guidance for parent educators in a form that is clear, well-organized, and easy to use
- provides ways to determine major community health and nutrition problems
- provides methods for parent educators to incorporate additional health topics of interest and need to parents
- contains enough background information for parent educators to fully understand concepts being explored
- provides materials that are easy to reproduce and suggests only materials that are easy to obtain
- provides resource information, groups, and materials if parent educators or parents want to explore topics further
The curriculum *includes and positively reflects equity and diversity* if it:

- contains no demeaning labels or stereotypes based on race, culture, gender, or ability
- depicts a variety of racial and cultural groups
- presents contributions and achievements of diverse racial and cultural groups and depicts differences in customs
- shows a socioeconomic range for different racial and cultural groups
- depicts gender equity, showing males and females in a range of professions, with equal representation in mental and physical activities
- reflects both traditional and nontraditional family make-up
- depicts individuals with disabilities

The curriculum *meets your program’s specific criteria* if it:

- fulfills the priorities identified by the staff, the Health Services Advisory Committee, and the Policy Council
- adapts itself to the cultural and ethnic mix of parents
- addresses major health issues in the community
- matches the objectives of parents and staff

The sample tool on the following page incorporates these nine criteria and can be used or adapted to assess health curricula for parents.
Directions on How to Use this Tool to Evaluate a Health Curriculum for Parents

1. Fill in the curriculum's title, its health content, and your program's specific criteria (#9).

2. Ask someone knowledgeable about the specific content (Head Start manager, Health Services Advisory Committee member, mental health consultant) to review the curriculum first to assure that the specific health content is valid and up-to-date.

3. Review the curriculum and estimate the degree to which each key factor is successfully met. Circle the appropriate number (use the indicators on the previous pages to help you in this process).

4. After you circle a number, jot down any comments you have.

5. Add the numbers circled and fill in the total score.

6. Use your ratings on key factors, comments, and total score as a basis for discussing the appropriateness of the curriculum for your program. The tool can also be used to compare strengths and weaknesses of several curricula, or to help you adapt or develop your own health curriculum.

Criteria for Staff

Health curricula for staff may address providing a safe and healthy environment for children, as well as personal health and wellness for staff themselves. Like health curriculum materials for children and parents, the materials selected for staff must be based on sound and current health information and practice. All health curricula developed or used should be reviewed by the health coordinator and all members of the Head Start management team, the mental health consultant, and the Health Services Advisory Committee to assure that the health content is sound and up-to-date.

Below are eight key factors to help your program choose curricula for staff, along with indicators of each key factor. A sample tool for assessing or adapting curricula for staff follows this section.

Key Factors to Consider

1. The curriculum builds on strengths and views staff as interested, capable adults if it:
   - acknowledges staff members’ individual differences, attitudes, beliefs, and personal situations
   - builds upon prior knowledge and respects life experiences
   - acknowledges the time demands on staff and provides brief, self-contained, interactive sessions
   - encourages staff members to identify their own health needs and provides training that is responsive to those needs

2. The curriculum encourages a positive approach to health education and promotion if it:
   - provides experiences that promote feelings of success, competence, and enjoyment of learning
   - encourages each staff person to take responsibility for promoting health and safety within the Head Start environment
   - provides materials that interest staff
   - permits flexibility for staff
3 The curriculum emphasizes knowledge, attitudes, and skills if it:
- demonstrates an awareness of the impact of staff attitudes and behavior on children and families in the program
- emphasizes the importance of skill building for staff, and for the parents and children with whom they work
- enhances skills through exercises such as role play, simulation, problem posing, and practice
- provides activities designed to achieve cognitive, emotional, and behavioral objectives

4 The curriculum helps meet or exceed the Performance Standards if it:
- provides relevant child growth and development information, including early identification of problems
- stresses the importance of providing a safe, healthy, and developmentally appropriate environment for children
- reinforces what the children and parents are learning in the classroom about health
- is comprehensive and inclusive, containing medical, dental, mental health, nutrition, and information about disabilities
- stresses the need to target information on specific personal, family, and community strengths and needs

5 The curriculum content and approach are relevant to the needs of Head Start staff if they:
- encourage staff to identify and address their own health needs
- provide information on general health needs of children and adults, such as adequate nutrition, rest, play or activity, and friendships
- provide appropriate expectations for children in their program and provide information on limit setting and guidance
- acknowledge the importance of providing staff with practical support such as transportation, child care, and occasional activities during work hours to encourage participation
• provide guidance on how to access health care in general and on the health resources available to families
• take into account a range of literacy levels
• provide materials relevant to the needs of staff from diverse backgrounds
• encourage staff wellness, so that staff can serve as role models to parents and children

6 The curriculum provides guidance, support, and resources for implementation if it:
• promotes sound adult learning principles for trainers
• provides materials and guidance in a form that is clear, well-organized, and easy to use
• provides materials that are easy to reproduce and suggests only materials that are easy to obtain
• provides enough background information for trainers to fully understand the concepts being explored
• provides resource information, groups, and materials if the trainer or staff want to explore topics further
• provides ways to determine and address major community health and nutrition problems

7 The curriculum includes and positively reflects equity and diversity if it:
• contains no demeaning labels or stereotypes based on race, culture, gender, or ability
• depicts a variety of racial and cultural groups
• presents contributions and achievements of diverse racial and cultural groups and depicts differences in customs
• shows a socioeconomic range for different racial and cultural groups
• depicts gender equity, showing males and females in a range of professions with equal representation in mental and physical activities
• reflects both traditional and nontraditional family make-up
• depicts individuals with disabilities
The curriculum *meets your program's specific criteria* if it:

- fulfills the priorities identified by the staff, the Health Services Advisory Committee, and the Policy Council
- adapts itself to the cultural and ethnic mix of staff
- addresses major health issues in the community
- matches the objectives of parents and staff

The sample tool on the following page incorporates these eight criteria and can be used or adapted to assess health curricula for staff.
Directions on How to Use this Tool to Evaluate a Health Curriculum for Staff

1. Fill in the curriculum's title, its health content, and your program's specific criteria (#8).

2. Ask someone knowledgeable about the specific content (Head Start manager, Health Services Advisory Committee member, mental health consultant) to review the curriculum first to assure that the specific health content is valid and up-to-date.

