Guides - Classroom - Teacher (052)

*Educational Resources; *Elementary Secondary Education; *Federal Programs; *Mathematics Education; National Programs; Regional Programs; *Resource Materials; *Science Education

*Federal Agencies

This guidebook is a comprehensive national directory of federal offices, programs, and facilities supporting K-12 education in the subject areas of mathematics and science. It is intended to inform educators and the public about federally supported resources and to increase access to them. This publication contains information on federal offices and programs at the national and regional levels and also lists state-by-state contacts for many of these resources in regions. Section 1 of this publication identifies contacts for national programs administered by each federal agency or department, while section 2 lists state highlights by region, and alphabetically by state or territory. (ASK)
The Guidebook of Federal Resources for K–12 Mathematics and Science
Dear Reader:

*The Guidebook of Federal Resources for K-12 Mathematics and Science* is a comprehensive national directory of Federal offices, programs, and facilities supporting K-12 education in these subject areas. It is intended to inform educators and the public about Federally supported resources and to increase access to them. This publication contains information about Federal offices and programs at the national and regional levels and also lists state-by-state contacts for many of these resources in your region.

This is the fourth edition of the *Guidebook* prepared by the Eisenhower National Clearinghouse (ENC). Information in this publication is also available in electronic format as part of ENC’s effort to provide online information and resources, including an extensive catalog of K-12 curriculum materials. Distribution of the *Guidebook* will also take place through the Eisenhower Regional Consortia, which work in collaboration with ENC to provide technical assistance and disseminate information to improve mathematics and science education.

This publication is part of an ongoing effort of the Office of Educational Research and Improvement and of the entire U.S. Department of Education to bring about educational reform and answer the President’s Call to Action for American Education in the 21st Century. The Eisenhower National Clearinghouse and Regional Consortia, working together, are a significant force for reaching National Education Goal Five, that American students will be first in the world in mathematics and science achievement by the year 2000.

We believe you will find *The Guidebook of Federal Resources for K-12 Mathematics and Science* to be a valuable tool as you seek ways to enrich students’ learning and to improve their performance in mathematics and science.

Sincerely,

Ronald W. Cartwright
Acting Director
Office of Reform Assistance and Dissemination

WASHINGTON, D.C. 20208-

</table>
The Eisenhower National Clearinghouse for Mathematics and Science Education (ENC) is pleased once again to publish The Guidebook of Federal Resources for K–12 Mathematics and Science. This directory is part of our continuing effort to identify and disseminate information about materials and programs that strengthen mathematics and science education in the United States. Section One of this publication identifies contacts for National programs administered by each Federal agency or department, while Section Two takes a regional approach, listing Federally funded programs in each State and Territory.

Located at The Ohio State University, the Clearinghouse is funded through a contract with the Office of Educational Research and Improvement of the U.S. Department of Education. The major mission of ENC is to provide K–12 teachers with a comprehensive source of information about mathematics and science education. In addition, ENC works closely with the Eisenhower Regional Consortia in the National effort to support systemic educational reform. The Consortia and the Clearinghouse collaborate to identify and distribute curricular materials for K–12 mathematics and science as well as products and services that enhance the professional development of teachers and other educators.

ENC produces a variety of print publications and CD-ROMs available free to educators. In addition, all ENC materials, including this Guidebook, are available through ENC Online, a World Wide Web site accessible via the Internet and by modem through a toll-free number. For details on how to receive ENC publications or how to access ENC Online, refer to the following pages.

I wish to thank the representatives of the Federal agencies and the Regional Consortia who provided information included in this Guidebook. I also wish to acknowledge the support provided by Aspen Systems Corporation and the work of the ENC Publications team who made this edition of The Guidebook possible.

Len Simutis, Director
Eisenhower National Clearinghouse for Mathematics and Science Education
About The Guidebook and ENC

How to Use The Guidebook

The purpose of this Guidebook is to assist educators, parents, and students across the country in attaining the National Education Goals, particularly Goal 5:

By the year 2000, U.S. students will be first in the world in science and mathematics achievement.

The Guidebook is intended to improve educators' awareness of the Federal Government's extensive commitment to mathematics and science education. Sixteen Federal agencies collaborated with the Eisenhower National Clearinghouse (ENC) to produce this publication. Although The Guidebook contains valuable information for anyone involved in mathematics and science education, its focus is on the elementary and secondary levels. Programs described include those that assist students who will go on to study in college or technical school as well as programs intended to improve general mathematics and science literacy.

The Guidebook consists of two sections:

Section One: Agency Overviews

Section One contains general information about each of the 16 agencies. Listed alphabetically, each overview highlights that agency's involvement in mathematics and science education and acquaints readers with agency-specific background information. Also listed are nationwide mathematics and science programs for elementary and secondary education sponsored by each agency. Each entry includes the program name, a brief description, and contact information.

Section Two: State Highlights by Region

Section Two lists, by region, Federally funded programs and resources available in each State and Territory. Each of the ten regional subsections begins with a description of the Eisenhower Regional Consortium serving that part of the country. By referring to the State-by-State listings of facilities and contacts for mathematics and science education, readers can easily discover what resources are available locally.

No one resource can list all Federal education programs, but this directory does provide contacts that can supply additional information. For added convenience, Guidebook contents are also available through ENC Online at http://www.enc.org.

About ENC

The U.S. Department of Education recognizes the efforts expended by mathematics and science educators to develop standards and improve their teaching. The Department also recognizes the need to identify and collect useful materials and to disseminate information about successful programs, especially those emanating from Federal support.

ENC was established in 1992 to provide K-12 teachers with a central source of information about mathematics and science curriculum materials. Since that time, ENC has fulfilled its mission through development of the growing ENC collection of resources. In addition, ENC has gone on to promote excellence in mathematics and science education through the creation of a variety of products and services, described below.

ENC Collection

ENC has acquired and cataloged several thousand items, including print materials, video, audio, graphic images, software, kits, and Internet resources from a variety of sources, including Federal and State agencies, commercial publishers, and professional associations. Materials collected are held in two ENC repositories, one at The Ohio State University in Columbus, Ohio, and one in Washington, DC, in collaboration with The George Washington University. Categories of materials include the following:

- Magnetic and Optical Media such as software, images (e.g., GIF, JPEG, EPS), CD-ROMs, optical and laserdiscs, videotapes, and audiotapes.
- Projected Media such as films, slides, filmstrips, overhead transparencies, microfiche, and microfilm.
- Real Objects such as kits, manipulative materials, microcomputer-based packages and probeware, instructional models, games and simulations, assorted instructional aids (e.g., posters, maps, charts), and laboratory or field equipment.
- Virtual Resources including education materials available on the Internet such as World Wide Web pages, ftp sites, listserv archives, and frequently asked question (FAQ) files.

ENC Resource Finder

Resource Finder, an electronic catalog of K-12 curriculum resources, is designed for teachers who often have limited time and unlimited needs. With input from teachers on types of information they want to see in a catalog record, ENC developed a unique and comprehensive system. Each record has more than 20 fields, including standard library fields—title, author, subjects, publication date, and publisher—as well as fields unique to the needs of educators—grade level, table of contents, evaluation, and resource type.

Catalog entries provide detailed information about resources and enable ready access to materials that enhance classroom activities and support professional development. For example, Resource Finder includes extensive information on:

- Content—ENC's abstracts are detailed and comprehensive, with sufficient information about a resource to help teachers make informed decisions. The abstracts contain information about instructional methods, assessment, intended outcomes, and any special features, including appendices and bibliographies.
- Evaluation—A significant part of ENC's mission is to locate and include evaluative
ENC Online
By accessing ENC Online, users may readily obtain a variety of electronic resources, including the contents of this Guidebook and other ENC publications, the ENC Resource Finder, resources from other education databases, and information and materials on education reform. Anyone with a computer and a modem or Internet access may use ENC Online. (See directions for access on page ix.) The following are just a few of the features of ENC Online:

► Professional Development Exchange is a searchable database with descriptions of professional development activities and opportunities. Anyone who knows of a conference or workshop can enter relevant information into the Exchange. If the activity benefits math and science educators, it will be posted to the public database. Then all Online users can search, using criteria ranging from cost, to State, to activity type, and find activities that best meet their professional development needs. Grants available to educators will also be entered into the Exchange.

► Digital Dozen is a list of exemplary Internet sites chosen monthly. Links to other Web sites with lesson plans and activities are provided. Teachers will also find copies of the latest standards and curriculum frameworks as well as information for their own professional development. Also included are grant opportunities and articles from math and science education journals.

► Innovator of the Month is a section devoted to profiles of creative educators who are trying new techniques, taking risks, and finding success. In reading these monthly stories online, other educators will find the ideas and the support they need to attempt new challenges.

ENC on Disc
CD-ROMs contain thousands of text pages as well as sound, images, and digital video. ENC has created six CD-ROMs as another interactive way to access ENC materials including Resource Finder. The CD-ROM version duplicates the online catalog and can be browsed easily. In addition, the discs contain information on State curriculum frameworks, assessment methods, standards, equity issues, and professional development, as well as materials describing innovative practices in mathematics and science education. The discs also provide curriculum materials that teachers may use in the classroom. ENC distributes one free copy of each CD-ROM to U.S. public schools requesting one on school letterhead.

ENC in Print
In addition to this Guidebook, ENC produces publications for teachers and others interested in education. Publications available free from ENC include:

► ENC Focus, a mini-catalog that pulls together information about a select group of mathematics and science curriculum resources on various topics. Recent issues have featured equity in the classroom, integrating mathematics and science, data analysis, hands-on resources, calculator-active materials, and others.

► ENC Update, a newsletter published three times per school year. Update features information about ENC and promising uses of technology in education.

ENC Reference Staff
The ENC Reference Desk is staffed by professional reference librarians who answer questions concerning curriculum resources and can help educators make the best use of Clearinghouse resources. They can provide assistance with:

► Locating K-12 teaching resources for classroom use.

► Using the ENC Resource Finder.

► Answering other mathematics or science education-related questions.

In addition, ENC Online lets users give feedback or ask questions directly from the Web pages. For example, teachers can go to the ENC Virtual Reference Desk, submit a question, and mail it electronically to ENC librarians. Reference staff will respond within two working days.

ENC Is Always Seeking Math and Science Materials
ENC counts on publishers, Federal agencies, professional organizations, and teachers to assist in the effort to provide broad access to information about curriculum materials. ENC's audience is anyone looking for science and curriculum materials, including:

► K-12 teachers looking for quality materials for their mathematics and science classrooms.

► Library and media specialists searching for mathematics and science materials for clients.

► School administrators and curriculum developers seeking materials that facilitate curriculum reform.

► K-12 students in mathematics and science.

► University faculty conducting research, developing new curricula, and educating preservice teachers.

► Parents and community members interested in mathematics and science resources.

Educators who know of valuable K-12 mathematics and science materials are invited to contact ENC's Acquisitions Coordinator and mention the items they would like to see in the collection. Please provide as much information as possible about the items. In addition, ENC actively seeks information available on the Internet, such as World Wide Web (WWW) sites where educational materials are stored. Educators who maintain such a site or know of one are requested to pass on the information to ENC.
Additional Information
About ENC

Accessing ENC Online

Internet:
Using World Wide Web software, connect to ENC at http://www.enc.org. With an Internet connection, use the telnet command to connect to enc.org and login as guest.

Modem:
With a modem, dial (800) 362-4448 for toll-free access. For direct access, dial (614) 292-9040.

Set communication software to: VT100 terminal emulation. No parity, 8 data bits, 1 stop bit. Once connected, press RETURN or ENTER once to bring up a screen and type c to begin. Login as guest.

General Information
Toll-Free Telephone: (800) 621-5785
Direct Telephone: (614) 292-7784
E-mail: info@enc.org
Fax: (614) 292-2066
Hours: Monday-Friday: 8 a.m.-5 p.m./ET

Technical Help Desk
Toll-Free Telephone: (800) 621-5785
Direct Telephone: (614) 292-9990
E-mail: help@enc.org
Hours: Call the toll-free number for hours when the Technical Help Desk is staffed.

Reference Desk
Toll-Free Telephone: (800) 621-5785
Direct Telephone: (614) 292-9734
E-mail: library@enc.org
Hours: Call the toll-free number for hours when the Reference Desk is staffed.

Acquisitions
Toll-Free Telephone: (800) 621-5785
Direct Telephone: (614) 292-8389
E-mail: submit@enc.org

ENC Demonstration Sites
In collaboration with the Eisenhower Regional Consortia, ENC has established regional Demonstration Sites that provide educators across the Nation a place for hands-on access to ENC online resources. For information about the Consortia, refer to the preface for each region in Section Two of this Guidebook.
Mission

The U.S. Department of Agriculture (USDA) is authorized to provide the leadership, oversight, and management necessary to ensure that the United States has adequate supplies of high-quality food and fiber. The Department supports and conducts a wide range of research, development, extension, and education activities to achieve that mission.

Background

On May 15, 1862, President Abraham Lincoln signed the act creating the U.S. Department of Agriculture. The Department has since helped make American agriculture the most productive in the world, giving the American people the most varied and wholesome food supply for the smallest share of disposable income of any people in the world. On July 2, 1862, President Lincoln signed the Morrill Land-Grant College Act, which established colleges in each State to educate young men and women in agriculture. This Act brought higher education within reach of youth of ordinary means and elevated what had been called "agricultural training" to a scientific enterprise. In 1890, an additional group of 17 Historically Black Colleges and Universities was given land-grant status to enable the Department to serve all populations. The Food and Agriculture Act of 1977 designated USDA as the lead Federal Agency for higher education in these fields.

Role in Mathematics and Science Education

USDA's education efforts have helped produce scientific and nonscientific professionals who have made American agriculture the most effective and efficient agricultural system in the world. The Department has accomplished the transfer of new technologies and scientific knowledge via research agencies, such as the Cooperative State Research, Education, and Extension Service; the Agricultural Research Service; and the Forest Service. USDA is also home to the National Agricultural Library, the largest agricultural library in the world. Other USDA agencies with research and education programs include the Animal and Plant Health Inspection Service, the Agricultural Marketing Service, the Food and Consumer Service, the Foreign Agriculture Service, the Natural Resources Conservation Service, and the National Agricultural Statistics Service.

Elementary and Secondary Education

USDA precollege activities devoted exclusively to mathematics and science are few. However, its Ag in the Classroom Program provides National coordination for States, helping to increase K–12 students' awareness of agriculture's role in the economy and society. USDA's Research Apprenticeship Program annually supports approximately 200 high school students' (primarily minority and female youth) hands-on research experiences with scientists in Federal and university laboratories. Scientific literacy among K–12 students is sustained by support from the many 4-H Youth Development Programs. Teacher enhancement is an integral part of these programs.

Higher Education

Because of the need to ensure an adequate supply of trained scientists and professionals in the food and agricultural sciences, USDA was designated as the lead Federal agency for higher education in these fields. Program areas include agriculture, natural resources and forestry, veterinary medicine, family and consumer sciences, and related disciplines. In response to its congressional mandate, USDA established the Office of Higher Education Programs, which provides National leadership to:

- Achieve and maintain excellence in college and university programs in the food and agricultural sciences.
- Produce outstanding graduates to satisfy the Nation's requirements for scientific and professional expertise.
- Enhance the synergism of research and teaching.

In this respect, USDA supports the development of expertise through both predoctoral traineeships at universities and postdoctoral traineeships in Federal laboratories as mechanisms to train personnel for critical positions with government, academia, and the private sector.

USDA's role in undergraduate education is even more extensive. The Office of Higher Education Programs (HEP) functions primarily as a catalyst to promote excellence in education, working closely with the States, the college and university systems, and the private sector. HEP administers several high-priority programs to enhance the quality of education and to develop outstanding scientific and professional expertise at colleges and universities across the Nation. For example, minority expertise development is funded through the Multicultural Scholars Program, launched in 1994. Institutional enhancement occurs through six grants programs, three formula (Delta Teachers Academy, Tribal Colleges Endowment Fund, and Tribal Colleges Education Equity Grants Program) and three competitive (1890 Institution Capacity Program, Higher Education Challenge Grants Program, and Hispanic-Serving Institutions Grants Program), amounting in fiscal year 1997 to approximately $24 million. Other National projects enhance the development of issues and information and the development of strategic planning.

Public Understanding of Science

USDA fosters public understanding of science through a variety of programs, including an annual Food Safety Campaign, held to coincide with National Consumers Week. Also provided are a Nutrition Education and Training Program and a USDA Meat and Poultry Hotline. In addition, approximately 100 Federal laboratories of the Agricultural Research Service provide tours and open-house activities to educate the general public on new developments in agricultural research.
How Mathematics and Science Education Programs Are Administered

The Under Secretary for Research, Education, and Extension has overall authority for educational initiatives within USDA. Most agencies referenced in this section are under the Under Secretary's direct purview: The Office of Higher Education Programs of the Cooperative State Research, Education, and Extension Service is the operating division most involved with college and university science education. The National Agricultural Research, Extension, Education, and Economics Advisory Board, established by Congress in 1996, advises the Secretary and land-grant colleges and universities on long-term and short-term National policies and priorities relating to the Department's research, education, and economics mission. The Board is made up of members from food and agricultural science organizations, societies, associations, and institutions representing a wide range of interest groups. USDA offers an unparalleled National network for advancing science and education through its Federal laboratories, State Agricultural Experiment Station System, university scientists and educator cooperators, professional staff, and volunteer lay leaders.

Administrative Offices for Mathematics and Science Education

Agricultural Research Service
This service operates approximately 100 Federal laboratories and research centers nationwide and overseas. Scientists at these laboratories are valuable resources for science-enrichment initiatives at the precollege and college levels.

Administrator, Agricultural Research Service
U.S. Department of Agriculture
Room 305-A, Whitten Building
1400 Independence Avenue SW
Washington, DC 20250-2201
(202) 720-4423 / Fax: (202) 720-8987
E-mail: CSREES@reeusda.gov

Cooperative State Research, Education, and Extension Service (CSREES)
CSREES advances science and technology in support of agriculture, forestry, people, and communities in partnership with the State Agricultural Experiment Station System and the State Cooperative Extension System. CSREES also serves as the Federal partner in the Cooperative Extension System, a unique educational partnership with land-grant institutions in each State, territory, and the District of Columbia. The partnership includes more than 130 colleges of agriculture; 59 agricultural experiment stations; 57 cooperative extension services; 63 schools of forestry; Tuskegee University and the other 16 Historically Black Colleges and Universities as designated in 1890; 27 colleges of veterinary medicine; 42 schools and colleges of family and consumer sciences; 29 Native American land-grant institutions, as designated in 1994; more than 160 Hispanic-serving institutions, including some 80 members and 45 associate members of the Hispanic Association of Colleges and Universities. The Cooperative Extension System is a valuable resource for technology transfer and issue identification at all education levels. CSREES administers the 4-H Program, which is one of the largest informal youth development programs in the country. The local county Cooperative Extension Service office can be contacted for more information about education programs. Offices are listed under local government in the telephone directory.

Forest Service
The Forest Service expanded its involvement in conservation education in 1990 by launching the Natural Resource Conservation Education Program (NRCEP), which was developed to help implement the Environmental Education Act of 1990. The program was established service-wide to strengthen natural resources education efforts. It is jointly sponsored by the Forest Service and the National Association of State Foresters. Its primary objective is to support a lifelong learning process that promotes the understanding of natural resources and ecosystems—their interrelationships, conservation, use, management, and values to society. NRCEP works with partners to jointly sponsor conservation education projects throughout the Nation. These joint projects combine Federal, State, local, and private funds to increase the money available for conservation education programs. Some of the current National NRCEP projects include: Project Learning Tree, National Children's Forests, Investigating Your Environment, Girl Scouts of the USA, and Boy Scouts of America. The NRCEP office can be contacted for more information about education programs.

Office of Civil Rights Enforcement (OCRE)

National Programs for K-12 Education

4-H/Honda Mentorship Project
This project provides an opportunity for teams of teenagers to work with adult mentors in hands-on problem-solving experiences in engineering at Honda's technical training sites across the country. The curriculum includes working as a team and managing time and resources to solve science-related problems.

Director, National 4-H Council
7100 Connecticut Avenue NW
Chevy Chase, MD 20815
(301) 961-2853

4-H Missions in Space Program
This partnership between National 4-H and the Alabama Space Science Exhibit Commission encourages youth to attend the Space and Rocket Center in Alabama and the Astronaut Hall of Fame in Florida. Space Camp allows students to participate in a variety of science and technology activities. Scholarships are available to assist underrepresented youth.

Extension 4-H Specialist, ACES-4-H
211 Duncan Hall
Auburn University, AL 36849-5620
(205) 844-2233

4-H Regional Leadership Centers
Designed to complement the National Network for Action in Science and Technology, Regional Leadership Centers train community-based teams in informal science education and are responsible for keeping these teams up to date on new programs. Regional Centers are currently operating in California, Georgia, Missouri, and New York.

Coordinator, National Network for Action and Science Technology
6H Berkey Hall
Michigan State University
East Lansing, MI 48824-1111

University of California at Davis
300 Lakeside Drive
Davis, CA 95616
(916) 752-8824

4-H Science Experience and Resources for Education Settings (SERIES) Program
The National 4-H SERIES Program increases both the quantity and quality of science experiences available to students in a way that promotes a greater understanding of science. SERIES trains teenagers as science coaches for youth ages 9-12. Teens also work under the mentorship of practicing scientists, explore possible career opportunities in science and technical fields, and participate in community service. Training for SERIES is conducted through the four Regional Leadership Centers.

Project Director, 4-H SERIES
Division of Agriculture and Natural Resources
University of California at Davis
300 Lakeside Drive
Davis, CA 95616
(916) 752-8824

4-H Youth Development Programs
Under the Cooperative State Research, Education, and Extension Service, these programs spark interest in mathematics and science among American youth. The purpose of the programs is to complement classroom education with informal, experiential education in community settings. Approximately six million youth, ages 5-18, participate in school enrichment programs, clubs, and special events. The 4-H organization receives substantial support from volunteers and private-sector contributors. Each State has a 4-H State Leader who can provide more information about 4-H activities.

National Program Leader

Ag in the Classroom
This program helps students gain a greater understanding of agriculture's role in the economy and society, and informs students about career opportunities in food and agricultural sciences. While the Department of Agriculture provides National leadership, each State develops its own programs in cooperation with agribusiness, education, and government. Information about State programs is available through the Washington, DC office. The Ag in the Classroom State Leader can provide details on State-level programs and materials.

Director, Ag in the Classroom
U.S. Department of Agriculture
Room 4309, South Building
Washington, DC 20250-0991
(202) 720-5727 / Fax: (202) 690-0062
E-mail: ewolanyk@reesusda.gov

Black Emphasis Program
This program develops academies that focus on African-American males at the middle school level. The academies provide students with early science experiences, mentors, and role models to enhance self-confidence and to develop an interest and desire to achieve in science-related fields. Academies are funded through two Historically Black Colleges and Universities.

Black Emphasis Program Manager

Infusing Aquaculture into Agriculture Education
Through congressional appropriations in 1990-1995, USDA initiated a pilot program, Infusing Aquaculture into Agriculture Education, to develop materials, conduct field tests, and provide training in aquaculture for selected teachers across the country. The 1,100-page, five-volume curriculum is proving valuable in teaching high school students the principles of science and mathematics related to aquatic organisms. The program is being adapted by some schools for middle school and elementary students.

National Network for Action in Science and Technology
The National Network creates a stronger link of land-grant colleges and universities that provides technical assistance to the Federally-funded sites for at-risk children, youth, and families. The Network provides trainers with the information and skills necessary to return to their local communities and train others to implement science and technology curricula and processes. In addition, trainers learn how to recruit participants, promote programs, and establish advisory and planning groups.

Coordinator, National Network for Action and Science Technology
6H Berkey Hall
Michigan State University
East Lansing, MI 48824-1111
(517) 355-0180
Research Apprenticeship Program
This program provides summer employment in university and Federal research laboratories for high school students who exhibit strong mathematics and science aptitude. One-fourth of the students receive Federal support; the remainder are supported by State and private funds leveraged by the Federal partner. Many research apprentices are females or minorities. Participants interact directly with scientists at USDA laboratories and gain valuable experience in agricultural science.

Rosanna Taylor, Manager
U.S. Department of Agriculture
Office of the Administrator, Special Programs
Room 3552-S
1400 Independence Avenue SW
Washington, DC 20250-0301
(202) 720-3511

Research Apprenticeship Program for Minority High School Students
This program provides summer employment for minority high school students with strong scientific aptitude. Participants also have the opportunity to interact with research scientists and gain firsthand experience in a research environment at selected university laboratories.

Coordinator, 1890 Programs
U.S. Department of Agriculture
Cooperative State Research, Education, and Extension Service

SPACES: Preparing Kids for a High-Tech and Global Future
SPACES is an informal, community-based science education program that uses hands-on techniques to prepare students for the global, high-tech society of the future. This programming framework shows how to set up a science education program for children ages 5–14 and how to involve community scientists, technicians, and others with science and technology expertise. The program focuses on aerospace, the environment, and relationships. Extensive curriculum support is available.

Teachers' Research Fellowship Program
This program offers temporary employment to mathematics, biology, or physical science teachers at the junior or senior high school level. Teachers work under an Agricultural Research Service scientist on specific research problems tailored for completion within a set time period. The program provides teachers with firsthand agricultural and food-related research experience that can be transferred to the classroom.

Rosanna Taylor, Manager
U.S. Department of Agriculture
Office of the Administrator, Special Programs
Room 3552-S
1400 Independence Avenue SW
Washington, DC 20250-0301
(202) 720-3511

Youth Conservation Corps
This summer employment program is offered by the Departments of Agriculture and the Interior. Students ages 15–18 work on projects to further the development and conservation of U.S. natural resources. Work projects are planned, directed, and executed to give the enrollees an understanding of their tasks and of how their work contributes to environmental enhancement.

Director, Human Resources Programs

Mission

The U.S. Department of Commerce (DOC) encourages, serves, and promotes the Nation's international trade, economic growth, and technological advancement. Within this framework, and with a policy of promoting the National interest through the encouragement of a competitive free enterprise system, the Department provides a wide variety of programs.

Background

The Department was established by Congress in 1913 through a reorganization of the Department of Commerce and Labor, which had been created in 1903. Today, DOC has 13 agencies in areas such as international trade, technology, the oceans and the atmosphere, economic and social data, travel and tourism, patents and trademarks, and telecommunication.

Role in Mathematics and Science Education

The National Institute of Standards and Technology and the National Oceanic and Atmospheric Administration have missions that involve scientific research and technical applications, and, therefore, have the greatest role in science and mathematics education within DOC.

Elementary and Secondary

Most DOC precollege activities consist of voluntary outreach by the professional staff or cooperative efforts with other organizations, with minimal direct funding available.

Higher Education

DOC has developed a cooperative education program to provide work-related educational opportunities to students, as well as graduate and postdoctoral fellowships.

How Mathematics and Science Education Programs Are Administered

DOC agencies that offer education programs self-administer their respective programs.

Administrative Offices for Mathematics and Science Education

National Institute of Standards and Technology, Office of International and Academic Affairs / Postdoctoral Programs
As the National laboratory for measurement science and engineering, with emphasis on state-of-the-art research, the National Institute of Standards and Technology maintains a strong program of postdoctoral education. The Institute sponsors numerous postdoctoral research fellowships in collaboration with the National Research Council of the National Academy of Sciences.

Dr. Jack Hsia / Joy Brooks, Academic Affairs Room A505, Administration National Institute of Standards and Technology Gaithersburg, MD 20899 (301) 975-3071 / Fax: (301) 975-3530 E-mail: v.brooks@nist.gov

Kimberly J. Goode, Student Coordinator National Institute of Standards and Technology Office of Personnel and Civil Rights Administration Building, Room A123 Gaithersburg, MD 20899 (301) 975-3026

The National Oceanic and Atmospheric Administration (NOAA)

National Sea Grant Program-NOAA
NOAA's National Sea Grant Program, in conjunction with 29 universities and institutions, promotes a strong educational base through a network of more than 300 university and marine research institutions. Sea Grant reaches its audiences through workshops, conferences, brochures, videotapes, films, radio shows, newsletters, and local education programs. For more information about a nearby Sea Grant institution, contact the National Sea Grant Office.

National Weather Service-NOAA
The National Weather Service supports educational programs developed by a wide variety of outside organizations. Examples are the American Meteorological Society's Project Atmosphere, the Weather Channel's Weather Classroom, and the NBC/WRC-TV project to develop public access to earth and space science data visualizations via TV and the Internet. Project Atmosphere prepares teachers to be Atmospheric Education Resource Agents so that they can act as a bridge between meteorologists and teachers in the classroom. The Weather Classroom, which is on the air ten minutes each day Monday through Friday, has a companion textbook. A series of publications on severe weather are being distributed to schools and the public to increase awareness and use of the National Weather Radio Service.

NOAA Office of Public and Constituent Affairs

This office has a limited number of publications suitable for classroom instruction that teachers can request by mail. Some of these titles are also available on the Internet. Users can access information online by typing "Telnet gopher.esdim.noaa.gov" at the Internet prompt, logging in as "gopher" and selecting "Connection to NOAA's Online..."
include graduate education and research apprenticeships, undergraduate education, K–12 teacher science skills, and public outreach.

**National Sea Grant College Program**

Global Change Education Program consists of "Training the Trainer" workshops for informal educators, NOAA employees, and local extension leaders. Workshop topics include natural variability, greenhouse/sea level rise, ozone depletion, resource consumption, and decision making under "scientific uncertainty."

The Operation Pathfinder Program consists of two-week summer courses that present an introduction to oceanographic and coastal processes. Courses are available in six regions and are designed to enhance skills in science teaching.

E-mail: Shirley.Fiske@noaa.gov

**NOAA National Environmental Satellite, Data, and Information Service (NESDIS)**

The primary educational goal of NESDIS is to enable teachers to access and interpret satellite imagery for use in teaching the Earth sciences. Data can be accessed either by direct readout from orbiting satellites or via the Internet service called the Satellite Active Archive (SAA). Imagery can be browsed, and then downloaded in limited quantities. A new initiative of the SAA is the creation of learning modules on satellites, remote sensing, and applications of satellite data, including imagery interpretation. NESDIS also provides information on ordering archived satellite data. Scientists in NESDIS help teachers learn how to interpret satellite imagery for applications in the atmospheric, marine, and terrestrial sciences. They give presentations at teacher conferences, conduct courses for groups of teachers near NESDIS facilities, and even give individual advice when possible.

**NOAA National Weather Service (NWS)**
The primary mission of the NWS is the protection of life and property and the enhancement of the National economy. To fulfill this mission, the NWS issues forecasts and warnings to minimize the impact of severe weather on the public and on commercial enterprises. The NWS produces a number of informative materials designed to prepare the public for severe weather conditions. Publications prepared in cooperation with the American Red Cross highlight the science and safety aspects of severe weather such as hurricanes, tornadoes, thunderstorms, flash floods, and winter storms. In partnership with the American Meteorology Society, the NWS has developed a program to educate teachers in the sciences of meteorology and hydrology. This program, Project Atmosphere, provides two-week summer workshops for teachers at several NWS training and research locations. At each field office, the NWS has designated a Warning Coordination Meteorologist and a Science Operations Officer to interact with local community members, including the general public, emergency managers, educators, and the media.

**Office of Ocean and Coastal Resource Management (OCRM)-NOAA**
The National Marine Sanctuary Program and National Estuarine Research Reserve System are two programs within OCRM, which fulfill the office's mission of achieving sustainable use of our Nation's coastal and ocean resources as well as maintenance of marine and coastal biodiversity in special areas through long-term comprehensive management and protection. Both programs offer education programs that interpret ongoing site-specific research as well as promote public awareness, understanding, appreciation, and wise use of coastal and marine environments. Site programs are as varied as the coastal resources and range from hands-on studies of the coastal ecology and geology for high school students to community workshops for specific resource users.

**NOAA National Education Program**

Education and outreach for the general public include research opportunities for scientists and education for the general public about marine resources. Educational activities and programs help parents and students learn how to interpret weather imagery for use in teaching the Earth sciences. Data can be accessed either by direct readout from the Internet service called the Satellite Active Archive (SAA). Imagery can be browsed, and then downloaded in limited quantities. A new initiative of the SAA is the creation of learning modules on satellites, remote sensing, and applications of satellite data, including imagery interpretation. NESDIS also provides information on ordering archived satellite data. Scientists in NESDIS help teachers learn how to interpret satellite imagery for applications in the atmospheric, marine, and terrestrial sciences. They give presentations at teacher conferences, conduct courses for groups of teachers near NESDIS facilities, and even give individual advice when possible.
To carry out these strategies, the United States must have a supply of scientists and engineers that meets the National need. For DoD, demand for scientists and engineers includes those for civilian employees of the Department, military personnel, and defense contractor employees. DoD sponsors a wide range of educational programs to improve the quality of the pool of personnel from which scientists and engineers can be drawn and in this way to help ensure that science and engineering requirements are satisfied.

The Department directly employs more than 100,000 scientists and engineers, approximately 3 percent of the National pool. Of this number, approximately 25,000 are engaged in research and development in the Department's laboratories and centers.

More than 200 separate programs use a wide variety of approaches and methods to enhance science and engineering education at different educational levels. At the upper level, college and university professors guide advanced research and development efforts for specific DoD projects. Lower level programs include sponsorship of elementary and secondary school science fairs, provision of tutoring and mentorship for students, and demonstrations and laboratory tours that stimulate interest in science and engineering. Many programs award scholarships, assistantships, and fellowships.

Elementary and Secondary Education
Precollege programs range from short exposure tours, seminars, and science fairs to intensive tutoring and summer experience programs. The most effective programs are those, such as the High School Apprenticeship Programs, that encourage an interest in and cultivate enthusiasm for science and engineering careers and provide the necessary guidance.

Higher Education
DoD support in the areas of science and engineering education includes undergraduate Reserve Officer Training Corps scholarships, graduate fellowships, National defense-related research conducted by graduate students, and programs designed to enhance recruitment and retention of civilian employees in science and engineering career fields.

Effective recruiting programs include career intern programs, which recruit students from college campuses for an accelerated promotion track and advanced education opportunities. The Co-op Program provides students with early exposure to the work environment and helps foster understanding of Federal job opportunities among students and college personnel. Postdoctoral research associateships provide a continuing supply of well-qualified graduate scientists and engineers for conducting research in DoD laboratories or in universities through grants and contracts.

DoD's Research Office provides opportunities for graduate students to work with university faculty members and explore topics of interest to the Department. Fellowship opportunities are also provided through DoD laboratories, which may, upon degree completion, provide the recipient with employment opportunities.

How Mathematics and Science Education Programs Are Administered

In 1991 the Department of Defense Authorization Act directed the Secretary of Defense to designate an individual within its Office to act as an adviser on science, mathematics, and engineering education. As such, the Director of Defense Research and Engineering (DDR&E) has been identified as the individual responsible for implementing scientific, mathematic, and engineering educational improvement programs within DoD.

The structure for managing science and engineering educational activities within DoD consists of three elements. The DDR&E provides leadership. A Science and Engineering Education Panel (SEEP) serves as a review and advisory body to provide continuous oversight of and coordination among the military departments and defense agencies. Lab directors, program directors, and other managers within DoD components execute science and engineering education activities within their organizations.

national programs for k–12 education

high school science and mathematics summer faculty (hssmf) program

The HSSMF Program is part of the Scientific Service Program (SSP) contract awarded to and administered by Battelle. The program is sponsored by the Department of the Army through the U.S. Army Research Office (ARO) and by participating Army laboratories and centers. Its primary objective is to enable participating high school faculty to use their personal exposure to research and development activities at Army laboratories to enhance their research and teaching skills and to encourage high school students to undertake careers in science and mathematics.

Applicants must be U.S. citizens and faculty members of accredited high schools or accredited secondary schools from the seventh through the twelfth grades. They must teach one or more of the following disciplines: mathematics, physics, general science, engineering, chemistry, psychology, computer science, and biology. Awards are made to the most deserving applicants. Selected candidates receive a stipend of $600 per week for a maximum of 10 weeks during the summer.

candidates must live within commuting distance of the assigned laboratory or center.

junior science and humanities symposium (jshs) program

JSHS Program objectives are to:

- Promote research and experimentation in the sciences, mathematics, and engineering at the high school level.
- Recognize the significance of research in human affairs and the importance of humane and ethical principles in the application of research results.
- Search out talented youth and their teachers, recognize their accomplishments at symposia, and encourage their continued interest and participation in the sciences, mathematics, and engineering.
- Expand the horizons of research-oriented students by exposing them to opportunities in the academic, industrial, and governmental communities.
- Increase the number of future adults capable of conducting research and development.

A typical symposium is held in an academic setting where attendees benefit from an active exchange of ideas with professionals and with their peers. They hear lectures from distinguished scientists and observe ongoing research projects in university, Army, or corporate laboratory settings. Selected students also have the opportunity to present the results of their original research before the audience. More than 8,000 students and teachers participate annually in 47 regional symposia held throughout the United States, Europe, Japan, and Puerto Rico.

national science center (nsc)

The National Science Center (NSC) and its multifaceted programs are supported by the United States Army. Programs are designed to increase interest in science, mathematics, and technology among students; to improve skills of teachers; and to provide mathematics and science education support in the classroom. The Center provides hands-on workshops for teachers in science, mathematics, electronics, and computers; it also offers camps nationwide in the same subjects for students. Portable planetariums for instruction in space science, astronomy, geography, and biology are available on loan to teachers who have been certified through the Center's comprehensive training program. In addition, SNC operates a discovery center that offers interactive experiences with scientific exhibits to school groups and the general public. Mobile versions of the discovery center travel nationwide. NSC also reaches out Nationally with satellite teleconference programs on science education and with a Science-by-Mail program that encourages pen pal relationships between students and scientists.

naval science awards program

The Navy and Marine Corps participate each year in district, regional, and State science and engineering fairs that exhibit various projects submitted by students in grades 9–12. At each participating fair, four students whose projects are considered to demonstrate excellence in any field of endeavor, not necessarily military or nautical, are designated as first-place Navy/Marine Corps Distinguished Achievement Award Winners. The students receive a certificate, a programmable scientific calculator, and an invitation to submit a written report of their winning project to the National Naval Science Award Program Competition held in May. Approximately 25 winners of this competition are awarded scholarships and science-oriented trips. The Navy and Marine Corps also participate in the annual International Science and Engineering Fair (ISEF), sponsored by Science Service, Inc., and award scholarships in each of the scientific disciplines. Award recipients must be citizens of the United States or its territories at the time of their selection.

navy community service program (ncsp)

The NCSP is a worldwide program that encourages Navy military and civilian employees to volunteer their time and talent to help educate and encourage youth to develop social responsibility, fitness, and nat-
ural resource stewardship. The Navy currently participates in several hundred volunteer partnerships with schools. These arrangements provide tutoring, mentoring, and other community-based projects. Projects are geared toward, but not limited to, strengthening student skills in mathematics, science, engineering, and environmental conservation. See the State Highlights section of this publication for regional NCSP offices.

