This document defines the requirements and program for the American Welding Society to certify expert welders through an evaluation process entailing performance qualification and practical knowledge tests requiring the use of advanced reading, computational, and manual skills. The following items are included: statement of the standard's scope; definitions of key terms; requirements for participating organizations; education and work experience requirements; purposes/scope of the written examinations and performance tests; inspection, testing, and acceptance criteria; documentation requirement; certification procedure; and information about the National Registry of Level II-Advanced Welders. Appended are the following: visual inspection test report; face- and root-bend test report; and welding procedure specifications. Twelve figures/tables are included. (MN)
AWS QC12-96

Specification for Qualification and Certification for Level III - Expert Welders

American Welding Society
Specification for Qualification and Certification for Level III - Expert Welders

Funded by the U.S. Department of Education Grant V244B30006-95

Prepared by the AWS Education and Certification Departments

Under the Direction of the AWS Education Grant Committee

Approved by the AWS Board of Directors

Abstract

This standard defines the requirements and program for the American Welding Society to certify expert level welders. The certification of Level III - Expert Welders requires performance qualification and practical knowledge tests. These tests require more detailed skills of reading, computational, and manual skills to complete.
Statement on Use of AWS Standards

All standards (codes, specifications, recommended practices, methods, classifications, and guides) of the American Welding Society are voluntary consensus standards that have been developed in accordance with the rules of the American National Standards Institute. When AWS standards are either incorporated in, or made part of, documents that are included in federal or state laws and regulations, or the regulations of other governmental bodies, their provisions carry the full legal authority of the statute. In such cases, any changes in those AWS standards must be approved by the governmental body having statutory jurisdiction before they can become a part of those laws and regulations. In all cases, these standards carry the full legal authority of the contract or other document that invokes the AWS standards. Where this contractual relationship exists, changes in or deviations from requirements of an AWS standard must be by agreement between the contracting parties.

International Standard Book Number: 0-87171-485-X

Printed in the United States of America

Note: The primary purpose of AWS is to serve and benefit its members. To this end, AWS provides a forum for the exchange, consideration, and discussion of ideas and proposals that are relevant to the welding industry and the consensus of which forms the basis for these standards. By providing such a forum, AWS does not assume any duties to which a user of these standards may be required to adhere. By publishing this standard, the American Welding Society does not insure anyone using the information it contains against any liability arising from that use. Publication of a standard by the American Welding Society does not carry with it any right to make, use, or sell any patented items. Users of the information in this standard should make an independent, substantiating investigation of the validity of that information for their particular use and the patent status of any item referred to herein.

With regard to technical inquiries made concerning AWS standards, oral opinions on AWS standards may be rendered. However, such opinions represent only the personal opinions of the particular individuals giving them. These individuals do not speak on behalf of AWS, nor do these oral opinions constitute official or unofficial opinions or interpretations of AWS. In addition, oral opinions are informal and should not be used as a substitute for an official interpretation.

This standard is subject to revision at any time by the AWS Certification Committee. Comments (recommendations, additions, or deletions) and any pertinent data that may be of use in improving this standard are requested and should be addressed to AWS Headquarters. Such comments will receive careful consideration by the AWS Certification Committee and the author of the comments will be informed of the Committee's response to the comments. Guests are invited to attend all meetings of the AWS Certification Committee to express their comments verbally. Procedures for appeal of an adverse decision concerning all such comments are provided in the Rules of Operation of the Technical Activities Committee. A copy of these Rules can be obtained from the American Welding Society, 550 N.W. LeJeune Road, Miami, Florida 33126.

Foreword

(This Foreword is not a part of AWS QC12-96, Specification for Qualification and Certification of Level III - Expert Welders, but is included for information purposes only).

This standard extends the work of the American Welding Society to further define a national skill standard for Level III - Expert Welders. The American Welding Society was awarded Grant #V244B30006-95 for $1,059,626 by the U.S. Department of Education to develop standards and a certification program for welders during the period from July 1993 to July 1996. The total program cost is $2,132,094, of which 49.7% ($1,072,468) is an in-kind contribution by AWS.