3. Review the curriculum and estimate the degree to which each key factor is successfully met. Circle the appropriate number (use the indicators on the previous pages to help you in this process).

4. After you circle a number, jot down any comments you have.

5. Add the numbers circled and fill in the total score.

6. Use your ratings on key factors, comments, and total score as a basis for discussing the appropriateness of the curriculum for your program. The tool can also be used to compare strengths and weaknesses of several curricula, or to help you adapt or develop your own health curriculum.

Criteria for Children

In selecting children's health curricula, it is critical that materials be based on sound and current health information and practice. All health curricula developed or used should be reviewed by the health coordinator and all members of the Head Start management team, the mental health consultant, and the Health Services Advisory Committee to assure that the health content is sound and up-to-date.

Below are seven additional key factors to help you choose health curricula for children, along with indicators for each key factor. A sample tool for assessing or adapting children's health curricula follows this section.

Key Factors to Consider

1. A curriculum is developmentally appropriate if it:
   - promotes opportunities for children to choose from among a variety of self-directed activities and explore through active involvement
   - is based on child-initiated, child-directed, and teacher-supported play and/or inquiries
   - is individualized and based on a teacher's observations and recordings of each child's special interests and developmental progress
   - is easily adaptable and responsive to individual ability, development, and learning style
   - emphasizes exploration, creative thinking, and interaction, rather than right or wrong answers, memorization, or drills

2. A curriculum builds on the child's knowledge, interests, and skills if it:
   - provides activities that are designed to achieve cognitive, affective, and behavioral objectives for each child
   - facilitates concept learning and skill development in an integrated, individualized, and natural way
   - focuses on the importance of skill building, such as decision making
   - emphasizes learning about health through activities that are part of the child's everyday experience and culture
   - provides a variety of activities about health that are interesting and meaningful to the child
A curriculum helps programs meet or exceed the Performance Standards if it:

- encourages social and emotional growth and self-esteem
- emphasizes that health education needs to be integrated into ongoing classroom and other program activities
- provides experiences and activities that familiarize children with all of the health services they will receive
- provides information and opportunities for hands-on skill building in dental health
- provides information on the variety of ways nutritional needs can be met and recognizes individual cultural and ethnic differences regarding food
- provides opportunities for children to be involved in activities related to meal service, including selecting, preparing, serving, and enjoying a wide variety of nutritious foods

The curriculum stresses the value of parent involvement if it:

- involves parents and families as partners
- tailors the parent materials to parents’ needs and interests
- provides specific strategies, concrete examples, and/or materials that bridge experiences in the program with those at home
- displays parent materials and handouts that take into account a range of literacy levels

The curriculum provides guidance, support, and resources for implementation if it:

- provides clear, well-organized, and easy-to-use materials and guidance for staff
- takes into account a range of literacy levels
- helps staff increase or decrease an activity’s level of difficulty to reflect the skill level of the children
- suggests only materials that are easily obtainable or can be easily or inexpensively made
- provides enough background information for staff to fully understand the concepts being explored
- provides information on resources, groups, and materials if staff want to explore topics further
The curriculum includes and positively reflects equity and diversity if it:
- contains no demeaning labels or stereotypes based on race, culture, gender, or ability
- displays a variety of racial and cultural groups
- presents contributions and achievements of diverse racial and cultural groups and depicts differences in customs
- shows a socioeconomic range for different racial and cultural groups
- depicts gender equity, showing males and females in a range of professions, with equal representation in mental and physical activities
- reflects both traditional and nontraditional family make-up
- depicts individuals with disabilities

The curriculum meets your program's specific criteria if it:
- adapts itself to the specific cultural and ethnic mix of families and children in the local community
- addresses major health issues in the local community
- matches the objectives set by parents and staff
- meets the priorities that have been identified by staff, the Health Services Advisory Committee, and the Policy Council

The sample tool on the following page incorporates these seven criteria and can be used to assess or adapt health curricula for children.
Directions on How to Use this Tool to Evaluate a Health Curriculum for Children

1. Fill in the curriculum's title, its health content, and your program's specific criteria (#7).

2. Ask someone knowledgeable about the specific health-related content (Head Start manager, Health Services Advisory Committee member, mental health consultant) to review the curriculum first to assure that the specific health content is valid and up-to-date.

3. Review the curriculum and estimate the degree to which each key factor is successfully addressed. Circle the appropriate number (use the indicators on the previous pages to help with this process).

4. After you circle a number, jot down any comments you have.

5. Add the numbers circled and fill in the total score.

6. Use your ratings on key factors, comments, and total score as a basis for discussing the appropriateness of the curriculum for your program. The tool can also be used to compare strengths and weaknesses of several curricula, or to help you adapt or develop your own health curriculum.

About these Resources

The following health resources for children, parents, and staff include curricula, print and audiovisual materials, manipulatives for children, and health resource organizations. We included resource materials in this guide based on several criteria. These materials are:

- judged by Head Start staff or professionals in the health education field to be strong in health content
- viewed as generally appropriate for the varied needs, interests, and family life styles within the Head Start community, based on the key factors described in the previous sections
- used and recommended by Head Start programs (but not endorsed by the Head Start Bureau)
- deemed timely and current
- designated specifically for children ages three to five
- readily available for purchase, with a majority being free or relatively low cost

A number of other relevant health resources that meet these criteria are available to Head Start programs. Exclusion from this guide does not mean that a resource was judged to be inappropriate for Head Start. Rather, sheer volume dictated that we limit the number of entries. Many of the resource organizations listed at the end of this section, as well as publishers cited in the annotations, offer free catalogues with information about additional health resource materials.