Research and Engineering Apprenticeship Program (REAP)
REAP was initiated in 1980 to encourage socially and economically disadvantaged youth to pursue studies in science and engineering. The REAP experience provides a cooperative education (work/study) program that affords hands-on experience in Army research and development activities to high school students who may choose to enter and complete basic education in science and engineering. High school students are accepted for apprenticeships at universities under mentorship of a university faculty member. The students are paid during work periods ranging from four to 13 weeks and work directly under a mentor scientist or engineer who provides guidance on day-to-day job activities and information on career opportunities in science and engineering.

Science and Engineering Apprentice Program (SEAP)
This program, coordinated and administered by The George Washington University (GWU), places academically talented high school students with interest and ability in science and mathematics as apprentices in more than 40 DoD research activities for eight weeks during the summer. These students work with scientists and engineers who act as mentors. Participating laboratories are encouraged to give special consideration to females and to members of underrepresented minority groups. Specific minority programs are held on the GWU campus in the summer. See the State Highlights section of this publication for participating activities.

Mission

The mission of the U.S. Department of Education (ED) is to ensure equal access to education and to promote educational excellence throughout the Nation. The Department has four major responsibilities:

- To collect data and oversee research on America's schools and to disseminate this information to educators and the public.
- To identify and focus National attention on major issues and problems in education.
- To enforce Federal statutes prohibiting discrimination in programs and activities receiving Federal funds and to ensure equal access to education for everyone.
- To establish policies relating to Federal financial aid for education, to administer distribution of those funds, and to monitor their use.

Background

Originally created as a non-Cabinet-level Department in 1867, it soon became the Office of Education, where for more than a century it served primarily to collect information and statistics about the Nation's schools. In the late 1950s the Office's mission was expanded when concerns about the quality of education led to the creation of various programs to improve it. These programs were increased in the 1970s to support National efforts to help students gain equal access to quality education. In October 1979, Congress passed Public Law 96-88, creating the current U.S. Department of Education.

Role in Mathematics and Science Education

The Department of Education provides resources to increase opportunities for students to learn mathematics and science. ED also supports research and assistance programs to improve mathematics and science education, collects data on student learning, and conducts studies on the condition of science and mathematics education.

ED's role is broadly based and connected to every level of formal education. The Department's programs reach nearly every school system and postsecondary institution. These programs support mathematics, science, and technical education for the disadvantaged and handicapped and students for whom English is not the primary language. The Department also supports the integration of science and mathematics learning with vocational and technical education. However, since most of ED's funds are allocated by formula, the actual amount expended on mathematics and science education is often determined by the grant recipient.

With the passage in 1994 of the Educate America Act: Goals 2000, which calls for States and school districts to develop systemic plans for educational reform, ED expects that mathematics and science activities will be increasingly integral to the new reforms. Also, passage of the Improving America's Schools Act of 1994 expanded the scope of the ED-funded Eisenhower Program to all of the core academic subjects, which serves to integrate mathematics and science activities to a greater degree with other subjects.

Elementary and Secondary Education

Approximately 95 percent of direct ED mathematics and science programs serve the precollege level. The Department aims to provide a balanced portfolio of programs that will benefit teachers, students, and schools at all educational levels. The cornerstone of ED's efforts is the Eisenhower Mathematics and Science Education State Grant Program, which is the largest single K-12 mathematics and science program supported by any Federal agency.

Higher Education

Most ED postsecondary education funds are allocated through grants or individual student financial aid. While many programs support opportunities to learn mathematics and science, only a few programs, such as the National Science Scholars Program, are directly targeted at these subjects; other postsecondary programs address broader educational purposes.

How Mathematics and Science Education Programs Are Administered

ED does not have a single major operating unit specifically charged with overseeing mathematics and science education. Rather, it is organized by educational level (elementary and secondary education and postsecondary education) and particular educational concern (e.g., educational research and improvement, and vocational, bilingual, and special education). Mathematics and science education activities are carried out within these larger units.

Administrative Offices for Mathematics and Science Education

Office of Educational Research and Improvement (OERI)

OERI supports and conducts research on education, collects and analyzes education statistics, disseminates information, and supports and improves library education and services. The Eisenhower National Program specifically supports mathematics and science. In general, however, mathematics and science are part of the broader OERI educational mission.

Office of Educational Research and Improvement
Office of Reform Assistance and Dissemination

555 New Jersey Avenue NW
Washington, DC 20208-5645
(202) 219-2116 / Fax: (202) 219-2053

Office of Elementary and Secondary Education (OESE)

OESE supports elementary and secondary education through such programs as the Eisenhower Professional Development Program, which supports sustained and intensive high-quality professional development in the core academic subjects, including mathematics and science. Other programs within OESE, such as
Title I, Compensatory Education, have a broader educational mission and also support professional development.

E-mail: Christine_Jackson@ed.gov or Audrey_Smith@ed.gov

Office of Postsecondary Education
The Office of Postsecondary Education supports postsecondary education through Federal student aid and programs in higher education, including international education, Historically Black Colleges and Universities, and accreditation. Although most of the programs do not specifically target mathematics and science education, they may be used to support those content areas.

Center for Research on the Education of Students Placed at Risk
This project develops programs for elementary school math, science, and social studies that are based on the premise that children are active constructors of knowledge. These programs emphasize discovery, experimentation, cooperative learning, and open-ended problem solving. They are being developed and evaluated in high-poverty urban and rural schools.

Eisenhower Professional Development Federal Activities Program
Under legislation passed in 1994, the Eisenhower Program was expanded to cover all core academic subjects. The Eisenhower Professional Development Federal Activities Program currently focuses on projects that seek to transform the education system to achieve high standards of student performance through systemic reform. The Eisenhower National Clearinghouse and the Eisenhower Regional Consortia, which are described in this section, illustrate activities supported by the program. Discretionary grant competitions will be held annually depending on availability of funds.

ERIC (Educational Resources Information Center)
ERIC is an international information network that acquires, catalogs, and provides access to educational literature. The ERIC system comprises 16 subject-specific clearinghouses; a central processing and reference facility; a document reproduction service; and ACCESS ERIC, a one-stop contact point for new users of the system. To learn more about ERIC, contact ACCESS ERIC at (800) LET-ERIC.

The ERIC Clearinghouse on Mathematics, Science, and Environmental Education, located at The Ohio State University, acquires, selects, and processes high-quality printed materials (such as reports, curricula and instructional materials, evaluations, and information on programs, practices, and policies) in science, mathematics, and environmental education. The Clearinghouse provides a variety of services and products to help educators, administrators, researchers, and others stay current on a broad range of issues. It provides reference and referral services in science and mathematics and maintains partnerships for the exchange of information with numerous other organizations. It also produces publications, bibliographies, ERIC Digests, syntheses, and summaries on mathematics and science topics, and compilations of promising programs and practices.

Field-Initiated Studies Program
ED, through OERI, funds educational research projects proposed by individuals; institutions of higher education; and public and private institutions, organizations, and agencies. Applicants propose research topics related to OERI's five National institutes:

National Institute on Early Childhood Development and Education
Attention: Joseph Caliguro
(202) 219-1596

National Institute on Education of At-Risk Students
Attention: Beth Fine
(202) 219-1315

National Institute on Governance, Finance, Policy-Making, and Management
Attention: Edward Fuentes
(202) 219-2032

National Institute on Postsecondary Education, Libraries, and Lifelong Learning
Attention: Delores Monroe
(202) 219-2229

National Institute on Student Achievement, Curriculum, and Assessment
Attention: Clara Lawson-Copeland
(202) 219-2028

To contact a specific institute, include the appropriate "attention" information provided above. One application package contains information regarding all five institutes. To request an application, write to:

Field-Initiated Studies Program
Office of Educational Research and Improvement
U.S. Department of Education
555 New Jersey Avenue NW, Room 620
Washington, DC 20208-5331
E-mail: fis@inet.ed.gov

Fund for the Improvement of Education
This fund supports Nationally significant programs to improve the quality of education, assist all students to meet challenging State content standards, and contribute to the achievement of the National Education Goals.

Lois N. Weinberg
Office of Educational Research and Improvement
U.S. Department of Education
555 New Jersey Avenue NW, Room 502h

National Assessment of Educational Progress (NAEP)
NAEP has measured the educational achievement of American students for more than two decades. Its 1996 mathematics and science assessments of fourth, eighth, and twelfth graders featured several testing innovations. In mathematics and science, students devoted more than half their time to "constructed response" questions that may have included extended problem solving. The science assessment contained a hands-on task for all students, a study of portfolios for fourth and eighth graders, and an assessment of the best twelfth graders. The math assessment measured students' estimating skills, allowing them to use calculators more often than in the past. Results from the 1992 NAEP math assessment are available from the National Center for Educational Statistics at OERI.

(202) 219-1761

National Education Longitudinal Study of 1988 (NELS:88)
Through NELS:88, the National Center for Educational Statistics is following a sample of 25,000 eighth graders on a two-year cycle. Individual cohort members (including dropouts in the follow-ups) were surveyed in 1988, 1990, and 1992, along with their parents, principals, and teachers. These same members were resurveyed in 1994. To allow researchers to examine cognitive growth over time, test data in mathematics, science, reading, and social studies also were collected from members. Other data collected by NELS:88 include enrollment patterns in mathematics and science courses, student attitudes toward those subjects, instructional practices used by their teachers, and high school transcripts.

**National Research and Development Center on Achievement in School Mathematics and Science**

This center is one of seven National education, research, and development centers supported by ED. The research projects at the core of the Center’s activities are organized around five thematic elements: modeling, argument and thematic elements: modeling, argument and assessment. Studies are carried out as part of design collaboratives, in which researchers work with teachers and schools at the elementary, middle, and high school levels. The goal is to design and implement "test beds" to support the development and validation of practices leading to higher levels of achievement for all students.

**National Science Standards**

The National Research Council of the National Academy of Sciences, with a grant from the Eisenhower National Program, developed science content standards that specify what students are expected to learn in grades K–12. Teachers and other science educators, scientists, and the general public were extensively involved by reviewing and refining the standards. More than 80 organizations served as liaisons to the project. Draft content standards were distributed in late 1994. Separate working groups, funded by a coalition of other Federal agencies, are developing teaching and assessment standards in close cooperation with those who developed the content standards. A complete set of the final standards—content, teaching, and assessment—was disseminated in late 1995. (The National Council of Teachers of Mathematics has already developed mathematics standards that are in use across the country.)

Washington, DC 20418
(202) 334-3417

**Regional Educational Laboratories**

Through the Office of Educational Research and Improvement, ED funds a network of 10 regional educational laboratories, each serving a specific region of the United States, including its territories. The laboratories identify effective teaching techniques and school improvement efforts within their regions, provide technical assistance, and share information with State and local educators through newsletters, research syntheses, conferences, and the electronic media. As part of their overall program, which is not subject-matter specific, the laboratories have undertaken an initiative to improve mathematics and science education. They are collecting, analyzing, and synthesizing information about curriculum frameworks, performance assessment methods, and successful mathematics and science programs and practices.

(202) 219-2187 / Fax: (202) 219-2106

**Regional Technology in Education Consortia (R*TEC)**

ED, through OERI, established the Regional Technology in Education Consortia (R*TEC) program in the fall of 1995 to help States, districts, schools, adult literacy centers, and other educational institutions use advanced technology to support improved teaching and student achievement. The R*TECs’ role in educational technology is unique in two ways: their emphasis is regional, and their primary goal is to ensure that technology is used effectively to support school reform. Program strategies include professional development, technical assistance, and information dissemination. The R*TECs work in a complementary and collaborative way with technical assistance providers funded by ED—such as Comprehensive Regional Assistance Centers, the Eisenhower Regional Consortia for Mathematics and Science Education, and the Regional Educational Laboratories—and with other nationwide educational technology support efforts, such as TechCorps.

Catherine Mozer Connor, Project Officer
Office of Educational Research and Improvement
U.S. Department of Education

**Teacher Networking Project**

Curricula, classroom teaching, and teacher professional development will be enhanced through online use of electronic teacher networks and shared knowledge in programs supported by more than $1.8 million in grants from ED. The networks link teachers with specialists who can help them improve their skills and knowledge of subject matter. Fifteen grants have been given to projects in 13 States, including an American Indian Nation, a State university research foundation, two regional educational laboratories, a private agency, and both rural and urban schools and school districts. Projects include teacher mentoring activities and development of curriculum materials for electronic networking.

E-mail: tcoles@inet.ed.gov

**Third International Mathematics and Science Study**

The National Center for Educational Statistics is conducting the U.S. portion of the Third International Mathematics and Science Study being coordinated by the International Association for the Evaluation of Education Achievement. The study will measure student achievement in mathematics and science in more than 40 countries. In 1995, each country assessed fourth, eighth, and twelfth grade students and twelfth grade specialists in mathematics and science. The study focuses on student proficiency and also includes performance assessments, a videotape study of instructional practices, and case studies of key policies and issues in education. Teachers, school, home, and societal factors will provide a context in which to gauge student achievement and differences among countries.

Mission

The Department of Energy (DOE), in partnership with our customers, contributes to the welfare of the Nation by providing the technical information and the scientific and educational foundation for the technology, policy, and institutional leadership necessary to achieve efficiency in energy use, diversity in energy sources, a more productive and competitive economy, improved environmental quality, and a secure National defense.

Background

DOE was created in 1977 by the Department of Energy Organization Act, which consolidated into one Cabinet-level department the responsibilities previously carried out under the Atomic Energy Commission, the Energy Research and Development Administration, several other small, independent energy-related agencies and offices in other Federal departments. DOE and its contractors employ approximately 146,000 men and women, more than one-third of whom fill positions in DOE's scientific, engineering, and technical workforce. In addition to DOE's Headquarters components, the Department has an extensive field structure of National laboratories, research facilities, regional operations and support offices, and regional power administrations that are dispersed across urban and rural areas of the United States.

Role in Mathematics and Science Education

In recognition of its need for well-educated, highly skilled scientific and technical personnel to carry out its basic research and development and operational missions, DOE has made education an essential part of its mission. DOE provides opportunities for students and faculty to use its laboratories and facilities for hands-on research experiences. DOE supports the National effort to improve science education for all students through local and regional educational partnerships. DOE promotes increased participation of traditionally underrepresented populations in mathematics, science, engineering, and technology in the Department's education programs and partnerships.

Elementary and Secondary

DOE utilizes the unique scientific and technical resources of its laboratories through local and regional education partnerships with urban and rural school districts, businesses, and industry. These partnerships introduce new approaches to teaching science and mathematics and contribute to systemic improvement in science, mathematics, engineering, and technology education.

Higher Education

As part of a continuum of efforts to keep students in the science pipeline, DOE supports undergraduate, graduate, postgraduate, and faculty-level science education programs, including those that encourage students from underrepresented groups to pursue scientific and technical studies and participate in cutting-edge research. These activities include research participation appointments, fellowships, faculty institutes and workshops, conferences, and visiting staff lectures.

How Mathematics and Science Education Programs Are Administered

DOE educational programs are administered by the Office of Science Education and Technical Information through its 10 National laboratories, more than 30 specialized research facilities, and area, field, regional, and operation offices. Each facility conducts its own education programs and makes its resources available to precollege and university faculty and students. Each center plans and administers a range of precollege and university science education programs that vary according to laboratory specialization and local needs. The programs place special emphasis on providing students and their teachers with hands-on experiences in cutting-edge science and technology.

National Institute for Petroleum and Energy Research (NIPER)
NIPER was established in Bartlesville, Oklahoma in 1918 as a research laboratory to aid the development of the region's oil and gas industry. NIPER's efforts are currently...
focused on supporting the U.S. Department of Energy's National Oil Program. Research, development, and technology transfer programs at NIPER aid independent operators in applying methods to sustain production of oil and gas from domestic reservoirs and to provide reliable data for processing heavy crude oils.

Judy Kokesh, Technology Transfer Specialist
National Institute for Petroleum and Energy Research

Stanford, CA 94309
(415) 926-2265
E-mail: kmac@slac.stanford.edu
Mission

The U.S. Department of Health and Human Services (HHS) is the Federal Government's principal agency for promoting the health of Americans, providing essential human services, carrying out clinical and basic biomedical and behavioral research, and providing support for predoctoral and postdoctoral research training in the life sciences. Also, HHS has long been concerned with the depth and quality of the scientific workforce and for this reason has launched a comprehensive life sciences education initiative.

Background

HHS was created in 1980 from what was formerly the U.S. Department of Health, Education, and Welfare. The work of HHS is implemented by the Office of the Secretary and four operating divisions: the Social Security Administration, the Health Care Financing Administration, the Administration for Children and Families, and the Public Health Service (PHS). The Public Health Service is the HHS agency with the major mission in science education.

In 1990 the Assistant Secretary for Health established the Public Health Service Life Sciences Education and Science Literacy Board. The Board was charged with developing strategies for ensuring an adequate pool of well-trained personnel to meet future National needs in the life sciences and increasing the level of scientific understanding among youth and adults in the United States. The Board's significant action was to host the Prologue to Action: Life Sciences Education and Science Literacy Conference. The Conference brought together experts from across the educational and scientific communities to provide recommendations on the role PHS agencies can play in improving science education. Recommendations made at the Conference form the basis for Meeting the Challenge: Achieving Results, the PHS strategy on life sciences education and public understanding of science.

Role in Mathematics and Science Education

While many Federal agencies have broad educational missions that include support for science education and training, none focus specifically on biomedical and behavioral science education or literacy. HHS uses its expertise in the life sciences to provide new and expanded initiatives to support the National education efforts. The bulk of the Department's science education programs at the precollege and undergraduate levels are targeted toward bringing students who are traditionally underrepresented in the life sciences into the science education pipeline and supporting them as they move into the health professions, graduate programs, and research careers. Through its Public Health Service, HHS is enlarging the public's understanding and appreciation for the life sciences, increasing the exposure of students at all levels to biomedical and behavioral research, and expanding efforts to recruit and retain underrepresented groups.

Elementary and Secondary

Traditionally, HHS-supported training has focused on graduate and postdoctoral students. However, with the recent decrease in the number of high school and college students majoring in the sciences, the Department has begun to dedicate more of its education and training efforts to precollege education. The Department views science education as a continuum from preschool to adulthood. Elementary programs such as partnerships with local schools and school systems, and the Summer Internship Program at the high school level, allow HHS to use its greatest resource—its scientists and technical staff—to increase the enthusiasm of both teachers and students for science.

The Department offers programs targeted to the important transitional period from junior to senior high. It also operates a long-standing program for minority high school students, the Minority High School Student Research Apprentice Program (MHSSRAP). In addition, HHS provides K–12 teachers with workshops and research opportunities and collaborates with them to increase opportunities for interaction with scientists, consult on curriculum improvement projects, and explore collaborative activities with other public- and private-sector organizations.

Higher Education

To ensure the availability of well-trained professionals to meet National health research goals, graduate support has been the primary emphasis of HHS education programs. This highly successful effort has nurtured many of the newest disciplines in the life sciences today—biotechnology, human genome research, and the search for the biologic components of mental illness. Integral to the Department's mission, graduate training is a stated requirement in sections 487 of the Public Health Service Act.

The efforts of HHS to recruit and retain talented undergraduate students in life sciences careers are accomplished primarily through direct financial support—grants, traineeships, and awards—to individuals and institutions. As in its programs for graduates, the Department supports undergraduate students traditionally underrepresented in the life sciences. Long-standing programs such as the Minority Access to Research Careers Honors Undergraduate Research Training Program, the Minority Biomedical Research Support Program, and the Health Careers Opportunity Program demonstrate the Department's commitment to this goal.

Public Understanding of Science

Public understanding of science is an important HHS priority. An informed public is better able to make judgments about the personal and societal implications of science and technology. Literacy in the life sciences improves the public's ability to be more effective health care consumers. Within the Department, PHS agencies are examining their programs to determine where science education messages can be more fully integrated into existing disease prevention, health promotion, consumer education, and other public outreach programs. The Department is also spearheading an interagency effort to increase the public's understanding of science by chairing the National Science and Technology Council on Education and Training Working Group on Public Understanding of Science.
How Mathematics and Science Education Programs Are Administered

The Public Health Service is the operating division within the Department of Health and Human Services that is most involved with science education. The agencies within PHS administer their own educational programs, although several PHS-wide efforts are currently underway through the Life Sciences Education and Science Literacy Board. The Office of Science Education Policy at the National Institutes of Health is responsible for policy development and coordination of science and training efforts for the Public Health Service and HHS.

Administrative Offices for Mathematics and Science Education

Division of Extramural Outreach and Information Resources
In addition to providing general information on grant programs, this division has publications on research and training opportunities.

Division of Extramural Outreach and Information Resources
Office of Extramural Research
National Institutes of Health
6701 Rockledge Drive, Suite 6095
Bethesda, MD 20892-7910

Bethesda, MD 20892
(301) 402-2469 / Fax: (301) 402-3034

National Programs for K–12 Education

Minority High School Student Research Apprentice (MHSSRA) Program
MHSSRA has three areas of focus: high school students and inservice and preservice teachers. MHSSRA's six-to-eight-week apprenticeship program cultivates interest among minority high school students in the biomedical sciences. Students work with local biomedical investigators and learn research procedures, collect and analyze data, help write scientific papers, and deliver presentations at research seminars.

MHSSRA Program for Inservice Teachers
The MHSSRA Inservice Program supports the participation of minority teachers or teachers who teach large numbers of minority students in cutting-edge biomedical research. Teachers work with biomedical investigators who are committed to broadening the teachers' scientific knowledge and understanding of technical skills in the hope that it will transfer into the classroom.

MHSSRA Program for Preservice Teachers
The MHSSRA Preservice Program supports the participation of minority undergraduate students interested in a science teaching career in biomedical research while working with local biomedical investigators. The program's intent is to expand teachers' basic scientific knowledge and expose them to research experiences before they enter the classroom.

National Cancer Institute Student Research Training Program
This program is designed to provide summer research experiences for qualified high school students with disabilities who wish to participate in an ongoing research project during the summer or during the school year.

Research Supplements to Promote the Recruitment of Individuals with Disabilities into Biomedical Research Careers
This program is designed to provide research experiences for qualified high school students with disabilities who wish to participate in an ongoing research project during the summer or during the school year.
Summer Science Enrichment Program

Conducted at sites across the country, this program encourages underrepresented minorities and underserved youth to pursue professional careers in science, mathematics, and research. During the six-week sessions, scientists act as teachers and mentors. The program includes classroom and laboratory experiences, as well as weekly field trips and evening seminars.

U.S. Department of Housing and Urban Development (HUD)

Mission

The U.S. Department of Housing and Urban Development (HUD) is the principal Federal agency responsible for programs concerned with the Nation's housing needs, fair housing opportunities, and the development and improvement of the Nation's communities.

Background

The Department was established in November 1965. Major offices include Housing, which administers the Federal Housing Administration (FHA) mortgage insurance programs; Community Planning and Development, which funds homeless programs and administers the Block Grant funds to States and cities for urban improvement projects; Public and Indian Housing, which funds the construction and renovation of publicly owned and managed housing through local Public and Indian Housing Authorities; Fair Housing and Equal Opportunity, which enforces anti-discrimination laws and promotes open housing plans; and Policy Development and Research, which formulates new initiatives and evaluates program experience. HUD's programs are administered through a National network of 70 State and local offices.

Role in Mathematics and Science Education

HUD is not directly involved in programs of mathematics and science education. However, the Department strongly supports the National Education Goals as an integral part of its commitment to strengthen families and communities. HUD's programs and activities affecting education focus on the special populations served by the Department, particularly low-income families receiving housing assistance, families in public housing, and minorities.

How Mathematics and Science Education Programs Are Administered

Each office within the Department is responsible for administering its own education programs.

Administrative Offices for Mathematics and Science Education

Office of Community Planning and Development

The Department has a program of assistance to Historically Black Colleges and Universities that both builds the capabilities of the institution and involves faculty and students in real-world problems of economics, planning, and social issues in nearby communities.

Evette Idora
Office of Community Planning and Development
Department of Housing and Urban Development
451 Seventh Street SW, Room 7218
Washington, DC 20410
(202) 708-1590

Office of Lead Hazard Control

In December 1991, HUD created an Office of Lead-Based Paint Abatement and Poisoning Prevention to develop guidelines and regulations applicable to HUD and other Federally supported housing programs. While this office supports a program of public information about these hazards, the Environmental Protection Agency (EPA) manages the National information clearinghouse.

Ronald Morony, Deputy Director
Office of Lead Hazard Control
Department of Housing and Urban Development
451 Seventh Street SW
Washington, DC 20410
(202) 755-1739 / Fax: (202) 755-1000
E-mail: Ronald_J_Morony@hud.gov

Office of Public and Indian Housing

HUD's child care assistance program supports the goal of early intervention for children entering school. No programs, however, prescribe the content of the early childhood curriculum. The Department strongly supports the concept of drug education and prevention for school-age children as a way to help make public housing communities drug-free. Most Department-sponsored drug prevention programs have education components.

451 Seventh Street SW, Room 4112
Washington, DC 20410
(202) 708-1197, ext. 4227
Fax: (202) 401-7965

BEST COPY AVAILABLE
Mission

As the Nation's principal conservation agency, the U.S. Department of the Interior (DOI) has responsibility for most of our Nationally owned public lands and natural resources. This includes fostering sound use of our land and water resources; protecting our fish, wildlife, and biological diversity; preserving the environmental and cultural values of our National parks and historical places; and providing for the enjoyment of life through outdoor recreation. The Department assesses our energy and mineral resources and works to ensure that their development is in the best interests of all our people by encouraging stewardship and citizen participation in their care. The Department also has a major responsibility for American Indian reservation communities and for people who live in island territories under U.S. administration.

Background

The Department of the Interior was formed on March 3, 1849. The natural resource stewardship responsibilities of the Department are carried out by its nine bureaus with more than 60 regional and 1,500 field offices.

Role in Mathematics and Science Education

DOI's stewardship mission and its extensive scientific and technological expertise present unique opportunities for educational outreach. With more than 440 million acres of land, 467 wildlife refuges, 75 fish hatcheries, and 356 National parks, including battlefields and seashores, DOI provides many opportunities for people to learn about science by observing nature firsthand.

Elementary and Secondary

About half of the Department's precollege efforts directly support students through workshops, informal classes, and student work appointments. DOI offers educational activities at its many field sites, develops curriculum materials, and provides educational opportunities to special populations. In addition, DOI supports mathematics and science instruction at the Bureau of Indian Affairs schools.

Higher Education

The majority of DOI's undergraduate programs provide student support, mostly in the form of student work appointments. Many of the bureaus enter into partnerships with State and academic institutions to further research and education in natural resource management. In addition, DOI provides support to Historically Black Colleges and Universities, Hispanic-serving institutions, and Native American Colleges and Universities. Graduate research programs fund basic and applied research and generate Earth science data. The Department also offers predoctoral and postdoctoral fellowships.

Public Understanding of Science

Fostering effective stewardship of the Nation's public lands and resources is a top Department priority. With hundreds of parks, refuges, fish hatcheries, and other field sites, many opportunities exist for visitors to gain an understanding of the natural sciences.

How Mathematics and Science Education Programs Are Administered

DOI's educational programs are administered by its nine bureaus. Because the Department's education outreach is a grassroots effort, information requests can be handled most effectively by the DOI Field Offices and facilities listed in the State Highlights section of this publication.

Administrative Offices for Mathematics and Science Education

Bureau of Indian Affairs (BIA)

The BIA works with tribal governments and Alaskan Native village communities to encourage and support tribal efforts to self-govern and to provide needed programs and services on the reservations. Developing forest lands, leasing mineral rights, directing agricultural programs, and protecting water and land rights are included in this responsibility. The BIA funds 187 elementary and secondary schools in 23 States with more than 46,000 students enrolled in preschool, kindergarten, and grades 1 through 12. Types of schools include day schools, on- and off-reservation residential schools, and peripheral dormitories. The BIA also funds 23 Tribally Controlled Community Colleges and operates two post-secondary institutions. Higher education grants for undergraduate students, graduate student assistance, and adult education funds are made available through contract.

Bureau of Land Management (BLM)

Operating under the principles of multiple use and sustained yield for the benefit of all Americans, the BLM oversees National public lands. Approximately 270 million acres of public land, located primarily in the West and in Alaska, comprise about one-eighth of the total land area of the United States. The BLM promotes natural resource and environmental education through a broad range of activities conducted by field offices in 12 Western States and in scattered areas throughout the East. State offices can provide information on local district offices that sponsor environmental education programs.

Bureau of Reclamation

The mission of the Bureau of Reclamation is to manage, develop, and protect water and related resources in an environmentally and economically sound manner. A major interest is safe and dependable water supplies for agricultural, municipal, industrial, and...
domestic users. The Bureau also oversees production of hydroelectric energy at Reclamation powerplants. Other mandates are to provide recreational and fish and wildlife benefits for the public, to enhance river regulation and navigation, and to control damaging floods.

Minerals Management Service (MMS)
The MMS provides a variety of educational services and information to teachers and students. A major topic is the environmentally correct management of offshore natural gas, oil, and other resources, but information is also available on a number of other subjects including geology, environmental and socio-economic sciences, marine biology, underwater archaeology, and beach restoration. MMS professionals have worked with schools in some States to develop energy resource curriculum. Teacher inservice programs and classroom visits may include booklets, brochures, posters, newsletters, and slide presentations as well as statistical and other off-the-shelf technical publications. Some of these materials are available upon request through MMS headquarters and/or regional offices. Availability may be limited, but arrangements can be made for duplication of some materials at cost to the requester.

Federal Junior Duck Stamp Conservation and Design Program
This program uses art as a catalyst to interest K-12 students in conservation. Focusing on migratory birds and other wildlife that depend on wetland habitats, the curriculum-based program crosses cultural, ethnic, and geographic boundaries. Since this kind of art activity requires an understanding of wildlife anatomy and environmental science, it can be a valid barometer of a student’s grasp of these scientific elements. Students enter their drawings of North American ducks, swans, or geese in their State contest. Student winners from each State win a free trip to Washington, DC, to compete in the Federal Duck Stamp Contest. First place receives a $2,500 scholarship, and the design is used to create the Junior Duck Stamp.

JoAnn Schneider, Program Director
Federal Junior Duck Stamp Conservation Program
Department of the Interior
1849 C Street NW, Room 2058
Washington, DC 20240
(202) 208-4354

Haskell Math and Science Summer Workshop
Participants of this workshop prepare culturally sensitive curriculum materials pertaining to math, science, and natural resources for elementary teachers in Bureau of Indian Affairs schools and to better prepare teachers in the areas of curriculum development, selection, and evaluation.

Dr. Sharon Atkinson, Summer Math and Science Workshop Coordinator
Department of Natural and Social Sciences
155 Indian Avenue
Haskell Indian Nations University
Lawrence, KS 66046
(913) 749-8428

Heritage Education Program
This Bureau of Land Management program is multifaceted, providing educational experiences and teaching resources with a focus on archaeology, history, and paleontology. The program is appropriate for the school setting as well as for outdoor classrooms, museums, and other informal learning environments. Materials for educators include Intrigue of the Past, a teacher’s guide to archaeology and ideas for classroom activities.

Project Manager
Bureau of Land Management Imagination Team
Anasazi Heritage Center, PO Box 758
27501 Highway 184
Dolores, CO 81323
(303) 882-4811

National Fishing Week
This National program is promoted in Wyoming through various Fishing Days and other educational activities that seek to capture the interest of the public in fishing activities. Hands-on activities, such as casting and, fishing techniques, are offered, and participants learn about the types of fish and places to fish, especially on public land.

Mark Gorges, Fisheries Biologist
5353 Yellowstone Road
Cheyenne, WY 82009
(307) 775-6100 / Fax: (307) 775-6082

Native Americans in Science Program
This program has three primary goals: (1) making Native Americans aware of the numerous types of jobs available in math and science, (2) elevating student awareness of their environment and of their natural resources and conservation, and (3) motivating students in science and mathematics.

Sam Azure, Principal
United Tribes Technical College
Theodore Jamerson Elementary School
3315 University Drive
Bismarck, ND 58554
(701) 255-3283

Parks as Classrooms
This program offers teachers an opportunity to use the National parks to augment classroom instruction. In most locations, emphasis is on ecological and biological principles, but a few locations focus on geological, meteorological, and oceanographic principles. The National Park Service offers workshops in the parks to encourage teachers to build their curricula around park resources.

Science Education Training Project Workshops
Sinte Gleska University, in cooperation with the South Dakota School of Mines and Technology, has hosted the Science Education Training Project since 1991. Two workshops are offered exclusively for teachers of American Indian students in grades K–8. The primary goal is to provide these elementary teachers with content, methods, activities, evaluative strategies, and curriculum development skills necessary for the implementation of culturally based, hands-on science and math activities in their classrooms. This is an empowerment process that includes the development of confidence, as well as knowledge and skills.

Dr. Leland Bordeaux, Director
Sinte Gleska University
PO Box 8
Mission, SD 57555
Phone: (605) 856-2886 / Fax: (605) 856-2011

Southwestern Indian Polytechnic Institute (SIPI) College Bound Math and Science Enrichment Program
During the school year, the students involved in this program work on assigned projects with coordinators at their high schools. The projects are used to keep the students working toward their education goals and to strengthen the students' computer networking skills. Since 1991, a one week workshop at the NERSC Supercomputer facilities in Livermore, California, has been included in the program. This workshop introduces students to the Cray Supercomputer and the skills required to use it. The workshops are conducted by staff from both the Sandia and Lawrence Livermore National Laboratories.

Joe Skenandore, College Bound Coordinator

Suitcase for Survival
This special education campaign acquaints young people with protected wildlife and how illegal trade in these species threatens them with extinction. The program is a cooperative effort sponsored by the U.S. Fish and Wildlife Service, the American Zoo and Aquarium Association, the World Wildlife Fund, and the National Fish and Wildlife Foundation. Operated Nationally through zoological parks across the country, the program sponsors training classes for teachers to enable them to use program suitcases, donated by American Tourister, that are filled with confiscated wildlife products and educational materials. The recommended curriculum helps children understand the connection between living animals and the products in the suitcases.

Lynn Baptista, Director of Education
American Zoo and Aquarium Association
Parks and Aquariums
3380 Americana Terrace
Boise, ID 83706
(208) 343-3088

University of Arizona Holistic Science and Whole Language Workshop
This program, funded by the Bureau of Indian Affairs, is designed to provide a high quality Whole Language Math and Science workshop to teachers of American Indian children throughout the United States. The three primary goals of the program are to develop philosophical foundations for the integration of language arts, science, and math, to build the relationships between the use of oral and written language as a tool for the development of science and math concepts, and to add to an established set of teaching and learning strategies.

Dr. Kenneth S. Goodman or Dr. Yetta M. Goodman
University of Arizona
Department of Language, Reading, and Culture
Tucson, AZ 85729
(602) 621-7868

Watchable Wildlife
This program will create a National network of wildlife viewing areas by forming State coalitions that consist of Federal agencies, nonprofit organizations, and environmental associations. Teachers may, for a small fee, purchase a guidebook to their State's Watchable Wildlife facilities. Future plans include the development of interpretive exhibits, visitor centers, environmental and conservation programs, and educational materials. Currently, 20 States participate in this program.

Mark Hilliard, Wildlife Appreciation Program Manager
Western Fish and Wildlife Staff
3380 Americana Terrace
Boise, ID 83706
(208) 343-3088

Youth Conservation Corps
This summer employment program is offered by both the U.S. Department of Agriculture and DOI. Students, ages 15–18, work on projects to further the development and conservation of U.S. natural resources. Work projects are planned, directed, and executed to give enrollees an understanding of their tasks and how their work enhances the environment.

Youth Conservation Corps Coordinator
U.S. Department of the Interior
National Park Service
PO Box 37127, Suite 57
Washington, DC 20013-7217
(202) 343-5514
U.S. Department of Justice (DOJ)

We must work to free our teachers of the social burdens in our schools, such as drugs and violence, so that they may rise to the educational challenge of teaching our children the skills that will meet our Nation's growing scientific and technological needs. Only by making this investment in our children now will they be prepared to maintain America as a first-rate Nation.

Janet Reno, U.S. Attorney General
U.S. Department of Justice

Mission

The U.S. Department of Justice (DOJ) provides legal advice to the President, represents the Executive Branch in Federal courts, investigates Federal crimes, enforces Federal laws, operates Federal prisons, and provides law enforcement assistance to State and local communities.

Background

The Office of the Attorney General was established in 1789, and the Department of Justice was subsequently established in 1870. Professionals of the highest caliber comprise the Department's many litigating divisions, law enforcement offices, and management and coordination offices.

Role in Mathematics and Science Education

Compared with the Federal science mission agencies, the Department of Justice does not have a significant focus on mathematics- and science-related occupations. However, the Department conducts numerous programs that support National educational goals, including improving student performance in mathematics and science. In addition, mathematics and science play an important role in certain aspects of the Department's mission, particularly the laboratory operations of the Federal Bureau of Investigation and the Drug Enforcement Administration. Opportunities for the active participation of students in the scientific endeavors of the Department are necessarily limited by the confidential nature of investigations into illegal activity and the need for security clearance.

Elementary and Secondary

Most programs offered by DOJ are part of delinquency prevention or volunteer educational outreach, and are not directly related to mathematics or science education.

Higher Education

DOJ activities have an indirect impact in the areas of education programs in mathematics and science. The Department awards research grants and sponsors graduate research fellowships and summer intern programs.

How Mathematics and Science Education Programs Are Administered

While DOJ is not a leader among Federal agencies in the field of mathematics and science education, the National Institute of Justice, the Federal Bureau of Investigation, and the Drug Enforcement Administration sponsor programs related to the Department's research efforts.

Administrative Offices for Mathematics and Science Education

The Drug Enforcement Administration supports drug investigations through the eight forensic laboratories located throughout the Nation. Chemists in these facilities participate in various educational activities.

