As part of an effort to reduce the costs of attending college, in 1996 New Hampshire College began developing a three-year bachelor's degree program in Business Administration with the goal of reengineering the existing four-year, eight-semester program into a competency- and outcomes-based, team-taught, cohort-based, interdisciplinary, and integrated academic program. The development team surveyed faculty in an attempt to reduce redundancy between courses, with the resulting program utilizing a modular design and intact student workgroup structure. Thirteen competencies, which measured outcomes, were also developed. Student academic experiences are reinforced by practical experience as employees and entrepreneurs. Yearly themes, such as "Student as Leader and Manager" or "Humanities and the Individual," are used to create additional cohesion to the academic experience. Due to the program's unique structure, students do not receive academic credit for a module until they meet the requisite competency levels. The appendices, which constitute more than half the document, include a definition of terms; a list of the 13 competencies; first-year modules and program themes; a computer technology module; the traditional Business Administration program; a comparison with competing educational paradigms; an annotated bibliography; survey data and analysis forms; a year-one competency reinforcement plan and course equivalent underlay; and a printout from the program's website. Redesigning the curriculum to emphasize core competencies is undeniably difficult. Those who undertake such a challenge must be willing to put aside long-held beliefs about what a program must include, raise questions that traditionally have been avoided, and test assumptions about what students know and what curricula now achieve. (Diamond, 1997)

I. Introduction: Three Year Bachelor's Degree in Business Administration

This paper describes the development of a three year, 6 semester, 120-credit bachelor's degree program in business administration. It involved the complete re-engineering of the existing traditional four year 8 semester degree program into a competency and outcomes based, team taught, cohort-based, inter-disciplinary and highly integrated academic program. This new program eschews traditional courses for flexible academic experiences called “modules” and promises equal or better learning outcomes than the four year program.

New Hampshire College was one of two colleges, out of over 2000 applicants, to receive a Fund for the Improvement of Postsecondary Education (FIPSE) grant to produce a three year undergraduate degree program to reduce the cost of going to college. A team of six faculty and professional staff chose business administration as the target program and conducted research that led to the creation of a set of thirteen competencies that students must master in order to
attain their undergraduate degree. [Appendix A contains a glossary of terms. Appendix B lists the competencies.] This research led to the development of a set of highly interrelated educational experiences (modules) that support student competency development. [The Year One modules and their sequence schedule can be found in Appendix C.]

This curriculum development effort involved nearly the entire undergraduate college faculty and resulted in a three year curriculum designed to foster student mastery of these competencies. The first cohort of 15 students entered the program in September 1997 and, without any attrition, these students are now completing their second semester of study. A new and larger class of students is currently being accepted for admission in September 1998.

Competency development support is interdisciplinary and cross-curricular throughout the three-year curriculum. Major academic experiences are grouped together into modules that are then divided into 3-credit sub-modules. All are tied together with intra- and inter-module common threads. [See Appendix D.] The foundations for eleven of the thirteen competencies are laid in Year One. The first semester Year One modules provide the foundations for competencies which are then built upon and reinforced in second semester modules and throughout Years Two and Three. Students enter as a cohort and move together as a group through the entire 6 semester program where competencies are built upon and reinforced.

Student proficiency in the thirteen competencies are meant to be developed over the three years in all modules to some degree with the end result of complete student mastery of each competency. Competency development and reinforcement occur at varying levels of intensity in each academic experience and are planned and closely coordinated through a master planning document. [See Appendix D.] Progress assessment is a weekly activity. Students always know where they stand with respect to competence mastery.

Academic value has been added to the curriculum in a number of areas. Computer information technology is integrated into all curricular facets as a program requirement. An integrated "business partnership" adds practical value to the academic experience by matching students with organizations that are committed to supporting the academic program. Also, umbrella
academic themes bind business and liberal arts in each year. The Year One themes, "Humanities and the Individual" and "Student as Leader and Manager" are reinforced through a summer reading list, a variety of academic year activities and assignments.

A very high degree of instructional planning and implementation integration also adds value to the curriculum. Instructors not only team teach, but all work closely together on a regular basis to coordinate and integrate student learning experiences and activities. Faculty members whose particular modules have ended continue to be actively involved with the program by serving as "consultants" to the students and to current instructors throughout the academic year.

There are one-week long integrating experiences at the end of each of the six semesters that are intentionally designed to help students synthesize module material, reinforce knowledge and skills and to understand the relevance and relatedness of their learning experiences.
New Hampshire College was founded in 1932 and is accredited by the New England Association of Schools and Colleges, the Association of Collegiate Business Schools and Programs, the New Hampshire Post-Secondary Education Commission, the New Hampshire State Department of Education for Teacher Certification and the American Culinary Federation Education Institute. The College offers Associate, Bachelor, Masters and Doctorate degrees. The Undergraduate School is divided into three divisions, Business, Liberal Arts, and Hospitality, which together offer 40 major areas of concentration leading to the bachelor's degree and 15 minors. All majors, including the Three Year Degree program, follow the traditional academic calendar of two fifteen-week semesters per academic year. [Appendix E shows the College mission, academic calendar, divisional structure, history and academic programs.]

The traditional four year Bachelor's of Science in Business Administration is an 8 semester degree program housed in the Business Division, while the Three Year Bachelor's of Science in Business Administration is a 6 semester program designed from the "ground up" as a custom three-year academic experience. The Three Year Degree program is not a "rescheduling" or a compression of the four year program. The development team used some of the distinctions that Barr and Tagg (1995) make between the "instruction" and "learning" paradigms as a guide in designing the new program. For example, instructors are considered primarily as "designers of learning methods and environments" rather than primarily as "lecturers." Also, the academic degree "equals demonstrated knowledge and skill" rather than "accumulated credit hours." [See Appendix F for the Barr & Tagg chart that compares these educational paradigms.]

The Three Year Degree program has these characteristics: students actively participate in the learning process; technology is fully integrated to facilitate and advance this learning process; mutually reinforced, highly integrated and coordinated educational experiences and activities are tightly woven throughout the curriculum; unnecessary redundancy and overlap in the curriculum are eliminated.

Additional characteristics include: close working relationships with for-profit and non-profit organizations that complement student learning in the classroom; students participate in intact workgroups both inside and outside of the classroom; academic experiences inside and outside of
the classroom are sequenced so that *foundations* for the competencies are acquired in a timely manner, and are reinforced, expanded and reflected in a multitude of innovative and diverse academic experiences, which include the business partnerships; a cohort-based program.

The program mission is described in Figure 1.

---

**Figure 1**

**Three Year Degree Program Mission**

The mission of the three-year baccalaureate program is to educate selected, qualified students who desire to major in Business Administration/Business Leadership. The program is designed so that students can:

a. *Succeed* in acquiring an entry-level position and advance in their chosen professions and careers.

b. *Realize* individual potential and contribute to the betterment of the local community and society at large.

c. *Be* effective leaders and proponents of change.

d. *Become* successful lifelong learners.

The college recognizes its obligation to deliver a high quality program that prepares students for a profoundly changing business, cultural and geopolitical environment so they have the best chance for personal and professional success and are equipped to provide effective leadership. To achieve this mission, students must work to accomplish certain academic competencies. The college must adopt the appropriate academic strategies and provide appropriate resources to ensure the success of the program. The new paradigm under which this program will operate thus recognizes the central role of the student, the faculty, and college administrators to work jointly to accomplish the academic mission.
III. Competency Determination

The development team of four faculty and two professional staff began their work in February 1996. They gathered numerous professional society curricular recommendations, studied related research, surveyed existing competency-based programs and sought ideas from faculty colleagues. This information was analyzed, synthesized and judgements were made. The process produced the thirteen competencies. [See Appendix B]. An annotated Bibliography of items that the team studied appears in Appendix G.

The team adopted this definition of "competency":

A competency or skill is defined as "the ability to demonstrate a system or sequence of behavior that is functionally related to attaining a performance goal." (Boyatzis, 1982, p33).

Two works in particular influenced the team's thinking: "A faculty program of assessment for a college level competency-based communication core curriculum" (Aitken & Neer, 1992) identified 12 core curriculum competencies based upon extensive research. Also, from the beginning, the development team was committed to the incorporation of a significant liberal arts component into the business curriculum. "Exploring common ground in liberal and professional education" (Stark & Lowther, 1989) demonstrated how to integrate professional and liberal study in order to achieve commonly valued outcomes.

Although a number of accrediting associations were contacted, none had developed explicit competencies and only one had stated outcomes. See Figure 2.

---

**Figure 2**

**Accrediting Associations Contacted**

- New England Association of Schools and Colleges (stated outcomes)
- Accrediting Council on Education in Journalism and Mass Communications
- American Assembly of Collegiate Schools of Business
- Computing Sciences Accreditation Board
- National Council for Accreditation of Teacher Education
- Accreditation Council for Independent Colleges and Schools
- Association of Collegiate Business Schools and Programs
With much study, analysis and discussion, the team developed 13 competencies that serve as the basis for the outcomes of the new program and at the same time satisfy the challenge to ensure that the students graduate as educated persons. All of this deliberation and analysis took place within the context of the existing 120 credit four year Business Administration Degree program where 27 credits constituted the major and the rest constituted the New Hampshire College and Business Division core credits, and Allied course credits. [Appendix E contains information on the College and courses in the program.]

In addition to these 13 competencies, the team constructed areas of competence/knowledge to be used in analyzing existing course content and which would be needed to build Three Year Degree program modules and outcome assessments. See Section IV.
IV. Analyses of Existing Courses

The goal was to redesign the existing four year 8 semester degree curriculum so that it could be offered in three years (6 semesters) cutting the cost of college by 25% without sacrificing learning outcomes. One way this could be done was to eliminate the unnecessary redundancies that existed in the established curriculum, while at the same time maintaining 120 credits of "coursework", and by streamlining the learning process. But first, the team had to understand what topics and skills were offered in each of the 40 courses that constituted the existing degree. Then: where they were sequenced in the program of study; whether these topics/skills were introduced, reinforced or were foundational (along with their level of emphasis) in a particular course; and under what general competence/knowledge categories they fell.

All existing courses in the college's traditional four-year Business Administration Degree program were given close scrutiny. [The four year Business Administration "Program Planning Sheet" is in Appendix E along with the College, Business Division and Business Administration course lists.] Note that 27 credit hours are needed to satisfy the major area, the College Core requires 48 credits, the Business core requires 24 credits and Allied courses constitute 21 credits. Faculty members who taught these forty 3-credit courses completed a comprehensive and detailed curricular survey. Many faculty members attended workshops to learn how to correctly respond to the survey.

The survey instrument was comprised of three data collection forms: [See Appendix H.]

A) Common Professional Component Course Analysis
B) Liberal Arts Component Analysis
C) General Education Competencies Analysis.

Each of these three forms contained multidimensional aspects:

D) "Course topics" rows, which the course instructors filled in, and
E) "Areas of competence/knowledge" columns, which are different for each of the three forms.

The development team constructed these during the competency determination phase described in Section III of this paper.