The health curricula referenced in this guide cover a range of health topics. Our review of these curricula, using the key factors presented in the previous section, indicated that some of the children's activities, while strong in health content, may need to be adapted for developmental appropriateness. Likewise, some materials for parents may need modification to reflect more diverse literacy levels and cultures.

In general, programs should review curricula based on the criteria suggested in the previous section, along with criteria established by the local program. No curriculum will offer everything. It is up to your program to adapt and modify resources to assure that health education activities are appropriate to the needs, interests, and skill levels of children, parents, and staff in the program.
Each entry in the following listing contains identifying information about the resource, an annotation, and an identification number. The subject and title indexes at the end of this guide use these identification numbers to help readers access appropriate resources quickly.

We believe these resources will enable programs to implement a comprehensive health education and health promotion program for children, parents, and staff. For assistance in planning and developing a health education and promotion program in Head Start, see the companion manual to this guide, Choosing Wellness: Comprehensive Health Education Planning and Implementation Handbook.

Creative Units Courseware

Title: Creative Units Courseware
Author: Johnson & Johnson, Health Management, Inc.
Publisher: Johnson & Johnson
Date: 1989-90
Cost: Cost varies with materials
Category: Training Pamphlets
No. of Pages: 6 per pamphlet
Availability: Johnson & Johnson, Health Management, Inc.
410 George Street
New Brunswick, NJ 08901
(800) 443-3682
Format: 7 major health topics, divided into 180+ pamphlets with training guides
Health Content: Stress, weight, nutrition, smoking, blood pressure, exercise, general health
Annotation: Each topical pamphlet, with accompanying leader's guide, allows further exploration into a subject. The materials are colorful and encourage participation. The entire program allows for customizing to one's audience, since only those modules of interest need be purchased.

The Doctor's Book of Home Remedies

Title: The Doctor's Book of Home Remedies
Author: Editors of Prevention Magazine Health Books
Publisher: Rodale Press
Date: 1991
Cost: $6.99
Category: Book
No. of Pages: 738
Availability: Rodale Press
33 East Minor Street
Emmaus, PA 18098
(800) 848-4735
Format: A to Z listing of health problems, with tips and techniques to try before calling the doctor
Health Content: Comprehensive
Annotation: This easy-to-read book gives useful, doctor-tested tips on what to do for a variety of common ailments, listed alphabetically. A 1993 version of the book, available in paperback for $27.95, includes hundreds of additional everyday health problems, such as insomnia, flu, depression, and stress.
Feelin' Good: A Wellness Program for Head Start Employees

Cathleen Hosner

Tri-County Head Start

1991

$5.00 to cover copying and postage

Guide/Manual

24

Cathleen Hosner/Tri-County Head Start
39617 Red Arrow Highway
Paw Paw, MI 49079

Handout from training conference

Personal health

Hosner's wellness program consists of several ideas: surveying employees regarding their needs, keeping track of health-promoting activities that will earn incentives, on-the-job performance issues, and bibliography.

Healing and the Mind: A Resource Guide for the Field of Mind Body Health

Institute of Noetic Sciences and The Fetzer Institute

Institute of Noetic Sciences and The Fetzer Institute

1993

$5.00

Resource Guide

47

The Fetzer Institute
9292 West KL Avenue
Kalamazoo, MI 49009

Written and audiovisual resources based on the PBS series

Personal health, risk reduction, stress management

Based on the popular 5-part series, Healing and the Mind with Bill Moyers, this resource guide presents an overview of books, tapes, journals, and organizations focused on the connection between mind and body health. Materials range from practical to spiritual, with emphasis on the latter.
**Heartland Community Health Programs**

**Title**: Heartland Community Health Programs

**Author**: Bloomington Heart and Health Program

**Publisher**: Bloomington Heart and Health Program

**Date**: 1989

**Cost**: Cost varies with program

**Category**: Multimedia Kit

**Availability**: Bloomington Heart and Health Program

1900 West Old Shakopee Road

Bloomington, MN 55431

**Format**: Booklets, videos, slides, manuals of several different health programs

**Health Content**: Nutrition, cardiac health, smoking cessation, fitness, weight management

**Annotation**: This organization offers affordable health promotion programs that are easily customized for adult groups, such as parent workshops or staff trainings. Features include ready-to-use materials, budgets, promotional aids and suggestions, and program evaluations.

---

**It's Making Me Sick: Alcohol and High Blood Pressure**

* (one in a series of health education booklets)

**Title**: It's Making Me Sick: Alcohol and High Blood Pressure

**Author**: Health Literacy Project/Health Promotion Council of S.E. Pennsylvania

**Publisher**: Health Promotion Council of S.E. Pennsylvania, Inc.

**Date**: 1992

**Cost**: Samples available; other costs vary

**Category**: Booklet

**No. of Pages**: 4

**Availability**: Health Literacy Project/Health Promotion Council of S.E. Pennsylvania

311 South Juniper Street, Room 308

Philadelphia, PA 19107

**Format**: Booklet written at or below 6th grade level and available in Spanish

**Health Content**: Blood pressure, alcohol abuse

**Annotation**: In this booklet a man discusses, with a supportive friend, the relationship between his drinking and his hypertension. More than 25 health education booklets are available, targeted to an African-American and Latino audience, and focusing on behavior contributing to chronic disease.
**Kicking Your Stress Habits: A Do-It-Yourself Guide for Coping with Stress**

**Title:** Kicking Your Stress Habits: A Do-It-Yourself Guide for Coping with Stress

**Author:** Donald A. Tubesing

**Publisher:** Whole Person Associates, Inc.

**Date:** 1989

**Cost:** $14.95

**Category:** Workbook

**No. of Pages:** 189

**Availability:** Whole Person Associates, Inc.
1702 East Jefferson Street
Duluth, MN 55812-2029

**Format:** 13 chapters on how to manage stress

**Health Content:** Stress management

**Annotation:** Tubesing's workbook allows the reader to follow along by keeping lists of one's own stressors as each is challenged and managed. Various coping strategies and alternatives are presented for consideration.