The Federal Bureau of Investigation (FBI)

The FBI provides training and research to law enforcement through the Forensic Science Research and Training Center. Research at the Center focuses on the development of new methods in forensic science. The Center operates a summer student intern program for upper-level college students.

The National Institute of Justice, Office of Justice Programs

Created in 1968 as DOJ's principal research branch, the National Institute of Justice awards competitive grants to researchers to conduct studies on the prevention and control of crime and criminal behavior and on the criminal justice system. Grants are also awarded to improve scientific approaches to the forensic investigation of crime as well as to the development and adaptation of law enforcement technologies. The National Institute of Justice disseminates its research findings to the field through a variety of conferences and publications. The Institute also sponsors graduate research fellowships to support work in the field of criminal justice.

Donald W. Thompson, Jr., Acting Assistant Director
Laboratory Division
Federal Bureau of Investigation
FBI Building, Room 3090
9th Street and Pennsylvania Avenue NW
Washington, DC 20535
(202) 324-4412 / Fax: (202) 324-1093

Jane Wiseman
National Institute of Justice

(202) 616-3233 / Fax: (202) 307-6394
U.S. Department of Labor (DOL)

Knowledge and skills the market demands. Our challenge is to provide every man and woman, student and worker, with the opportunity to acquire the academic and technical skills they need to achieve the economic security we all want.

Timothy M. Barnicle
Assistant Secretary of Labor for Employment and Training
U.S. Department of Labor

Mission

The basic concern of the U.S. Department of Labor (DOL) is quality of life for American workers. The Department enforces laws that protect jobs, pension rights, and worker safety and health; helps people find jobs; sponsors training for those who need it; guides the Nation's unemployment insurance system; monitors changes in employment and prices; and provides services and information to workers, employers, teachers, students, business people, government officials, and others.

Background

The Department was created as a cabinet-level agency by Congress in 1913 "to foster, promote, and develop the welfare of the wage earners of the United States, to improve their working conditions, and to advance their opportunities for profitable employment." Predecessor agencies had existed since 1884, but this legislation marked the first time that a cabinet department was created with the primary function of furthering the interests of working people.

Role in Mathematics and Science Education

For most agencies and offices within DOL, the major training activity is directed toward Federal staff, and in some cases, State and local staff, to help them carry out their responsibilities. The Department's Employment and Training Administration (ETA) also is involved in broad basic mathematics and science education and vocational training for unskilled and unemployed workers. Training activities focus on vocational technical training skills and basic literacy education, including mathematics and general equivalency diploma (GED) preparation, which is generally provided outside the traditional education system. Among other activities, ETA funds training programs to enable workers to gain the skills they need for employment, primarily those authorized by the Job Training Partnership Act (JTPA), which includes a system of decentralized State and local programs, funded through grants to the States, and the Job Corps.

How Mathematics and Science Education Programs Are Administered

DOL's mathematics and science education programs are administered by the Department's Employment and Training Administration and operated at the State or community levels.

Administrative Offices for Mathematics and Science Education

Employment and Training Administration, Office of Job Training Programs

This office administers eight programs for economically disadvantaged youth and adults.

National Programs for K–12 Education

Job Corps

This residential employment and training program for severely disadvantaged youth, ages 16–24, prepares young people for employment and entrance into vocational and/or technical schools or other institutions for further education and training. Students receive room and board, books, supplies, and a cash living allowance. The program offers vocational training, English-as-a-second-language (ESL), basic education, and instruction in personal hygiene, nutrition, positive work habits, social skills, parenting, intergroup relations, and constructive use of leisure time. Services are provided at one of more than 100 Job Corps centers across the country.
The individually paced basic education program includes reading, mathematics, and GED and precollege preparation.

John Chowning, Education Specialist

Washington, DC 20210
(202) 219-6236 / Fax: (202) 219-7190
Mission

The U.S. Department of Transportation (DOT) will shape the National Transportation Policy to "tie America together" with a safe, technologically advanced, and efficient transportation system. This system will promote economic growth and international competitiveness now and in the future, and will contribute to a healthy and secure environment for us and our children.

Background

Since 1967 the Department has helped keep the Nation's transportation system operating. The Department functions through 10 operating administrations, each of which oversees a different aspect of transportation and implements its own programs directly, reporting to the Secretary of Transportation.

Role in Mathematics and Science Education

Mathematics and science education is a critical support activity to ongoing DOT programs. Education conveys new technical skills to professionals already in the transportation community. It also develops a pool of trained technical talent to move into jobs in the transportation sector.

Elementary and Secondary

The Federal Aviation Administration (FAA) offers aviation education programs for educators at all levels (K-college) that stimulate student interest in mathematics and science. FAA-sponsored programs for students include Air Bear for elementary students, the International Aviation Art Contest, and the Aviation Career Education (ACE) Academy summer program for high school students, which focuses on the science of flight and the study of science and careers. In addition, the Research and Special Programs Administration's Volpe National Transportation Systems Center encourages awareness of transportation careers.

Higher Education

Institutions of higher education can receive DOT assistance, including funding to support curricula and grants for research related to transportation. The Department sponsors cooperative education programs, research fellowships, and scholarships. In addition, most DOT operating administrations have technical laboratories with advanced technology materials and are required to engage in research application and technology transfer activities. DOT is committed to increasing involvement of Historically Black Colleges and Universities and Hispanic-serving institutions in funded programs and activities.

How Mathematics and Science Education Programs Are Administered

Each operating administration within the Department of Transportation is responsible for its own education programs.

Administrative Offices for Mathematics and Science Education

Aviation and Transportation Education Programs

DOT, along with the Federal Aviation Administration (FAA), has designated more than 100 education resource centers across the country. Located at museums, science centers, State transportation and education departments, and schools and colleges with interest in aviation and transportation education, the centers conduct teacher workshops and youth programs and provide assistance to educators and the public. DOT/FAA has also established partnerships with industry and education organizations.

Office of Research Policy and Technology Transfer, Research and Special Programs Administration (RSPA)

RSPA research and technology programs ensure that DOT's research and development program is effectively advancing U.S. transportation technology and expertise. Using a multimodal systems approach, the RSPA provides the Secretary with a critical counterbalance to the focus on the needs of individual modes of transportation in the other
DOT operating administrations. The research and technology programs also provide analyses of specific technology areas and ensure that the Department's efforts integrate with government-wide technology initiatives and priorities. These activities are particularly important in science and technology education. The programs also help ensure that results of DOT research and other innovative efforts from across the country are made available to Federal, State, and local officials, the transportation community, and academia.

(202) 366-6370 / Fax: (202) 366-3786
The basics of education are not enough anymore; in order to be competitive in the future, Americans will need a foundation of quality education, and they will need to continue learning throughout their lifetime. I believe, as the President does, that our educational system can achieve international excellence, if we establish clear standards and support realistic student loan programs. The VA will continue to be a major contributor in this area through GI Bill benefits and our involvement in health care education.

Jesse Brown, Secretary
U.S. Department of Veterans Affairs

Mission
The mission of the U.S. Department of Veterans Affairs (VA) is to serve America’s veterans and their families with dignity and compassion and to be their principal advocate in ensuring that they receive the care, support, and recognition they have earned in service to this Nation.

Background
The Department of Veterans Affairs, formerly the Veterans Administration, was elevated to Cabinet level in 1989. The Department has three main components that administer veterans’ programs: the Veterans Health Administration, the Veterans Benefits Administration, and the National Cemetery System.

Role in Mathematics and Science Education
The vast VA workforce, representing diverse science- and technology-related professions, includes physicians, nurses, statisticians, architects, and computer specialists. As part of its mission to provide health care to eligible veterans, the VA provides training and education for health professionals and conducts medical, health, and rehabilitation research. The Department supports graduate-level education through more than 40 health professions education programs. The Department also administers education benefits to eligible veterans, service persons, and dependents.

How Mathematics and Science Education Programs Are Administered
Two VA administrative offices are involved in education activities: the Veterans Health Administration and the Veterans Benefits Administration.

Administrative Offices for Mathematics and Science Education

The Veterans Health Administration, Office of Academic Affairs
This office conducts the Nation’s largest coordinated education and training effort for the health professions. There are no K-12 programs.

Elizabeth M. Short, M.D., Chief, Academic Affiliations
Department of Veterans Affairs
Office of Academic Affairs (14)
810 Vermont Avenue NW
Washington, DC 20420
(202) 565-7091

Veterans Benefits Administration, Education Service
This service conducts several basic educational programs for veterans, service persons, and eligible dependents. Some younger users of the Dependents Education Assistance program may be involved in math and science programs. Assistance is in the form of monthly payments, for a period of up to 45 months, to be used for tuition, books, and subsistence. Young people between the ages of 18 and 26 are eligible if they are children of veterans or servicepersons in several categories: living veterans whose service-connected disabilities are considered permanently and totally disabling, veterans who died of any cause while such service-connected disabilities were in existence, veterans who died of a service-connected disability, or servicepersons who have been listed for a total of more than 90 days as currently missing in action or as currently prisoners of war. Application is made by filing a VA Form 22-5490, which can be obtained from any VA Regional Office.

Celia P. Dollarhide, Director
Education Service (22)
810 Vermont Avenue NW
Washington, DC 20420
(202) 273-7132 / Fax: (202) 275-2636
Mission

The U.S. Environmental Protection Agency (EPA) is responsible for implementing the Federal laws designed to protect the public from environmental hazards, enhance the quality of our natural environment, and expand our knowledge of the environment. The Agency endeavors to accomplish its mission systematically by proper integration of a variety of research, monitoring, standard-setting, enforcement, and educational activities. As a complement to its other activities, EPA coordinates and supports research and anti-pollution activities of State and local governments, private and public groups, individuals, and educational institutions. EPA also monitors the operations of other Federal agencies with respect to their impact on the environment.

Background

The Environmental Protection Agency was created through Reorganization Plan #3 of 1970, which was devised to consolidate the Federal Government's environmental regulatory activities into a single agency. The plan was sent by President Nixon to Congress on July 9, 1970, and the Agency began operation on December 2, 1970.

The enactment of major new environmental laws and important amendments to older laws in the 1970s and 1980s greatly expanded EPA's responsibilities. The Agency now administers 10 comprehensive environmental protection laws: the Clean Air Act; the Clean Water Act; the Safe Drinking Water Act; the Comprehensive Environmental Response, Compensation, and Liability Act; the Federal Insecticide, Fungicide, and Rodenticide Act; the Toxic Substances Control Act; the Marine Protection, Research, and Sanctuaries Act; the Uranium Mill Tailings Radiation Control Act; and the Pollution Prevention Act. In addition, the National Environmental Education Act of 1990 gave EPA, for the first time, the authority to develop a National environmental education program.

Role in Mathematics and Science Education

As political leaders and the public continue to recognize the urgency and global nature of environmental challenges, the EPA will be required to respond with still higher quality research, innovative analysis, and sound strategies for public involvement. Currently, more than one-third of the Agency's employees are scientists and engineers, and the demands for highly educated and talented staff will only increase as the scientific complexity of environmental problems increases. Clearly, the Agency has a vested interest in ensuring that the Nation's education system produces students literate in mathematics and science, and that the Nation produces an adequate supply of world-class scientists and engineers. In addition, the Agency believes an environmentally educated public is the best way to bring about voluntary changes in personal behaviors that affect the environment.

Elementary and Secondary

As a result of the passage of the National Environmental Education Act of 1990, the Agency will focus on two broad areas of environmental education: improving basic science literacy as the core of environmental education for students in grades K–12 (and in college), and informing the general public about environmental consequences of their individual and collective actions and motivating them to address environmental problems.

Higher Education

EPA offers predoctoral fellowships and traineeships and postdoctoral fellowships. Undergraduate programs provide opportunities for research, work study, and other forms of assistance to students.

How Mathematics and Science Education Programs Are Administered

The Agency's headquarters in Washington, DC, maintains overall planning, coordination, and control of EPA programs, and two offices at headquarters have responsibilities related to education programs. To ensure that EPA is truly responsive to the American people, the Agency has established 10 regional offices, and each of these offices has an environmental education coordinator. In addition, the EPA maintains field offices in the following categories: laboratories, investigations, and administration.

Administrative Offices for Mathematics and Science Education

Environmental Education Division

The mission of this division is to advance and support National and international environmental education efforts, to develop an environmentally conscious and responsible public, and to inspire in all individuals a sense of personal responsibility for the care of the environment.

C. Michael Baker, Acting Director
Environmental Education Division
U.S. Environmental Protection Agency
401 M Street SW (1707)
Washington, DC 20460
(202) 260-4965 / Fax: (202) 260-4095
E-mail: baker.michael@epamail.epa.gov

Office of Research and Development (ORD)

This office coordinates education programs related to research efforts. Each ORD facility and office plans and administers a range of programs, precollege through graduate, which vary according to laboratory specialization and community needs.
National Programs for K–12 Education

Environmental Education and Training Program
In September 1995, EPA entered into a three-year cooperative agreement with a consortium of nonprofit organizations and academic institutions led by the North American Association for Environmental Education (NAAEE) to operate the second three-year phase of a nationwide environmental education and training program. This program is authorized under Section 5 of the National Environmental Education Act of 1990. Its purpose is to train education professionals to develop and deliver quality environmental education programs. The second phase will focus on supporting and expanding existing quality training efforts; identifying, evaluating, and disseminating information on model education materials, teaching methods, and programs; and strengthening and expanding partnerships and networks. This effort builds upon the work initiated by the National Consortium for Environmental Education and Training (NCEET) led by the University of Michigan, which operated the program from 1992 to 1995.

Kathleen MacKinnon, Project Officer
EPA Environmental Education Division (1707) 401 M Street SW Washington, DC 20460 (202) 260-4951 / Fax: (202) 260-4095
E-mail: mackinnon.kathleen@epamail.epa.gov

Augusto Medina, Project Manager
NAAEE
1255 23rd Street NW, Suite 400 Washington, DC 20037 (202) 884-8788 / Fax: (202) 884-8701
E-mail: gmedina@web.apc.org

Environmental Education Grants Program
The purpose of this program is to stimulate environmental education by supporting projects to design, demonstrate, or disseminate new practices, methods, or techniques related to environmental education. Projects must demonstrate the potential for wide application and address a high-priority environmental issue. Only State and local agencies and nonprofit organizations or institutions are eligible to apply for grants; however, teachers may participate in the program through their school or another organization. Grants of less than $25,000 are awarded by the Regional Offices and inquiries should be directed to the appropriate region. Grants of $25,000 to $250,000 are awarded from the Washington Office.

George Walker, Grants Specialist
Environmental Education Grants Program
Environmental Education Division
U.S. Environmental Protection Agency
401 M Street SW (1707)
Washington, DC 20460 (202) 260-8619 / Fax: (202) 260-4095
E-mail: walker.george@epamail.epa.gov

Project Air Information Resources for Education (A.I.R.E.)
In cooperation with the American Lung Association, EPA Air and Radiation employees are working with schools Nationally to promote awareness of air quality issues and science. Program volunteers visit classrooms and conduct demonstrations, talks, and interactive sessions about air pollution and the decision-making involved in developing EPA policy from science. Text is available.

Linda Zarro, Coordinator
Office of Air and Radiation
U.S. Environmental Protection Agency
401 M Street SW (6102)
Washington, DC 20460 (202) 260-6621

Public Information Centers (PICs)
PICs provide public access to information selected and maintained by the Federal Government on major ecological and environmental issues. The centers offer publications, data, interactive computer workstations, theaters, and exhibits, although available services may vary from center to center. PICs also supply environmental education materials for K–12 students and teachers. A PIC is located within each of the 10 regional offices.

Public Information Center
U.S. Environmental Protection Agency
401 M Street SW (3404)
Washington, DC 20460 (202) 260-2080 / Fax: (202) 260-6257
E-mail: Public-Access@epamail.epa.gov

The President’s Environmental Youth Awards (PEYA) Program
Young people from each State are invited to participate in the PEYA Program. This nationwide K–12 program is designed to encourage individuals, school classes, summer camps, public interest groups, and youth organizations to promote environmental awareness and positive community involvement. The two components of the program are the regional certificate program and the National awards competition. Regional certificates, signed by the President, are awarded to each participant by EPA regional offices. National individual project winners or one representative from a National award-winning group project, along with one sponsor, are honored by EPA headquarters in Washington. Interested individuals or groups may obtain application materials and contest rules by contacting the appropriate EPA Regional Office that services their State. PEYA has been an ongoing project since it was created in 1971 by the White House Office of Education and the U.S. Environmental Protection Agency.

U.S. Environmental Protection Agency (EPA)

Regional Office and Research Laboratories

To ensure that EPA is truly responsive to the American people, it has established 10 regional offices. Each office has an Environmental Education Coordinator who oversees participation in regional environmental education programs, which include a variety of activities. Materials and information on environmental issues are also available.

Region I Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, Vermont

Region II New Jersey, New York, Puerto Rico, Virgin Islands

Region III Delaware, District of Columbia, Maryland, Pennsylvania, Virginia, West Virginia

Region IV Alabama, Florida, Georgia, Kentucky, Mississippi, North Carolina, South Carolina, Tennessee

Region V Illinois, Indiana, Michigan, Minnesota, Ohio, Wisconsin

Region VI Arkansas, Louisiana, New Mexico, Oklahoma, Texas

Region VII Iowa, Kansas, Missouri, Nebraska

Region VIII Colorado, Montana, North Dakota, South Dakota, Utah, Wyoming

Region IX Arizona, California, Hawaii, Nevada, American Samoa, Guam

Region X Alaska, Idaho, Oregon, Washington

Health Effects Research Laboratory, Research Triangle Park, North Carolina

Environmental Criteria and Assessment Office, Research Triangle Park, North Carolina

Risk Reduction Engineering Laboratory, Cincinnati, Ohio

Environmental Monitoring Systems Laboratory, Cincinnati, Ohio

Environmental Monitoring Systems Laboratory, Las Vegas, Nevada

Robert S. Kerr Environmental Research Laboratory, Ada, Oklahoma

Environmental Research Laboratory, Athens, Georgia

Environmental Research Laboratory, Gulf Breeze, Florida

Environmental Research Laboratory, Duluth, Minnesota

Environmental Research Laboratory, Corvallis, Oregon

Environmental Research Laboratory, Narragansett, Rhode Island
National Aeronautics and Space Administration (NASA)

NASA’s mission in aeronautics and space, its unique facilities, and specialized workforce provide educators and students a National resource for enhancing and expanding scientific and technological competence. The Agency’s commitment to promoting excellence in America’s education system is carried out through the integrated application of science, mathematics, and technology that is inherent in NASA’s research capabilities, scientific discoveries, advanced technologies, and future explorations.

Daniel S. Goldin, Administrator
National Aeronautics and Space Administration

Mission

As the agency responsible for the Nation’s civilian aerospace program, the National Aeronautics and Space Administration (NASA) mission is threefold:

- To advance and communicate scientific knowledge and understanding of the Earth, the solar system, and the universe, and to use the environment of space for research;
- To explore, use, and enable the development of space for human enterprise;
- To research, develop, verify, and transfer advanced aeronautics, space, and related technologies.

Background

On October 1, 1958, the U.S. Congress created the National Aeronautics and Space Administration through the Space Act. The legislation combined certain military space research programs with the existing National Advisory Committee for Aeronautics to create a unique civilian agency for aeronautical and space activities.

Current major areas of activity include five enterprises: Mission to Planet Earth; Aeronautics; Human Exploration and Development of Space; Space Science; and Space Technology. Ten Field Centers located across the country provide NASA with the expertise to conduct research in all facets of aeronautics and space.

Role in Mathematics and Science Education

To maintain a leadership role in the 21st century, NASA and other Federal agencies must contribute to systemic reform of American education. NASA’s education vision is to promote excellence in America’s school systems by involving the educational community in our endeavors to inspire America’s students, create learning opportunities, and enlighten inquisitive minds. NASA uses its inspiring mission, unique facilities, and specialized workforce to conduct science, mathematics, and technology education programs and activities.

Elementary and Secondary

To nurture early enthusiasm for science, mathematics, and technology, NASA has developed a broad range of programs and services for students at the elementary and middle school levels. These programs are specifically designed to use space and aeronautics as the vehicle to inspire students’ interest in science, mathematics, and technology. Once interest has been captured, it is imperative to follow through at the secondary level with both formal and informal education experiences. NASA provides programs for teachers and faculty that have been specifically designed to enhance their knowledge, skills, and experience. Additionally, in a continuing effort to address groups that have not been adequately represented in the science and engineering workforce, NASA offers educational programs that are specifically tailored for underrepresented minority students at the middle school and high school levels, as well as for minority teachers and faculty members.

Higher Education

NASA’s higher education programs target faculty, graduate and undergraduate students, colleges and universities, and other organizations with an interest in aeronautics; life, Earth, and space science research; education; and related public service. NASA’s programs at the collegiate level feature active participation in NASA research, undergraduate and graduate student financial support, and faculty preparation and enhancement activities.

Public Understanding of Science

NASA Visitor Centers offer the public a unique chance to see first-hand the past, present, and future of U.S. aerospace research. The Centers display hundreds of artifacts, scale models, and pieces of actual space equipment. Many of the Centers also offer special films, programs, and attractions that highlight achievements of the past 30 years or ideas for future explorations.

How Mathematics and Science Education Programs Are Administered

NASA’s National education programs are carried out through NASA Headquarters and the 10 NASA Field Centers. The Headquarters Education Division of the Office of Human Resources and Education oversees education programs and activities at a National level, while the 10 Field Centers administer segments of the National programs, as well as additional regional and local programs. To find the Field Center serving your State, see the State Highlights section of this publication.

Administrative Offices for Mathematics and Science Education

NASA’s Education Program is carried out through five primary categories: Teacher Preparation and Enhancement, Student Support, Curriculum Support, Systemic Change, and Education Technology.

Teacher Preparation and Enhancement

NASA facilities, human resources, and programs provide experiences for teachers and college faculty. Focus is on providing access to NASA information in science, mathematics, engineering, and technology and well as enhancing teachers’ knowledge and skills in those areas.

Student Support

NASA facilities, human resources, and programs provide information, experiences, and research opportunities for K–12 and undergraduate and graduate students. Focus is on the enhancement of knowledge and skills in the areas of science, mathematics, engineering, and technology.

Curriculum Support

Supplementary instructional materials and curricula in science, mathematics, engineering, and technology are based on NASA’s
unique mission. Another focus is the development and augmentation of higher education curricula.

**Systemic Change**
The unique assets of NASA support local, state, regional, and national efforts to enhance the goals of the educational community. Change is accomplished through individual efforts or through collaboration with a range of partners.

**Education Technology**
NASA products and services facilitate the application of technology to enhance both the formal education process and lifelong learning.

**Elementary and Secondary Branch Office**
This office oversees a broad range of programs and services for educators and students at the elementary and secondary levels.

**Higher Education Branch Office**
This office oversees higher education programs and services created for faculty, graduate and undergraduate students, and colleges and universities.

**Technology and Evaluation Branch**
This branch disseminates educational products and materials for teachers and students of all grade levels through the NASA Centers, the Educator Resource Center Network (ERCN), NASA Television, and NASA Spacelink. ERCN is a NASA space science educational material distribution system that reaches more than 220,000 educators a year. The system is composed of the NASA Central Operation of Resources for Educators (CORE), NASA Educator Resource Centers (ERCs), and NASA Regional Educator Resource Centers (RERCs). Spacelink complements ERCN by using a computer network to distribute text and graphic information, whereas NASA Television transmits NASA news and educational videotapes via satellite. CORE serves all nonprofit educators worldwide by maintaining the current list of ERCs and RERCs nearest the caller.

**National Programs for K–12 Education**

**Aerospace Education Services Program (AESP)**
Focusing on the elementary and secondary school levels, AESP uses NASA’s mission to enhance the knowledge, skills, and experience of teachers, to capture the interest of students, and to channel that interest into related career paths. Teacher enhancement is NASA’s highest priority. NASA-AESP programs use exemplary teaching practices to expose teachers to a curriculum that includes skills, attitudes, connections, and content. High-quality instructional materials and state-of-the-art educational research and technologies are used to highlight both subject content and pedagogical skills. AESP specialists provide educational assemblies and classroom visits in schools participating in teacher workshops, school-sponsored and designed integrated thematic units, and NASA Aerospace Community Involvement Programs.

**Central Operations of Resources for Educators (CORE)**
CORE was established for the National and international distribution of NASA educational materials including audiovisuals, laserdiscs, CD-ROMs, and educational software. To receive a catalog and order forms, submit written requests on school letterhead. A nominal fee includes the cost of the materials plus shipping and handling.

**Community Involvement Program (CIP)**
CIP is a unique, multidimensional service that seeks to involve not just schools, but service clubs, local government officials, and the private sector in a community-wide program that places special emphasis on the educational value of the Nation’s aerospace program. CIPs are usually initiated at the request of a school administrator or State education official. Once a community has been selected, NASA officials and educators within the community meet to plan the program and its duration, which can range from one week to one month. Aerospace Education Services Program specialists usually form the core of the program, with additional NASA personnel added as needed.

While no two CIPs are alike, a typical program includes many of the elements of an education specialist’s visit in an expanded format; for example, a CIP may include comprehensive inservice workshops, community exhibits, student competitions, workshops, assemblies for both students and the general public, and other public events. CIPs are extremely well received and are in great demand. Unfortunately, due to limited resources and the intensive nature of these programs, NASA conducts no more than four or five CIPs each year. To increase their chances of being chosen, smaller school districts are encouraged to contact other school districts or possibly a State education official to enlarge the geographic area to be served by the proposed program.

**Educational Horizons**
The newsletter Educational Horizons is NASA’s triannual publication for educators. Each issue features information about upcoming Shuttle missions, updates on space science and aeronautics research, and information about NASA’s Education Program. The newsletter, which is free by subscription to educators, also announces the latest educational publications available from NASA.

**MATHCOUNTS**
This annual mathematics competition for seventh and eighth grade students brings a number of organizations together in a cooperative effort to promote excellence in mathematics. Competition begins at the local level and culminates in a National contest. NASA spon-
sors a week-long trip to the U.S. Space Camp for individual and team winners of the National competition; in addition, a three-day mathematics workshop at a NASA Field Center is awarded to the top eight coaches in the National competition.

MATHCOUNTS
1420 King Street
Alexandria, VA 22314
(703) 684-2928

NASA Educational Workshops for Elementary School Teachers (NEWEST)
NEWEST provides a two-week workshop (graduate credit optional) to elementary school teachers (grades K–6) at a NASA Field Center. The teachers participate in seminars conducted by NASA scientists and engineers, learn about current research and projects, and are provided with techniques to assist them in incorporating aerospace-related topics into their curricula. Participants receive a variety of educational materials to take back to their classrooms. The application deadline is mid-February, with selection in mid-April.

National Science Teachers Association
NEWEST Program
1840 Wilson Boulevard
Arlington, VA 22201-3000
(703) 243-7100

NASA Educational Workshops for Math, Science, and Technology Teachers (NEWMAST)
NEWMAST provides mathematics, science, and technology teachers (grades 7–12) a two-week inservice workshop (graduate credit optional) at a NASA Field Center. Participants observe state-of-the-art research and development activities, interact with NASA scientists and engineers, and receive a variety of educational materials to share with their peers and students. The application deadline is mid-February with selection in mid-April.

National Science Teachers Association
NEWMAST Program
1840 Wilson Boulevard
Arlington, VA 22201-3000
(703) 243-7100

NASA Spacelink
This computer information service allows individuals to receive news about current NASA programs, activities, and other space-related information, including historical and astronaut data, lesson plans, classroom activities, and even entire publications. Although primarily intended as a resource for teachers, anyone with a personal computer and a modem can access the network. The Spacelink computer access number is (202) 899-0028. Users need a computer, modem, communications software, and a long distance telephone line to access Spacelink. The service is also available through the Internet, at any of the following addresses:

http://spacelink.msfc.nasa.gov
spacelink.msfc.nasa.gov
192.149.89.61

NASA Spacelink Administrator
Marshall Space Flight Center
Code CL01
NASA Marshall Space Flight Center
Huntsville, AL 35812-001
(205) 961-1225
Spacelink Computer Access: (202) 895-0028

NASA Educator Resource Center Network (ERCN)
Teachers can enhance their existing curricula with information that is generated by NASA programs, technologies, and discoveries. Although NASA educational materials relate primarily to mathematics, science, and technology, they can be valuable supplements for all subjects. NASA Education Division has established ERCN to disseminate materials to elementary educators, secondary educators, and higher education faculty. The materials come in various formats, including laserdiscs, CD-ROMs, videotapes, slides, audiotapes, publications, and teacher guides. Educators may preview or copy NASA materials upon request. ERCN is composed of Educator Resource Centers, Regional Educator Resource Centers, and the NASA Central Operation of Resources for Educators.

Washington, DC 20546-0001
(202) 554-4380

NASA Television
This distribution system for live and taped programs offers the public a front-row seat for launches and missions, as well as information and educational programming, historical documentaries, and updates on the latest developments in aeronautics and space science. The educational programming is aimed at inspiring students to achieve, especially in science, mathematics, and technology. If a school’s cable system carries NASA TV or if a school has access to a satellite dish, the programs may be downlinked and videotaped. Daily and monthly programming schedules for NASA Television are also available via NASA Spacelink. NASA Television is transmitted on Spacenet 2 (a C-band satellite) on transponder 5, channel 9, 69 degrees West longitude, frequency 3880.0 Megahertz, horizontal polarization, audio on 6.8 mHz.

NASA Television
NASA Headquarters, Code P-Z
300 E Street, SW
Washington, DC 20546

Science and Engineering Fairs
To stimulate interest in aeronautics and aerospace sciences among secondary school students, NASA participates in the science fairs administered by Science Services. NASA recognizes students with outstanding projects in aeronautics, space sciences, mathematics, space technology, and applications. Participation in NASA’s award program must be requested by fair directors, and NASA depends on individual science and engineering fair judges to select recipients of NASA certificates. NASA’s own team of judges attend the international fair and select ten students to receive an educational trip, accompanied by their teachers, to a NASA Field Center.

Science Service

Shuttle Amateur Radio Experiment (SAREX)
With the help of Amateur Radio clubs and ham operators, astronauts on designated shuttle flights make radio contacts while in orbit. The astronauts talk directly with ham operators, astronauts on designated shuttle flights make radio contacts while in orbit. The astronauts talk directly with ham operators, astronauts on designated shuttle flights make radio contacts while in orbit. The astronauts talk directly with ham operators, astronauts on designated shuttle flights make radio contacts while in orbit.
Space Science Student Involvement Program (SSIP)

SSIP is an annual program that allows students to compete in diverse areas related to space exploration, including the arts and sciences. Although the program culminates in a National competition, it has been designed to be used within the context of existing curricula. SSIP has five multidimensional program elements within which students may compete: one for grades 3–12, one for grades 3–5, one for grades 6–8, and two for grades 9–12. Public or private school students may apply.

Summer High School Apprenticeship Research Program (SHARP) Plus

SHARP Plus is an intensive research-based mentor program that is the residential analogue of the NASA Summer High School Apprenticeship Research Program. SHARP Plus research experiences occur in industry or in laboratories at universities that host participants on their campuses. The objective of the program is to increase underrepresented students' participation and success rates in mathematics and science precollege courses, thereby increasing the pool of underrepresented mathematics, science, and engineering majors in college, and leading to an eventual impact in the workplace. A group of 300 11th and 12th grade students with aptitude and interest in science and engineering participate in this eight-week experience.

SHARP Plus
Education Division

Washington, DC 20546-0001
(202) 358-1631

Urban Community Enrichment Program (UCEP)

UCEP exposes teachers and middle school students from urban communities to interesting and broadening activities. Special emphasis is placed on communication, logic, and reasoning skills. Major activities include lectures, demonstrations, and structured classroom activities highlighting the various sciences that supplement the ongoing curriculum. Workshops and other activities are offered to school personnel. Technical and logistical assistance is supplied by the UCEP Coordinator. In preparation for the program, NASA Aerospace Education Specialists train a team of teachers to conduct interdisciplinary aerospace activities in school districts.
1. Ames Research Center, Moffett Field, California, contributes to the U.S. space program in the areas of space science, life sciences, and space technology.

2. Dryden Flight Research Facility, Edwards Air Force Base, California, is the Nation's premier aeronautical flight test facility and the landing site for many Space Shuttle missions.

3. Goddard Space Flight Center, Greenbelt, Maryland, is a unique national facility where hundreds of scientists, engineers, and technicians work together to design, develop, fabricate, test, launch, and track spacecraft; operate flight projects; and analyze data.

4. Jet Propulsion Laboratory, Pasadena, California, has as its primary focus the scientific study of the solar system and the exploration of the planets with automated spacecraft.

5. Lyndon B. Johnson Space Center, Houston, Texas, is the focal point for NASA's manned space flight program. Johnson has been "Mission Control" for all manned space flights since Gemini 4 in 1965.

6. John F. Kennedy Space Center, Cape Canaveral, Florida, is the primary launch site for manned and unmanned space vehicles. Situated on a national wildlife refuge, it is the NASA Field Center where rockets and their payloads are inspected, prepared, and launched.

7. Langley Research Center, Hampton, Virginia, focuses primarily on aeronautical research. The Center currently devotes two-thirds of its programs to aeronautics and the remainder to space research.

8. Lewis Research Center, Cleveland, Ohio, conducts a varied program of research in aeronautics and space technology. Aeronautics research at Lewis includes work on advanced materials and structures for aircraft. Space-related research focuses primarily on power and propulsion.

9. George C. Marshall Space Flight Center, Huntsville, Alabama, is the primary propulsion system center for NASA. Its rockets sent the first Americans into space, landed men on the moon, launched Skylab, and lifted the Space Shuttle into orbit.

10. John C. Stennis Space Center, Mississippi, is NASA's prime test facility for large liquid propellant rocket engines and propulsion systems. Stennis is also responsible for research programs in environmental sciences and remote sensing of Earth's resources.

11. Wallops Flight Facility, Virginia, is a special facility for suborbital research, operated by Goddard Space Flight Center.

12. NASA Headquarters, Washington, DC, oversees agency programs.
Mission

The National Science Foundation (NSF) was established to promote and advance scientific progress in the United States. The Foundation has a legislative mandate to initiate and support basic science and engineering research, with the dual objective of strengthening research potential and education programs at all levels. While the Foundation itself does not conduct such activities, it sponsors research and education in science and engineering.

Background

NSF is an independent Federal agency, established in 1950. Policy-making authority within the agency is vested in the National Science Board, which is composed of scientists, educators, and public affairs experts. Its 25 members are appointed by the President with the consent of Congress.

NSF provides funding for research and education in the sciences and engineering. However, the Foundation does not support clinical research. Most proposals are initiated by educational institutions and other organizations rather than from individuals. More than one-half of its professional staff are scientists, engineers, and educators in these disciplines—60 percent on temporary assignment as visiting scientists and Inter-Program Assignees. These individuals oversee the disbursement of funds through seven directorates within the Foundation: Biological Sciences; Computer and Information Science and Engineering; Education and Human Resources; Engineering; Geosciences; Mathematical and Physical Sciences; and Social, Behavioral, and Economic Sciences.

Role in Mathematics and Science Education

The National Science Foundation Act of 1950 authorizes and directs the Foundation to initiate and support education programs in virtually all fields of science and engineering, at all educational levels. The agency capitalizes on its unique ability to draw on the expertise of the science and mathematics research and education communities. Each year, NSF submits to Congress an updated five-year strategic plan for science and engineering education. The plan simultaneously addresses short-term objectives that benefit the students currently in the system and long-term goals that result in fundamental changes to the basic delivery of education.

Elementary and Secondary

NSF places a major emphasis on elementary and secondary science, mathematics, and technology education, with the objectives of attracting and sustaining the interest of all students in these fields, as well as improving the quality of instruction for all students. The Foundation is actively involved in the support of reform efforts in science and mathematics curricula that emphasize comprehensive, integrated approaches to teaching and learning. NSF’s highest priority in terms of funding currently is the enhancement of teachers’ content and pedagogical knowledge in science, mathematics, and technology (especially at the elementary level); implementation of systemic reform at State, urban, and district levels; and implementation of science and mathematics standards for content, teaching, and student performance assessment.

Higher Education

NSF provides leadership and leveraged project support for the Nation’s higher educational system of technical colleges, two- and four-year colleges, and comprehensive and research universities. NSF programs seek to engage all undergraduate students in the learning of science and mathematics—those who will be engineers and scientists or skilled technicians in our work-force; teachers of science and mathematics in our schools; leaders of business, the professions, and government; and, in every case, citizens in an increasingly technology-based society.

At the graduate level and beyond, the Foundation’s activities concentrate principally in two directions:

- Support for postdoctorals and young faculty to attract beginning professionals to academic careers and provide them with critical study and research opportunities in their formative years.

Public Understanding of Science

The Foundation supports projects that provide rich and stimulating environments outside of school, where individuals of all ages, interests, and backgrounds can increase their appreciation and understanding of science and mathematics and their applications. Program emphases include establishing creative linkages between formal and informal education and stimulating parental/adult involvement in, and support of, quality science, mathematics, and technology education. These projects involve broadcast, print, and film; museums and science and technology centers; zoological parks, arboretum, and aquaria; and community-based organizations.

How Mathematics and Science Education Programs Are Administered

The Directorate for Education and Human Resources is the primary unit for education programs within NSF, and is funded by Congress through separate appropriation. All NSF research directorates, however, also engage in educational activities related to their disciplinary focus.

Administrative Offices for Mathematics and Science Education

Division of Educational System Reform

This division is an active partner in efforts to significantly improve learning. Focus is on high achievement in challenging science and mathematics by all students and reform of K-12 educational systems to sustain positive change in selected States, cities, and rural areas.
Division of Elementary, Secondary, and Informal Education (ESIE)

ESIE supports projects that enable all students—PreK-12—to succeed in science, mathematics, and technology and that increase the scientific and technological literacy of students and adults of all ages. Division programs provide the educational foundation for future generations of scientists, engineers, and technologists; for those pursuing post-secondary education in other disciplines; and for those who enter the workforce directly from secondary school. ESIE programs inform citizens about the science, math, and technology issues that impact their lives and promote effective advocacy for high-quality education in these fields.

