This report documents the archaeological investigations conducted at the former site of the Altaville Schoolhouse in Calaveras County, California. These investigations were carried out through the cooperative efforts of the California Department of Forestry and Fire Protection, the Calaveras County Historical Society, and the local community. The schoolhouse is the only one-room brick school building remaining in the Mother Lode area of California. It is California Historical Landmark Number 499, and in 1979 the schoolhouse was listed on the National Register of Historic Places. In 1996, the 330 artifacts excavated were examined, identified, and cataloged. The first part of this report narrates the history of the schoolhouse: its construction in 1858 through its closure in 1950; its protected state from 1950-81; its relocation and renovation; and its current condition. The second part of the report gives an overview of the structural, educational, and cultural specimens obtained by archaeological investigations at the original site. The major part of the document consists of: 29 historical photographs of the school; 16 figures of school artifacts; a 330-item catalog of artifacts; newspaper and magazine reprints; copies of relevant documents, correspondence, legislation, maps, and blueprints; and chapter 7 from "Calaveras, the Land of Skulls" (R. C. Wood) describing state and county schools and teachers in California, 1855-59. (Contains 33 references.) (SAS)

PREFACE

I am pleased to see this excellent report on the Altaville Schoohouse come to print in the CDF Archaeological Reports series. This is an amazing story of how a state agency, a county historical society, and local participants can work together to save a piece of California’s history. In 1983, this old brick schoolhouse was in terrible shape. A large corner of the double-walled building had fallen and the entire structure was in danger of total collapse. Through the diligent efforts of many people, the building was relocated, restored, and put back into service. However, the archaeological work which I started was never completed. I am grateful to Dr. Napton and Elizabeth Greathouse for their willingness to take on the task of producing this report on archaeology of the Altaville Grammar School.

All of the artifacts, field notes, photographs, maps, records, and other material collected during the 1983 study had been stored in several archive boxes at the CDF Archaeology Office in Sacramento, but these had received little attention over the years. Luckily for CDF, Dr. Napton recognized the importance in completing the documentation for the project and agreed to take it on in spite of the absence of any available financial assistance. The authors did an excellent job of documenting the cooperative effort between CDF, the Calaveras County Historical Society, and the numerous local participants which led to the building’s restoration, but the cooperative effort did not end there. Their willingness to volunteer the time necessary to complete this study and rekindle interest in a remarkable historic schoolhouse is a gesture for which CDF is sincerely grateful.

The next time you pass through the Mother Lode region, look for the Altaville Schoolhouse right along Highway 49 in a pleasantly-shaded spot on the outskirts of town. You may even want to stop and take a look. The fully restored building and a large sample of its glorious history exists due to the efforts of many people who helped save it, including the authors of this report.

Acknowledgements

The writers thank Dan Foster, Archaeologist, California Department of Forestry, Sacramento, for asking us to undertake study of the Altaville schoolhouse artifact collection. We also thank Bill Ray, CSUS Archaeology, for his help during the laboratory phase of artifact analysis. We received a great deal of enthusiastic assistance from Lorryne Kennedy, Archivist, Calaveras County Archives. We also are grateful to the Calaveras County Historical Society, Barbara Beaman, President, Sheryl Waller, Office Manager, and Kate Culver, Assistant Office Manager. We thank Mr. W. P. Fuller, Jr. for reviewing a draft of this report.

We were assisted during our visit to the Altaville school by Betty Snyder, Calaveras County Historical Society, Tad Folendorf, Altaville, and Jeff Sanders, Altaville CDF Fire Station. Columbia State Historic Park Rangers Sharon Grout and Diana Newington also provided research assistance. California State University, Stanislaus, students who participated in study of the Altaville School included Yvette Benavidez, Joanna Law, Kelly Morrow, Tony Rocha, Stan Strain, Chris Tucker, and Chris Yohannan.
Abstract

This report documents archaeological investigations conducted at the former site of the Altaville Schoolhouse, located in the community of Altaville, Calaveras County, California. Constructed in 1858, for more than a century the schoolhouse stood on a knoll overlooking nearby Highway 49. In 1983 the building was moved a short distance to its present location next to the highway where, as an important historical resource, it can be viewed and visited by the citizens of Calaveras County and by numerous visitors to the Mother Lode region who travel Highway 49. It is California Historical Landmark Number 499, and in 1979 it was listed on the National Register of Historic Places.

The artifacts recovered by investigations at the former site of the schoolhouse were obtained by the writers through the offices of Mr. Dan Foster, Archaeologist, California Department of Forestry and Fire Protection (CDF), Sacramento. Mr. Foster's excavations were conducted April 20, 1982, before the building was moved. In 1983, after the building was moved to its present location, additional excavations in the area enclosed by the foundation were undertaken by crews from the CDF Baseline Camp. In all, 330 artifacts were found. In 1996 Mr. Foster asked the writers if they would be interested in examining the collection, identifying the specimens, completing the specimen catalog and preparing a report on the results of their studies, as part of a program of historical resources investigations conducted by the writers for CDF during the past several years. The study was duly undertaken; the results are reported here.

In addition to discussing the collection the writers considered that it would be useful to bring together basic information pertaining to the history of the schoolhouse. During the course of this "background research" it became evident that the exemplary cooperative efforts of CDF, the Calaveras County Historical Society, local industries and businesses, and the citizens of Altaville had resulted in an extraordinarily successful example of preservation of an important local historical resource -- the Altaville schoolhouse. This was accomplished by saving the building from destruction, due in no small measure to the interest in the structure shown by CDF Captain McGee and other CDF officials, and of course is largely due to the efforts of members of the Calaveras County Historical Society, who spearheaded the effort to save the building and restore it to its former appearance as an early-day one-room schoolhouse. Thanks to the fact that it is constructed of red brick, it is truly a fine example of the proverbial "little red schoolhouse" -- certainly one of the finest buildings of its type in California, if not in the United States.
THE ALTAVILLE SCHOOLHOUSE: COMMUNITY AND STATE

COOPERATION IN LOCAL HISTORICAL RESOURCE PRESERVATION

They came in their usual desultory fashion -- the fashion of country school-
children the world over -- irregular, spasmodically, and always as if
accidently...appearing from ditches, behind trunks, and between fence rails;
cropping up in unexpected places along the road after vague and purposeless
detours -- seemingly going anywhere and everywhere but to school!

--Bret Harte

INTRODUCTION

The purpose of this report is to document archaeological investigations
conducted at the former site of the Altaville Schoolhouse, located in the community of
Altaville, Calaveras County, California. Constructed in 1858, for more than a century
the schoolhouse stood on a knoll overlooking nearby Highway 49 (Figures 1-7). In
1983 the building was moved a short distance to its present location next to the
highway where, as an important historical resource, it can be viewed and visited by
the citizens of Calaveras County and by numerous visitors to the Mother Lode region
who travel Highway 49. It is California Historical Landmark Number 499, and in
1979 it was listed on the National Register of Historic Places.

The artifacts recovered by investigations at the former site of the schoolhouse
were obtained by the writers through the offices of Mr. Dan Foster, Archaeologist,
California Department of Forestry and Fire Protection (CDF), Sacramento. Mr.
Foster’s excavations were conducted April, 20 1982, before the building was moved.
In 1983, after the building was moved to its present location, additional excavations in
the area enclosed by the foundation were undertaken by crews from the CDF Baseline
Conservation Camp. In all, 330 artifacts were found. In 1996 Mr. Foster asked the
writers if they would be interested in examining the collection, identifying the
specimens, completing the specimen catalog and preparing a report on the results of
their studies, as part of a program of historical resources investigations conducted by
the writers for CDF during the past several years. The study was duly undertaken; the
results are reported here.

In addition to discussing the collection the writers considered that it would be useful to bring together basic information pertaining to the history of the schoolhouse. During the course of this "background research" it became evident that the exemplary cooperative efforts of CDF, the Calaveras County Historical Society, local industries and businesses, and the citizens of Altaville had resulted in an extraordinarily successful example of preservation of an important local historical resource -- the Altaville schoolhouse. This was accomplished by saving the building from destruction, due in no small measure to the interest in the structure shown by CDF Captain McGee, and of course largely due to the efforts of members of the Calaveras County Historical Society, who spearheaded the effort to save the building and restore it to its former appearance as an early-day one-room schoolhouse. Thanks to the fact that it is constructed of red brick, it is truly a fine example of the proverbial "little red schoolhouse" -- certainly one of the finest buildings of its type in California, if not in the United States.

This report consists of two major sections: a compendium of information pertaining to the schoolhouse, its past history and current condition; and an overview of the specimens obtained by archaeological investigations at its former location.

THE COMMUNITY OF ALTAVILLE, CALAVERAS COUNTY, CALIFORNIA

Altaville is a small community located at the intersection of California State Highway 4 and Highway 49. The community owes its existence to the fact that these two major arteries of Mother Lode traffic intersect at this point in a pleasant, small valley, and a community -- originally called "Forks of the Road" -- appeared, virtually overnight, as mining towns do, following the discovery of gold in the adjacent region. At one point in its colorful past Altaville boasted a huge stamp-mill, a foundry, and even a silk farm. Gudde (1975:17) discusses the salient points of historic Altaville as follows:

Four miles north of Angels Camp, now a part of it. Former names were Forks of the Road, Winterton, Cherokee Flat. See Cherokee Flat. It was important as a point for supplies and machinery. A foundry was established in 1854 by D. D. Demarest, and is still operating today as California Electric Steel (G. Poore). In the 1870s the place was the center of silk culture. Historic Landmark 228.

In reference to Cherokee Flat, Gudde (1975:69) states:
On Cherokee Creek, northwest of Angels Camp. The camp Cherokee Flat became Altaville, now a part of Angels Camp. Rich pockets "the richest in the state," were discovered here by French and Italian prospectors, February 17, 1854 (Hittell Clips, p. 56; Brown p. 70). The Mining Press, April 13, 1861, reports that the diggings "yield more this season than ever." However, the 16-stamp mill was already idle in 1867, according to Browne (p. 70). The famous and controversial Calaveras Skull, now in the Peabody Museum of Archaeology and Ethnography, Harvard University, was discovered nearby (Smithsonian Report, 1899, pp. 454 ff.). See Bret Harte's story "To the Pliocene Skull." In this region the bandit Murieta played such an important role that Joaquin Mountain, northwest of the creek, was named for him (Ridge, p. 124; Demarest, p. 4). The creek is shown on the USGS Jackson 1939 quadrangle.

The Altaville Schoolhouse

Among the many notable historical features in and around the community of Altaville, California, is the Altaville Schoolhouse, constructed in 1858 and, by all accounts, one of the oldest one-room schoolhouses surviving in the Mother Lode region of California (Calaveras County History Society 1986). The Altaville schoolhouse is not only one of the oldest of the one-room schoolhouses, it is probably one of the best preserved examples of its type. Its survival is due to several fortunate circumstances: first, it was constructed of brick, whereas many of the early-day schoolhouses were built almost entirely of wood; second, it was used until as late as 1950; third, after it ceased to be used as a school it was preserved for its historical value, thanks to the fact that it was located on the grounds of the California Department of Forestry and Fire Protection within the compound of CDF's Altaville Forest Fire Station; lastly, it has been restored to its present excellent condition through the efforts of the Calaveras County Historical Society and interested citizens of Altaville and the surrounding region.

The school stood in its original location on CDF property until 1983 (Figures 8-11), when it was moved a short distance to its present location on an attractive, landscaped hillside adjacent to Highway 49 (Figures 12-16). The move was desirable for a number of reasons, including the fact that the building was badly deteriorated (CDF personnel removed the bell from the bell tower to save it in case the building collapsed), and interested persons who came to view the schoolhouse were potentially endangered by fire response operations, as well as a consequence of their own actions (smoking near fuel storage tanks). Hence, it was the consensus of those interested in the future of the schoolhouse that if the restored building were relocated next to
Highway 49 it would be much more accessible to Altaville visitors and travellers along the principal route through California's historically important Mother Lode region (Figures 17-29). Today the historic Altaville Schoolhouse stands as a reminder of days gone by, when children walked or rode mules or horses to school and were educated in the classic "little red schoolhouse" which the building so well typifies.