**Marketing Booze to Blacks**

**Title:** Marketing Booze to Blacks

**Author:** Center for Science in the Public Interest/Institute on Black Chemical Abuse

**Publisher:** Center for Science in the Public Interest

**Date:** 1990

**Cost:** $29.95

**Category:** Audiovisual

**Availability:** Center for Science in the Public Interest
1875 Connecticut Avenue, NW, Suite 300
Washington, DC 20009-5728

**Format:** Video

**Health Content:** Alcoholism, substance abuse

**Annotation:** This realistic 17-minute video examines the implicit and explicit messages in alcohol ads targeted to African-Americans and gives examples of how some communities have chosen to deal with the problem by increased advocacy and personal responsibility.
Minding the Body, Mending the Mind

Author: Joan Borysenko
Publisher: Simon & Schuster, Inc.
Date: 1988
Cost: $11.00
Category: Audiocassette

Availability: Simon & Schuster
1230 Avenue of the Americas
New York, NY 10020

Format: 60-minute tape on relaxation techniques
Health Content: Stress management
Annotation: Borysenko's tape focuses on the facts and some techniques for reducing stress. She describes how to elicit the "relaxation response" and make it work to lessen some physical ailments. The tape seems especially useful for those who are ready to make changes in their health behavior.

Minute Health Tips: Medical Advice and Facts at a Glance

Author: Thomas G. Welch, M.D.
Publisher: DCI/Chronimed Publishing
Date: 1991
Cost: $8.95
Category: Book

No. of Pages: 101
Format: Health topics listed alphabetically
Health Content: Comprehensive
Annotation: Welch's book answers routine health questions and offers preventive medical tips on a variety of topics, including back pain, smoking cessation, relief of hay fever, headaches, and other common ailments.
**The New Our Bodies, Ourselves**

**Title**
Boston Women's Health Book Collective

**Author**
Touchstone/Simon & Schuster

**Publisher**
1992

**Date**
$20.00

**Cost**
Book

**Category**
752

**No. of Pages**
Simon & Schuster

**Availability**
1230 Avenue of the Americas
New York, NY 10020

**Format**
27 chapters on individual health-related topics

**Health Content**
Comprehensive

**Annotation**
This "bible" of the Women's Health Movement covers every aspect of women's health, plus more. Some of the many topics covered are: occupational health, body image, violence against women, sexuality, stress, HIV/AIDS, health and healing, and substance abuse.

Creative Food Experiences for Children

Mary T. Goodwin and Gerry Pollen

Center for Science in the Public Interest

1990

$7.95

Book

256

7 chapters of information and activities with recipes and resources

Nutrition

Goodwin and Pollen's book is a comprehensive source on nutritional facts and activities, particularly with young children, and contains some reference to ethnic cooking.

Does AIDS Hurt? Educating Young Children about AIDS

Marcia Quackenbush and Sylvia Villarreal

ETR Associates

1992

$14.95

Book

150

13 chapters, with appendices on related resources

AIDS, sexuality

This frank and factual book on how to talk with young children under 10 about HIV and AIDS has particular sensitivity to preschool age as well as to urban, drug-using populations.
Help Me Learn, Help Me Grow
(also available in Spanish)

National Health/Education Consortium

National Commission to Prevent Infant Mortality

1992

$28.00 for “sampler”

Audiovisual

15 (guide)

Series of videos with accompanying materials

Parenting, nutrition, prenatal care, immunizations

This series of videos examines the critical connection between parents' good health and their children's ability to learn. This health education awareness campaign seems well-suited for parent group meetings.

HIV/AIDS: A Challenge To Us All

The Pediatric AIDS Foundation

1992

No cost

Audiovisual

51 (book)

Pediatric AIDS Foundation

1311 Colorado Avenue
Santa Monica, CA 90404

(310) 395-9051

2 videos—(1) vignettes of parents and children; (2) parent meeting; and accompanying book

HIV/AIDS

This 2-video package, with accompanying book, outlines how to organize a successful parent meeting on HIV/AIDS, as well as how to talk to children about the virus. The useful appendices list further resources.
I Don't Feel Good: A Guide to Childhood Complaints and Diseases

$14.95
Book
103
ETR Associates
P.O. Box 1830
Santa Cruz, CA 95061-1830
6 chapters on childhood illnesses, with references and appendices
First aid, infectious disease, HIV/AIDS
This handbook is a comprehensive guide to common and not-so-common childhood illnesses. It gives practical information and skills on how to respond to medical problems and emergencies that could arise at school.