Margaret B. Cozzens, Director
Division of Elementary, Secondary & Informal Education
National Science Foundation
4201 Wilson Boulevard, Suite 885
Arlington, VA 22230
(703) 306-1628 / Fax: (703) 306-0412
E-mail: mcozzen@nsf.gov

Division of Human Resource Development (HRD)

HRD works to increase diversity in the workforce by broadening the participation of persons from underrepresented groups in science, engineering, and mathematics. Working on the precollege to graduate education levels, HRD programs focus on making comprehensive and systemic changes in the education and research training of minorities, women, and persons with disabilities.

Roosevelt Calbert, Director
Division of Human Resource Development
National Science Foundation
4201 Wilson Boulevard
Arlington, VA 22230
(703) 306-1640 / Fax: (703) 306-0423
E-mail: rcalbert@nsf.gov

Division of Research, Evaluation, and Communication

This division supports research, statistical studies, and evaluation of science, mathematics, engineering, and technology education in the U.S. In addition, the division prepares a biennial indicators report on all levels of science and mathematics education; supports communication of educational research results; funds projects in advanced educational technology, teaching and learning; and provides analytical and policy support in these critical areas.

Daryl E. Chubin, Director
Division of Research, Evaluation, and Communication
National Science Foundation
4201 Wilson Boulevard, Suite 855
Arlington, VA 22230
(703) 306-1650 / Fax: (703) 306-0434
E-mail: dchubin@nsf.gov

Division of Undergraduate Education

This division serves as the focal point for the NSF’s agency-wide effort in undergraduate education. Programs support course and curriculum development, instrumentation and laboratory improvement, undergraduate faculty enhancement, undergraduate preparation of future elementary and secondary science and mathematics teachers, and advanced technological education for the technical workforce.

Norman L. Fortenberry, Director
Division of Undergraduate Education
National Science Foundation
4201 Wilson Boulevard
Arlington, VA 22230
(703) 306-1670 / Fax: (703) 306-0445

National Programs for K-12 Education

Advanced Technological Education (ATE)
The ATE program promotes exemplary improvement in advanced education through support of curriculum development and program improvement. The program targets technicians being educated for the high performance workplace of advanced technologies. Such technicians normally earn an associate degree in engineering or science technology that qualifies them for immediate employment or for transfer to a four-year institution. The program supports National/Regional Centers of Excellence in Advanced Technological Education and projects for the development of instructional materials and curriculum. The program also supports instrumentation and laboratory improvement and provides technical experiences for students and faculty and teacher development. Special projects include conferences and studies to improve understanding of issues in advanced technological education. ATE centers and projects will result in major improvements in advanced technological education, serve as models for other institutions, strengthen student preparation in mathematics and science, and yield educational products for National dissemination. All projects must have a vision for technician education to guide project development. The ATE program is jointly managed by the Division of Undergraduate Education (DUE) and the Division of Elementary, Secondary, and Informal Education (ESIE).

Collaboratives for Excellence in Teacher Preparation Program

This program supports projects aimed at major changes in the undergraduate preparation of future teachers of elementary and secondary science and mathematics. This includes development of new institutional structures, production of creative materials, courses and curricula for teacher education, and research on factors affecting the recruitment and preparation of teachers. Projects demonstrate leadership by the scientific discipline departments and emphasize a solid foundation in science or mathematics and rigorous attention to effective teacher practices, including the use of advanced instructional technologies. Special interests include multi-disciplinary projects and initiatives for recruiting members of underrepresented groups into the teaching profession. The program encourages collaborations among scientists, science educators, teachers, and other educational leaders both in higher education and in school systems. Colleges and universities or consortia with the capacity to prepare significant numbers of highly qualified teachers are eligible to submit proposals. Smaller-scale proposals for teacher education are welcome in the other programs in the Division of Undergraduate Education. These programs support course and curriculum development, undergraduate faculty enhancement activities, and laboratory equipment.

Arlington, VA 22230
(703) 306-1668

Comprehensive Partnerships for Mathematics and Science Achievement (CPMSA) Program

The CPMSA Program supports comprehensive precollege education reform programs aimed at city school systems. These districts link with institutions of higher education and with community-based and other educational organizations to design and implement
a combination of in-school student and teacher enhancement activities and informal education efforts. The goals are to improve student achievement in mathematics and science courses, enhance teacher knowledge and skills, and increase student interest in careers in science, mathematics, and technology.

Comprehensive Partnerships for Mathematics and Science Achievement Program

(703) 306-1633 / Fax: (703) 306-0423
E-mail: hrdpmss@nsf.gov

Informal Science Education (ISE) Program
ISE activities provide stimulating opportunities for individuals of all ages, interests, and backgrounds to increase their appreciation and understanding of science, mathematics, engineering, and technology. ISE projects take place outside of formal school settings in diverse environments (e.g., museums of all types, community centers, the home) and involve the use of various media (e.g., broadcast film, interactive technology, print). Projects typically are designed to reach large audiences or to have the potential for significant National or regional impact. To broaden its impact, ISE promotes collaborations among organizations that have similar goals, especially when such projects bridge the informal and formal education communities. Such partners combine their resources and expertise to develop effective strategies for reaching target audiences. In cooperation with the Instructional Materials Development Program and the Teacher Enhancement Program, ISE supports projects to increase involvement of parents and caregivers in science, mathematics, and technology education.

Informal Science Education Program
Division of Elementary, Secondary, and Informal Education
National Science Foundation
4201 Wilson Boulevard, Suite 885
Arlington, VA 22230
(703) 306-1614

Instructional Materials Development (IMD) Program
IMD projects create curricula, materials, and student assessments that change classroom instruction, enabling students to acquire a sophisticated understanding of content knowledge, higher-order thinking abilities, and problem-solving skills. The materials incorporate investigative, hands-on science, math, and technology education activities and align with recently developed standards for content, teaching, and assessment. IMD-supported materials promote the success of all students, regardless of background or ability. Another goal is the improvement of student attitudes toward science, mathematics, and technology. Projects range from major revisions of existing materials to the creation of entirely new ones; from development of a few modules at a single instructional level to comprehensive curricula for several school years; from a focus on a single subject to the integration of several disciplines; and from assessments embedded in classroom materials to the creation of assessment items and full programs that can be used by districts and States. All projects include comprehensive National dissemination plans to ensure wide use of the materials in diverse settings. In cooperation with the Teacher Enhancement Program, IMD supports implementation sites to assist districts in the selection and classroom implementation of curricula. In cooperation with the Informal Science Education Program and Teacher Enhancement, IMD also supports projects to increase the involvement of parents and caregivers in science, math, and technology education.

Arlington, VA 22230
(703) 306-1614

Presidential Awards for Excellence in Science and Mathematics Teaching (PAEMST) Program
The NSF operates the PAEMST Program on behalf of the White House. PAEMST recognizes career excellence for teachers at both elementary and secondary grade levels. Awards are made in each State and four jurisdictions (Washington, DC, Puerto Rico, The Department of Defense Dependent Schools and U.S. Territories [American Samoa, Guam, The Commonwealth of the Northern Mariana Islands, and the Virgin Islands]) taken as a group. Teachers submit applications to State or jurisdiction selection committees which, in turn, select three candidates from each of the four disciplinary/grade-level award groups. These nominees are then forwarded to a National selection committee comprised of prominent scientists, mathematicians, educators, and past awardees. This committee recommends four finalists (one from each of the four disciplinary/grade-level categories) from each State and eligible jurisdiction. PAEMST teachers constitute a National network of outstanding leaders in science and mathematics education and are a rich resource for the improvement of science and mathematics education throughout the Nation.

Programs for Persons with Disabilities
These programs are committed to helping students with disabilities participate fully in science, mathematics, engineering, and technology education and to promoting career opportunities in these disciplines for qualified people with disabilities. The programs support projects designed to change the present academic and professional climates that produce barriers to these goals. Activities include developing innovative methods of teaching science and mathematics to all students including those with disabilities and increasing the awareness and recognition of the capabilities and needs of students with disabilities among education professionals and the general public. The programs also provide mentoring resources for students with disabilities and promote the accessibility and appropriateness of instructional materials, media, and educational technologies.

Programs for Women and Girls
These programs aim to elicit projects with a high potential for increasing the representation of women in science, engineering, and mathematics careers and for improving the overall science, engineering, and mathematics education of women and girls. The initiative addresses educational issues from preschool through the graduate level, as well as professional issues. Two programs—Implementation and Development Projects and Information Dissemination Activities for Women and Girls—accomplish these goals.

Rural Systemic Initiatives (RSI) Program

The RSI Program is an NSF effort to address barriers to systemic and sustainable improvements in science, mathematics, and technology education in rural, economically disadvantaged regions of the Nation. The RSI is designed to fund projects in regions defined by similarities in social, cultural, and economic circumstances, rather than by governmental boundaries. The Program supports activities that lead to formation of partnerships and coalitions as well as determination of present needs and resources and future educational goals. The RSI also supports strategies directed toward systemic educational reform, such as professional development for teachers and administrators that is aligned with National science and mathematics standards. Other goals include adaptation of high-quality, challenging curricula to address cultural diversity and formulation of appropriate assessment strategies that can measure achievement in all students, regardless of socioeconomic status.

Statewide Systemic Initiatives (SSI) Program

The SSI Program is a major NSF effort to encourage improvements in science, mathematics, and engineering education through comprehensive systemic changes in the education systems for the States. The program represents a strategy to strengthen the infrastructure for science and mathematics education through alignment of State policies and resources. This requires the collaboration of educators at all levels, business and industry, parents, and the community at large. States were selected for funding through a rigorous merit review process that included preliminary proposals, panel reviews of full proposals, and site visits. Selection was based on:

- State commitment to fundamental reform of mathematics and science education;
- new directions in State vision for mathematics and science education that includes curriculum goals, assessment, teacher development, equity, governance, and improved outcomes;
- consensus on the current status of science and mathematics education and on the identification of the most serious problems that need to be addressed;
- partnerships that enable the effort to succeed;
- a plan for effective management and oversight;
- an evaluation plan that encourages mid-course corrections.

Twenty-five States and Puerto Rico received five-year awards. Two States have recently received additional five-year awards, while four completed their five-year awards. Four States have been phased out prior to completing five years of funding.

(703) 306-1684 / Fax: (703) 306-0456

Teacher Enhancement (TE) Program

TE projects provide professional development opportunities to broaden and deepen the disciplinary and pedagogical knowledge of teachers, improving their ability to deliver rich and challenging science, mathematics, and technology (SMT) education to all students. Through active involvement of administrators, projects develop school cultures that provide requisite resources to implement classroom improvements and sustain professional development opportunities. TE supports projects that:

- develop teachers who become leaders in content and pedagogy;
- engage teachers and students in meaningful research experiences that can be translated back to classrooms;
- provide cost-effective replication of effective projects;
- create professional development materials;
- provide innovative applications of educational technologies in networking underserved populations and giving them cost-effective access to quality SMT resources and inservice training.

Emphasis is placed on projects that focus on the professional development of teachers as the primary drivers for implementing SMT education reform in entire school districts. In cooperation with the Instructional Materials Development (IMD) Program, TE will support implementation sites to assist districts in selecting and implementing NSF-supported curricula; in cooperation with the Informal Science Education Program (ISE) and IMD, TE also will support projects to increase involvement of parents and caregivers in SMT education.

Urban Systemic Initiatives (USI) Program

The USI Program in science, mathematics, and technology education is a comprehensive and systemic effort designed to enable fundamental reform of K-12 science and mathematics education in large urban school systems. Eligibility for the program is limited to school systems in the 25 cities having the largest numbers of school-aged children (ages 5-17) living in poverty as determined by the 1990 Census. Built upon experience gained from the Statewide Systemic Initiatives program and the Comprehensive Regional Centers for Minorities, USI provides significant support for five years to cities that have completed comprehensive planning and demonstrated readiness to make systemic and sustainable changes in the policies, practices, and procedures of urban school systems. At present, 16 of the eligible cities have received awards.

Mission

Established to increase and diffuse knowledge, the Smithsonian Institution is a trust instrumentality of the Federal Government. While the Institution receives Federal support for its operation, it has no government or regulatory functions and serves, in effect, as an independent agency.

Background

The Smithsonian Institution was founded in 1846. Although it is best known for its 14 museums and the National Zoo, the Smithsonian is also one of the country's premier research facilities. In addition to its Federally funded programs, the Institution has many privately funded activities.

Role in Mathematics and Science Education

As part of its mandate to increase and diffuse knowledge, the Smithsonian Institution considers science education to be one of its most important missions.

Elementary and Secondary Education

In recent years, the Institution has focused on assisting school systems in addressing the National crisis in science and mathematics education. Three areas receiving particular attention, both in the museums and in other Smithsonian bureaus, have been professional education for teachers, curriculum materials for schools, and programs to effect attitudinal changes about science.

Higher Education

Through internships and fellowships, the Institution provides individualized training in science for undergraduate and graduate students. Smithsonian programs in astrophysics and biology are especially outstanding.

Public Understanding of Science

Through educational outreach programs, the Smithsonian Institution can improve science literacy among the general public. Special exhibits, onsite demonstrations, and publications inform and educate visitors.

How Mathematics and Science Education Programs Are Administered

Each administrative division within the Smithsonian is responsible for its own education programs, and each museum has an education office that reports to the museum director. The Institution's Office of Elementary and Secondary Education is the central office for precollege education.

Administrative Offices for Mathematics and Science Education

Harvard-Smithsonian Center for Astrophysics

The Smithsonian Astrophysical Observatory coordinates its varied scientific programs with the Harvard College Observatory, and together the two observatories form the Harvard-Smithsonian Center for Astrophysics in Cambridge, Massachusetts. The Science Education Department at the Center currently manages eight projects funded by the National Science Foundation (NSF) or the Annenberg Foundation, with additional support from the Smithsonian Institution. These projects use advanced technology, curricula and materials, teacher enhancement, and teacher networks to address the needs of teachers and students in elementary, secondary, and college science education.

Cambridge, MA 02138
(617) 495-9798 / Fax: (617) 496-5404
E-mail: hcoyle@cfa.harvard.edu

National Air and Space Museum

This museum serves as a major educational center that the public can easily access to learn about the history and development of aeronautics, Earth and planetary sciences, astronomy, astrophysics, and related areas of the arts, humanities, and sciences. Particular emphasis is given to the social implications of the Museum's collections and research on the quality of life for humankind.

Maureen Kerr, Assistant Director for Education
Educational Services Department, MRC 305
National Air and Space Museum
Washington, DC 20560
(202) 786-2524 / Fax: (202) 633-8174

National Museum of Natural History/Museum of Man

This museum houses the world's largest and most valuable assemblage of natural history specimens and human artifacts. It is the largest research organization in the Smithsonian and has a large internship program at the college level. Through its many exhibits, educational programs, and scholarly and popular publications, the Museum disseminates knowledge about the world's natural and cultural diversity.

Laura McKie, Assistant Director for Education
National Museum of Natural History
10th Street and Constitution Avenue NW, MRC 158
Washington, DC 20560
(202) 357-2066 / Fax: (202) 786-2778

National Science Resources Center

Operated jointly by the Smithsonian Institution and the National Academy of Sciences, the National Science Resources Center works to improve the teaching of science in the Nation's schools. The Center's three principal program areas are National outreach to build consensus, dissemination of information, and development of innovative science curriculum materials.

Douglas Lapp, Executive Director
National Science Resources Center
MRC 403
Smithsonian Institution
Washington, DC 20560
(202) 357-4892 / Fax: (202) 786-2028

National Zoological Park

The Park maintains a living collection at the Zoo and a major conservation, animal breeding, and research facility in Virginia. Through programs in education, research, conservation, and animal health, the Park promotes under-
standing of animal adaptations and evolution, and the interaction of wildlife with the environment and human culture. Through a series of new exhibits, programs, and graphics, the Zoo is being transformed into a biological preserve to educate the public about life in all of its forms and connections.

David Jenkins, Associate Director for Interpretive Programs
National Zoo / Education Department
3001 Connecticut Avenue NW
Washington, DC 20008
(202) 673-4919 / Fax: (202) 673-4746

Office of Elementary and Secondary Education
Drawing on the collections, exhibitions, and research of the Institution’s many museums and research institutes, this office brings focus and synergy to the educational work of the Smithsonian as a whole. Priorities center on building an Institution-wide publishing and information program, strengthening and coordinating the Institution’s professional development programs for teachers, promoting excellence in Smithsonian educational activities through leadership and support services, and providing resources for the infusion of multicultural perspectives into Smithsonian educational programs and policies.

Ann Bay, Director
Elementary and Secondary Education
Smithsonian Institution
Arts and Industries Building, Room 1163
Washington, DC 20560
(202) 357-2425 / Fax: (202) 357-2116
E-mail: esee013@sivm.si.edu

Smithsonian Environmental Research Center
The Center conducts long-term scientific research on estuarine land and water ecosystems found in the Chesapeake Bay watershed. The results of its research are disseminated through scientific journals, National and international meetings and seminars, the training of scientists, and public education activities for adults, families, and K–12 students.

A. Mark Haddon, Education Director
Smithsonian Environmental Research Center
PO Box 28
Edgewater, MD 21037
(301) 261-4190 / Fax: (301) 261-7954
E-mail: haddon@serc.si.edu or haddon@aol.com

Smithsonian Tropical Research Institute
This institute conducts basic research on the ecology, behavior, and evolution of tropical organisms. Headquartered in Panama, the Institute carries out research throughout the tropics and is the custodian of the Barro Colorado Nature Monument, a 12,000 acre tropical nature preserve located along the Panama Canal. Other facilities include a cloud-forest station, a research vessel, marine laboratories on the Atlantic and Pacific Oceans, and a research library.

Georgina DeAlba

National Science Resources Center’s (NSRC) Resource Collection
The NSRC maintains a comprehensive and growing collection of effective science teaching resource materials. Housed at the Arts and Industries Building of the Smithsonian Institution, the collection holds more than 5,000 volumes. It is cataloged and accessible through computerized databases that include annotations as well as bibliographic data. The Resources Center has also produced an annotated guide to elementary science resources, Resources for Teaching Elementary School Science (National Academy Press, Washington, DC). A companion volume for middle schools, Resources for Teaching Middle School Science, is under development.

Douglas Lapp, Executive Director
National Science Resources Center
MRC 403
Smithsonian Institution
Washington, DC 20560

The Private Universe Project
This project is developing a six-part, nationally broadcast television series to help science teachers address student preconceptions in science. Funded in 1992, the project focuses on grades K–12. The series is derived from work pioneered in Project STAR: Science Teaching through its Astronomical Roots, and is an extension of that project's award-winning video, A Private Universe. The project will alert science teachers to problems posed by their students' preconceived ideas and will encourage them to devise solutions tailored to students' specific needs.

Nancy Finkelstein
60 Garden Street, Mail Stop 71
Cambridge, MA 02138

Project SPICA: Support Program for Instructional Competency in Astronomy

Project SPICA provides astronomy education support to precollege teachers, particularly in grades K–9. The project has prepared some 180 expert teachers in 41 States to provide workshops to other teachers who want to enhance their use of astronomy in their classrooms. SPICA agents may be contacted through the project office. In addition, a manual containing 37 astronomy activities for grades 2–12, *Project SPICA: A Teacher Resource to Enhance Astronomy Education*, is available from Kendall/Hunt Publishing Company.

Appalachia Region

- Kentucky
- Tennessee
- Virginia
- West Virginia

Eisenhower Regional Math/Science Consortium at AEL
The Eisenhower Regional Math/Science Consortium at AEL (Appalachia Educational Laboratory) promotes and supports systemic reform in mathematics and science education in Kentucky, Tennessee, Virginia, and West Virginia. The Consortium builds on existing resources and creates partnerships that cut across State boundaries to link public schools, private schools, State and local education agencies, business and industry, science museums, and higher education institutions. Funded by the Eisenhower National Program for Mathematics and Science Education, the Consortium is one in a National network of 10 Consortia located across the country. The network also includes the Eisenhower National Clearinghouse (ENC) at The Ohio State University.

The Consortium's support for systemic reform in mathematics and science education includes teams of trainers in each State who are providing free onsite training designed to help align classroom instruction with National standards and State-specific curriculum frameworks.

By working closely with the Region's mathematics and science educators, the Consortium's full range of services can be tailored to State initiatives. A regional board and four State steering committees help align Consortium activities with local needs and with needs common across the Region.

The Consortium provides:

- **Technical assistance** and instructional materials to schools through projects and programs recommended by State steering committees and State departments of education.

- **Connections** to the National Science Foundation's Appalachian Rural Systemic Initiative, operating in 66 counties across six States.

An Equity Minigrant Program sponsored by the Consortium helps classroom teachers increase opportunities for all students in the Region to attain a higher level of mathematics and science education. Grants of up to $750 are available each year for projects designed to increase access to mathematics and science for students from traditionally underrepresented groups, including women, students with learning disabilities, students from rural areas, students from racial/ethnic/cultural minorities, students with physical disabilities, and students at risk for academic failure.

Equity minigrants can be used for various projects. For example, teachers might want to purchase materials to enhance the curriculum, bring scientists and mathematicians from traditionally underrepresented groups into classrooms to develop linkages or mentoring programs for students, provide research experiences for students from traditionally underrepresented groups, or develop school-based programs geared to increasing traditionally underserved students' interest and skills in science and mathematics.

The Consortium provides information on professional development opportunities at school sites; a newsletter entitled *Charmed Particles*; copies of EDTALK's *What We Know About Mathematics Teaching and Learning* and *What We Know About Science Teaching and Learning*; a proposal-writing guide entitled *Increasing Student Access to Mathematics and Science: A Guide for Classroom Equity Projects*; a set of classroom lessons entitled *Scope It Out: Standards-Based Microscope Lessons for the Middle School*; and catalogs of Appalachia Educational Laboratory products.

Department of Energy (DOE)

Appalachian Regional Commission (ARC) and Oak Ridge National Laboratory (ORNL)
A summer science, mathematics, and technology Teacher Leadership Institute is available for secondary teachers to participate in research-based programs at ORNL. The institute is provided in a two-week summer residential format patterned after the ORNL/National Science Foundation (NSF) National Teacher Enhancement Project and Leadership Institute. Participants are selected by the ARC from secondary schools throughout the ARC region. The focus is on "hands-on" laboratory research applying the tools and methods used in ongoing ORNL projects in research areas (as appropriate for each teacher's teaching assignment), pedagogy, and leadership. The program will feature telecommunications instruction at the ORNL Regional Science Center and telecommunications will be the primary method used for academic year follow-up and continued interactions with the teachers. Participants in the Teacher Leadership Institute will be hosted by several ORNL research divisions based on each teacher's background and interests. A program coordinator with experience in teacher preparation/higher education delivers instruction in pedagogy and educational leadership.

ARC and ORNL also collaborate on a summer science, mathematics, and technology Summer Science Honors Academy for ARC students to participate in research-based programs at ORNL. Student participants (seniors or graduating seniors) will be selected by the ARC from secondary schools throughout the Arc region. Students will be teamed with research mentors to participate in hands-on laboratory research applying the tools and methods used in ongoing ORNL projects. Students will also receive telecommunications instruction at the ORNL Regional Science Center.

Department of Transportation (DOT)
Federal Aviation Administration (FAA) Aviation Education
The FAA Aviation Education Representative coordinates aviation education services, including materials and programs for the FAA in the States assigned to the region.

Programs include the following:

- The Aviation Career Education (ACE) Academy is a one-week summer aviation education program for high school students sponsored by the FAA along with a host educational institution. The program provides students with diverse experiences in aviation career exploration. The focus is on aviation career clusters identified by FAA, with an emphasis on opportunities for women and minorities. A goal is to have one program in each State and U.S. Territory. The FAA will conduct regional leadership workshops and provide funds based on the availability of resources.

- Aviation Education Workshops for Teachers provide teachers with information on FAA aviation programs and materials and prepare them to teach aviation in the classroom. Annual workshops are conducted at colleges and universities across the Nation. The FAA provides information, materials, and speakers for the program.

- National Congress on Aviation and Space Education is sponsored annually by the FAA in partnership with the National Aeronautics and Space Administration and the Civil Air Patrol. The meeting includes teacher workshops and crosstalk sessions to exchange ideas on promoting aerospace education.

Eisenhower State Coordinators for Higher Education
Eisenhower State Coordinators oversee the Eisenhower Professional Development State Formula Grants for the State Agency for Higher Education (SAHE). The program focuses on teacher enhancement through both inservice and preservice programs.
**Southeast and Islands Regional Technology in Education Consortium (SEIR*TEC)**

ED established the Regional Technology in Education Consortia (R*TEC) program in the fall of 1995 to help States, districts, schools, adult literacy centers, and other educational institutions use advanced technology to support improved teaching and student achievement. R*TEC's role in educational technology is unique in two ways: the emphasis is regional and the primary goal is to ensure that technology is used effectively to support school reform. Program strategies include professional development, technical assistance, and information dissemination.

**Department of Energy (DOE)**

**Appalachian Regional Commission (ARC) and Oak Ridge National Laboratory (ORNL)**

A summer science, mathematics, and technology Teacher Leadership Institute is available for secondary teachers to participate in research-based programs at ORNL. The institute is provided in a two-week summer residential format patterned after the ORNL/National Science Foundation (NSF) National Teacher Enhancement Project and Leadership Institute. Participants are selected by the ARC from secondary schools throughout the ARC region. The focus is on hands-on laboratory research applying the tools and methods used in ongoing ORNL projects in research areas (as appropriate for each teacher's teaching assignment), pedagogy, and leadership. The program will feature telecommunications instruction at the ORNL Regional Science Center and telecommunications will be the primary method used for academic year follow-up and continued interactions with the teachers. Participants in the Teacher Leadership Institute will be hosted by several ORNL research divisions based on each teacher's background and interests. A program coordinator with experience in teacher preparation/higher education delivers instruction in pedagogy and educational leadership.

**Regional Science Center and telecommunications**

ARC and ORNL also collaborate on a summer science, mathematics, and technology Summer Science Honors Academy for ARC students to participate in research-based programs at ORNL. Student participants (seniors or graduating seniors) will be selected by the ARC from secondary schools throughout the ARC region. Students will be teamed with research mentors to participate in hands-on laboratory research applying the tools and methods used in ongoing ORNL projects. Students will also receive telecommunications instruction at the ORNL Regional Science Center.

**Nonproliferation Teacher Institute**

The Nonproliferation Teacher Institute provides participants with experiences in research and curriculum development in the technical and policy aspects of global nuclear proliferation issues and nonproliferation efforts. The Institute is composed of technology briefings; laboratory research; development of a "Nonproliferation World" model, a computer moderated simulation exercise that will operate a mini-world educators can use to help build an understanding of proliferation and the dynamics associated with it; roundtable exchange; and closure report and critique.

**The Adventures in Supercomputing (AiS)**

The Adventures in Supercomputing (AiS) program is designed to foster and enhance the participation of diverse populations of high school students in mathematics, science, and computing.

**The Ecological and Physical Sciences Study Center (EPSSC)**

EPSSC provides inquiry-based, hands-on science and mathematics activities and experiments for K–12 students and teachers. EPSSC instructors, science professionals, and educators deliver programs at the DOE's National Environmental Research Park, the ORNL Regional Science Center, the American Museum of Science and Energy, and area school classrooms. Currently the EPSSC offers more than 30 different programs. The programs are offered on a fee-for-service basis. EPSSC courses serve to supplement or enrich, not replace, existing science and mathematics curricula.

**The Saturday Academy of Computing and Mathematics (SACAM)**

SACAM is an enrichment activity for East Tennessee area high school students. The goal is to reinforce the interests of selected outstanding students who already are moving towards math/science/engineering careers and can benefit from the opportunity to work, individually or in a group, with technical mentors through a structured series of research-based learning experiences. Student participants are nominated by teachers and administrators from as many as 15 area high schools. Teachers are encouraged to participate with their students. The program is offered twice (fall and winter) during each school year. SACAM is not a lecture course, nor primarily a course in mathematics or computer science. Rather, the principal subject matter is modern mathematics and high-performance computing. The approach is one of hands-on involvement with tools used to solve problems across the full range of scientific and technical disciplines.
The Teacher Research Participation Program is designed to improve the quality of precollege education by enhancing the professional competence of science and mathematics teachers. This is accomplished by involving teachers in National engineering and scientific research programs and by supporting other activities that enable teachers to interact with science and engineering professionals. Through first-hand experiences gained from full-time, eight-week summer appointments, the program provides a better understanding of how scientific knowledge is applied in the laboratory and other technical environments. The primary objective is to provide opportunities for qualified science, mathematics, and technology teachers to participate in ongoing research under the guidance of the scientific staff at the Oak Ridge facilities. Participants are assigned to positions in well-established projects and become fully integrated members of the research groups. Applicants must be certified to teach mathematics, science, or computer science, and must have taught full-time for at least one year in either public or private secondary schools serving grades 7–12.

Science and Engineering Apprentice Program
This program, supported by DoD and administered by The George Washington University, is designed to provide research experience for high school students attending school near the participating research facility. Each student works with a senior scientist or engineer who acts as a mentor for eight weeks during the summer. The following are participating organizations in the State of Virginia:

Michael Antos
Naval Surface Warfare Center (NSWC-D)
Code P30, Route 206
Dahlgren, VA 22448
(540) 653-8701

Dr. John Cline
Army Research Laboratory Vehicle Structures Directorate (AVSD)
NASA Langley Research Center
Hampton, VA 23681
(804) 864-3966

Other participating organizations located in Virginia include: Army Research Institute (ARI), Alexandria, Virginia; Army Test, Measurement and Diagnostic Equipment Activity (TMDE-V), Ft. Belvoir, Virginia; Night Vision and Electronic Sensors Directorate (NVESD), Ft. Belvoir, Virginia; and Topographic Engineering Center (TEC), Ft. Belvoir, Virginia. For information on these programs, contact:

Appalachian Regional Commission (ARC) and Oak Ridge National Laboratory (ORNL)

A summer science, mathematics, and technology Teacher Leadership Institute is available for secondary teachers to participate in research-based programs at ORNL. The institute is provided in a two-week summer residential format patterned after the ORNL/National Science Foundation (NSF) National Teacher Enhancement Project and Leadership Institute. Participants are selected by the ARC from secondary schools throughout the ARC region. Students will be teamed with research mentors to participate in hands-on laboratory research applying the tools and methods used in ongoing ORNL projects. Students will also receive telecommunications instruction at the ORNL Regional Science Center.

Chincoteague National Wildlife Refuge
Programs include guided walks, environmental education activities, and teacher workshops. Teachers participating in the workshops receive teacher guides. The refuge also conducts offsite outreach programs to elder hostels, youth groups, and other interested organizations.

Other programs include the following:

- The Non-Guided Environmental Education program provides materials to groups that request fee waivers for environmental education programs.

- The Spring Environmental Education program allows students to study endangered species, biodiversity, and migration through pre-visit, onsite, and post-visit activities.

Prince William Forest Park
Food Chains, Food Webs, and the Pyramid of Life are all ways of describing the flow of energy in nature. In this program, the student learns about photosynthesis, herbivores, carnivores, and how the system interrelates to the food chain.

Other programs include:

- The Forest Succession Walk teaches students to name the five different layers of a mature forest, describe three stages of forest succession, and understand plant and animal communities.

- Geology of Prince William Forest Park is a program that teaches students about various rocks and minerals in the park, as well as general concepts of geology and the processes that help form the park.

- Hug A Tree introduces tree parts, names, and how trees benefit humans.

- The Mining and Minerals program teaches students about iron pyrite and sulfur and their importance. Other topics include how to identify a mining site, how to extract these minerals from the ground, and the effects of mining on the environment.

- Seeds: Nature's Hitch Hikers and Parachutes helps students identify some plant seeds and describe the ways in which they propagate life.

- Using the Five Senses teaches students about their five senses and the part of the body used for each sense. Students learn how animals use their senses to survive.

- Water Cycles, Watersheds, and Stream Ecology helps students learn about the importance of watersheds, water cycles, and why they should be protected. They learn about pollution in streams as well as about the parameters of streams and how they influence each other.

Mason Neck National Wildlife Refuge
The refuge offers educational environmental education workshops for teachers on- and offsite. In the Field Studies program, classes or groups can study successional grasslands and forests, wetlands, and wildlife management programs during field trips after teachers or group leaders have attended a pre-trip orientation tour. Staff may accompany adult or special needs groups for detailed discussion of management programs or to assist with access.

Teacher Workshops focus on Nationally known activity guides (Project WILD, Aquatic Project WILD, Project Learning Tree, Wonders of Wetlands) or customized programs to meet teachers' needs for presenting environmental concepts or fulfilling the youth program curriculum.

Project WILD
Project WILD offers teacher training and educational materials. Teacher guides, free to teachers who attend the training session, contain more than 80 supplementary, interdisciplinary activities for grades K–12.
The programs for students and teachers include field trips, workshops, volunteer intern positions, mentoring, shadowing, science fair judging, career fair presentations, and classroom visits. These programs are designed to present scientific content and hands-on experiences in relevant science. The focus is on teacher training and enhancement as the best way to reach more students. Programs address issues in current science education reform and the content areas of local/regional curricula. Programs are regional or local in nature and are advertised through local school systems or teacher organizations.

Teacher Resource Centers (GEO-Center, Earth Science Education Collection) provide a comprehensive, current collection of Earth science education resources to the educational community. Educational materials, including books, videos, activities, maps, posters, models, and hands-on items are available for loan to K-12 teachers and other educators involved in the teaching of the geosciences, including hydrology, meteorology, cartography, astronomy, and Earth science.

Federal Aviation Administration (FAA) Aviation Education
The FAA Aviation Education Representative coordinates aviation education services, including materials and programs for the FAA in the States assigned to the region.

Programs include the following:

- **The Aviation Career Education (ACE) Academy** is a one-week summer aviation education program for high school students sponsored by the FAA along with a host educational institution. The program provides students with diverse experiences in aviation career exploration. The focus is on aviation career clusters identified by the FAA, with an emphasis on opportunities for women and minorities. A goal is to have one program in each State and U.S. Territory. The FAA will conduct regional leadership workshops and provide funds based on the availability of resources.

- **Aviation Education Workshops for Teachers** provide teachers with information on FAA aviation programs and materials and prepare them to teach aviation in the classroom. Annual workshops are conducted at colleges and universities across the Nation. The FAA provides information, materials, and speakers for the program.

- **National Congress on Aviation and Space Education** is sponsored annually by the FAA in partnership with the National Aeronautics and Space Administration and the Civil Air Patrol. The meeting includes teacher workshops and crosstalk sessions to exchange ideas on promoting aerospace education.

The President's Environmental Youth Awards (PEYA) Program
Young people from each State are invited to participate in PEYA, a nationwide program designed to encourage individuals, school classes, summer camps, public interest groups, and youth organizations to promote environmental awareness and community involvement. The two components of the program are the regional certificate program and the National awards competition. Regional certificates, signed by the President, are awarded to each participant by EPA regional offices. National individual project winners, or one representative from a National award-winning group project, along with one sponsor, are honored at EPA headquarters, Washington, DC. Interested K-12 individuals or groups may obtain application materials and contest rules by contacting the EPA Regional Office that serves their State. PEYA has been an ongoing project since it was created by the White House Office of Education and the EPA in 1971.

Harpers Ferry National Historic Park

The Marsh Walk program explores an often misunderstood natural resource, the wetland.
New River Gorge National River

Programs are requested by teachers and other youth group leaders from a list of 10 in-park programs offered at six locations or 11 offsite programs. Each is designed to offer a hands-on experience that complements State learner outcomes, and to promote a sense of responsibility for protecting the park and the environment as a whole. Programs include guided walks and lectures on the history, geology, and ecology of the New River Gorge National River. A teacher guide is available.

In the park's curriculum-based Environmental Education Program, a park ranger visits each K-4 classroom in participating schools in both the fall and spring to present a one-to-two-hour program of activities centering on a grade-specific environmental or cultural theme.

The President's Environmental Youth Awards (PEYA) Program
Young people from each State are invited to participate in PEYA, a nationwide program designed to encourage individuals, school classes, summer camps, public interest groups, and youth organizations to promote environmental awareness and community involvement. The two components of the program are the regional certificate program and the National awards competition. Regional certificates, signed by the President, are awarded to each participant by EPA regional offices. National individual project winners, or one representative from a National award-winning group project, along with one sponsor, are honored at EPA headquarters, Washington, DC. Interested K-12 individuals or groups may obtain application materials and contest rules by contacting the EPA Regional Office that serves their State. PEYA has been an ongoing project since it was created by the White House Office of Education and the EPA in 1971.

Department of Transportation (DOT)

Federal Aviation Administration (FAA) Aviation Education
The FAA Aviation Education Representative coordinates aviation education services, including materials and programs for the FAA in the States assigned to the region.

Programs include the following:

- The Aviation Career Education (ACE) Academy is a one-week summer aviation education program for high school students sponsored by the FAA along with a host educational institution. The program provides students with diverse experiences in aviation career exploration. The focus is on aviation career clusters identified by FAA, with an emphasis on opportunities for women and minorities. A goal is to have one program in each State and U.S. Territory. The FAA will conduct regional leadership workshops and provide funds based on the availability of resources.

- Aviation Education Workshops for Teachers provide teachers with information on FAA aviation programs and materials and prepare them to teach aviation in the classroom. Annual workshops are conducted at colleges and universities across the Nation. The FAA provides information, materials, and speakers for the program.

- National Congress on Aviation and Space Education is sponsored annually by the FAA in partnership with the National Aeronautics and Space Administration and the Civil Air Patrol. The meeting includes teacher workshops and crosstalk sessions to exchange ideas on promoting aerospace education.

WestEd Eisenhower Regional Consortium for Science and Mathematics Education
The WestEd Eisenhower Regional Consortium for Science and Mathematics Education (WERC), a program of the WestEd Regional Educational Laboratory, has served the Far West region since October, 1992. WERC is a member of the National Network of Eisenhower Regional Consortia and the Eisenhower National Clearinghouse for Mathematics and Science Education. The mission of this network is to serve as a coordinated field-based National infrastructure for systemic development and dissemination, with an emphasis on underserved and under-represented populations.

Each of the 10 Regional Consortia serves the States within its geographical region to promote systemic reform in science and mathematics education. Systemic reform aims to simultaneously address the various factors that contribute to the current condition of science and mathematics education. On a State level, this includes curriculum frameworks, grade-level assessments, and teacher preservice and inservice programs. WestEd works with States to develop world-class standards, to help align curriculum frameworks with world-class standards, and to match statewide assessment methods with these standards and reform frameworks.