To accomplish its goals, AWS organized an Education Grant Committee, which has representatives from all segments of the welding industry, including labor organizations and educational institutions. This Committee has overseen the efforts toward a standard for the qualification and certification of the Level III - Expert Welder.

The development of this National Skill Standard has involved the participation of the welding industry through a survey designed to determine a consensus of welder skills and competencies required for individuals seeking to continue the development of their welding skills.

The results of this industry survey were an occupational task analysis that formed the basis for curriculum guidelines to guide the training of the Level III - Expert Welder candidate.

This standard defines the requirements for the certification of such individuals and their entry into the National Registry of Level III - Expert Welders.

Comments and suggestions for improvement of this standard are welcome. They should be sent in writing to the Secretary, AWS Certification Committee, American Welding Society, 550 N.W. LeJeune Road, Miami, Florida 33126.

Specification for Qualification and Certification for Level III - Expert Welders

1. Scope

1.1 This standard establishes the minimum requirements for an organization to participate with the American Welding Society (AWS) in the qualification and certification of expert welders.

1.2 This standard specifies practical knowledge and performance tests that require a more detailed level of reading, computational, and manual skills to successfully complete.

1.3 All individuals that meet the specified performance at a facility meeting 3. Requirements for Participating Organizations will be listed in The National Registry of Level III - Expert Welders at the American Welding Society.

1.4 Organizations not meeting 3. Requirements for Participating Organizations may use this standard, but individuals they certify will not be listed in the National Registry of Level III - Expert Welders.

1.5 Although a written test including questions on safety is required by this standard, this standard is not intended to address safety and health. Safety and health requirements are provided in ANSI Z49.1, Safety in Welding and Cutting, other safety and health standards, and federal, state, and local government regulations. The responsibility for safety of the Level III - Expert Welder is primarily with the welder, the Participating Organization during training and testing, and afterwards, with the employer.

1.6 The requirements of this standard shall not supersede the authority of the training facility as established by the local evaluation guidelines.

2. Definitions

The terms used in this standard are defined in ANSI/AWS A3.0, Standard Welding Terms and Definitions. Other terms are defined as follows:

1) Participating Organization - Any organization meeting 3. Requirements for Participating Organizations.

2) Level III - Expert Welder - An individual employed in this position is considered to possess a prerequisite amount of knowledge, attitude, skills, and habits required to perform tasks autonomously, including the selection and use of appropriate techniques and equipment, and to apply theoretical knowledge and motor skills with minimum supervision.
3. Requirements for Participating Organizations

3.1 Participating Organizations may be training-and-testing or testing-only facilities.

3.2 Participating Organizations shall maintain and follow a quality manual that assures compliance with this standard.

3.3 An application for registration as a Participating Organization shall be submitted with a cover letter signed by the Senior Official at the Facility. The cover letter shall certify to AWS that the Facility has a Quality Program which will be rigorously followed, and that the requirements of this standard will be met.

3.3.1 If the Participating Organization is a training-and-testing organization, the letter shall also state that their curriculum follows AWS EG4.0, Guide for Training and Qualification of Welding Personnel, Level III - Expert Welders.

3.3.2 Participating Organizations already registered for the Entry Level Welder and Level II - Advanced Welder training program must notify AWS of their intention to administer the Level III - Expert Welder curriculum.

3.4 Test supervisors for training-and-testing or testing-only Participating Organizations should be AWS Certified Welding Inspectors.

3.5 Instructors for testing-and-training Participating Organizations should be AWS Certified Welding Educators.

3.6 Quality System Audits. Audits may be required if evidence of nonconformance with the Participating Organization’s Quality Program or this standard exists.

3.6.1 Allegations of nonconformance supported by documentary evidence will be presented to the AWS Certification Committee. The Committee may require:

1) A written statement by the Senior Official of the Participating Organization with supporting evidence refuting the allegations, and a statement by the Senior Official of the Participating Organization that the requirements of the Participating Organization Quality Program and this standard have been met in the past, and will be met in the future, or

2) An on-site quality audit by an AWS-approved assessor to verify that the requirements of the Quality Program and this standard have been and are being met.
3.6.2 If a quality audit is required by the Committee, then the Participating Organization has two options, as follows:

1) The Participating Organization may decline to be audited and resign from the program, or

2) The Participating Organization may agree to be audited, in which case the Senior Official of the Participating Organization shall issue a purchase order to AWS for administrative fees and expenses of the assessor.