**History of the Altaville Schoolhouse**

The Altaville schoolhouse has passed through four major "phases" during its lengthy existence. The first phase was from its construction in 1858 through its active use as a school and closure in 1950; the second from 1950 to 1981, when it was protected by CDF; the third when it was moved to its present location and renovated; the fourth as it exists today, fulfilling its present status as an important Calaveras County landmark, California State Historical Landmark (Number 499) and property listed on the National Register of Historic Places.

**Phase One: The Schoolhouse Era**

The Altaville schoolhouse was constructed as a result of the great interest displayed by citizens of the Altaville area, Calaveras County, and, indeed, of the Mother Lode region in general, in educating their children. Rather than waiting for action to be taken by the "government" or some other agency, the self-reliant citizens of many early-day localities took it upon themselves to organize school districts and find ways and means to finance worthy projects, such as constructing schools, hiring teachers and operating the schools year after year. Mace (1991:241 ff.) has pointed out that sometimes, early-day schooling took place in churches, which were normally used only on Sunday. The church served as a school; the parson or his wife acted as the teacher. The first school in Calaveras County was probably located in the Methodist Church of Fort John (Kenfield 1995; Wood 1955).

In 1851 the California legislature laid out the framework for a public school system (Cloud 1952; Ferrier 1927, 1937; Ferris 1962; Hendrick 1980; Stone 1916). The program established school districts and authorized election of a three-member "school committee" in each district, whose purpose it was to supervise school affairs, collect and disburse funds, build or provide schoolhouses, examine and appoint teachers, and report to the superintendent annually. In 1855 the governor signed a bill providing for election of a county superintendent. In 1853 Calaveras County began collecting funds to support their local schools. The Altaville School District was not the first in the county -- 14 such districts were organized in Calaveras County between
1855 and 1858; the Altaville School District was established February 2, 1859.

In 1986 members of the Calaveras County Historical Society published an important and in many respects unique book titled *An Album of the Pioneer Schools of Calaveras County*. By means of this noteworthy book members of the Calaveras County Historical Society compiled and preserved important historical information about early-day schooling, schools, teachers and other aspects of Calaveras County history pertaining to elementary education. The compilers, notably Bessie McGinnis and Eva Soracco, state that the original plan of the *Album* was to display a collection of historical photographs of pioneer elementary schools in Calaveras County, but fortunately it was decided to include information about school districts as well as brief discussions regarding teachers and pupils. The Altaville School is the first described; early-day photographs are included (examples are reproduced in this report). The text pertaining to the Altaville schoolhouse is as follows:

The Altaville School District was officially formed from a part of the Angels District in February, 1859. Apparently the schoolhouse was already under construction, for an item in the *San Andreas Independent* of January 8 stated: "The new schoolhouse is nearly completed. It stands upon a beautiful natural eminence and presents quite a pleasing ornament as well as a useful appendage to the town."

Two acres of land were donated for the school by M. D. Harmon. A substantial portion of the funds used to erect the building were raised at a dance held in the billiard room of the H. R. Prince building in Altaville. Various socials were organized to finance the furnishings of the new school. John Ward, Davis Demarest, and Gitchell Bregg were elected as trustees. There were soon ninety-two pupils enrolled, ranging in age from five to seventeen years. Mr. W. W. Durham was the first teacher employed. Miss M. J. Clayes taught the lower grades.

The building was sturdily and attractively constructed of brick that had been manufactured in a local kiln. It measured twenty-four feet wide and thirty-six feet long. This schoolhouse is a good example of the importance early residents placed upon the education of their children. It served not only as a school, but also as a center of community activities for several generations. A second building of wooden construction was added later, close by the brick schoolhouse, and was used for the upper grades. There were two teachers at Altaville, hardly enough for the large enrollment.

In 1950, the two old buildings were closed and Altaville became part of
the Mark Twain Elementary School District. The property was purchased by
the California Division of Forestry (as it was then known) and the wooden
building was removed. Recently the brick schoolhouse has been moved closer
to the highway and restored under sponsorship of the Calaveras County
Historical Society. It became Historical Landmark No. 499 in 1955, and was
listed in the National Register of Historic Places in 1979.

Altaville Teachers, 1899-1912: J. B. Kennedy 1899-1901; Lizzie Hannon 1899-
1903; William L. Redding 1901-1909; David Brown 1909-1910; Loretta Kaler
1907-1912; Mayme C. Duffy 1901-1912.

The Album includes a seven-page "historical perspective" of the pioneer schools
of Calaveras County, which is an excellent summary. We take the liberty of quoting
portions of it here:

As early as 1851, the California Legislature set up the framework for a
public school system. This provided for the election of a three-member school
committee in each district to supervise school affairs, disburse funds, build or
provide schoolhouses, examine and appoint teachers, and report to the state
superintendent each year. . . By 1855, there were some six schools or schools
districts in the county. . . Newer, smaller districts were carved out of the older,
larger ones as residents of growing communities, particularly in rural areas,
petitioned for their own schools. By the year 1902 this process had reached its
peak with some fifty-seven school districts in operation. . . The compelling
reasons for so many schools, most of which were small and of the one-room
type, was the desire to have a school within walking distance for each family.
This was considered to be not over two or three miles, but if the children came
by mule or horseback, or in "hitches" from ranch to ranch, up to five miles
was tolerated.

. . . . . . .

There were no prescribed plans and specifications for school buildings,
and each district had to provide the best schoolhouse possible with the available
funds supplemented by donations of materials and labor. However, tradition
and practicality produced surprisingly similar structures, although the size was
varied to fit the local situation. These buildings were oblong in shape, with a
simple gable roof. There were generally three windows on each side, and larger
schools often had one or two windows in the front and rear. Many of the
smaller schools had two front doors, although one was more typical. Some sort
of porch was constructed in front, with railings and with front steps. Although
generally not part of the original design, a lean-to shed was in most cases built onto the rear wall of the school for the storage of wood and other supplies, and it was sometimes large enough to serve as a shed for any horses used by the teacher and pupils. Other schools might have a separate shed for this purpose. Most schools had a belfry and a bell, although a number of districts could not afford this luxury. Many buildings, especially in the lower country, were equipped with the traditional shutters with the upper portion hinged to open upwards for protection from the rain and sun, and the lower part to open outward for better lighting.

Generally, schools were built on sloping ground, although a few were fortunate enough to have a flat site. Following the custom of the day, no grading of the site was done, and foundations were simply rocks to provide support for the underpinnings. Only a few schools had walled-in foundations. Graded playgrounds were unheard of, and the hillsides were considered quite adequate for the outside activities of children brought up in the hilly and mountainous country.

Structurally, especially in the rural districts, the schoolhouses left much to be desired. Few of them used double-wall construction. A number of the smaller buildings had simple board and batten siding, although clapboard siding was popular with the better-built structures. Although painting was considered unnecessary, communities took pride in the school’s appearance.

Most schools had at least some slate blackboards. A wood stove was essential for heating. Simple shelves, hooks, and often just nails were sufficient for lunch boxes and outside clothing. Often the desks were made by local carpenters. Water was obtained from the nearest spring, or from the school well, if such had been provided. There was a bench, generally, for a common wash basin, and for a water bucket with a dipper used by everyone. There was, of course, no inside plumbing.

Before the [school] board had been organized, parents bought books, slates, and slate pencils, and later paper and lead pencils, for their children. The same books were often used by all the children in a family as they progressed through school.

The compilers of the Album discuss the reasons underlying the gradual decline of the one-room schoolhouse, particularly in Calaveras County and of course
elsewhere in the Mother Lode and other rural districts. They note that after the Gold Rush there was a substantial decline in the population of Calaveras County, but the underground gold mining "boom" that began in the 1880's and continued until World War I tended to reverse the trend. After the war, as mining decreased in importance, people moved away from rural areas and sought employment in cities, since there were declining employment opportunities in the Mother Lode region. A low point in this trend was reached in the mid-twenties. The Album continues:

This demographic situation had a great effect upon the pioneer schools. School population declined, and with a shrinking tax base, revenues became ever smaller. There was simply insufficient cause and money with which to continue so many small schools. During the eight years that Teresa Rivara was county superintendent (1915-1922), ten rural schools were suspended, six to be closed permanently and four reorganized, to last only a short time longer.

After the reopening of the gold mines in the depression years of the 1930's, there began a steady rising trend in county population which is continuing today, but for different reasons. With improving transportation and housing, the new residents settled in the towns, and the rural population continued to decline. . . One by one the smaller schools were closed, and some of the districts were "unionized"; that is, two or more small districts would be combined. . . In 1951, Mother Lode Union joined with Altaville to become Mark Twain Elementary District.

. . . . . . .

These little schools, mostly one-room, of very simple construction and sparingly equipped, were presided over by a remarkable group of dedicated teachers, many of whom had no more than a ninth-grade education. Yet this rudimentary school system was surprisingly effective in doing the job required, even with the frugal finances provided it.

The Album provides a good summary of the schools districts of Calaveras County in order of formation, and we see that Altaville was not the first (that honor apparently goes to Angels, organized prior to 1855) but was among the 17 schools formed between 1855 and 1860. Thus, 17 schools were created within a five-year period. Many of these same 17 schools either lapsed or became "unionized" in 1955 or 1971 (two, including Altaville, in 1951; six in 1955; three in 1971).

In many ways the gradual decline of the need for one-room schoolhouses in Calaveras County (and the Mother Lode region in general) directly reflects dynamic
population and economic factors that played a major part in shaping the development of central California. During the 1850s the Gold Rush brought an enormous influx of people to the region (Holliday 1981), but after the initial "rush" people drifted to the agricultural lowlands or took up homesteads in the Mother Lode region and turned to farming -- the beginning of the era of the self-sufficient farmer, an era which continued (as some aver) until the coming of World War I. Other factors, such as the economic boost provided by underground mining, produced population surges in many mountain counties. World War II and the post-war production of automobiles and four-wheel drive vehicles played a major part in altering rural demographics: people were able to work in one region and commute to another, a trend that continues to the present day, as demonstrated by the fact that the Mother Lode region has become a haven for retirees and a refuge for those who desire to "get away from it all."

It is probably fair to say that the circumstances that occasioned development of the celebrated one-room schoolhouses in the Mother Lode country and elsewhere are in most respects gone forever. Early-day California schooling is documented in few publications (Bolton and Mack 1992; Cleland 1944; Mace 1991; Settle 1939; Wood 1955; 1978b). It is through such documentation and the preservation of structures from the era typified by the Altaville schoolhouse that the past becomes tangible; the teachers and their pupils seem not far distant; memories of better times live on.

In recent years a welcome contribution to Calaveras County history is a series of articles published by O. H. Mace (1991). Mace’s book consists of 47 short articles originally published in the Calaveras Enterprise as weekly columns about people and events around Calaveras County. Mace devotes a single but informative article to education in the county, a chapter titled "All the World in a Single Room." Mace notes that Coke Wood states that the first school was organized in the Methodist church-tent in Mokelumne Hill in 1852. "The minister’s wife, Mrs. Isaac Fish taught five children three hours a day, for the rather hefty sum (for the time period) of $75 a month." Mace tells us:

In most small town schools of the 19th century, students from 8 grades were taught by a single teacher in the same room. Those working on the same level would be seated in the same general area of the room, and while the teacher gave individual instruction to that group, the other grades were involved in written assignments or study.

The subjects taught were basic and general: reading, penmanship, English, arithmetic, science, history, and geography. For upper grades, the
curriculum might have been expanded to "specifics" such as biology, chemistry, American history, literature, etc.

The school day generally ran from 8:30 A.M. to 3:30 P.M. All grades took "recess" for 30 minutes mid-morning and another half-hour was allowed for lunch, which everyone brought from home in a bag or box. The restrooms were "out houses" -- one for the boys and one for the girls. Drinking water came from a deep well or nearby spring, and was usually "fetched" at the beginning of each day by the older boys.

For children of a small Mother Lode community, many of whom had never ventured further than the next town, the school house was their one connection to the wide world which lay beyond.