In addition, each [D by E] cell in the instrument required two multidimensional responses:

F) Topic emphasis level (high, moderate, low) and
G) Levels of competence/knowledge (initiating, foundational, reinforcement).
The collected data were compiled into "Course Data Summary Sheets" and a comprehensive multidimensional meta-analysis helped to identify what and where unnecessary redundancies and overlaps existed. This meta-analysis also helped to identify what and where foundational material was, or was not, built upon in the existing four year Business Administration program. Example meta-analyses "grids" from each of the Common Professional, Liberal Arts and General Education Component Course Analysis forms are shown in Appendix I.

The results that were collected and summarized in the meta-analysis were utilized by the team, and by instructors recruited for the Three Year Degree program, to create and integrate modules in order to foster topic and competence mastery.
IV. Module Design and Integration

As a result of the above meta-analysis, college faculty totally reconstituted the curriculum into new academic experiences: modules and their accompanying 3-credit submodules. These modules cover all of the existing course topics without the unnecessary redundancies and are specifically designed to contribute to competency mastery. Each module and submodule are inextricably linked to all of the others. Mutually reinforcing intra-modular and inter-modular learning activities and cross-disciplinary coordination are module hallmarks. The modules and submodules for Year One are shown in Appendix C. Note that each submodule is equivalent to 3 academic credits.

An integral part of the curriculum is intact student workgroups that are active in and out of class. Outside of class, students work with actual businesses. Initially, students learn about business operations. Later in the program, groups work with business enterprises helping them to develop solutions to real problems. These particular non-credit business workgroup experiences are a value-added feature of the Three Year Degree program. See the "Labs and Field Trips" modules in Appendix C.

Year One modules are carefully sequenced to provide students with the foundations for the competencies in the first part of the year. Then, these competencies are built upon and reinforced in the latter part of Year One and throughout the second and third years. Appendix J shows a partial "Competency Reinforcement Plan" for Year One focusing upon the Computer Information Technology module. Notice how all of the submodules are explicitly linked to various competencies.

Provisions have been made for submodules in Year One to map directly into existing courses in the traditional four year program. This mapping facilitates ease of credit transfer should a student leave the Three Year Degree program in any of the two Year One semesters. See the partial example in Appendix J that focuses upon the Computer Information Technology submodules. There are ten 3-credit submodules in Year One that map directly into existing courses. The two weeks of Integrating Experience count as 3 credits. Public speaking is spread throughout Year One and thus corresponds to a public speaking 3 credit traditional course. Study skills and college life adjustment are spread throughout Year One. This corresponds to a freshman experience 3 credit traditional course. The three year student thus earns 39 credits in Year One.
An "Integrating Experience week" at the end of each semester affords students the opportunity to consolidate knowledge and skills and to learn even more through research and presentation. Together, these two integrating experience weeks constitute a total of 3 academic credits in each of the three years.

Competency development and reinforcement occur at varying levels of intensity in each of the modules and are coordinated and planned through a comprehensive Master Planning document. An example can be found in Appendix D for the Computer Information Technology - Advanced submodule. The module plan is divided into three parts: "Strategy", "Goals" and "Implementing Activities." Note that the implementing activities are designated by whether or not they are foundational, reinforcing and/or pre-foundational.

The yearly program themes are meant to add even more cohesion to the academic experience. These themes, "Student as Leader and Manager" and "Humanities and the Individual" in Year One, for example, help keep a common focus for the academic year and are addressed through guest lectures, module related readings, field trips, a summer "reading" list and other activities.

Modules are team taught, whenever possible, to enhance the educational experience for the students and to encourage interdisciplinary collaboration by participating faculty members. All instructors in the program are "hired" for the entire academic year even though their own module may constitute only a portion of the year. The idea is that all instructors comprise the "teaching team" and need to be available for students and for other instructors as consultants throughout the year. Teamwork is paramount. All instructors in the currently running modules physically meet on a weekly basis to review module and student progress and to coordinate instructional learning activities such as joint assignments and evaluations.

Students are continually evaluated in each of the modules and are thus able to know, on a weekly basis, where they stand with respect to module completion and competency mastery. Students who finish a module within the module time-frame but who have not mastered one or more competency levels, do not receive academic credit for the module until the competency level deficiency is remedied. Although total competency mastery is not expected until the end of Year Three, mastery at certain levels of each competency is expected throughout the three years.
V. Educational Communication and Delivery System: The Virtual Classroom

Because of the shortened time span of the new program, compared with the traditional four year program, and because of the focus on team teaching and student workgroups, a different kind of educational communication and delivery system was called for. While students still meet face-to-face as a cohort in classroom sessions, a modern World Wide Web-enabled computer-based communication system supports the cross-curricular and highly integrated nature of the modules and the entire program.

The notion of "classroom" has been greatly expanded by adopting a technological infrastructure that electronically connects students, teachers and business partners together over the college computer network and through the Internet. This communications infrastructure facilitates individual and group learning experiences inside and outside of the regular face-to-face classroom and helps to make possible the ongoing assessment of how students are doing with respect to competence mastery. One of the program's physical classrooms is completely wired for 30 networked ports connected to the campus network, the Internet and the World Wide Web. A state-of-the-art computer projection system is provided for classroom presentations along with a dedicated laser printer. All dormitory rooms are similarly connected to the network, as are many other campus locations.

All students and faculty members in the program are required to "own" network-ready laptop computers, which they can take with them anywhere on and off campus. Thus, students and faculty can be connected to and participate in the program's "virtual classroom" through the World Wide Web from anywhere in the world with an Internet connection.

The most basic component of this electronic delivery system is email with attachment capability. Here students and faculty can exchange private messages and transfer files with ease. Constant communication and access is crucial in such a tightly woven program. An asynchronous World Wide Web-enabled conferencing system permits students and faculty to publicly post ideas and assignments, hold threaded discussions and to make available just about any kind of electronic file (video, sound, HTML, spreadsheet, database, word processing, etc.). Web-based synchronous chat rooms are provided for student and instructor use.
These communication modalities facilitate the teamwork that is so crucial in this program of study. Student groups "meet" in cyberspace to work on projects outside of the physical classroom. Research, collaborative work on draft assignments, and the "publishing" (posting) of interim and finished products are facilitated by the virtual classroom collaborative tools available in the program. Currently, the program uses a set of tools provided by the College's Distance Education Program. Soon, the Three Year Degree program will begin utilizing a commercial software product, IBM-Lotus LearningSpace, which has full synchronous and asynchronous functionality including on-line testing modalities.

Students and participating faculty members receive intensive training in the use of the electronic communications and delivery system prior to the start of each academic year. For the students, this takes place prior to College freshman orientation week. Three Year Degree program students arrive on campus several days before the other freshman arrive for orientation. Program orientation activities, including "virtual classroom" training, are designed so that three year students have a chance to get to know one another, their professors and program expectations. These students then take part in all of the other regular freshman orientation activities so that they can be fully integrated into the freshman class.
VI. Higher Education Significance: New Demands and Innovations

This complete re-engineering of a four year undergraduate major involved the cooperation of most of the College faculty and the development of a number of novel curricular assessment tools and analysis techniques. The multidimensional three-form course assessment and the subsequent meta-analysis of the resulting data along multidimensional lines appear to be unique. This analysis gave valuable insights into the existing four year curriculum and exposed redundancies that could be judged as either necessary or unnecessary. This kind of understanding and clarity helped the team to design the academic experiences for the three year curriculum.

The high degree of academic coordination in the development of student competence mastery and module delivery required a significant re-orientation of traditional academic structure, culture and college politics. Departmental lines of demarcation as well as disciplinary walls were removed. For example, English professors and Computer Information Systems professors physically met each week, and in cyberspace on an almost daily basis, to discuss student progress, course content and to collaborate on shared assignments and exams.

The new Three Year Degree program class schedule did not mirror the rest of the College's course meeting times and thus required administrative and faculty scheduling adjustments. A different educational paradigm, "learning" as opposed to "instructional", and new computer communications tools had to be understood and assimilated into the pedagogical repertoire of participating faculty members.

The team had the challenge of educating faculty, professional staff and administrative colleagues about a radically different program of study housed within and utilizing the resources of a traditional institution of higher education. A number of public and private informational meetings were held on campus and numerous informational newsletters, team meeting minutes, and reports were distributed and posted on the College's Web site. [See the Three Year Degree Program Web site in Appendix K.]
The result of this 18 month intense developmental effort is that a select group of students reduce their time in college and their cost by 25%. At the same time they are promised to receive at least the same quality education as students in the traditional four year program.

This kind of non-compressed competency and outcomes based three year bachelor's degree program is unique in academe and just may be the harbinger of a fundamental change in the way undergraduate education is structured and delivered in the future.

Far-reaching curricular reform may appear overwhelming at first. But until we structure our curricula so that every student has the opportunity to learn and use core skills, and until we can confidently assert that we know how to measure each student's mastery of those skills, we will not give our students the background that they need for life beyond academe. (Diamond, 1997)

APPENDIX A

Definition of Terms
**DEFINITION OF TERMS**

**COMPETENCY:** A competency or skill is defined as “the ability to demonstrate a system or sequence of behavior that is functionally related to attaining a performance goal.” (Boyatis, 1982, p33)

**MODULE:** One or more associated academic areas of study that can be logically grouped together or areas of lesser relatability that can be grouped under a theme to achieve the desired academic outcomes and/or competencies.

**MODULAR SUB-COMPONENT:** Credit-bearing academic experience similar to a traditional course.

**CUSTOM-DESIGNED:** A research-based program intentionally constructed to achieve the expected outcomes of the Bachelor’s Degree in Business Administration and the stated 13 competencies in this program of study.

**COMPETENCY-BASED:** Program of study that is built upon the achievement of the 13 competencies.

**VALUE-ADDED:** Coordinating and integrating activities that are designed to enhance the value of the learning environment to include computer and information technology, business partnership program, yearly academic themes, inter-modular coordination within a semester, inter-modular coordination between semesters and inter-modular coordination between years, and semester ending integrating experience.

**HIGHLY INTEGRATED:** All instructors teaching modular sub-components each semester coordinate academic experiences, activities, themes, and competency-reinforcing implementing activities.

**STUDENT CENTERED LEARNING:** Instructor facilitates student learning and development as opposed to faculty member being the center of attention as a disseminator of facts.

**CROSS-CURRICULAR COMPETENCY DEVELOPMENT:** Refers to establishing a foundation for each competency in the first year and the reinforcement of those competencies in all appropriate modular sub-components during the three-year period.

**BUSINESS PARTNERSHIPS:** Local, regional and national businesses acting as host sites to provide progressively stimulating real-world experiences which complement the students’ academic experiences.

**INTEGRATING EXPERIENCE:** Comprehensive academic experience that requires students to demonstrate skills, knowledge, and competency achievement from that semester and previous semesters. The integrating experience is both formative and cumulative over the three years.
APPENDIX B

The Competencies
THE COMPETENCIES

1. **Communication**: To master written, verbal, and electronic communication as well as reading comprehension that is appropriate for an entry level management position and for advancement thereafter.

2. **Computer and Information Technology**: To master and apply state-of-the-art computer/information-based principles and business applications.