Arizona

Consortium staff have worked with the Arizona Department of Education to develop a curriculum alignment program to assist schools in meeting the goals of the Arizona Essential Skills in mathematics and science. Consortium staff also helped design and implement the summer Arizona Academy for Systemic Reform of Mathematics and Science and the subsequent Journey Schools Program. WERC staff also provide technical assistance to Arizona systemic reform efforts such as the Phoenix area Urban Systemic Initiative and the Arizona Coalition members of the area's UCAN Rural Systemic Initiative. The technical assistance for the Urban Systemic Initiative has had a focus on teacher action research projects and is developing a new focus on telecommunications.

California

California is the only State in WestEd's region to have received funding from the National Science Foundation's Statewide Systemic Initiative (SSI). WERC collaborates with the State's SSI to help coordinate science education efforts throughout the State. Together they have established the California Science Education Advisory Committee (CSEAC), which is currently leading the effort to develop California Challenge Science Education Standards. This statewide effort utilizes electronic communications to assist in the development, review, and dissemination of the new standards. Another major CSEAC initiative is focusing on the implementation of science performance assessments statewide. In the spring of 1996, more than 20,000 students engaged in performance tasks as part of this initiative.

The Science Education Academy of the Bay Area (SEABA) provides an example of the networking and collaboration model for enhanced systemic reform. Charter members of SEABA include 10 county offices of education, four University of California campuses, the Lawrence Hall of Science, four California State University campuses, WestEd, the California Department of Education, the Exploratorium, the California Academy of Sciences, Public Broadcasting Station KQED, and four U.S. Department of Energy laboratories. A SEABA goal from its inception has been the production and dissemination of a "one-stop shopping catalog" of greater Bay Area programs and resources. This electronic catalog provides accurate up-to-date information about science education resources and continuing education opportunities available to educators in the greater Bay Area. Teachers and resource providers can search the catalog by organization name, subject area, type of activity, date range, geographic location, and other search criteria. A companion journal, printed in magazine format, provides teachers with an overview of Bay Area professional development activities, highlights selected SEABA activities, encourages teachers to continue their education in science, and helps them use the electronic catalog.

Utah

Work in Utah focuses on revising and implementing the science framework. Revision of the core curriculum initially focused on K-6 and expanded to grades 7-12. WERC participated in writing and revising the new core, integrating authentic assessment instruments aligned with the core content and philosophy, piloting the use of the core in selected schools, and disseminating the revised core to a much wider audience in Utah. After the Utah Board of Education adopted both revised cores, efforts have focused on supporting the professional development to assist teachers and schools in implementing the new ways of teaching science at the elementary and secondary levels. A key philosophical underpinning of the science core revisions is a departure from instruction based on isolated facts toward an integrated instructional program that highlights the processes of science and the big ideas in science and their connections. The revised secondary science core includes a new ninth grade Earth Systems Science course. WERC staff are assisting Utah educators in developing helpful resources for teachers and students, especially a site on the World Wide Web specifically geared to support this course.

Consortium Services

The Regional Consortia have a special role in identifying and disseminating exemplary curricular materials, teaching methods, teacher training programs, and assessment tools. WERC helps identify exemplary materials developed within its region to be disseminated by the Consortium and by the Eisenhower National Clearinghouse (ENC). In addition, WERC plays a central role in the dissemination of information from the Clearinghouse to schools and teachers in its four States. WERC,
in collaboration with ENC, has set up a Demonstration Site in the California Academy of Sciences located in San Francisco's Golden Gate Park. This collaboration is now being extended through the establishment of one or more ENC Access Centers in each State.

At the local level, the Consortium provides technical assistance that teaches classroom teachers, administrators, and other educators to adapt and use exemplary instructional materials, teaching methods, curricula, and assessment tools. Since the WestEd Eisenhower Regional Consortium has a limited budget to serve a very large area in terms of both population and geography, it is focusing its training efforts on working with existing staff development networks. The Consortium's training and information services aim to facilitate the efforts of the many agencies that themselves reach out into all the schools in the region.

WestEd provides significant resources and assistance with respect to the uses of technology to support improvements in mathematics and science education. The development, printing, and distribution of the acclaimed book Tales from the Electronic Frontier illustrate WERC’s approach to the uses of technology to support education reform. Tales features nine stories of how practicing teachers use the Internet for the active learning of mathematics and science. Each story raises challenging issues that arise in instructional settings. In addition, Tales provides valuable resources, tips, and ideas to help both Internet novices and those with more experience.

The WestEd Governing Board oversees the activities of the WestEd Eisenhower Regional Consortium. The Governing Board has 33 active members from all four States, including Chief State School Officers, local school administrators, representatives from higher education, county superintendents of schools, representatives from State offices of education, representatives from private schools, and members of the business community.

Pacific and Southwest Regional Technology in Education Consortium (PSR*TEC)

ED established the Regional Technology in Education Consortia (R*TEC) program in the fall of 1995 to help States, districts, schools, adult literacy centers, and other educational institutions use advanced technology to support improved teaching and student achievement. R*TEC's role in educational technology is unique in two ways: the emphasis is regional and the primary goal is to ensure that technology is used effectively to support school reform. Program strategies include professional development, technical assistance, and information dissemination.

Elk Hills Naval Petroleum Reserves

Elk Hills is one of the Nation's leading producers of crude oil and California's largest producer of natural gas. In addition to daily operations, Elk Hills is committed to future generations, encouraging young people in Kern County to pursue careers in mathematics and science through active involvement in various education outreach programs. One of the largest and most visible programs is the annual Kern County Regional Science Bowl. In addition to the Science Bowl, Elk Hills is host to many other programs, including paid student internships, Earth Day school activities, and the Environment Pockets Educational Outreach Program.

Todd G. Goode, Public Affairs

Lawrence Livermore National Laboratory

The primary mission of the laboratory is "to provide the scientific and technological tools needed to meet critical National missions in the next 20 years." The Education Program is channeling the unique scientific and technical resources of the laboratory toward systemic improvement in science, mathematics, engineering, and technology education to ensure a highly skilled, diverse workforce. The laboratory introduces new approaches to teaching science and mathematics, integrates laboratory core competencies and technology to enhance science education, enhances public understanding and awareness of science and technology, and provides students and educators with opportunities to conduct research and earn advanced degrees.

Bureau of Reclamation
Environmental Education
A variety of environmental subjects, with an emphasis on water resources, is offered to teachers and students in grades K-12. Subjects vary from groundwater model to instant snow storms and wetlands in a pan. Programs are presented in the classroom as well as outdoors at laboratory schools, summer camps, and at some visitor centers. The program currently operates in the States of California, Colorado, Montana, Nevada, Idaho, and Utah.

Caring for the Land
This interagency, year-round, environmental education area is permanently located on the Los Angeles County Fairgrounds. It was built and is managed cooperatively by the Bureau of Land Management, USDA, Forest Service, National Park Service, California Department of Forestry and Fire, and the Los Angeles County Forestry and Fire Warden. The site includes an interpretive trail through southern California native ecosystems, an amphitheater, and a restored firetower. Programs are given by Native Americans on native plant uses, tree potting, etc.

Elayn Briggs, Environmental Education Coordinator
California Desert District Office
6221 Box Springs Boulevard
Riverside, CA 92507
(909) 697-5200 / Fax: (909) 697-5296

Channel Islands National Park
The park offers environmental programs, including guided walks, lectures, a video, and teacher workshops. In the Floating Classroom program, park concessions and park interpreters conduct educational presentations on ships out to Anacapa Island and on the island. All-day programs highlight marine life and history of the islands. Students hike on the island and explore the tidepools.

Carol J. Spears, Chief
Division of Interpretation
Channel Islands National Park
1901 Spinnaker Drive
Ventura, CA 93001
(805) 658-5700 / Fax: (805) 658-5799

Death Valley National Monument
The monument offers environmental programs, including guided walks, lectures, and hands-on activities. In the Junior Ranger Education Program, interpreters travel to area schools and present information about the park to students. All activities are completed in and around the school. This program teaches stewardship of Death Valley and other public lands. An activity book, certificate, and badge are provided.

Sacramento, CA 95825-1846
(916) 979-2837

Fort Cronkhite
"Walk to the Edge of America—the Military" is a two-hour, ranger-guided interpretive presentation focusing on U.S. history in California from 1850 to the present. The program uses the park's abandoned forts as learning and discussion tools. Activities
include archaeological explorations, discussion of perceived foreign threats, changing technology, and problem resolutions on personnel and global levels.

Another program is \textit{"B"} Is for Biodiversity. Through a series of engaging activities, students walk a trail and begin to understand the concept of ecosystem health through a variety of species. Games, discovery walks, discussion, problem solving, and solo walks allow the students to experience why they value biological systems.

Diane Dobos-Bubno, Park Ranger
Building 1056
Fort Cronkhite
Sausalito, CA 94965
(415) 331-0845 / Fax: (415) 331-1428

\textbf{Golden Gate National Park}

Exploring the Neighborhoods at the Golden Gate features a hike along the coastal bluffs and shoreline at the Golden Gate. Students learn about the homes of the plants, animals, and people who have lived there. Students meet the plants and animals that live in the forest, the bay, the beach, and the tide line. Participants catch and release a crab, observe animal “neighborhoods,” and discuss how their lives affect all the neighborhoods around them.

A Walk Through Time features a hike in the forest, during which students learn about the geography, geology, and natural history of the Presidio and how it has changed through time. They also learn about the Ohlone, Spanish, Mexican, and American communities that have lived with the land.

Jill Torres, Education Coordinator
Golden Gate National Park Association
Fort Mason, Building 201
San Francisco, CA 94123
(415) 556-1874 / Fax: (415) 992-2692

\textbf{Golden Gate National Recreation Area}

Curriculum-based programs are led by trained staff who stress outdoor activities. Teacher guides that detail pre- and post-visit activities are available for each program. For example, Adopt-a-Beach is an environmental education program that teaches students about the effects of garbage on ocean ecosystems. Curriculum developed by the California Coastal Commission supplements a field trip to Ocean Beach (San Francisco) where students participate in a beach cleanup.

The Junior Ranger Program is a six-part education program that provides students and teachers with an in-depth National park experience. Students learn about natural and cultural resources of the park through a series of field trips to different park sites. Through discussion, hands-on activities, and journal assignments, students develop life-long skills such as cooperation, observation, decision making, questioning, recording, and analyzing information. All field trips are ranger led.

Kevin Turner, Fort Funston Site Supervisor
Golden Gate National Recreation Area
Building 201
San Francisco, CA 94123
(415) 239-2366 / Fax: (415) 556-1638

\textbf{Joshua Tree National Monument}

The monument manages several ranger-led natural-science oriented educational programs that are available both onsite and in the classroom. For example, Introduction to Joshua Tree National Monument acquaints students to the natural, cultural, and geographic features of the park.

Division of Interpretation
Joshua Tree National Monument
74485 National Monument Drive
Twentynine Palms, CA 92277-3597
(619) 367-7511

\textbf{Joshua Tree National Park}

Geology of Joshua Tree National Park introduces students to geological concepts and to the forces creating the Park’s landscape.

Programs include the following:

- \textbf{Habitats Are Where It’s At} helps students define “habitat” and stresses the importance of habitats for all living things.

- \textbf{The Joshua Tree Hotel} gives students a look at the life supported by a single joshua tree and it emphasizes interrelationships.

- \textbf{The Junior Ranger Program} is a comprehensive unit introducing students to National Park Service history and philosophy, careers, and cultural and natural history of the Joshua Tree National Park. This program includes a service project.

- \textbf{The Mojave Desert Discovery Educator’s Guide} provides information about the cultural and natural history of Joshua Tree National Park and four other Mojave Desert Parks.

- \textbf{Project Learning Tree}, through hands-on interdisciplinary activities, encourages students to investigate environmental issues and to make informed, responsible decisions.

- \textbf{The Oasis Ecosystem} introduces students to the interrelationship between plants, animals, and people who inhabit an oasis.

- \textbf{Project Wild Workshops} provide supplementary activities in environmental education and resource conservation with an emphasis on wildlife.

- \textbf{In Who Lives in the National Park?} students take a look at the diversity of life in the park and distinguish between wild versus domestic and living versus nonliving.

- \textbf{Who’s Who and What’s What?} introduces students to common desert plants and animals.

Carol Peterson, Education Specialist
Joshua Tree National Park
9800 Black Rock Canyon Road
Yucca Valley, CA 92284
(619) 365-2371

\textbf{Lassen Volcanic National Park}

The National Park Education Program provides students with a variety of structured and educational activities designed to enhance their understanding of the natural and cultural history of Lassen Volcanic National Park. The program also strives to increase the participant’s understanding of the importance and values of the National Park System. In addition, the park offers guided walks, lectures, a museum, and hands-on activities that focus on anthropological and geological aspects of the park. In-school presentations may be requested.

The Winter Ecology Snowshoe Program is designed to increase student awareness and understanding of the interrelationships of the plant and animal communities of Lassen in winter. The program is also designed to introduce students to the importance of snow and the role it plays in the environment. Students learn the proper way to snowshoe as well as winter survival skills.

Steve Zachary, Education Coordinator
Division of Interpretation
Lassen Volcanic National Park
PO Box 100
Mineral, CA 96063-0100
(916) 595-4444 / Fax: (916) 595-3262

\textbf{Lava Beds National Monument}

Programs include guided walks that focus on anthropological and geological aspects of the park.

Yvonne McMillan, Interpretative Ranger
Lava Beds National Monument
PO Box 867
Tulelake, CA 96134
(916) 667-2282

\textbf{Menlo Park Earth Science Information Center}

The center offers information and sales service for U.S. Geological Survey map products and Earth science publications.
Minerals Management Service (MMS) Regional Office
The MMS Regional Office provides a range of educational services. Teacher in-service programs and classroom visitations may include supplemental materials. Availability may be limited, but arrangements may be made for duplication of some materials at minimal cost.

Minerals Management Service Office of Public Affairs
1201 Elmwood Park Boulevard, MS 500

Public Affairs Office, Mid-Pacific Region
Bureau of Reclamation
Federal Office Building
2800 Cottage Way
Sacramento, CA 95825-1846
(916) 979-2837

Pinnacles National Monument
In the Junior Park Management program, students are introduced to the management of National parks, their organization, philosophy, the National Park Service (NPS) mission, and responsibility to future generations. Students learn what their responsibilities are as owners and users of public lands. The partnership between the NPS and students is emphasized.

William Lester, Chief Ranger
Pinnacles National Monument
Hispanic, CA 95043
(408) 389-4485 / Fax: (408) 389-4489

Point Reyes National Seashore
Both the South and North Districts of the seashore offer environmental education programs for teachers and students. The Clem Miller Environmental Education Center is available to educators and students for a five-day wilderness awareness program.

Other programs include the following:
- Habitat Trek: The Next Generation, a one-mile walk through fields and forest, involves children in games and activities. A variety of habitats are explored, and children learn about the importance and interdependence of all life forms.
- Bird Rap, an auditorium-based program, gives students the opportunity to meet a live western screech owl. Topics covered include bird adaptations, especially habits of raptors, and the conservation of habitats.
- Shake, Rattle, and Roll introduces students to earthquake preparedness, the theory of plate tectonics, and the geology of the Point Reyes Peninsula through an active hands-on walk along the half-mile, accessible Earthquake Trail.
- Whale Watching at the Headlands focuses on the physical adaptations that the migrating California gray whales need to undertake their lengthy journey. Tips on viewing gray whales off the coast are also given.

John A. Dell’Osso, Acting Chief of Interpretation
Point Reyes National Seashore
Point Reyes Station, CA 94956
(415) 663-8522 / Fax: (415) 663-8132

Project Water Education for Teachers (WET)
Project WET is an interdisciplinary water education program intended to supplement a school's existing curriculum. Classroom-ready teaching aides being developed include activity guides and modules for grades K-12, computer simulations, water-history publications, groundwater flow models, and a series of children's story and action books.

Rita Sudman
Water Education Foundation
717 K Street, Suite 517
Sacramento, CA 95814

Sacramento, CA 95814
(916) 653-9843 / Fax: (916) 653-1856

Redwood National Park
Field seminars supplement park interpretation by providing concentrated field study of the natural and cultural history of the coast redwood ecosystem.

Programs include the following:
- The Howland Hill Outdoor School introduces students to coast redwood and stream ecology of the park. One- to three-day programs are available. The programs match the Del Norte County School District curriculum goals for science and some history themes. There is a one-day teacher workshop.
- Wolf Creek Outdoor School is a curriculum-based program on coastal redwood forests and prairie community for elementary school children. There is a pre-visit video and curriculum guide. The programs are ranger-led at the site on stream ecology, redwood trees, and prairies.

Yosemite National Park
The park has several educational programs:

- **Classrooms in the Park—School Program** allows school classes to spend one or two hours with a park ranger and/or a member of Yosemite's Indian Culture staff. Spring classes focus on natural history; fall themes are based on cultural history. Materials presented are correlated to California State frameworks and include a National Park Service message of protection and preservation. All material can be adapted for groups with special needs.

- **Commencement 2000** is an invitational program that allows inner-city school students to explore careers with natural resource agencies. The program is sponsored by several agencies, including National Park Service, the Bureau of Land Management, U.S. Fish and Wildlife Service, the Bureau of Reclamation, and the California Department of Fish and Game.

- **Discover Yosemite: A Teacher Guide to the Park** provides a self-guided way for teachers to visit the park with a class. Included are ideas on how to plan a trip; where to find features and help; maps; background information; resources; activities to do before, during, and after the visit; and education programs description.

- **The Environmental Living Program** permits students to stay overnight at the Pioneer History Center and assume the roles of historical people who influenced the development and protection of Yosemite National Park. The focus of the program is the mock establishment of a National park. An overnight workshop for teachers is required.

- **The Junior/Senior Ranger Program** allows Junior Rangers (ages 8-10) and Senior Rangers (ages 11-12) to experience nature through interactive learning during a three-hour class with a park ranger. Classes are held in Yosemite Valley for Junior and Senior Rangers and in Tuolumne Meadows for Senior Rangers only. Various topics are explored, such as American Indians, habitats, and water cycle/pond life. Junior and Senior Rangers also attend regular ranger-led interpretive programs.

- **The Teacher Intern Program** brings teachers to Yosemite to live for five weeks in the summer while developing curriculum-based programs related to the natural and cultural history of the park. The results are made available to teachers outside the park. Programs are hands-on, interactive, and interdisciplinary.

Federal Aviation Administration (FAA) Aviation Education

The FAA Aviation Education Representative coordinates aviation education services, including materials and programs for the FAA in the States assigned to the region.

Programs include the following:

- **The Aviation Career Education (ACE) Academy** is a one-week summer aviation education program for high school students sponsored by the FAA along with a host educational institution. The program provides students with diverse experiences in aviation career exploration. The focus is on aviation career clusters identified by FAA, with an emphasis on opportunities for women and minorities. A goal is to have one program in each State and U.S. Territory. The FAA will conduct regional leadership workshops and provide funds based on the availability of resources.

- **Aviation Education Workshops for Teachers** provide teachers with information on FAA aviation programs and mate-
National Congress on Aviation and Space Education is sponsored annually by the FAA in partnership with the National Aeronautics and Space Administration and the Civil Air Patrol. The meeting includes teacher workshops and crosstalk sessions to exchange ideas on promoting aerospace education.

The President's Environmental Youth Awards (PEYA) Program
Young people from each State are invited to participate in PEYA, a nationwide program designed to encourage individuals, school classes, summer camps, public interest groups, and youth organizations to promote environmental awareness and community involvement. The two components of the program are the regional certificate program and the National awards competition. Regional certificates, signed by the President, are awarded to each participant by EPA regional offices. National individual project winners, or one representative from a National award-winning group project, along with one sponsor, are honored at EPA headquarters in Washington, D.C. Interested K-12 individuals or groups may obtain application materials and contest rules by contacting the EPA Regional Office that serves their State. PEYA has been an ongoing project since it was created by the White House Office of Education and the EPA in 1971.

Federal Aviation Administration (FAA) Aviation Education

The FAA Aviation Education Representative coordinates aviation education services, including materials and programs for the FAA in the States assigned to the region.

Programs include the following:

- The Aviation Career Education (ACE) Academy is a one-week summer aviation education program for high school students sponsored by the FAA along with a host educational institution. The program provides students with diverse experiences in aviation career exploration. The focus is on aviation career clusters identified by the FAA, with an emphasis on opportunities for women and minorities. A goal is to have one program in each State and U.S. Territory. The FAA will conduct regional leadership workshops and provide funds based on the availability of resources.

- Aviation Education Workshops for Teachers provide teachers with information on FAA aviation programs and materials and prepare them to teach aviation in the classroom. Annual workshops are conducted at colleges and universities across the Nation. The FAA provides information, materials, and speakers for the program.

- National Congress on Aviation and Space Education is sponsored annually by the FAA in partnership with the National Aeronautics and Space Administration and the Civil Air Patrol. The meeting includes teacher workshops and crosstalk sessions to exchange ideas on promoting aerospace education.

The Aviation Career Education (ACE) Academy is a one-week summer aviation education program for high school students sponsored by the FAA along with a host educational institution. The program provides students with diverse experiences in aviation career exploration. The focus is on aviation career clusters identified by FAA, with an emphasis on opportunities for women and minorities. A goal is to have one program in each State and U.S. Territory. The FAA will conduct regional leadership workshops and provide funds based on the availability of resources.

Aviation Education Workshops for Teachers provide teachers with information on FAA aviation programs and materials and prepare them to teach aviation in the classroom. Annual workshops are conducted at colleges and universities across the Nation. The FAA provides information, materials, and speakers for the program.

National Congress on Aviation and Space Education is sponsored annually by the FAA in partnership with the National Aeronautics and Space Administration and the Civil Air Patrol. The meeting includes teacher workshops and crosstalk sessions to exchange ideas on promoting aerospace education.

Environmental Protection Agency (EPA)

EPA Regional Office
This office takes part in a variety of environmental education programs for both teachers and students. Programs range from teacher
workshops and student contests to in-school presentations. Information on environmental issues is also available through the Public Information Center located at the office.

Cece Forget, Environmental Education Coordinator Environmental Protection Agency One Denver Place (OCPI) 999 18th Street, Suite 500 Denver, CO 80202-2405 (303) 312-6605 / Fax: (303) 312-6961

The President's Environmental Youth Awards (PEYA) Program

Young people from each State are invited to participate in PEYA, a nationwide program designed to encourage individuals, school classes, summer camps, public interest groups, and youth organizations to promote environmental awareness and community involvement. The two components of the program are the regional certificate program and the National awards competition. Regional certificates, signed by the President, are awarded to each participant by EPA regional offices. National individual project winners, or one representative from a National award-winning group project, along with one sponsor, are honored at EPA headquarters in Washington, DC. Interested K-12 individuals or groups may obtain application materials and contest rules by contacting the EPA Regional Office that serves their State. PEYA has been an ongoing project since it was created by the White House Office of Education and the EPA in 1971.

Mid-Atlantic Region

Mid-Atlantic Eisenhower Consortium for Mathematics and Science Education

- Delaware
- District of Columbia
- Maryland
- New Jersey
- Pennsylvania
Technology is included as an important tool for education by providing technical assistance and professional development in mathematics and science. The Consortium's primary mission is to support the improvement of mathematics and science education by providing technical assistance and professional development to teachers. The Consortium is one of 10 established by the U.S. Department of Education. Along with the Eisenhower National Clearinghouse for Mathematics and Science Education (ENC) at The Ohio State University, the Regional Consortia form a coordinated, field-based National infrastructure to promote mathematics and science improvement. The Consortia are designed to address the realization that past mathematics and science reform efforts have been piecemeal and isolated events, and that a new approach is needed if U.S. students, indeed, are to be first in the world in mathematics and science achievement. The Mid-Atlantic Eisenhower Consortium is housed at Research for Better Schools (RBS) in Philadelphia.

Mission

The Consortium's primary mission—to support improvement in mathematics and science education by providing technical assistance and professional development in programs and practices that embody high-performance standards, curriculum frameworks, and alternative assessment. This assistance is delivered through intensive workshops, conferences, and onsite consultation.

For example, in Delaware over the past several years, the Consortium has sponsored in-service workshops in mathematics and science that are consistent with the State's vision of new directions for education in Delaware. In the District of Columbia, the Consortium is supporting the DC Mathematics, Science, Technology Initiative (DC-MSTI). In Maryland, the Consortium has sponsored regional conferences on standards and assessment in mathematics and science education for teachers and principals. In New Jersey, the Consortium, in close collaboration with the SSI, is sponsoring public awareness activities and development of statewide science curriculum frameworks. In Pennsylvania, the Consortium has sponsored professional development programs on various topics, including elementary science teaching, equity, and the development of within-State mathematics and science collaboratives.

Regional Efforts

On a regional level, the Consortium publishes a newsletter on mathematics and science education that is distributed to 50,000 educators, thereby reaching every school building. In addition, the Consortium develops electronic resources to serve educators. These resources may be accessed through the RBS World Wide Web site, which provides detailed information about Consortium activities, services, and products, and enables users to access an extensive variety of local, regional, and National mathematics and science education resources. The Consortium also promotes communication and networking among State teams, regional groups, and educators through electronic networks and forums.

The Consortium also develops publications. For example, two publications that summarize the eighth and fourth grade results from the Third International Mathematics and Science Study (TIMSS) are currently being prepared. Internet Jones, an illustrated guide that helps educators understand the Internet and how it can be used in the classroom, has been completed and disseminated extensively throughout the country.

Finally, other means of communication include Mid-Atlantic regional conferences for Consortium members, State and National conference presentations, Consortium State team meetings, and information via telephone and mail.

Collaboration among the States of the region, as well as with the other Consortia and ENC, results in a whole effort that is greater than the sum of its parts. Many coordinated resources are used to achieve the goal of improved mathematics and science education in the Mid-Atlantic region.

Eisenhower National Clearinghouse (ENC) Capital Collection
Located at The George Washington University in Washington, DC, this site serves as a minirepository for ENC’s K-12 mathematics and science resources. It is also one of 12 ENC Demonstration Sites throughout the Nation. The Capital Collection includes representative materials from the ENC National Collection; highlights are K-12 mathematics and science education materials produced by Federal agencies and commercial publishers. The Capital Collection and Demonstration Site is open year-round at hours convenient to teachers. Educators and others may preview curriculum materials included in the Collection and learn how to integrate technology into their classroom activities. Several computer workstations are available for educators to search the ENC Resource Finder for additional resources, including those found via the Internet. Upon request, Capital Collection staff will travel to schools in the Washington, DC, metropolitan area to demonstrate ENC Online and other resources.

Kenilworth Aquatic Gardens
Birds and Their Habitat introduces wetland birds. The program discusses when and why birds can be found in this particular habitat and identifies several kinds of birds by color and sound.

Other programs include the following:

- Ecology of a Pond features a detailed survey of freshwater pond environments. Special attention is paid to the life history of ponds, the characteristics of their various zones, and specialized plant and animal life. Coverage includes the food chain, spring and fall overturn, plant successions, invertebrates, and vertebrates.

- Frogs and Toads is an introductory survey for the beginning student. The program presents interesting facts about morphology, behavior, reproduction, growth, and development.

- Insects begins with a viewing of fantastic close-up photography of insects, followed by an outdoor trek to view aquatic insects.

- Introduction to Wetlands introduces the gardens as a wetland. Students discuss characteristics of a wetland and learn of other wetlands in the country. Groups will view a healthy and an unhealthy marsh in order to compare, contrast, and discuss.

- Snakes—More Fascinating Than Fearful includes learning about the snake's life habits, ecology, hatching, shedding, and care. The four poisonous snakes of the United States and Canada are identified; a live specimen may be available for viewing. Discussion is also centered around the myths about snakes and the importance of snakes to people and their environment.

- Water Plants is a program featuring plants associated with freshwater and how they differ from terrestrial plants. The program will highlight the spectacular inventory of plants at Kenilworth Aquatic Gardens.

- Water Pollution and Wildlife is an interactive program featuring a hands-on game called “Who Dirtied the Water?” This program helps children and adults see first hand how water is fouled and the effect it has on the environment.

Rock Creek Nature Center
Creek Life Walk explores different sections of Rock Creek. The group searches for a variety of plant and animal life found in the park.

Other programs include the following:

- Exploring the Night Sky uses telescopes provided by the National Capital Astronomers to view the planets, moon, and other space objects. Special topics such as comets, meteor showers, and/or special astronomical events are covered, depending on the time of year.

- Tales for Tots teaches preschoolers and kindergartners about a variety of animal adaptations and survival techniques used by animals in their everyday lives.

- Wildlife Education Kits focus on three park animals: the white-tailed deer, eastern box turtle, and great-horned owl. The kits are available for teachers to use at their school. The kits contain lesson plans and activities for each animal.

Department of Transportation (DOT)

Federal Aviation Administration (FAA) Aviation Education
The FAA Aviation Education Representative coordinates aviation education services, including materials and programs for the FAA in the States assigned to the region.

Programs include the following:

- The Aviation Career Education (ACE) Academy is a one-week summer aviation education program for high school students sponsored by the FAA along with a host educational institution. The program provides students with diverse experiences in aviation career exploration. The focus is on aviation career clusters identified by FAA, with an emphasis on opportunities for women and minorities. A goal is to have one program in each State and U.S. Territory. The FAA will conduct regional leadership workshops and provide funds based on the availability of resources.

- Aviation Education Workshops for Teachers provide teachers with information on FAA aviation programs and materials and prepare them to teach aviation in the classroom. Annual workshops are conducted at colleges and universities across the Nation. The FAA provides information, materials, and speakers for the program.

- National Congress on Aviation and Space Education is sponsored annually by the FAA in partnership with the National Aeronautics and Space Administration and the Civil Air Patrol. The meeting includes teacher workshops and crosstalk sessions to exchange ideas on promoting aerospace education.

- Environmental Protection Agency (EPA)

EPA Regional Office
This office takes part in a variety of environmental education programs for both teachers and students. Programs range from teacher workshops and student contests to in-school presentations. Information on environmental issues is also available through the Public Information Center located at the office.

- The President's Environmental Youth Awards (PEYA) Program
Young people from each State are invited to participate in PEYA, a nationwide program designed to encourage individuals, school classes, summer camps, public interest groups, and youth organizations to promote environmental awareness and community involvement. The two components of the program are the regional certificate program and the National awards competition. Regional certificates, signed by the President, are awarded to each participant by EPA regional offices. National individual project winners, or one representative from a National award-winning group project, along with one sponsor, are honored at EPA headquarters in Washington, DC. Interested K-12 individuals or groups may obtain application materials and contest rules by contacting the EPA Regional Office that serves their State. PEYA has been an ongoing project since it was created by the White House Office of Education and the EPA in 1971.

NASA Educator Resource Center
The center has NASA-related educational materials in various formats, including laser discs, CD-ROMs, videotapes, slides, audiotapes, publications, and teacher guides. Educators may preview or copy NASA materials upon request.

NASA Field Centers
Each field center has an educational programs officer who is responsible for precollege education programs. In addition to administering National programs, the center offers programs and services to meet regional and local needs.

NASA Regional Educator Resource Center (RERC)
To offer more educators the opportunity to visit the Educator Resource Center Network (ERCN), NASA forms partnerships with planetariums, universities, museums, and other nonprofit organizations to serve as RERCs. Teachers may preview or copy NASA materials upon request.

Northeast Regional Technology in Education Consortium (NetTech)

ED established the Regional Technology in Education Consortia (R*TEC) program in the fall of 1995 to help States, districts, schools, adult literacy centers, and other educational institutions use advanced technology to support improved teaching and student achievement. R*TEC's role in educational technology is unique in two ways: the emphasis is regional and the primary goal is to ensure that technology is used effectively to support school reform. Program strategies include professional development, technical assistance, and information dissemination.

Department of Energy (DOE)

Appalachian Regional Commission (ARC) and Oak Ridge National Laboratory (ORNL)

A summer science, mathematics, and technology Teacher Leadership Institute is available for secondary teachers to participate in research-based programs at ORNL. The institute is provided in a two-week summer residential format patterned after the ORNL/National Science Foundation (NSF) National Teacher Enhancement Project and Leadership Institute. Participants are selected by the ARC from secondary schools throughout the ARC region. The focus is on hands-on laboratory research applying the tools and methods used in ongoing ORNL projects in research areas (as appropriate for each teacher's teaching assignment), pedagogy, and leadership. The program will feature telecommunications instruction at the ORNL Regional Science Center and telecommunications will be the primary method used for academic year follow-up and continued interactions with the teachers. Participants in the Teacher Leadership Institute will be hosted by several ORNL research divisions based on each teacher's background and interests. A program coordinator with experience in teacher preparation/Higher education delivers instruction in pedagogy and educational leadership.

ARC and ORNL also collaborate on a summer science, mathematics, and technology Summer Science Honors Academy for ARC students to participate in research-based programs at ORNL. Student participants (seniors or graduating seniors) will be selected by the ARC from secondary schools throughout the ARC region. Students will be teamed with research mentors to participate in hands-on laboratory research applying the tools and methods used in ongoing ORNL projects. Students will also receive telecommunications instruction at the ORNL Regional Science Center.

Department of the Interior (DOI)

Assateague Island National Seashore

Onsite environmental activities such as beachcombing and marsh studies are available to students at all grade levels at the seashore. Previsit curriculum materials and guided tours are also available.

Other programs include the following:

- **Dune What Comes Naturally Puppet Show** introduces students to the dynamic nature of the barrier island ecosystem through the characters of Lorna Dune and her friends. Ecological content is presented in a humorous, interactive way.

- **Grade 1 Aquarium/Beachcombers Talk** is a curriculum-based program that introduces material associated with food chains and homes. A class spends half an hour in a talk at the aquariums and half an hour talk in the Beachcomber Room. The talks are led by naturalists. Students also participate in a pantomime story about the food chain.

- **Salt Marsh Study** is designed to introduce the importance of the salt marsh ecosystem, complex inter-connections, and general ecological principles. Students use seine nets in the bay for an up-close look at this productive area.

Northeast Regional Technology in Education Consortium (NetTech)

ED established the Regional Technology in Education Consortium (R*TEC) program in the fall of 1995 to help States, districts, schools, adult literacy centers, and other educational institutions use advanced technology to support improved teaching and student achievement. R*TEC's role in educational technology is unique in two ways: the emphasis is regional and the primary goal is to ensure that technology is used effectively to support school reform. Program strategies include professional development, technical assistance, and information dissemination.

Gateway National Recreation Area

In the Ecology Village Camping Program, students and teachers explore the environment, sleep in tents, prepare meals outdoors, and practice teamwork at an Ecology Village campsite. Classes study science, nature, and history at the shore and in the uplands habitat.

Educational opportunities at Sandy Hook include programs in oceanography, geology, and the marine environment. These programs educate teachers, students, families, and other groups, about the importance of the ocean and its resources.

Appalachian Regional Commission (ARC) and Oak Ridge National Laboratory (ORNL)

A summer science, mathematics, and technology Teacher Leadership Institute is available for secondary teachers to participate in research-based programs at ORNL. The institute is provided in a two-week summer residential format patterned after the ORNL/National Science Foundation (NSF) National Teacher Enhancement Project and Leadership Institute. Participants are selected by the ARC from secondary schools throughout the ARC region. The focus is on hands-on laboratory research applying the tools and methods used in ongoing ORNL projects in research areas (as appropriate for each teacher’s teaching assignment), pedagogy, and leadership. The program will feature telecommunications instruction at the ORNL Regional Science Center and telecommunications will be the primary method used for academic year follow-up and continued interactions with the teachers. Participants in the Teacher Leadership Institute will be hosted by several ORNL research divisions based on each teacher’s background and interests. A program coordinator with experience in teacher preparation/higher education delivers instruction in pedagogy and educational leadership.

ARC and ORNL also collaborate on a summer science, mathematics, and technology Summer Science Honors Academy for ARC students to participate in research-based programs at ORNL. Student participants (seniors or graduating seniors) will be selected by the ARC from secondary schools throughout the ARC region. Students will be teamed with research mentors to participate in hands-on laboratory research applying the tools and methods used in ongoing ORNL projects. Students will also receive telecommunications instruction at the ORNL Regional Science Center.

Erie National Wildlife Refuge
Instruction in the Endangered Species program is designed to increase the awareness of endangered species, the reasons they are endangered, and what is being done to help the recovery. The program has hands-on activities for students.

Other programs include the following:

- The Wildlife Education Program consists of four separate courses (including Project WILD and Project Learning Tree) offering educators an opportunity to develop awareness, knowledge, and skills related to fish and wetland environments, plant species, animals and their habitats, and photography as a tool for studying the natural world.

- The Junior Duck Stamp Conservation and Design Program is a dynamic, active arts curriculum to teach wetlands and waterfowl conservation to students in grades K-12. This program is designed to incorporate scientific and wildlife management principles into a visual arts curriculum. This nontraditional pairing of subjects brings new interest to both the sciences and the arts.

Federal Aviation Administration (FAA) Aviation Education
The FAA Aviation Education Representative coordinates aviation education services, including materials and programs for the FAA in the States assigned to the region.

Programs include the following:

- The Aviation Career Education (ACE) Academy is a one-week summer aviation education program for high school students sponsored by the FAA along with a host educational institution. The program provides students with diverse experiences in aviation career exploration. The focus is on aviation career clusters identified by FAA, with an emphasis on opportunities for women and minorities. A goal is to have one program in each State and U.S. Territory. The FAA will conduct regional leadership workshops and provide funds based on the availability of resources.

- Aviation Education Workshops for Teachers provide teachers with information on FAA aviation programs and materials and prepare them to teach aviation in
Pennsylvania

the classroom. Annual workshops are conducted at colleges and universities across the Nation. The FAA provides information, materials, and speakers for the program.

*National Congress on Aviation and Space Education* is sponsored annually by the FAA in partnership with the National Aeronautics and Space Administration and the Civil Air Patrol. The meeting includes teacher workshops and crosstalk sessions to exchange ideas on promoting aerospace education.

Eisenhower High Plains Consortium
for Mathematics and Science
The Eisenhower High Plains Consortium (HPC) for Mathematics and Science at McREL is one of the 10 Eisenhower Mathematics and Science Regional Consortia established by the U.S. Department of Education. The National Network of Eisenhower Regional Consortia and the Eisenhower National Clearinghouse for Mathematics and Science Education form a coordinated, field-based National infrastructure to promote systemic educational reform. The Consortium and the Mid-continent Regional Educational Laboratory (McREL) serve a seven-State region. HPC enhances and builds on existing resources, creating new partnerships that span district and State boundaries and link private and public schools, businesses, and industries. The Consortium facilitates ongoing projects, links programs through established communication networks, and maximizes the impact of existing resources in the seven-State region.