4. Education and Work Experience

4.1 Trainees desiring AWS Level III - Expert Welder Certification through training under the requirements of AWS QC12 shall meet the requirements of sections 1.3.7 and 1.3.8 of the EG4.0-96 Guide for the Training and Qualification of Welding Personnel, Level III - Expert Welder and document two years of multiple welding process work experience (with a minimum of 6 months fabrication experience that includes drawing interpretation, layout and fitup duties) that has a direct relationship to weldments fabricated to a code, specification or employer’s qualified welding procedure.

4.2 Trainees desiring AWS Level III - Expert Welder Certification through testing and examination under the requirements of AWS QC12 shall meet the requirement of sections 1.3.7 and 1.3.8 of the EG4.0-96 Guide for the Training and Qualification of Welding Personnel, Level III - Expert Welder and document seven years welding work experience. Said work experience shall consist of three years in a single process and 4 years using multiple processes, (with a minimum of 6 months fabrication experience that includes drawing interpretation, layout and fitup duties) that have a direct relationship to weldments fabricated to a code, specification or employer’s qualified welding procedure.

4.3 At the discretion of a Participating Organization, credit for completion of individual training requirements and work experience may be simultaneously granted to an AWS QC12 Level III - Expert Welder applicant provided the work experience or experiential learning meets or exceeds the requirements for either work experience or training.
5. **Written Examination**

5.1 The written examination is designed to show that the Level III - Expert Welder understands the following subjects:

- Mathematics
- Safe Practices
- Fabrication Principles and Practices
- Nondestructive Examination and Piping Symbol Interpretation
- Use of Welding Codes and Standards
- Welding Inspection and Testing
- Cutting and Welding Theory
- Welding Metallurgy and Weldability
- Cutting and Welding Terms and Definitions

5.2 Trainees desiring AWS Level III - Expert Welder Certification shall pass a three part examination consisting of Part A - Welding Fundamentals and Safety (based on the applicable subject matter identified in section 3 of the EG4.0-96 Guide for the Training and Qualification of Welding Personnel, Level III - Expert Welder, Part B - Practical Welding Specification Interpretation (visual examination of weld samples), and Part C - Open Code Book (open book examination based on one of the following: AWS D1.1, API 1104 or ASME Section IX).

5.3 A minimum passing grade of 75% is required with at least 90% of the safety questions answered correctly, with no limits on retests. Individuals failing one part of the written examination must retest on all parts of the examination.

5.4 As an option, Level III - Expert Welder applicants may substitute the AWS QC1 Certified Welding Inspector (CWI) examination for the Level III - Expert Welder written examination. The applicant shall pass the AWS QC1 Certified Welding Inspector exam with a minimum cutoff score equal to or greater than the passing score required for CWI.

5.4.1 Current AWS Certified Welding Inspectors (CWI) or Certified Associate Welding Inspectors (CAWI) with an examination score of 72% or higher shall be recognized as having met the requirements for AWS QC12 Expert Welder written examination provided they pass a supplemental safety examination with a minimum passing score of 90% accuracy.

5.4.2 In accordance with the requirements of this standard, all applicants for written examinations administered under AWS QC1, Standard for AWS Certification of Welding Inspectors shall be required to take a supplemental written safety examination and pass with 90% accuracy.
6. **Performance Tests**

Performance tests are designed to show that the Level III - Expert Welder can:

1) Pass a performance qualification test using SMAW, on carbon steel pipe, in the 6GR position. (Refer to Figure 1)
2) Pass a performance qualification test using SMAW, on stainless steel pipe, or on carbon steel pipe using 300 series filler metal, in the 6G position. (Refer to Figure 2)
3) Pass a performance qualification test using GMAW-S, on carbon steel pipe in the 6G position. (Refer to Figure 3)
4) Pass a performance qualification test using GMAW-P, on aluminum pipe in the 6G position. (Refer to Figure 4)
5) Pass a performance qualification test using FCAW-S, on carbon steel pipe in the 6G position. (Refer to Figure 5)
6) Pass a performance qualification test using FCAW-G, on carbon steel pipe in the 6G position. (Refer to Figure 5)
7) Pass a performance qualification test using GTAW, on carbon steel in the 6G position in pipe or round tubing. (Refer to Figure 6)
8) Pass a performance qualification test using GTAW, on carbon steel or stainless steel pipe using 300 series filler metal, in the 6G position in pipe or round tubing. (Refer to Figure 6)
9) Pass a performance qualification test using GTAW, on carbon steel or stainless steel pipe using 300 series filler metal, in the 6G position in pipe or round tubing using a consumable insert. The consumable insert type is optional and shall be stainless steel material. (Refer to Figure 6)
10) Pass a performance qualification test using GTAW, on aluminum in the 6G position in pipe or round tubing. (Refer to Figure 6)

6.1 The Level III - Expert Welder shall prepare, by mechanical, oxyfuel gas, or plasma arc cutting, the parts as designated in Figures 1 through 6.

6.2 The Level III - Expert Welder shall assemble the parts prepared in 6.1, as shown in Figures 1 through 6.

6.3 The Level III - Expert Welder shall weld the assemblies using the WPS indicated on the drawing for each assembly. The WPSs specified are listed in Annex C.

6.4 Participating Organizations may qualify and certify Level III - Expert Welder performance qualification tests at an AWS QC4 Accredited Test Facility using the AWS QC7, *Standard for AWS Certified Welders*. All welder performance will be in accordance with the AWS QC7 Supplement G, AWS *Performance Qualification Test*, and AWS B2.1, *Standard for Welding Procedure and Performance Qualification*. The purpose of AWS QC7 is to document the ability of welders to deposit sound welds (qualify) and to impose controls on the documentation and maintenance of certification (certify). Welder performance qualification tests
administered within the AWS QC7 program are conducted at AWS Accredited Test Facilities. Such facilities operate under the requirements of AWS QC4, Standard for Accreditation of Test Facilities for AWS Certified Welder Program.

6.4.1 As an option, Participating Organizations may elect to substitute any of the performance qualifications listed in section 4.2 Performance Qualifications, of the AWS EG4.0 Guide for the Training and Qualification of Welding Personnel, Level III - Expert Welder for the performance qualifications tests required by AWS QC12 and detailed in section 3 of the AWS EG4.0-96 Guide for the Training and Qualification of Welding Personnel, Level III - Expert Welder. Substituted performance qualifications shall cover all aspects of the replaced performance qualification test, with respect to welding process, welding positions, base metal, filler metal and product form.

6.4.2 Current AWS QC7 Certified Welders desiring AWS QC12 Level III - Expert Welder Certification may apply for completion status of any mandatory welder performance qualification test with the AWS QC12 Expert Welder Program. AWS QC7 Certified Welders desiring recognition as having met the requirements for welder performance qualification testing as set forth in the AWS QC12 - Expert Welder Program shall meet the following conditions:

1) The applicant’s AWS QC7 certification meets or exceeds the requirements set forth in the AWS QC12 - Expert Welder Program for any welder performance qualification test being superseded by the current certification.

2) At the time of application for recognition, the AWS QC7 Certified Welder shall produce his/her certification card(s) and present it to the AWS QC12 Facility Representative for review. The AWS QC7 Facility Representative shall verify that the card is current. The card shall be maintained in good condition.

3) The AWS QC12 Facility Representative shall record the AWS QC7 Welder’s certification number and test description. Prior to recognition the Facility Representative shall contact the AWS Certification Department to verify the applicant’s current status. The Facility Representative may request from AWS Certification Department a detailed description of the applicant’s certification so compatibility with AWS QC12 performance qualifications can be ascertained.

