Metrical phonology, a linguistic process of phonological stress assessment and diagrammatic simplification of sentence and word stress, is discussed as it is found in the English language with the intention that it may be used in second language instruction. Stress is defined by its physical and acoustical correlates, and the principles of metrical phonology are outlined, with examples of the underlying syntactic structure of the English sentence. Word stress, a binary feature in metrical phonology, is then examined. It is concluded that the diagrammatic use of metrical trees simplifies the explanation of English stress patterns and their corresponding syntactic foundation, and can be used as a device to enhance understanding and acquisition of both structural and phonological aspects of English sentences. CABE Para-educator Conference

May 2, 1996

Session II

11:30 a.m. - 12:45 p.m.

Bakersfield Convention Center
1001 Truxton Ave.
Bakersfield, CA 93301
**Introduction**

The lecture will discuss the use of metrical phonology as a linguistic process of phonological stress assessment and diagramatic simplification of sentence and word stress as found in the English language. This is only a general overview and should not be considered a complete view of metrical phonology as it is more involved and complicated than will be presented for this session. The first major work on metrical phonology is by Liberman and Prince (1977) and is a result of the weaknesses inherent in the individual segmental analysis of stress coming from Chomsky and Halle (1968). The goal of this lecture is to promote the use of metrical phonology as a tool for enhancing English stress patterns in words and sentences in both first and second language acquisition students.

**Stress**

Stress is an isolatable phonological phenomenon defined by both physical and acoustic correlates as represented in the following example (1.0).

(1.0) The goal of the descriptive study of a language is the construction of a grammar.

If we mark the stresses by a using a ' sign, the following will result as given in example (1.1).

(1.1) The 'goal of the des'criptive 'study of a 'language is the construc'tion of a 'grammar.

Another stress pattern can be obtained by using stressed (/) and unstressed (x) syllables as a sequence as shown in example (1.2).

(1.2) x/xxx/x/xxx/xxxx/xxx/x

Notice how regular the pattern is and can be generalized as occurring every fourth or fifth syllable. Stress is a property of a string of segments rather than individual segments (Hogg and McCully, 1987:2). Stress is regarded as a suprasegmental phenomenon and is hierarchical in nature as based on the syllable.
Basis of Metrical Phonology

Metrical trees should reflect the syntactic structure of the sentence. Example (2.0) a. and b. illustrates the metrical tree diagrams of the phrases black board and John left.

\[
\begin{array}{c}
\text{(2.0) a. black board} \\
\text{b. John left}
\end{array}
\]

Similar trees can be made for compound words such as stress-shift as in example (2.1).

\[
\begin{array}{c}
\text{(2.1) stress-shift}
\end{array}
\]

To show the relative prominence of each constituent in a metrical tree we label each node either s or w, where s means 'stronger than' and w means 'weaker than' as represented in example (2.2) a., b. and c.

\[
\begin{array}{c}
\text{(2.2) a. black board} \\
\text{b. John left} \\
\text{c. stress-shift}
\end{array}
\]

These metrical trees are intended to express the relative strength of constituents and is just a matter of denoting the relative prominence of sister constituents (Hogg and McCully, 1987: 65). Metrical trees are always and only binary-branching. Metrical trees follow syntactic structure as depicted in examples (2.3) and (2.4). The symbol R is to denote the root or topmost node of the tree and dominates a constituent, in this case a phrase.

\[
\begin{array}{c}
\text{(2.3) dew \text{- covered lawn)}
\end{array}
\]
The syntactic structure of example (2.3) can be represented by bracketing [[[dew][covered]][lawn]] as can example (2.4) [[[coffee][table]][book]]. A simple rule to keep in mind is that if one node is marked strong then it follows that the other is weak (Hogg and McCully, 1987: 68).
Word Stress

Word stress in metrical phonology is treated as a binary feature. The internal metrical structure of words is organized syllabically so that monosyllabic words such as bad have one metrical constituent, bisyllabic words such as honest have two metrical constituents and so on. An example of metrical trees for word stress in simple bisyllable words are in example (3.0) a. and b. (Hoggs and McCully, 1987: 76).