Elliott (1885:26) published a series of community histories between 1876 and 1893. During the period 1890 to 1891 Elliott produced the remarkable total of 20 regional histories, often called "mug books or subscribed editions" (Wood 1978a). Elliott’s little book on Calaveras County is rather less a history than a "promotion" book extolling the attributes of Calaveras County as a land of undeveloped resources, which Elliott (1885:12) considered "almost inexhaustible," a remark that represents the attitude of the time (that the western frontier and its resources were unlimited). Elliott has little to say about the schools of Calaveras County, although one of the plates in the work cited (Elliott 1885:26) shows the public schoolhouses in Angels, Murphys, and Mokelumne Hill.4

In Chapter 8 of Calaveras, Land of Skulls, Wood (1955) discusses schools in Calaveras County. In reference to the Altaville School, Wood (1955:123) gives the following information:

Phase 2: The Altaville Schoolhouse and the California Department of Forestry and Fire Protection

In the 1950s the Altaville schoolhouse site was acquired by the California Department of Forestry and Fire Protection. As noted above, CDF removed the newer frame building which was one of the Altaville schools, but did not destroy the old
brick schoolhouse, which even then was regarded by CDF personnel and many other citizens of Altaville as an important historic structure. Local and CDF interest in the structure is manifested in a document prepared by former CDF Captain James R. McGee pursuant to nominating the structure as a historic resource. The following is quoted verbatim from a Historic Resources Inventory form prepared January 15, 1981, by Mr. McGee, Fire Captain, California Department of Forestry and Fire Protection, Altaville, California:

The old Altaville Grammar School is the only one room brick school building remaining in the Mother Lode area of California. Altaville is now a part of Angels Camp, an incorporated town whose population is about 3,000. Both Altaville and Angels Camp had their beginnings in the Gold Rush Days and the population was greater in the past than at the present time. Tourism is an important industry in this historic area as it is sixty miles from Stockton, seventy miles from Sacramento, a little over one hundred miles from the San Francisco Bay area.

The Altaville School was built in 1858 with funds raised at a dance in the Billiard Saloon of the N. R. Prince Building in Altaville. At the present time the State of California owns the property on which the school stands. There are no other property owners adjacent to the school.

The building which measures 24' x 34' has an area of 816 square feet. The school area is 0.084 acres. The building is constructed of red brick that was kilned in the area. It has white wood trim on the gable and the sides under the roof line. The roof slants two ways, forming a 90 degree angle at the gable, front and rear. The walls are two bricks wide. There is a door in the center front of the building with a window on each side of the door. There is a small window in the gable below the door. Bricks above the door and windows are placed in a vertical position, commonly spoken of as "eyebrow" detail. The roof line suggests Greek influences and the cornices have white trim extending to the front of the building, that add architectural interest.

There are three windows on each side of the building, with one window and two doors at the rear. The "lean-to" of wood lumber that was added to the rear of the building to serve as a cloak and storage room was removed in 1975. A brick chimney is at the center rear of the building. The windows are all boarded up at present.

The interior of the building has wood wainscoting on the lower three feet of the walls. A plaster board material was installed on the upper walls in the early
1900's. Blackboards covered sections of the walls. The ceiling is about twelve feet high, with the floor about sixteen inches above the ground. Floorboards are placed lengthwise of the room. Electric lights were installed sometime in the 1900's. Oil lamps were used originally. The shingle roof of the structure was covered with galvanized roofing years ago. The belfry has a four sided shingle roof and the louvered sides protected the bell that called children to school for nearly one hundred years.

The building is in fair condition but is in need of immediate repair. The bricks at one rear corner of the building have become dislodged and have fallen to the ground. The building is in the National Register and is worth saving. However, funds are needed to refurbish this piece of our heritage [McGee 1981].

Historical Resources Inventory Form; Significance (continuing McGee [1981]):

The Altaville School is worthy of preservation because it is the only one room brick school building remaining the Mother Lode of California. It was built in 1858 in what was then an important gold mining town, and it was used as a school for all eight grades, with as many as sixty children instructed by one teacher, then as a room for upper grades for almost one hundred years, until 1950 when it was replaced by the Mark Twain Elementary School.

The Altaville School is a good example of the importance the early residents placed on the education of their children. It was well built, attractive, and served as a center for community life for many generations. We feel it should be restored for it is a historic building and a reminder of our American Heritage. It is truly "A little red schoolhouse," and it should be preserved for future generations.

The bronze plaque that was placed on the building by the State Park Commission in cooperation with the Native Daughters of the Golden West, Princess Parlor No. 84, on May 1, 1955, states: "Brick building built in 1858 with funds raised at a dance given in the Billiard Saloon in the N. R. Prince Building (which still stands). One of the oldest schools in California, used as a school until it was replaced in 1950 by the Mark Twain Elementary School." Landmark No. 89.

Phase Three: The Restoration Project

In 1981 Ray Stewart, former Operations Officer for CDF (now retired from State service), outlined plans for preserving the historic schoolhouse and moving it a short distance from its original location in the CDF station’s main parking area to a more accessible location on Highway 49 (Figures 1-7). As reported in the December 30th edition of the Calaveras Enterprise the building would be moved "brick by brick to a shaded picnic area in front of the Forestry Station." (In fact it was moved en masse; see Figures 12-16). The newspaper account states that two other state agencies would be involved in the project: approval would have to come from the State Historical Preservation Commission and the actual restoration work would be done by inmates from the State Department of Corrections Sierra Conservation Center, near Jamestown. The plan was spearheaded by Bessie McGinnis, a member of the Calaveras County Historical Society. Later (November 23, 1988) the Calaveras Enterprise reported the project "underway." Work had been delayed until the Historical Society received title to the property on which the school presently stands.

Many volunteers contributed to the project. A major financial contributor was the Burlington Northern Foundation. Work on the interior of the school was coordinated by Arnold architect David Hitchcock. Others involved in the project included Roger Pitto of Sierra Engineering, Terry Bennett of Pioneer Construction, Tom Colter and Dave Deschryver of Colter-Deschryver Construction, Dave Kuehl Painting Contractor, Danny Kawcak, Davis John and Marshall Cristo of Homeworks Construction, and Aldie Broglio of Broglio Electric. The Calaveras Enterprise article notes that the "old ceiling is being removed and lumber especially milled to resemble the old wood will soon be installed." Landscaping of the school yard was undertaken by the Calaveras County Garden Club directed by Rusty Rolleri. Schoolhouse project chairperson was Sandie Cuneo.

In 1983 the Calaveras Prospect, Weekly Citizen and Chronicle (February 3, 1983) published a Letter to the Editor from Mrs. Betty Snyder, President, Calaveras County Historical Society, in which she clarified some of the financial issues pertaining to the project. She further stated:

We would like to point out the generosity of Mr. Gene Deaver in providing the plans; the devotion of Bob Yohr and Ray Stewart of the CDF in preventing the loss of this fine example of gold rush architecture; the wonderful cooperation of the staff and crews of CDF and Baseline Conservation Camp in helping the project along under the supervision of Architect Bob McCabe; and finally, the dedication and enthusiasm of our own Eldred Lane as Chairman of the Altaville School Committee.
Phase 4: The Altaville Schoolhouse Today

At present the Altaville schoolhouse reposes under stately trees on the southwest side of Highway 49 (street address 125 North Main), approximately one-quarter mile northwest of the intersection of Highways 4 and 49. The structure is accessed via a well-marked turnoff, which leads uphill into a parking area. There are picnic tables adjacent to the building, which is surrounded by well-kept grounds -- a most appealing place to linger as one drives historic Highway 49. The building is looked after by Mr. Brad Pecchenino of Altaville, and is visited by many travelers along Highway 49 -- the Mother Lode's "highway through history."

Entering the building, visitors find themselves in a small "lobby" -- actually the front part of the schoolroom -- which is partitioned off from the main part of the interior. Displayed on the lobby walls are framed newspaper clippings and photographs pertaining to the history of the building, notably its removal from the CDF site to the present location (some of the principal photographs are reproduced in this report). The visitor views the restored classroom through a glass partition: one sees the early-day desks, a wood stove, blackboards and many other features that senior citizens might recall from their own school days, and that (we trust) impress today's youngsters with some of the advantages they enjoy in present-day schools -- indoor plumbing being perhaps not the least of these.

California State University Archaeological Recordation

As an exercise for the California State University field class in archaeological methods (Anthropology 4605) during Fall Semester, 1996, the senior writer brought the class to the Altaville school in order to record the present structure, observe its former location and generally become acquainted with the building and its environs as an excellent example of historical preservation. The class, consisting of six students, measured the building, drew elevations of one side and the front of the structure and photographed all four elevations, as well as oblique views of the building, showing the front and sides. The distance from the original site of the school to its present location was measured and the students obtained information from CDF personnel and local residents regarding the history of the school. In the campus laboratory the students participated in the layout and initial cataloguing of the materials, which was completed by the writers and J. W. Ray, M. A.
THE ARCHAEOLOGICAL COLLECTION

The former site of the Altaville schoolhouse is documented on plat layouts prepared by CDF (Figures 3 and 4). In 1981 the building was moved approximately 440 feet (134 m) downhill and slightly to the northwest. The former location of the schoolhouse has been paved subsequently and is part of the CDF service yards, but the archaeological investigations in 1982 and 1983 fortunately preceded the paving.

Excavations conducted by Mr. Foster in 1982 to a depth of 30 cm yielded seven artifacts; the excavations conducted in 1983 by the CDF Baseline crew inside the foundation produced 323 specimens. The 1982 excavation (a one-meter square unit) was located on the west side of the building below the northernmost window (Foster 1982). The 1983 excavations were confined to the interior of the former foundation. Although the specimens found in 1983 were not separated by specific locus, the collection records state that all were found in or near the foundation of the structure.

The entire collection from the Altaville school excavations was unpacked at the CSUS Archaeological Laboratory, laid out, numbered, indexed, measured, weighed and catalogued and, to the extent possible or appropriate, each specimen was analyzed as to its probable or possible use and/or relationship to the school during the lengthy period when the building was in use (Appendix A). It is important to note that the building was used from 1859 to 1950 (91 years). Artifacts and other specimens that accumulated during this lengthy span of time could not be differentiated precisely as to the specific time when they were used. The collection might be said to be "destratified," so to speak: the artifacts had accumulated during nearly a century but were not differentiated stratigraphically nor by discrete depositional events. This particular problem is not at all unprecedented in historical archaeology (Deetz 1977; South 1977), nor, for that matter, in prehistoric archaeology: many sites contain artifacts that can be attributed to a general time-period, but not an exact one.

The collection obtained from the two excavations conducted at the Altaville schoolhouse includes objects of metal, including nails, horseshoes and other items; objects of wood or plaster representing pieces of the structure; and objects used by the pupils and teachers (Figures 30-43). The latter category of objects includes nubbins of chalk, the ends or ferrules from paint brushes (Figure 31), thin pieces of blackboard slate (interpreted as bits of hand-held writing slates) (Figure 31), and a rather enigmatic type of artifact which proved to be slate pencils used to write on blackboards or hand-held slates (Figures 30-33).

The artifacts from the two excavations can be separated conveniently into four
general "functional" categories (Table 1): structural, educational, cultural and other (rather than describing them simply as objects of metal, wood, glass and so forth). Briefly, these categories are defined as follows: structural includes materials related to the construction and/or maintenance of the building, such as nails, plaster fragments, pieces of wood, and so forth. Educational refers of course to items such as pieces of blackboard slate, chalk, and slate pencils. Cultural includes items such as fragments of bottles, pieces of cut bone and fragments of crockery. Other subsumes the remaining items of the collection. These categories are discussed below.

Structural

The collection included numerous pieces of flat glass, very weathered or "oxidized", readily identifiable as fragments of single-pane window glass. A notable feature of the present-day schoolhouse is double-pane windows, but probably even these were occasionally broken -- perhaps, one likes to think, by mis-directed baseballs or other playground objects. However, a more prosaic explanation for the presence of broken glass may be that after the school was abandoned some of the windows were broken while the building stood empty (approximately 1950 to 1983). Broken windows were "boarded up", as Captain McGee states, to protect the interior of the building.