3. **Research**: To conduct primary and secondary research and understand, analyze, and interpret the results of the research.

4. **Problem Solving**: To conduct analytical and creative problem detection and problem solving.

5. **Organizational Leadership**: To understand how and be able to function as an effective team, group, and organizational leader.

6. **Group Membership**: To understand how and be able to function as an effective group and/or team member.

7. **Strategic Management**: To think, analyze, manage, and plan strategically.

8. **International Perspective**: To achieve a multi-disciplinary, global perspective in order to understand others and make more effective international business decisions.

9. **Interpersonal Skills**: To develop a broad range of interpersonal skills to use in multicultural and diverse work force settings.

10. **Business Directions**: To master the importance, significance, and meaning of business trends in their larger historical, political, economic, social, cultural, geopolitical, and technological contexts.

11. **Legal and Ethical Issues**: To understand the legal and ethical considerations and implications of personal, social, business and international business behavior and activities.

12. **Quantitative and Qualitative Analyses**: To understand and apply quantitative and qualitative methods of analysis as a basis for making business decisions.

13. **Humanities and Sciences**: To understand and appreciate how science, history, literature, and the arts impact society, politics, business, economics, culture, and technology trends.
APPENDIX C

Year One Modules
&
Program Themes
A WALK THROUGH OF THE FIRST YEAR IN THE THREE-YEAR PROGRAM IN BUSINESS ADMINISTRATION

The purpose of this walk-through is to describe where we “want to get to” in the first year of the three-year degree program. The academic design includes the following:

1. modular groupings of course equivalents,
2. laying of foundation for the competencies,
3. introduction, reinforcement, and development of all competencies,
4. central themes integrating content within modules, and
5. year-long, thematic integration of content across curriculum.

The three-year program begins prior to students’ arriving on campus. Students will receive suggested reading lists and selected materials regarding essential skills. The formal program begins with an on-campus orientation week before the start of classes.

First Semester
During the first 4.4 weeks of class, students focus on two modules, Communications and Computer Information Technology which, as part of larger academic components, lay the indispensable foundation for the written and computer competencies.

Each of the two modular components have intensive 40 class hours in 4.4 weeks introduce/strengthen critical learning skills which future modules will reinforce and develop.

During the next 8.6 weeks, students build on their foundation of research and presentation from the Communications module as they center their attention on the Management module which presents problem-solving interpersonal skills, group/team membership, and organizational leadership. The students continue their Computer module, learning concepts and applications.

Each of the three modular components meets 4 hours and 40 minutes a week. Students also participate in a non-credit lab/field trip block. The semester concludes with a one-week, 20 hour integrating experience.

Second Semester
During the first 4.4 weeks of the second semester, students focus on foundations for business directions: legal, ethical and international perspectives. These components are incorporated as follows:

- three 13-week modules, each meeting 3 hours and 45 minutes a week
- one intensive 4.4-week module, meeting 9 hours weekly

The total contact class time during the first 4.4 weeks of the second semester is 19 hours and 30 minutes each week.

During the remaining 8.6 weeks of the semester, students concentrate on laying a foundation for the strategic management competency with approximately 14 hours of their class time dedicated to three subject areas: Accounting, Marketing, Behavioral Sciences.

Students participate in the business partnership program and, as they did in the first semester, they take part in a non-credit lab/field trip block.

The semester concludes with a one-week, 20 hour integrating experience. Students will participate in examinations/evaluations during the fifteenth week of both semesters.

MODULE DESCRIPTION:

This module goes well beyond the fundamental "computer literacy" component required for all New
Hampshire College students. It is designed to promote a deeper and broader understanding of computer
concepts and applications that support both academic and professional related requirements.
Topics include: The major components of both personal and mainframe computer systems in terms of both hardware and software; business information systems and computer application software; data structures, databases and data storage concepts/techniques; computer programming; network communications and the Internet; social, philosophical, ethical and economic implications of computers; computer center operations; and trends in the computer industry like artificial intelligence.

In addition, the student develops further computer-related proficiencies in support of his or her college studies. This is accomplished, in part, by the use of Microsoft Office 97.

MODULE OBJECTIVES:

This Computer Information Technology Module (which includes the CIS100 3-Year and CIS195 3-Year sub-modules) lays the conceptual and technological skills foundations required to master Competency #2.

Competency #2

"To master and apply state-of-the-art computer/information-based business applications."

Knowledge and skill mastery is commensurate with the needs of an entry-level management position in a Fortune 500 company.

(From the Three-Year Degree Program Strategic Plan).

Upon successful completion of CIS195 3-Year, the student should be able to:

1. Achieve further knowledge and mastery of the concepts of data representation and information theory; the hardware and architecture of a computer system; systems and applications software (including multimedia and educational software); telecommunications and networking infrastructure; Internet and Information Super Highway; data security and control; information technology careers; purchasing computers; computer files, databases and data storage devices in support of business operations; effective information systems in organizations; computer programming; artificial intelligence.

2. Demonstrate advanced skill mastery in computer word processing, graphical presentations, integration of word processing and graphical presentations, E-mail, asynchronous electronic discussion groups, synchronous electronic chat, Internet and World Wide Web navigation, database management systems, electronic spreadsheets. Demonstrate skill mastery in aspects of Web site construction.

3. Achieve further knowledge and understanding of the concepts of privacy and ethical issues; social, economic & philosophical implications of computers; historical and contemporary uses of computer information systems in business and other organizations; present and future impacts of computers on business and society at large.

This module supports the Three-Year Degree Program Integrating Themes of: "Student as Leader and Manager" and "Humanities and the Individual." This is accomplished by coordination of related assignments with other non-computer modules and through a series of videos, some of which are produced by PBS and Films for the Humanities and Sciences. In addition, this module supports Competencies 1,3,4,5,6,9,10, 11.

* Do prior to class session. ** Do prior to class session. Entails Steps and Explore. Course Lab Assignments are recommended (but are optional) unless explicitly assigned. *** Dr. Seidman's days: Assignments are due via email before the start of class. Professor Funk's days: Assignment due dates vary. To be discussed in class.
**WRITING COMPONENT**

This module is specifically designed to support the New Hampshire College policy of requiring all students to expand their proficiency in expressing themselves in writing. Therefore, all written work is graded on both communication and technical proficiency. A word processor must be used to prepare all papers.

**ASSIGNMENTS:**

**Readings:** Students are expected to complete all text and supplementary reading assignments prior to the class meeting of the date that the assignment is due (see MODULE SCHEDULE). If absent from class, it is the student's responsibility to obtain any supplementary readings that were distributed or assigned.

**Course Lab Assignments:** Course Lab Assignments (P) should be completed prior to the class meeting of the date in which they are assigned.

**Homework:** The STANDING HOMEWORK ASSIGNMENT is to complete the "Quick Check" exercises in each section that is assigned for reading in both of the Parsons (P) & (O) texts. While students need not submit these "Quick Checks", successful completion of them indicates probable understanding of the readings. Scheduled assignments are shown in the MODULE ASSIGNMENT SCHEDULE. Any additional homework will consist primarily of written assignments and computer assignments given in advance of their due-dates. If absent from class, it is the student's responsibility to obtain any additional assignments.

**Budgeting Time.** Students should expect to spend between 10-20 hours outside of class each week on readings, assignments and computer work.

**EVALUATION:**

Students are evaluated based on assignments and tests. Tests are designed to ensure that assignments are prepared and understood by the student.

</tbody>
</table>
Students can always tell how well they are doing by dividing their cumulative points for exams and assignments by the total points possible for each assignment as shown above. For example, suppose a student earns 20 on Quiz #1 and 15 on Quiz #2. He or she would be doing B+ work in the module to this point \[ \frac{(20+15)}{40} = 0.875 \].

The Instructors reserve the right to modify the grading structure to consider additional assignments, quizzes, the results of exams, attendance, or other factors deemed appropriate.

If student needs any special accommodations for exams, please let the Instructors know at least **two classes** prior to the exam.
INSTRUCTORS' POLICIES

1. Students are encouraged to discuss assignments with classmates and to collaborate to a limited extent for educational purposes. However, all assignments must individual work. For group projects, all assignments must be that of the student and others in his or her group. Copying assignments is plagiarism, which is subject to course failure. The results of copying always show up on exams.

2. Adhere to Assignment Due Dates. Grades for late assignments will be reduced by 10% of the value of the assignment for each day late. An assignment is considered "submitted" when the instructor receives it.

3. Three unexcused absences are cause for withdrawal from the module. Students have the obligation to contribute to the learning process by attending and being prepared for class, and by completing assignments on time.

4. Papers with egregious grammar and spelling errors will not be accepted. Use your grammar and spell checkers!

5. A student's grade is determined by the quality of his or her performance in the module. Grades are earned according to the following guidelines.

   A = Outstanding Work of distinctive quality not usually seen in other work. Shows superior grasp of module material and initiative on the part of the student. [A- = 90-93; A = 94-100]

   B = Good Work of above average or superior quality but less than outstanding. [B- = 80-82; B = 83-86; B+ = 87-89]

   C = Average Work of acceptable quality but without distinction. Meets stated requirements. [C- = 70-72; C = 73-76; C+ = 77-79]

   D = Passing Work of less than average quality but meets minimum requirements. [D = 60-64; D+ = 65-69]

   F = Failing Fails to meet minimum requirements.

DEPARTMENT POLICIES

The Computer Information Systems Department has identified three categories of cheating. The categories and action taken when cheating is encountered are:

1. Theft Fail module and refer to Dean of Students.
2. Excessive Assistance Regrade based on exams.
3. Copying All involved students fail the module.
THE COMPETENCIES*

1. Communication: To master written, verbal, and electronic communication as well as reading comprehension that is appropriate for an entry level management position and for advancement thereafter.

2. Computer and Information Technology: To master and apply state-of-the-art computer/information-based business applications.

3. Research: To conduct primary and secondary research and understand, analyze, and interpret the results of the research.

4. Problem Solving: To conduct analytical and creative problem detection and problem solving.

5. Organizational Leadership: To understand how and be able to function as an effective team, group, and organizational leader.

6. Group Membership: To understand how and be able to function as an effective group and/or team member.

7. Strategic Management: To think, analyze, manage, and plan strategically.

8. International Perspective: To achieve a multi-disciplinary, global perspective in order to understand others and make more effective international business decisions.

9. Interpersonal Skills: To develop a broad range of interpersonal skills to use in multicultural and diverse work force settings.

10. Business Directions: To master the importance, significance, and meaning of business trends in their larger historical, political, economical, social, cultural, geopolitical, and technological contexts.

11. Legal and Ethical Issues: To understand the legal and ethical considerations and implications of personal, social, business and international business behavior and activities.

12. Quantitative and Qualitative Analyses: To understand and apply quantitative and qualitative methods of analysis as a basis for making business decisions.

13. Humanities and Sciences: To understand and appreciate how science, history, literature, and the arts, impact society, politics, business, economics, culture, and technology trends.