Efforts are focused on four specific functions—communication, professional development, curriculum frameworks, and institutionalization.

In the area of communication, HPC promotes the use of electronic communication both within each State and within the region. Every attempt is made to work collaboratively with partners in each State to make technology more accessible to teachers and students. HPC has set up a listserv for mathematics educators that is accessible on the Internet. Conference calls initiated by the Consortium are used to promote communication among job-alike groups, such as the Statewide Systemic Initiative (SSI) State coordinators. HPC also serves as a facilitator on a number of topics to various groups throughout the region.

In the area of professional development, HPC has worked with key groups in each State, including the State education agency, to aid in the coordination of multiple State-level initiatives. These initiatives include emerging State curriculum frameworks and the teacher training necessary to refine, adapt, adopt, and implement the frameworks at the local level. Upon request, HPC also provides professional development on alternative assessment and curriculum framework development to numerous school districts. Professional development opportunities with optional graduate credit are being provided or cosponsored by HPC during the summer in several States. HPC staff expertise in mathematics and science serves as a resource for teachers from kindergarten through post-secondary school.

In the area of curriculum framework development and refinement, HPC provides staff expertise and two Laboratory Network Program documents, Curriculum Frameworks Analysis Tool and A Summary of Analyzed State Curriculum Frameworks. HPC also has worked closely with State groups to facilitate the planning and writing of various grants to assist the State framework development process.

In the area of institutionalization, the State-level advisory teams are establishing a coordinated professional development effort within each State. Additionally, the shift from producing an HPC newsletter to submitting articles to State-level educational newsletters reflects an institutionalization process.

To assist teachers in their efforts to improve instructional practice, HPC seeks to identify “Promising Practices.” The process has resulted in the identification of five programs to date. These programs are:

- CMEA-MESA is a multidisciplinary studies program in Denver, Colorado, which develops interest in science, engineering, and related fields, targeting minority student participation from grades 6–12. The program stimulates career awareness and motivation through field trips, role model speakers, competitions, incentive awards, college and career counseling, summer enrichment opportunities, and internships.

- MathVantage is a product of Nebraska mathematics teachers under the direction of the Nebraska Mathematics and Science Coalition in Lincoln. The MathVantage materials target seventh- and eighth-grade students, presenting mathematics from a different perspective—a different “vantage” point. These materials demonstrate a relevance to the student’s life and emphasize active participation on the part of the student.

- Teaching Science Concepts Using Discrepant Events from Kansas State University in Manhattan is a compilation of more than 250 discrepant scientific events that can be used by teachers of Earth science, physics, chemistry, and biology in upper-elementary or middle schools to stimulate students’ interest and motivation. These discrepant events are written as hands-on investigation activities and minds-on exercises.

- Small Scale Science-STAR Program provides teachers of middle-level science (grades 5–9) with the necessary confidence and skills to employ small-scale science in the classroom. The program comprises an inquiry-based series of hands-on experiments that have been used successfully from upper-elementary through university classrooms.

- K–6 Science and Mathematics Enhancement Program (KSAM) from Southeast Missouri State University encourages the utilization of an effective, process-based instructional strategy in K–6 science and mathematics. KSAM provides teachers with process-based activities and training in addition to pertinent materials and support.

For additional information about these or other promising practices from around the country, contact HPC.

Pacific and Southwest Regional Technology in Education Consortium (PSR*TEC)
ED established the Regional Technology in Education Consortia (R*TEC) program in the fall of 1995 to help States, districts, schools, adult literacy centers, and other educational institutions use advanced technology to support improved teaching and student achievement. R*TEC’s role in educational technology is unique in two ways: the emphasis is regional and the primary goal is to ensure that technology is used effectively to support school reform. Program strategies include professional development, technical assistance, and information dissemination.

Bureau of Indian Affairs (BIA)
Natural Resources in Mathematics and Science for Schools is a program held to provide educators from BIA schools with both reference information and curriculum-inspiring expertise. The goal is to help sixth through 12th grade Native American students attending BIA schools understand the importance of the petroleum industry to the American society; how oil and natural gas are formed and produced; and the economic impact of oil and gas revenues on Tribal governments and individual mineral owners. Through this effort, BIA teachers will be able to better prepare their students, many of whom will become heirs to tribal and family mineral resources, for future responsibilities.

A guest speaker is periodically scheduled for Natural Resources Management Classes to discuss the importance of oil and gas to our society. Topics include how resources are produced, refined, and used and what types of work are available in private industry and government. These classes are used to acquaint college students with the petroleum industry and the economic impact of revenues for owners who are Native American.

Bureau of Reclamation
The Archaeology and Public Education program encourages the incorporation of archaeology into schools. The Bureau's personnel go into classrooms to assist teachers, give talks at senior citizen groups, etc. The Bureau also provides funding to other organizations to help them pursue archaeology and education.

A variety of environmental subjects, with an emphasis on water resources, is offered to teachers and students in grades K–12. Subjects vary from groundwater model to instant snow storms and wetlands in a pan. Programs are presented in the classroom as well as outdoors at laboratory schools, summer camps, and at some visitor centers. The program currently operates in the States of California, Colorado, Montana, Nevada, Idaho, and Utah. For example, the groundwater model is used to show effects of various pollutions of groundwater. Programs can be given in short sessions at water festivals, education fairs, and State/county fairs, or in longer sessions for classroom instruction.

Bureau of Reclamation Hydraulic Laboratory
This lab offers tours and demonstrations of working models of reclamation projects, including modern and unique instrumentation and testing equipment used by engineers.
Colorado National Monument
The monument offers guided walks and teacher guides that focus primarily on environmental education and geology.

The Young Naturalists program consists of week-long workshops for youngsters ages 9–12 who are interested in learning about the environments of western Colorado. Each morning the group visits a different site with professional interpreters from agencies including USDA- Forest Service, Colorado Division of Wildlife, NPS, BLM, U.S. Fish and Wildlife. Topics are “See the Forest for the Trees,” “Water, Water Everywhere?” and “Like Pieces in a Puzzle.”

Ron Young, Chief of Interpretation Colorado National Monument Association Colorado National Monument Fruita, CO 81521 (303) 858-3617

Colorado River Hydroexplorer
In this program game, students guide a mini-submarine, Hydroexplorer, down the length of the Colorado River from its headwaters in Colorado, Utah, Wyoming, and New Mexico through Arizona, Nevada, and California to Mexico and the Sea of Cortez. Along the way, students study the many uses of the river: recreation, power generation, agriculture and irrigation, wildlife habitat protection, and urban use for industry and homes. They look at where the water comes from, how it carves the land, why it has sediments and salts in it, how it was explored, and how its waters have been divided by the States it flows through. Ultimately, students learn that since there are so many uses of the water and there is a limited supply, it is important to conserve water in their homes and schools.

Steve Jones, Water Conservation Manager PO Box 61470 Boulder City, NV 89005 (702) 293-8196 / Fax: (702) 293-8042

Curecanti National Recreation Area
In the spring and fall, environmental education outreach programs are offered for grades K–8. Curriculum materials are provided for both teachers and students. Educators may choose in-class presentations or onsite day field trips.

Curecanti National Recreation Area Environmental Education Outreach Program/ Curecanti Teacher Continuing Education Workshops are available. Opportunities include extensive year-round, onsite educational programs, field experiences, computer resource systems, onsite classrooms, college internship program, GIS and Internet capability, and graduate teacher continuing education workshops.

Rocky Mountain Arsenal National Wildlife Refuge
The refuge is located 10 miles from downtown Denver on the doorstep of 2 million city dwellers who have few opportunities to connect with the natural world. The unique history of this site—as an area where indigenous people hunted and roamed; where settlers built ditches, ponds, and farmsteads; where the U.S. Army manufactured chemical weapons for use in World War II and during the Cold War; where private corporations created pesticides for agricultural use; and now where the U.S. Fish and Wildlife Service will manage one of the Nation's largest urban wildlife refuges—makes this a special place for examining the relationship of people with nature. The overall message of all educational activities is that people need to help overcome past environmental mistakes and take responsibility for making the refuge and elsewhere better places.

Service staff and volunteers lead environmental education programs for grades K–12 at the refuge. Programs are grade-specific and offered year round at no charge. Each teacher receives the Rocky Mountain Arsenal National Wildlife Area Teacher Resource Guide (developed in cooperation with the Denver Museum of Natural History), which includes pre- and post-visit activities for grades 4–12. As part of a cooperative agreement with the Service, the Colorado Wildlife Federation conducts educational presentations in the schools to prepare students for their trips to the refuge. In FY94, 17,000 students participated in environmental education programs.

Federal Aviation Administration (FAA) Aviation Education
The FAA Aviation Education Representative coordinates aviation education services, including materials and programs for the FAA in the States assigned to the region. Programs include the following:

The Aviation Career Education (ACE) Academy is a one-week summer aviation education program for high school students sponsored by the FAA along with a host educational institution. The program provides students with diverse experiences in aviation career exploration. The focus is on aviation career clusters identified by FAA, with an emphasis on opportunities for women and minorities. A goal is to have one program in each State and U.S. Territory. The FAA will conduct regional leadership workshops and provide funds based on the availability of resources.
Aviation Education Workshops for Teachers provide teachers with information on FAA aviation programs and materials and prepare them to teach aviation in the classroom. Annual workshops are conducted at colleges and universities across the nation. The FAA provides information, materials, and speakers for the program.

National Congress on Aviation and Space Education is sponsored annually by the FAA in partnership with the National Aeronautics and Space Administration and the Civil Air Patrol. The meeting includes teacher workshops and crosstalk sessions to exchange ideas on promoting aerospace education.

The President's Environmental Youth Awards (PEYA) Program
Young people from each state are invited to participate in PEYA, a National program designed to encourage individuals, school classes, summer camps, public interest groups, and youth organizations to promote environmental awareness and community involvement. The two components of the program are the regional certificate program and the National awards competition. Regional certificates, signed by the President, are awarded to each participant by EPA Regional Offices. National individual project winners, or one representative from a National award-winning group project, along with one sponsor, are honored at EPA headquarters in Washington, DC. Interested K-12 individuals or groups may obtain application materials and contest rules by contacting the EPA Regional Office that serves their State. PEYA has been an ongoing project since it was created by the White House Office of Education and the EPA in 1971.

The President's Environmental Youth Awards (PEYA) Program  
Young people from each State are invited to participate in PEYA, a Nationwide program designed to encourage individuals, school classes, summer camps, public interest groups, and youth organizations to promote environmental awareness and community involvement. The two components of the program are the regional certificate program and the National awards competition. Regional certificates, signed by the President, are awarded to each participant by EPA Regional Offices. National individual project winners, or one representative from a National award-winning group project, along with one sponsor, are honored at EPA headquarters in Washington, DC. Interested K–12 individuals or groups may obtain application materials and contest rules by contacting the EPA Regional Office that serves their State. PEYA has been an ongoing project since it was created by the White House Office of Education and the EPA in 1971.

Federal Aviation Administration (FAA) Aviation Education
The FAA Aviation Education Representative coordinates aviation education services, including materials and programs for the FAA in the States assigned to the region.

Programs include the following:

- The Aviation Career Education (ACE) Academy is a one-week summer aviation education program for high school students sponsored by the FAA along with a host educational institution. The program provides students with diverse experiences in aviation career exploration. The focus is on aviation career clusters identified by FAA, with an emphasis on opportunities for women and minorities. A goal is to have one program in each State and U.S. Territory. The FAA will conduct regional leadership workshops and provide funds based on the availability of resources.

- Aviation Education Workshops for Teachers provide teachers with information on FAA aviation programs and materials and prepare them to teach aviation in the classroom. Annual workshops are conducted at colleges and universities across the Nation. The FAA provides information, materials, and speakers for the program.
Young people from each State are invited to participate in PEYA, a Nationwide program designed to encourage individuals, school classes, summer camps, public interest groups, and youth organizations to promote environmental awareness and community involvement. The two components of the program are the regional certificate program and the National awards competition. Department of Transportation (DOT)

Federal Aviation Administration (FAA) Aviation Education
The FAA Aviation Education Representative coordinates aviation education programs and information services for the FAA in the States assigned to the region. Programs include the following:

The Aviation Career Education Academy (ACE) is a one-week summer aviation education program for high school students sponsored by the FAA along with a host educational institution. The program provides students with diverse experiences in aviation career exploration. The focus is on aviation career clusters identified by FAA, with an emphasis on opportunities for women and minorities. A goal is to have one program in each State and U.S. Territory. The FAA will conduct regional leadership workshops and provide funds based on the availability of resources.

Aviation Education Workshops for Teachers provide teachers with information on FAA aviation programs and materials and prepare them to teach aviation in the classroom. Annual workshops are conducted at colleges and universities across the Nation. The FAA provides information, materials, and speakers for the program.

The National Congress on Aviation and Space Education is sponsored annually by the FAA in partnership with the National Aeronautics and Space Administration and the Civil Air Patrol. The meeting includes teacher workshops and crosstalk sessions to exchange ideas on promoting aerospace education.

FAA Aviation Education Resource Centers
Located at colleges, museums, and State aviation authority offices, these centers function as information distribution centers for Federal Aviation Administration education materials and resources. The resource centers maintain and provide quantities of printed materials, videotapes, and computer educational software. Center personnel can also provide general information, conduct workshops, and make aviation-related presentations.

The President's Environmental Youth Awards (PEYA) Program
Young people from each State are invited to participate in PEYA, a Nationwide program designed to encourage individuals, school classes, summer camps, public interest groups, and youth organizations to promote environmental awareness and community involvement. The two components of the program are the regional certificate program and the National awards competition. Regional certificates, signed by the President, are awarded to each participant by EPA Regional Offices. National individual project winners, or one representative from a National award-winning group project, along with one sponsor, are honored at EPA headquarters in Washington, DC. Interested K-12 individuals or groups may obtain application materials and contest rules by contacting the EPA Regional Office that serves their State. PEYA has been an ongoing project since it was created by the White House Office of Education and the EPA in 1971.

Fossil Butte National Monument
Teaching Paleoontology in the National Parks, Monuments, and Public Lands is a curriculum guide designed to be used by second and third grade teachers when presenting principles of fossils as clues to past life. The guide is accompanied by a traveling kit that includes casts of fossils, slide programs that introduce fossils, environments, adaptations, and an interactive computer program on population dynamics. The curriculum includes four units. For second graders there is a unit on fossilization and human influences; for third graders, there are units on adaptation, community, and human influences. Fifteen kits are available for loan.

Monument staff also offer a Junior Ranger Program. To become a Junior Ranger, children need only have a desire to learn and a sense of wonder. By talking with a ranger, hiking a trail, touring the exhibits, and helping to prepare a fossil, children will earn a Junior Ranger badge and their name will be entered in our permanent register. Parents are encouraged to follow along.

Marcia D. Fagnant, Park Ranger
Fossil Butte National Monument

Yellowstone National Park
Expedition: Yellowstone! is a 234-page curriculum for grades four through six. Its goal is to acquaint students, teachers, and parents with the Great Yellowstone Ecosystem. A residential program with a National Park Ranger faculty is offered to school groups in the spring and fall. Whether the curriculum is used in the park or in the classroom, students experience hands-on activities in the out-of-doors and develop an ethic that promotes life-long stewardship of the park, as well as of regional and global resources. The program offers teachers of grades four through six free use of park facilities, free accommodations, and services of a park ranger during the spring and fall for environmental education field trips. Teachers are required to register for the program and purchase curriculum materials. Due to the high number of requests, a lottery process determines which teachers can participate.

**The President's Environmental Youth Awards (PEYA) Program**
Young people from each State are invited to participate in PEYA, a nationwide program designed to encourage individuals, school classes, summer camps, public interest groups, and youth organizations to promote environmental awareness and community involvement. The two components of the program are the regional certificate program and the National awards competition. Regional certificates, signed by the President, are awarded to each participant by EPA Regional Offices. National individual project winners, or one representative from a National award-winning group project, along with one sponsor, are honored at EPA headquarters in Washington, DC. Interested K–12 individuals or groups may obtain application materials and contest rules by contacting the EPA Regional Office that serves their State. PEYA has been an ongoing project since it was created by the White House Office of Education and the EPA in 1971.

Midwest Consortium for Mathematics and Science Education
Beliefs About Students and Learning:

Systemic reform of mathematics and science education is a complex challenge that must be grounded in a well-defined set of beliefs. Because the system as a whole is the challenge, the beliefs must relate not only to the nature of learners and learning, but to organization and change theory as well. Finally, the beliefs must speak to the nature of interventions that are most likely to facilitate continuous improvement of mathematics and science learning for all students.

Beliefs About the Nature of the Education Enterprise:

- The most significant element of the Education Enterprise is the instruction that takes place within the classroom.
- Dedicated teachers constantly seek to improve their practices and willingly adapt to change and adopt new approaches they believe to be consistent with the goal of enhanced learning for their students.
- Effective educational leaders empower teachers to be creative and inventive in their choice of teaching practice and provide support that facilitates improved learning.
- Standards and curriculum frameworks exist to shape and guide practice and are used most effectively when education professionals are involved in their development and are given the opportunity to understand and apply them to learning for students.
- Assessment systems must exist for the primary purpose of informing instructional choice and therefore must be embedded in the learning process. Assessment must be varied in methodology and focused on application and performance that demonstrates the acquisition of expected skills, knowledge, and understanding.
- Technology provides a powerful tool that can both enhance and facilitate student learning; therefore, it should be available to and used by all teachers and students.

Beliefs About System Interventions:

- Systemic reform of education must address all elements of the instructional system.
- Systemic reform of education should have continuous improvement of student learning as a fundamental goal.
- Systemic reform efforts must empower and engage all stakeholders in the process of seeking continuous improvement of the system.
- Interventions that result in systemic reform must provide for long-term, follow-up support of efforts that result in improvement of instruction and learning for all students.

Mission

The mission of the MSC is to advance systemic change in mathematics and science education through: (1) collaboration with institutions and agencies within the region; (2) direct services and technical assistance to school districts, schools, teachers, and administrators to support high priority initiatives; (3) support that will result in the development and implementation of standards, curriculum, assessment, and performance indicators that challenge students to higher levels of attainment; (4) identification and dissemination of resources, methods, materials, and practices that expand learning beyond the classroom through information education agencies and electronic media; and (5) access to networks of instructional resources and materials that will result in improved learning for all students.

Objectives

MSC will continue to collaborate with partners throughout the region, including State departments of education, intermediate units, and other programs that are interested in systemic improvement of mathematics, science, and technology. MSC plans to advance the systemic reform of mathematics and science education through the accomplishment of the following six objectives:

- MSC will facilitate and engage in collaborative efforts with teachers, administrators, and professional organizations to achieve the outcome of systemic reform of mathematics and science education throughout the region.
- MSC will establish and implement a process to identify high impact, high priority projects, products, and services that respond to the needs of our collaborative
partners. MSC will develop relationships with two or three "intensive" sites in each State to collaboratively research and develop materials and processes that support improved student learning strategies and achievement.

- MSC will provide teachers, administrators, and other educators with training and technical assistance that will enable them to continuously improve teaching and learning in mathematics and science. Special emphasis will be placed on the use of technology.
- MSC will work through the National Organization Task Force on Informal Education, energy labs, museums, and other informal education entities to promote the use of informal education resources.
- MSC will work through its collaborative regional networks, other Consortia, and the Eisenhower National Clearinghouse for Mathematics and Science Education to identify and describe exemplary resources and best instructional practices.
- MSC will initiate evaluation and data collection related to intended outcomes to determine the effectiveness of Consortium activities in districts selected for intensive partnerships.

Indiana Dunes National Lakeshore
Lakeshore programs, including guided walks and teacher guides, focus on lakeshore ecology. Specific programs include the following:

▷ A Grain of Truth allows participants to observe winds and waves at work creating, shaping, eroding, and moving dunes. Students hike approximately one mile along beach and dune trails to learn about the processes of glaciation, erosion, and dune building. The specific activities and interpretive techniques used will be adapted to the experience and abilities of the group and special circumstances that may exist on the day of the program.

▷ The Biological Diversity Program explores whether we could survive without the incredible variety of plant and animal life that shares the Earth with us. Participants investigate the great variety of living organisms and communities, and learn of the importance of biodiversity to the continued existence of living systems.

▷ Discover allows participants to be detectives to find all the clues to the wonders of nature. By using their senses, students find what's new and what's old.

▷ The Earth Day Celebration invites students to explore how our consumptive lifestyle affects our environment. Subjects include habitat loss, pollution, endangered species, and recycling. Indoor and outdoor activities help students develop a sense of belonging to the natural environment and show them actions they can take to help protect it.

▷ Fall Fanfare explores the many changes in the dunes at this season. Students search the dunes and forests for evidence of change and learn of fall activities and adaptations that plants and animals use to prepare for winter.

▷ Fire Ecology investigates the properties behind fire's dynamic force. Students learn why some ecosystems need fire to maintain themselves. Methods of prescribed burn and fire management using current technology are described.

▷ Fire Friend or Foe teaches students how some plants need fire to survive. Participants explore the nutrient cycle and discuss fire's use as a tool for managing our natural resources. Safety equipment used in fire suppression by National Park Service Rangers is explained.

▷ Habitats Hike helps students discover why Indiana Dunes has the third largest number of plant species in the entire National Park System. Participants investigate the many habitats, including a forested dune, wetland area, and a sand prairie, and learn about the diversity of life each supports.

▷ Lake Michigan Alive features the life cycles of the lake. Students experience the predator/prey relationships and discuss the differences of aquatic life from land animals. Individual groups participate in reenacting the day-to-day struggles of a lake creature.

▷ Let's Get Wild About Wildlife answers such questions as, Who lives in that cattail mound? Who's swooping down to grab that mouse? Who gnawed on that tree branch? On a hike students become detectives searching for animal homes and signs. Students will see and be able to touch a box turtle or snake. Other indoor and outdoor activities will teach students about animal habitat and predator/prey relationships. By the end of the program, students will realize that wildlife habitat is being destroyed. They will be able to name ways to help protect wildlife.

▷ Mother Nature's Recycling Center allows students to investigate the process of decomposition and renewal during a walk in the woods at the Douglas Center. Participants learn what they can recycle at home to save energy and space. They develop creative and critical thinking abilities using reading, writing, and math skills, while learning about recycling in nature and our communities.
Mount Baldy Moves gives students the chance to climb a dune, hike along a wooded trail and catch a spectacular view of Lake Michigan. Participants in role-playing activities learn how wind, water, waves, and plants work together to form dunes. Also described are the ways in which humans have altered dune formations.

Out on a Limb allows students to explore the mysterious inner workings of the forest community. By using a key, students will learn to identify trees. Through a rotten log study, they will uncover the importance of fungi and bacteria. Activities will reveal people's dependence on forests and the need for wise management of our forests.

Pinhook Bog was born during the retreat of the last glacier, when a chunk of glacier fell off into a clay area and created a kettle lake. Through the course of the next 10,000 years, as sphagnum moss moved in and closed off the lake, a unique environment of insect-eating plants, highly acidic water and quaking earth, and delicious blueberries was created. The specific activities and interpretive techniques used will be adapted to the experience and abilities of the group and special circumstances that exist on the day of the program.

Reflections on Snow helps students discover winter while hiking or cross-country skiing in Miller Woods. Indoor activities explore tracking, predation, and winter habitats.

The Secrets of Succession allows participants to travel through time from beach and dunes through jack pine forests to ancient oak-covered dunes. On this approximately one-mile hike, students discover how the dynamic process of dune succession works by measuring the sunlight, wind speed, percolation rate, soil moisture, and soil temperature of four biological communities. The specific activities and interpretive techniques used will be adapted to the experience and abilities of the group and special circumstances that may exist on the day of the program.

Survival of the Fittest teaches students that each species has adaptations that allow it to survive in its habitat. Also discussed is how predator/prey relationships allow wildlife to maintain an acceptable balance in nature.

Talk with the Animals is a puppet show in which students meet characters such as Otis Oak, Patty Poison Ivy, Sammy Skunk, Freddie Frog, and Carl Cattail. As the puppets talk, they reveal their secret haunts and habits. Students will see how the animals and plants of Miller Woods work together as neighbors. On a short walk around a pond and through a forest, students search for the springtime activity of plants and animals.

Tracking Animals familiarizes students with animal signs such as tracks, droppings, gnawings, scratchings, rubs, dams, nests, and burrows. Noting these signs can open up a whole new story in an otherwise familiar setting.

Water, Water Everywhere provides valuable information on the sources of water, the water cycle, and conservation of this precious resource. Through activities and the use of a groundwater model, students discover the value of water.

In Water World, students use nets and pans to study and collect insects from a pond. Indoors, students will use microscopes to identify pond plants and animals. Through this pond life investigation and a movie, students discover the rich diversity of pond life. From indoor activities, students learn about the history of water pollution and its effect on water quality and pond life diversity. Also, they learn about the scarcity of pure, useable water and about ways that they can use water more wisely.

Winter Exploration allows students to admire the beauty of the winter woods, search for signs of winter, and seek the food and shelter of animals. Activities help students to understand how plants and animals adapt to survive the winter. An indoor discussion will precede either hiking or snowshoeing through the woods.

In Winter Wonderland, students discover what animals do to prepare for winter.

Project WILD
Project WILD offers teacher training and educational materials. Teacher guides, free to teachers who attend the training session, contain more than 80 supplementary, interdisciplinary activities for grades K-12.

Warren Gartner, Project WILD Coordinator
Indiana Department of Natural Resources

The Aviation Career Education (ACE) Academy is a one-week summer aviation education program for high school students sponsored by the FAA along with a host educational institution. The program provides students with diverse experiences in aviation career exploration. The focus is on aviation career clusters identified by FAA, with an emphasis on opportunities for women and minorities. A goal is to have one program in each State and U.S. Territory. The FAA will conduct regional leadership workshops and provide funds based on the availability of resources.

Aviation Education Workshops for Teachers provide teachers with information on FAA aviation programs and materials and prepare them to teach aviation in the classroom. Annual workshops are conducted at colleges and universities across the country and at aviation-related sites.
the Nation. The FAA provides information, materials, and speakers for the program.

- **National Congress on Aviation and Space Education** is sponsored annually by the FAA in partnership with the National Aeronautics and Space Administration and the Civil Air Patrol. The meeting includes teacher workshops and crosstalk sessions to exchange ideas on promoting aerospace education.

Lee Carlson, AGL-11, FAA Aviation Education Representative
O'Hare Lake Officer Center
2300 East Devon Avenue
Des Plaines, IL 60018
(708) 294-7042 / Fax: (708) 294-7368

- **FAA Aviation Education Resource Centers**
  Located at colleges, museums, and State aviation authority offices, these centers function as information distribution centers for Federal Aviation Administration education materials and resources. The Resource Centers maintain and provide quantities of printed materials, videotapes, and computer educational software. Center personnel can also provide general information, conduct workshops, and make aviation-related presentations.

NASA Regional Educator Resource Center (RERC)
To offer more educators the opportunity to participate in PEYA, a nationwide program designed to encourage individuals, school classes, summer camps, public interest groups, and youth organizations to promote environmental awareness and community involvement. The two components of the program are the regional certificate program and the National awards competition. Regional certificates, signed by the President, are awarded to each participant by EPA regional offices. National individual project winners, or one representative from a National award-winning group project, along with one sponsor, are honored at EPA headquarters in Washington, DC. Interested K-12 individuals or groups may obtain application materials and contest rules by contacting the EPA Regional Office that serves their State. PEYA has an ongoing project since it was created by the White House Office of Education and the EPA in 1971.

Voyageurs National Park
The park offers environmental education pro-
grams targeted primarily to fourth graders,
although arrangements can be made for stu-
dents of other age groups.

Kids and Their Environment is designed to
introduce northern Minnesota and southern
Ontario school children to the diverse cul-
tural and natural history that is unique to this
area. A 49-passenger park tour boat serves as
a floating classroom, transporting fourth,
fifth, and sixth grade children throughout the park. Children visit an active beaver pond to
learn how the beaver affects both flora and
fauna by altering the surrounding environ-
ment through dam building that creates criti-
cal wetlands. Program participants visit an
active bald eagle nest and learn about threat-
ened and endangered species. Children also
learn about the French Canadian “Voyageurs,” their way of life, hardships, and
importance as explorers.

Department of Transportation (DOT)
Federal Aviation Administration
(FAA) Aviation Education
The FAA Aviation Education Representative
coordinates aviation education services,
including materials and programs for the
FAA in the States assigned to the region.

Programs include the following:

▶ The Aviation Career Education (ACE)
Academy is a one-week summer aviation
education program for high school stu-
dents sponsored by the FAA along with a
host educational institution. The program
provides students with diverse experiences
in aviation career exploration. The focus
is on aviation career clusters identified by
FAA, with an emphasis on opportunities
for women and minorities. A goal is to
have one program in each State and U.S.
Territory. The FAA will conduct regional
leadership workshops and provide funds
based on the availability of resources.

▶ Aviation Education Workshops for
Teachers provide teachers with informa-
tion on FAA aviation programs and mate-
rials and prepare them to teach aviation in
the classroom. Annual workshops are con-
ducted at colleges and universities across
the Nation. The FAA provides informa-
tion, materials, and speakers for the pro-
gram.

▶ National Congress on Aviation and Space
Education is sponsored annually by the
FAA in partnership with the National
Aeronautics and Space Administration and
the Civil Air Patrol. The meeting
includes teacher workshops and crossrak
sessions to exchange ideas on promoting
aerospace education.

ERIC Clearinghouse for Science, Mathematics, and Environmental Education

The Clearinghouse's mission is to facilitate improved teaching, learning, and research in science, mathematics, and environmental education through the active exchange of information and services. As a component of the Educational Resources Information Center (ERIC), the Clearinghouse collects, abstracts, and indexes materials for the ERIC database, the world's largest and most heavily used education-related information resource.

The database contains more than 850,000 records of reports, journal articles, instructional materials, and other items. It is accessible electronically through the Internet and at over 1,000 physical locations around the world. The Clearinghouse staff also serves educators at all levels by answering questions, providing training in use of the database, distributing educational materials electronically, disseminating practical information and documents to teachers and the general public, and developing publications used by teachers, parents, administrators, curriculum specialists, and others.

Appalachian Regional Commission (ARC) and Oak Ridge National Laboratory (ORNL)

A summer science, mathematics, and technology Teacher Leadership Institute is available for secondary teachers to participate in research-based programs at ORNL. The institute is provided in a two-week summer residential format patterned after the ORNL/National Science Foundation (NSF) National Teacher Enhancement Project and Leadership Institute. Participants are selected by the ARC from secondary schools throughout the ARC region.
The focus is on "hands-on" laboratory research applying the tools and methods used in ongoing ORNL projects in research areas (as appropriate for each teacher's teaching assignment), pedagogy, and leadership. The program will feature telecommunications instruction at the ORNL Regional Science Center; telecommunications will be the primary method used for academic year follow-up and continued interactions with the teachers. Participants in the Teacher Leadership Institute will be hosted by several ORNL research divisions based on each teacher's background and interests. A program coordinator with experience in teacher preparation/higher education delivers instruction in pedagogy and educational leadership.

ARC and ORNL also collaborate on a summer science, mathematics, and technology Summer Science Honors Academy for ARC students to participate in research-based programs at ORNL. Student participants (seniors or graduating seniors) will be selected by the ARC from secondary schools throughout the ARC region. Students will be teamed with research mentors to participate in "hands-on" laboratory research applying the tools and methods used in ongoing ORNL projects. Students will also receive telecommunications instruction at the ORNL Regional Science Center.

Cuyahoga Valley National Recreation Area
The Cuyahoga Valley Environmental Education Center is a new 132-bed facility serving school children from September to May. Participants participate in a four-day program with multicultural and global emphasis. The curriculum, A River Runs Through It, blends issues, nature, and the arts into a complete tapestry. The curriculum starts with fourth through sixth grades and moves up to high school. Program teaching staff participate in a college internship. Weekend workshops for teachers are offered periodically.

A Day-Use Program includes two environmental education classes for area school groups interested in a day visit to the park. The two classes are called "At the Water's Edge" and "Among the Trees." The approach is hands-on, guided discovery.

Federal Aviation Administration (FAA) Aviation Education
The FAA Aviation Education Representative coordinates aviation education services, including materials and programs for the FAA in the States assigned to the region.

Programs include the following:

The Aviation Career Education (ACE) Academy is a one-week summer aviation education program for high school students sponsored by the FAA along with a host educational institution. The program provides students with diverse experiences in aviation career exploration. The focus is on aviation career clusters identified by FAA, with an emphasis on opportunities for women and minorities. A goal is to have one program in each State and U.S. Territory. The FAA will conduct regional leadership workshops and provide funds based on the availability of resources.

Aviation Education Workshops for Teachers provide teachers with information on FAA aviation programs and materials and prepare them to teach aviation in the classroom. Annual workshops are conducted at colleges and universities across the Nation. The FAA provides information, materials, and speakers for the program.

National Congress on Aviation and Space Education is sponsored annually by the FAA in partnership with the National Aeronautics and Space Administration and the Civil Air Patrol. The meeting includes teacher workshops and crosswalk sessions to exchange ideas on promoting aerospace education.

The President’s Environmental Youth Awards (PEYA) Program
Young people from each State are invited to participate in PEYA, a nationwide program designed to encourage individuals, school classes, summer camps, public interest groups, and youth organizations to promote environmental awareness and community involvement. The two components of the program are the regional certificate program and the National awards competition. Regional certificates, signed by the President, are awarded to each participant by EPA regional offices. National individual project winners, or one representative from a National award-winning group project, along with one sponsor, are honored at EPA headquarters in Washington, DC. Interested K–12 individuals or groups may obtain application materials and contest rules by contacting the EPA Regional Office that serves their State. PEYA has been an ongoing project since it was created by the White House Office of Education and the EPA in 1971.

Eisenhower Regional Alliance for Mathematics and Science Education Reform
The Eisenhower Regional Alliance for Mathematics and Science Education Reform is one of 10 Eisenhower Mathematics and Science Consortia established by the U.S. Department of Education. The National Network of Eisenhower Regional Consortia and the Eisenhower National Clearinghouse for Mathematics and Science Education form a coordinated, field-based National infrastructure to promote systemic educational reform. The Alliance is managed by the Technical Education Research Centers (TERC), a nonprofit education research and development organization based in Cambridge, Massachusetts and dedicated to improving mathematics and science learning.

The Alliance’s goal is to provide professional development, technical assistance, information dissemination, and other services to strengthen the efforts of State and local mathematics and science education reform leaders. Three principles guide the work of the Alliance:

- The Alliance should make it easier for educators to collaborate regionally in addressing significant mathematics, science and technology (MST) reform issues.
- Clients of the Alliance should be involved in the process of setting priorities for Alliance services.
- Alliance services should be directed toward helping local educators access the necessary resources to meet their reform needs.

These principles have led to the formation of four collaborative structures: Statewide Action Teams, Regional Networks, Alliance Schools, and Electronic Services.

### Statewide Action Teams

Each State or Island has a team of MST reform leaders who work with the Alliance to identify local and State priorities for MST reform services and activities. Team members are drawn from within the State or Island and include K-12 educators, higher education faculty, Statewide Systemic Initiative (SSI) leaders, State Eisenhower coordinators, State mathematics and science supervisors, science center directors, and teacher association leaders. The teams support their local Alliance Schools; disseminate valuable information to the K-16 MST community; encourage participation in Alliance-sponsored institutes, pilots, and other initiatives; and foster increased statewide collaboration among diverse MST reform efforts. An 18-member Advisory Board, consisting of two representatives per State team, establishes regional priorities for resource allocation, ensures coordination across the region, and advises the Alliance staff.

### Regional Networks

To promote region-wide collaboration, the Alliance has four regional reform networks of local and State educators. These networks address key aspects of MST reform: equity, K-16 collaboration, curriculum/instruction/assessment, and public engagement. Each network has a dual mission: (1) to extend expertise related to the given network’s topic as widely as possible across the region, and (2) to make this expertise easily, affordably, and equitably accessible, especially to teachers and their students. Network services include an open e-mail listserv, professional development institutes, sustained technical assistance, pilot projects, Web-based information, and newsletters. Network membership is free and open to anyone interested. Each network is led by a steering committee that is responsible for setting priorities for Alliance initiatives across the region, developing services for Alliance Schools and network members, expanding network membership, and disseminating network-related information and resources.

The focus of the Curriculum/Instruction/Assessment Network has been to support the implementation of State frameworks and standards-based curriculum, and to provide leadership training to State and local educators. The Equity Network will hold a regional institute to train a cadre of trainers who will assist school districts across the region to develop strong, data driven, local evaluation systems to inform their decision-making. The K-16 Network has provided extensive support for the development of State-based K-16 networks and cross-State collaboration on K-16 reform. The Public Engagement Network has brought representatives from many of the States together to share strategies, materials, and information about efforts to communicate with and engage the public more closely in math and science reform. In addition, the Alliance is working with the National Network of Eisenhower Regional Consortia on the development of a searchable National database of Informal Science Centers and has established a new Informal Education Network to enable museum and other informal science educators to share their work across the region.

### Alliance Schools

The Alliance has launched a regionwide “Alliance Schools” initiative, a network of K-12 schools committed to systemic reform efforts and sustained partnerships with State and local leaders in MST education. In the first phase, 37 schools were selected by the Regional Alliance’s State teams. Alliance Schools represent a cross-section of grade levels, demographics, and experience with MST reform; however, schools enrolling substantial numbers of underserved populations represent a majority of the school sites. Alliance School Partners include representatives of the region’s State Systemic Initiatives (SSIs), leaders of the major State MST organizations, professional development specialists, museum and science center educators, and faculty from colleges and universities. The goals of the partnerships are to build capacity in each school to support comprehensive MST reform and to develop a model for replicating and expanding the number of partnerships across the region.

Each Alliance School has a local plan for MST reform, and the Regional Alliance supports an array of professional development and technical assistance opportunities based on the local plans and common issues and concerns across the schools. Schools that did not have e-mail and Internet access received a school account. The Alliance uses its electronic networks to connect the schools to each other, their State partners, the Alliance staff, and the wider educational community. Each school has been provided with a World Wide Web site where faculty and students can publish information and share ideas about curriculum and programs. During the summer, the Alliance hosts an Alliance School Summit to share strategies and resources.
Electronic Services

The Alliance information, communication, and dissemination efforts are supported by The Hub, its electronic network http://www.ra.terc.edu. The Hub provides Web access to a wide range of resources and services, including listserv and discussion groups; statewide action team and regional network information; Alliance Schools Web sites; and an extensive collection of online resources, MST documents, and links to valuable MST Web sites.