Metal artifacts referable to construction or maintenance of the building include numerous machine-made cut nails (so-called "square" nails) produced in America from the 1830s to the 1900s (and later), almost surely used during construction of the building (Figures 34 and 35). Other types of nails -- wire nails -- dating from the 1900s to the present (Loveday 1983; Mercer 1924; Michael 1974; Priess 1973; Nelson 1968) probably were used in the course of routine repairs made to the building. Most of these specimens are unremarkable. It is interesting to note that none of the specimens collectively or individually provide an exact date of construction -- that date is known only from historical records. The cut nails certainly are indicative of construction before 1900, but neither these nails or the other some 300 specimens in the collection impart to the investigator any idea of the exact age of the building. It is interesting to have the opportunity to study remains obtained from a structure of known age (both in terms of construction and abandonment): it is not particularly surprising, however, to discover that the total collection does not reveal either the beginning or end-date of the time-period represented.

Educational

Items subsequently identified as slate pencils attracted general attention in the CSUS Archaeology Laboratory because they are a type of artifact that lay outside the experience of most of the student technicians who worked with the collection -- an interesting example of how everyday objects become unfamiliar as technology changes. They present a good example of how difficult it may be to identify the function of certain types of artifacts -- even those of the recent past, to say nothing of those from remote prehistoric periods. Many of the slate pencils bore obvious signs of sharpening, and several displayed spiral-pattern striations, as though they had been used in some type of holder. Several exhibit oblique parallel marks, possibly saw marks created during the manufacturing process.

We were puzzled by the fact that test slate pencils from the collection made no mark on paper, slate or other surfaces, but this is explained by the fact that they have become hard and rather brittle during the years since they were discarded. When they were new they were apparently sufficiently pliable to be sharpened and abraded or scored during use, as indicated by striations, blunting and other evidence of use-wear (Figures 30-33). Many were dulled from use; some are complete with tip and original base, but during use were sharpened and reduced to less than half of their original length. None are as long as apparently unused specimens observed at the Columbia State Historic Park Museum. The latter specimens, with their original paper wrappers intact, are 14.1 cm (5.5 inches) long, which is assumed to be their length prior to use. Three of the Columbia State Historic Park specimens examined by the authors appear to be unused. Each of these was bound by the manufacturer in a paper wrapper on which is printed a color depiction of the American flag (Figures 44 and 45).

Other objects which we classified in the "educational" category include an eraser "wheel" -- a circular rubber wheel with a metal frame and brush, a type of eraser recently manufactured (Figure 43). Included in the collection are several fragments of ordinary school chalk (Figure 43), and pieces of thin slate which are doubtless fragments of hand-held school slates (Figure 31).

Cultural

Items which were unexpected (but not, in retrospect, should they have been) include pieces of animal bone cut with butchers saws (Figures 38 and 39). It is possible that children brought pieces or cuts of meat to school with them as part of their lunches, or the bones may be remains from a community picnic or social event of years past. Another item perhaps resulting from an outing or non-school social event of some sort is the bottom of a wine or champagne bottle (identified by the
obvious basal kick-up) (Figure 36). (The bottle bore no identifying markings). Other pieces of glass are also fragments of bottles; their presence may be attributed to the same hypothetical cause. Still other "cultural" items include a hand-forged single-bit axe head, much distorted (presumably from having been used as a maul) (Figure 42); the base of a cartridge (.38 caliber) (Figure 43); and a large "skeleton" key of the type that might have been used to lock the original front door of the building (Figure 43).

Included in the collection are three horseshoes, all of which have been used, as evidenced by the presence of nails still in place (Figures 40 and 41). Their occurrence is difficult to explain; one can only speculate as to why they are present. Perhaps they came from horses belonging to the teachers or some of the pupils, or they might have been among materials stored in the building after it ceased to be used as a school.

Other

This category includes a piece of rubber, a bagged sample of soil and rust, and a chert flake -- the latter possibly an isolated prehistoric archaeological specimen.

CONCLUDING DISCUSSION

Beyond the brief description provided here, the artifact collection from the Altaville schoolhouse represents a very interesting example of structure-specific and activity-specific remains from an early-day building, and so may prove useful in elucidating other collections from buildings that served unknown or multiple purposes. By arrangement with Mr. Foster and CDF, representative artifacts will be given to the Calaveras County Archives, where they may be preserved for study by others.

There is a considerable amount of documentation pertaining to the Altaville school, notably a large scrapbook compiled by the late Eldred Lane, which includes photographs of the building in the process of being moved and restored. This and other materials pertaining to the Altaville school are housed in the Calaveras County Archives. We have included a selection of the relevant documents in this report (Figures 10-21 and Appendix B).

We have seen that the Altaville Schoolhouse stands as an appropriate monument to early-day California public education, and is tangible evidence of the civic pride of the citizens of Altaville. During the formative years in the Mother Lode the public played a crucial role in organizing school districts, constructing schoolhouses, hiring teachers, and generally operating a system which today, of course, is largely a
function of city and county governments. The Altaville schoolhouse, renovated and attractively situated, is a notable component of the historical heritage of Calaveras County. That it has been saved for the enjoyment and edification of present-day and future generations is a high tribute to all those who participated in this worthy endeavor.
Notes

1. The writers are indebted to Mr. O. H. Mace, who cited the quotation from Bret Harte's _Cressy_ (Harte 1889).

2. The "Calaveras Skull" was claimed to have been found in a mine shaft located between Altaville and Angels Camp. Found in 1866 (about the same time that significant "early-man" discoveries were being made in Europe) it is likely that the skull was intended as a "practical joke" but came to be regarded as extremely ancient by credulous laymen and scientists alike. The skull, which saw the light of day in 1866, supposedly was discovered more than one hundred feet below the surface in a mine shaft on Bald Hill (Whitney 1867, 1880). Because it supposedly came from such a great depth and was encrusted with calcareous materials it was regarded by contemporary scientists as ancient, although Holmes (1902), Hrdlička (1907) and others argued that such claims were without merit -- which has indeed proved to be the case (Dexter 1986; Taylor et al. 1992:269-275).

3. For the senior author part of the appeal of Mace's weekly articles published in the _Calaveras Enterprise_ regarding people and events in Calaveras County owes to the fact that his father did much the same thing in Bozeman, Montana, where for many years, writing as the "Roving Reporter," L. W. Napton gathered a great deal of historical information, anecdotes, pioneer reminiscences and so forth, compiling material that surely would have been lost to posterity had he not done so. Another, similar effort to document local history in the Mother Lode region is manifested by Larry Cenotto's writings about Amador County history (Cenotto 1980).

4. The Murphys schoolhouse is shown in early-day photographs reproduced in the _Album_ (Calaveras County Historical Society 1986:64); it was still in use in 1986 for extension classes. The first Mokelumne Hill schoolhouse burned in 1874 and was replaced by a two-room schoolhouse which was used until 1964.

5. We mention the names of some of the individual volunteers and firms contributing to the Altaville Schoolhouse relocation and restoration project, as reported in the _Calaveras Enterprise_ and _Calaveras Prospect_ and obtained from other contemporary documents. Obviously a great many more persons and firms contributed; if they are not mentioned here the omission is unintentional. The primary purpose of this report is to present the results of archaeological study of artifacts from the school site. We also attempt, however imperfectly, to sketch the background of the project and in so doing underline the fact that the success of the schoolhouse restoration is due to the cooperative efforts of a great many individuals and organizations.

1978a Preface. In *Calaveras County Illustrated and Described Showing its Advantages for Homes*. W. W. Elliott, Oakland.

Figure 1: The former location and the present location of the Altaville Grammar School, California Historical Landmark No. 499, exhibited on a portion of the Angels Camp USGS 7.5-minute quadrangle map.
Figure 2: Altaville Grammar School Location Map (1983)
Figure 3: Altaville Forest Fire Station Master Site Plan, with an arrow pointing to the former location of the Altaville Grammar School.
Figure 4: Map of Altaville Forest Fire Station showing the former and present location of the Altaville Schoolhouse building, and the location of Foster’s 1982 one-meter square test excavation.
Figure 5: Portion of map entitled: "Historical School Relocation, Altaville Forest Fire Station, Calaveras County - Region IV."
ALTAVILLE GRAMMAR SCHOOL
Erected 1858
State Historical Landmark
No. 499
State Park Commission
May 1, 1955

Outside Wall - Double row of bricks, trim above windows and doors.
Inside Wall - Plaster board with vertical board wainscot 38" high.
Windows - Nine each casement approximately 44" x 72" high.
Floor - Wood Board, about 16" above ground elevation.
Ceiling - Wood board, about 12 feet above floor.
Roof - 6:12 Pitch, wood shingle covered with galvanized steel.

This sketch map does not include the entire boundary line; it is only a sketch
of the school building. For a sketch map of the entire property the Department of
Forestry's sketch map.

Figure 6: Assistant Civic Engineer (State
Department of Forestry), Harry
Townsend's 1978 map of the Altaville
Grammar School.

Harry Townsend - 11/7/78
Assistant Civic Engineer
State Dept. of Forestry
Figure 7: Map of the Calaveras Schools (Calaveras County Historical Society 1986)
Figure 8: The two Altaville school houses prior to 1950. The brick schoolhouse is visible in the background. Photograph from Charles Schwoerer Family.

Figure 9: Altaville School teacher Mayme Duffy’s pupils pose in front of the frame Altaville School in 1911. The brick school is visible in the background, left.
Figure 10: The Altaville School on the CDF grounds ca. 1981.
Figure 11: Altaville School in original location being inspected by members of the Calaveras County Historical Society and CDF personnel.
Figure 12: Altaville School in original location on CDF grounds, showing installation of steel beams prior to moving the structure (*Calaveras Enterprise*).
Figure 13: Altaville School in the process of being moved in 1983; CDF personnel observe the moving (left).
Figure 14: Altaville School in the process of being moved, nearing its final position, 1983.
Figure 15: Altaville School being moved to its present position, observed by Eldred Lane, Calaveras County Historical Society.
Figure 16: Baseline Crew 4, directed by CDF Fire Crew Supervisor Alan Stovall, undertake restoration of the Altaville School, 1983 (CDF Communiqué).
Figure 17: CDF Fire Crew Supervisor Alan Stovall and members of the Calaveras County Historical Society view the process of restoration of the Altaville School.
Figure 18: Restoration of the historic Altaville School in progress; from left, architect Dave Hitchcock, Roger Pitto, Sierra Engineering, and Calaveras County Historical Society Vice-President, Don Cuneo.
Figure 19: Formal dedication of the Altaville School in its new location, Saturday, April 21, 1984. Shown from left to right, Jack Kennedy, President, Calaveras County Historical Society, Alan Stovall, CDF Baseline Conservation Camp, and Eldred Lane, Calaveras County Historical Society.
Figure 20: Formal dedication of the Altaville School in its new location, Saturday, April 21, 1984. Shown from left to right, Jack Kennedy, President, Calaveras County Historical Society, and Eldred Lane, Calaveras County Historical Society.
THE RESTORED ALTAVILLE School was dedicated in ceremonies Saturday. At left, Historical Society President Jack Kennedy and Eldred Lane, who headed the project. Above, veteran teacher Bessie McGinnis completes a tour of the schoolhouse; she was one of the first to promote the idea of restoring the historic building.

Figure 21: Altaville School dedicated in formal ceremony held Saturday, April 21, 1984. Veteran teacher Bessie McGinnis shown in front of the schoolhouse in its new location. -Calaveras Enterprise
Figure 22: The Altaville School (north elevation) in its present-day renovated condition, serves as a memorial and museum, November 1996. -CSUS/IAR Photo

Figure 23: The Altaville School (south elevation) in its present-day renovated condition, serves as a memorial and museum, November 1996. -CSUS/IAR Photo
Figure 24: The Altaville School (east elevation) in its present-day renovated condition, serves as a memorial and museum, November 1996. -CSUS/IAR Photo

Figure 25: The Altaville School (west elevation) in its present-day renovated condition, serves as a memorial and museum, November 1996. -CSUS/IAR Photo
Figure 26: Altaville School, showing the north and east elevations, and landscaping, including picnic table. -CSUS/IAR Photo

Figure 27: Altaville School, southeast elevation, showing storage room which has been added to the back of the restored brick building. -CSUS/IAR Photo
Figure 28: Members of California State University, Stanislaus, ANTH 4605 Archaeological Field Methods, positioned at the approximate corners of the former location of the Altaville School on the CDF grounds, November 1996. -CSUS/IAR Photo

Figure 29: Members of California State University, Stanislaus, ANTH 4605 Archaeological Field Methods, at the Altaville School, November, 1996. -CSUS/IAR Photo
Figure 30: Altaville School Artifacts: Upper, Artifact #107, slate pencil, complete; Lower, #108, slate pencil, complete, note parallel scars.