Making Healthy Food Choices
(Home & Garden Bulletin #250)

Human Nutrition Information Service
U.S. Department of Agriculture
1993
$1.50
Booklet
17
United States Government Printing Office
Superintendent of Documents
P.O. Box 371954
Pittsburgh, PA 15250-7954
10 short sections on nutritional topics
Nutrition
This booklet is designed to help families learn more about how to choose and prepare foods. It contains useful information on such topics as weight control, cholesterol, shopping tips, and food preparation for children. The booklet is nicely illustrated and easy to read.
Parents' Check List for the Prevention of Child Abuse

Author: Elizabeth D. Drake and Anne E. Gilroy
Publisher: Child Care Publications
Date: 1993
Cost: $2.00
Category: Booklet
No. of Pages: 17
Availability: Kidsrights
10100 Park Cedar Drive
Charlotte, NC 28210

Format: How-to guide in dealing with stress, physical, and emotional abuse
Health Content: Sexual abuse, stress
Annotation: This short, easy-to-read check list, also available in Spanish, gives quick tips on parenting when parent stress and anger mount, and when abuse is suspected. Suggestions range from giving “time outs” to praising children often and showing them your love.

Parents' Guide to the Development of Preschool Children with Disabilities

Author: National Library Service for the Blind and Physically Handicapped
Publisher: The Library of Congress
Date: May 1992
Cost: No cost
Category: Resource Guide
No. of Pages: 22
Availability: National Library Service for the Blind and Physically Handicapped
The Library of Congress, Reference Section
Washington, DC 20542

Format: 4 sections on materials and resources for preschool children
Health Content: Disabilities
Annotation: This particular issue features special-format materials; educational games, toys and play equipment; annotated bibliography; and listings of national organizations concerned with preschool children with disabilities.
Pediatric AIDS: A Time of Crisis

**Title**

How About a Hug

Nan Holcomb; Illustrated by Tricia Taggart

Jason & Nordic

1988

$6.95 paperback; $13.95 hard cover

Children's Book

32

Jason & Nordic

P.O. Box 441

Holidaysburg, PA 16648

Illustrated storybook

Disabilities

This book presents the simple story of a child who wants a hug and who, incidentally, has Down syndrome.

I'll Miss You Mr. Hooper

Norman Stiles; Illustrated by Joe Mathieu

Random House

1984

$3.95

Children's Book

24

Random House

201 East 50th Street

New York, NY 10022

Illustrated storybook

Death

In this storybook Big Bird looks for Mr. Hooper all around Sesame Street and is reminded that Mr. Hooper has died. He finally comes to an acceptance of it, and places a picture of Mr. Hooper in his nest.
**Title**

It’s My Body
(available in Spanish as Mi Cuerpo Es Mio)

**Author**
Lory Freeman; Illustrated by Carol Deach

**Publisher**
Parenting Press, Inc.

**Date**
1982

**Cost**
$3.95

**Category**
Children’s Book

**Availability**
Parenting Press, Inc.
P.O. Box 75267
Seattle, WA 98125
(800) 992-6657

**Format**
Illustrated storybook

**Health Content**
Sexual abuse prevention

**Annotation**
This resource will open communication between adult and child about sharing their bodies and different kinds of touch. It reinforces two “touching codes” that children can learn to empower their feelings.

Lewisville, NC 27023-0609
(800) 334-2014

**Format**
Songs and Guide

**Health Content**
Fitness

**Annotation**
This tape, like many others of its kind designed for movement and exercise, contains songs specifically for toddler fitness and development. Included are “Itsy Bitsy Spider” and “If You're Happy,” as well as a guide for use.
Learning Basic Skills through Music: Health and Safety

Title: Learning Basic Skills through Music: Health and Safety
Author: Hap Palmer
Publisher: Educational Activities, Freeport, NY
Cost: $10.75
Category: Audiocassette
Availability: Kaplan School Supply Corporation
1310 Lewisville-Clemmons Road; P.O. Box 609
Lewisville, NC 27023-0609
(800) 334-2014
Format: Songs
Health Content: General health, safety
Annotation: Palmer's tape contains happy songs with catchy lyrics that teach cleanliness, a balanced diet, exercise, safety rules, and thoughtfulness to young children.

Mommy Don't Go

Title: Mommy Don't Go
Author: Elizabeth Crary; Illustrated by Marina Megale
Publisher: Parenting Press, Inc.
Date: 1986
Cost: $4.95
Category: Children's Book (part of series)
No. of Pages: 30
Availability: Parenting Press, Inc.
P.O. Box 75267
Seattle, WA 98125
Format: Illustrated storybook
Health Content: Mental health, growth, and development
Annotation: This book presents the dilemma posed by Matthew's mother going on a trip, and the ways in which he can cope. Children can choose many alternatives that will help Matthew, as they discuss their own feelings.

Washington, DC 20009-5786
(800) 424-2460

Format
Packet of materials with book, posters, photocopiable handouts for parents

Health Content
Safety

Annotation
This packet contains an illustrated book, teacher’s guide, and handouts for both children and parents, and focuses on the need to wear safety belts in automobiles. Additional resources, as well as suggestions for parent activities, are also included.
Curricula for Parents

Active Parenting Today

Title
Active Parenting Today

Author
Michael T. Popkin

Publisher
Active Parenting Publishers

Date
1993 (rev. from 1983)

Availability
Active Parenting Publishers
810 Franklin Court, Suite B
Marietta, GA 30067
(800) 825-0060

Cost
$345.00

Format
Consists of a leader’s guide, parent’s guide, 2 videos, and promotional materials

Health Content
Parenting and additional materials on abuse prevention

Intended Audience
Preschool parents

Annotation
The curriculum includes many issues appropriate for Head Start parents, including communication, decision making, self-esteem, and skill building. However, it contains materials for parents at a high literacy level, and some examples will need to be adapted to be appropriate for an audience with limited financial resources.

The Black Parenting Education Program

Title
The Black Parenting Education Program

Author
Geraldine Carter

Publisher
Relevant Education Corporation

Date
1989

Availability
Relevant Education Corporation
4665 South 4th Street
Arlington, VA 22204-1320

Cost
$159.00

Format
5 modules with instructor’s manual, parent workbooks, video, and test packet

Health Content
Parenting, cultural diversity, child development, family

Intended Audience
Preschool parents

Annotation
Overall, this curriculum offers a thorough guide to children’s development from birth to age 5. Illustrations depict children and parents of color, although the content does not focus much on the issue of raising an African-American child in America today.
Exploring Parenting

Roy Littlejohn Associates, Inc.

