Guides - Classroom Use - Teaching Guides (For Teacher) (052)

The materials are designed to help teachers of English as a Second Language (ESL) at all levels educate adult students about hazards and prevention of lead poisoning, and to encourage use of English within the context of daily living situations. The materials consist of: a teacher's guide that describes the instructional units and lists resources for further information and assistance in lead poisoning prevention; a six-unit curriculum for ESL beginners; a parallel nine-unit curriculum for intermediate and advanced ESL learners; and a volume containing glossaries for each unit in Chinese, Haitian Creole, Khmer, Polish, Portuguese, Russian, Spanish, and Vietnamese. Each instructional unit poses a specific situation relating to lead hazards and shows students how to protect their families. Vocabulary lists, workbook-style questions, sentence completion exercises, and illustrated checklists are included. Topics of the instructional units include: going to the doctor; identifying symptoms of illness; making water safe to drink; preparing and storing food; avoiding dangers in the dirt; finding the right home; identifying household hazards; making the home safe; and renovating the home. The development of Healthy Beginnings: Lead Safe Families involved the active and intense collaboration of many individuals who represent a union between the professions of health and literacy education. This easy-to-use curriculum responds to the environmental health concerns of adult speakers of English as a Second Language. With funding from the New England Office of the U.S. Environmental Protection Agency (EPA), Healthy Beginnings project staff developed, pilot-tested, and evaluated the original version of this curriculum. Following the evaluation, Healthy Beginnings staff worked together to revise the ESL materials to reflect evaluation findings.

The project staff of Education Development Center, Inc. (EDC) wish to express gratitude to EPA-New England for its long-standing support of environmental education and justice. In particular, we would like to thank our project officer, Alice Kaufman, for her valuable advice and continued support of this project from inception to completion. We would also like to express a special thanks to the EPA Region I Lead Coordinator, Ann Carroll, M.P.H., for her continued support and input.

The project staff also appreciate the invaluable assistance provided by the Healthy Beginnings advisors and reviewers, as an expression of their commitment to lead poisoning prevention, environmental justice, and health and literacy education.

April 1996

Dear Teacher:

Lead poisoning is a serious problem. The American Academy of Pediatrics has identified it as one of the most dangerous toxicological hazards facing young children in New England and across the United States.

Children in minority and low-income communities, including linguistic minorities, are affected most by high blood lead levels. Lead poisoning can cause learning problems and affect academic performance, loss of hearing, and behavioral problems later in life.

Despite the scope of the problem, we know what causes lead poisoning and we know how to prevent it. In fact, there are simple steps families can take to protect their children from this pervasive environmental hazard.

EPA-New England's commitment to ensure that equal environmental protection is provided to all New Englanders has meant the development of many new programs in the region's disadvantaged communities and urban centers. An example of this effort is Healthy Beginnings: Lead Safe Families—a curriculum for teaching critical lead poisoning prevention information to students as part of their adult English as a Second Language (ESL) classes.

This curriculum will help adults learning English understand the risks of lead poisoning. It offers simple, practical steps to help prevent this problem in their homes. Equally important, this curriculum is designed to help ESL instructors teach English by presenting information about lead within the context of everyday life.

You need not become an expert in lead poisoning prevention. The Teacher's Guide lists New England state experts in lead poisoning prevention that your students can call or write to for additional information.

Thank you for your continued commitment to help new Americans adjust to life in this country and to help them learn how to reduce risks of childhood lead poisoning.

Sincerely,

John P. DeVillars
Regional Administrator
Purpose of Healthy Beginnings

Lead poisoning is one of the most pervasive toxicological hazards facing young children in the United States today. Studies of pollution and environmental stresses in New England show that lead presents one of the highest health risks in the region.

Children in minority and low-income communities—including those for whom English is a second language—are at increased risk for lead poisoning because they tend to live in older, unmaintained homes. The effects of high blood lead levels for children may include poor academic performance, loss of hearing, and behavioral problems later in life.

To reduce and eliminate lead poisoning among those groups most at risk, Education Development Center, Inc. (EDC), in partnership with the U.S. Environmental Protection Agency (EPA), has developed Healthy Beginnings: Lead Safe Families to integrate lead poisoning prevention into community-based adult English as a Second Language (ESL) programs.

The purpose of this curriculum is twofold. First, it is designed to help adults understand how their children may be at risk for lead poisoning and the simple steps they can take to prevent lead poisoning among their children. Because occurrences of severe lead poisoning are relatively rare, the emphasis of the curriculum is to empower parents and other adults to make changes in their environments rather than alarm or scare them about lead poisoning.

Second, the curriculum is designed to help ESL instructors encourage use of English and present lead information within the context of daily living situations that new English speakers face. Healthy Beginnings was developed to raise overall English literacy and health-related skills, not to teach English grammar skills. The units teach important health skills such as communication, risk assessment, self-advocacy, decisionmaking, and healthy self-management.

Teachers and students are encouraged to make copies of Healthy Beginnings to share with colleagues, friends, and family.
Using Healthy Beginnings

We do not prescribe an approach to using Healthy Beginnings. You may teach the units in any order. In fact, you may want to let students set the course for discussing lead poisoning prevention issues that have special relevance for them.

*Can the units be used individually or must they be used as a package?* Each unit has been developed to stand alone and to be used with students at beginner’s, intermediate, and advanced ESL. The revised units can be used independently, in conjunction with other materials in a longer, more detailed course of study, or as a supplement to materials already in use. Used as a whole, the revised package constitutes a comprehensive lead poisoning prevention curriculum for ESL students.

Teachers will notice that the individual units contain much repetition. The reason for repetition is to allow teachers who are extremely pressed for time to be able to convey most of the key lead poisoning prevention points by teaching only one or two units. Some units tend to be more comprehensive than others. For example, a teacher with little time to devote to lead poisoning prevention would want to select a more comprehensive unit, such as “Making Your Home Safe” or “Going to the Doctor.” Whereas a teacher who would like to devote more time to lead poisoning prevention might want to teach individual units on lead in the soil, water, and food.

*Can Healthy Beginnings be integrated into other ESL lessons?* Healthy Beginnings can be integrated into ESL lessons that examine general topics related to housing, food or nutrition, and health services. In fact, Healthy Beginnings was designed to parallel these topics and to teach important health-related skills, such as self-advocacy, communication, and risk assessment. For example, teachers focusing on housing issues might want to integrate the units on “Finding the Right Home” and “Renovating Your Home” into their lesson plans. The table below illustrates how Healthy Beginnings units relate to typical ESL topics.

HEALTHY BEGINNINGS: LEAD SAFE FAMILIES
Is the teacher expected to be an expert on lead poisoning prevention? Teachers are not expected to be experts in lead poisoning prevention. We recognize that ESL instructors are expected and encouraged to teach a range of health-related topics and cannot possibly become experts in all of these. Should you have questions regarding any of the content, please call or write to your local health department’s childhood lead poisoning prevention program or the Environmental Protection Agency for accurate and up-to-date information on lead hazard identification and lead poisoning prevention.

How should the teacher handle student questions about landlord and tenant rights and responsibilities? Perhaps the best way to handle student questions regarding lead poisoning prevention is to refer students to their local or state health department’s childhood lead poisoning prevention program. Landlord and tenant rights and responsibilities regarding lead poisoning prevention differ from state to state. Massachusetts, for example, has some of the toughest lead laws in the country. Landlords in Massachusetts are required to disclose and prove to tenants with children the presence or absence of lead on their properties. Moreover, landlords who rent to families with children are required within a specific time period to delead their apartments. Such strict laws have created a difficult situation for potential tenants and homeowners. Many tenants are illegally turned away by landlords who do not want to rent to families with children for fear that they will have to delead their apartments—a very expensive undertaking. Other states do not have such strict lead laws, but do have laws in place that outline landlord responsibilities regarding the prevention of lead poisoning. Tenants in other New England states may also hold their landlords accountable when their children are poisoned by lead in the apartment. For more information, call or write to your local childhood lead poisoning prevention program.

Does Healthy Beginnings teach English grammar? The curriculum is designed to help ESL instructors encourage use of English and present lead information within the context of daily living issues that new English speakers face. Healthy Beginnings was not necessarily developed to teach English grammar skills as much as it was to raise overall English literacy and health-related skills. Teachers may want to supplement the Healthy Beginnings units with grammar exercises.

What are some of the ways I can supplement these materials? We strongly encourage ESL teachers to supplement these units with related materials and activities. Many of the pilot-site teachers supplemented the Healthy Beginnings materials with English grammar exercises, illustrations or photographs of houses, and photocopies of articles on lead poisoning. One pilot-site teacher invited guest speakers from the state health department’s childhood lead poisoning prevention program. Other pilot-site teachers asked students to collect soil, paint, and water samples from their homes and then sent the samples to be lab-tested for lead content. One teacher even brought a lead paint test kit to class. Other suggestions from pilot sites included class field trips such as visiting a doctor’s office or clinic and walking through a house to identify trouble spots for lead hazards.
Description of the Units

We have developed nine units for use at the intermediate/advanced ESL level and six units for the beginner’s level. Each unit is a complete teaching package: it poses a specific situation relating to lead hazards and shows people how to protect their families. Vocabulary lists, workbook style questions, sentence completion exercises, and illustrated checklists are included in each unit. The nine units at the intermediate/advanced level are listed and described below; the beginner’s level curriculum parallels the intermediate/advanced curriculum.

Going to the Doctor
Identifying Symptoms of Illness
Making Water Safe to Drink
Preparing and Storing Food
Avoiding Dangers in the Dirt
Finding the Right Home
Identifying Household Hazards*
Making Your Home Safe*
Renovating Your Home*

Going to the Doctor

In this unit, students are encouraged to think about the importance of routine lead screening at sick or well-child visits to the doctor. Through patient-physician dialogues, students learn that children under the age of six are most at risk for lead poisoning and that all children between the ages of nine months and six years should be checked for lead. These tests are very important for children who live or spend time in older buildings that may have lead paint. Students also role-play a conversation between a parent and a doctor to help strengthen their communication skills with physicians and other health care providers about health concerns such as lead poisoning. Students learn that blood tests can help determine if someone has taken too much lead before they show any outward signs of illness and that a lead test result of 10 micrograms per deciliter may be considered dangerous to children. Finally, students explore ways that parents can help limit the effects of lead poisoning such as getting good medical care for their child(ren), feeding their child(ren) a nutritious and balanced diet, and keeping objects that have lead away from their child(ren).

Identifying Symptoms of Illness

This unit helps students develop a vocabulary for describing their symptoms of illness, including those symptoms associated with severe lead poisoning (e.g., a lead test result that is equal to or greater than 20 micrograms of lead per deciliter). Through a series of patient-provider dialogues and discussion exercises, students review the general symptoms of illness and the symptoms of serious

*Only available in the intermediate/advanced version.
lead poisoning, such as stomachaches, loss of appetite, loss of interest in play, and irritability. Students learn that most children who have lead poisoning never look sick. In unit activities, they read and talk about how lead poisoning can cause learning disabilities, behavior problems, emotional retardation, and stunted growth later in life. Most important, students learn that prevention is the best way to protect children from lead poisoning because no treatment completely removes lead from the body.

**Making Water Safe to Drink**

In this unit, students learn how to test their water for lead and strategies for reducing lead content in water. Through reading, discussion, and written exercises, students learn that they should test their water if their supply comes from a drinking well, pipes with lead solder, or water known to be very corrosive. Students are encouraged to collect water samples from home. They also discover where they can get their water tested (i.e., at certified laboratories). Students talk about and distinguish between safe and unsafe levels of lead in the water. They learn that if water has too much lead, families can reduce the risk of lead poisoning by running the faucet for a minute before drinking the water, and cooking or washing vegetables with cold water. Students also examine more costly solutions, such as using bottled water and installing a recommended filter. This unit also includes some discussion of pregnancy and lead. Students learn that lead can pass to the fetus and that lead exposure during pregnancy may result in miscarriage, low birth weight, birth defects, and slower development in children. Students review precautions that pregnant women can take to protect themselves and the fetus from lead poisoning.

**Preparing and Storing Food**

In this unit, students examine the number of ways lead can get into food: lead dust settles on food stored in open containers; lead-based glazes on handmade or imported dishes leach into the food; lead from the soil in city gardens can be absorbed into vegetables; and lead in the water gets on food during cooking. Through reading, discussion, and written activities, students learn ways that families can carefully prepare and store food so that it is not contaminated with lead. Students also review some additional household changes that reduce the risk of lead in the home; changes that do not take much time and can easily become part of their everyday lives. Students learn that one important way to reduce the amount of lead children absorb is by preparing and feeding them nutritious and balanced meals. At the end of the unit, students practice developing balanced and nutritious menus that include foods high in calcium, iron, and vitamin C.

**Avoiding Dangers in the Dirt**

Through a story about growing food in the city, students learn ways to test for lead in the soil and strategies for reducing children's exposure to lead. Students learn that almost all the lead in soil comes from lead-based paint chips flaking from homes. They learn that the danger of lead in soil depends on the amount of
lead in the soil around the house and the amount of soil that gets into children. In
general, vegetables that are grown in soil containing lead do not absorb much
lead, but students learn that they should wash these vegetables carefully to re-
move any soil. To determine if their soil contains lead, students can collect soil
samples from areas in their yard where children normally play and send the
samples to laboratories for testing. They discuss what levels of lead are danger-
ous in soil and precautions they should take to reduce children’s exposure to lead
in the soil.

Finding the Right Home
For many new immigrants in this country, finding the right home is an impor-
tant issue. Each family will have its own decision to make when it rents an
apartment or buys a house. This unit explores the factors that families consider
when selecting a home with a special emphasis on identifying risks of lead poi-
soning. Students identify, through a conversation between landlord and poten-
tial tenant, the things that may indicate lead hazards, such as a house built before
1978; peeling or chipping paint; and painted windows, doors, and door frames.
Students also explore the steps they and their landlords should take to reduce the
risk of lead poisoning. Again, the issue of pregnancy and lead poisoning is
discussed. Students learn that pregnant women should avoid excessive expo-
sure to lead in water, soil, and paint (dust).

Identifying Household Hazards
In this unit, students practice identifying household hazards, such as lead paint.
Students explore various safety issues through a story about concerned parents
and learn that the danger of lead in paint depends on the amount of lead paint in
the house and the amount of lead dust that gets into children. Students identify
things in the home that may indicate lead hazards, such as a house built before
1978; painted woodwork on doors, windows, or trim; and peeling or chipping
paint. Students also have the option of collecting paint samples from their homes
to test for lead. Finally, they learn that they can have someone else test their
paint for lead and discuss what the results of a lead paint test mean.