* From the Three-Year Degree Program Strategic Plan. The curriculum is designed so that all competencies are mastered by the end of the student's third year in the program.
Computer Information Technology - CIS195 3-Year

Videos
(These videos can be re-viewed at the AV Center)

Video 1: The World at Your Fingertips

"Americans live in the freest country on the planet, but we are also the most counted, recorded, questioned, dossiered, and filed; the same computers that free us to work, shop, play, and organize our lives also enable others to keep track of almost everything we do. This video looks at the social revolution wrought by computers, and at what price: the disappearance of place as an attribute; the loss of privacy; the pollution of information - and the transmission, sharing, and replication of polluted information; and the near-catastrophes that can occur when (as happened in the October 1987 stock market plunge) computer networks take on a life of their own."

Video 2: Inventing the Future

"Getting in on the ground floor of the computer industry was no picnic. This video chronicles the rough times experienced by the computer pioneers, until the industry took off and forever changed the way the world does business. The video covers the invention of programming languages, and the shifts, first to transistors, and later to integrated circuits, that made computers smaller and cheaper and ultimately led to personal computers."

Video 3: Triumph of the Nerds Series

Volume 2: "IBM's decision - 'buy not build' PC technology. The tiny software company named Microsoft. Culture shock - the suits meet the nerds. IBM PC hits the American business world. Clones invade the market, and Bill Gates sells to every clone maker. Microsoft and IBM co-operate, compete, and split. IBM launches OS/2 and Microsoft comes up with Windows. Bill Gates wins again."

Video 4: The Paperback Computer

"Computers are called that because historically they were first used for numbers; but in fact they are all-purpose machines that can be turned to any purpose by being so instructed. This video shows how roomsized number crunchers evolved into desktop machines easy enough for a child to use, with less and less to do with arithmetic, cheaper than a TV set. No story would be complete without the Apple story, and this video covers the development of microprocessors, the trailblazing of Steve Jobs, Steve Wozniak, and Michael Markkula — and the arrival of a new generation for whom computers are the most basic form of communications."

Video 5: Cyberspace: Virtual Unreality

"The Information Age has been hailed as a quantum leap forward for humanity — an opportunity to finally achieve Marshall McLuhan’s ‘global’ village’ in which ‘the medium is the message.’ But what kinds of people are being created in cyberspace? While computer technology has changed virtually all aspects of life, critics argue that this technology is contributing to the growing social isolation of individuals. This video examines just what the implications of the new Information Age may be."

Video 6: Once Upon a Time in Cyberville

"This video takes a provocative look at the power and role of technology in our lives today, as well as what role it may play in the future. PC’s, email, video games, interactive TV, electronic shopping malls, and the Internet are all an important part of ‘Cyberville.’ But are these advances moving us farther away from the real world outside our doors? Is technology and ‘techno-lust’ causing us to lose sight of who we are and where we came from? Instead of dealing with our growing societal problems, are we focusing on a future ‘cyber-utopia’? This video explores advances in technology across a wide spectrum, as well as their implications for our society, economy, and culture.” Many technology proponents and critics are featured in the video.

Video 7: The Thinking Machine

"Computers can calculate at mind-boggling speed. They can store, compare, predict, and juggle data. What they can’t do — yet, anyway — is make sense of the plot of Dick and Jane stories. This video is devoted to artificial intelligence, and what computer scientists, psychologists, and philosophers have learned about human intelligence in the process of trying to teach computers to ‘think.’ ‘What we are learning,’ says Marvin Minsky, one of the pioneers of artificial intelligence at MIT, is that ‘the things that people think are hard are actually quite easy, and the things that people think are easy are very hard.’"
ADVANCED COMPUTER APPLICATIONS
ACADEMIC PLAN

WEEKS 6 THROUGH 15
NEW HAMPSHIRE COLLEGE

3-YEAR DEGREE

BACHELOR OF SCIENCE BUSINESS ADMINISTRATION

ACADEMIC PLAN COVER SHEET

THREE-YEAR BACHELOR OF SCIENCE IN BUSINESS ADMINISTRATION

MODULE: COMPUTER INFORMATION TECHNOLOGY (CIT)

MODULAR SUB-COMPONENT: CIS 195, ADVANCED CIT

PROGRAM YEAR: YEAR ONE, SEMESTER ONE, WEEKS 6-15

1. INTRA SUB-COMPONENT LINKING THEMES:
   a. Student as computer tool user
   b. Student as contributing group/team member
   c. Student as competent and effective learner
   d. Student as “systems” thinker

2. INTRA MODULAR LINKING THEMES:
   a. Student as effective computer tool integrator
   b. Student as effective synthesizer of new ideas
   c. Student as competent and effective learner
   d. Student as “systems” thinker

3. INTER MODULAR LINKING THEMES FOR THE YEAR:
   a. Student as manager and leader
   b. Humanities and the individual
   c. Student as effective communicator and learner
   d. Student as effective problem-solver and informed critic
4. OTHER MODULAR SUB-COMPONENTS:
   a. Foundations of CIT

5. CONCURRENTLY RUNNING MSC’S:
   a. Writing, Research and Presentations (Semester 1, Weeks 8.6-15)
   b. Management Module (Semester 1, Weeks 8.6-15)

F = Items marked “F” refer to knowledge and skills which are foundational to the students in the module as indicated.
R = Items marked “R” refer to knowledge and skills which are reinforcing to the students in the module as indicated.
C = Activity contributes to the students’ awareness of certain knowledge and skills prior to their foundational experience.
MODULAR SUB-COMPONENT ACADEMIC PLAN

MODULAR SUB-COMPONENT: Advanced Computer Information Technology

PROGRAM YEAR: Year One, Semester One, Weeks 8.6-15

1. STRATEGY:

a. To continue to develop understanding of basic computer and information technology concepts by laying the foundation in:

   - In-depth information theory & and data representation
   - Communications systems infrastructure and the World Wide Web
   - Development of effective information systems
   - Management of data in files and in databases
   - Computer programming languages
   - Computer programming
   - Cutting-edge concepts (artificial intelligence & expert systems)
   - Advanced thinking on the social, economic & philosophical implications of computers

   These concepts are achieved by a combination of readings, computer simulation labs, guided exercises, independent lab work, class discussion and continued regular use. Group and individual hands-on exercises and projects are a major part of the learning experience. Thus, all learning activities involve a high degree of individual and group work.

b. To continue to develop the basic computer and information technology skills by laying the foundation in:

   - Problem solving with spreadsheets
   - Building business systems with database management systems
   - Integration of word processing, graphical presentation, spreadsheets and database management systems
   - Advanced asynchronous electronic discussion groups
   - Advanced synchronous electronic chat
   - Advanced Internet and World Wide Web navigation
   - World Wide Web Home page/site development

   These skills are achieved by a combination of readings, computer simulation labs, guided exercises, independent lab work, class discussion and continued regular use. Group and individual hands-on exercises and projects are a major part of the learning experience. Thus, all learning activities involve a high degree of individual and group work.
2. GOALS: COMPUTER INFORMATION TECHNOLOGY-COMPETENCY #2

a. To further understand the fundamental concepts of information, communications and computers including information theory, computer hardware, and network and software fundamentals.

b. To have a deeper understanding of and be able to more aptly apply skills in word processing, presentation graphics and electronic communications (telnet, file transfer, E-mail, Internet: World Wide Web and distance learning technology).

c. To understand and be able to effectively use electronic spreadsheets and database management systems.

d. To further understand and more effectively use on-line, computer-based technology for business research.

e. To have a deeper understanding of the influence of computer information technology on society and the individual.

2. IMPLEMENTING ACTIVITIES: COMPUTER INFORMATION TECHNOLOGY-COMPETENCY #2

a. Continue to use a word processor and presentation graphics for all written and presentation forms of communication, including: the creation of a "desktop publishing" newsletter and the use of the spell-checker and grammar checker. Supports Projects #2 & #3 in Communications Writing, Research & Presentations MSC. Group and individual work.

   C1-R This implementing activity is a reinforcement activity for Competency #1 (Communication)
   C2-R This implementing activity is a reinforcement activity for Competency #2 (Computer and Information Technology)
   C5-R This implementing activity is a reinforcement activity for Competency #5 (Organizational Leadership)
   C6-R This implementing activity is a reinforcement activity for Competency #6 (Group Membership)
   C9-R This implementing activity is a reinforcement activity for Competency #9 (Interpersonal Skills)
2. GOALS: COMPUTER INFORMATION TECHNOLOGY-COMPETENCY #2

a. To further understand the fundamental concepts of information, communications and computers including information theory, computer hardware, and network and software fundamentals.

b. To have a deeper understanding of and be able to more aptly apply skills in word processing, presentation graphics and electronic communications (telnet, file transfer, E-mail, Internet: World Wide Web and distance learning technology).

c. To understand and be able to effectively use electronic spreadsheets and database management systems.

d. To further understand and more effectively use on-line, computer-based technology for business research.

e. To have a deeper understanding of the influence of computer information technology on society and the individual.

2. IMPLEMENTING ACTIVITIES: COMPUTER INFORMATION TECHNOLOGY-COMPETENCY #2

a. Continue to use a word processor and presentation graphics for all written and presentation forms of communication, including: the creation of a "desktop publishing" newsletter and the use of the spell-checker and grammar checker. Supports Projects #2 & #3 in Communications Writing, Research & Presentations. MSC. Group and individual work.

C1-R This implementing activity is a reinforcement activity for Competency #1 (Communication)
C2-R This implementing activity is a reinforcement activity for Competency #2 (Computer and Information Technology)
C5-R This implementing activity is a reinforcement activity for Competency #5 (Organizational Leadership)
C6-R This implementing activity is a reinforcement activity for Competency #6 (Group Membership)
C9-R This implementing activity is a reinforcement activity for Competency #9 (Interpersonal Skills)
b. Continue to solve basic business problems including "what-if" analyses using electronic spreadsheets and produce five spreadsheet solutions to business cases. Coordinates with and supports the Management MSC running concurrently and the Accounting MSC which is forthcoming in Semester 2. Group and individual work.

   C2-F This implementing activity is a foundational activity for Competency #2 (Computer and Information Technology)
   C3-R This implementing activity is a reinforcement activity for Competency #3 (Research)
   C4-R This implementing activity is a reinforcement activity for Competency #4 (Problem Solving)
   C5-R This implementing activity is a reinforcement activity for Competency #5 (Organizational Leadership)
   C6-R This implementing activity is a reinforcement activity for Competency #6 (Group Membership)
   C9-R This implementing activity is a reinforcement activity for Competency #9 (Interpersonal Skills)
   C12-R This implementing activity is a reinforcement activity for Competency #12 (Quantitative and Qualitative Analyses)

c. Set up two small-business computer systems to perform fundamental business functions using database management system software. Supports and coordinates with the Management MSC running concurrently and the Business Foundation MSC in Semester 2. Group and individual work.