U.S. Department of Health and Human Services
Administration for Children, Youth, and Families
Head Start Bureau

1978

Head Start Publications Center
P.O. Box 26417
Alexandria, VA 22313-0417

No cost to Head Start programs

A 20-lesson teacher guide and parent information sheets to accompany all lessons

Parenting skills, with such health themes as injury prevention, relationship building, coping with stress, and dealing with anger

Preschool parents

This curriculum builds on strengths and views parents as the primary influence in the development of their children. It encourages positive health education and promotion and is relevant to the needs of Head Start parents. Overall, this curriculum was rated highly even though it is over 10 years old.

The curriculum may require modification or adaptation for varying literacy levels. It does not provide guidelines for handling sensitive topics and disclosure of sensitive information, which is likely to surface given the nature of the lesson topics.
**Getting Involved: Workshops for Parents**

**Title**

Ellen Frede

**Author**

High/Scope Press

**Publisher**

1984

**Date**

High Scope Press

**Availability**

600 North River Street

**Cost**

Ypsilanti, MI 48197

$15.00

**Format**

A 300-page, stand-alone document with a chapter on planning, leading, and evaluating parent workshops, followed by 9 chapters dealing with parenting as it relates to children’s learning; based, in part, on the “Getting Involved” booklet series published by the Administration for Children, Youth, and Families.

**Health Content**

Two of the chapters focus on children’s learning and play

**Intended Audience**

Preschool parents

**Annotation**

“Your Child’s Attitude Toward Learning” and “Your Child and Play” provide guidance for teaching parents about children’s learning and fostering the parent/child relationship. Programs may find some of the enclosed materials vague and instructions for activities brief. Only the most experienced trainer would be able to use these materials to design a full, interactive session, with parents.

National Center
7320 Greenville Avenue
Dallas, TX 75231
(214) 748-7212

Date
1984

Availability
From local affiliates of the American Heart Association

Cost
No cost

Format
A boxed set of materials divided into (1) adult resources, including pamphlets, teacher guide, parent information, and videotape; and (2) children's resources, including videotape, audiotape, game, stethoscope, syringe, and plastic tubes

Health Content
Cardiac health, nutrition, and physical activity

Intended Audience
Preschool parents

Annotation
This curriculum is a boxed set of materials for adults and children in the classroom. The majority of the activities provided are developmentally appropriate and include an array of materials and activities for 3- to 5-year-olds. The approach includes a mix of teacher- and child-directed activities. Some activities, however, seem unrealistic for Head Start programs and inappropriate for this age group. Opportunities for parent involvement are provided although materials are at a high literacy level.

No cost to Head Start programs

Format
Session plans provide guidance for the group leader and step-by-step directions for conducting the activities; information sheets are reproducible handouts for parents

Health Content
Relationship-building within families; caring for one's self

Intended Audience
Preschool parents

Annotation
This is a sound curriculum, which is responsive to the strengths of parents, providing opportunities for exploration. It is respectful of cultural differences and values and champions parents as the primary influence on their child's development. It also offers activities for parents' own growth, health, and wellness, apart from their role as parents.
Parents and Children Getting A Head Start Against Drugs

Sylvia Carter and Ura J. Oyemade

National Head Start Association (NHSA)

1990 (rev.)

National Head Start Association
1220 King Street, Suite 200
Alexandria, VA 22314
(703) 739-0875

None

A stand-alone document with separate activities for children and parents; sections on parent involvement, training, and facilitator skills; 50 reproducible handouts

Parenting, family, community, and taking care of one's self

Preschool teachers

This curriculum is a valuable resource for working with Head Start parents. It builds on strengths and is respectful and responsive to parents and their primary role. It tackles hard issues in a frank and sensible manner. Curriculum materials may need to be adapted as they are presented at high literacy levels, particularly in role-playing skits and prepared letters for parent distribution.

Systemic Training for Effective Parenting (STEP)

Don Dinkmeyer and Gary McKay

American Guidance Service

1989 (3rd Ed.)

American Guidance Service
4201 Woodland Road, Box 99
Circle Pines, MN 55014-1796
(800) 328-2560

$285.00

A boxed set of materials with a leader’s manual, parent’s handbook, booklet for integrating STEP with substance abuse prevention information, parent certificates, 2 video cassettes, and charts

Parenting, family life, reproductive health, substance abuse prevention

Preschool parents

This curriculum focuses on assisting parents with their parenting skills. Information is summarized, with easy reference checklists. Completion of the curriculum requires a lot of reading and writing for parents and may need substantial modification for a range of literacy and English-reading skills.

(301) 779-6200

$34.95 for Vols. I, II; $23.95 for Trainer’s Guide

A supervised, self-instructional program consisting of 13 modules that follow the CDA competency areas, including modules on safety, health and families, with self-assessments, available in 2 volumes and a trainer’s guide

Safety

Intended Audience

Preschool teachers

Annotation

This curriculum is aimed at helping teaching staff provide a safe and healthy environment for children. It follows the 13 competency areas for CDA and contains a strong section on why it is important for staff to have healthy habits.