4) The AWS QC7 Certified Welder and the AWS QC12 Facility Representative shall be aware that the card is the property of the American Welding Society. Evidence of tampering with the card shall be sufficient cause for rejection of recognition and shall require return of the card to the AWS Certification Department for investigation. An investigation by the Certification Committee may result in dismissal of the charges, suspension, revocation of certification, or renewal qualification, depending upon circumstances. The Committee will provide an explanation for its actions.
5) AWS QC7 Certified Welders applying for AWS QC12 Level III - Welder Certification whether through training, examination and testing or testing and examination alone shall meet all requirements for written examination, performance qualifications and work experience in accordance with AWS QC12, Level III - Expert Welder Program rules prior to issuance of certification.

7. Inspection, Testing, and Acceptance Criteria

7.1 All cut edges shall be visually examined and the cut surfaces shall meet the criteria of AWS C4.1 Sample 2 with grinding. After inspection, the cut surfaces may be conditioned to bright metal.

7.2 All assemblies shall be visually examined and the welds shall meet the acceptance criteria shown in Table 1.

7.3 All test assemblies shall be either bend tested or radiographed.

7.3.1 All test assemblies shall be cut to produce face- and root-bend specimens as shown in Figure 7.

7.3.2 Face- and root-bend specimens shall be conditioned as shown in Figure 8, and bent in a bend fixture similar to Figure 9 or 10, in accordance with ANSI/AWS B4.0, Standard Methods for Mechanical Testing of Welds.

7.3.3 Face- and root-bend specimens after bending shall meet the requirements of Table 2.

7.4 Test assemblies radiographed shall be in accordance with AWS B2.1 Standard for Weld Procedure and Performance Qualification and the welds shall meet the acceptance criteria shown in Table 1 of this document.

8. Documentation

For each successful Level III - Expert Welder, the Participating Organization shall prepare a report containing the following:

1) The Level III - Expert Welder’s name and Social Security Number,

2) The actual grade on the written examinations,

3) The actual grade on the Safety portion of the written examination,

4) The results of the performance qualification tests.
9. **Certification**

9.1 The Participating Organization shall send the report to the American Welding Society.

9.2 The American Welding Society shall enter the data into the Level III - Expert Welder database.

10. **National Registry of Level III - Expert Welders**

The Level III - Expert Welder database shall function as the National Registry of Level III - Expert Welders.

10.1 Persons listed in the databank are not required to maintain registration by reporting welding activities.

10.2 Public disclosure of individual records in the National Registry of Level III - Expert Welders shall be at the discretion of the individual welders.
Table 1

Inspection Criteria for Level III - Expert Welders

1) There shall be no cracks or incomplete fusion.

2) There shall be no incomplete joint penetration in groove welds except as permitted for partial joint penetration groove welds.

3) The Test Supervisor shall examine the weld for acceptable appearance, and shall be satisfied that the welder is skilled in using the process and procedure specified for the test.

4) Undercut shall not exceed the lesser of 10% of the base metal thickness or 1/32 in. (0.8 mm).

5) Where visual examination is the only criterion for acceptance, all weld passes are subject to visual examination, at the discretion of the Test Supervisor.

6) The frequency of porosity shall not exceed one in each 4 in. (100 mm) of weld length and the maximum diameter shall not exceed 3/32 in. (2.4 mm).

7) Welds shall be free from overlap.

8) On pipe tests with offset internal diameters, a discernable edge on the smaller inside diameter is acceptable.
Table 2

Acceptance Criteria for Face- and Root-Bends

For acceptance, the convex surface of the face- and root-bend specimens shall meet both of the following requirements:

1. No single indication shall exceed 1/8" (3.2 mm), measured in any direction on the surface.

2. The sum of the greatest dimensions of all indications on the surface, which exceed 1/32" (0.8 mm), but are less than or equal to 1/8" (3.2 mm), shall not exceed 3/8" (9.6 mm).

Cracks occurring at the corner of the specimens shall not be considered unless there is definite evidence that they result from slag inclusions or other internal discontinuities.