Making Your Home Safe
This is a very general unit designed to point out that lead is only one of many
household hazards that can cause harm to children. The unit includes a safety
checklist that helps students identify hazards in their home. Students learn that
one of the greatest household hazards is lead and that children with lead in their
blood are at increased risk of developing health and learning problems later in
life. Students also read a story about a young mother who discovers, at a routine
medical checkup, that her children have lead poisoning. The emphasis of the
unit is on the simple steps families can take to reduce the risk of childhood lead
poisoning in their homes. Using illustrations, students review these strategies
and talk about ways to implement them in their homes.
Renovating Your Home

Home renovations and repairs can increase the amount of lead dust in the home and, thus, the amount absorbed by children and other household members. In this unit, students learn that before repairing or renovating a home or apartment, they should call the local health department and ask if individuals there or elsewhere can test for lead-based paint. Students also examine ways to make lead paint in their homes less dangerous: replacing it, covering it, or removing it. The first two methods are the safest; the third is the most dangerous. This unit emphasizes that homeowners should not attempt to remove lead paint themselves; they should hire a qualified contractor. Students read and discuss a checklist that describes guidelines contractors should follow when removing lead.

At the Doctor's Office

Directions: Read or act out the following passage.

Mr. and Mrs. Borges have a little boy. His name is Alexi. Alexi is two years old. He is happy and healthy. Today is his checkup at the doctor's office. They are in the examination room. The doctor enters.

Doctor: Hello. How are you today?
Mr. Borges: Fine. Thank you.
Doctor: How is Alexi?
Mrs. Borges: He is fine. He has a lot of energy. He runs all day. He loves to play with his toys.
[The doctor takes Alexi's temperature. She listens to his heart and his chest with a stethoscope. Then, she looks at his eyes, his mouth, and his ears.]
Doctor: Alexi is a very healthy boy. He does not need a shot today.
Mr. Borges: That's good.
Doctor: Does he play outside every day?
Mrs. Borges: I go outside with him in the afternoon every day.
Doctor: How old is your house?
Mr. Borges: We live in an old house. It is 50 years old.
Doctor: I need to test Alexi for lead poisoning.

Mr. Borges: Why? He is not sick.

Doctor: Your house is old. Many houses built before 1978 have paint with lead. Lead is dangerous. Lead gets into children's blood. It can hurt their brains and make it hard for them to learn. Children can have problems in school.

Mr. Borges: But, doctor, Alexi does not eat paint. We watch him carefully.

Doctor: I know. You are very good parents. But lead poisoning is very dangerous. The paint gets old. It changes to dust. The dust falls on toys. All children put toys in their mouths. Lead gets into children's blood. I will test Alexi's blood. The test results will be ready in one week.

Mrs. Borges: Thank you, doctor.
**Vocabulary**

**Directions:** Review the vocabulary words below and define each using simple English terms.

- examining room(s) (n.)
- healthy (adj.)
- lead poisoning (n.)
- brain(s) (n.)
- immunization(s) (n.)
- blood (n.)
- paint (n.)
- dust (n.)
- window(s) (n.)
- checkup(s) (n.)
- lead (n.)
- dangerous (adj.)
- stethoscope (n.)
- finger(s) (n.)
- body(ies) (n.)
- mouth(s) (n.)
- test (v.)

---

**Review and Discuss**

**Directions:** Review “At the Doctor’s Office” and answer the following questions.

1. Why is Alexi at the doctor’s office?

2. Is Alexi sick?
3. What does the doctor tell the Borgeses?  
   ____________________________________________  
   ____________________________________________  
   ____________________________________________  

4. Where do the Borgeses live?  
   ____________________________________________  
   ____________________________________________  
   ____________________________________________  

5. Why does the doctor test Alexi for lead poisoning?  
   ____________________________________________  
   ____________________________________________  
   ____________________________________________  

6. Why is lead dangerous for children?  
   ____________________________________________  
   ____________________________________________  
   ____________________________________________  

7. How does lead get from the paint into a child?  
   ____________________________________________  
   ____________________________________________  
   ____________________________________________  

4 Act Out the Scene

This activity will help you feel comfortable talking to doctors and nurses about your health and about lead poisoning. Some doctors do not ask their patients about lead poisoning. Therefore, you need to be prepared to ask questions and tell your doctor or nurse what you are worried about. Then, your doctor or nurse may be able to better help you and your children.

Directions: Using the information below, role-play a scene between doctor and patient. Act out the scene in front of the others or work in pairs and practice the dialogue as partners, each taking turns playing doctor and patient.

Patient: You live in an old house. You want the doctor to test your child for lead poisoning. What do you say to the doctor?

Doctor: What do you say to the patient?
Understanding the Test Results

Directions: Read or act out the following passage.

Mrs. Borges and Alexi return to the doctor's office. It is one week later. The test results are ready.

Doctor: Hello, Mrs. Borges. How are you?
Mrs. Borges: I'm fine. But I'm worried about Alexi.
Doctor: Don't worry. I have the test results. Alexi has some lead in his blood. It is only a little. It is not dangerous.
Mrs. Borges: Will he get sick?
Doctor: No. He will be fine. I will test him again in six months. Until then, you can do some simple things to make your house and yard safer. Alexi will be OK.
Mrs. Borges: Doctor, I am pregnant. Is the new baby safe?
Doctor: Alexi and the new baby will be fine. Again, you can make your house safer. Here is a list of important rules. This will help Alexi and the new baby. Also, you should test your water. It is important to have lead-free water.
Mrs. Borges: Thank you, doctor.

6 Vocabulary

Directions: Review the vocabulary words below and define each using simple English terms.

yard (n.)
current (adj.)
low (adj.)
mop(s) (n.)
dirt (n.)
wash (v.)
scatter (v.)
absorb (v.)
recommend (v.)
worry (v.)
high (adj.)
safe (adj.)
furniture (n.)
vacuum (v.)
wipe (v.)
nutritious (adj.)
empty (adj.)

GOING TO THE DOCTOR 5
Complete the Sentences

Directions: Complete the sentences below in class.

1. Mrs. Borges is worried about ________

2. Most old houses have ________

3. Alexi's test results show that ________

4. Alexi's next checkup is ________

5. Lead in the blood causes ________
Review the Doctor's Report and Recommendations

Directions: Read the doctor's report aloud and discuss the doctor's recommendations.

Neighborhood Health Clinic
SUSAN JONES-SANTIAGO, M.D.

Dear Mr. and Mrs. Borges,

Your son, Alexi, has some lead in his blood. We need to stop the lead poisoning. I want you to do these things:

1. Watch what Alexi puts into his mouth.
2. Mop floors with a damp mop (use automatic dishwasher soap and water) and wipe furniture and windowsills with a damp cloth to remove dust.
3. Wash your child's hands before he eats.
4. Every day wash the objects that Alexi puts into his mouth.
5. Vacuum rugs and carpets frequently, but do not vacuum the floors.
6. Make sure Alexi eats regular nutritious meals, because more lead is absorbed on an empty stomach.
7. Watch Alexi when he plays outside. Do not let him eat dirt. Pieces of paint fall in the dirt.

I will test Alexi again in six months.

Sincerely,

Susan Jones-Santiago, M.D.
Watch what your child puts into his or her mouth.

Mop floors and wipe down furniture and windowsills.

Wash your child's hands before he or she eats.

Wash objects that your child puts into his or her mouth.
Vacuum rugs and carpets frequently, but do not vacuum floors.

Make sure that your child eats regular nutritious meals.

Make sure that your child does not eat dirt.

Note to Student: More information on preventing lead poisoning can be found in the units "Making Water Safe to Drink" and "Identifying Symptoms of Illness."
Identifying Symptoms of Illness

How Do You Feel?

Directions: Review the symptoms and illustrations below. Act out the symptoms or describe them using simple English terms. Which of the symptoms below have you experienced? What do you think causes these symptoms?

When we are sick, we have many symptoms. Symptoms are signs that help us and our doctors understand why we are sick. When the doctor knows what our symptoms are and what causes them, she or he can recommend ways to get better.

dizzy (adj.); dizziness (n.)
nausea (n.); nauseated (adj.)
headache(s) (n.)
stomachache(s) (n.)
diarrhea (n.)
itch (n.)
rash(es) (n.)
irritable (adj.); irritability (n.)
pain(s) (n.)
sore (adj.); soreness (n.)
cough (v.)
sneeze (v.)
fatigue (n.)
tired (adj.)
sore throat(s) (n.)
cramp(s) (n.)
fever(s) (n.)
vomit (v.)
ache (v.); ache(s) (n.)
Complete the Sentences

Directions: Complete the following sentences using the symptoms listed above.

1. I have a cold. I am ____________________________
   ____________________________
   ____________________________

2. My head is spinning. I feel ____________________________
   ____________________________
   ____________________________

3. I ate something bad. Now I feel ____________________________
   ____________________________
   ____________________________

4. My muscles hurt. They are ____________________________
   ____________________________
   ____________________________

5. My temperature is 101° F. I have a ____________________________
   ____________________________
   ____________________________

6. Nothing is going right. I am grumpy and ____________________________
   ____________________________
   ____________________________

7. These red marks on my skin must be a ____________________________
   ____________________________
   ____________________________
Mr. Lopez has a three-year-old daughter, Lisa. Lisa is sick. Mr. Lopez is worried about Lisa. He wants to know what is wrong. He took her to one doctor two months ago. The doctor did not think Lisa was sick. Now Mr. Lopez is going to a new doctor. A friend told him this doctor was a very good doctor. Mr. Lopez and Lisa are waiting in the examination room. The doctor enters.

Doctor: Hello. How are you?
Mr. Lopez: I'm fine. Thanks.
Doctor: How is Lisa?
Mr. Lopez: Doctor, I know something is wrong. Lisa used to be a happy little girl. Now she is irritable. She always has a lot of stomach-aches.
Doctor: When did these symptoms begin?
Mr. Lopez: Two months ago, I brought her to a doctor. That doctor said Lisa had a cold. I am worried. I think there is something wrong. Can you help us?
Doctor: I will try. Lisa's symptoms are very common. Let me ask you some questions. Does Lisa go to a daycare center?
Mr. Lopez: No.
Doctor: Where do you live, Mr. Lopez?
Mr. Lopez: We rent an apartment on Oak Street. It is in a beautiful old house.
Doctor: How old is the house?
Mr. Lopez: It is more than 60 years old. We like the big rooms. Is this important?
Doctor: Yes, it is. Old houses contain lead paint. It is possible that Lisa has lead paint poisoning. I need to test her blood. Lead poisoning can be very dangerous.
Mr. Lopez: But, doctor, Lisa does not eat paint. I vacuum the paint chips all the time. My wife and I keep the house very clean.
Doctor: The problem is often lead paint dust. The dust gets on the toys and fingers. Children put everything in their mouths. I will do a blood test. The results will be ready next week. Today, I want you to wash all of Lisa's toys with soap and water. Wash her hands before she eats. I will see you next week.
Vocabulary

Directions: Review the vocabulary words below and define each using simple English terms.

sick (adj.)
examine (v.)
symptom(s) (n.)
irritable (adj.)
demanding (adj.)
poison (v.)
test (v.); test (n.)
illness (n.)
doctor(s) (n.)
examination room(s) (n.)
scream (v.)
complain (v.)
check (v.); checkup(s) (n.)
lead (n.)
blood (n.)
mysterious (adj.)
diagnosis(ses) (n.)

Review and Discuss

Directions: Review “The Mysterious Illness” and answer the following questions.

1. What are Lisa’s symptoms? _______________________________________________________

2. When did these symptoms begin? ________________________________________________

3. Why does the doctor ask a lot of questions? _______________________________________

4. What does the doctor think the problem is? _______________________________________
5. Where does the lead come from?

6. **Topics for Discussion**

   **Directions:** Discuss your experiences of being sick and going to the doctor. Answer the following questions.

   1. When was the last time you were sick?

   2. What were your symptoms?

   3. Do you like going to the doctor? Why or why not?

   4. Do you have a regular doctor? Where is this doctor? Is it difficult to make an appointment with your doctor?

   5. Do you feel comfortable talking to your doctor? Why or why not?
What Do the Results Mean?

Directions: Read or act out the following passage.

It is one week later. The results of Lisa’s blood test are ready. Mr. Lopez is waiting for the doctor in his office. The doctor arrives.

Doctor: Hello, Mr. Lopez.
Mr. Lopez: Hello, Doctor.
[The doctor sits down across from Mr. Lopez.]
Doctor: Mr. Lopez. Now I understand the problem. Lisa’s blood test shows that she has some lead in her blood.
Mr. Lopez: What does that mean?
Doctor: That means you and your wife must make some changes at home. We need to be sure that Lisa is safe.
Mr. Lopez: What can we do?
Doctor: There are simple things you can do. These are good habits. This will stop Lisa from getting more lead in her blood. First, I want you to wash the floor and windowsills. It is very important to wash all the toys in the house with soap and water. Lisa needs to eat well. She should eat food with iron, calcium, and vitamin C. Spinach, milk, and orange juice are good for her.
Mr. Lopez: Of course. My wife and I will do all these things.
Doctor: Does Lisa have brothers and sisters?
Mr. Lopez: Yes, Doctor. We have two other children.
Doctor: I will need to see Lisa and your other children in one month. We will test all the children to be sure they are safe.

Note to Student: For more information on ways to reduce the risk of lead in homes, see the units “Preparing and Storing Food” and “Making Water Safe to Drink.”

Vocabulary

Directions: Review the vocabulary words below and define each using simple English terms.

disease(s) (n.)
landlord(s) (n.)
contact (v.)
remove (v.)
learn (v.)
Review and Discuss

Directions: Review “What Do the Results Mean?” and answer the following questions.

1. What did the doctor learn? ____________________________________________
   ____________________________________________
   ____________________________________________

2. What should Lisa eat? ________________________________________________
   ______________________________________________
   ______________________________________________

3. How many children are in the Lopez family? ____________________________
   ______________________________________________
   ______________________________________________

4. What does the doctor want Mr. Lopez to do at home? ____________________
   ______________________________________________
   ______________________________________________

5. Do you know anyone with lead poisoning? Describe what happened to him or her. _________________________________________________________
   ___________________________________________________
   ___________________________________________________

Act Out the Scene

Directions: Using the information below, role-play a scene between doctor and patient. Act out the scene in front of the others or work in pairs and practice the dialogue as partners, each taking turns playing doctor and patient.