Essentials for Child Development Associates

1991

Council for Early Childhood Professional Recognition
1718 Connecticut Avenue, NW, Suite 500
Washington, DC 20009
(202) 265-9090

$30.00

A stand-alone document with more than 350 pages of self-study activities

Child development, safety, nutrition, mental health, family relationships

Intended Audience

Preschool teachers

Annotation

This curriculum focuses on 3 issues: a safe and healthy environment, positive ways to support a child’s social and emotional development, and establishing productive relationships with parents. It provides a clear, step-by-step picture of appropriate practice in early childhood situations. Nutrition and safety are thoroughly covered, and the curriculum is sensitive to issues of diversity and gender bias.
Health in Day Care: A Training Guide for Day Care Providers

Judith Pokorni and Roxanne Kaufmann

Georgetown University Child Development Center

1986

Georgetown University Child Development Center
3800 Reservoir Road, NW
Washington, DC 20007
(202) 687-8635

$25.00

This stand-alone document provides 2 to 3 training activities on each of 12 topics. The trainer's guide was developed to accompany Health in Day Care: A Manual for Day Care Providers, which provides comprehensive information for day care providers on major health and safety issues.

Safety

Preschool teachers

This curriculum provides staff with a variety of options for learning and skill-building, which include exercise, group discussion, and checklists. Special attention is given to the care of chronically ill children and adaptations for children with disabilities.

**Cost**
No cost to Head Start programs

**Format**
A 223-page stand-alone document with an introduction followed by 7 topical areas and several appendices

**Health Content**
Mental health issues, including self-esteem, coping with stress, building relationships with family and peers

**Intended Audience**
Preschool children

**Annotation**
*As I Am* is soundly rooted in developmentally appropriate practice, reflected both in its content and its methodology, presenting open-ended activities designed to increase one's knowledge base, change attitudes, and increase skill levels. Parent involvement is a key focus of the curriculum, and it meets Head Start Performance Standards for Mental Health. Resources are listed at the end of each of the curriculum's 7 sections. In addition, there are appendices with additional references, an observation form for working with children, and a curriculum goal cross reference chart. The curriculum deals effectively and openly with both diversity and equity.

</tr>
<tr>
<td>Annotation</td>
<td>This curriculum focuses on decision making. The authors report that it can be adapted to children of any age. Stories are used to help children understand their feelings and learn to ask for help. It explores many kinds of relationships: siblings, friends, and parents. However, many of the activities are focused on right and wrong answers and concepts generally more appropriate for older children. Programs need to carefully consider whether the nature of the materials is in keeping with their philosophy and approach.</td>

<tr>
<td>Facilitating Social Problem Solving is a 44-page curriculum that outlines a 5-step approach to conflict resolution. It is developmentally appropriate, with guidance given for teaching children at their levels. However, the curriculum does not give enough guidance in establishing the link between problem solving and parents.</td>
<td>The content area is age-appropriate for Head Start children. The program provides guidance on adapting activities for children with disabilities. However, the curriculum is limited by the approach, which requires that teachers model motor skills and children then repeat them. In addition, diversity and equity are not emphasized.</td>
</tr>

Title: Growing Up Strong: A Mental Wellness and Chemical Abuse Prevention Program for Preschoolers

Author: Center for Child and Family Development
Public Responsibility and Community Affairs
Continuing Education and Public Service
The University of Oklahoma
Norman, OK 73037-0005

Publisher: Oklahoma State Department of Mental Health
P.O. Box 53277, Capitol Station
Oklahoma City, OK 73152

Date: 1986

Availability: The Center for Child and Family Development
University of Oklahoma College of Continuing Education
555 Constitution, Suite 221
Norman, OK 73037-0005
(405) 325-1446

Cost: $120.00

Format: 22 specific lessons, mental health check list, teacher's guide, and parent's guide

Health Content: Mental health, tobacco and alcohol prevention, self-esteem

Intended Audience: Preschool children

Annotation: The authors view parents as an integral part of this curriculum for children. Discussion suggestions are very open-ended and great for language stimulation. In addition, the curriculum seems careful to show gender equity and both traditional and nontraditional families.
Head Start Nutrition Education Curriculum

Mary F. Lewis, Carol Byrd-Bredbenner, and Joan Bernstein

Department of Health and Human Services/Administration for Children, Youth, and Families—Head Start Bureau

Date

1987

Availability

Head Start Publications Center
P.O. Box 26417
Alexandria, VA 22313

Cost

No cost to Head Start programs

Format

A 300+ page, stand-alone document consisting of 9 units, each of which is approximately 30 pages long

Health Content

Nutrition

Intended Audience

Preschool children

Annotation

This curriculum is developmentally appropriate, emphasizing the importance of skill development and integrating language arts, music, pre-math skills, physical development, and arts in its approach to nutrition. The curriculum meets the Head Start Performance Standards for nutrition education, provides extensive references and resources, stresses parent involvement, and offers useful strategies for involving parents.

Publisher
Department of Health and Human Services/Administration for Children, Youth, and Families—Head Start Bureau

Date
1985

Availability
Head Start Publications Center
P.O. Box 26417
Alexandria, VA 22313-0417

Cost
No cost to Head Start programs

Format
10 lessons with photocopiable materials and home visit ideas for parents; a section on children with disabilities; puppet.

Health Content
Dental health, good nutrition, dental injury and first aid, visits to the dentist

Intended Audience
Preschool children

Annotation
The content areas are well-organized and provide children with opportunities for hands-on and self-initiated activities. The curriculum meets the Head Start Performance Standards for dental health and promotes parent involvement, using letters and handouts with activities that bridge the program and home. References consist of a list of national organizations. Although the curriculum does not specifically deal with issues of diversity and/or equity, there is a special section on helping children with disabilities.

Preschool children

Annotation
I'm So Glad You Asked is a well-organized substance abuse curriculum, which is easy to follow and stresses the importance of strengthening the parent-teacher-child relationship. Programs need to carefully consider whether the majority of the materials are in keeping with their philosophy and approach.