AWS3-GTAW-2  Welding Procedure Specification (WPS) for Gas Tungsten Arc Welding of Austenitic Stainless Steel, (M-1 to M-8 or P-8), 10 Gauge through 18 Gauge, in the As-Welded Condition, With Consumable Insert.
PIPE INCLINATION FIXED (45° ±5°) AND NOT ROTATED DURING WELDING

TEST POSITION 6GR (Multiple Welding Test Position With Restriction Ring)

Notes:
1. Duplicate performance qualification tests are not required if welder is tested under AWS QC12 using the AWS QC7 option.
2. 12' Ø Schedule 80 M-1/P-1/S-1 carbon steel pipe. Other Schedules of pipe 6'' Ø or greater may be used provided the requirements for minimum offset root and minimum wall thickness can be met. See Detail 'A'.
3. The standard pipe groove test weldment for performance qualification shall consist of two pipe sections a minimum of 3 in. (76 mm) long joined by welding to make one test weldment a minimum of 6 in. (150 mm) long.
4. Without backing. Restriction ring to suit diameter of pipe.
5. All welding done in position.
6. All parts may be mechanically cut or machine OFC unless otherwise specified. I.D. of chamfered section bored to obtain a 0.500 in. (12.7 mm) minimum wall thickness. Depth of bore 1½ in. minimum. Refer to Detail "A".
7. Use WPS AWS3-SMAW-1.
8. Visual examination in accordance with the requirements of QC12, Table 1. Bend test or Radiograph in accordance with the requirements of QC12, Table 2 and Annex D, Figures 7 and 8. Except as specified in AWS EG4.0, Section 4.2 Performance Qualification. Machine bend test coupons to dimension of thinner wall thickness of two mating sections prior to bending.

Figure 1 - SMAW, Carbon Steel, Performance Qualification Test, 6GR Position
Notes:

1. Duplicate performance qualification tests are not required if welder is tested under AWS QC12 using the AWS QC7 option.
2. 2 1/2" - 6" Schedule 40 M1/P1/S-1 carbon steel or Schedule 10S M-8/P-8 stainless steel pipe. Pipe diameter and base metal type optional within range specified.
3. The standard pipe groove test weldment for performance qualification shall consist of two pipe sections, each a minimum of 3 in. (76 mm) long joined by welding to make one test weldment a minimum of 6 in. (150 mm) long.
4. With backing. Refer to Detail "A". Backing ring to suit diameter and nominal wall thickness of pipe.
5. All welding done in position.
6. All parts may be mechanically cut, machine OFC or PAC.
7. Use WPS AWS2-1-SMAW for carbon steel pipe.
8. Visual examination in accordance with the requirements of QC12, Table 1. Bend test or Radiograph in accordance with the requirements of QC12, Table 2 and Annex D, Figures 7 and 8. Except as specified in AWS EG4.0, Section 4.2 Performance Qualification

Figure 2 - SMAW, Stainless Steel, Performance Qualification Test, 6G Position
PIPE INCLINATION FIXED (45° ±5°) AND NOT ROTATED DURING WELDING

TEST POSITION 6G

Notes:
1. Duplicate performance qualification tests are not required if welder is tested under AWS QC12 using the AWS QC7 option.
2. 2 1/2" - 6" Ø Schedule 40 M-1/P-1/S-1 carbon steel pipe. Pipe diameter optional within range specified.
3. The standard pipe groove test weldment for performance qualification shall consist of two pipe sections, each a minimum of 3 in. (76 mm) long joined by welding to make one test weldment a minimum of 6 in. (150 mm) long.
4. With backing. Refer to Detail 'A'. Backing ring to suit diameter and nominal wall thickness of pipe.
5. All welding done in position.
6. All parts may be mechanically cut or machine OFC.
7. Use WPS AWS2-2-GMAW.
8. Visual examination in accordance with the requirements of QC12, Table 1. Bend test or Radiograph in accordance with the requirements of QC12, Table 2 and Annex D, Figures 7 and 8. Except as specified in AWS EG4.0, Section 4.2 Performance Qualification.