Figure 31: Altaville School Artifacts (actual size): left to right: #100, slate fragment; #105-#108, slate pencils; #320, ferrule of small brush.
Figure 32: Altaville School Artifacts (actual size): Upper, Artifacts #200-209, slate pencils; Lower, #210-219, slate pencils.

Figure 33: Altaville School Artifacts (actual size): left to right, Slate pencils, #21-25, proximal ends; #30-34, distal ends.
Figure 34: Altaville School Artifacts (actual size): Cut nails, 12D-8D, left to right, Artifacts #230-239.

Figure 35: Altaville School Artifacts (actual size): Cut nails, 8D-4D, left to right, Artifacts #240-247.
Figure 36: Altaville School Artifacts (actual size): Artifact #110, basal fragment of champagne or wine bottle (note "kick-up").

Figure 37: Altaville School Artifacts (actual size): Artifact #87, basal fragment of ceramic bottle.
Figure 38: Altaville School Artifacts (actual size): Upper right, Artifact #51, lower left, #50, fragments of bone cut with meat saw.

Figure 39: Altaville School Artifacts (actual size): Left to right, Artifacts #202, #221, and #231, fragments of bone cut with meat saw.
Figure 40: Altaville School Artifacts: left, Artifact #97, horseshoe; right, Artifact #98, horseshoe.

Figure 41: Altaville School Artifacts: Artifact #326, horseshoe.
Figure 42: Altaville School, Artifacts: Artifact #327, hand-forged single bit axe head; left, face; right, haft.

Figure 43: Altaville School Artifacts, left to right: #164, Skeleton key; #194, .38 caliber cartridge; #103, eraser wheel; #191, slate pencil; #102, nubbin of chalk.
Figure 44: Comparison of slate pencils from the Altaville School (upper three specimens) and from the Columbia State Historic Park (lower four).

Figure 45: Closeup of slate pencils from the Altaville School (upper two specimens) Columbia State Historic Park Museum (lower four specimens).

Appendix B
Baseline restores 115-year-old school

Imagine being given the task of picking up a 115-year-old brick building and moving it 200 yards without even disturbing the mortar.

Having spent the winter restoring it, a California Department of Forestry inmate hand crew from Baseline Conservation Camp now plans to do exactly that with the old Altaville Elementary School at the CDF Altaville Station, in Calaveras County.

The old structure, built by gold rush miners, was in such a state of disrepair when Fire Crew Supervisor Alan Stovall and Baseline Crew Four began the restoration, it was considered hazardous.

Portions of the south and west walls of the old one-room school had crumbled and fallen away. Its floor, rotted and sagging, had broken through in places to the bare ground beneath it. At the suggestion of State Forest Ranger III Ray Stewart, Officials at the Department of Forestry’s Baseline Conservation Camp, the Calaveras County Board of Supervisors, the Calaveras County Historical Society, and the Angels Camp City Council joined forces in early 1982 to draft a restoration plan for the old building.

Aided by Sacramento Architect Bob McCabe, who was involved in restoration and moving of similar structures in Old Sacramento, a specific plan to return the schoolhouse to its original condition, and move it to the new site was agreed upon. The actual reconstruction began in January.

Protected by large sheets of plastic to block the rain and chilling winds that whistled through its gaping walls, the Baseline crew, under Fire Crew Supervisor Stovall’s supervision, began shoring up and rebuilding, using the original bricks salvaged on-site.

With restoration plans calling for the school’s original split shake roof, long ago covered by now rusted sheets of corrugated iron, to be replaced with new ones, bolts of new shingle material in the form of straight grained sugar pine, were brought in.

Neither Fire Crew Supervisor Stovall or any members of his crew had ever manufactured shakes or seen the long bladed old hand froes which were used to split them from the pine blocks.

First, from old automobile spring leaves, they made the blades with which to do the splitting. Then, gathering bits of information here and there on how the shakes are split from the pine bolts, the Baseline crew began the time consuming job of manufacturing them.

The result was stacks of clear, straight grained, 28-inch shakes as good or better than the originals, which will be used to roof the old school after it is moved.

The old structure, originally built with funds raised at a miner’s dance and used as a classroom until 1950, is on the National Register of Historic Places.

Baseline Camp Ranger Lou Gonzalez has stated that the success of this project has been due to the interest and dedication of Fire Crew Supervisor Stovall and his crew.

CCC plans 50th anniversary

. . . . Chapter 34 of the Civilian Conservation Corps (CCC) and the Angeles National Forest will conduct a special presentation in commemoration of the 50th anniversary of the CCC. Guest speakers will be USFS Regional Forester Zane Smith, Chief Rex Griggs of CDF’s Region VI and Chief Clyde Bradgon of the Los Angeles County Fire Department.

The ceremonies will be held at 1400 hours on September 24, 1983 behind the Junior Fair Building in the southeast portion of the Los Angeles County Fairgrounds.

If you have any materials relating to the 50 years of the Civilian Conservation Corps which could be used for display or if you have any questions, please contact Gordon Rowley at the Angeles National Forest (213) 577-0050.

Family ($8.00) and Junior memberships ($1.00) include subscriptions to Las Calaveras. Non-members may obtain copies of Las Calaveras from the secretary. The original historical material in this bulletin is not copyrighted and anyone is invited to use it. Mention of the source will be appreciated.

OUR SCHOOLHOUSE PROJECTS
As we go to press (late as usual), the Altaville schoolhouse has been moved safely to its new location near the highway, in front of the State Forestry Station. Restoration will continue as weather permits, and especially as additional funds become available. As many of you know, the County and the City of Angels have each provided $5000, and the Society $2500 for the restoration. In addition, members of the Society, members of the Berkeley City Club, and other individuals and organizations have contributed (at last count) some $7350. Local suppliers have helped by making materials available at a special price or as a donation. The State Forestry and the Baseline Camp continue to provide substantial help in supplying labor and some equipment. However, additional funds will be needed to complete the restoration. The Society will be pleased to receive such funds, which are tax exempt expenditures, and forward them to the Committee.

Another project that has been in progress for a year or so is the collecting of pictures of our early schools, many of which were of the one-room variety, and of information about them and the teachers and pupils. We hope to con-

ALTAVILLE SCHOOL
Just 100 years ago, nearly sixty pupils and their teachers stand in front of the school for the annual picture. The Prince, Demarest, Frazier, Nuninger, Baumhoggler, Becker, Lee, Starr, Marchal and Smith families were among those sending children to Altaville school in the early 1880’s.

NEW MEMBERS
We welcome the following new members:
Mr. and Mrs. A. L. Arighi, Arnold
Celia M. Beltramo, Angels Camp
Mrs. Charles Gross, Marysville
Mr. and Mrs. W. A. Peyton, San Andreas
Mr. and Mrs. Robert E. Stewart, Mountain Ranch
Myrtle E. Severy, Tracy
James Sanders, Woodland
Mr. and Mrs. Roy D. Wathen, Mountain Ranch
Kern County Historical Society, Bakersfield
rate sewer and garbage
disappeared out of the back-
yard of the family home on
French Gulch road just after
noon on January 19.

According to Deputy Jim
Stenquist, a lost child can usu-
ally be expected to take the
course of least resistance, so
when deputies got to the
boy, he told them that his
mommy and daddy were lost.

Deputy Stenquist added
that it began to rain a short
time after they found the boy.

The Angels Camp city
council last week reversed a
previous decision and agreed
to donate $5,000 to the Cala-
eras Historical Society to aid
in the restoration of the old
Altaville school.

The council had previously
offered to lend the money but
declined an outright gift. The
county board of supervisors
complicated the matter by ac-
cepting to match any funds
donated by the city, but re-
fused to match a loan.

The historical society as-
ked for the donations to help
pay for restoring the old brick
building in preparation for
moving it from its present lo-
cation down closer to the
highway.

The building, owned by the
historical society, currently
sits on state land in the Alt-
aville California department
of forestry facility. The state
wants the building moved to
make it easier to move, fire
trucks around the facility,
and has offered to give the
historical society land front-
ishing the highway.

Councilman Tad Folendorf
told the council that after dis-
cussions with the historical
society he came to the con-
clusion that it would be in the
best interest of the city to do-
nate the money. The society
has indicated that it intends
to support all of the museums
in the County, both public
and private, when it finally
receives an anticipated inher-
ance that may amount to
more than $500,000.

The city's museum is in
need of numerous repairs
and restoration work, and the
city could use help in financ-
ing those projects. "I think
we're going to get more out
of them than we're giving
them, in the long run," Fol-
endorf said.

The council voted to shift
$5,000 in federal revenue
funds which had been set
aside for museum restoration
to the Altaville school pro-
ject. A public hearing on the
transfer is scheduled for Feb-
ruary 1.

In the meantime restora-
tion work on the school has
already begun with crews
from CDF and the California
Conservation Corps rebuild-
ing a brick wall which collaps-
ed last winter. The building
has been shored up and sta-
bilized so that it is no longer
in danger of collapsing. Once
the walls are complete, prob-
ably some time this spring,
the entire structure will be
moved down to the highway.
Dear Members of the Calaveras County Historical Society:

The purpose of this letter is to bring you an update on the progress of the restoration of the Altaville School.

The brick building has been successfully moved intact and is now sitting on its permanent foundation located on Highway 49 at the Division of Forestry headquarters in Altaville. The restoration of the exterior includes a new, hand-split, cedar shake roof and the repair and installation of the original bell tower. During the coming week new, custom-made doors and windows will be installed which will authentically duplicate the design and material used in the original structure. In addition, it is planned to construct a lean-to on the back of the building as existed originally. This will also be true to the design used on the original schoolhouse.

Following the completion of this exterior restoration, the brick walls will be treated with a preservative sealer tinted to match the original painted surface of the bricks. All wooden doors, windows and trim will then be painted white to match the original.

In order for your Society to complete all of this final phase of the exterior restoration, additional funds are being solicited from our friends and members. Even though the Historical Society has allocated additional funding from its treasury, we are still short the necessary amount of money to realize the completion of this phase of the project. Therefore, we are requesting whatever additional financial assistance you can render at this time. Time is of the essence in your responding to this appeal inasmuch as we still have the manpower available through the Division of Forestry to complete this work. However, this source of volunteer labor will only be available to us for a limited time more so we must come up with the necessary monies to purchase the needed materials now.

We do thank you so very much for your past interest and financial assistance and hope that you will be able to come up with "just a little bit more" to help your Society realize the completion of this very worthwhile project.

Tax-deductible contributions may be mailed to the Calaveras County Historical Society, P.O. Box 721, San Andreas, CA. 95249, Attention: Jack W. Kennedy, President.

Sincerely,

Jack W. Kennedy
Mr. Jerry Partain, Director  
California Department of Forestry  
1416 - 9th Street  
Sacramento, California 95814

Dear Mr. Partain:

Upon completion of the restoration of the Altaville School building and its relocation, which was a joint project of the California Division of Forestry and Calaveras County Historical Society, I am submitting this letter of commendation for Allan Stovall, Fire Captain B, California Department of Forestry, who operates from Baseline Conservation Camp, Jamestown, California.

When I first inspected this building, it appeared to be beyond repair or beyond practical restoration. Nevertheless, under the direction of Architect McCabe, Allan Stovall and a crew of inmates went to work during the off fire season to accomplish this difficult restoration project.