This activity will help you feel comfortable talking to doctors and nurses about your health and about lead poisoning. Some doctors do not ask their patients about lead poisoning. Therefore, you need to be prepared to ask questions and tell your doctor or nurse what you are worried about. Then, your doctor or nurse may be able to better help you and your children.
Doctor: Your patient is sick. Ask him or her to describe the symptoms. What questions can you ask the patient?

Patient: You are not feeling well. Describe your symptoms to the doctor. Tell the doctor how you feel. You may even want to predict your illness.

Writing Assignment

Directions: Using the questions below as a guide, write about a time when you were sick. Carefully describe your symptoms, your trip to the doctor (if you went), and what you did to get better.

Describe a time when you were sick. What happened? What was it like? What were your symptoms? Did you go to the doctor? What did you tell the doctor? What did you do to get better?

Note to Teacher: Consider inviting a local health professional to visit the class and discuss the symptoms of lead poisoning with students.
Making Water Safe to Drink

Is Our Water Safe to Drink?

Directions: Read or act out the following passage.

It is early morning. Emma and Marek Sowinski are a young married couple. They are eating breakfast at the kitchen table. Emma is four months pregnant. She's very hungry this morning.

Emma: Marek, may I please have more orange juice?
Marek: Of course.
Emma: I'd like more toast and butter, too.
Marek: I'll get it for you.
Emma: Is there more fruit? I'd like another piece. I'm really hungry today.
Emma: No thanks. I'm fine.
Marek: I'm thirsty. I think I'll have a glass of water. [Marek stands at the sink. He turns on the faucet and fills his glass.]
Emma: Hey, Marek. Do you think we should drink bottled water?
Marek: Why?
Emma: Shira told me she has lead in her water.
Marek: Shira lives on this street, doesn’t she?
Emma: Yes, she does. Somebody tested her water last month.
Marek: [Looks at his glass of water.] Do you think we have lead in our water, too?

Emma: Maybe. This house is 50 years old. Shira said many old homes have lead pipes.
Marek: Perhaps Shira can help us. Let’s call her.
[Emma picks up the phone and calls Shira.]
Shira: Hello.
Emma: Hello, Shira. This is Emma.
Shira: Hi, Emma. How are you?
Emma: I’m fine, thanks. I’m four months pregnant and I feel great!
Shira: I’m so glad.
Emma: I want to ask you something. How did you test your water for lead. Marek and I are worried. We live in an old house. We want to test our water.
Shira: It was easy. First, I called the landlord. The landlord told me the name of the water supplier. The water supplier told me the name of a certified laboratory. Then, I called the lab. Soon, someone from the lab sent me a kit to test my water. The test cost about $15.
Emma: We need to do this.
Shira: Yes, you do because you are pregnant. Lead can hurt you and the baby. Lead poisoning is very dangerous.
Emma: Thanks, Shira. We will call today.
Shira: There are simple things you can do now. Turn on the water for 30 to 60 seconds before drinking it, or cooking with it. Also, always use cold water for cooking. This helps reduce the lead.
Emma: Those are good ideas. Thanks a lot!
Shira: Goodbye.

Vocabulary

Directions: Review the vocabulary words below and define each using simple English terms.

- kitchen(s) (n.)
- breakfast(s) (n.)
- toast (n.)
- fruit (n.)
- juice (n.)
- glass(es) (n.)
- lead (n.)
- sink(s) (n.)
- pipe(s) (n.)
- dollar(s) (n.)
- determine (v.)
- telephone(s) (n.)
- certified (adj.)
- well (n.)
- table(s) (n.)
- eat (v.)
- butter (n.)
- hungry (adj.)
- milk (n.)
- water (n.)
- faucet(s) (n.)
- fill (v.)
- test(s) (n.); test (v.)
- cost (v.)
- laboratory(ies) (n.)
- water supplier(s) (n.)
- pregnant (adj.)
- tap (n.)

Review and Discuss

Directions: Review “Is Our Water Safe to Drink?” and answer the following questions.

1. What are Marek and Emma eating for breakfast?

2. Where do Emma and Marek live?
3. Who is Shira?

4. How does lead get into Emma and Marek's drinking water?

5. Why is Emma worried about the lead in the water?

6. How can Emma and Marek test their water for lead?

7. How much did Shira pay for the test? Do you think this is expensive?

4 Testing for Lead in Your Water

Directions: Read the directions below to test your water for lead. Follow the directions and collect water samples from home. Bring your samples to the next class. The teacher will locate the nearest certified testing laboratory and mail class samples for testing.

You think your water may contain lead. Ask your local water supplier for the names of certified laboratories that will test your water. The U.S. Environmental Protection Agency considers water safe if it has less than 15 parts per billion* (ppb) of lead. Some doctors suggest that anything greater than 10 ppb is unsafe. You should test if you have water from a drinking well, pipes with lead solder, or water that is very corrosive. Collect two samples of water: one that was standing in the plumbing lines overnight, and another that ran for several minutes to flush the lines.

You can also call the U.S. Environmental Protection Agency Safe Drinking Water Hotline if you have any questions (1-800-426-4791).

* one billion = 1,000,000,000 = 10^9
If your water contains less than 5 ppb of lead, then let your water run for one minute before using it for drinking or cooking.

If your water contains between 5 and 14 ppb of lead, then let your water run for one minute before using it for cooking or drinking, and ask everyone in your family to drink less than 16 ounces of this water each day.

If your water contains more than 15 ppb of lead, then do not drink the water or use it for cooking. Consult your local or state health department for advice.

---

5

Reviewing the Water Test Results

Directions: Read or act out the following passage.

It is three weeks later. Emma and Marek just received the results of the two water samples. Emma, Marek, and Shira are at the kitchen table. They are talking about the test results.

Marek: The test results say that our water contains lead.
Emma: Yes. This is serious. There were 14 ppb of lead in the morning sample and 6 ppb in the water that did not sit in the pipes.
Marek: Maybe we can buy a water filter.
Shira: Some water filters do not remove lead from the water. You can call the U.S. Environmental Protection Agency for information about water filters.
Emma: Did you call them?
Shira: Yes, I also called the health department officials. They had lots of good suggestions. They told me not to drink, cook, or make baby formula with water from the hot water faucet. Hot water contains more lead than cold water.

Emma: What else did they say?
Shira: The health department officials also told me to turn on the cold water for 30 to 60 seconds before I use it.
Emma: That’s a good idea. Do you think I should drink water from the faucet? I’m afraid it could hurt the baby.
Shira: You should ask your doctor. Maybe you should buy bottled water.
Marek: Thanks, Shira. You have lots of good ideas.

6 Vocabulary

Directions: Review the vocabulary words below and define each using simple English terms.

hotline(s) (n.)
corrosive (adj.)
drink (v.)
mail (v.)
water filter(s) (n.)
collect (v.)
health department(s) (n.)
harm (v.)
predict (v.)
plumbing (n.)
sample(s) (n.)
test(s) (n.); test (v.)
flush (v.)
safe (adj.)
expensive (adj.)
bottle(s) (n.)
waste (v.)
baby(ies) (n.)
risk (n.)
Pick the Correct Response

Directions: Read each statement and choose the correct answer.

1. Emma and Marek mailed their water sample to the
   a. U.S. Environmental Protection Agency
   b. local health department
   c. certified laboratory
   d. doctor

2. Emma and Marek’s water contains
   a. no lead
   b. 10 parts per billion of lead
   c. 14 parts per billion of lead
   d. 30 parts per billion of lead

3. In a house with lead plumbing, hot water
   a. contains more lead than cold water
   b. is good for washing fruits and vegetables
   c. contains less lead than cold water
   d. is good for making baby formula

4. One way to reduce the risk of lead in the water is to
   a. buy a water filter
   b. boil the water
   c. wash fruits and vegetables in hot water
   d. turn on the cold water for 60 seconds before drinking it or using it for cooking
5. Emma and Marek are very careful
   a. because Shira is sick
   b. because Emma is pregnant
   c. because bottled water is expensive
   d. because they don't want to waste water

*Note to Student:* More information on the effects of lead poisoning can be found in the units “Going to the Doctor” and “Identifying Symptoms of Illness.”
Avoiding Dangers in the Dirt

The City Garden

Directions: Read the following passage.

Mei and her husband have four small children. They own a house outside the city. They have a small yard.

Mei wanted a garden. In the spring, she decided to plant some vegetables. She went to the hardware store. She bought seeds, a rake, and a shovel. When she got home, she prepared the soil. She planted the seeds and watered them.

Soon the plants began to grow. She watered her garden. She protected the plants from animals and bugs. In the summer, the garden was full of carrots, lettuce, tomatoes, turnips, and beans. They were ready to eat!

Mei's husband didn't want to eat the vegetables. He was worried that there were chemicals in the soil. Many houses in their neighborhood contained lead paint. He was worried about the children.

Mei was disappointed. She did not know what to do. She was so worried that she called the local health department. The health department officials answered her questions. Mei learned that vegetables do not absorb much lead from the soil.
soil. She learned that there were certain things she could do in her garden to prevent lead contamination. The health department officials said to add compost to the soil and to avoid root vegetables such as potatoes, carrots, and turnips. Next year she will plant lettuce and tomatoes, which grow above ground. And finally, the health department officials told her to wash her vegetables with vinegar and water, peel the root crops, and throw away the outer leaves of lettuce because dust with lead falls on garden plants.

Mei was very careful. She enjoyed eating her vegetables! She was still worried about her children. The health department officials told her it was dangerous for children to play in soil with lead and to test the soil.

2 Vocabulary

Directions: Review the vocabulary words below and define each using simple English terms.

- city(ies) (n.)
- vegetable(s) (n.)
- hardware store(s) (n.)
- rake(s) (n.)
- shovel(s) (n.)
- dirt (n.)
- seed(s) (n.)
- grow (v.)
- turnip(s) (n.)
- carrot(s) (n.)
- bug(s) (n.)
- lead (n.)
- leaf(ves) (n.)
- health department(s) (n.)
- compost (n.)
- plant (v.); plant(s) (n.)

- garden(s) (n.)
- tool(s) (n.)
- hoe(s) (n.)
- grass (n.)
- soil (n.)
- bother (v.)
- root(s) (n.)
- lettuce (n.)
- tomato(es) (n.)
- harvest (v.)
- environmental (adj.)
- absorb (v.)
- crop(s) (n.)
- danger (n.)
- water (v.)

3 Review and Discuss

Directions: Review “The City Garden” and answer the following questions.

1. Where does Mei live?
2. Who lives with Mei?

3. What did Mei plant in her garden?

4. Why was Mei's husband worried?

5. What did the health department officials tell Mei to do?

6. Did Mei eat the vegetables from her garden?

7. How can Mei protect her children from lead poisoning?

8. How does lead get from the soil into children's bodies?

**Topics for Discussion**

*Directions:* Describe some of your experiences with gardening, food, and the environment. Answer the following questions.

1. Do you plant a garden?
2. What do you grow in your garden?

3. Have you tested the soil from your garden for lead?

4. Does anyone in your neighborhood have lead in their soil?

5. Do you live in the city?

---

**5 Testing Your Soil for Lead**

*Directions*: Read the directions below for testing lead in the soil. Then follow the directions and collect soil samples from home. Bring your samples to the next class. Your teacher will locate the nearest testing laboratory and mail class samples to be tested.

The danger of lead in soil depends on (1) the amount of lead in the soil around your house and (2) the amount of soil that gets into your child.

To find out the lead content of your soil, you need to test it. The test results will tell you what to do about low, medium, high, or very high levels of soil lead.

If you have children, select areas in your yard where children normally play. Soil in other areas, such as near the outside of your house or garage, or near the street, may also contain lead.

- Select area(s) of your yard to sample.
- Take soil from the top one-half inch of each area you have selected with a clean spoon.
- Collect about one cup of soil and place it in a clean, ordinary plastic bag.
Cut out any plants or grass that are growing in your sample. Do not pull the grass out. Plant roots may stay in the sample.

**6 Protecting Your Child from Lead in the Soil**

*Directions:* Read the safety tips below. Do you practice any of them?

If the amount of lead in your soil is high, and if the soil is not covered with many plants or thick grass, *then* you should consider one or more of the following suggestions to make your soil safer.

*Control peeling house paint. Call your local health department for appropriate methods.*

*Plant and maintain grass or ivy.*
Cover the soil with a thick layer of gravel, wood chips, or other materials.

Pave the area.

As a last alternative, remove the top six inches of soil and replace it with uncontaminated soil.
Here are some other ways to stay healthy:

Wash children's hands before eating.

Have all family members and guests take off their shoes before entering the house so that lead dust from the soil will not get inside.

Prepare and eat nutritious meals that include fruits and vegetables; foods high in calcium, such as milk; and foods high in iron, such as meat and iron-fortified cereals.
Finding the Right Home

Looking for an Apartment

Directions: Read or act out the following passage.

Dimitri and Isabel Gonzalez are married. They have two children, ages 2 and 3. Isabel is expecting a new baby in five months. Their apartment is too small. They are looking for a new apartment.

Dimitri and Isabel have seen many places. Now they are looking at an apartment on Elm Street. It is in an old house.

[The landlord is showing them the kitchen.]

Landlord: Here's the kitchen. There's enough room for a table.
Dimitri: Isabel, do you think this is big enough?
Isabel: Oh, yes. I like the kitchen. This apartment is large and bright. There is plenty of room for the children to play.
Dimitri: Hmm, you are right. They could also play outside. We are in the city, but this is a quiet street.
Isabel: [Asks the landlord.] Is this apartment near public transportation?
Landlord: Yes. There is a bus stop two blocks from this apartment.
Dimitri: Where is the closest laundromat?
Landlord: The laundromat is on the corner. There is a small grocery store around the corner, too.

Dimitri: There are storm windows on every window. I like that.

Isabel: How much is the rent? Do we have to pay a security deposit?

Landlord: The rent is $700 each month. You must pay the heat, electricity, and telephone in addition. You must sign a lease for one year. I require two months rent now—the first month and the last month. But, there is no security deposit.

Dimitri: [Looks around.] Is the heat gas or oil?

Landlord: It's gas.

Isabel: How much does it cost to heat this apartment?

Landlord: It costs about $100 each month to heat. Of course, the winter months will cost much more than $100 and the summer months will cost much less; $100 is an average figure.

Dimitri: I am very happy with the apartment. We would like to live here. Before we sign the lease, I have a question. This is a rather old house. Many old houses have lead paint. Some of the paint is peeling and chipping. Is there lead paint in this apartment? My wife is pregnant. We have two small children. I'm worried about their health.

Landlord: Umm, I don't know.