The Alliance also publishes two newsletters. Alliance Access provides information about key issues in MST reform, Alliance activities, and resources in math, science, and technology. MST Under Construction is the newsletter for the Alliance Schools Network. These newsletters are free to interested educators and also can be found on The Hub.

In the fall of 1997, the Alliance will publish a Systemic Reform Handbook that will support local educators as they plan their MST reform efforts. The Handbook will provide vignettes of effective strategies regarding issues in MST reform, describe how educators can link with others in the region who are undertaking these reforms, and point readers to excellent information and resources available elsewhere in print and via Internet.

Department of Transportation (DOT)
Federal Aviation Administration (FAA) Aviation Education
The FAA Aviation Education Representative coordinates aviation education services, including materials and programs for the FAA in the States assigned to the region.

Programs include the following:

Aviation Career Education (ACE) Academy is a one-week summer aviation education program for high school students sponsored by the FAA along with a host educational institution. The program provides students with diverse experiences in aviation career exploration. The focus is on aviation career clusters identified by FAA, with an emphasis on opportunities for women and minorities. A goal is to have one program in each State and U.S. Territory. The FAA will conduct regional leadership workshops and provide funds based on the availability of resources.

Aviation Education Workshops for Teachers provide teachers with information on FAA aviation programs and materials and prepare them to teach aviation in the classroom. Annual workshops are conducted at colleges and universities across the Nation. The FAA provides information, materials, and speakers for the program.

National Congress on Aviation and Space Education is sponsored annually by the
Environmental Protection Agency (EPA)

EPA Regional Office
This office takes part in a variety of environmental education programs for both teachers and students. Programs range from teacher workshops and student contests to in-school presentations. Young people from each State are invited to participate in PEYA, a nationwide program designed to encourage individuals, school classes, summer camps, public interest groups, and youth organizations to promote environmental awareness and community involvement. The two components of the program are the regional certificate program and the National awards competition. Regional certificates, signed by the President, are awarded to each participant by EPA regional offices. National individual project winners, or one representative from a National award-winning group project, along with one sponsor, are honored at EPA headquarters in Washington, D.C. Interested K-12 individuals or groups may obtain application materials and contest rules by contacting the EPA Regional Office that serves their State. PEYA has been an ongoing project since it was created by the White House Office of Education and the EPA in 1971.

Great Meadows National Wildlife Refuge

The refuge operates a classroom laboratory for wetlands study. Teachers must complete a wetlands workshop prior to conducting a class in the laboratory.

Other programs include the following:

- National Wildlife Week, sponsored by the National Wildlife Federation, is held each April. Great Meadows National Wildlife Refuge serves as a distribution point for approximately 300 kits for school teachers in the area, mostly eastern Massachusetts. Each kit contains lesson plans for teachers, student pages, and promotional materials on the theme selected by the NWF each year.

- The Wetlands Teacher Workshop is a one-day workshop introducing teachers and youth group leaders to the biology of pond and freshwater marsh habitats of the Refuge; the onsite classroom laboratory and its use; and equipment available to teachers for their self-guided onsite environmental education programs. Film, handouts, discussion, and hands-on pond sampling and microscopic investigation techniques are used.

Monomoy National Wildlife Refuge

Cultural and Natural History Tours of South Monomoy Island operate through a cooperative agreement with the U.S. Fish and Wildlife Service and the Cape Cod Museum of Natural History. The program offers cultural and natural history tours of South Monomoy Island and includes the use of the historical Monomoy Lighthouse as a base of operations. Day and overnight trips are offered.

Internships in refuge management, wildlife management, biology, and public use management are available during the summer months. Undergraduate students and those planning to enter graduate school participate in field activities related to the above-mentioned disciplines, working alongside refuge staff and independently. Internships are tailored to meet student and refuge needs. Generally, one or two internships are conducted each year.

In the program A Colonial Iron Works, students are introduced to 17th century iron-making. Students participate in a “hunt” to find the natural resources used in ironmaking. Then they are taken through the process and the end result, such as an iron tool or nail. Pre- and post-visit materials and resource boxes are available.

Federal Aviation Administration (FAA) Aviation Education
The FAA Aviation Education Representative coordinates aviation education services, including materials and programs for the FAA in the States assigned to the region.

Programs include the following:

- The Aviation Career Education (ACE) Academy is a one-week summer aviation education program for high school students sponsored by the FAA along with a host educational institution. The program provides students with diverse experiences in aviation career exploration. The focus is on aviation career clusters identified by FAA, with an emphasis on opportunities for women and minorities. A goal is to have one program in each State and U.S. Territory. The FAA will conduct regional leadership workshops and provide funds based on the availability of resources.

- Aviation Education Workshops for Teachers provide teachers with information on FAA aviation programs and materials and prepare them to teach aviation in the classroom. Annual workshops are conducted at colleges and universities across the Nation. The FAA provides information, materials, and speakers for the program.

- National Congress on Aviation and Space Education is sponsored annually by the FAA in partnership with the National Aeronautics and Space Administration and the Civil Air Patrol. The meeting includes teacher workshops and crossstalk sessions to exchange ideas on promoting aerospace education.

The President's Environmental Youth Awards (PEYA) Program
Young people from each State are invited to participate in PEYA, a nationwide program designed to encourage individuals, school classes, summer camps, public interest groups, and youth organizations to promote environmental awareness and community involvement. The two components of the program are the regional certificate program and the National awards competition. Regional certificates, signed by the President, are awarded to each participant by EPA regional offices. National individual project winners, or one representative from a National award-winning group project, along with one sponsor, are honored at EPA headquarters in Washington, DC. Interested K-12 individuals or groups may obtain application materials and contest rules by contacting the EPA Regional Office that serves their State. PEYA has been an ongoing project since it was created by the White House Office of Education and the EPA in 1971.

**Appalachian Regional Commission (ARC) and Oak Ridge National Laboratory (ORNL)**
A summer science, mathematics, and technology Teacher Leadership Institute is available for secondary teachers to participate in research-based programs at ORNL. The institute is provided in a two-week summer residential format patterned after the ORNL/National Science Foundation (NSF) National Teacher Enhancement Project and Leadership Institute. Participants are selected by the ARC from secondary schools throughout the ARC region. The focus is on hands-on laboratory research applying the tools and methods used in ongoing ORNL projects in research.
programs will feature telecommunications instruction at the ORNL Regional Science Center and telecommunications will be the primary method used for academic year follow-up and continued interactions with the teachers. Participants in the Teacher Leadership Institute will be hosted by several ORNL research divisions based on each teacher's background and interests. A program coordinator with experience in teacher preparation/higher education delivers instruction in pedagogy and educational leadership.

ARC and ORNL also collaborate on a summer science, mathematics, and technology Summer Science Honors Academy for ARC students to participate in research-based programs at ORNL. Student participants (seniors or graduating seniors) will be selected by the ARC from secondary schools throughout the ARC region. Students will be teamed with research mentors to participate in hands-on laboratory research applying the tools and methods used in ongoing ORNL projects. Students will also receive telecommunications instruction at the ORNL Regional Science Center.

(516) 289-4810

Gateway National Recreation Area

Programs are primarily for grades four through six, although programs can be arranged for other grade levels. Teachers must attend a one-day seminar about the park prior to bringing their students.

Division of Interpretation
Gateway National Recreation Area
Building 69, Floyd Bennett Field
Brooklyn, NY 11234
(718) 338-4376

Iroquois National Wildlife Refuge

Teacher workshops and guided tours are offered to promote environmental education. In the School Field Trip Program, teachers may schedule a one- or two-hour program during their visit, including: 1) an hour indoors with an orientation slide show or other AV program selected from the refuge library, and 2) an hour outdoors on an interpretive walk on a nature trail or visit to a wildlife overlook. Programs can be modified to coincide with specific classroom studies.

Project WILD and Project WET (Aquatic WILD) Teacher Workshops are supplemental environmental education programs emphasizing Wildlife In Learning Design. Teachers and youth educators learn new teaching ideas for use in the classroom or in youth-oriented programs including scouts and recreation centers. Participants receive activity guides and other teaching materials that can be used to supplement the curriculum.

Two sessions of the State Waterfowl Identification class are conducted each fall. Slides, videotapes, and lectures help participants learn how to identify common waterfowl species. Hunter ethics, ballistics, and wildlife laws pertaining to hunting are also covered. Participants must pass a written test to receive a certification card.

Federal Aviation Administration (FAA) Aviation Education
The FAA Aviation Education Representative coordinates aviation education services, including materials and programs for the FAA in the States assigned to the region.

Programs include the following:

- The Aviation Career Education (ACE) Academy is a one-week summer aviation education program for high school students sponsored by the FAA along with a host educational institution. The program provides students with diverse experiences in aviation career exploration. The focus is on aviation career clusters identified by FAA, with an emphasis on opportunities for women and minorities. A goal is to have one program in each State and U.S. Territory. The FAA will conduct regional leadership workshops and provide funds based on the availability of resources.

- Aviation Education Workshops for Teachers provide teachers with information on FAA aviation programs and materials and prepare them to teach aviation in the classroom. Annual workshops are conducted at colleges and universities across the Nation. The FAA provides informational materials, and speakers for the program.

- National Congress on Aviation and Space Education is sponsored annually by the FAA in partnership with the National Aeronautics and Space Administration and the Civil Air Patrol. The meeting includes teacher workshops and crosstalk sessions to exchange ideas on promoting aerospace education.

- The President's Environmental Youth Awards (PEYA) Program
  Young people from each State are invited to participate in PEYA, a nationwide program designed to encourage individuals, school classes, summer camps, public interest groups, and youth organizations to promote environmental awareness and community involvement. The two components of the program are the regional certificate program and the National awards competition. Regional certificates, signed by the President, are awarded to each participant by EPA regional offices. National individual project winners, or one representative from a National award-winning project group, along with one sponsor, are honored at EPA headquarters in Washington, DC. Interested K-12 individuals or groups may obtain application materials and contest rules by contacting the EPA Regional Office that serves their State. PEYA has been an ongoing project since it was created by the White House Office of Education and the EPA in 1971.

NASA Educator Resource Center
The center has NASA-related educational materials in various formats, including laserdiscs, CD-ROMs, videotapes, slides, audiotapes, publications, and teacher guides. Educators may preview or copy NASA materials upon request.

Department of Transportation (DOT)

Federal Aviation Administration (FAA) Aviation Education
The FAA Aviation Education Representative coordinates aviation education services, including materials and programs for the FAA in the States assigned to the region.

Programs include the following:

The Aviation Career Education (ACE) Academy is a one-week summer aviation
education program for high school students sponsored by the FAA along with a host educational institution. The program provides students with diverse experiences in aviation career exploration. The focus is on aviation career clusters identified by FAA, with an emphasis on opportunities for women and minorities. A goal is to have one program in each State and U.S. Territory. The FAA will conduct regional leadership workshops and provide funds based on the availability of resources.

**Aviation Education Workshops for Teachers** provide teachers with information on FAA aviation programs and materials and prepare them to teach aviation in the classroom. Annual workshops are conducted at colleges and universities across the Nation. The FAA provides information, materials, and speakers for the program.

**National Congress on Aviation and Space Education** is sponsored annually by the FAA in partnership with the National Aeronautics and Space Administration and the Civil Air Patrol. The meeting includes teacher workshops and crosstalk sessions to exchange ideas on promoting aerospace education.

George Burnette, ASO-17B.1, FAA Aviation Education Representative
1701 Columbia Avenue
College Park, GA 30337

Environmental Protection Agency
290 Broadway, 26th Floor
New York, NY 10007
(212) 637-3671 / Fax: (212) 637-4445

**The President's Environmental Youth Awards (PEYA) Program**
Young people from each State are invited to participate in PEYA, a nationwide program designed to encourage individuals, school classes, summer camps, public interest groups, and youth organizations to promote environmental awareness and community involvement. The two components of the program are the regional certificate program and the National awards competition. Regional certificates, signed by the President, are awarded to each participant by EPA regional offices. National individual project winners, or one representative from a National award-winning group project, along with one sponsor, are honored at EPA headquarters in Washington, DC. Interested K-12 individuals or groups may obtain application materials and contest rules by contacting the EPA Regional Office that serves their State. PEYA has been an ongoing project since it was created by the White House Office of Education and the EPA in 1971.

Science and Mathematics Consortium for Northwest Schools
The Science and Mathematics Consortium for Northwest Schools (SMCNWS) project, conducted by The Columbia Education Center (CEC), serves schools and agencies in Alaska, Idaho, Montana, Oregon, and Washington. SMCNWS is one of 10 Regional Consortia across the country. The Consortium is an integral part of a National effort to improve mathematics and science education led by the Eisenhower Federal Activities Program, administered by the Office of Educational Research and Improvement (OERI) of the U.S. Department of Education.

SMCNWS seeks to help improve the mathematics and science education in the Northwest's K-12 schools by forming a consortium of education-related agencies in the Northwest, and providing catalytic support and assistance to the reform efforts of these agencies.

The Consortium is not defined as those individuals employed by the project. It is better thought of as the sum total of the partnerships we create with other stakeholders in mathematics and science education in the region and Nationally. These stakeholders represent a broad spectrum of those concerned with education: State Departments of Education, State math and science professional organizations, other education-related nonprofit organizations, school districts, schools, and teachers, corporate educational outreach departments, informal math and science agencies, community members.

As part of this consortium, we rarely operate independently. Rather, almost every initiative we undertake is done in partnership with one or more consortium members, each bringing resources to accomplish purposes none could do as easily or effectively alone.

**Philosophy and Beliefs**

SMCNWS believes that educational improvement begins in the classroom. Teachers are professionals; they want to learn and apply new teaching methods and approaches. Teachers recognize that continued professional development is a necessary—and a desirable—element of a successful teaching career. Given the opportunity and support, teachers will seek out such training and become enthusiastic agents of lasting change and improvement in classroom outcomes.

SMCNWS honors and respects teachers as the primary agents of educational improvement. It is the belief of SMCNWS that teachers are fully capable of determining appropriate professional development activities. Within the framework of the various National science and mathematics standards, each State's reform efforts, and the teacher's district and building-wide effort to align with these standards, we believe that teams of teachers are the best "units of reform." Given the opportunity and access to appropriate technical assistance, teams of teachers can both design and implement sustained professional development programs that are congruent with district, State, and National reform efforts.

The SMCNWS philosophy is to empower teachers to undertake such initiatives. More than 20 percent of the annual budget is devoted to direct support of teams of teachers who, with the support of the district superintendent and technical assistance of SMCNWS, propose, design, and implement staff development activities that will further systemic reform in mathematics and science education in their districts.

**Typical SMCNWS Project Activities**

- Collecting, organizing, evaluating, and distributing lists of promising and exemplary science and math programs.
- Promoting the use of resources and expertise available at "informal" science and mathematics education providers by "formal" science and mathematics education agencies.
- Collecting and distributing free and inexpensive samples and materials available from developers of innovative science and math resources in the region and the Nation.
- Collecting and distributing information about sources of "outside" funding available to schools involved in science and math education reform initiatives and helping teachers, administrators, and other educators access these funds by providing technical assistance in proposal development.

- Providing technical assistance in planning, conducting, and evaluating local staff development activities related to emerging priorities and needs in science and mathematics education. (On some limited occasions, SMCNWS will provide partial, leveraged financial support for high-priority staff development activities linked to system-wide reform plans.)

- Assisting in identifying and obtaining the services of qualified personnel to help local and State agencies and organizations establish and address emerging priorities in science and mathematics education.

- Assisting regional institutions and agencies in publicizing and recruiting participants for their staff development activities.

- Providing opportunities for State and local educators to participate in awareness programs that introduce exemplary National programs such as Project 2061, Equity 2000, and Eisenhower National Clearinghouse.

- Planning and conducting institutes, workshops, and seminars to prepare cadres of teachers for leadership roles in local and State staff development activities related to topics such as educational equity, technology in the classroom, frameworks and standards, and assessment.

- Expanding the regional capacity to use the resources and services of the Eisenhower National Clearinghouse for Mathematics and Science Education by establishing multiple ENC Access Centers at sites throughout the Northwest.

- Assisting educators to respond to the information and implications of the Third International Math and Science Study (TIMSS).

- Maintaining an Internet presence through a World Wide Web site, http://www/col-
ed.org/smcnws/, that includes information about all SMCNWS project activities and ensures access to project resources and services.

The essential consideration facing SMCNWS is how to help the communities, schools, and personnel that are ultimately responsible for bringing about systemic reform in science and mathematics education.

The regional approach must be coordinated. While SMCNWS cannot do it all, it can serve as a catalyst in identifying resources and assisting with the organization of a joint effort. The guiding principle of SMCNWS is to support regionally agreed upon goals and objectives in concert with all stakeholders.

Department of the Interior (DOI)

Alaska Maritime National Wildlife Refuge
Pribilof Stewardship Camp is a summer nature camp for children, mainly Aleuts, of the Pribilof Islands. Day and overnight activities are designed to teach children about the natural and human history of their island. The goal is to combine traditional Aleut knowledge with western science.

In the Shorebird Sister Schools Project, schools along the Pacific flyway from southeastern California to Nome, Alaska, are linked via America Online to study the shorebird migration every April and May. Participant schools are selected from key migration stopover areas. Curriculum, flyway maps, and local experts are supplied. A field trip is required.

Poppy Benson, Outdoor Recreation Planner
Alaska Maritime National Wildlife Refuge 2355 Kachemak Bay Drive, Suite 101 Homer, AK 99603
(907) 235-6346 / Fax: (907) 235-7783

Anchorage, Alaska, Public Lands Information Center
In addition to educational programs on the cultural and natural histories of Alaska, the center loans educational materials to teachers.

Bureau of Land Management Anchorage District Office
Alaska Outdoor Week involves individuals from many different agencies and groups to present lessons to students on outdoor skills and environmental and natural resource education. Students receive five lessons during a one-day visit.

Other programs include the following:

- **Campbell Creek Science Center** was built to provide outdoor learning experiences, promote land stewardship, and function as a regional resource for environmental education. School groups, scout groups, and other civic groups may reserve the center for environmental education purposes. Participants can explore the rippling creeks and quiet forests of Campbell Tract, discover the area's wildlife and wildflowers, and understand the role people play in the local and global environment. The center features a 10,500 square-foot central building with kitchen, dining room, greenhouse, interpretive displays, and living stream aquarium.

- **The Campbell Tract Biological Inventories** program relies on community volunteers to perform a variety of inventories (such as plant surveys, breeding bird surveys, insect inventories, mushroom inventories, and lichen studies) to learn what lives on Campbell Tract, Anchorage's backyard wildland.

- **Campbell Tract Field Trips** give teachers from local schools the chance to visit BLM-managed land near their district office. An education specialist works with teachers to design field trips that meet specific learning objectives for students. On field trip days, the education specialist and, in some cases, other resource specialists make presentations to students. All activities are hands-on.

- **Earth Ranger Academy** is an intensive three-day program to teach children ecological concepts, how those concepts relate to their daily lives, and how they can help conserve natural resources by modifying their use of resources.

- **The Limits of Acceptable Change Monitoring Program** employs community volunteers to conduct visitor surveys, and monitor trails and natural resources to maintain health of BLM's Campbell Tract and Urban Wildland.

- **The Resource Apprenticeship Program for Students (RAPS)** offers rural native students an opportunity to explore natural resource management careers and learn about the professional work environment by placing them in summer apprenticeships. Alongside specialists in over 10 State and Federal agencies, students work on an educational handbook, and have the opportunity to attend the Alaska Inter-Tribal Youth Practicum.

- **The Resource Specialist Extension Program** makes district office specialists available to visit school classrooms on an on-call basis. Resource specialists work with teachers and make presentations.

For information on these programs, contact:

Jeff Brune and Van Waggoner, Education Specialists; Janelle Eklund, Outdoor Recreation Planner; or Carrie Agibinik and Mike Johnson, RAPS Coordinators, at Bureau of Land Management Anchorage District Office 6881 Abbott Loop Road Anchorage, AK 99507

Fairbanks Fishery
In the Integrated Fisheries Education program, education teams developed in each community (Dillingham, Galena) plan teachers' inservice training, workshops, and an in-depth outdoor studies program for K-12 students. The study is based on Alaska's fisheries and aquatic systems.

Other programs include the following:

- The Adopt-A-Stream Program lets students "adopt" a local aquatic system for long-term monitoring of water quality, physical changes, and biological change. This is augmented in the classroom through use of a cold-water aquarium to house native fish for study. Students will also network, via the Internet, with other water quality monitoring programs throughout the country.

- Salmonids in the Classroom develops an appreciation of Alaska's native fisheries by allowing classrooms to hatch salmon eggs and track their development. A curriculum introduces aspects of salmon biology, life cycles, and conservation.

Laurel Devaney, Education Coordinator
Fairbanks Fishery Resource Office
101 12th Avenue, Box 17, Room 222

Kenai National Wildlife Refuge
The Environmental Education Program provides teacher/youth leader workshops and credit courses. Adult leaders are trained in curricula that reflect refuge-related resource issues and subject areas important to the school district and to youth organizations such as the Scouts, 4-H, and others. For preschool to first grade, thematic units include animals and their senses; for second and third grade, the theme is the role of predators in the ecosystem. Fourth through sixth grades study wetlands and wildlife, and sixth through eighth grades learn about the role of fire in the ecosystem.

Candace D. Ward, Park Ranger
Kenai NWR
PO Box 2139
Soldotna, AK 99669
(907) 262-7021 / Fax: (907) 262-3599

Koyukuk/Nowitna National Wildlife Refuge
In Biological Skills Camp, participants learn about fish and wildlife management and the role of the National Wildlife Refuge System in resource conservation. Participants also develop skills needed to help qualify them for a biological technician position with the Service.

Heather Johnson, Park Ranger
Koyukuk/Nowitna NWR
PO Box 287
Galena, AK 99741
(907) 656-1231 / Fax: (907) 656-1708

Minerals Management Service (MMS) Regional Office
The MMS Regional Office provides a range of educational services. Teacher inservice programs and classroom visits may include supplemental materials. Availability may be limited, but arrangements may be made for duplication of some materials at minimal cost.

Alaska Outer Continental Shelf Region
Minerals Management Service
Office of Public Affairs
949 East 36th Avenue, #110, MS 8000
Anchorage, AK 99508-4302

Project WILD
Project WILD offers teacher training and educational materials. Teacher guides, free to teachers who attend the training session, contain more than 80 supplementary, interdisciplinary activities for grades K-12.

Colleen Matt, Project WILD Coordinator
Alaska Department of Fish and Game
333 Raspberry Road
Anchorage, AK 99518-1599
(907) 267-2241 / Fax: (907) 344-7914

Tetlin National Wildlife Refuge
Refuge teacher workshops promote education in wildlife management and environmental issues. Curriculum materials and programs for students are also available.
Other programs include the following:

- **National Wildlife Week**, sponsored by the National Wildlife Federation, is a week-long event celebrated each spring. Each year a different theme is covered and includes wildlife, wildlife habitat, and environmental “happenings”—such as pollution—that affect all of us.

- **The Summer Nature Camp** is a series of day camps where students are taught about wildlife, wildlife habitat, natural fire effects and benefits for wildlife, and outdoor skills and care. Camps are held in local communities and on refuge lands; all include outdoor, hands-on educational activities. All of the activities are related to the Tetlin National Wildlife Refuge and natural areas (especially of Alaska).

- **Role of Fire in Alaska** consists of a K–12 curriculum, poster, video, slide show, display, and education kit. USFWS employees train educators in the use of these materials through university credit courses and shorter workshops.

- **Wetlands and Wildlife and Teach About Geese** are two K–12 curricula. Materials include a poster, slide show, display, and education kit. USFWS employees train educators in the use of these materials through university credit courses, as well as shorter workshops. Two curricula are presented together.

-Catherine Rezabeck, Education Specialist USFWS Region 7 1011 East Tudor Road Anchorage, AK 99503 (907) 786-3351 / Fax: (907) 786-3635

- **Yukon Delta National Wildlife Refuge**
  Refuge teacher workshops promote education in wildlife management and environmental issues. College credit for these workshops is available. Yukon Delta also hosts an extensive video library.

- **Western Alaska Natural Science Camp** introduces native Alaskan students to scientific and traditional concepts of ecosystem management and biodiversity. The camp education and recreation activities promote environmental management. The activities also compare and contrast traditional native ecological knowledge about natural resources with scientific approaches to resource management.

-Lorrie Beck, Outdoor Recreation Planner Yukon Delta NWR PO Box 346 Bethel, AK 99539 (907) 543-3151 / Fax: (907) 543-4413

- **The U.S. Fish and Wildlife Service (USFWS)**
  In the Goose Calendar Contest, five refuges in western and northern Alaska invite local school children to participate in an art and literature competition. The contest highlights winners of State poster contests that emphasize water resource issues. The calendar is published and distributed to all elementary schools throughout Idaho, Washington, Oregon, Montana, Alaska, and Hawaii.

- **The Water Conservation Center**
  The center sponsors a Water Education Calendar and Poster Contest that results in a regional calendar produced in cooperation with the International Office of Water Education and Utah State University. The calendar highlights winners of State poster contests that emphasize water resource issues. The calendar is published and distributed to all elementary schools throughout Idaho, Washington, Oregon, Montana, Alaska, and Hawaii.

- **Debbie Cross, Public Affairs Officer**
  Water Conservation Center PO-6430 North Curtis Road Boise, ID 83705 (208) 378-5020 / Fax: (208) 378-5066

- **The U.S. Fish and Wildlife Service (USFWS)**
  In the Goose Calendar Contest, five refuges in western and northern Alaska invite local school children to participate in an art and literature competition. The contest highlights four species of arctic nesting geese whose populations have decreased. The winners of the contest have their work published in a color calendar that is distributed to communities in western and northern Alaska for free.

- **The U.S. Fish and Wildlife Service (USFWS)**
  Other programs include the following:

  - **Learn About Seabirds** is a curriculum developed to teach students in grades 4–6 throughout Alaska about seabird biology and what can be done to help seabirds. The curriculum includes a slide set, poster, and two booklets. The USFWS offers teacher workshops and credit courses.

- **Department of Labor (DOL)**

  - **Job Training Partnership Act (JTPA) Liaison**
    The JTPA Liaison can provide information about the Job Training Partnership Act State and local programs for economically disadvantaged adults and youth.

    - **William Maier**

The President's Environmental Youth Awards (PEYA) Program
Young people from each State are invited to participate in PEYA, a nationwide program designed to encourage individuals, school classes, summer camps, public interest groups, and youth organizations to promote environmental awareness and community involvement. The two components of the program are the regional certificate program and the National awards competition. Regional certificates, signed by the President, are awarded to each participant by EPA regional offices. National individual project winners, or one representative from a National award-winning group project, along with one sponsor, are honored at EPA headquarters in Washington, DC. Interested K-12 individuals or groups may obtain application materials and contest rules by contacting the EPA Regional Office that serves their State. PEYA has been an ongoing project since it was created by the White House Office of Education and the EPA in 1971.

Hagerman Fossil Beds National Monument
The monument provides a teacher curriculum package and a traveling trunk of support materials for teachers of grades 7-9. Students learn about the sciences of geology, paleontology, and archaeology, as well as the history of the Oregon Trail. Teachers may take a college-level course for university credit to learn how to use the curriculum and the monument's resources. Guided tours are scheduled during the summer months, and a small visitor center with exhibits and audiovisual programs is available throughout the year.

The Traveling Trunk curriculum is designed to meet the needs of students in grades 7-9.

Topics include Idaho's fossil record as well as the Native American and Oregon Trail history. The program supplements the State curriculum in a hands-on, interactive way.

Department of Transportation (DOT)
Federal Aviation Administration (FAA) Aviation Education
The FAA Aviation Education Representative coordinates aviation education services, including materials and programs for the FAA in the States assigned to the region. Programs include the following:

The Aviation Career Education (ACE) Academy is a one-week summer aviation education program for high school students sponsored by the FAA along with a host educational institution. The program provides students with diverse experiences in aviation career exploration. The focus is on aviation career clusters identified by FAA, with an emphasis on opportunities for women and minorities. A goal is to have one program in each State and U.S. Territory. The FAA will conduct regional...
leadership workshops and provide funds based on the availability of resources.

**Aviation Education Workshops for Teachers** provide teachers with information on FAA aviation programs and materials and prepare them to teach aviation in the classroom. Annual workshops are conducted at colleges and universities across the Nation. The FAA provides information, materials, and speakers for the program.

**National Congress on Aviation and Space Education** is sponsored annually by the FAA in partnership with the National Aeronautics and Space Administration and the Civil Air Patrol. The meeting includes teacher workshops and crosstalk sessions to exchange ideas on promoting aerospace education.

**FAA Aviation Education Resource Centers**

Located at colleges, museums, and State aviation authority offices, these centers function as information distribution centers for Federal Aviation Administration education materials and resources. The Resource Centers maintain and provide quantities of printed materials, videotapes, and computer educational software. Center personnel can also provide general information, conduct workshops, and make aviation-related presentations.

DOI, Montana State Office
In the Animal Inn/Sammy Snag program, a costumed presenter tells a story about the creatures that live in dead trees/snags. The one-hour presentation uses stuffed toy animals to demonstrate habitat. Students are involved when Sammy Snag solicits questions from the audience.

NILE (Northern International Livestock Exposition) Agricultural Classroom includes presentations covering various topics, such as Good Fire/Bad Fire, Mining & Minerals, and Wild Horses. Visual aids are used along with demonstrations and projects for students to do when they return to their classrooms. The target audience is fourth graders from areas surrounding Billings, Montana. During the three-day session more than 1,600 students attend the exposition.

Glacier National Park
The park offers environmental education field trips, guided tours, and other activities. Curriculum materials are available.

The Parks as Classrooms Program is designed to provide students, grades 1-6, with an introduction to the biological and cultural diversity of the park through a series of hands-on activities conducted in the classroom and the park. Individual units deal with habitat awareness, forest diversity, aquatic ecosystems, the alpine environment, and human relationships to the land.

Lee Metcalf National Wildlife Refuge
The Refuge offers teacher workshops to give teachers ideas, materials, and methods for teaching about natural resources, and to provide teachers with resource people and materials for teaching about the history and culture of people native to this area.
Other programs include the following:

- **Migratory Bird Days** is a series of field day programs on migratory birds offered to the general public. Teachers, students, families, and naturalists are invited to participate in birding activities that include topics on adaptations, behavior, identification, migration, research, habitat needs, and conservation.

- **The Statewide Junior Duck Stamp Contest**, part of the Federal Junior Duck Stamp Program, is sponsored for K-12 school children. Children enter their artwork of North American waterfowl into one of four grade categories. All participants are acknowledged and winners are recognized at the Spring Awards Ceremony. The program promotes “Conservation through the Arts” and encourages young wildlife artists.

- **National Bison Range**

  The range offers a variety of environmental education activities for students and an outdoor education resource library.

  Programs include the following:

  - **Discovery Workshops for Teachers** are presented in the spring and fall for teachers at all grade levels and disciplines. Fall workshops teach methods for teachers without science backgrounds. Spring workshops are more science based. Special workshops are held for schools with particular needs. Schools with nature centers or those planning one are provided with design assistance and advice.

  - **The Program for Schools and People with Disabilities** consists of special sessions for visiting school groups, including learning disabled students and a special ACCESS program for people with disabilities. Summer day camps include other organizations that hold camps onsite.

  **Department of Transportation (DOT)**

  **Federal Aviation Administration (FAA) Aviation Education**

  The FAA Aviation Education Representative coordinates aviation education services, including materials and programs for the FAA in the States assigned to the region.

  Programs include the following:

  - **The Aviation Career Education (ACE) Academy** is a one-week summer aviation education program for high school students sponsored by the FAA along with a host educational institution. The program provides students with diverse experiences in aviation career exploration. The focus is on aviation career clusters identified by FAA, with an emphasis on opportunities for women and minorities. A goal is to have one program in each State and U.S. Territory. The FAA will conduct regional leadership workshops and provide funds based on the availability of resources.

  **Aviation Education Workshops for Teachers** provide teachers with information on FAA aviation programs and materials and prepare them to teach aviation in the classroom. Annual workshops are conducted at colleges and universities across the Nation. The FAA provides information, materials, and speakers for the program.

  **National Congress on Aviation and Space Education** is sponsored annually by the FAA in partnership with the National Aeronautics and Space Administration and the Civil Air Patrol. The meeting includes teacher workshops and crosstalk sessions to exchange ideas on promoting aerospace education.

The President's Environmental Youth Awards (PEYA) Program Young people from each State are invited to participate in PEYA, a nationwide program designed to encourage individuals, school classes, summer camps, public interest groups, and youth organizations to promote environmental awareness and community involvement. The two components of the program are the regional certificate program and the National awards competition. Regional certificates, signed by the President, are awarded to each participant by EPA regional offices. National individual project winners, or one representative from a National award-winning group project, along with one sponsor, are honored at EPA headquarters in Washington, DC. Interested K-12 individuals or groups may obtain application materials and contest rules by contacting the EPA Regional Office that serves their State. PEYA has been an ongoing project since it was created by the White House Office of Education and the EPA in 1971.

**Pacific Northwest National Laboratory (PNLL)**
University and Science Education Programs conducted by PNLL use the science-rich human and technical resources of a National...
laboratory to enhance National, regional, and local efforts to provide high-quality mathematics, science, and technology education for all students. A comprehensive array of programs provide teacher preparation and enhancement, curriculum development and dissemination, student incentives and opportunities, and State and regional partnerships. University and Science Education Programs support education reform throughout the State and region in mathematics, science, and technology education.

Jeff Estes, Deputy Manager
University and Science Education Programs

Regional Science Bowl
The DOE sponsors a Regional Science Bowl for Washington State high schools in the T-3 Cities area. This is a public/private-sponsored academic competition held each February that encourages the study of science and mathematics and the pursuit of related careers. The regional winner advances to the National competition held each spring.

Mount Rainier National Park
The park offers regularly scheduled guided nature walks and lectures about the park's ecology, environment, and geology. Where the River Begins is an educator's guide to the Nisqually River in the park. This interdisciplinary curriculum for grades K-12 is a cooperative program with the Nisqually River Education Project. A CD-ROM with the same title incorporates interactive animations, games, slides, and videos to elicit information about the natural and human history of the park.

Loren E. Lane, Resource Education Specialist
Mount Rainier National Park
Tahoma Woods, Star Route
Ashford, WA 98304
(206) 569-2211, ext. 3313
Fax: (206) 569-2187

Nisqually National Wildlife Refuge
The education program informs the public (both children and adults) on National Wildlife Refuges and their role in the protection and preservation of wildlife and related habitats and resources. The variety of habitat and wildlife species at Nisqually NWR are featured.

Willard B. Hesselbart, Refuge Manager
Nisqually NWR
100 Brown Farm Road
Olympia, WA 98516
(360) 753-9467 / Fax: (360) 534-9302

Olympic National Park
The park offers teacher workshops, guided nature walks, and curriculum materials that can be used as guides to the park. Olympic also allows educators to borrow Discovery Trunks that contain educational materials and activities.

Living Forest (also referred to as The Park in Your Backyard) is designed to help students, teachers, and parents learn about and enjoy the lowland and old growth forests of Olympic National Park. The program includes a 180-page curriculum guide containing natural history information and activities for both the classroom and outdoors. Three educational trunks with learning materials and activity guides are available for teachers to check out and use for two-week periods. In addition, the park provides varied field trip opportunities, as well as several teacher workshops each year.

Job Training Partnership Act (JTPA) Liaison
The JTPA Liaison can provide information about the Job Training Partnership Act State and local programs for economically disadvantaged adults and youth.
Federal Aviation Administration (FAA) Aviation Education
The FAA Aviation Education Representative coordinates aviation education services, including materials and programs for the FAA in the States assigned to the region.

Programs include the following:

- The Aviation Career Education (ACE) Academy is a one-week summer aviation education program for high school students sponsored by the FAA along with a host educational institution. The program provides students with diverse experiences in aviation career exploration. The focus is on aviation career clusters identified by FAA, with an emphasis on opportunities for women and minorities. A goal is to have one program in each State and U.S. Territory. The FAA will conduct regional leadership workshops and provide funds based on the availability of resources.

- Aviation Education Workshops for Teachers provide teachers with information on FAA aviation programs and materials and prepare them to teach aviation in the classroom. Annual workshops are conducted at colleges and universities across the Nation. The FAA provides information, materials, and speakers for the program.

- National Congress on Aviation and Space Education is sponsored annually by the FAA in partnership with the National Aeronautics and Space Administration and the Civil Air Patrol. The meeting includes teacher workshops and crossstalk sessions to exchange ideas on promoting aerospace education.

The President's Environmental Youth Awards (PEYA) Program
Young people from each State are invited to participate in PEYA, a nationwide program designed to encourage individuals, school classes, summer camps, public interest groups, and youth organizations to promote environmental awareness and community involvement. The two components of the program are the regional certificate program and the National awards competition. Regional certificates, signed by the President, are awarded to each participant by EPA regional offices. National individual project winners, or one representative from a National award-winning group project, along with one sponsor, are honored at EPA headquarters in Washington, DC. Interested K–12 individuals or groups may obtain application materials and contest rules by contacting the EPA Regional Office that serves their State. PEYA has been an ongoing project since it was created by the White House Office of Education and the EPA in 1971.

Pacific Mathematics and Science Regional Consortium
The Pacific Mathematics and Science Regional Consortium is one of 10 Eisenhower Mathematics and Science Regional Consortia established by the U.S. Department of Education. The National Network of Eisenhower Regional Consortia and the Eisenhower National Clearinghouse for Mathematics and Science Education (ENC) form a coordinated, field-based National infrastructure to promote systemic educational reform.

The Consortium serves 10 Pacific Island entities. Its mission is to support professional communities of educators and their partners as they work to improve mathematics and science teaching and learning. The Pacific Consortium believes the path to improvement in the classroom lies within and through teachers’ professional communities, which generate knowledge, craft new standards, and sustain participants in their efforts to reflect, examine, experiment, and change. To this end, the Consortium focuses on providing technical assistance in implementation, innovation, and dissemination of exemplary materials, teaching strategies, and assessment resources for elementary and secondary students, teachers, and administrators.