   C2-F This implementing activity is a foundational activity for Competency #2 (Computer and Information Technology)
   C4-R This implementing activity is a reinforcement activity for Competency #4 (Problem Solving)
   C5-R This implementing activity is a reinforcement activity for Competency #5 (Organizational Leadership)
   C6-R This implementing activity is a reinforcement activity for Competency #6 (Group Membership)
   C9-R This implementing activity is a reinforcement activity for Competency #9 (Interpersonal Skills)
   C12-R This implementing activity is a reinforcement activity for Competency #12 (Quantitative and Qualitative Analyses)
b. Continue to solve basic business problems including “what-if” analyses using electronic spreadsheets and produce five spreadsheet solutions to business cases. Coordinates with and supports the Management MSC running concurrently and the Accounting MSC which is forthcoming in Semester 2. Group and individual work.

C2-F This implementing activity is a foundational activity for Competency #2 (Computer and Information Technology)

C5-R This implementing activity is a reinforcement activity for Competency #5 (Organizational Leadership)
C6-R This implementing activity is a reinforcement activity for Competency #6 (Group Membership)
C9-R This implementing activity is a reinforcement activity for Competency #9 (Interpersonal Skills)
C12-R This implementing activity is a reinforcement activity for Competency #12 (Quantitative and Qualitative Analyses)

C2-F This implementing activity is a foundational activity for Competency #2 (Computer and Information Technology)
C4-R This implementing activity is a reinforcement activity for Competency #4 (Problem Solving)
C5-R This implementing activity is a reinforcement activity for Competency #5 (Organizational Leadership)
C6-R This implementing activity is a reinforcement activity for Competency #6 (Group Membership)
C9-R This implementing activity is a reinforcement activity for Competency #9 (Interpersonal Skills)
C12-R This implementing activity is a reinforcement activity for Competency #12 (Quantitative and Qualitative Analyses)

c. Set up two small-business computer systems to perform fundamental business functions using database management system software. Supports and coordinates with the Management MSC running concurrently and the Business Foundation MSC in Semester 2. Group and individual work.

C2-F This implementing activity is a foundational activity for Competency #2 (Computer and Information Technology)
C4-R This implementing activity is a reinforcement activity for Competency #4 (Problem Solving)
C5-R This implementing activity is a reinforcement activity for Competency #5 (Organizational Leadership)
C6-R This implementing activity is a reinforcement activity for Competency #6 (Group Membership)
C9-R This implementing activity is a reinforcement activity for Competency #9 (Interpersonal Skills)
C12-R This implementing activity is a reinforcement activity for Competency #12 (Quantitative and Qualitative Analyses)
d. Integrate activities (a) through (c) above to create multimedia documents containing text/spreadsheets/databases/graphics/sound/animation in at least one major project. Supports Projects #2 & #3 in Communications Writing, Research & Presentations MSC and work in the Management MSC, both running concurrently. Coordinates with the Accounting and Business Foundation MSC’s, both in Semester 2. Group and individual work.

C1-R This implementing activity is a reinforcement activity for Competency #1 (Communication)
C2-R This implementing activity is a reinforcement activity for Competency #2 (Computer and Information Technology)
C4-R This implementing activity is a reinforcement activity for Competency #4 (Problem Solving)
C5-R This implementing activity is a reinforcement activity for Competency #5 (Organizational Leadership)
C6-R This implementing activity is a reinforcement activity for Competency #6 (Group Membership)
C9-R This implementing activity is a reinforcement activity for Competency #9 (Interpersonal Skills)

e. Continue to use electronic mail; upload and download files (ftp); zip and unzip files; telnet to other computers to use their facilities; subscribe and unsubscribe to E-mail lists and news groups in order to become an active participant in the Internet cyberworld community. Continue to demonstrate ability to effectively communicate electronically with classmates and with instructors.

C2-R This implementing activity is a reinforcement activity for Competency #2 (Computer and Information Technology)

f. Continue to participate in an electronic learning experience which includes using asynchronous discussion groups, synchronous chat and various electronic classroom activities. Students judged on form and on good writing criteria. Group and individual work.

C2-F This implementing activity is a foundational activity for Competency #2 (Computer and Information Technology)
C4-R This implementing activity is a reinforcement activity for Competency #4 (Problem Solving)
C5-R This implementing activity is a reinforcement activity for Competency #5 (Organizational Leadership)
C6-R This implementing activity is a reinforcement activity for Competency #6 (Group Membership)
C9-R This implementing activity is a reinforcement activity for Competency #9 (Interpersonal Skills)
g. Create their own Internet World Wide Web home page; publish on a three-year program web site. Supports Communications Writing, Research & Presentations MSC.
   C1-R This implementing activity is a reinforcement activity for Competency #1 (Communication)
   C2-R This implementing activity is a reinforcement activity for Competency #2 (Computer and Information Technology)

h. Continue to learn the fundamental concepts and basic principles of computers and computer-information technology in order to effectively adapt to and utilize technological advances. Read and understand pertinent material available in computer information technology magazines; determine specifications for the purchase of computer hardware and software. Labs, quizzes, written and network assignments.
   C2-F This implementing activity is a foundational activity for Competency #2 (Computer and Information Technology)
   C4-R This implementing activity is a reinforcement activity for Competency #4 (Problem Solving)
   C12-R This implementing activity is a reinforcement activity for Competency #12 (Quantitative and Qualitative Analyses)

i. Continue to view videos pertaining to the Year One Integrating Themes: “Student as Manager” and “Humanities and the Individuals” as well as read text chapters such as: “The Impact of Computers on Your Life,” “Computers, Intellectual Property, and Ethics,” “Computers and Privacy,” and “Can Computers Think?” Reviews and critical thought pieces expected from students.
   C2-R-I This implementing activity is a reinforcement activity for Competency #2 (Computer and Information Technology)
   C13-R This implementing activity is a reinforcement activity for Competency #13 (Humanities and Sciences)

j. Use the World Wide Web and electronic library resources to do research for required papers. A hypertext format research “paper” is required. Coordinated with Writing, Research and Presentations MSC that runs concurrently.
   C1-F This implementing activity is a foundational activity for Competency #1 (Communication)
   C2-F This implementing activity is a foundational activity for Competency #2 (Computer and Information Technology)
   C3-R This implementing activity is a reinforcement activity for Competency #3 (Research)

k. Conduct a 15-minute class (supported by multimedia computer graphics) to explain an aspect of the leadership process.
   C2-R This implementing activity is a reinforcement activity for Competency #2 (Computer and Information Technology)
   C5-R This implementing activity is a reinforcement activity for Competency #5 (Organizational Leadership)
1. Engage in a series of problems, activities, and applications, using appropriate computer applications to achieve the supporting goals for Year One. Where possible, students will work as members of groups and present their solutions verbally and graphically to their peers.
   
   C2-R This implementing activity is a reinforcement activity for Competency #2 (Computer and Information Technology)
   C4-R This implementing activity is a reinforcement activity for Competency #4 (Problem Solving)
   C12-R This implementing activity is a reinforcement activity for Competency #12 (Quantitative and Qualitative Analyses)

m. Use a word processor for all written forms of communication to include: the creation of a “desktop publishing” newsletter and the use of the spell-checker and grammar checker. The end product is a group newsletter. Other products include papers on video series. Supports Project #1 in Communications Foundation MSC and is the technical foundation for various aspects of the Writing, Research & Presentation MSC. Group and individual work.
   
   C1-F&R This implementing activity is a foundational and reinforcement activity for Competency #1 (Communication)
   C4-R This implementing activity is a reinforcement activity for Competency #4 (Problem Solving)
   C5-R This implementing activity is a reinforcement activity for Competency #5 (Organizational Leadership)
   C6-R This implementing activity is a reinforcement activity for Competency #6 (Group Membership)
   C9-R This implementing activity is a reinforcement activity for Competency #9 (Interpersonal Skills)

n. Create effective class presentations using presentation graphics, spreadsheet and database management skills. Technical foundation for various aspects of Writing, Research & Presentation MSC. Numerous in-class presentations of knowledge and skills learned. Group and individual work.
   
   C1-F&R This implementing activity is a foundational and reinforcement activity for Competency #1 (Communication)
   C5-R This implementing activity is a reinforcement activity for Competency #5 (Organizational Leadership)
   C6-R This implementing activity is a reinforcement activity for Competency #6 (Group Membership)
   C9-R This implementing activity is a reinforcement activity for Competency #9 (Interpersonal Skills)
o. Learn the fundamental concepts and basic principles of computers and information technology in order to effectively adapt to and utilize technological advances. Read and understand pertinent material available in computer information technology magazines; determine specifications for the purchase of computer hardware and software. Also, computer-related ethics studied. Labs, quizzes, written and network assignments.

C1-F&R This implementing activity is a foundational and reinforcement activity for Competency #1 (Communication)
C11-C This implementing activity is a contributing activity for Competency #11 (Legal and Ethical Issues)

p. Use electronic mail; upload and download files (ftp); zip and unzip files; telnet to other computers to use their facilities; subscribe and unsubscribe to E-mail lists and newsgroups in order to become an active participant in the Internet cyberworld community. Demonstrate ability to effectively communicate electronically with classmates and instructors.

C1-F This implementing activity is a foundational activity for Competency #1 (Communication)

q. Create multimedia documents containing text/spreadsheets/databases/graphics/sound/animation in at least one major project. Supports Projects #2 & #3 in Communications Writing, Research & Presentations MSC and work in the Management MSC, both running concurrently. Coordinates with the Accounting and Business Foundation MSC’s, both in Semester 2. Group and individual work is expected.

C5-R This implementing activity is a reinforcement activity for Competency #5 (Organizational Leadership)
C6-R This implementing activity is a reinforcement activity for Competency #6 (Group Membership)
C9-R This implementing activity is a reinforcement activity for Competency #9 (Interpersonal Skills)
C10-C This implementing activity is a contributing activity for Competency #10 (Business Directions)

New Hampshire College

Mission

New Hampshire College provides its graduates with the intellectual and social foundations which prepare them to lead fulfilling lives as competent, committed and compassionate members of a global society. As an institution dedicated to teaching, New Hampshire College is accessible, innovative and offers challenging educational experiences of high quality.

New Hampshire College is a private, independent institution dedicated to teaching undergraduate and graduate academic programs of high quality and to giving personal support to its students. The college develops instructional programs which blend theory with practice, thus preparing graduates for personal growth and professional development.

Whether in business, liberal arts, teacher education, hospitality or related disciplines, the college is committed to the education of the whole person in a caring, challenging and friendly environment. So that its students may make positive contributions to society, the college acknowledges the importance of intellectual, professional and ethical development, community service, cultural involvement and social responsibility.

The college fosters learning partnerships among students, faculty and staff. Students become actively involved in the learning process which encompasses opportunities for community service and work experience. The college faculty includes individuals who bring practical, professional experience to the learning environment.

The college offers a diverse living and learning environment that reflects many ages, races and cultures. The multi-cultural, multi-national community promotes mutual respect and understanding of others as an integral part of its globally-oriented educational purpose.

New Hampshire College leads in the development of educational programs and services which reflect the changing demands and needs of students and society, thus enabling graduates to compete in the global economy.

Goals of the Undergraduate School

Instructors, students and administrators in the undergraduate school recognize and subscribe to the mission of the college. In addition, the undergraduate school has the following specific, supporting goals:

- Present a quality education that enables students to enter the professional world, or that enables those already established to enhance, advance or change their careers.