Isabel: Would you find out for us?

Landlord: Ah... sure, I guess so.

Dimitri: Thanks.

Landlord: Here's the lease. You need to decide quickly. A lot of people are interested in this apartment.

Dimitri: OK. We will call you about the lead paint. Thanks again. You should hear from us soon. Goodbye.
Activity

Directions: Draw a map of the neighborhood. Where is the bus stop, the laundromat, and the grocery store? You will need to add more details.

Vocabulary

Directions: Review the vocabulary words below and define each using simple English terms.

- transportation (n.)
- street(s) (n.)
- available (adj.)
- utility(ies) (n.)
- rent (v.)
- landlord(s) (n.)
- kitchen(s) (n.)
- apartment(s) (n.)
- bedroom(s) (n.)
- lead (n.)
- heat (n.)
- parking (n.)
- lease(s) (n.)
- electricity (n.)
- storm windows (n.)
- tenant(s) (n.)
- dining room(s) (n.)
- laundromat(s) (n.)
- security deposit(s) (n.)
- location (n.)

Review and Discuss

Directions: Review “Looking for an Apartment” and answer the following questions.

1. Why are Dimitri and Isabel looking for a new apartment? 

2. Describe the apartment they want to rent.
3. What questions do Dimitri and Isabel ask the landlord? Why do you think they ask so many questions? 

4. Why is Dimitri worried about lead in the apartment? 

5. Does the apartment have lead in it? 

5 Topics for Discussion

Directions: Describe some of your personal experiences in looking for a home. Answer the following questions.

1. Where do you live now? Do you rent or do you own your home? What do you like about the place you live in now? 

2. What do you think about when you look for a house or an apartment? 

3. How many times have you moved? 

4. Do you have a landlord or tenants? 

5. Do you know if there is lead paint in the building you live in now? 

4 FINDING THE RIGHT HOME
Act Out the Scene

Directions: Many of us may feel uncomfortable confronting landlords and others about the condition of our homes. Using the information below, act out a scene between a tenant and a landlord.

Tenant: You are looking at an apartment. It is in an old house. What questions do you ask the landlord? Think about rent, lead, security deposit, heat, parking, and the lease. For example, you think the apartment has lead paint. What do you ask the landlord?

Landlord: You own an old house. There are some problems with the house. You want to have good tenants. How would you answer the question about lead paint? How would you make the house safer?

Deciding on the Right Apartment

Directions: Read or act out the following passage.

Dimitri and Isabel have seen two apartments that they like. One is on Elm Street, the other is on Maple Street. Today they must make a decision.

Dimitri: Isabel, I called the owner of the apartment on Elm Street.
Isabel: What did he say about the lead paint?
Dimitri: He doesn’t know anything.
Isabel: What should we do?
Dimitri: I like the location on Elm Street. The apartment is inexpensive and near public transportation.
Isabel: I don’t know. I’m worried about lead paint. The paint on the windowsills was peeling. I think the children will not be safe there. Let’s think about the apartment on Maple Street. The location was not as nice. But there was no chipping or peeling paint. The windows are new, the floors are covered with carpet.
Dimitri: You are right. The apartment on Maple Street is safer for the children. Also, the landlord told us there was some lead paint in the building.
Isabel: Yes. We will still have to be careful.
Dimitri: I know. We will wash the children’s hands before they eat. We’ll clean all the toys because they put them in their mouths.
Isabel: And we need to vacuum the carpet every day.
Dimitri: Isabel, these are the things we always do. The landlord will help us make the apartment lead-free.
Isabel: There's one more thing. We need to test the water. That's easy to do.

Dimitri: OK. We'll move to Maple Street. I'll call the landlord and tell him we want to sign the lease. Then I'll call the landlord on Elm Street. I'll tell him we are not interested.

Note to Student: Each family will have its own decision to make when it rents an apartment. The family should consider factors such as convenience, cost, amount of space, and hazards like lead in paint and water. Discuss how you would decide in this case.
Preparing and Storing Food

Dinnertime

Directions: Read or act out the following passage.

It is Friday night at the Lafitte house. Frank and Kathy Lafitte are cooking dinner and their three young children are playing in the living room. The Lafittes have invited their neighbors Marie and Claude Joseph for dinner.

Kathy: [Goes to the front door.] Hi, Marie, Claude. Come in. Come in.
Marie: Hello!
Frank: How are you? How are your children?
Marie: We're fine. My sister is babysitting tonight. How are your children?
Frank: They're fine. They're playing in the living room.
Marie: [Looks toward the kitchen.] Oh, something smells great.
Kathy: That's a new recipe I am trying.
Claude: What is it?
Kathy: I don't have a name for it. It is a stew.
Claude: [Looks in pot.] You are a good cook. I love to eat here.
Frank: [Stirs the pot on the stove.] Yes. This is a great recipe. It contains lots of vegetables. There are sweet potatoes, eggplant, green peppers, tomatoes, and carrots. Kathy also adds some raisins to make it sweet.
Marie: Oh, that sounds great. Will your children eat it?
Kathy: Yes. Of course.
Marie: My children love junk food. They are always eating potato chips, candy bars, and French fries. They don't eat fruit or vegetables.
Kathy: I had the same problem. The doctor helped me to change things. My kids have lead in their blood. They need nutritious meals so they will not absorb so much lead. Healthy meals help to protect them. I don't buy junk food anymore.
Claude: Your kids have lead in their blood? How did that happen?
Kathy: Oh, there is lead dust in this apartment. The dust comes from the lead-based paint. It gets on the kids' toys and on their fingers. Then the kids put their fingers in their mouths. You know kids are always putting things in their mouths.
Claude: You are so calm. Aren't you worried?
Frank: We were very worried, but the amount of lead in our children's blood was low. The doctor told us to feed the children nutritious food and keep the house clean.

Claude: How do children get lead in their blood?
Frank: There is lead in drinking water, soil, and even in food.
Marie: How does it get in food?
Frank: There are a number of ways. It is important to cover food or dust will collect on it. Some imported dishes are painted with lead-based paint. Some food from city gardens may contain lead if the soil has lead in it.

Kathy: Also, if there is lead in the water, it will get into the food.
Marie: This is too much. How can you control everything?
Kathy: If you carefully prepare and store your food, then lead is not a problem.
Frank: I agree with Kathy. The changes we have made are small. They do not take much time and they do make a big difference. The changes are now part of our everyday life. We are used to it.

Kathy: [Lifts the pot off the stove.] So, are you still hungry?
Marie: Of course.
Kathy: Well, let's eat.
Frank: [Shouts into the living room.] Hey kids! Dinner is ready!
Vocabulary

**Directions:** Review the vocabulary words below and define each using simple English terms.

- recipe(s) (n.)
- invite (v.)
- stew(s) (n.)
- sweet potato(es) (n.)
- tomato(es) (n.)
- raisin(s) (n.)
- herb(s) (n.)

Review and Discuss

**Directions:** Review “Dinnertime” and answer the following questions.

1. What are Frank and Kathy Lafitte making for dinner? What vegetables does Kathy use in the stew?

2. What kinds of food do Marie Joseph’s children like?
3. Why do the Lafitte children eat nutritious meals? __________________________
   ___________________________________________________________________
   ___________________________________________________________________

4. How did the Lafitte children get lead in their blood? ______________________
   ___________________________________________________________________
   ___________________________________________________________________

5. Where can you find lead in the home? ___________________________________
   ___________________________________________________________________
   ___________________________________________________________________

6. How does lead get into food? ____________________________________________
   ___________________________________________________________________
   ___________________________________________________________________

7. How do Kathy and Frank protect their children from lead? _________________
   ___________________________________________________________________
   ___________________________________________________________________

4 Topics for Discussion

*Directions*: Discuss your favorite foods. Answer the following questions.

1. What are your favorite foods? __________________________________________
   ___________________________________________________________________
   ___________________________________________________________________

2. What are your favorite meals? _________________________________________
   ___________________________________________________________________
   ___________________________________________________________________

3. Do you like to cook? Why or why not? _________________________________
   ___________________________________________________________________
   ___________________________________________________________________
4. Do you think you are a nutritious eater? Why or why not? ____________

__________

5. Do you worry about chemicals, like lead, getting in your food? Why or why not? ____________

__________

5 Keeping the Lead Out of Your Food

*Directions:* Read the recommendations below. Do you practice these steps?

There are several things you can do to decrease the amount of lead in your food.

*Store food in closed containers (containers with tops) to keep the lead dust out.*

*Buy cans without side seams or with narrow seams and blue/black lines. Cans with wide or dented seams usually contain lead.*
Test dishes and mugs for lead, especially brightly colored, imported, or handmade dishes.

Store food only in unpainted glass or plastic, not in pottery or painted dishes.

Wash hands (especially children's hands) before eating.
Don’t use the following home remedies because they might contain lead: Alarcon, Alkohl, Asarcon, Bala Goli, coral, Ghasard, Greta, Kandu, Kohl, Luiga, Maria Luisa, Pay Loo-Ah, Rueda.

Planning a Healthy Menu

Directions: Review the words below.

A well-balanced diet contributes to good health in many ways. In fact, foods that are high in calcium, iron, and vitamin C can help protect your children from lead poisoning. On the other hand, your child should eat fewer of the foods that are high in fat and oil, because these foods let the body absorb lead more easily.

Writing Assignment

Directions: Write a five-day menu that includes breakfasts, lunches, and dinners. Try to include foods high in calcium, iron, and vitamin C.

Imagine that your children have lead in their blood. Your doctor said that your children need to eat nutritious meals. She said to make sure that the children's meals contain many foods high in iron, calcium, and vitamin C. The doctor also said to avoid junk food and food with a lot of fat and oils. Think about what the doctor told you and plan a five-day menu that includes breakfasts, lunches, and dinners for your family.

Going to the Doctor

At the Doctor's Office

Directions: Read or act out the following passage.

Mr. and Mrs. Borges and their son, Alexi, are visiting the neighborhood health clinic. Alexi is two years old and his parents have brought him to the clinic for a checkup. They are waiting in the examining room when the doctor enters.

Doctor: Hello. How are you today?
Mrs. Borges: Fine. Thank you.
Doctor: How is Alexi?
Mrs. Borges: He had a cold last week. He was sneezing and coughing. He would not eat and was very tired.
Doctor: How is he now?
Mrs. Borges: He seems fine.

[The doctor checks Alexi's temperature and listens to Alexi's lungs and heart with a stethoscope. Then, she examines his ears, throat, and eyes.]

Doctor: Alexi is a very healthy boy.
Mrs. Borges: Yes, he is. He usually eats and sleeps well and he is very active. He plays with his toys all the time.
[The doctor looks at Alexi's medical record. She turns a few pages.]

**Doctor:** So far, Alexi has received all his necessary immunizations.

**Mrs. Borges:** Good.

**Doctor:** I would guess that Alexi is old enough to easily get around the house. Does he get into everything?

**Mrs. Borges:** Sometimes. We live in an older house and it is very hard to make the house safe for Alexi.

**Doctor:** Has Alexi been tested for lead poisoning?

**Mr. Borges:** No. I don’t think so. Why should he be tested for lead poisoning?

**Doctor:** Well, you said you lived in an older home. Many homes built before 1978 have paint with lead. Lead is dangerous to children because it can affect the brain. Children with lead in their blood may find it harder to learn and they may be more irritable than other children. Lead can also affect the blood, kidneys, and other parts of the body.

---

**Mr. Borges:** How does the lead get from the paint into my child?

**Doctor:** Over many years, paint on windows, walls, and doors crumbles into household dust. This dust clings to toys, fingers, and other objects that children put into their mouths. This is the most common way that lead gets into your child. Children also get lead into their bodies by chewing on lead painted surfaces. Some young children eat paint that is peeling or chipping. It is normal for children to eat paint.
Mr. Borges: I don't understand. My son seems so healthy. How could he have lead poisoning?

Doctor: Even children who appear healthy may have high levels of lead in their blood. Most of the time you can't tell if your child has lead poisoning unless you have him tested.

Mrs. Borges: Can you test him today?

Doctor: Yes. The test is a blood test that involves taking blood from the arm. It takes only 10 minutes and the results should be ready within a week.

Vocabulary

Directions: Review the vocabulary words below and define each using simple English terms.

- health clinic(s) (n.)
- examining room(s) (n.)
- sneeze (v.)
- healthy (adj.)
- lead poisoning (n.)
- brain(s) (n.)
- immunization(s) (n.)
- blood (n.)
- paint (n.)
- dust (n.)
- finger(s) (n.)
- peeling (adj.)
- window(s) (n.)
- checkup(s) (n.)
- recover (v.)
- cough (v.)
- lead (n.)
- dangerous (adj.)
- stethoscope (n.)
- kidney(s) (n.)
- body(ies) (n.)
- crumble (v.)
- cling (v.)
- mouth(s) (n.)
- test (v.)
**Review and Discuss**

*Directions:* Review "At the Doctor's Office" and answer the following questions.

1. Why did Mr. and Mrs. Borges bring their son, Alexi, to the doctor? 

2. Is Alexi sick? 

3. What does the doctor tell the Borgeses? 

4. Where do the Borgeses live? 

5. Why should Alexi be tested for lead poisoning? 

6. Why is lead dangerous for children? 

7. How does lead get from the house paint into a child?
Act Out the Scene

Directions: Unlike the doctor described in “At the Doctor’s Office,” many doctors will not ask you about lead paint in your house. Therefore, you need to be prepared to ask your doctor the right questions. Using the information below, act out a scene between doctor and patient. Think about what you would say if you were in this situation.

Patient: You think your house contains lead paint. You want the doctor to test your child to make sure he or she does not have lead in his or her blood. What would you say to the doctor?

Doctor: What would you say to the patient?

Understanding the Test Results

Directions: Read or act out the following passage.

Mrs. Borges and Alexi return to the neighborhood health clinic one week later to get the results of the blood test. They are waiting in the examining room for the doctor when she walks through the door.