Figure 3 - GMAW-S, Carbon Steel, Performance Qualification Test, 6G Position
PIPE INCLINATION FIXED (45° ±5°) AND NOT ROTATED DURING WELDING

TEST POSITION 6G

Notes:
1. Duplicate performance qualification tests are not required if welder is tested under AWS QC12 using the AWS QC7 option.
2. 2 1/2'- 6' ø Schedule 40 M-22/P-22/S-22 or M-23/P-23/S-23 aluminum pipe. Pipe diameter and material optional within range specified.
3. The standard pipe groove test weldment for performance qualification shall consist of two pipe sections, each a minimum of 3 in. (76 mm) long joined by welding to make one test weldment a minimum of 6 in. (150 mm) long.
4. With backing. Refer to Detail "A". Backing ring to suit diameter and nominal wall thickness of pipe.
5. All welding done in position.
6. All parts may be mechanically cut or machine PAC.
7. For M-22/P-22/S-22 use WPS AWS3—GMAW-P—1.
   For M-23/P-23/S-23 use WPS AWS3—GMAW-P—2.
8. Visual examination in accordance with the requirements of QC12, Table 1. Bend test or Radiograph in accordance with the requirements of QC12, Table 2 and Annex D, Figures 7 and 8. Except as specified in AWS EG4.0, Section 4.2 Performance Qualification.

See Detail "A" and Notes 5 & 7

PIPE INCLINATION FIXED (45° ±5°) AND NOT ROTATED DURING WELDING

See Notes 2 & 3

45° ±5°

TEST POSITION 6G

a = 60° minimum
R = 3/16", +1/4" -1/16"
f = R/2 maximum

DETAIL "A" - Joint Geometry With Backing

Notes:
1. Duplicate performance qualification tests are not required if welder is tested under AWS QC12 using the AWS QC7 option.
2. 2 1/2" - 6" Ø Schedule 40 M-1/P-1/S-1 carbon steel pipe. Pipe diameter optional within range specified.
3. The standard pipe groove test weldment for performance qualification shall consist of two pipe sections, each a minimum of 3 in. (76 mm) long joined by welding to make one test weldment a minimum of 6 in. (150 mm) long.
4. With backing. Refer to Detail "A". Backing ring to suit diameter and nominal wall thickness of pipe.
5. All welding done in position.
6. All parts may be mechanically cut or machine OFC.
8. Visual examination in accordance with the requirements of QC12, Table 1. Bend test or Radiograph in accordance with the requirements of QC12, Table 2 and Annex D, Figures 7 and 8. Except as specified in AWS EG4.0, Section 4.2 Performance Qualification.

Figure 5 - FCAW-S, FCAW-G, Performance Qualification Test, 6G Position
ROUND TUBING OR PIPE INCLINATION FIXED (45° ±5°) AND NOT ROTATED DURING WELDING

TEST POSITION 6G

R = T/2 (minimum) — T (maximum)
T = 0.05" — 0.120"

Notes:
1. Duplicate performance qualification tests are not required if welder is tested under AWS QC12 using AWS QC7 option.
2. 2 1/2" Ø carbon steel, stainless steel and aluminum round tubing (0.05" - 0.14" wall thickness) or Schedule 40 (aluminum or carbon steel) or 10S pipe (0.120" wall thickness). Round tubing diameter and wall thickness optional within range specified. Pipe Schedule optional according to material requirements.
3. Round tubing or pipe wall thickness greater than 0.0625" chamfer both pipe sections to form V-groove. Round tubing less than or equal to 0.0625" wall thickness use Square-groove.
4. The standard pipe groove test weldment for performance qualification shall consist of two pipe sections, each a minimum of 3 in. (76 mm) long joined by welding to make one test weldment a minimum of 6 in. (150 mm) long.
6. All welding done in position.
7. Parts may be mechanically cut, machine OFC or machine PAC.
9. Visual examination in accordance with the requirements of QC12, Table 1. Bend test or Radiograph in accordance with the requirements of QC12, Table 2 and Annex D, Figures 7 and 8. Except as specified in AWS EG4.0, Section 4.2 Performance Qualification.

Figure 6 - GTAW Performance Qualification Test, 6G Position
Figure 7 - SMAW Test Pipe Specimen Location
Notes:
1. A longer specimen length may be necessary.
2. These edges may be oxygen-cut and may or may not be machined.
3. The weld reinforcement, and any backing, shall be removed flush with the surface of the specimen.
4. Cut surfaces shall be smooth and parallel.