Title

Author
Pnina Tobin and Susan L. Farley

Publisher
Children's Self Help Project
3368 22nd Street
San Francisco, CA 94110
(415) 826-9050

Date
1990

Availability
Learning Publications, Inc.
P.O. Box 1338
Holmes Beach, FL 34218-1338
(813) 778-6651

Cost
$19.95

Format
A stand-alone document, with 2 units for preschoolers, 2 units for elementary age children, and chapters on the need for prevention, intervention, classroom management, and working with parents, teachers, and schools

Health Content
Physical and sexual abuse prevention

Intended Audience
Preschool children

Annotation
This curriculum offers many activities for physical and sexual abuse prevention, to be addressed by an “expert” rather than the classroom teacher. The language and content are developmentally appropriate, and parent involvement is approached through informational meetings and lessons.

| Cost | $16.00 for total package  
$15.40 for 25-99 packages  
$14.29 for 100+ packages        |
| Format | A 60-page teacher's guide with easy-to-follow lesson plans, letters to copy for parents, coloring pictures to copy for children, and an audiotape with songs about fire and burn prevention |
| Health Content | Fire safety and prevention                                                           |
| Intended Audience | Preschool children                        |
| Annotation | This curriculum has a single topic focus—dealing with fire safety and prevention issues. It places emphasis on specific fire safety knowledge and gives children practical skills. The lesson format is easy to follow but many activities will need to be adapted to be developmentally appropriate for 4-year-olds. Programs will need to carefully consider whether the nature of the materials is in keeping with their philosophy and approach. |
Preschool Stress Relief Project

$450.00; $350.00 to nonprofits

A stand-alone document and audiovisuals

Strategies for dealing with anger, frustration, and stress

Preschool children

The curriculum includes videos, puppets, and skits, which may be used in large group or small group sessions. It provides children with strategies for coping with anger, frustration, and stress, including basic yoga. Many activities may not be developmentally appropriate as they are primarily teacher-directed, offering stickers as rewards and utilizing prepared worksheets and paper and pencil tasks.

Ready, Set, Grow

Paula Peterson

Peterson Publishing

1984

Peterson Publishing
P.O. Box 65144
St. Paul, MN 55175

$40.00

A three-hole-punched, shrink-wrapped, stand-alone document

Comprehensive coverage of traditional health topics

Preschool children

While the focus is on teacher-directed activities in large groups, this curriculum provides good guidance for teachers to involve parents in nutrition activities, as well as an emphasis on parent involvement in general. Many of the child activities, however, need to be modified to be developmentally appropriate.

<td>Preschool children</td>
</tr>
<tr>
<td><strong>Annotation</strong></td>
<td>The curriculum has a single-issue content area dealing with movement and physical activity for children 3 to 5 years old. It includes opportunities for parents and can be easily modified or adapted in response to the varying needs of children or their parents. It details the developmental differences between 3-, 4-, and 5-year olds, with guidance on how to handle these differences.</td>
</tr>
</tbody>
</table>
Organizations for Health Education and Promotion

The following health resources can be contacted for further information and materials. Many of the groups have free publications catalogs. All are listed in the index by subject and title. Although there is no annotation for each listing, the title alone should indicate the health focus of the organization.

In addition to the resources listed, contact county extension services, local and state public health departments (all located under “Government” in your local telephone directory), local colleges and universities, local police and fire departments, and local affiliates of such national health organizations as the American Lung Association and American Heart Association, for additional materials.

Acknowledgements

Over the past two years, many people have generously contributed their vision, expertise, and time to the development of the products of Choosing Wellness. We are grateful to Johnson & Johnson, and particularly to Frank H. Barker; Jonathan E. Fielding, M.D., M.P.H.; Terry Mason, M.P.H.; Christopher DeGraw, M.D., M.P.H.; and Martha Naismith, whose vision and commitment made this effort possible. We also appreciate the efforts of Marlys Gustafson Bell, M.S.; Madelyn Cahn Schultz, Ph.D.; Susan A. Weber, M.P.A.; Robin Brocato, M.H.S.; and James O'Brien, Ph.D. from the Head Start Bureau who provided direction and support throughout the project. We extend our heartfelt thanks to Joanne P. Brady, our mentor at EDC, whose intelligence, humor, and commitment to excellence and integrity were instrumental to the successful completion of this project.

We especially thank the members of our Working Group who gave countless hours to the project. The following people met with us for several days, critically reviewed and contributed to all of our products, and helped us apply the principles of comprehensive health education to the realities of Head Start staff and families. Choosing Wellness benefited greatly because of the commitment and expertise of the following professionals:

Laurie Danahy
Teacher and Special Services Liaison
Moscow Head Start Program
Moscow, Idaho

Twila Hanchey
Health Coordinator
South Central Head Start
Twin Falls, Idaho

Cathleen Hosner
Health Services Manager
Tri-County Head Start
Paw Paw, Michigan
Tim King
Family Services Coordinator
Southeast Community Organization (SECO) Head Start
Baltimore, Maryland

Linda Likens
Director of Government Affairs
National Head Start Association
Alexandria, Virginia

Clarence Montgomery
Health Coordinator
Metro-Dade County Community Action Agency Head Start and Family Services
Miami, Florida

Donna Pike
Project Director
Rocky Mountain Center for Health Promotion and Education
Lakewood, Colorado
We gratefully acknowledge the contributions of our colleagues for assistance in developing *Choosing Wellness*:

Many other practitioners provided assistance and shared their expertise in the development of the products. In particular, we would like to thank two groups: the 25 Head Start directors and coordinators who participated in our telephone survey in March 1993 and who helped us understand the needs of Head Start families and staff and the barriers to providing comprehensive health education for them; and the 63 Head Start staff members who participated in our four focus groups in Indianapolis, Indiana in April, 1993 and who taught us how health education and health promotion is integrated into the day-to-day lives of Head Start children, families, and staff.