- Research and teach important truths, principles, ideas, facts and performance methods, so that students can make significant contributions to their chosen fields.

- While providing a challenging course of studies, encourage students to become life-long learners, critical thinkers, and problem solvers, so that they can adapt creatively and appropriately to all situations, whether structured or unstructured.

- Help students to understand themselves, society and different cultures, so that they can participate in the changing world around them.

- Encourage students to identify the personal qualities and ideals which will enable them to function ethically and responsibly in all areas of society.

- Ensure that all students learn to speak and write clearly and accurately, use computers efficiently, and use libraries effectively.

To meet these goals, the faculty is committed to the art of teaching and strives to stimulate critical thought and inquiry in the classroom. Although teaching is primary at New Hampshire College, the living-learning environment that exists given the undergraduate school’s significant international student body provides the basis for intercultural and affective development of its students.

A Teaching Institution

For all its apparent diversity and educational pluralism, a single, strong and unbroken theme runs throughout the entire college, linking its schools, institutes and programs: New Hampshire College is first and foremost an institution committed to teaching.

At New Hampshire College, the student and the students’ needs to learn, to grow, and to experience that exhilarating sense of competence and commitment that always accompany mastery are the foundations upon which the educational adventure is based and assumes its meaning. This reality, above all others, is what the college is all about, and it is this reality which has enabled the college to self-consciously define itself as an educational community in which creative teaching is the most important and wondrous of all activities.

As a teaching institution, New Hampshire College takes seriously the fact that not only do we learn in different ways, but that learning occurs both inside and outside of the classroom, and can take place only if an individual successfully integrates the intellectual, social and emotional aspects of his or her development.
Commitment to Intercultural and International Education

The world has become a “global village” where events, corporations and other institutions transcend national boundaries. Higher education must reflect the interdependence of this world and recognize that its graduates will be world citizens whose careers will influence and be influenced by people, organizations and cultures beyond their countries’ borders.

New Hampshire College prepares its students to live in this increasingly complex world of diverse beliefs, ideologies and values. It has moved into the forefront of educational efforts to increase the exchange of ideas and experiences between the United States and other countries.

New Hampshire College hosts students from 70 countries. From Thailand to Kenya, from Colombia to Denmark, from Turkey to Japan, its student body reflects the diversity of our world. The mix of foreign and domestic students has created a climate rich with opportunity for cross-cultural dialogue and exchange. The benefits of international and intercultural exchange do not show up in grades or grade point averages; they manifest themselves in the understanding developing from the experience of learning with people from other cultures and in the network developed by alumni around the world.

New Hampshire College’s commitment to educational exchange is exemplified in the following areas:

Certificate and Degree Programs
- The Graduate Certificate in International Business;
- The M.S. in International Community Economic Development;
- The Bachelor of Applied Science in Hospitality Administration, an international training program;
- The M.S. and B.S. programs in International Business;

Support Programs
- The American Language and Culture Center;
- The Center for International Exchange;

Exchange and Foreign Programs
- Work exchange trainee programs with Fanshawe College and other Canadian and overseas institutions;
- Exchange student agreements with the University of North London and the University of Glamorgan;
- Participation in the Quebec/New England Exchange Program;
- Articulation agreements and cooperative relationships with foreign educational institutions.

New Hampshire College will continue to support and to recognize members of its community who strive to support its goals in international educational exchange.

History of the College

New Hampshire College was founded in 1932 by H.A.B. Shapiro as the New Hampshire School of Accounting and Secretarial Science. The school remained relatively small until 1961 when it was incorporated and renamed New Hampshire College of Accounting and Commerce.

In 1963 the state of New Hampshire granted the college its charter which gave it degree-granting authority. That same year the first associate’s degrees were awarded and three years later the first bachelor’s degrees were conferred.

The college became a non-profit institution under a board of trustees in September, 1968. In 1969 the name was shortened to New Hampshire College. In 1971 the college moved from its downtown Manchester site to a new 200 acre campus on the Merrimack River, and during 1974 the college introduced a master of business administration program. In 1978 the college assumed the degree programs in human services originally started by Franconia College. These two programs were later organized into the Graduate School of Business and the School of Human Services.

During the spring of 1981 the General Court of New Hampshire authorized New Hampshire College to award the master of human services degree and the master of science degree in business-related subjects. That same year, to accommodate the two new rapidly expanding programs, the college purchased the former Mount Saint Mary College in Hooksett, just under five miles from the south campus.

In 1983 the college established the Culinary Institute which offers a two-year degree program to prepare students for career opportunities in the hospitality field.

In 1988 the School of Human Services was transferred to Springfield College in Springfield, Massachusetts. In 1992, new liberal arts and teacher education majors were added to the undergraduate school.

This past year was a period of growth on the New Hampshire College campus. Four new buildings, a residence hall, and new homes for the graduate school of business, the hospitality administration programs and the American Language and Learning Center, the Center for International Exchange and public safety, were completed. All of the college’s operations formerly located at the north campus have been moved to the main campus.

In 1996 the graduate school received authority to offer doctoral programs in international business and community economic development, with the first classes offered in the fall of 1997.

Over the years New Hampshire College has extended its academic programs to off-campus locations to better serve adult learners. Currently programs are being offered in Concord, Laconia, Manchester, Nashua, Portsmouth and Salem, NH; Brunswick, Maine, and Roosevelt Roads, Puerto Rico.

New Hampshire College now has a day college enrollment of nearly 1,000 students, 1,500 in the graduate school of business, and nearly 4,000 in the division of continuing education. In recent years international student enrollment has enriched the cultural diversity of the college.

Today, New Hampshire College offers associate’s degrees in culinary arts and several business-related fields as well as in an inter-disciplinary liberal arts program. In addition to bachelor of science degrees in sixteen areas of business and...
professional preparation, the college also offers bachelor of arts degree programs in communication, English language and literature, humanities, psychology and social science as well as the pre-law program. A three-year bachelor of science degree program in business administration was launched in September 1997.

The graduate school of business offers master’s degree programs in business administration, accounting, business education, computer information systems, community economic development and international business.

**Academic Programs**

**Undergraduate School**

The undergraduate school, under the leadership of its faculty and dean, prepares its students by offering the following major courses of study leading to the bachelor’s degree:

- Accounting
- American Studies
- Business Administration
- Business Administration - Three Year Degree Program
- Business Studies (with concentrations in:)
  - Accounting
  - Aviation Management
  - Business Administration
  - Business Finance
  - Computer Information Systems
  - Healthcare Management
  - Human Resource Management
  - International Business
  - Marketing
  - Materials Management
  - Production and Inventory Control
  - Restaurant Management
  - Small Business Management
  - Sport Management
- Communication
- Computer Information Systems
- Economics
- Economics/Finance
- English Language and Literature
- Hospitality Administration (Applied Science)
- Hotel Management
- Humanities
- International Business
- Management Advisory Services
- Marketing
- Psychology
- Restaurant Management
- Retailing
- Social Science
- Sport Management
- Teacher Certification Programs
- Business
- English
- Marketing
- Technical Management
- Travel and Tourism

**Accreditation and Membership**

Accredited by:
- New England Association of Schools and Colleges, Inc., which accredits schools and colleges in the six New England states. Accreditation by the association indicates that the institution has been carefully evaluated and found to meet the standards agreed upon by qualified educators.
- Association of Collegiate Business Schools and Programs (ACBSP).
- The New Hampshire State Department of Education for Teacher Certification.
- American Culinary Federation Education Institute

New Hampshire College supports the efforts of secondary school officials and governing bodies to have their schools achieve regional accredited status to provide reliable assurance of the quality of the educational preparation of its applicants for admission.

New Hampshire College is also:
- Approved for the education of veterans and the children of veterans.
- Approved for the rehabilitation training of disabled students.
- Listed in the Department of Education’s Education Directory, Part 3, Higher Education.

**Campus**

The campus is located in the Manchester/Hooksett area of southern New Hampshire. Manchester, known as the Queen City, has a growing population of 100,000 and is hub to a wheel of progress with industrial and business growth to its south, and vacation and tourist areas to its north. Convenient interstate highways bisect Manchester’s bustling perimeters; air service connects Manchester to all major cities in the United States. New Hampshire College’s campus borders Interstate 93 and is within an hour of Boston.

Campus facilities include 280 acres with twenty-four major buildings: classroom/administrative buildings, residence halls, a computer center, a library complex with a TV studio, a student center with dining facilities and an athletic/recreational complex featuring two gymnasiums, a competition-size swimming pool, a hockey rink, athletic fields and lighted tennis courts.
Minors:
- Accounting
- Advertising
- Business for Liberal Arts
- Business/Marketing Teacher Education
- Communication
- Computer Information Systems
- Economics
- English Language and Literature
- Finance
- History
- Hotel Management
- Marketing
- Psychology
- Restaurant Management
- Sociology

Associate’s Degree Programs
In addition to its range of four-year bachelor’s degree majors, New Hampshire College offers two-year associate in arts and associate in science and applied science degree programs, which may be a solution for those not sure about going on to college for four years. A two-year program offers solid preparation for a job in addition to the opportunity to continue on to a bachelor’s degree. The college offers the following seven associate degree programs:
- Accounting
- Business Administration
- Computer Information Systems
- Culinary Arts (Applied Science)
- Liberal Arts
- Marketing
- Retailing/Fashion Merchandising

Certificate Programs
- Accounting
- Aviation
- Computer Programming
- Education and the Family
- Healthcare (with options in:)
  - Accounting
  - Administration
  - Computer Information Systems
  - Human Resources
- Human Resource Management
- Microcomputer
- Production and Inventory Control
- Retailing
Academic Programs

The Undergraduate Curriculum

The undergraduate school believes that success requires that students receive a broad preparation in liberal arts, and intense practice in oral and written communication. As part of its recognition that successful leaders be able to view problems from a variety of perspectives, the undergraduate school mandates that all students complete courses in writing, arts and humanities, social sciences, mathematics and science, public speaking and the freshman seminar. Students may choose to add additional breadth to their preparation by enrolling in more advanced general education courses as part of their free elective credits.

ENG 101 (Fundamentals of Writing) may be a requirement for some students, in addition to the 48 credits listed below.

All students who must begin the English sequence with ENG 101 should review with their advisor how that course will fit into their academic year.

Total Credits: 48

*Literature Electives are fulfilled by ENG 200-level courses and above. This does not include ENG 212, ENG 220, ENG 330, ENG 333, and ENG 435.

Division Cores

Each division of the undergraduate school sets out a series of courses required in that division. Business majors take the business core, liberal arts majors the liberal arts core, and hospitality majors the hospitality core. Students who complete their program of study with the business, hospitality and business teacher education core receive a bachelor of science (B.S.) degree. Those who complete their program with the liberal arts core receive a bachelor of arts (B.A.) degree.

Major Courses

Each college program requires that students select a specific related major with up to 33 credits in that major. The record of the college alumni’s success in specialized areas results in major course offerings that provide students the knowledge and skills to enter focused careers upon graduation. Some of the major credits may be designated for a cooperative education experience. The credit-bearing cooperative education program allows students to apply theory and practice the skills learned in the classroom in an actual experience.