Allan's resourcefulness and ability to follow technical instructions and improvise when necessary to get on with the project was superb. His attention to detail and thoroughness is outstanding. He possesses that rare ability to handle men and maintain their respect and admiration.

The Calaveras County Historical Society is very grateful for Allan's and for the California Department of Forestry's part in accomplishing the restoration and relocation of this brick school building, a monument of which the community and county are proud.

Sincerely yours,

Eldred L. Lane, Chairman  
Altaville School Committee

ELL/sh  
cc: Calaveras County Historical Society
CDF has in its control land upon which there is a one-room brick schoolhouse built in 1858. It is the only one-room brick schoolhouse building remaining in the Mother Lode area of California, and is of great historical value. The building is located in the Altaville Townsite on State Route 49 near the junction of State Route 4. Its historical value and attraction as a historical site is a liability to the Department of Forestry. Its location makes it accessible to visitors which require parking, sanitary facilities and management by an attendant. The Department of Forestry is unable to provide for this public use, or to provide protection from vandals or caretaking services. Also, the Department of Parks and Recreation does not have staff in the immediate area to provide these services. The Calaveras County Historical Society will operate the facility as a historic museum and assume all operating obligations if the land, approximately 0.58 acres, is conveyed to them without cost.

Proposed Solutions:

1. Existing Law:

   Legislation (AB 2713/1984) authorizing the disposal of the 0.58 acre parcel containing the schoolhouse was passed last year. Unfortunately, this legislation contained restrictions as to the method of disposal, none of which allowed for conveyance to the Calaveras County Historical Society without fees being collected.

   The Historical Society is the only responsible group interested in acquiring, preserving and operating this facility for its historic significance, and has cooperated with the Department of Forestry in restoration efforts undertaken to date. They have contributed more than $20,000 to help preserve the facility and its historical significance.

2. Proposed Change:

   Allow for the conveyance of the 0.58 acre parcel with improvements to the Calaveras County Historical Society at no cost, subject to certain safeguards that would assure its operation in the best interest and benefit to the people of California.

3. Justification:

   The schoolhouse is currently a burdensome liability to the State. Staffing would need to be provided to maintain and operate the facility in a satisfactory manner. The Calaveras County Historical Society was

(Continued on attached sheet)
formed to provide private funding and care for items of historic value by the local citizenry. It is the only group which has shown an interest in preserving the site and operating it as a facility open to the public. To assure its use as a public facility, the conveyance will contain language that would assure responsible operation on behalf of the public and require reconveyance back to the State in the event of violation of the safeguard clauses. Such language has been developed jointly with the representatives of the Departments of Forestry and General Services, Assemblyman Waters, and Senator Garamendi's Office, and the Calaveras County Historical Society.

scal Impact: None

The State will rid itself of a liability it now holds. The public will be able to enjoy visiting the site as it will be on display by the Historical Society, and the State will always be able to take the parcel back if the public is not well served.

islative story: None

The transfer of this property will enable the Calaveras County Historical Society to make available this historically significant facility to the public for their benefit and enjoyment.

This action is proposed for amendment with SB 1510 (Senator Presley)
THE RELOCATION OF HISTORIC Altaville School is delayed by weather conditions. The contractor has placed steel beams beneath the floor and reinforced the crumbling brick walls with wood on both sides. The relocation is a community project sponsored by the Calaveras County Historical Society.
THE CALAVERAS Historical Society held a formal dedication ceremony for the old Altaville school last Saturday. Among those taking part were, from left, Jack Kennedy, president of the Society; Alan Stovall from CDF's Baseline Conservation Camp, whose prisoners did most of the restoration work; and Eldred Lane, also of the Society. The school was moved several months ago from CDF property to its new site on Highway 49 in Altaville.
Altaville School Restoration Funding Sought

ANGELS CAMP - Funding for restoration of the historic Altaville School remains a question mark following an appeal for county support Monday.

The matter was continued for one week to explore the possibility that the City of Angels might put up half of the $10,000 which was requested from the county at Monday's meeting of the Board of Supervisors.

State Forestry Operations Officer Ray Stewart asked the county to help fund the project to move the old brick building from its present site in the middle of California Department of Forestry property to a tree-shaded spot closer to Highway 49.

CDF actually owns the school, having acquired it when the forestry station property was purchased, and proposes to lease the old building to the County Historical Society.

The Historical Society and Native Daughters of the Golden West have both taken an active role in the project and have completed plans for the restoration but funding has not been determined. Plans call for crews from Sierra Conservation Camp near Jamestown to do the actual restoration work.

Stewart told the supervisors about $10,000 is needed now to help finance the project, and possibly as much as $20,000 will be needed for the actual moving of the old building.

Alice Lea, speaking for the Native Daughters, asked the county to put up at least part of the money.

The supervisors suggested the county might be able to furnish $5,000 if the city of Angels Camp would match that amount.

The old brick schoolhouse is in such a state of disrepair that two walls are beginning to crumble. In addition, it poses a problem for CDF because tourists who turn off the highway to see the school are often confronted with fire trucks leaving the station en route to a fire.
Altaville School

Dedication set June 11

Angels Camp

Restoration of the historic Altaville Schoolhouse is nearing completion, with a dedication ceremony planned June 11.

Students who studied at the school are urged to attend as special guests. Three of their former teachers - Marcella Avery, Ted Bird and Bob Groves - will participate in the program. All former Altaville students attending will be recognized during the festivities.

The program begins at 3 p.m. with an old-fashioned band concert in the schoolyard featuring the Angels Camp Community Band, directed by Phil Stock. The public is invited.

Dedication ceremonies will follow at 4 p.m. Dignitaries participating will include Assemblyman Norm Waters, who assisted the Calaveras County Historical Society in gaining title to the old building, which sits on state property as part of the California Department of Forestry complex in Altaville.

The building was moved to its present location in 1983 through a cooperative effort of the Historical Society, the County of Calaveras and City of Angels Camp, which jointly funded the moving project. Crews from the CDF Base Camp at Jamestown provided the labor.

Once the Historical Society was granted title last year, restoration of the interior of the school began. That phase was bolstered by a $22,500 grant from the Burlington Northern Foundation, presented to the Historical Society in early March.

The foundation makes grant funds available through its companies, including Meridian Minerals Company, whose subsidiary, Meridian Gold Company, has recently brought a large open-pit gold mine into production near Copperopolis.

The Altaville School was constructed in 1858 and was used continuously until 1950. The public - especially anyone who attended or had family members who attended the school - is invited to the dedication. Former students planning to attend should call the Historical Society office at 754-1058 to assure proper recognition.

The Altaville Grammar School, built in 1858, is significant for its historic association with the development of Altaville, California. The one-room schoolhouse operated as the only educational facility, serving the community until 1950. It is one of the oldest schoolhouses in California. The architectural significance of the building is based on its style; a vernacular translation of a Greek Revival design.

The brick building was erected, with funds raised by a dance in the Billiard Saloon of the W.R. Prince Building, on land donated by Thomas Frazier. The schoolhouse became a State Landmark in 1954. Despite the deterioration noted above, the Altaville Schoolhouse retains most of its original fabric and is an important landmark in the Mother Lode region of California.

The schoolhouse is a vernacular adaptation of the Greek Revival style popular in the United States between 1820 and 1860. The last date of the Altaville Schoolhouse falls after the heyday of the style which was in the 1830's and 1840's. The date of the schoolhouse is governed largely by the historical development of the Mother Lode region which occurred primarily after 1848 with the beginning of the Gold Rush. The popularity of the style is to be noted in the fact that the general style of the locale was Greek Revival. As noted by historian Harold Kirker, this style "remained the domestic vernacular on California's architectural frontier until after the completion of the Pacific Railroad."

The Greek Revival style appeared in the United States in 1798 with a design by William Latrobe, the first professionally trained architect in the U.S. The popularity of the style spread quickly due to its political associations (it was seen as the style of ancient democracies) and social associations (it was viewed as a welcome break with the English based Georgian and Federal styles) and the popularization of the style with the publication of carpenter's pattern books that presented plans and detailing. Since the Altaville Schoolhouse presents the typical aspects of domestic versions of the Greek Revival style with simple rectangular block, pediment suggested by cornice returns and frieze but does not display any Greek Revival detailing, it suggests that a local builder was able to translate the major characteristics of the plan, pediment, cornice and frieze but relied on his vernacular knowledge of brickwork when dealing with details such as door and window frames. Therefore, the Altaville Schoolhouse is representative of the process by which an architectural style is introduced and subsequently translated into a local context.

STATE PARK COMMISSION

Marvin D. Samuel
DIRECTOR, DEPARTMENT OF NATURAL RESOURCES

REGISTERED LANDMARK NUMBER: 499
DATE: Dec. 4, 1951
Mr. J. E. Carpenter,
California State Chamber of Commerce,
San Francisco, California.

My dear Jerry:

The enclosed application for the registration of the red brick grammar school at Altaville, California, was for some reason sent to me. I think it is O.K., as it is one of the typical old early mining town school houses. It was built way back in May, 1858, so it comes in as one of the early landmarks. It certainly seems to be one of the typical old red school houses, of which we hear so much. The only other one I know of is up in Columbia, and that is being preserved. This is evidence of the fact that the miners were quick to see the advantages of school houses, as well as churches.

Sincerely yours,

J. R. Knowland
Mess. John Connolly,

May 9, 1951.

Mr. Joseph A. Kentland, Publisher,
Oakland Tribune,
Tribune Tower,
Oakland, Cal.

Dear Mr. Kentland:

Your letter of May 8 enclosing application for
the registration of the red brick grasmur school at Altaville,
California, and your favorable comments has been received.

In this connection there is something which the
Approval Committee should consider, and also the Governor's
Committee when appointed and functioning. The town of Altaville
is already duly registered as historic landmark No. 290. In the
write-up for this registration the red schoolhouse is duly men-
tioned, along with other features which warranted its registra-
tion. A separate registration may be confusing — that is the
registration of each of the historical features in each of these
towns. This is the principle which we had followed in the case
of the registration of Auburn, and which we are trying to follow
on all new applications. In this instance the town of Auburn
was registered and the various points of historical interest in
the town were enumerated as part of that registration. In the
case of the red schoolhouse, should this not come under the Alt-
aville registration and by this means become eligible for a plaque,
if they so apply.

I shall appreciate your comments and advice be-
fore proceeding with the usual routine.

Sincerely,

J. E. Carpenter, Director
Travel and Recreation Department
State of California

Copy to all members of the
S.I.O.4.0. Convention Committee,
Division of Beaches and Parks,
Sacramento.
October 10, 1951.

Col. L. V. Lyng, Secy.,
Calaveras County Chamber of Commerce,
Altaville, Cal.

Dear Col. Lyng:

Thanks for your recent letter. I, too, was sorry that we could not have gotten together for a few minutes. We shall again look to you for the snow reports as usual. If there is any way we can assist from this end in working out any plan you have in mind, please call on us.

And now for a little job on Historic Landmarks. Attached you will find our file for registration of the little brick schoolhouse at Altaville. Somehow, it got in our files and has remained dormant. You will also find attached, the registration of the town of Altaville which includes the schoolhouse. In my letter to Mr. Knowland I pointed out the plan which we have been following — that is, instead of registering the individual buildings or historic sites in the case of a town, the town itself should be registered with adequate mention of the points of historic interest which it contains. This has been done in the case of Altaville, and therefore appears to be sufficient. As the case in point is the securing of a plaque to be affixed to the schoolhouse, it appears to me that it is eligible without further registration.

The next step is to apply for such a plaque directly to Mr. Jos. R. Knowland, Chairman, State Park Commission, Tribune Tower, Oakland. I would suggest that the wording be carefully worked out and submitted at the time you make application. Also, send him the attached so that he will have the complete story. Please let me know how you are proceeding.

Sincerely,

J. E. Carpenter, Director
Travel and Recreation Department
HISTORIC LANDMARKS
Mr. J. E. Carpenter,
Travel and Recreation Dept.,
California Chamber of Commerce,
350 Bush Street,
San Francisco 4, California.

Dear Jerry:

I am in receipt of your letter of October 10 which returned to BOB the papers and application for a historic landmark for the Red School House at Altaville.