Doctor: Hello, Mrs. Borges. How are you?
Mrs. Borges: I’m fine, but I’m worried about the test results.
Doctor: Well, the test results are OK. Alexi has some lead in his blood. This means that somewhere he came into contact with lead.
Mrs. Borges: What will happen to Alexi? Will he become sick?
Doctor: Alexi’s lead level is not high, but children with low lead levels can have health problems and problems learning when they are older. However, if you keep your home and yard safe, I think Alexi will be fine. I’ll give you a list of recommendations for preventing lead poisoning. Bring Alexi to my office for another test in six months. Does Alexi have any brothers or sisters who should be tested?
Mrs. Borges: No. But I am pregnant. Should I be worried about lead?
Doctor: If you follow the same recommendations I’m making for Alexi, then you and your new child should be OK. I also recommend that you test your water to determine if it is a source of lead. If your water has lead in it, then you may want to consider using bottled or filtered water for drinking and cooking. It is important for Alexi and you, Mrs. Borges, to have lead-free water.
6 Vocabulary

Directions: Review the vocabulary words below and define each using simple English terms.

yard (n.)  worry (v.)
current (adj.)  high (adj.)
low (adj.)  safe (adj.)
mop(s) (n.)  furniture (n.)
dirt (n.)  vacuum (v.)
wash (v.)  wipe (v.)
scatter (v.)  nutritious (adj.)
absorb (v.)  empty (adj.)
recommend (v.)  stomach (n.)

7 Complete the Sentences

Directions: Review “Understanding the Test Results” and complete the sentences below.

1. Mrs. Borges is worried about ____________________________

2. Most homes built before 1978 have ____________________________

3. Alexi’s test results show that ____________________________

4. Alexi should visit the doctor for another checkup in ____________________________
5. Lead in the blood can cause

__________________________

__________________________

**Review the Doctor’s Report and Recommendations**

*Directions*: Read and discuss the recommendations below.

---

Neighborhood Health Clinic  
SUSAN JONES-SANTIAGO, M.D.

Dear Mr. and Mrs. Borges,

Your son, Alexi, has some lead in his blood. To prevent the lead level from becoming higher, I would recommend that you take these simple steps:

- Watch what your child puts into his mouth.
- Mop floors with a damp mop (using automatic dishwasher soap and water) and wipe down furniture and windowsills with a damp cloth to remove dust.
- Wash your child’s hands before he eats.
- Frequently wash the objects that Alexi puts into his mouth.
- Vacuum rugs and carpets frequently, but do not vacuum hardwood floors because this activity scatters dust.
- Make sure Alexi eats regular nutritious meals, because more lead is absorbed on an empty stomach.
- Watch Alexi when he plays outside to make sure he does not eat dirt (which may have paint chips in it).

See you in six months.

Sincerely,

Susan Jones-Santiago, M.D.
Watch what your child puts into his or her mouth.

Mop floors and wipe down furniture and windowsills.

Wash your child's hands before he or she eats.

Wash objects that your child puts into his or her mouth.
Vacuum rugs and carpets frequently, but do not vacuum floors without rugs because this activity scatters dust.

Make sure that your child eats regular nutritious meals.

Make sure that your child does not eat dirt.

Note to Student: More information on preventing lead poisoning can be found in the units “Making Water Safe to Drink” and “Identifying Symptoms of Illness.”
Identifying Symptoms of Illness

How Do You Feel?

Directions: Review the symptoms and pictures below. Act out the symptoms or describe them using simple English terms.

When we are sick we experience many symptoms. Symptoms are clues that help us and our doctors understand why we are sick. When the doctor knows what our symptoms are and what causes them, she or he can recommend ways to get better.

dizzy (adj.); dizziness (n.)
nausea (n.); nauseated (adj.)
headache(s) (n.)
stench(s) (n.)
diarrhea (n.)
itch (n.)
rash(es) (n.)
irritable (adj.); irritability (n.)
pain(s) (n.)
cough (v.)
sneeze (v.)
fatigue (n.)
tired (adj.)
sore throat(s) (n.)
cramp(s) (n.)
fever(s) (n.)
vomit (v.)
ache (v.); ache(s) (n.)
sore (adj.); soreness (n.)
Complete the Sentences

Directions: Complete the following sentences using the symptoms listed above.

1. I have a cold. I am _____________________________

2. My head is spinning. I feel __________________________

3. I ate something bad. Now I feel __________________________

4. My muscles hurt. They are __________________________

5. My temperature is 101° F. I have a __________________________

6. Nothing is going right. I am grumpy and __________________________

7. These red marks on my skin must be a __________________________
Directions: Read or act out the following passage.

Mr. Lopez is bringing his three-year-old daughter, Lisa, to the doctor. Lisa is sick. Mr. Lopez wants to know why she is not feeling well. He took her to one doctor two weeks ago and that doctor did not think Lisa was sick. Therefore, Mr. Lopez is visiting a new doctor. A friend told him this doctor was a very good doctor. Mr. Lopez and Lisa are waiting in the examination room when the doctor enters.

Doctor: Hello. How are you today?
Mr. Lopez: I am fine. Thanks.
Doctor: How is Lisa feeling?
Mr. Lopez: I think she is sick.
Doctor: What are her symptoms?
Mr. Lopez: Lisa is always irritable and demanding. She complains of stomachaches.
Doctor: Hmm. I see.
Mr. Lopez: I brought her to a doctor for a checkup two weeks ago. That doctor told me Lisa probably had a cold. I think something else is wrong with my child.
Doctor: I agree with you, Mr. Lopez. If Lisa has had these symptoms more than two weeks, something must be wrong.
Mr. Lopez: Well, I think Lisa may have lead poisoning. We know other people in our neighborhood whose children had these symptoms. Their children had lead poisoning. Besides, the apartment we rent is in an old house which, I think, has lead paint. The paint is peeling on the window frames, doors, and some walls. I have just learned from friends that lead paint, especially peeling lead paint, can be dangerous to children.
Doctor: You may be right about the lead poisoning. Lead poisoned children sometimes show the symptoms you have described. However, Lisa’s symptoms are common. Her symptoms might mean a number of things.
Mr. Lopez: What about the paint in our apartment?
Doctor: You are correct. Old homes may have lead paint. Yet, children usually become poisoned by lead dust rather than lead paint. The dust gets on their toys and fingers and children put these things in their mouths. If the paint in your apartment is peeling, I think you may have much lead dust. To make sure that Lisa does not have lead in her blood, I need to do a blood test. It will only take a few minutes for the people in our laboratory to take a blood sample from Lisa’s arm. We should have the results in a week.
**Vocabulary**

*Directions:* Review the vocabulary words below and define each using simple English terms.

<table>
<thead>
<tr>

</tr>
</tbody>
</table>

**Review and Discuss**

*Directions:* Review "The Mysterious Illness" and answer the following questions.

1. What are Lisa's symptoms?

2. How long has Lisa had these symptoms?

3. Why is it difficult for the doctor to determine what is wrong with Lisa?

4. What does Mr. Lopez think caused Lisa's symptoms? Why does he think that?

5. How can the doctor be sure that Lisa has lead in her blood?
Topics for Discussion

Directions: Talk about your experiences of being sick and going to the doctor. Answer the following questions.

1. When was the last time you were sick?

2. What were your symptoms?

3. Do you like going to the doctor? Why or why not?

4. Do you have a regular doctor that you see all the time? Where is this doctor? Is it difficult to get to your doctor?

5. Do you feel comfortable talking to your doctor or doctors in general? Why or why not?

What Do the Results Mean?

Directions: Read or act out the following passage.

It is one week later and the results of Lisa's blood test are ready. Mr. Lopez and Lisa wait in the examination room for the doctor. The scene opens as the doctor enters the room.

Doctor: Hello, Mr. Lopez. Hello, Lisa.

Mr. Lopez: Hello, Doctor.

[The doctor sits down across from Mr. Lopez and Lisa.]
**Doctor:** Well, Mr. Lopez, you were right. The blood test shows that Lisa does have lead in her blood. She has a high blood lead level.

**Mr. Lopez:** I don’t understand. What does that mean?

**Doctor:** I’m afraid that Lisa has a serious case of lead poisoning. A blood test shows the amount of lead in the blood. The lead level can be low, moderate, or high.

**Mr. Lopez:** Is there a cure for lead poisoning?

**Doctor:** Unfortunately, there is no cure for lead poisoning. In Lisa’s case I can give her drugs that will decrease her blood lead level and reduce her symptoms. Yet, she may still develop problems later in life that are related to lead poisoning. Children with a high level of lead in their blood can develop behavioral, emotional, and learning problems. It is too early to predict how the lead poisoning will affect Lisa.

**Mr. Lopez:** I feel terrible. I wish I had learned sooner that lead poisoning was a problem in my neighborhood and could be a problem for my children. Is there anything I can do?

**Doctor:** First, I believe you should contact the local health department. Health department officials will identify lead hazards in your apartment and work with your landlord to cover or reduce the lead.

**Mr. Lopez:** If the health department officials inspect the apartment and ask my landlord to make repairs, he might get upset and evict my family or he might raise our rent.

**Doctor:** I hear your concerns, Mr. Lopez, but you must consider Lisa’s health.

**Mr. Lopez:** You know I want what is best for my children.

**Doctor:** Well, there are also a number of simple things you can do once the landlord covers the lead in your apartment. For example, you may need to carefully clean windowsills and floors. You should also make sure that Lisa eats well. She should eat foods high in iron, calcium, and vitamin C. Foods like spinach, milk, and oranges are good for her and they help reduce the amount of lead that gets in her blood. Try to keep Lisa out of the dirt around the house, because the soil also may contain lead. If possible, filter the tap water you use for drinking and cooking or let the water run for a minute before using it.

**Mr. Lopez:** What about our other children? Do you think they have lead in their blood?

**Doctor:** You should bring them in for a test, especially if they are younger than six years old. I will also need to see Lisa in a few months so that I can test her again.

**Mr. Lopez:** I can’t believe this is happening to me. I’d better let other people in my house and in my neighborhood know that their children can get lead poisoning.
Vocabulary

Directions: Review the vocabulary words below and define each using simple English terms.

- contact (v.)
- landlord(s) (n.)
- remove (v.)
- learn (v.)

Review and Discuss

Directions: Review “What Do the Results Mean?” and answer the following questions.

1. What are the results of Lisa's test?

2. What do the results mean?

3. What will happen to Lisa?

4. What does the doctor recommend Mr. Lopez do?

5. Do you know any children with lead poisoning? Describe what happened to them and what actions their parents took.
Act Out the Scene

**Directions:** Unlike the doctor described in "The Mysterious Illness," some doctors will not ask you about lead in your home. Therefore, you need to be prepared to talk with doctors and nurses about health concerns such as symptoms of lead poisoning. Using the information below, think about what you would say and act out a scene between doctor and patient.

**Doctor:** You are listening to a patient describe how he or she feels. What kinds of questions would you ask the patient to get him or her to describe in detail how he or she is feeling?

**Patient:** You are not feeling well. Describe your symptoms to the doctor to let him or her know how you feel. You may even want to predict your illness.

Writing Assignment

**Directions:** Using the questions below as a guide, write about a time when you were sick. Carefully describe your symptoms, your trip to the doctor (if you went), and what you did to get better.

Describe a time when you were sick. What happened? What was it like? What were your symptoms? Did you go to the doctor? What did you tell the doctor? What did you do to get better?
Making Water Safe to Drink

Is Our Water Safe to Drink?

Directions: Read or act out the following passage.

Emma and Marek Sowinski, a young couple, are sitting at their kitchen table eating breakfast. Emma is four months pregnant and is very hungry this morning.

Emma: Marek, could you pour me some juice, please?
Marek: Sure.
Emma: Will you pass me the toast and butter, too?
Marek: OK.
Emma: Oh, can you also get me another piece of fruit? I’m really hungry.
Marek: Is there anything else you would like while I’m up? Some milk? Some bacon? A glass of water?
Emma: I’m fine. I don’t want anything else.
Marek: Good. I think I’ll have a glass of water. [Takes a glass and goes to the sink. He turns on the faucet and fills his glass.]
Emma: Hey, Marek, do you think we should drink bottled water?
Marek: Why?
Emma: Well, my friend Shira said that she has lead in her water.
Marek: Is that your friend who lives down the street from us?
Emma: Yes. She tested her water last month.
Marek: [Holds up his glass of water and looks at it.] Do you think we have lead in our water, too?

Emma: Maybe. Our home is more than 50 years old. Shira said that older homes usually have lead pipes in them.
Marek: So, the water picks up lead as it moves through the pipes.
Emma: Correct.
Marek: How do we determine whether our water contains lead?
Emma: Maybe Shira knows.
Marek: I knew you were going to say that. Give her a call.
[Emma picks up the phone and calls Shira.]

Shira: Hello.
Emma: Hello, Shira. This is Emma.
Shira: Hi. How are you?
Emma: I’m good.
Shira: So, what’s happening? How do you feel? How is the pregnancy?
Emma: Oh, I’m feeling fine. I’m four months pregnant now. I don’t have morning sickness.

Marek: [Says loudly from the table.] Emma, are you going to ask her or not?
Emma: [Looks at Marek.] OK. OK. [Then speaks into the phone.] So, Shira, I’m calling because I want to know how you tested your water for lead. Marek and I think that we may have lead in our water.

Shira: It was easy. First, I called my landlord to get the name of our water supplier. Then I called the water supplier who gave me the name of a certified laboratory. I called the lab and one week later, someone from the laboratory sent me directions on how to test the water at my house. I think it cost $15.
Emma: I think we should get our water checked, too.
Shira: Yes, you should because you are pregnant. I heard that lead can affect you and your child. Lead exposure during pregnancy may result in low birth weight, miscarriage, birth defects, and slower development in children.
Emma: OK. We will call right away.
Shira: Good. I'm glad you're getting your water tested. There are also some simple things you can do to protect yourself while you wait for the results. You can run your water for 30 to 60 seconds before drinking it or using it in cooking. You also should always use cold water. If there is any lead in your water, then this process will flush out most of it. Let me know what happens.
Emma: OK. Goodbye.
Directions: Review "Is Our Water Safe to Drink?" and answer the following questions.

1. What are Marek and Emma eating for breakfast?

2. Where do Emma and Marek live?

3. Who is Shira?

4. How does lead get into Emma and Marek's drinking water?

5. Why should Emma be worried about the lead in the water?

6. How can Emma and Marek test their water for lead?

7. How much did it cost Shira to have her water tested for lead? Do you think this is expensive?
Testing for Lead in Your Water

Directions: Read the directions below to test your water for lead. Follow the directions and collect water samples from home. Bring your samples to the next class. The teacher will locate the nearest certified testing laboratory and mail class samples for testing.

You think your water may contain lead. Ask your local water supplier for the names of certified laboratories that will test your water. The U.S. Environmental Protection Agency considers water safe if it has less than 15 parts per billion* (ppb) of lead. Some doctors suggest that anything greater than 10 ppb is unsafe. You should test if you have water from a drinking well, pipes with lead solder, or water that is very corrosive. Collect two samples of water: one that was standing in the plumbing lines overnight, and another that ran for several minutes to flush the lines.