(3.0) a. english b. baroque
\[ \begin{array}{c}
\text{sw} \\
+ - \\
\end{array} \quad \begin{array}{c}
\text{ws} \\
- + \\
\end{array} \]

The relative prominence of the two syllables (vowels) are preserved in the metrical tree structure. Another rule that can be used in metrical phonology is that if a vowel is s (strong), then it is +stress and if a vowel is w (weak), then it is -stress (Hogg and McCully, 1987:77). An example is elephant as depicted in example (3.1).

(3.1) elephant
\[ \begin{array}{c}
\text{s} \\
\text{sww} \\
+ - - \\
\end{array} \]
Summary

Although this is only a general overview of metrical phonology and does not take into account rhythm and the metrical grid or metrical tree, it is clear that the diagramic use of metrical trees does simplify the explanation of English stress patterns and the corresponding syntactic foundation underlying these patterns and can be used as a simple device to enhance the understanding and acquisition of both sentence and phonological aspects of the English language.

I. DOCUMENT IDENTIFICATION:

Title: Metrical Phonology and SLA.

Author(s): Bradley S. Tice

If this document was presented at another conference? yes no Specify: CABE Conference May 2, 1996

Publication Date: 1996

II. REPRODUCTION RELEASE:

In order to disseminate as widely as possible timely and significant materials of interest to the educational community, documents announced in the monthly abstract journal of the ERIC system, Resources in Education (RIE), are usually made available to users in microfiche, reproduced paper copy, and electronic media, and sold through the ERIC Document Reproduction Service (EDRS). Credit is given to the source of each document, and, if reproduction release is granted, one of the following notices is affixed to the document.

If permission is granted to reproduce and disseminate the identified document, please CHECK ONE of the following three options and sign at the bottom of the page.

The sample sticker shown below will be affixed to all Level 1 documents

PERMISSION TO REPRODUCE AND DISSEMINATE THIS MATERIAL HAS BEEN GRANTED BY

TO THE EDUCATIONAL RESOURCES INFORMATION CENTER (ERIC)

Level 1

The sample sticker shown below will be affixed to all Level 2A documents

PERMISSION TO REPRODUCE AND DISSEMINATE THIS MATERIAL IN MICROFICHE, AND IN ELECTRONIC MEDIA FOR ERIC COLLECTION SUBSCRIBERS ONLY, HAS BEEN GRANTED BY

TO THE EDUCATIONAL RESOURCES INFORMATION CENTER (ERIC)

Level 2A

The sample sticker shown below will be affixed to all Level 2B documents

PERMISSION TO REPRODUCE AND DISSEMINATE THIS MATERIAL IN MICROFICHE ONLY HAS BEEN GRANTED BY

TO THE EDUCATIONAL RESOURCES INFORMATION CENTER (ERIC)

Level 2B

Check here for Level 1 release, permitting reproduction and dissemination in microfiche or other ERIC archival media (e.g., electronic) and paper copy.

Check here for Level 2A release, permitting reproduction and dissemination in microfiche and in electronic media for ERIC archival collection subscribers only.

Check here for Level 2B release, permitting reproduction and dissemination in microfiche only.

Documents will be processed as indicated provided reproduction quality permits.

If permission to reproduce is granted, but no box is checked, documents will be processed at Level 1.

I hereby grant to the Educational Resources Information Center (ERIC) nonexclusive permission to reproduce and disseminate this document as indicated above. Reproduction from the ERIC microfiche or electronic media by persons other than ERIC employees and its system contractors requires permission from the copyright holder. Exception is made for non-profit reproduction by libraries and other service agencies to satisfy information needs of educators in response to discrete inquiries.

III. DOCUMENT AVAILABILITY INFORMATION (FROM NON-ERIC SOURCE):

If permission to reproduce is not granted to ERIC, or, if you wish ERIC to cite the availability of the document from another source, please provide the following information regarding the availability of the document. (ERIC will not announce a document unless it is publicly available, and a dependable source can be specified. Contributors should also be aware that ERIC selection criteria are significantly more stringent for documents that cannot be made available through EDRS.)