During the past few years, I have conducted all my historic landmark business through Joseph R. Knowland, Chairman of the California Centennials Commission. Since the closing of the Centennials Commission offices and based on correspondence with Mr. Knowland, I have continued this activity through him.

The deal on the School House at Altaville is as follows:

The School House proper is located at least one mile from the town of Altaville where the landmark site of No. 288 has been allocated for easement from the State Highway Department. The Red School House is on property owned by the State of California, for use by the State Forestry Service as is evidenced in papers included in the application for the creation of a landmark. The sponsors of this landmark and the Division of Forestry are both anxious to have this building designated as a landmark as the State Forestry Service is planning on preserving the structure.

I am returning the copies of the application to you with the request that the necessary steps be taken to have this school created as a historical landmark. I would appreciate anything you can do for me.

Very sincerely yours,

L. V. Lyng, SEC-MGR.
APPLICATION FOR REGISTRATION OF HISTORICAL POINT OF INTEREST

NAME OF HISTORICAL POINT  Grammar School - red brick (1858)

LOCATION  Altaville, California

NAME OF OWNER  State Division of Forestry

STREET

CITY  Sacramento 10, California

HISTORY AND DESCRIPTION

Altaville in 1850 was called the "Forks of the Road" but in 1857 a group got together and decided to name the camp "Winterton" after Bill Winters - however, one month later in December 1857 the name was changed to Altaville.

In 1858 Thomas Frazier generously donated the land for the red-brick school. In May 1858 a ball was held in the upstairs "Billiard Saloon" of the H.R. Prince building (which is still standing) to raise funds for building the school. The 25 x 18 foot re-brick schoolhouse was completed in October 1858.

The San Andreas Independent of October 9, 1858 referred to the school house as follows, "A commodious brick school house is in course of construction in Altaville."

The wood frame anterooms on the rear were added to the brick building about the middle 1870's, as per a letter from D.C. Demarest, Berkeley California who attended the school from 1872 until 1881.

The bulge in the side walls had developed before 1872. During the period of Mr. D.C. Demarest's attendance these walls were reinforced with wrought iron through-rods, holding cast iron plate washers against the outer faces of both walls - these were furnished by Mr. Demarest's father's iron works in Altaville.
Mrs. Agnes Woods, Chairman
History and Landmarks
N. D. G. W.,
Box 211
Angels Camp, Calif.

Dear Mrs. Woods:

Reference is made to your letter of February 5 and telephone conversation of this date.

We, too, should like a bronze plaque on the old AltaVille school and will do everything possible to cooperate with the Chapter of the Native Daughters in this regard. As you know, it is our plan to preserve the schoolhouse.

I presume you would want some form of dedicatory services with the plaque's unveiling. If this is your plan, I would suggest it be dedicated the summer after we have finished our construction on the site.

I understand you are arranging with the State Chamber of Commerce to secure a bronze plaque and that you will compile the data to go on the plaque.

If this office can be of any further assistance to you in this matter, please let me know.

Yours very truly,

DeWitt Nelson, State Forester

NDGW Will Mark Altaville School As Historical Site

ANGELS CAMP, Calaveras Co.—The Princess Parlor, "Native Daughters of the Golden West," plan to place a bronze plaque on Altaville Grammar School as a marker for a historical site.

May 1st has been set tentatively for the ceremony.

Mrs. Elbert McCoy, chairman of history and landmarks, has made the preliminary arrangements for the marking of the school which was built in 1858 and used until 1950, when it was replaced by the Mark Twain Union Elementary School. Mrs. John Lemue, who attended the school when she was in the primary grades, will be Mrs. McCoy with the final arrangements.

HISTORICAL LANDMARK NO. 48
Married June 25, 1855 to A.S. Roan, Altaville Commission, in cooperation with Princess A. Roan, nee Eletta
LOCATION OF HISTORIC OLD SCHOOLHOUSE SITE.

This historic old schoolhouse is located on property owned by the State of California, Department of Forestry, in the town of Altaville, Calaveras County, California. It is in the Northeast one-quarter (¼) of the Southeast one-quarter (¼) of Section 29, Township 3 North, Range 13 East, Mount Diablo Base and Meridian. The following description describes that fenced area within the property owned by the Department of Forestry:

Begining at a point which bears N. 75° 03' E., 758.31 feet from the East one-quarter (¼) corner of Section 29, T.3 N., R. 13 E., M.D.M.; thence S. 52° 34' W., 334.75 feet; thence S. 33° 40' W., 458 feet, more or less, to the true Point of Beginning; thence Northerly 55 feet, more or less; thence Westerly 64 feet, more or less; thence Southerly 58 feet, more or less; thence Easterly 64 feet, more or less, to the Point of Beginning, and containing 3,648 square feet, more or less (0.084+ Acres).

The entire area is fenced off from adjacent land, owned by the Department of Forestry on the east, north and west, and by Oscar J. Scheres on the south.

6. **Present Use:** Un-occupied  Original use: Educational

**DESCRIPTION**

7a. **Architectural style:** Greek Influence
7b. **Briefly describe the present physical description of the site or structure and describe any major alterations from its original condition:** The Old Altaville Grammer School is the only one room brick school building remaining in the Lower Lake area of California. Altaville is now a part of Angels Camp, an incorporated town whose population is about 3,000. Both Altaville and Angels Camp had their beginnings in the Gold Rush Days and the population was much greater in the past than at the present time. Tourism is an important industry in this historic area as it is sixty miles from Stockton, seventy miles from Sacramento, and a little over one hundred miles from the San Francisco Bay area.

The Altaville School was built in 1858 with funds raised at a dance in the Billiard Saloon by the M.R. Prince Building in Altaville. At the present time the State of California owns the property on which the school stands. There are no other property owners adjacent to the school.

The building which measures 24' x 34' has an area of 816 square feet. The school area is 0.082 acres. The building is constructed of red brick that was kilned in the area. It has white wood trim on the gable and the sides under the roof line. The roof slants two ways, forming a 90 degree angle at the gable, front and rear. The walls are two bricks wide. There is a door in the center front of the building, with a window on each side of the door. There is a small round window in the gable over the door. (continued on the reverse side)

    - or approx. acreage 0.082
12. **Date(s) of enclosed photograph(s):** 11/78 *

* Further deterioration has occurred since photo.
Bricks above the door and windows are placed in a vertical position, commonly spoken of as "eyebrow" detail. The roof line suggests Greek influence as the cornices have white trim extending to the front of the building, that add architectural interest.

There are three windows on each side of the building, with one window and two doors at the rest. A "lean-to" of wood lumber that was added to the rear of the building to serve as a cloak and storage room was removed in 1975. A brick chimney is at the center rear of the building. The windows are all boarded up at present.

The interior of the building has wood wainscoting on the lower three feet of the walls. A plaster board material was installed on the upper walls in the early 1900's. Blackboards covered sections of the walls. The ceiling is about twelve feet high, with the floor about sixteen inches above the ground. Floor boards are placed lengthwise of the room. Electric lights were installed sometime in the 1900's. Oil lamps were used originally. The shingle roof of the structure was covered with galvanized roofing years ago. The belfry has a four sided shingle roof and the louvered sides protect the bell that called children to school for nearly one hundred years.

The building is in fair condition but is in need of immediate repair. The bricks at one rear corner of the building have become dislodged and have fallen to the ground. The building is in the National Register and is worth saving. However funds are needed to refurbish this piece of our heritage.

SIGNIFICANCE
19. Briefly state historical and/or architectural importance (include dates, events, and persons associated with the site.)

The Altaville School is worthy of preservation because it is the only one room brick school building remaining in the Mother Lode area of California. It was built in 1853 in what was then an important gold mining town, and it was used as a school for all eight grades, with as many as sixty children instructed by one teacher, then as a room for upper grades for almost one hundred years, until 1950 when it was replaced by the Park Train Elementary School.

The Altaville School is a good example of the importance the early residents placed on education of their children. It was well built, attractive, and served as a center of community life for many generations. We feel it should be restored for it is a historic building and a reminder of our American Heritage. It is truly a little red school house, and it should be preserved for future generations.

The bronze plaque that was placed on the building by the State Park Commission in cooperation with the Native Daughters of the Golden West, Princess Parlor No. 94, on May 1, 1955, states: "Brick building built in 1853 with funds raised at a dance given in the Million Saloon in the N.R. Prince Building (which still stands). One of the oldest schools in California, used as a school until it was replaced in 1956 by the Park Train Elementary School". Landmark No. 79. (over)

CHAPTER VIII

SCHOOLS AND TEACHERS

Although the rush to California in 'forty-nine and 'fifty was made up very largely of single men, it was not long until wives and families were coming to join the husbands and fathers. But even before the state had many school-age youngsters, the first State legislature made provisions for an educational system. The sixteenth and thirty-sixth sections of land in each township had been set aside by the federal government for the promotion of public schools, and for a university two whole townships were granted. Added to this was a 500,000 acre grant by the federal government for internal improvement. The first State Superintendent of Public Instruction was John G. Marvin, who estimated in his report of February 13, 1855, that the value of the school land in California was about $8,000,000. An effort was made to use this school land for a general fund sacred to the public schools, but it was opposed by Senator Wm. Gwin and General H. W. Halleck. As a result of the sale of school lands, about 50,000 acres of land were lost before safety measures were established.

Superintendent Marvin in his report on schools in 1852 recommended: (1) that a five cent tax be levied on each one hundred dollars worth of property for the aid of schools; (2) that the office of County Superintendent be created; and that proceeds from swamp and overflow land be applied to the school. The report also stated that Calaveras County had one hundred children of school age but no public schools.

The first free school in the state was organized in 1850 in San Francisco. The system of public schools was rather slow in developing and many of the early schools were private schools, supported by a religious denomination. As late as 1857, State Superintendent Paul K. Hubbs reported that there was no such
thing as a public school in the state and that rate hills and other expenses excluded many from the schools. He urged a greater state appropriation. The legislature followed his advice in 1858 and also authorized the school districts to levy a special tax on all property, so that the schools would be open to all on a free basis. However, as late as 1862 the public school at Mokelumne Hill was charging one dollar and fifty cents per month for all children attending the school.

However, the school system of the state was being gradually improved. Under the original act setting aside public land for the benefit of schools, only three months of school each year was required for any assistance from the public land revenue. In 1858, A. J. Moulder, the State Superintendent of Public Instruction, recommended to the legislature that all school districts be required to hold school for a period of six months each year. Another advance in the Public school system was made in 1863 when a new law provided for the election of trustees for school districts to serve for a period of three years and authorized the issuance of teacher certificates. Before this law was passed teachers were appointed by the County Superintendent on the recommendation of the local residents. Also, some uniformity in the use of textbooks was being developed. In 1855 Superintendent Hubbs recommended that uniform series of textbooks be used. Every school, and sometimes every pupil, had his own textbooks.

By the middle of the 'sixties the confused conditions in the school system of the state were being eliminated and higher standards were being demanded in the schools.

Naturally enough the first schools in Calaveras County were private schools, supported by tuition from the parents. It is impossible to tell just when the first public schools were established because there are no county records on the matter before May 7, 1855, the date of the first meeting of the Board of Supervisors. At that time we know from the minutes of the Board that public schools had been established in San Andreas, Mokelumne Hill, Angels Camp, Murphys and Cave City. However, the little camp of Ft. John in what is now Amador County was probably the first camp to have a school as well as a church in 1850. In 1852 a school was organized in Mokelumne Hill in the tent used by the Methodist Church. The teacher was Mrs. Isaac Fish, wife of the minister. She received seventy-five dollars a month for daily sessions of three hours. The school numbered five pupils—two white children and three negroes.

The Methodist Church was also the location of the first
school in Jackson. It was taught by Mrs. Trowbridge, one of the few women in the camp before 1850.  

In 1852, State Superintendent Marvin's report stated there were twenty public schools in the state and as yet none in Calaveras County. Private schools were being established which were turned into public schools between 1853 and 1855. Murphys had private schools taught by a Miss Powers and also one taught by a Miss Vichers before 1855. These were probably primary grades. A Mr. Jaquith taught in the first school building in Murphys before 1855. He was the first teacher in the public school. The Methodist Church, built in 1853, may have been used as a school, also. When funds for its construction were being planned, it was stated the building would be used for church, education, and town meetings. 