You can also call the U.S. Environmental Protection Agency Safe Drinking Water Hotline if you have any questions (1-800-426-4791).

If your water contains less than 5 ppb of lead, then let your water run for one minute before using it for drinking or cooking.

If your water contains between 5 and 14 ppb of lead, then let your water run for one minute before using it for cooking or drinking and ask everyone in your family to drink less than 16 ounces of this water each day.

If your water contains more than 15 ppb of lead, then do not drink the water or use it for cooking. Consult your local or state health department for advice.

Reviewing the Water Test Results

Directions: Read or act out the following passage.

It is three weeks later. As recommended, Emma and Marek collected two samples of water: one that was standing in the plumbing lines overnight and another that ran for several minutes to flush the lines. They sent both samples to a certified laboratory for tests. The laboratory mailed the test results to Emma and Marek. As the scene opens, Emma, Marek, and Shira are talking about the test results at the kitchen table.

Marek: According to these test results, our water contains lead.
Emma: Yes. It looks that way. It's pretty high too—14 parts per billion

* one billion = 1,000,000,000 = 10^9
of lead in the first sample and 6 parts per billion after letting the
water run for one minute.

*Marek:* I wonder what we should do?
*Emma:* What about buying a water filter?
*Marek:* I don't know. I read that some filters are expensive and some do
not remove lead from the water.

*Shira:* Why don't you call the U.S. Environmental Protection Agency's
Safe Drinking Water Hotline to find out which filters are certi-
Fied for lead removal. They provide that kind of information.

*Emma:* Yes. I guess we could do that. What did you do, Shira?
*Shira:* Well, I called the local health department when I found out about
the lead in my water. I was certain that I was poisoning myself.

*Emma:* And . . . what did the health department officials say?
*Shira:* They told me not to worry so much. Apparently, there are some
easy things I can do to reduce the lead in my water. I should not
drink, cook, or make baby formula with water from the hot water
tap. Hot water contains more lead than cold water because it is
corrosive.

*Emma:* Really?
*Shira:* Yes. The health department officials also told me to run my cold
water for 30 to 60 seconds before drinking it or using it for cook-
ing. This allows me to draw water directly from the street pipes—
where there is no lead—and flushes the water that has been stand-
ing in my lead plumbing.

*Marek:* Yes. I guess we could remember to run the water for a minute
before using it. Isn't that a waste of water though?
*Shira:* If the waste bothers you, collect drinking water in bottles at night
after you have fully flushed the water from the faucet.
Emma: That’s a good idea. But, do you think I should risk drinking water from the faucet? I’m afraid it might harm the baby.

Shira: You will have to ask your doctor about that. Maybe you should buy bottled water.

Marek: At least there are things we can do to prevent the problem from becoming worse.

6 Vocabulary

Directions: Review the vocabulary words below and define each using simple English terms.

- hotline(s) (n.)
- corrosive (adj.)
- drink (v.)
- mail (v.)
- water filter(s) (n.)
- collect (v.)
- health department(s) (n.)
- harm (v.)
- prevent (v.)
- plumbing (n.)

- sample(s) (n.)
- test(s) (n.); test (v.)
- flush (v.)
- safe (adj.)
- expensive (adj.)
- bottle(s) (n.)
- waste (v.)
- baby(ies) (n.)
- risk (n.)
Pick the Correct Response

Directions: Read each statement and choose the correct answer.

1. Emma and Marek mailed their water sample to the
   a. U.S. Environmental Protection Agency
   b. local health department
   c. EPA-certified laboratory
   d. doctor

2. Emma and Marek’s water contains
   a. no lead
   b. 10 parts per billion of lead
   c. 14 parts per billion of lead
   d. 30 parts per billion of lead

3. In a house with lead plumbing, hot water
   a. contains more lead than cold water
   b. is good for washing fruits and vegetables
   c. contains less lead than cold water
   d. is good for making baby formula

4. One way to reduce the risk of lead in the water is to
   a. use hot water fresh from the tap for cooking
   b. boil the water
   c. wash fruits and vegetables in hot water
   d. let the cold water run for 60 seconds before drinking it or using it for cooking

5. Emma and Marek decide to
   a. buy a water filter
   b. buy bottled water
   c. let the water run for 60 seconds before each use
   d. unknown

Note to Student: More information on the effects of lead poisoning can be found in the units “Going to the Doctor” and “Identifying Symptoms of Illness.”
Directions: Read or act out the following passage.

It is Friday night at the Lafitte house. Frank and Kathy Lafitte are cooking dinner and their three young children are playing in the living room. The Lafittes have invited their neighbors Marie and Claude Joseph over for dinner. They arrive as the scene opens.

Kathy: [Goes to the front door.] Hi, Marie, Claude. Come in. Come in.
Marie: Hello!
Frank: How have you been? How are your children?
Marie: We're good. The children are with my sister tonight. She agreed to watch them while we came over for dinner. How are your children?
Frank: They're good. They're playing in the living room.
Marie: Good. [Looks toward the kitchen.] Oh, something smells great.
Kathy: That's a new recipe I am trying.
Claude: What is it?
Kathy: I don't have a name for it. It is a stew.
Claude: [Looks in pot.] You are such a good cook. I am always amazed every time I come to visit.
Frank: [Stirs the pot on the stove.] Yes. I love this recipe. It contains lots of vegetables. There are sweet potatoes, eggplant, green peppers, tomatoes, and carrots. Kathy also throws in some raisins to make it sweet and cooks it with some spices and herbs.
Marie: Oh, that sounds great. Will your children eat the stew?
Kathy: Yes. Of course.
Marie: I only asked because my own children do not eat well. They love junk food. They are always eating potato chips, candy bars, and French fries. When I try to get them to eat fruit or something healthy, they just say "yuck" and don't eat it.
Kathy: I used to have the same problem. But I told my kids they could not eat junk food. I don't buy it for them. They used to always cry and beg at the grocery store. Now they are used to it.
Marie: Wow. That's great. Maybe I just need to stop buying so many snacks.
Kathy: Well, I had to do something. My kids have lead in their blood. The doctor told me that if the kids ate nutritious and balanced
meals, then they would not absorb as much lead. He also told me that the effects of the lead in their blood may not be as bad if they eat well.

Claude: I didn’t know your kids had lead in their blood. How did that happen?

Kathy: Oh, there was lead dust in this old apartment. The dust came from the lead-based paint. It got on the kids’ toys and on their fingers. Then the kids put their fingers in their mouth. You know kids are always putting things in their mouths.

Claude: You are so calm. Aren’t you worried?

Frank: We were worried at first, but the amount of lead in our children’s blood was low. The doctor told us that if we watch the children’s diet and make sure the house is clean, then the kids will be OK.

Claude: Does lead in the home only come from the paint?

Frank: No. Lead can be in drinking water, soil, and even in food.

Marie: How do you keep lead out of your food?

Frank: There are a number of ways we keep lead out of our food. We don’t store food in open containers where the dust can collect on the food. We don’t use handmade or imported dishes and mugs that can contain lead glazes. Lead from the glaze can get in the food. We avoid cooking with and eating foods stored in cans that may contain lead. We are also careful about eating foods that our friends grow in city gardens. Some food from city gardens may contain lead if the soil has lead in it.
Kathy: Also, we don’t wash or cook our food with water that contains lead because the lead will get in the food.

Marie: Wow! You have to do so much to keep lead out of your food. There seems to be no way to avoid lead.

Kathy: Well, if you carefully prepare and store your food, then lead will not get in your food.

Frank: I agree with Kathy. The changes we have made are small. They do not take much time and they do make a big difference. The changes are now part of our everyday life. We are used to it.

Kathy: [Lifts the stew pot off the stove.] So, are you still hungry?

Marie: Of course.

Kathy: Well, let’s eat.

Frank: [Shouts into the living room.] Hey kids! Everyone to the table!

</table>
Review and Discuss

Directions: Review "Dinnertime" and answer the following questions.

1. What are Frank and Kathy Lafitte making for dinner? What are some of the ingredients?

2. What kinds of food do Marie Joseph’s children like?

3. Why do the Lafitte children eat nutritious meals?

4. How did the Lafitte children get lead in their blood?

5. Where can you find lead in the home?

6. How does lead get into food?

7. How do Kathy and Frank protect their children from lead?
Topics for Discussion

Directions: Discuss your favorite foods. Answer the following questions.

1. What are your favorite foods?

2. What are your favorite meals?

3. Do you like to cook? Why or why not?

4. Do you think you are a nutritious eater? Why or why not?

5. Do you worry about chemicals, like lead, getting in your food? Why or why not?

Keeping the Lead Out of Your Food

Directions: Read the recommendations below. Do you practice these steps?

There are several things you can do to decrease the amount of lead in your food.
Store food in closed containers (containers with lids) to keep the lead dust out.

Buy cans without side seams or with narrow seams and blue/black lines. Cans with wide or dented seams usually contain lead.

Test dishes and mugs for lead, especially brightly colored, imported, or handmade dishes.
Store food only in unpainted glass or plastic, not in pottery or painted dishes.

Wash hands (especially children's hands) before eating.

Be aware that some home remedies may contain lead: Alarcon, Alkohl, Asarcon, Bala Goli, coral, Ghasard, Greta, Kandu, Kohl, Luiga, Maria Luisa, Pay Loo-Ah, Rueda.
Planning a Healthy Menu

Directions: Review the words below.

A well-balanced diet contributes to good health in many ways. In fact, foods that are high in calcium, iron, and vitamin C can help reduce the amount of lead children absorb when they are exposed to lead in the home. On the other hand, your child should eat less of the foods that are high in fat and oil, because these foods let the body absorb lead more easily.

Writing Assignment

Directions: Write a five-day menu that includes breakfasts, lunches, and dinners. Try to include foods high in calcium, iron, and vitamin C.

Let's say the doctor told you that your children have lead in their blood. He or she also recommended that you feed your children nutritious meals to reduce the amount of lead absorbed into your children's blood. He or she said to make sure that the children's meals contain many foods high in iron, calcium, and vitamin C. The doctor also said to avoid junk food and food with a lot of fat and oils. Based on what the doctor told you, plan a five-day menu that includes breakfasts, lunches, and dinners for your family.

</table>
Mei, her husband, and their four young children live just outside the city. They own a two-family house and have a small backyard.

In early spring, Mei decided to plant a vegetable garden in her yard. She went to the hardware store to buy seeds and the garden tools she needed—a rake, a hoe, and a small shovel. When she got home, she pulled up all the grass in the backyard. She dug shallow rows in the soil, placed the seeds in the ground, covered them, and watered them.

By late spring, the vegetable plants began to sprout from the earth. Mei watched her garden closely. She chased away the neighborhood animals that bothered her vegetables. She checked each leaf for bugs. When summer arrived, she was ready to harvest and eat the carrots, lettuce, tomatoes, turnips, and beans she had planted.

But Mei's excitement soon ended. Her husband was worried about environmental dangers. He said that her garden was probably polluted with chemicals, such as lead. The houses in their neighborhood contained lead paint. The paint
from the houses crumbled into the soil. Her husband also said that he was worried about their children playing in the garden soil. Apparently, the children could be poisoned by the lead in the soil.

Mei was disappointed. She did not know what to do. She was so worried that she called the local health department. The health department officials made her feel a little better. Mei learned that vegetables growing in soil do not absorb much lead. She learned that there were certain things she could do to prevent lead contamination in the future. The health department officials said to add compost to the soil and to plant fruiting or leafy vegetables, such as lettuce or tomatoes, because they take in less lead than potatoes, carrots, turnips, and other root crops. And finally, the health department officials told her to wash her vegetables with vinegar and water, peel the root crops, and throw away the outer leaves of lettuce because dust with lead settles on garden plants.

Mei harvested her vegetables that summer and followed the local health department recommendations. However, she did not know what to do about her children. The health department officials told her that soil lead was more dangerous to children who play in it than to children who eat vegetables grown in it. Mei decided to test her children and her soil for lead.

2 Vocabulary

Directions: Review the vocabulary words below and define each using simple English terms.

| City(ies) (n.) | Yard(s) (n.) |
| Vegetable(s) (n.) | Garden(s) (n.) |
| Hardware store(s) (n.) | Tool(s) (n.) |
| Rake(s) (n.) | Hoe(s) (n.) |
| Shovel(s) (n.) | Grass (n.) |
| Dirt (n.) | Soil (n.) |
| Dig (v.) | Seed(s) (n.) |
| Chase (v.) | Bother (v.) |

Review and Discuss

Directions: Review "The City Garden" and answer the following questions.

1. Where does Mei live?

2. Who lives with Mei?

3. What did Mei plant in her garden?

4. What did Mei's husband tell her about the garden?

5. Why do you think Mei was so disappointed?

6. Why did Mei worry about lead in her soil?

7. What did the local health department recommend Mei do?

8. Did Mei eat the vegetables she grew?
9. If the soil contains lead, what do you think Mei should do to protect her children from lead poisoning?

________________________________________________________________________

________________________________________________________________________

10. How do you think the lead gets from the soil into Mei’s children?

________________________________________________________________________

________________________________________________________________________

4 Topics for Discussion

*Directions*: Describe some of your experiences with gardening, food, and the environment. Answer the following questions.

1. Have you ever planted a home garden? Have you thought about planting a home garden?

________________________________________________________________________

________________________________________________________________________

2. What did you grow in your garden? Or what would you grow in your garden?

________________________________________________________________________

________________________________________________________________________

3. Did you worry about any environmental dangers, such as pollution, bugs, or lead?

________________________________________________________________________

________________________________________________________________________

4. Have you ever tested your soil for lead?

________________________________________________________________________

________________________________________________________________________

5. Do you know anyone in your neighborhood who has lead in his or her soil?

________________________________________________________________________

________________________________________________________________________
6. Is your neighborhood in the city?

Testing Your Soil for Lead

**Directions:** Read the directions below for testing lead in the soil. Then follow the directions and collect soil samples from home. Bring your samples to the next class. Your teacher will locate the nearest testing laboratory and mail class samples to be tested.

The danger of the lead in soil depends on (1) the amount of lead in the soil around your house and (2) the amount of soil that gets into your child.

To find out the lead content of your soil, you need to test it. The test results will tell you what to do about low, medium, high, or very high levels of soil lead.

If you have children, select areas in your yard where children normally play. Soil in other areas, such as near the outside of your house or garage, or near the street, may also contain lead.

- Select area(s) of your yard to sample.
- With a clean spoon, take soil from the top one-half inch of each area you have selected.
- Collect about one cup of soil and place it in a clean, ordinary plastic bag. Cut out any plants or grass that are growing in your sample. Do not pull the grass out. Plant roots may stay in the sample.