Allied Courses and Free Electives

Each bachelor’s degree student will have an opportunity to select free electives that students and their advisors believe best meet students’ individual needs. Some students may select courses that would comprise a minor area of studies, while others may use a part of their elective credits to complete a cooperative experience. Still others may opt for additional advanced courses in areas of business or the liberal arts. In some majors there are allied courses outside of the major area that students are required to take in order to give them a stronger preparation for their chosen careers.
Division of Business

Business Division Chair: Associate Professor John C. VanSantvoord

The Business Core

The following courses comprise the basic business education that the college believes essential in providing students with a solid foundation for business careers. Students in each bachelor of science degree business program will add to these core courses, major courses, allied courses, and free electives that will match their career goals.

**Business Administration Programs**

Coordinator: Assistant Professor Martin J. Bradley

Business Administration

The past two decades have witnessed unparalleled change in business, industry and society. Emerging trends suggest that change is going to continue to be rapid, at times unpredictable and frequently disruptive.

As business and society grow more complex, the demand for trained managers and leaders has increased. Managers can no longer make business decisions based on hunches and guesses or look for old solutions to solve new problems.

Students in the business administration program will learn how to be leaders and managers in this ever-changing and hectic business environment.

Students in the business administration program will learn how to be leaders and managers in this ever-changing and hectic business environment.

New Hampshire College’s business administration major has its emphasis on leadership, communication, accounting, behavioral dynamics and quantitative analysis. These business and management skills, when complemented with a solid foundation provided by the college core enable students to obtain the knowledge and skills necessary to be a complete manager.

APPENDIX G

Annotated Bibliography of Selected Sources
ANNOTATED BIBLIOGRAPHY of SELECTED SOURCES

ASSESSMENT AND COMPETENCY BASED EDUCATION

Internet Resources:

Report and results of the outcomes assessment program undertaken at the University of Colorado at Boulder beginning 1989-1990.

Initial web site that gives general information about the Coalition of Essential Schools, a national school-university partnership, founded by Thomas R. Sizer, that assists and encourages the development of competency-based secondary schools. Site suggested by grant consultant, Tom Rusk Vickery.

HORACE, online journal of the Coalition of Essential Schools. Available under publications - HORACE.

Online research publications of the Coalition of Essential Schools. Available under publications - research.

Pathfinder of web sites relevant to assessment and evaluation. Developed for the ERIC Clearinghouse on Assessment and Evaluation.

Homepage of ERIC Clearinghouse on Assessment and Evaluation at the Department of Education, Catholic University of America. This site leads to valuable web sites, bibliographies and FAQs.

Connection to outcomes assessment sites on the web, including assessment pages of other institutions of higher education.

Books, articles and documents:

Describes assessment procedures that led to the design of a competency-based communication studies program at the University of Missouri-Kansas City.

A competency-based model curriculum by three prestigious professional organizations.

Describes and explains the nine "Principles of Good Practice for Assessing Student Learning" devised by the American Association for Higher Education and gives examples of assessment programs undertaken at major institutions.

Describes the new "learning paradigm" and contrasts it with the traditional "instruction paradigm.

Explains the use of a competency-based instructional model developed from the Personalized System of Instruction that is used in a basic communication course.

Survey of the issues surrounding minimum communication competencies that high school graduates should possess.

Assessment package used at the Ball State University College of Business for preparation for curriculum assessment.

Discusses and describes classroom assessment techniques that can be used by faculty. The three sections cover: assessment of academics skills; assessment of student's self-awareness as learners; and assessment of students reactions to teachers and teaching methods.

An influential book on curricula design and assessment.

Examines the construction of a competency-based curriculum in a self directed program for working adults.

Describes a model for assessing competencies in a college classroom that can be readily adapted to differing curriculum.

Lengthy report that examines the development and implementation of performance indicators and reviews some of these indicators in institutions in the United States, and other countries.

An early FIPSE sponsored study on the competency movement in higher education.

Lengthy report that explores the issues and concerns related to the development of a process to assess college student learning. Divided into three chapters that address (1) a national assessment, (2) specific skills to be assessed and (3) gives standards and measurement issues.

Gives pros and cons of competency-based assessment in higher education.

Laurence, D. (1994, Fall). From the Editor column. ADE Bulletin. 108, 1-4. Review of a FIPSE supported project that brought together faculty from 29 college or university English departments to review their curriculum.

Describes different methods to determine critical thinking skills. States that college educators must be clear on the intended results and must decide what students should be able to demonstrate before they decide what they must teach.

Describes new educational approaches to integrate professional and liberal studies. Competency underpinnings are explored.

Argues that the college environment must change to allow students to gain competencies.

Survey of entry level computer professionals and managers regarding competencies identified in Association for Computing Machinery curricula.

COMPETENCY AND BUSINESS

Books, articles and documents:

Competency definition.

A description of the changes taking place in the theory and practice of management education.

Results of a survey asking what criteria business managers consider when hiring college graduates. The most important determinants are basic competencies in written and oral communication.

Diamond, R.M. (1997, August 1) Broad curriculum reform is needed if students are to master core skills. The Chronicle of Higher Education, 50 (47), B7.

The title is the conclusion of a cogent and persuasive argument.

Study that relates the outcome of a survey of corporate recruiters that identifies that the 3 most important skills required of MBA graduates were communications skills, interpersonal skills and self-motivation/initiative.

Illinois MBA Today, 1 (1), whole issue.
Premier issue of the publication of the College of Commerce and Business Administration at the University of Illinois at Urbana-Champaign that describes their new outcome-based curriculum.

As a Human Resource program director at a large university, the author interviewed corporate HR professionals and claims the following skills are desirable in recent graduates - demonstrated leadership qualities excellent communication and interpersonal skills, good technological skills, knowledge of cultural differences and knowledge of basic business fundamentals.

Survey that asked executives from 12 global companies to define the competencies critical for leadership effectiveness. Among the top ten were the ability to articulate a corporate vision, to serve as a manager of change and to be able to communicate effectively.

The author looks at reasons for the dwindling enrollment in Canadian MBA programs and cites components of successful schools in Canada and the United States.

The author identifies sixteen competencies that are critical for Human Resource professionals to succeed in a global economy.

Competencies in 50 international business areas were ranked and validated by administrators and faculty from leading business schools.*

Competencies that were necessary at the master’s level in IFM were identified from the analysis of eight textbooks.*

A study undertaken to determine if competencies in business writing, interpersonal communication, basic English and other business communication were perceived of equal importance by business faculty and business professionals.

CONTINUOUS QUALITY IMPROVEMENT:

Internet Resources:

Homepage of the CQI server at the Department of Industrial Engineering, Clemson University that details the department's efforts at quality improvement and provides an extensive listing of files that can be downloaded.

An annotated list of the major Total Quality Management (TQM) and Continuous Quality Improvement (CQI) world-wide-web sites

Books, articles and documents:

Describes examples of Continuous Quality Improvement programs undertaken at 25 institutions of higher education.

Reviews the need for teams in engineering education and shows how teams can improve the quality of education. Includes a workshop manual that focuses on: (1) techniques for forming teams, (2) results of team decision making and (3) team-building exercises.

Examines and reviews the literature on active learning in higher education. Discusses the barriers established by faculty and gives ideas on how faculty can implement active learning.

Bibliography of print, non-print and organizational resources developed to assist colleges and universities in their Continuous Quality Improvement efforts.
Examines what quality is and what tools and systems are required to improve quality. An appendix list the criteria for the 1992 Malcolm Baldridge National Quality Award.

Focuses on teaching students the strategies necessary for learning.

This unit focuses on the lecture method and is designed to assist the instructor in deciding when to evaluate instruction methods, for what purposes and how to collect data.

Paper presented at New Mexico Higher Education Assessment Conference that describes the faculty response to outcomes assessment at New Mexico State University.*

Description of the nine-step assessment project undertaken at the University of Northern Colorado and Illinois Benedictine College

Examines various methods used at Pennsylvania State University to monitor the quality and effectiveness of instruction.

Discusses and explains critical thinking skills and reviews studies on the effectiveness of instruction in higher education and the development of these skills in relation to curriculum, instruction, campus psychological climate and academic advising.

Proposes to focus on student learning to support the role of colleges and universities as learning-centered communities.

Proceedings of a workshop on curriculum development, design, specification, and assessment in engineering.

Explains the 11 core values of the Malcolm Baldridge Criteria for Quality Improvement and demonstrates the use of the criteria at San Juan College in New Mexico.

Reviews the literature of Total Quality Management and applies the theory to institutions of higher education. Recommends that institutions must define a concept of quality, recognize the 4 TQM assumptions, use cross-functional teams, use a conceptual framework and empower the executive leadership.

Introduces general principles of Total Quality Management (TQI) and explains the transition from TQI in colleges administration to Continuous quality improvement (CQI) in the classroom. Reports on six institutions of higher education and the use of CQI to improve classroom effectiveness.

MODULAR INSTRUCTION

Books, articles and documents:

Describes the development of modular instruction, its use at the Dutch Open University and the advantages and disadvantages of this educational format.
TECHNOLOGY AND LEARNING

Internet Resources:

Homepage of the Institute situated at The University of North Carolina at Chapel Hill and "dedicated to the proposition that information technology can be a valuable tool for improving the quality of student learning."

Describes how technology is used to deliver the Ohio University MBA at three separate sites.

Books, articles and documents:

The need to identify competencies is necessary to match educational objectives with appropriate technological methods.*

Examples that demonstrate how advances in technology can alter limitations of time and space during instruction.*

Describes the application of an integrated learning systems (ILS) that takes into account learning theory research, principles of instructional design and other factors related to human learning.*

Paper discusses the three issues relating to offering a management course via distance education - the educational design issues that need to be faced; the ways computers, e-mail and networks can be improved; and the issues involved in the introduction of multimedia and hypermedia systems into distance education.

Proposes the idea that traditional teaching methods must not be carried over into distance education.
Considers how technology can create communities of learners and how to support meaningful learning with technologies.

Reports on a model to teach collaborative business writing, problem solving and the contextual nature of cases that takes advantage of network technology.

Examines the use of Iowa's fiber-optic telecommunications network to offer live, interactive television instruction.

Technology is playing a vital role in helping students develop the skills to think clearly about complex issues and solve a wide range of problems.

Describes a model undergraduates program in business education designed to prepare graduates with the ability to use and evaluate current and emerging technology in teaching.

Higher order or critical thinking skills are necessary in today's world. The authors give six examples of instructional strategies using computer technology that can help students develop higher order thinking.

Description of project to design a networked learner support system by graduate students in the University of Colorado at Denver's School of Education.*

Explains the interactive Multimedia Distance learning project between RPI and AT&T and the designing of a "Virtual Classroom" that combines video teleconferencing with real time, synchronous data communication to teach a course in AT&T's University of Sales Excellence.