Schools, probably private, had been established in Volcano, Jackson, Sutter Creek, and Ione in 1853.  

James Gould moved to Lancha Plana on the Mokelumne River in 1853 and set up a private school for the ten or twelve children in the camp. Many miners were bringing their families to California, and State Superintendent Rubbs reported the number of school children in the state had increased from 2,000 in 1853 to 6,751 in 1854. It was probably in this year that the public schools were organized in San Andreas, Mokelumne Hill, Angels Camp, Murphys and Cave City. The minutes of the Board of Supervisors give us accurate dates of the formation of public school districts after 1855 and the following is a list of the first of these that were formed:

Vallecito ........................................... Nov. 17, 1855.
District No. 2 of Township No. 6, embracing Pleasant Springs, Rich Gulch, Rich Gulch Flat, Cedar Gulch, Mosquito Gulch, and Glen-coe ............................................. Nov. 17, 1855.
Douglas Flat ........................................ Feb. 11, 1856
District No. 3, Township No. 6, Middle Bar to Bay State Ranch .................. Dec. 20, 1856
West Point ......................................... Dec. 29, 1856.
District No. 4, Township No. 6, Bay State Ranch and Chili Gulch ....... Feb. 19, 1857.
Upper Calaveritas, Lower Calaveritas, Foreman's Ranch, Old Gulch, French Gulch, San Antone, Indian Creek ................................. May 15, 1858.
Negro Gulch (Jesus Maria) ..................... Aug. 16, 1858.

121
In June, 1859, the following twelve school districts were named by the Board of Supervisors: San Andreas, Mokelumne Hill, Pleasant Springs, Chili Gulch, Golden Gate, Cave City, West Point, Angels, Murphys, Vallecito, Douglas Flat, Negro Gulch, and Upper Calaveritas.

By June 12, 1871, there were the following twenty-six school districts: Paloma, Campo Seco, Comanche, Salt Spring Valley, Copperopolis, Vallecito, Douglas Flat, Telegraph City, Pleasant Springs, Mosquito Gulch, West Point, Brushville, Black Hills, Murphys, Altaville, San Andreas, Petersburg, Fourth Crossing, Spring Valley, Washington Ranch, Chili Gulch, Railroad Flat, Negro Gulch, Cave City, Sheepranch and Upper Calaveritas.

The school districts were eventually increased until there were fifty-seven, but with the decrease of mining activity and loss of population, plus unionization of a few schools, the number of school district are now twenty-four. There have been unionizations of districts of West Point, El Dorado and Angels. Lincoln joined West Point in 1930. Banner and Cave City joined to form Ed Dorado Union in 1946, and Carson and Melones joined Angels in 1948 to form the Mother Lode Union. Altaville has now joined with Angels Camp in building a fine new school building. Many of the schools, however, were small one-room school buildings and when the population migrated, such as at Washington Flat, Peppermint, Big Trees, Petersburg, Williams, and others, the schools closed and the district was absorbed by an adjoining district. This occurred to the Union School District which was annexed to Mokelumne Hill in 1870.

The two high school districts, Bret Harte at Angels and Calaveras at San Andreas, were organized in 1905. In 1924 two years of high school work was provided at West Point but this functioned only as a part of the elementary district.

Apparently the first County Superintendent of Schools was R. Thompson as there is no record of any reports on schools by a superintendent before this time. Up until 1855 the assessor had been acting as County Superintendent of Schools. State Superintendent Marvin had recommended in 1852 that the County Assessor be made ex-officio County Superintendent.

The following report of Superintendent Thompson, published in the San Andreas, Independent, November 26, 1859, gives a rather complete picture of the schools:

SAN ANDREAS—Scholars between 4 and 18 years of age,

CAMPO SECO—Scholars between 4 and 18 years of age,
136. Teacher, Mrs. Maria Hill. Trustees: J. B. McGilvery, J. Gabbert, Wm. O. Gray.

CHILI GULCH—Scholars between 4 and 18 years of age, 52. Teacher, Mrs. Hester A. Morse. Trustees: Mr. N. Beals, Mr. Cassil, Mr. L. R. Morse.

GOLDEN GATE—Scholars between 4 and 18 years of age, 29. Teacher, Miss Faulks. Trustees: L. M. Schrank, J. Dickerson, A. R. Young.

WEST POINT—Scholars between 4 and 18 years of age, 56. Teachers, M. M. Collier and Miss L. J. Hope. Trustees: S. G. Briggs, A. M. Hope.

MURPHYS—Scholars between the ages of 4 and 18 years, 124. Teachers, L. W. Keys and Miss Mary A. Kelly. Trustees: Wm. Jones, Volney Shearer, R. Senter.

VALLECITO—Scholars between 4 and 18 years of age, 90. Teachers, M. Holmes and T. W. Brotherton. Trustees: A. Taylor, J. Booth, M. W. Hall.

Two years later Superintendent Thompson gives another report on the conditions of the schools in Calaveras County which was published in the Calaveras Chronicle, November 11, 1861. It is worth quoting as he takes pride in pointing out the advancement made in the public school system.

No District in the County that has drawn public funds for the last year has had school for a less period than four months during the year, and the average of the districts is over seven months; that is, the children
on an average in the 13 Districts from which I received reports have had the privilege of attending school for over seven months of the last school year. This is nearly a month more than last year.

The total number of children entitled to draw public money the coming year is 1822; last year, 1600. They are divided as follows:

San Andreas, 346; Campo Seco, 111; Upper Calaveritas, 123; Mokelumne Hill, 220; Pleasant Springs, 66; Chili Gulch, 109; West Point, 78; Angels, 152; Alta- ville, 217; Murphys, 177; Vallecito, 70; Brushville, 93; Comanche, 56; Total, 1822.

The census returns from Cave City shows that they have 48 school children for which they would have been entitled to draw, if the teachers had made a report. This makes the second year that the Cave City District has lost its share of the school fund, through the neglect of its teachers.

The total amount spent for school purposes during the school year is a little over $13,000.00. About one-half this amount was raised by rates and private subscription, one quarter from the State fund. This includes $4,000.00 expended at Murphys for a school house.

The amount raised by different districts by rates and private subscription, are as follows:

San Andreas, $480; Campo Seco, $268; Upper Calaveritas, $232; Mokelumne Hill, $533; Pleasant Springs, $420; Chili Gulch, $167; West Point, $750; Angels, $663; Alta- ville, $125; Murphys, $3100; Vallecito, $267; Brushville, $150; Comanche, $300; Total, $7455.

As some future time I will give through your paper a short history of each school in the County.

R. Thompson, County Supt. of Common Schools.

W. C. Mosher was County Superintendent in 1866 and his report published in the Calaveras Chronicle, March 17, 1866, stated that the amount expended on public schools between 1852 and 1865 had amounted to $96,041. The total school attendance for the past year had been 1275 with an average daily attendance of 694 in twenty-two schools. The total expenditures had been $15,878, and $10,752 of this amount had been for teachers' salaries.
The school enrollment had almost doubled in 1870 and six new school districts had been added. County Superintendent Wells reports that there were 2151 pupils in attendance in the following schools:

- Angels, 145
- Altaville, 107
- Brushville, 78
- Carson Hill, 39
- Campo Seco, 90
- Cave City, 47
- Comanche, 100
- Chili Gulch, 66
- Copperopolis, 142
- Douglas Flat, 44
- Eureka, 57
- Fourth Crossing, 75
- Mosquito Gulch, 19
- Murphys, 172
- Mokelumne Hill, 196
- Negro Gulch, 48
- Petersburg, 84
- Pleasant Springs, 16
- Paloma, 47
- San Andreas, 159
- Spring Valley, 35
- Sheep Ranch, 30
- Salt Valley, 20
- Telegraph City, 97
- Upper Calaveritas, 43
- Vallecito, 82
- West Point, 73
- Washington Ranch, 40
- Total, 2151.

This apparently was the largest enrollment up to this time in the schools of the county and exceeded the present enrollment. The enrollment in 1950 in both elementary and high schools as reported by Superintendent Chas. Schoener was 1863. This was slightly more than the 1822 reported in 1861.

By 1890, according to a report of Superintendent William Turner, the number of pupils in the schools had increased to 2424. This was the largest attendance ever reported in the county. He also reported that the county had fifty-three school buildings, one of brick, and employed sixty teachers, twenty-five of whom held grammar grade certificates and thirty-five primary certificates. There were 2407 pupils in attendance in the fifty-seven schools of the county in 1904. The number of pupils was declining but the number of schools had increased by three over the number in operation in 1890. This was the largest number of school districts established. After this there was a decrease to the present twenty-four.

The total number of teachers were then seventy-three, employed at the average salary of $63.07 a month.

There are many old school buildings in Calaveras County. Many of them should have been replaced with new, modern ones, as they are inadequate. The residents of Douglas Flat claim they have the oldest building in use, giving the date 1854 for its construction. There are no records that substantiate this claim, but the oldtimers say it was built the same year the first little school was built in Murphys.

The enrollment must have been rather small at Douglas Flat because on June 7, 1859, the Board of Supervisors ordered the Douglas Flat and Murphys School consolidated under the name of Murphys District.
The Altaville Grammar School was erected in 1858, which makes it one of the oldest grammar schools in California. Built of brick manufactured in a local kiln, the building measures twenty-four feet wide by thirty-six feet long. The land upon which the school originally stood was donated by M. D. Harmon. Most of the funds required to build the school were raised at a dance held in the billiard room of the Prince & Garibardi building, with the furnishings being financed by various social events in the community. An item in the San Andreas Independent of January 8, 1859, notes: "The new schoolhouse is nearly completed. It stands upon a beautiful natural eminence and presents quite a pleasing ornament as well as a useful appendage to the town." It remained in use until 1950. Left alone and abandoned, the building was on the verge of collapse when, in 1981, a campaign was launched to save the historic structure. The Calaveras County Historical Society spearheaded the project, and along with the County of Calaveras, Angels Camp, and local citizenry, helped to raise $28,000 to restore and move the school to its present site near Hwy 49. The 90-ton building was moved in December of 1983, and in 1989 the final restoration was completed. The historical society currently maintains the structure, whose front portion is generally open, allowing visitors a look at the typical schoolroom of the last century.

II. REPRODUCTION RELEASE:

In order to disseminate as widely as possible timely and significant materials of interest to the educational community, documents announced in the monthly abstract journal of the ERIC system, Resources in Education (RIE), are usually made available to users in microfiche, reproduced paper copy, and electronic media, and sold through the ERIC Document Reproduction Service (EDRS). Credit is given to the source of each document, and, if reproduction release is granted, one of the following notices is affixed to the document.

If permission is granted to reproduce and disseminate the identified document, please CHECK ONE of the following three options and sign at the bottom of the page.

<table>
<thead>
<tr>
<th>Level 1</th>
<th>Level 2A</th>
<th>Level 2B</th>
</tr>

| PERMISSION TO REPRODUCE AND DISSEMINATE THIS MATERIAL HAS BEEN GRANTED BY |
| TO THE EDUCATIONAL RESOURCES INFORMATION CENTER (ERIC) |
| Sample |

Check here for Level 1 release, permitting reproduction and dissemination in microfiche or other ERIC archival media (e.g., electronic) and paper copy.

Check here for Level 2A release, permitting reproduction and dissemination in microfiche and in electronic media for ERIC collection subscribers only.

Check here for Level 2B release, permitting reproduction and dissemination in microfiche only.

Documents will be processed as indicated provided reproduction quality permits. If permission to reproduce is granted, but no box is checked, documents will be processed at Level 1.

I hereby grant to the Educational Resources Information Center (ERIC) nonexclusive permission to reproduce and disseminate this document as indicated above. Reproduction from the ERIC microfiche or electronic media by persons other than ERIC employees and its system contractors requires permission from the copyright holder. Exception is made for non-profit reproduction by libraries and other service agencies to satisfy information needs of educators in response to discrete inquiries.