Protecting Your Child from Lead in the Soil

**Directions:** Read the safety tips below. Do you practice any of them?

If the amount of lead in your soil is high (greater than 300 parts per million of lead), and if the soil is not covered with many plants or thick grass, then you should consider one or more of the following suggestions to make your soil safer.
Control peeling house paint. Call your local health department for appropriate methods.

Plant and maintain grass or ivy.

Cover the soil with a thick layer of gravel, wood chips, or other materials.
Pave the area.

As a last alternative, remove the top six inches of soil and replace it with uncontaminated soil.

Here are some other ways to stay healthy:

Wash children's hands before eating.
Have all family members and guests take off their shoes before entering the house so that lead dust from the soil will not get inside.

Prepare and eat nutritious meals that include fruits and vegetables; foods high in calcium, such as milk; and foods high in iron, such as meat, and iron-fortified cereals.
Finding the Right Home

Looking for an Apartment

Directions: Read or act out the following passage.

Dimitri and Isabel Gonzalez are looking for a new apartment to rent. They are a young couple with two children, ages 2 and 3, and they are expecting another child in five months. The Gonzalez's old apartment is too small. Now with a baby on the way, they will need even more room.

Dimitri and Isabel have seen several places. Now they are looking at an apartment in an old house on Elm Street. The landlord is with them. The scene opens with Dimitri looking down into the basement.

Dimitri: Look, Isabel, this apartment has a basement.
Isabel: That's great. We can store some of our things down there.
Landlord: [Guides Isabel and Dimitri through the kitchen.] There is enough space in here for a small table.
Dimitri: Yes. I saw the kitchen. I like it, but I think we need more storage space in the kitchen for our pots and pans. What do you think, Isabel?
Isabel: I don't know. I like the kitchen. This apartment is larger than some of the others we have seen. The children will have more room to play.
Dimitri: I guess you are right. They could also play outside. This seems like a quiet street even though it is in the city.

Isabel: [Turns toward the landlord.] Is this apartment near public transportation?

Landlord: Yes. There is a bus stop two blocks from this apartment.

Dimitri: Where is the closest laundromat?

Landlord: The laundromat is on the corner. There is a small grocery store around the corner, too.

Isabel: How much is rent? And would we have to pay a security deposit?

Landlord: OK. I do not charge a security deposit. I do ask that you sign a lease and pay me the first and last month's rent. The rent is $700 each month and that does not include utilities such as electricity or heat.

Dimitri: [Looks around.] Is the heat gas or oil?

Landlord: It's gas.

Isabel: How much does it cost to heat this apartment?

Landlord: It costs about $100 each month to heat. Of course, the winter months will cost much more than $100 and the summer months will cost much less; $100 is an average figure.

Dimitri: I see you have storm windows in the apartment. That's good.

Landlord: Yes. I installed those last year.

Dimitri: It sounds good to me. I think we would like to take the apartment. But, before we sign anything, I would like to ask you if
there is lead in the apartment. I noticed that this is a fairly old house. I understand that many of these older homes were painted with lead paint. I noticed that the paint is peeling and chipping on the windowsills and doors. My wife is pregnant and I am worried about her health, the health of our new baby, and the health of our young children. Do you know if this paint has lead in it?

Landlord: Gee, I don’t know.
Isabel: Would you check for us?
Landlord: Ah ... I guess so.
Dimitri: Thanks.
Landlord: Here’s the lease. Look at it and let me know what you think. I suggest you decide fast. I have other people looking at this apartment.
Dimitri: OK. We will call you about the lead paint. Thanks again. You should hear from us soon. Goodbye.

2 Activity

Directions: Draw a map of the neighborhood. Where is the bus stop, the laundromat, and the grocery store? You will need to add more details.

3 Vocabulary

Directions: Review the vocabulary words below and define each using simple English terms.

Review and Discuss

Directions: Review “Looking for an Apartment” and answer the following questions in English.

1. Why are Dimitri and Isabel looking for a new apartment?

2. Describe the apartment they want to rent.

3. What questions do Dimitri and Isabel ask the landlord? Why do you think they ask so many questions?

4. Why is Dimitri worried about lead in the apartment?

5. According to the landlord, does the apartment have lead in it?

Topics for Discussion

Directions: Describe some of your personal experiences in looking for a home. Answer the following questions.

1. What do you look for when buying or renting a home? What are some of the characteristics you want your home to have? What location do you prefer?
2. What are some of the concerns you have when looking for a house or an apartment to buy or rent? 

3. How many times have you moved? 

4. Describe your relationship with your landlord or tenants. 

5. Do you know if the house you rent or own has lead in it? 

6. **Act Out the Scene**

   **Directions:** Many of us may feel uncomfortable confronting landlords and others about the condition of our homes. Using the information below, act out a scene between a tenant and a landlord.

   **Tenant:** You are looking at an apartment. It is in an old house. What kinds of questions would you want to ask the landlord? Think about rent, lead, security deposits, storage, or other things that interest you. For example, you think the house contains lead paint. What would you say to the landlord about this issue?

   **Landlord:** You own an old house. There are some problems with the house, but you would really like to have good tenants. How would you answer the tenants’ questions? How would you make the house safer for the tenants?
Deciding on the Right Apartment

Directions: Read or act out the following passage.

Dimitri: Isabel, I called the owner of that apartment on Elm Street.
Isabel: Oh yes, I liked that apartment. It has plenty of room and a nice kitchen. Did you find out about the lead paint in the apartment?
Dimitri: No. The landlord is still telling me he does not know about the lead.
Isabel: Oh? Then there's a chance that the apartment has lead paint.
Dimitri: Yes. What do you think we should do? I like the location of the apartment. It is convenient. It is also inexpensive.
Isabel: I don't know. I'm worried about the lead paint in the apartment on Elm Street. You saw how the paint on the windowsills was peeling. I think our children will not be safe there. Maybe we should choose the first apartment we saw. Do you remember the apartment on Maple Street? The location is not as good as the one on Elm Street, but the Maple Street apartment appeared to have less lead. There was no chipping paint, the windows were new, the floors were covered with carpet, and the wood trim was not painted.
Dimitri: You are right. The Maple Street apartment will probably be safer for the children. Besides the landlord admitted that there was a little lead paint in the apartment.
Isabel: True. Even if we do rent the Maple Street apartment, we will still have to take some steps to protect our children from lead poisoning.
Dimitri: I know. We will have to make sure that we clean the children's hands before they eat. We'll also have to clean toys and other objects that they like to bite and put into their mouths.
Isabel: Don't forget that we will have to vacuum the carpet often.
Dimitri: These are good habits anyway. We can work with the landlord to make the final necessary changes so that the apartment is lead-free.
Isabel: Oh, yes, there's one more thing. The water will have to be tested for lead. That's easy to do.
Dimitri: OK. I'll call the landlord of the apartment on Maple Street and tell her we want to sign the lease. Then, I'll call the landlord of the apartment on Elm Street and tell him we are not interested in that apartment.

Note to Student: Each family will have its own decision to make when it rents an apartment. The family should consider factors such as convenience, cost, amount of space, and hazards like lead in paint and water. Discuss how you would decide in this case.
Directions: Read the following passage and answer the questions below. Describe your experiences with home safety.

People think of home as a safe place. But each year, many people are injured at home. Young children and older people are more likely to injure themselves at home than are other people.

Young children are at risk because they are growing and learning. They are curious and want to explore their environment. They learn by doing, making mistakes, and imitating. Children are also very active. They enjoy running and jumping. But sometimes they go too far and do things that are unsafe. Fortunately, children are better able to recover from their injuries than are adults.

Children injure themselves at home by falling—especially from cribs, windows, and stairs. Other common injuries are poisoning from household chemicals, fire and burn injuries, and suffocation and choking on small objects.

Older people are also at risk for injury in the home. Changes in the way they see and move affect their ability to react to hazards. Many older people also live alone, so there is no one to help them when they are hurt. Common home injuries among the elderly include falls, suffocation, fire and burns, and poisoning.

1. Do you worry about hazards in your home? What are these?

2. Have you ever been injured at home? Have your children been injured at home?
3. What do you do to make your home safer?

The Silent Hazard

Directions: Read the following passage.

Tong Quic and Hung Thu Tran never thought their house was a dangerous place until their daughter Mgi Ngor was born. By the time Mgi Ngor was two, she was into everything. She was climbing on the furniture. She was pulling at the curtains. She was reaching the top of the hot stove.

Therefore, the Trans took many precautions to make their home safe for Mgi Ngor. They put plugs in all the electrical outlets so that Mgi Ngor would not be shocked. They did not drink hot liquids when holding Mgi Ngor so that she would not be burned. They put all the dangerous chemicals out of Mgi Ngor’s reach so that she would not be poisoned. They put window guards on the upstairs windows and a gate at the bottom of the stairs so that she could not climb up.

Tong Quic and Hung Thu did not stop there. They made sure that Mgi Ngor’s toys were safe for her. They did not buy anything Mgi Ngor might swallow. They also installed smoke alarms in their home and frequently checked the batteries. They even asked their guests not to smoke cigarettes around Mgi Ngor. They always made smokers go outside.
Unfortunately, the Trans did not see an important hazard in their home. They had not guessed that their house contained lead. It was a fairly modern home. It had been built in the 1960s. They thought only older homes had lead paint. They soon learned that many homes built before 1978 contain some lead paint.

When Mgi Ngor turned three, the Trans learned that their daughter was poisoned with lead. On a routine checkup the doctor tested Mgi Ngor and found that she had some lead in her blood. Her lead level was only borderline dangerous, but the Trans were very worried.

The Trans asked the doctor how Mgi Ngor was poisoned. He explained that Mgi Ngor was probably poisoned by lead paint in their home. Tong Quic and Hung Thu said that their daughter did not eat lead paint. But the doctor told them that Mgi Ngor was probably not poisoned by eating the paint. The doctor said that the lead paint turned to dust and settled on Mgi Ngor’s toys. When Mgi Ngor played with her toys, the lead got on her fingers and then into her mouth.

The doctor told Tong Quic and Hung Thu that Mgi Ngor might be fine if they follow certain procedures, such as watching what Mgi Ngor put in her mouth, mopping the floors with a damp mop, wiping down furniture and windowsills with a damp cloth, washing Mgi Ngor’s hands before meals, vacuuming rugs and carpets frequently, making sure Mgi Ngor eats nutritious meals, and making sure Mgi Ngor does not eat dirt, which may contain lead paint chips. But he also said that she may have problems later in life. He asked the Trans to bring Mgi Ngor back for another checkup in three months.
Note to Student: For more information on the health problems associated with lead poisoning, see the units “Going to the Doctor” and “Identifying Symptoms of Illness.”

4 Review and Discuss

Directions: Review “The Silent Hazard” and answer the following questions.

1. How old is the Trans's house? 

2. What did Tong Quic and Hung Thu do to make their house safe for Mgi Ngor?
3. What were Tong Quic and Hung Thu shocked to learn?

________________________________________________________________________
________________________________________________________________________

4. What did the doctor tell the Trans?

________________________________________________________________________
________________________________________________________________________

5. How did Mgi Ngor become poisoned?

________________________________________________________________________
________________________________________________________________________

5 Topics for Discussion

Directions: Discuss lead poisoning hazards that can be found in homes. Answer the following questions.

1. Do you live in an older home? Was your home built before 1978?

________________________________________________________________________
________________________________________________________________________

2. Do you have young children in your house? How old are they?

________________________________________________________________________
________________________________________________________________________
3. Lead-based paint is hard and glossy. Do you have any hard, glossy paint on your windows, doors, stairs, railings, and trim?

__________________________________________________________

4. Have you ever had a lead inspection or tested your home for lead? Why or why not?

__________________________________________________________

5. Do you think your house contains lead? If so, where is the lead paint?

__________________________________________________________

6. **Testing Your Paint for Lead**

   **Directions:** Read the directions below for testing lead in house paint. Follow the directions and collect paint samples from your home. Bring your samples to the next class. The teacher will locate the nearest certified testing laboratory and mail class samples to be tested. When test results return, discuss the results.

   Test painted surfaces that your child has chewed, or woodwork in your child's room. Woodwork, such as doors, windows, or trim, will often have a lot of lead in the paint. Any area that is peeling is also a good choice for testing.

   √ Keep samples from different areas separate.

   √ Use a knife to scrape sections of paint, at least the size of a quarter, down to the bare wood or plaster. Do not take the wood or plaster with your sample or your paint results will not be accurate.

   √ Put the samples in clean, plastic bags. With a permanent marker, write where you got the sample from on the bag.
Send the samples to a lab certified by your state health department. Call your local health department for a list of certified labs.

Discuss and Compare Test Results

**Directions:** Review the table below.

Lead paint is found in older homes. How old is your house? Do you live in a single family or multifamily house? How likely is it that your house has lead paint?

<table>

Making Your Home Safe

The Safe Home Checklist

Directions: Read the following passage, then complete "The Safe Home Checklist." Remember that the checklist does not include everything you can do to make your home safe. It only includes some of the most important things.

For most of us, home is a haven—a place where we go to relax and feel safe. Sometimes, however, our homes can be hazardous places. Young children and the elderly, in particular, are at risk for injury in the home. Common injuries for these groups include burns, poisonings, and falls.

Whether we have children or not, we need to understand the hazards in our homes. Once we know what these hazards are, we can remove or reduce them and prevent injury.

To know more about home safety issues that affect you, complete The Safe Home Checklist. Read the questions below and answer each by writing "yes," "no," or "n/a" (not applicable) in the blank beside the question.
The Safe Home Checklist*

1. Do you keep hot liquids and hot foods out of your child's reach?

2. Do you keep cleaning supplies out of your child's reach?

3. Do you keep medicine and vitamins out of your child's reach?

4. Do you use electrical appliances (e.g., hair dryer, radio, lamps) in the bathroom? These can cause electrical shock or death if they are plugged in and fall into a tub while you or your child is in the water. Keep electrical appliances out of the bathroom or unplugged, away from water, and out of your child's reach.

5. Have you adjusted the hot water heater to a safe temperature? The recommended temperature is 120° F or less to prevent tap water scalds. To test the water, let it run for three minutes before measuring the temperature with a thermometer.

6. Does an adult always watch your child when your child is in the tub? Children can drown in a few inches of water within seconds; they can be burned by turning on hot water themselves.