1. **High Emphasis Area** - Crucial to the nature of the course.
2. **Moderate Emphasis Area** - A topic area that requires substantial attention in the delivery of course content.
3. **Low Emphasis Area** - A topic area that has a minimal relationship in the overall impact of the course on the student.
4. This course initiates the skill or knowledge critical to the achievement of the liberal arts component.
5. This course establishes the Foundation upon which the skill or knowledge is achieved.
6. This course reinforces the skill or knowledge, important to the achievement of the liberal arts component.

### Directions:

1. List in the left hand column the significant topics that are covered in the course. The sample collection sheet for ADB 125 may be useful to review at this point.
2. For each course topic listed, indicate to the degree that the topic emphasizes (if at all) the areas of competence/knowledge that appear across the top of this table. Add competence/knowledge under Other if you wish.
3. As you place a L, M, or H in the appropriate box, please also indicate (as demonstrated on the sample worksheet)
   whether this course topic (skill or knowledge) is initiated, reinforced or establishes the Foundation in the class.
   Simply place an "I", "R", or an "F" after your rating of L, M, or H.
4. We invite you to share with the Grant Team any comments that you may have regarding this course and or table.
   Please use the back of this table for your written comments.

**Due Date:** May 6, 1996    **Send to:** Marty Bradley
APPENDIX I

Sample Meta-analysis Grids

Common Professional Component Course Analysis
Liberal Arts Component Analysis
General Education Competencies Analysis
The meta-analysis represents the next level of interpretation of the data as submitted by the faculty who teach required courses that appear on the 1995/96 Business Administration worksheet.

As you review this grid, please note that the topics in the far left column marked "Component" represent a competency that appeared on the original data collection sheet completed by faculty. The column marked "# of Courses Contributing" indicates the total number of courses in which a particular component is discussed. In the illustration below, you will note that Topic #1 is discussed in ten of the eighteen business classes required in the B.A. major. Of those ten courses, the column marked "Total # of I/F/R" indicates that the topic is Initiated six times, is Foundational zero times and is Reinforced four times. The remaining columns illustrate the "course level" (100, 200, 300, or 400) in which these I/F/R actions are occurring. Of the six initiating experiences for Topic #1 three occur in 100 level courses and the remaining three occur in 200 level courses. Next, we see that there are no foundational experiences for students, and finally, of the four reinforcing experiences, two occur in 200 level courses and two occur in 300 level courses.

Please note that the data is presented in exactly the same manner for the Liberal Arts meta-analysis and the General Education meta-analysis.

I - This course Initiates the skill or knowledge critical to the achievement of the common professional component.
F - This course establishes the Foundation upon which the skill or knowledge is achieved.
R - This course Reinforces the skill or knowledge, important to the achievement of the common professional component.

**DATA PYRAMID**

- Meta-Analysis of Summary Sheets
- Course Data Summary Sheets
- Course Data Sheets (Completed by Faculty)
Explanation of the Liberal Arts Meta-Analysis Grid

The meta-analysis represents the next level of interpretation of the data as submitted by the faculty who teach required courses that appear on the 1995/96 Business Administration worksheet.

As you review this grid, please note that the topics in the far left column marked "Component" represent a competency that appeared on the original data collection sheet completed by faculty (as an example, see below the column that lists Topic #1).

The column marked "# of Courses Contributing" indicates the total number of courses in which a particular component is discussed. In the illustration below, you will note that the topic of writing is discussed in 13 of the 17 classes required in the B.A. major. Of those 13 courses, the column marked "Total # of I/F/R" indicates that the topic is Initiated six times, is Foundational two times and is Reinforced seven times. The remaining columns illustrate the "course level" (100, 200, 300, or 400) in which these I/F/R actions are occurring. Of the six initiating experiences for Topic #1, three occur in 100 level courses and the remaining three occur in 200 level courses. Next, we see that there are two foundational experiences for students, and finally, of the seven reinforcing experiences, five occur in 100 level courses and two occur in 200 level courses.

Please note that the data is presented in exactly the same manner for the Common Professional Component meta-analysis and the General Education meta-analysis.

I - This course Initiates the skill or knowledge critical to the achievement of the liberal arts component.
F - This course establishes the Foundation upon which the skill or knowledge is achieved.
R - This course Reinforces the skill or knowledge, important to the achievement of the liberal arts component.

DATA PYRAMID

- Meta-Analysis of Summary Sheets
- Course Data Summary Sheets
- Course Data Sheets (Completed by Faculty)
The meta-analysis represents the next level of interpretation of the data as submitted by the faculty who teach required courses that appear on the 1995/96 Business Administration worksheet.

As you review this grid, please note that the topics in the far left column marked "Component" represent a competency that appeared on the original general education collection sheet completed by faculty. The column marked "# of Courses Contributing" indicates the total number of courses in which a particular component is discussed. In the illustration below, you will note that the topic of Topic #1 is discussed in 12 of the 35 classes required in the B.A. major. Of those 12 courses, the column marked "Total # of I/F/R" indicates that the topic is Initiated five times, is Foundational three times and is Reinforced five times. The remaining columns illustrate the "course level" (100, 200, 300, or 400) in which these I/F/R actions are occurring. Of the five initiating experiences for Topic #1, four occur in 100 level courses and the remaining one occurs in a 200 level course. Next, we see that there are two foundational experiences occurring in a 100 level course and the remaining one in a 300 level course. Finally, of the five reinforcing experiences, one occurs in each of the 100 and 200 level courses, three occur in 300 level courses, and one occurs in a 400 level course.

Please note that the data is presented in exactly the same manner for the Common Professional Component meta-analysis and the Liberal Arts meta-analysis.

APPENDIX K

NEW HAMPSHIRE COLLEGE

3-YEAR DEGREE

BACHELOR OF SCIENCE BUSINESS ADMINISTRATION

Web Site
EDUCATIONAL INNOVATION AT ITS BEST
This program, which is the result of a comprehensive, research-based assessment of our existing program, was designed from "the ground up" as a custom, three-year academic experience. It is not a "rescheduling" or compression of our four-year program.

120 CREDITS / 6 SEMESTERS
Three-year degree students earn the same number of academic credits (120) as students in a conventional four-year degree program. Students attend college for two 15-week semesters each year for three years from early September until early May.

COMPETENCY-BASED
The three-year program is a highly integrated academic experience designed to achieve proficiency in thirteen competencies. These competencies are achieved as students participate in a series of intentionally designed interdisciplinary and cross-curricular modules. Foundations for the competencies are laid in the first year and are built upon and reinforced in years two and three. These development and reinforcement activities occur at varying levels of intensity depending on the nature of the knowledge and skills being acquired in a particular module.

THE PROGRAM FEATURES:
- Integration of computer information technology;
- Emphasis on team teaching;
- Emphasis on thirteen competencies essential for success in business;
- Combining hands-on business experience at external sites throughout the program;
- Interdisciplinary approach to learning;
- Plus, save 25% of the total cost of your education.
INTEGRATING EXPERIENCE
Instructors are enthusiastic, supportive, and committed to the objectives of this program and work together on a regular basis to coordinate and integrate learning experiences and activities between and among all academic experiences. A week-long integrating experience at the end of each semester helps students see the relevance of their learning and serves as a vehicle for competency development.

TOTAL COLLEGE EXPERIENCE
As a student in the three-year academic program you have the ability to participate in the total college experience. New Hampshire College has 12 NCAA Division II athletic programs, and more than 40 student clubs, activities and intramural sports in which to take part. You can also choose to work at an on-campus job, attend student activities events or play in a pick-up game in the gym. It is all possible at New Hampshire College!

**REPRODUCTION RELEASE:**

In order to disseminate as widely as possible timely and significant materials of interest to the educational community, documents announced in the monthly abstract journal of the ERIC system, Resources in Education (RIE), are usually made available to users in microfiche, reproduced paper copy, and electronic media, and sold through the ERIC Document Reproduction Service (EDRS). Credit is given to the source of each document, and, if reproduction release is granted, one of the following notices is affixed to the document.

If permission is granted to reproduce and disseminate the identified document, please CHECK ONE of the following three options and sign at the bottom of the page.

**Level 1**

- PERMISSION TO REPRODUCE AND DISSEMINATE THIS MATERIAL HAS BEEN GRANTED BY
- TO THE EDUCATIONAL RESOURCES INFORMATION CENTER (ERIC)

**Level 2A**

- PERMISSION TO REPRODUCE AND DISSEMINATE THIS MATERIAL IN MICROFICHE, AND IN ELECTRONIC MEDIA FOR ERIC COLLECTION SUBSCRIBERS ONLY, HAS BEEN GRANTED BY
- TO THE EDUCATIONAL RESOURCES INFORMATION CENTER (ERIC)

**Level 2B**

- PERMISSION TO REPRODUCE AND DISSEMINATE THIS MATERIAL IN MICROFICHE ONLY HAS BEEN GRANTED BY
- TO THE EDUCATIONAL RESOURCES INFORMATION CENTER (ERIC)

Check here for Level 1 release, permitting reproduction and dissemination in microfiche or other ERIC archival media (e.g., electronic) and paper copy.

Check here for Level 2A release, permitting reproduction and dissemination in microfiche and in electronic media for ERIC archival collection subscribers only.

Check here for Level 2B release, permitting reproduction and dissemination in microfiche only.

---

I hereby grant to the Educational Resources Information Center (ERIC) nonexclusive permission to reproduce and disseminate this document as indicated above. Reproduction from the ERIC microfiche or electronic media by persons other than ERIC employees and its system contractors requires permission from the copyright holder. Exception is made for non-profit reproduction by libraries and other service agencies to satisfy information needs of educators in response to discrete inquiries.

Dear AERA Presenter,

Congratulations on being a presenter at AERA¹. The ERIC Clearinghouse on Assessment and Evaluation invites you to contribute to the ERIC database by providing us with a printed copy of your presentation.

Abstracts of papers accepted by ERIC appear in Resources in Education (RIE) and are announced to over 5,000 organizations. The inclusion of your work makes it readily available to other researchers, provides a permanent archive, and enhances the quality of RIE. Abstracts of your contribution will be accessible through the printed and electronic versions of RIE. The paper will be available through the microfiche collections that are housed at libraries around the world and through the ERIC Document Reproduction Service.

We are gathering all the papers from the AERA Conference. We will route your paper to the appropriate clearinghouse. You will be notified if your paper meets ERIC's criteria for inclusion in RIE: contribution to education, timeliness, relevance, methodology, effectiveness of presentation, and reproduction quality. You can track our processing of your paper at http://ericae.net.

Please sign the Reproduction Release Form on the back of this letter and include it with two copies of your paper. The Release Form gives ERIC permission to make and distribute copies of your paper. It does not preclude you from publishing your work. You can drop off the copies of your paper and Reproduction Release Form at the ERIC booth (424) or mail to our attention at the address below. Please feel free to copy the form for future or additional submissions.

Mail to: AERA 1998/ERIC Acquisitions
        University of Maryland
        1129 Shriver Laboratory
        College Park, MD 20742

This year ERIC/AE is making a Searchable Conference Program available on the AERA web page (http://aera.net). Check it out!

Sincerely,

Lawrence M. Rudner, Ph.D.
Director, ERIC/AE

¹If you are an AERA chair or discussant, please save this form for future use.