Given the cultural, linguistic, economic, and environmental diversity of the Pacific region, and the geographic isolation of a significant number of the region’s teachers, many of the projects and programs supported by the Pacific Consortium involve long-term and multiphase professional development that combines a variety of models: training, teacher-as-researcher study groups, teacher case studies, credit coursework, and a new educator-in-residence approach. Consortium support often incorporates a training-of-trainers model to ensure that local resources are available. It also makes use of local, regional, and National telecommunications networks and builds in local adaptations that recognize and celebrate the diversity that enriches Pacific education.

One major feature of the Pacific Consortium is the Mathematics and Science Leadership Team, which consists of mathematics and science specialists from each entity. The team is the core development and implementation group for all regional documents and projects carried out through the Consortium. It also determines the kinds of activities to be carried out in the home entities of the team members, as well as supporting school-based initiatives through the Visions and Dreams Program for each entity’s schools and teachers. The competition is funded through the Pacific Consortium. Below are some of the activities the Leadership Team has developed or is implementing across the region and within each entity.

### Pacific Consortium Regional Activities

#### The Pacific Educational Conference

The Consortium uses this conference to highlight activities of interest to the region’s educators, to disseminate information about the Consortium’s regional and entity-specific projects, to demonstrate effective classroom practices and quality assessment strategies, and to distribute exemplary materials.

#### Support for Educational Initiatives

The Pacific Consortium supports region-wide and individual entity initiatives. It works in partnership with the University of Hawaii’s Curriculum Research and Development Group (CRDG), whose staff support the work of the Leadership Team and provide training and technical assistance in implementing regionally and Nationally recognized courses and projects. In collaboration with the CRDG mathematics and science faculty, the team has developed Pacific Standards for Excellence in Mathematics, Pacific Standards for Excellence in Science, and Pacific Standards for Excellence in Teaching, Assessment, and Professional Development. These standards are appropriate for the region and aligned with world-class standards.

#### Networking

The Consortium is encouraging a network of teachers across the Pacific and beyond to share information, ideas, and projects via Far-Reaching Information Sharing (FISHnet).

#### Assessment Projects

The Yap Classroom Learning Assessment Project is a multiphase initiative addressing improvement in classroom assessment, curriculum, and instruction through training of trainers and direct teacher training. The Commonwealth of the Northern Mariana Islands (CNMI) Performance Assessment Project is similar to the Yap Project. Program managers in CNMI have formed a training team that is developing performance tasks, assessment criteria, and scoring rubrics.

- **The Guam Mathematics Project**

This project involves teachers—one from each of Guam’s 29 public elementary schools and middle schools—in learning how to teach and assess mathematics for understanding. Ten of these teachers will receive additional staff development to become trainers within the local school district.

- **School/Community-Based Management (SCBM) Projects**

Serving Hawaii schools, these projects involve Consortium staff and partners from the University of Hawaii in residence one to two days per month to provide focused technical assistance (developing curriculum, creating active learning environments, using heterogeneous work groups, and conducting classroom assessments) to small groups of teachers who plan and implement integrated thematic units.

The Pacific Consortium uses diverse resources to meet the needs of the region’s mathematics and science educators. *Voyages in Mathematics and Science* is a quarterly teacher-oriented publication that emphasizes practical applications of quality mathematics and science strategies.

Another effort of the Pacific Consortium is to familiarize educators with technologies that can improve and enhance the teaching and learning of science and mathematics in the region’s classrooms. The mechanism for this effort is the Pacific Regional Technology Demonstration Site, which was in Honolulu but has now begun to move to other locales in the region. The demonstration site is a multi-prong partnership among the ENC, Pacific Consortium, departments of education, and other educational institutions in the region.

Haleakala National Park
Guided, environmental field trips for school groups are the primary activities offered at the park. Teacher guides and pre-visit materials are provided for field trip participants. Other programs include the following:

- If Rocks Could Talk lets students conduct experiments and map landforms while hiking. The goal is to learn how Hawaii was created by volcanoes and destroyed by erosion. Pre- and post-visit classroom activities are available.

- Kilohoku O Haleakala is an hour-long bimonthly program on celestial bodies and events, the role of astronomy in Hawaiian culture, and related mythology.

- Sliding Sands Wilderness Hike is a two-mile, two-hour walk into the cinder desert to examine aeolian desert, geology, early Hawaiian usage and mythology, and endangered species.

- Waikamoi Cloud Forest Hike is a three-hour, three-mile hike through privately owned reforested grazing land into intact old growth forest to examine impacts on the native biota and the role of the forest in Hawaiian culture.

- Who Lives at Haleakala? examines species of plants and animals found on Haleakala that are unique and found nowhere else on Earth due to adaptation and isolation of habitat. Pre- and post-visit classroom activities are available.

Federal Aviation Administration (FAA) Aviation Education  
The FAA Aviation Education Representative coordinates aviation education services, including materials and programs for the FAA in the States assigned to the region.

Programs include the following:  
- The Aviation Career Education (ACE) Academy is a one-week summer aviation education program for high school students sponsored by the FAA along with a host educational institution. The program provides students with diverse experiences in aviation career exploration. The focus is on aviation career clusters identified by FAA, with an emphasis on opportunities for women and minorities. A goal is to have one program in each State and U.S. Territory. The FAA will conduct regional leadership workshops and provide funds based on the availability of resources.
- Aviation Education Workshops for Teachers provide teachers with information on FAA aviation programs and materials and prepare them to teach aviation in the classroom. Annual workshops are conducted at colleges and universities across the Nation. The FAA provides information, materials, and speakers for the program.
- National Congress on Aviation and Space Education is sponsored annually by the FAA in partnership with the National Aeronautics and Space Administration and the Civil Air Patrol. The meeting includes teacher workshops and crosstalk sessions to exchange ideas on promoting aerospace education.

The President's Environmental Youth Awards (PEYA) Program  
Young people from each State are invited to participate in PEYA, a nationwide program designed to encourage individuals, school classes, summer camps, public interest groups, and youth organizations to promote environmental awareness and community involvement. The two components of the program are the regional certificate program and the National awards competition. Regional certificates, signed by the President, are awarded to each participant by EPA regional offices. National individual project winners, or one representative from a National award-winning group project, along with one sponsor, are honored at EPA headquarters in Washington, DC. Interested K–12 individuals or groups may obtain application materials and contest rules by contacting the EPA Regional Office that serves their State. PEYA has been an ongoing project since it was created by the White House Office of Education and the EPA in 1971.

Eisenhower Consortium for Mathematics and Science Education at SERVE
The Eisenhower Consortium for Mathematics and Science Education at SERVE (SouthEast Regional Vision for Education) is one of 10 Eisenhower Mathematics and Science Regional Consortia established by the U.S. Department of Education. The National Network of Eisenhower Regional Consortia and the Eisenhower National Clearinghouse for Mathematics and Science Education (ENC) form a coordinated, field-based National infrastructure to promote systemic educational reform. The Consortium, a coalition of educators, business leaders, governors, and policymakers, promotes systemic reform in mathematics and science education in its region. In collaboration with other stakeholders in the region, the Consortium works to expand and enhance mathematics and science education by providing technical assistance, linking and coordinating resources, using technology, and disseminating information about successful practices.

The Consortium's goal is to empower educators in the Southeast to provide quality mathematics and science programs for all students. In keeping with the Consortium's philosophy of decentralizing technical assistance through the use of field offices, three of the Consortium's Program Specialists are housed in offices outside of Florida (Greensboro, NC; Atlanta, GA; and Cleveland, MS).

Collaboration and coordination are the foundation for the Consortium's work, and since its inception, the Consortium has been involved in Laboratory and Consortium Network Programs. The Consortium provided leadership in the identification of exemplary mathematics and science programs for the National Network’s Successful Practices effort. Also, the Consortium led the task force that compiled and published an Equity Resource Guide for Mathematics and Science Education. At the regional level, the Consortium continues to seize upon opportunities to work with a variety of stakeholders to carry out its mission. For example, mathematics and science specialists, State- and district-level administrators, and Eisenhower State Grant program coordinators were involved in the identification of exemplary programs and practices.

### Consortium Programs

To more effectively disseminate information concerning exemplary programs and deliver focused technical assistance, the Consortium has developed an annual institute and a technical assistance academy.

- **The Promising Practices Leadership Institute**, an annual event held each September, showcases the talents and enhances the leadership skills of past Promising Practices award winners, National Science Foundation (NSF) projects, and other exemplary programs from across the region and Nation. District or school-level teams are invited from each of the six SERVE States to participate in sessions that highlight these programs. The sessions are intended to equip teachers with skills and knowledge needed to develop strategies to implement new programs in their schools.

- **The Technical Assistance Academy for Mathematics and Science Services** (TAAMSS) is the cornerstone of the Consortium’s delivery of region-wide technical assistance. The Academy's goal is to provide high quality professional development to a cadre of staff developers and lead teachers from each State. Participants then function as regional resources and assist other teachers and educators to develop strategies for improving the teaching of mathematics, science, and technology. Academy participants are affiliated with a variety of education agencies including universities, State and Urban Systemic Initiatives, Regional Service Centers, and local districts, especially those recognized as being in “critical” need. The Academy provides training for an array of topics, including technology, facilitative leadership for change, alternative assessment, curriculum frameworks, implementing National standards, and grant writing.

The Consortium also focuses on enhancing the work of others by linking and coordinating resources. In this role, the Consortium contributes support to established programs and agencies.

Examples of this kind of activity include the following:

- **The South Eastern Consortium for Minorities in Engineering (SECME) Summer Institute** provides an opportunity for teachers to learn new methods to enrich their instructional programs. For example, the teachers spend a significant portion of their time doing hands-on projects in engineering laboratories and in industrial/manufacturing settings. Also, the teachers are provided sessions that focus on the required academic preparation for students pursuing engineering and information regarding the current opportunities in the engineering profession. SECME combines many of the components needed to bring about equity in mathematics and science education.

- **The Technology Institute at Fayetteville State University** is a week-long summer institute for teachers and professors linked to the Historically Black Colleges and Universities (HBCU) network. Participants from across the southeast and Nation are introduced to interactive and calculator-based methods for engaging students in upper-level mathematics courses such as Trigonometry and Calculus. Using the Internet as a resource is also stressed.

### Publications

The Eisenhower Consortium at SERVE distributes SERVE catalogs and publications as well as publications from the U.S. Department of Education, the Eisenhower National Clearinghouse for Mathematics and Science Education (ENC), and the NSF. The Consortium also distributes its own publications. *Action Research: Perspectives From Teachers' Classrooms and Science in the Elementary School Classroom: Portraits of Action Research* are monographs consisting of studies conducted and reported by middle school science teachers for Florida State University’s Science FEAT (Science For Early Adolescence Teachers) program. *Policy Brief: The Need for Improved Mathematics and Science Education* depicts the status of mathematics and science education in the region and the need for improvement. A newsletter,
Common Denominator, is published twice a year with a special focus for each issue; past topics have included systemic reform, equity, and informal science.

Appalachian Regional Commission (ARC) and Oak Ridge National Laboratory (ORNL)
A summer science, mathematics, and technology Teacher Leadership Institute is available for secondary teachers to participate in research-based programs at ORNL. The institute is provided in a two-week summer residential format patterned after the ORNL/National Science Foundation (NSF) National Teacher Enhancement Project and Leadership Institute. Participants are selected by ARC and ORNL from secondary schools throughout the ARC region. The focus is on hands-on laboratory research applying the tools and methods used in ongoing ORNL projects in research areas (as appropriate for each teacher’s teaching assignment). Participants in the Teacher Leadership Institute are provided in a two-week summer residential format, which will include:

Federal Aviation Administration (FAA) Aviation Education
The FAA Aviation Education Representative coordinates aviation education services, including materials and programs for the FAA in the States assigned to the region.

Programs include the following:

- The Aviation Career Education (ACE) Academy is a one-week summer aviation education program for high school students sponsored by the FAA along with a host educational institution. The program provides students with diverse experiences in aviation career exploration. The focus is on aviation career clusters identified by FAA, with an emphasis on opportunities for women and minorities. A goal is to have one program in each State and U.S. Territory. The FAA will conduct regional leadership workshops and provide funds based on the availability of resources.

- Aviation Education Workshops for Teachers provide teachers with information on FAA aviation programs and materials and prepare them to teach aviation in the classroom. Annual workshops are conducted at colleges and universities across the Nation. The FAA provides information, materials, and speakers for the program.

- National Congress on Aviation and Space Education is sponsored annually by the FAA in partnership with the National Aeronautics and Space Administration and the Civil Air Patrol. The meeting includes teacher workshops and crosstalk sessions to exchange ideas on promoting aerospace education.

The President's Environmental Youth Awards (PEYA) Program
Young people from each State are invited to participate in PEYA, a nationwide program designed to encourage individuals, school classes, summer camps, public interest groups, and youth organizations to promote environmental awareness and community involvement. The two components of the program are the regional certificate program and the National awards competition. Regional certificates, signed by the President, are awarded to each participant by EPA Regional Offices. National individual project winners, or one representative from a National award-winning group project, along with one sponsor, are honored at EPA headquarters in Washington, DC. Interested K–12 individuals or groups may obtain application materials and contest rules by contacting the EPA Regional Office that serves their State. PEYA
has been an ongoing project since it was created by the White House Office of Education and the EPA in 1971.

Pinellas Plant
The plant sponsors numerous Educational Outreach programs. The DOE Science Bowl is a major event that encourages high school students to compete and test their science knowledge. Regional winners are provided an opportunity to compete in the Nationals. National winners move to the ultimate level when they compete in an international setting. The event requires the participation of more than 100 Pinellas Plant employees. Several employees are mentors and tutors throughout the Pinellas Plant School system. Employees volunteer year round for special events at schools, including science fairs and career days. Significant financial support is provided to the Pinellas County Education Foundation (PCEF), a fundraising organization for the school system. PCEF provides scholarships to underprivileged students and supports those programs that go above and beyond the standard curriculum.

Canaveral National Seashore
The seashore offers environmental education, as well as natural and cultural history programs on both ends of the Barrier Island. Guided tours and teacher guides are also available.

Programs include the following:

- The Canaveral National Seashore and Merritt Island National Wildlife Refuge/Education Workshop
Environmental Education Program is offered by the South District. In this program, educators spend a half day onsite learning how to conduct programs for their fifth grade classes. Another program is the Mind Boggling Mosquito Lagoon. Students are involved in two activities, which include a two-hour tour of the lagoon and a mock development project. In Seashore Discovery, students spend two hours learning about the wildlife that inhabits the beach, sea turtles that nest on the beach, and hurricanes and coastal development. Educators participate in workshops that enable them to assist park rangers in leading onsite activities.

- Parks as Classrooms, offered by the North District, is a program in which students are introduced to four sensitive environments: Mosquito Lagoon, Turtle Mound, Ocean, and Sand Dunes, all of which face threats that could impact the park. The students become aware of their responsibility in protecting the environment for future generations. The Seashore Junior Ranger Program consists of multiple activities, including: Lagoon Experience, Turtle Mound, Crabbing and Clamming at Canaveral, Wildlife in the

National Aeronautics and Space Administration (NASA)

NASA Educator Resource Center
The Center has NASA-related educational materials in various formats, including laserdics, CD-ROMs, videotapes, slides, audiotapes, publications, and teacher guides. Educators may preview or copy NASA materials upon request.

NASA Field Centers
Each field center has an educational programs officer who is responsible for precollege education programs. In addition to administering National programs, the center offers programs and services to meet regional and local needs.

Space Grant Consortium
The Space Grant Consortium in each State consists of colleges, universities, industry, and other organizations that have an interest in aeronautics and space education. Each consortium receives NASA funds for use in implementing a balanced program of research, education, and public service.

Florida Space Grant Consortium

Southeast and Islands Regional Technology in Education Consortium (SEIR*TEC)
ED established the Regional Technology in Education Consortia (R*TEC) program in the fall of 1995 to help States, districts, schools, adult literacy centers, and other educational institutions use advanced technology to support improved teaching and student achievement. R*TEC's role in educational technology is unique in two ways: the emphasis is regional and the primary goal is to ensure that technology is used effectively to support school reform. Program strategies include professional development, technical assistance, and information dissemination.

Appalachian Regional Commission (ARC) and Oak Ridge National Laboratory (ORNL)

A summer science, mathematics, and technology Teacher Leadership Institute is available for secondary teachers to participate in research-based programs at ORNL. The institute is provided in a two-week summer residential format patterned after the ORNL/National Science Foundation (NSF) National Teacher Enhancement Project and Leadership Institute. Participants are selected by the ARC from secondary schools throughout the ARC region. The focus is on hands-on laboratory research applying the tools and methods used in ongoing ORNL projects in research areas (as appropriate for each teacher's teaching assignment), pedagogy, and leadership. The program will feature telecommunications instruction at the ORNL Regional Science Center and telecommunications will be the primary method used for academic year follow-up and continued interactions with the teachers. Participants in the Teacher Leadership Institute will be hosted by several ORNL research divisions based on each teacher's background and interests. A program coordinator with experience in teacher preparation/higher education delivers instruction in pedagogy and educational leadership.

ARC and ORNL also collaborate on a summer science, mathematics, and technology Summer Science Honors Academy for ARC students to participate in research-based programs at ORNL. Student participants (seniors or graduating seniors) will be selected from secondary schools throughout the ARC region. Students will be teamed with research mentors to participate in hands-on laboratory research applying the tools and methods used in ongoing ORNL projects. Students will also receive telecommunications instruction at the ORNL Regional Science Center.

Pinckney Island National Wildlife Refuge

In Barrier Island Ecology, instructors with the University of Georgia and U.S. Fish and Wildlife Service volunteers lead groups on walking tours of a barrier island. The outdoor ecology classes focus on the barrier island ecosystem, with additional instruction provided in management of a pristine maritime forest habitat.

Marsh Meander/Maritime Woods Walk are alternate programs focusing on the salt marsh ecology of the Carolina lowcountry and the hammocks/maritime woodlands prevalent on Pinckney Island. Students are instructed in the value of marshland and coastal islands as buffer zones protecting the mainland during violent storms. Also covered is the richness of wildlife sustained in this coastal zone, with an emphasis on bird identification.

Appalachian Regional Commission (ARC) and Oak Ridge National Laboratory (ORNL)
A summer science, mathematics, and technology Teacher Leadership Institute is available for secondary teachers to participate in research-based programs at ORNL. The institute is provided in a two-week summer residential format patterned after the ORNL/National Science Foundation (NSF) National Teacher Enhancement Project and Leadership Institute. Participants are selected by the ARC from secondary schools throughout the ARC region. The focus is on hands-on laboratory research applying the tools and methods used in ongoing ORNL projects in research areas (as appropriate for each teacher’s teaching assignment), pedagogy, and leadership. The program will feature...
telecommunications instruction at the ORNL Regional Science Center and telecommunications will be the primary method used for academic year follow-up and continued interactions with the participants. Participants in the Teacher Leadership Institute will be hosted by several ORNL research divisions based on each teacher's background and interests. A program coordinator with experience in teacher preparation/higher education delivers instruction in pedagogy and educational leadership.

ARC and ORNL also collaborate on a summer science, mathematics, and technology Summers Science Honors Academy for ARC students to participate in research-based programs at ORNL. Student participants (seniors or graduating seniors) will be selected from secondary schools throughout the ARC region. Students will be welcomed by research mentors to participate in hands-on laboratory research applying the tools and methods used in ongoing ORNL projects. Students will also receive telecommunications instruction at the ORNL Regional Science Center.

Federal Aviation Administration (FAA) Aviation Education
The FAA Aviation Education Representative coordinates aviation education services, including materials and programs for the FAA in the States assigned to the region.

The Aviation Career Education (ACE) Academy is a one-week summer aviation education program for high school students sponsored by the FAA along with a host educational institution. The program provides students with diverse experiences in aviation career exploration. The focus is on aviation career clusters identified by FAA, with an emphasis on opportunities for women and minorities. A goal is to
have one program in each State and U.S. Territory. The FAA will conduct regional leadership workshops and provide funds based on the availability of resources.

- Aviation Education Workshops for Teachers provide teachers with information on FAA aviation programs and materials and prepare them to teach aviation in the classroom. Annual workshops are conducted at colleges and universities across the Nation. The FAA provides information, materials, and speakers for the program.

- National Congress on Aviation and Space Education is sponsored annually by the FAA in partnership with the National Aeronautics and Space Administration and the Civil Air Patrol. The meeting includes teacher workshops and crosstalk sessions to exchange ideas on promoting aerospace education.

Eisenhower Southwest Consortium for the Improvement of Mathematics and Science Teaching
The Eisenhower Southwest Consortium for the Improvement of Mathematics and Science Teaching (SCIMAST) is one of the 10 Eisenhower Mathematics and Science Regional Consortia established by the U.S. Department of Education. The National Network of Eisenhower Regional Consortia and the Eisenhower National Clearinghouse for Mathematics and Science Education form a coordinated, field-based National infrastructure to promote systemic educational reform. The Consortium supports systemic educational reform in its region, with objectives to support regional, State, and local reform initiatives and to fill gaps in knowledge and service. These efforts help educators:

- Develop statewide visions of a system of mathematics and science education that provides equal access to all students and reflects emerging world-class standards.
- Develop State policies and systems to guide the implementation of that vision.
- Implement professional development approaches that model effective teaching and provide sustained support.
- Identify, adapt, and use instructional materials, methods, and assessment tools to implement new visions of mathematics and science education.

Since the fall of 1992, SCIMAST has been funded through grants from the U.S. Department of Education's Eisenhower National Program for Mathematics and Science Education. This year's Federal funds for SCIMAST total $1,470,000, representing 80 percent of the project's costs. An additional $367,500 is provided by non-Federal sources, making up the final 20 percent of project costs. SCIMAST is operated by the Southwest Educational Development Laboratory, which has provided educational services to the Southwestern region since 1966.

**Activities**

Consortium activities are grounded in the belief that "systemic reform" requires support for change at all levels of the educational system, and that educators at all levels must participate in setting the direction for change.

If any single group is most critical in transforming educational practice, it is teachers. They need an active voice in the reform movement; they also need strong programs of professional development and support. Teachers often teach in the ways they have been taught, not in the ways they have been educated to teach; therefore, teacher training needs to effectively model the instructional approaches that teachers are expected to use in the classroom.

Consortium activities also reflect the belief that equity must be a priority in the reform and redesign of math and science education. No country can maintain world-class status if half or more of its students are disenfranchised from the system. Moreover, "equal access" means much more than simply the freedom to walk in the door of a classroom or enroll in a course—it includes access to ideas and resources. Instructional content and strategies, then, must be geared to the context, interests, and needs of every student, not merely those for whom the math and science pipeline has traditionally been structured.

SCIMAST's organizational structures and activities are designed to be as inclusive as possible, promoting open communication and collaboration among a broad spectrum of participants. The 15-member Consortium Advisory Board includes representatives from all levels of educational policy and practice and reflects the Southwestern region's cultural and ethnic diversities. Regional forums and other Consortium-sponsored meetings are open to all constituencies. Service activities also are targeted to a wide range of practitioners and policymakers.

**Services**

The Consortium offers services to educators at all levels, including State and local policymakers; teacher trainers and professional development staff; and local administrators, supervisors, and teachers. Networking activities include regional forums that focus on reform issues and concerns, as well as State-level meetings that facilitate consensus regarding standards and policies. Technical assistance is provided to States to support development and implementation of statewide visions, goals, standards, frameworks, curricula, materials, assessments, and instructional practices. Schools also receive technical assistance to identify, select, and implement quality programs, materials, and assessment activities.

Professional development activities are available in the form of workshops for policymakers and teacher trainers to increase their awareness and proficiency in using effective, student-centered staff development approaches. Professional development awards are available to support and strengthen local programs at both preservice and inservice levels. The Consortium also provides intensive long-term professional development and follow-up support for teachers, providing up-to-date content and modeling effective teaching practices.

The Consortium identifies regional resources, including materials, instructional methods, and assessment tools, appropriate for dissemination via the Eisenhower National Clearinghouse (ENC). It also provides dissemination of information about reform issues, regional resources, SCIMAST services, and the services and information available through ENC.

Federal Aviation Administration (FAA) Aviation Education
The FAA Aviation Education Representative coordinates aviation education services, including materials and programs for the FAA in the States assigned to the region.

Programs include the following:

- The Aviation Career Education (ACE) Academy is a one-week summer aviation education program for high school students sponsored by the FAA along with a host educational institution. The program provides students with diverse experiences in aviation career exploration. The focus is on aviation career clusters identified by FAA, with an emphasis on opportunities for women and minorities. A goal is to have one program in each State and U.S. Territory. The FAA will conduct regional leadership workshops and provide funds based on the availability of resources.

- Aviation Education Workshops for Teachers provide teachers with information on FAA aviation programs and materials and prepare them to teach aviation in the classroom. Annual workshops are conducted at colleges and universities across the Nation. The FAA provides information, materials, and speakers for the program.

- National Congress on Aviation and Space Education is sponsored annually by the FAA in partnership with the National Aeronautics and Space Administration and the Civil Air Patrol. The meeting includes teacher workshops and crosstalk sessions to exchange ideas on promoting aerospace education.

Sandia National Laboratories
RAISE: Rural American Indian Science Education Workshop provides an elementary and a secondary component. The elementary component is piloting a new type of science and math curriculum, Full Option Science System (FOSS). The training workshop will be focused on learning the activities associated with the kits/modules to be used in the school during the school year. The secondary component consists of a two-week teacher workshop. The first week of the workshop is for training in the specific use of the activities and kits. The second week is scheduled for student teaching and computer training.

Ruth Bitsui, Program Coordinator

White Sands National Monument
The monument sponsors a number of educational programs:

Camping in the Dunes allows students to learn about minimum-impact resource use, ethics, camping skills, desert ecology, astronomy, and animal tracks on an overnight camping trip with a ranger.

Desert and Dunefield Ecology sends students on a nature walk in the dunefield, where they learn the characteristics of a desert and how plants and animals adapt to desert and dunefield conditions.

Five-day teacher workshops introduce teachers to park resources and hands-on activities in the areas of geology, desert ecology, Tularosa Basin history, endangered species, exotics, and biodiversity. This workshop includes two field trips. In an overnight workshop, teachers learn about minimum impact resource use, ethics, and camping skills in a classroom pre-session. In an overnight camping trip in the field, they learn about desert ecology and astronomy and practice minimum impact resource use.

Geology of Tularosa Basin and Gypsum Dunefield allows students to climb a dune that provides a view of the mountains (source of gypsum), a small playa (model of larger one that is the source of sand), the plains, and the dunefield. They learn how the basin and dunefield were formed.

Project Learning Tree (PLT) Workshop is a supplemental environmental education program that uses forests as the vehicle to teach basic ecological principles. Teachers are introduced to the program, activities, and activity guide by participating in and leading activities.

Project Wild Workshop introduces the teachers to the program and activity guides. They participate in doing and leading the activities. Project Wild uses wildlife as the vehicle to teach basic ecological principles.

Job Training Partnership Act (JTPA) Liaison
The JTPA Liaison can provide information about the Job Training Partnership Act State and local programs for economically disadvantaged adults and youth.
Federal Aviation Administration (FAA) Aviation Education

The FAA Aviation Education Representative coordinates aviation education services, including materials and programs for the FAA in the States assigned to the region. Programs include the following:

- **The Aviation Career Education (ACE) Academy** is a one-week summer aviation education program for high school students sponsored by the FAA along with a host educational institution. The program provides students with diverse experiences in aviation career exploration. The focus is on aviation career clusters identified by FAA, with an emphasis on opportunities for women and minorities. A goal is to have one program in each State and U.S. Territory. The FAA will conduct regional leadership workshops and provide funds based on the availability of resources.

- **Aviation Education Workshops for Teachers** provide teachers with information on FAA aviation programs and materials and prepare them to teach aviation in the classroom. Annual workshops are conducted at colleges and universities across the Nation. The FAA provides information, materials, and speakers for the program.

- **National Congress on Aviation and Space Education** is sponsored annually by the FAA in partnership with the National Aeronautics and Space Administration and the Civil Air Patrol. The meeting includes teacher workshops and crosstalk sessions to exchange ideas on promoting aerospace education.

- **National Congress on Aviation and Space Education** is sponsored annually by the FAA in partnership with the National Aeronautics and Space Administration and the Civil Air Patrol. The meeting includes teacher workshops and crosstalk sessions to exchange ideas on promoting aerospace education.

The President's Environmental Youth Awards (PEYA) Program
Young people from each State are invited to participate in PEYA, a nationwide program designed to encourage individuals, school classes, summer camps, public interest groups, and youth organizations to promote environmental awareness and community involvement. The two components of the program are the regional certificate program and the National awards competition. Regional certificates, signed by the President, are awarded to each participant by EPA Regional Offices. National individual project winners, or one representative from a National award-winning group project, along with one sponsor, are honored at EPA headquarters, Washington, DC. Interested K-12 individuals or groups may obtain application materials and contest rules by contacting the EPA Regional Office that serves their State. PEYA has been an ongoing project since it was created by the White House Office of Education and the EPA in 1971.

**Wichita Mountains National Wildlife Refuge**
Wichita Mountains National Wildlife Refuge offers environmental education programs, including teacher-accredited workshops. Curriculum materials are available.

Programs include the following:

- **Biodiversity**—The Wichita Bione uses the refuge as a showcase and center of biodiversity protection. The staff involve participants in an action-based curriculum designed to help assess the health of their environment. The curriculum provides a strong base in biological sciences interspersed with political and social science. Students analyze various components of their environment, such as air quality, water quality, floral and faunal components, and cultural diversity.

- **Edible Plants** is a program used to give students a sense of humankind’s relationship to nature and dependence on habitat. Students learn to recognize and use several common prairie plant species, and correlate their activities to the maintenance of healthy grassland conditions.

- **Geology: The Past, Present, and Future of the Wichita Mountains** is an overview of the geologic history of the Wichita Mountains. It teaches basic identification techniques of rocks and minerals. Special emphasis is placed on mankind’s impact on the resources, from early gold mining through present-day recreational and industrial impacts.

Pantex Plant
Educational Outreach programs are designed to promote interest in science, math, and engineering among students attending K–12 educational institutions within Region XVI, the 26-county region in which Pantex is located. The region comprises approximately 79,400 students and 6,000 teachers. Many programs will directly impact at-risk students and students already identified as interested in the sciences. The primary message to students is that science, math, and engineering should be considered as major fields of study in higher education and as career choices. Pantex offers student tours, science fairs, and academic contests, loans New Explorers Videos and teacher guides, and also sponsors a teacher internship program.

Balcones Canyonlands National Wildlife Refuge
Staff provide onsite talks and presentations to local school children at the request of their schools. The refuge also coordinates all aspects of the Junior Duck Stamp Contest in the State of Texas. This involves instructing teachers and children on how to depict waterfowl in a natural setting, visiting schools to make them aware of the educational benefits of participating in the contest, judging the contest, generating publicity, and providing other information as needed.

Deborah Holle, Refuge Manager
Balcones Canyonlands NWR
10711 Burnet Road, Suite 201
Austin, TX 78758
(512) 339-9432 / Fax: (512) 339-9453

Big Thicket National Preserve
The preserve offers interdisciplinary, curriculum-based educational programs for all age groups. Accredited teacher workshops are offered.

Other programs include the following:

- **Big Thicket Field Trips** are curriculum-based, interdisciplinary programs for early and upper elementary students. The programs meet Texas State Essential Elements requirements and are based on Big Thicket regional resource management research and critical issues. Activities are age appropriate and use interactive methods to develop an understanding and commitment to environmental preservation.

- **Big Thicket—A Biological Crossroads** is a secondary curriculum guide that synthesizes environmental studies into a whole to promote appreciation of the Big Thicket. Facts are presented in an unbiased fashion to give students the opportunity to make educated decisions regarding their environment.

- **Environmental Education Skills** is for professional development of front-line people who deal with school and youth groups, develop and present education programs and materials, and serve as liaisons with local teachers and education professionals.

- **Project Wild—Big Thicket** is a supplementary, interdisciplinary environment and conservation education program for educators.

Padre Island National Seashore
Environmental programs, guided nature walks, and in-school presentations are offered by Padre Island National Seashore.

Other programs include the following:

- **Ecosystem of Padre Island** allows students to explore the beach, grasslands, and mud flats found on Padre Island. Through a series of data collection activities, the students begin to understand the complex ecosystem of the Island.

- **A Grain of Salt** lets students use scientific data gathering techniques to deduce that the natural elements in our environment have a direct relation to the survival of many plants and animals found on Padre Island.

- **It's for the Birds** uses a series of activities to help students understand how birds adapt to the habitat found at Padre Island.

- **Plants, Who Needs 'Em** provides a series of on-site activities to help students explore the role plants play on the Island and their interrelationship to the animals.

- **The Traveling Trunk** contains teacher-directed activities covering the historic aspect of European discovery of the area and scientific information and activities on the habitats of Padre Island.

- **What's Ashaw in the Gulf** uses activities to help students learn about marine debris and other pollution that enters the Gulf of Mexico and eventually ends up on the beaches of Padre Island.

Padre Island National Seashore
9405 South Padre Island Drive
Corpus Christi, TX 78418
(512) 949-8173 / Fax: (512) 949-8023

**Project WILD**
Project WILD offers teacher training and educational materials. Teacher guides, free to teachers who attend the training session, contain more than 80 supplementary, interdisciplinary activities for grades K-12.

Kathryn Hampton, Project WILD Coordinator
Texas Parks and Wildlife Department
4200 Smith School Road
Austin, TX 78744
(512) 328-6035 / Fax: (512) 328-5632

**Santa Ana National Wildlife Reserve**
The refuge provides teacher packets with lesson plans targeted for grades K-6, interpretive presentations, environmental education programs, and a visitor center that offers interpretive exhibits and displays. Fifty-two interpretive tram tours are offered to school groups of 60, free of charge. Groups are given an environmental education tour that discusses the flora and fauna and ecology of the area, and encourages students to participate in thinking of ways to preserve, protect, and expand habitat areas in the lower Rio Grande Valley.

**Department of Transportation (DOT)**

**Federal Aviation Administration (FAA) Aviation Education**
The FAA Aviation Education Representative coordinates aviation education services, including materials and programs for the FAA in the States assigned to the region.

Programs include the following:

- **The Aviation Career Education (ACE) Academy** is a one-week summer aviation education program for high school students sponsored by the FAA along with a host educational institution. The program provides students with diverse experiences in aviation career exploration. The focus is on aviation career clusters identified by FAA, with an emphasis on opportunities for women and minorities. A goal is to have one program in each State and U.S. Territory. The FAA will conduct regional leadership workshops and provide funds based on the availability of resources.

- **Aviation Education Workshops for Teachers** provide teachers with information on FAA aviation programs and materials and prepare them to teach aviation in the classroom. Annual workshops are conducted at colleges and universities across the Nation. The FAA provides information, materials, and speakers for the program.

- **National Congress on Aviation and Space Education** is sponsored annually by the FAA in partnership with the National Aeronautics and Space Administration and the Civil Air Patrol. The meeting includes teacher workshops and crosswalk sessions to exchange ideas on promoting aerospace education.

Debra Myers, ASW-18B, FAA Aviation Education Representative
2601 Meacham Boulevard
Fort Worth, TX 76193
(817) 222-5833 / Fax: (817) 222-5950

**FAA Aviation Education Resource Centers**
Located at colleges, museums, and State aviation authority offices, these centers function as information distribution centers for Federal Aviation Administration education materials and resources. The Resource Centers maintain and provide quantities of printed materials, videotapes, and computer educational software. Center personnel can also provide general information, conduct workshops, and make aviation-related presentations.
groups, and youth organizations to promote environmental awareness and community involvement. The two components of the program are the regional certificate program and the National awards competition. Regional certificates, signed by the President, are awarded to each participant by EPA Regional Offices. National individual project winners, or one representative from a National award-winning group project, along with one sponsor, are honored at EPA headquarters, Washington, DC. Interested K-12 individuals or groups may obtain application materials and contest rules by contacting the EPA Regional Office that serves their State. PEYA has been an ongoing project since it was created by the White House Office of Education and the EPA in 1971.

Space Grant Consortium
The Space Grant Consortium in each State consists of colleges, universities, industry, and other organizations that have an interest in aeronautics and space education. Each consortium receives NASA funds for use in implementing a balanced program of research, education, and public service.

Texas Statewide Systemic Initiatives (SSI) Program
The Texas SSI Program will focus on changes in teacher development. Strategies include Renaissance Centers to house teams of master teachers, scientists, mathematicians, and higher education faculty to reform preservice and inservice programs; the involvement of business, industry, and universities to work with educational service centers and school districts; and the establishment of an infrastructure for distance learning.

ABOUT THIS PUBLICATION
How useful was this publication?  □ Very useful  □ Useful  □ Of little use  □ Of no use

How did you obtain this publication?
□ It was mailed directly to me by the Clearinghouse
□ I received it from another teacher
□ I received it from an administrator in my building
□ I received it from an administrator in my district
□ I picked it up at a(n) _____________ meeting
□ Other: ___________________________

Did you pass this publication on to another educator (either the original or a photocopy)?  □ Yes  □ No

OPTIONAL: Please provide the following information to help us better serve you.

Sex:  □ Male  □ Female  Age __________

Ethnicity:  □ American Indian or Alaskan Native  □ Asian or Pacific Islander
□ Black, not of Hispanic origin  □ Hispanic
□ White, not of Hispanic origin  □ Other: ___________________________

Do you have easy access to a(n):  □ Macintosh computer  □ IBM/PC or compatible?

Do you have easy access to a computer which:  □ Has a modem  □ Has a CD-ROM drive?

Do you have easy access to:  □ The Internet  □ Other local, state, regional, or commercial networks?

(name the other network(s)): ___________________________
For all Educators (please check all that apply):

Years of K-12 teaching experience________________ Is your institution: □ Public □ Private

Are you currently: □ A classroom teacher □ A school department chair □ A curriculum specialist
□ A school administrator □ A district administrator □ A librarian
□ A teacher educator □ A college faculty member □ Other________________

Is your area: □ Science education □ Mathematics education □ Elementary education
□ Some other area________________

Teachers, please circle those grades which you teach
Administrators, circle those for which you have responsibility K 1 2 3 4 5 6 7 8 9 10 11 12
Teacher educators, circle those for which you prepare teachers

For K-12 Teachers and Administrators:
Your school designation (e.g., Elementary, Middle, High, ...)________________
Would you describe your district as: □ Rural □ Suburban □ Urban