7. Have you blocked windows so that your child cannot fall out?

8. Do you use toddler gates at the top and bottom of stairs to prevent falls?

9. Do your windows have screens that are secure?

10. Does your house have two unblocked exits in case of fire?

11. Are electrical cords in safe condition? For example, do not overload extension cords.

12. Are space heaters approved, in safe condition, and out of children's reach? Space heaters should be stable, with a covering, and at least three feet from curtains, papers, and furniture.

13. Are stairs, walls, railings, porches, and balconies sturdy and in good condition? For example, if wall paint is peeling, it is not in good condition.

14. Is hall and stairway lighting adequate to prevent falls?
15. Do you have a working smoke detector correctly placed? Attach
the smoke detector to the ceiling. Put one detector on each floor,
making sure you have one at the head of the stairs to the base-
ment, at the foot of the stairs to the bedrooms, and in the hallway
outside the bedrooms. Test the smoke detector monthly, replacing
batteries yearly or when low. Also, consult the local fire depart-
ment regarding smoke detector regulations in your state.

16. Do you have the local poison control center number near your
phone?

17. Do you have a fire escape plan?

18. Do you keep matches and lighters out of your child’s reach?

19. If you smoke, do you safely dispose of cigarette butts and matches?
Careless smoking is a major cause of fire deaths. Put out ciga-
rettes in a large deep ashtray, then dump everything into the toilet.
Do not smoke in bed or when under the influence of alcohol or
medication. Check stuffed furniture for cigarette butts before
going to bed.

20. a. Do you keep firearms in your home?
   b. If so, do you keep them locked and out of your child’s reach?

21. Have you tested the paint in your house for lead? Dust from lead-
based paint is particularly dangerous to children. Over the years,
painted surfaces crumble into household dust. The dust clings to
toys, fingers, and other objects that children normally put in their
mouths. This is the most common way that lead gets into your
child. Children also get lead into their bodies by chewing on lead
painted surfaces.
22. Have you tested your water for lead? Test water for lead if you have water from a drinking well, pipes with lead solder, or water known to be very corrosive.

23. Have you tested your children for lead? Children between the ages of nine months and six years should be tested for lead. A blood test for lead helps individuals find out if someone has taken in too much lead before there are any outward signs of illness.

List below any changes you need to make—replacing your smoke detector, arranging a lead test, etc.
Vocabulary

Directions: Review the vocabulary words below and define each using simple English terms.

ashtray(s) (n.)  block (v.)
thermometer(s) (n.)  smoke detector (n.)
Review and Discuss

Directions: Finish "The Safe Home Checklist" and answer the following questions.

1. How did you do on "The Safe Home Checklist"?

2. What are the greatest dangers in your home?

3. What could you do to make your home safer?

4. Why do you think the checklist includes so many items related to child safety?

5. If you have children, do you often worry about their safety?
Angela Caruso rented an apartment in a two-family home located just outside the city. The house, which was built in the 1920s, was large and located on a quiet street. It was perfect for Ms. Caruso and her three children: Lisa, age 5; Paulo, age 4; and Giovanni, 1 year old. The house was also inexpensive, close to Ms. Caruso’s job, and in the same neighborhood as her family.

About one year after moving into the new apartment, Ms. Caruso took Giovanni to the doctor for a routine checkup. At the checkup, Ms. Caruso explained to the doctor that she lived in an older home which contained lead paint. Ms. Caruso had learned from her new neighbors that the lead paint in the older homes crumbles into dust over the years and that the dust gets on children’s toys, fingers, and other things they put in their mouths. Her neighbors also told her than some of the children in the neighborhood had lead poisoning. Knowing that Giovanni could have been exposed to lead, Ms. Caruso asked the doctor to give Giovanni a lead test as part of his checkup.

The test took only a few seconds. The lab technician took some blood from Giovanni’s arm and sent the blood to the laboratory. The doctor told Ms. Caruso that he would let her know the results of the test in one week.

One week later, the doctor called Ms. Caruso and reported the results of the blood test. The blood test showed that Giovanni did not have lead poisoning. Ms. Caruso was relieved to learn that Giovanni was OK.

However, the doctor told Ms. Caruso that she should take some simple precautions to keep Giovanni and her other children safe from lead poisoning in the future. He recommended that Ms. Caruso frequently wash her children’s hands and toys, mop hard floor surfaces, wash windowsills with soap and water, feed her children foods with much iron and calcium, and use only cold water or filtered water for cooking and drinking. He also suggested that Ms. Caruso make sure her children stay out of the dirt around the house because the dirt can contain lead paint chips.

The doctor asked Ms. Caruso to bring Lisa and Paulo to his office for a lead test. He said that Paulo and Lisa might also have unsafe amounts of lead in their blood. Ms. Caruso agreed.

Ms. Caruso also said that she would call the local health department and her landlord. She was very worried about her children’s health and wanted to do everything she could to reduce the amount of lead in her apartment.
Review and Discuss

Directions: Review “Angela Caruso’s Story” and answer the following questions.

1. What do you know about lead poisoning?

2. Who usually gets lead poisoning?

3. Do you think your children are at risk for lead poisoning?

4. Do you know anyone who has had lead poisoning?

5. If you were in Ms. Caruso’s position what would you do?

Reducing Lead in Your Home

Directions: Look at the pictures below and note the different ways to protect yourself from lead in the home.

One of the greatest environmental threats to children is lead poisoning: 74 percent of all private homes built before 1978 contain some lead paint. One out of nine children under age 6 has enough lead in his or her blood to place him or her at risk. Children with high lead levels are six times more likely to have reading disabilities.*

* Sources include the U.S. Department of Housing and Urban Development, U.S. Centers for Disease Control and Prevention, and the U.S. Environmental Protection Agency.
However, there are some simple steps you can take to reduce the risk of childhood lead poisoning in your home. These are listed below.

**Children's Hands and Faces**

Wash children's hands and faces frequently.

**Folk Remedies**

Use cautiously because they may contain lead: Alarcon, Alkohl, Asarcon, Bala Goli, coral, Ghasard, Greta, Kandu, Kohl, Luiga, Maria Luisa, Pay-Loo-Ah, Rueda.

**Painted Surfaces (pre-1978 homes only)**

Cover peeling paint with a thick, durable material. Move cribs and playpens away from peeling paint. Have paint tested in a laboratory. If it has lead, don't scrape, sand, or burn it.
Toys

Wash toys and pacifiers frequently.

Dust (pre-1978 homes only)

Mop hard surface floors and wash windowsills and baseboards at least once a week with trisodium phosphate in water. Buy trisodium phosphate at a hardware store. Don't use mops or sponges for anything else. (Also make sure that you store the trisodium phosphate out of your child's reach. It can be poisonous if consumed.)

Diet

Feed children foods with much iron and calcium. Foods high in iron include liver, fish, eggs, raisins, and spinach. Foods high in calcium include milk, cheese, and yogurt.

Cans

Don't store food in open cans. Don't buy cans with wide, dented seams. (Cans with no side seams or narrow seams and blue/black paint lines are lead free.)
Water

Use only cold water for drinking, making baby formula, or cooking food. Run water until it is cold. Use excess water for washing or watering plants.

Clothes

If your work exposes you to lead, leave your clothes at work and shower before entering the house. Wash work clothes separately from the rest of the laundry. Parents who work with lead, such as renovation or contract workers, can bring home lead dust on their clothing. The dust can affect their children.

Dishes

Test dishes and mugs for lead, especially colored, imported, or handmade dishes. Store food only in unpainted glass or plastic, not in painted dishes or pottery.
Directions: Choose one of the following scenarios to write about. Bring your story to class.

- Assume that your house or apartment was built before 1978 and contains lead-based paint, and that your water also contains some lead. Describe steps you can take to reduce the risk of childhood lead poisoning in your own home. If you do not have children living in your home, describe steps you would take if you did.

- Write about a personal experience with lead poisoning. This might be something that you have experienced or something that happened among your friends or family.
Renovating Your Home

1 Home Repairs

Directions: Read the following passage.

Manuel and Isabel Ramirez searched for two years before they found their perfect home. The two-story house was near Manuel's job and two blocks from the neighborhood park. Many of Isabel and Manuel's friends lived in the same neighborhood. The house also had a big backyard and enough space inside for Isabel, Manuel, and their three young children—Matthew, Peppe, and Sandra. It needed some renovation, but Manuel was very good at home repairs.

After the Ramirez family moved in, Manuel began renovating the house. He scraped the old paint off the kitchen cabinets and he sanded the door frames, windows, and trim down to the original wood. Isabel removed the old wallpaper in one of the bedrooms and put up new wallpaper. She also vacuumed all the dust created by the renovation. The place was looking good.

Yet, soon after Manuel and Isabel began the renovation, the children became sick. The new baby, Sandra, cried all the time and would not eat. Matthew and Peppe, ages 3 and 4, complained of stomachaches and were always tired. The doctor found nothing wrong.

One day, Isabel was reading a magazine while waiting in line at the grocery store. In the magazine, she found a story on lead poisoning. The story described symptoms that matched her...
children's behavior, so she called her doctor's office. The nurse told Isabel not to worry. But Isabel insisted something was wrong and brought her children to the doctor for a test.

From the test, Isabel and Manuel learned that their children had lead poisoning. The doctor told them that Matthew, Sandra, and Peppe probably got it from paint dust—stirred up by the renovation Manuel did to improve the house.

The doctor said, "It is too early to tell how the children will be affected by the lead." The doctor said that the effects of the lead may be lessened if Isabel and Manuel keep their house free of dust. He also told them to make sure that their children eat healthy meals because healthy, nutritious meals protect against more lead absorption.

## Vocabulary

**Directions:** Review vocabulary words below and define each using simple English terms.

- neighborhood(s) (n.)
- kitchen(s) (n.)
- park(s) (n.)
- bedroom(s) (n.)
- window(s) (n.)
- repair (v.); repair(s) (n.)
- renovate (v.); renovation(s) (n.)
- stomachache(s) (n.)
- complain (v.)
- symptom(s) (n.)
- behavior (n.)
- lead poisoning (n.)
- dust (n.)
- absorption (n.)
- yard(s) (n.)
- original (adj.)
- bathroom(s) (n.)
- door(s) (n.)
- wallpaper (n.)
- cabinet(s) (n.)
- sick (adj.)
- magazine(s) (n.)
- scrape (v.)
- sand (v.)
- lead (n.)
- paint (n.)

## Review and Discuss

**Directions:** Review "Home Repairs" and answer the following questions.

1. Describe the Ramirez's perfect house. ________________________________
2. What kinds of repairs did the Ramirez's make in the house? 

3. How did Matthew, Peppe, and Sandra get lead poisoning? 

4. What were the children's symptoms? 

5. How will the lead affect Matthew, Peppe, and Sandra? 

# Ways to Renovate*

*Directions: Read the following passages.*

Before you repair or renovate, call your local health department officials and ask if they can test your home for lead-based paint. If the health department officials cannot test, ask them who can. You can also test it yourself with a kit you buy at a hardware store. Ask the store clerk for help.

There are many dangers involved in removing lead paint from your home. Every member of your family can be poisoned if you incorrectly remove the paint. There are three ways to make the lead paint in your home less dangerous. The first two are the safest ways to handle lead paint. Consider them first.

*Adapted from "Lead in Paint," a pamphlet distributed by the Childhood Lead Poisoning Prevention Program, California Department of Health Services, 1991.*
Replacing a lead painted object means removing the object from the house and replacing it with a new lead-free item. For example, remove a door by its hinges and replace it with a new safe door. Wrap the old item in heavy plastic and keep it away from your children. Replacing objects takes the lead out of your home and it does not create much lead dust.
Cover it.

It is best to cover surfaces that cannot be replaced, such as walls or floors, with a long-lasting, tough material like sheetrock, paneling, or floor tiles. Covering does not get the lead paint out of your home; therefore, you must keep newly covered walls or floors in good condition. Covering walls with new paint or hanging wallpaper is not a permanent method of covering lead paint. If the new paint or wallpaper peels, the lead paint will be exposed again.
Sanding, burning, or scraping is the most dangerous way of removing lead paint! This makes large amounts of lead dust or fumes, which can poison workers, household members, and pets. *Homeowners should not try to eliminate lead paint hazards from their property.* If your house contains lead paint, you should hire a professional contractor to remove the lead from your house.

### Vocabulary

**Directions:** Review the vocabulary words below and define each using simple English terms.

- **remove** (v.)
- **replace** (v.)
- **paneling** (n.)
- **wrap** (v.)
- **permanent** (adj.)
- **hazard(s)** (n.)
- **contaminated** (adj.)
- **contractor(s)** (n.)
- **carpet** (n.)
- **utensil(s)** (n.)
- **assure** (v.)

---

- **cover** (v.)
- **sheetrock** (n.)
- **tile(s)** (n.)
- **hinge(s)** (n.)
- **fume(s)** (n.)
- **dispose** (v.)
- **respirator** (n.)
- **furniture** (n.)
- **drapes** (n.)
- **waste** (n.)
Directions: Review "Ways to Renovate" and answer the following questions.

1. What are three ways to make the lead paint in your home less dangerous?

2. Which two are the safest ways to handle lead paint?

3. How do you dispose of objects with lead paint on them?

4. Which materials are best for covering walls?

5. Which methods do not permanently remove lead paint?

6. What are the most dangerous ways to remove lead paint?

7. Have you ever done any home repairs or renovations? What were they?
Act Out the Scene

**Directions:** Role-play a conversation between a homeowner and a contractor about the removal of lead paint from the home. Refer to “Guidelines for Renovation and Removal of Lead Hazards” below during the role play.

**Guidelines for Renovation and Removal of Lead Hazards***

Ask contractors about their qualifications and experience removing lead-based paint, and their plans to follow these guidelines:

- People living in the house (especially young children and pregnant women) should keep out of the work area until the job is finished.
- People living in the house should remove all food and eating utensils from the work area.
- Contractors should remove all furniture, carpets, and drapes and seal the work area from the rest of the house. The contractor also should cover and seal the floor unless lead paint is to be removed from the flooring.
- Contractors should ensure that workers wear respirators designed to avoid inhaling lead.
- Contractors should not eat or drink in the work area.
- Contractors should cover and seal all cabinets and food surfaces.
- Contractors should clean up dust using special vacuum cleaners.
- Contractors should dispose of lead-based paint waste and contaminated materials in accordance with state and local regulations.
- Contractors should dispose of clothing worn in the room after working. Workers should not wear work clothing in other areas of the house. The contractor should wash work clothes separately.
- Contractors should use a shower, or at least a sink, to clean up after work.

* Adapted from the U.S. Department of Housing and Urban Development prepared guidelines for removing lead-based paint, published in the Federal Register, April 18, 1990.
