This package consists of course syllabi, an instructor's handbook, and a student laboratory manual for a 2-year vocational training program to prepare students for entry-level employment as welders. The program was developed through a modification of the DACUM (Developing a Curriculum) technique. The course syllabi volume begins with the MASTER (Machine Tool Advanced Skills Technology Educational Resources) Program Consortium competency profile with 25 duties (and supporting technical workplace competencies): follow safety practices; total quality; work ethics; communication skills; work as a team; mathematical skills; weld-related requirements; blueprinting, structural layout and fit-up; set-up welding process(es); prepare joint for welding; oxyacetylene cutting and welding; shield metal arc welding (SMAW)--basic; SMAW--advanced; gas metal arc welding (GMAW)--basic; GMAW short circuit transfer (intermediate); GMAW spray and pulsed spray, pipe transfer (advanced); flux core arc welding (FCAW); gas tungsten arc welding (GTAW)--basic; GTAW--advanced; plasma arc cutting and welding; in-process weld inspection; in-process rework; housekeeping activities; emergency vehicle terminology; and wellness/physical abilities. The first volume contains the justification, documentation, and course syllabi for the courses. Each syllabus contains the following: course description; prerequisites; course objectives; required course materials; methods of instruction; lecture outline; lab outline; Secretary's Commission on Achieving Necessary Skills competencies taught; and appropriate reference materials. The three-volume instructor's handbook consists of technical training modules that include some or all of the following: time required; duty; task; objective(s); instructional materials list; references; student
preparation; introduction; presentation outline; practical application; evaluation; summary; and attachments, including handouts, laboratory worksheets, and self-assessment with answer key. The handbook is arranged by duty grouping, with technical modules developed for each task box on the competency profile. The two-volume student laboratory manual contains a DACUM chart and learning modules for duties A-U. Each module in the student manual includes some or all of the following: objectives, outline, laboratory exercises, laboratory aids, and handouts. (KC)
MACHINE TOOL ADVANCED SKILLS TECHNOLOGY EDUCATIONAL RESOURCES

EDUCATIONAL RESOURCES FOR THE MACHINE TOOL INDUSTRY

Welding Series COURSE SYLLABI

Supported by the National Science Foundation's Advanced Technological Education Program
EDUCATIONAL RESOURCES
FOR THE
MACHINE TOOL INDUSTRY

Welding Series
COURSE SYLLABI

Supported by the National Science Foundation's Advanced Technological Education Program
ACKNOWLEDGEMENTS

This project was made possible by the cooperation and direct support of the following organizations:

National Science Foundation - Division of Undergraduate Education
MASTER Consortia of Employers and Educators

MASTER has built upon the foundation which was laid by the Machine Tool Advanced Skills Technology (MAST) Program. The MAST Program was supported by the U.S. Department of Education - Office of Vocational and Adult Education. Without this prior support MASTER could not have reached the level of quality and quantity that is contained in these project deliverables.

MASTER DEVELOPMENT CENTERS
Augusta Technical Institute - Central Florida Community College - Itawamba Community College - Moraine Valley Community College - San Diego City College (CACT) - Springfield Technical Community College - Texas State Technical College

MASTER PROJECT EVALUATORS
Dr. James Hales, East Tennessee State University and William Ruxton, formerly with the National Tooling and Machine Association (NTMA)

NATIONAL ADVISORY COUNCIL MEMBERS
The National Advisory Council has provided input and guidance into the project since the beginning. Without their contributions, MASTER could not have been nearly as successful as it has been. Much appreciation and thanks go to each of the members of this committee from the project team.
Dr. Hugh Rogers-Dean of Technology-Central Florida Community College
Dr. Don Clark-Professor Emeritus-Texas A&M University
Dr. Don Edwards-Department of Management-Baylor University
Dr. Jon Botsford-Vice President for Technology-Pueblo Community College
Mr. Robert Swanson-Administrator of Human Resources-Bell Helicopter, TEXTRON
Mr. Jack Peck-Vice President of Manufacturing-Mercury Tool & Die
Mr. Don Hancock-Superintendent-Connally ISD

SPECIAL RECOGNITION
Dr. Hugh Rogers recognized the need for this project, developed the baseline concepts and methodology, and pulled together industrial and academic partners from across the nation into a solid consortium. Special thanks and singular congratulations go to Dr. Rogers for his extraordinary efforts in this endeavor.

Dr. Don Pierson served as the Principal Investigator for the first two years of MASTER. His input and guidance of the project during the formative years was of tremendous value to the project team. Special thanks and best wishes go to Dr. Pierson during his retirement and all his worldly travels.

All findings and deliverables resulting from MASTER are primarily based upon information provided by the above companies, schools and labs. We sincerely thank key personnel within these organizations for their commitment and dedication to this project. Including the national survey, more than 2,800 other companies and organizations participated in this project. We commend their efforts in our combined attempt to reach some common ground in precision manufacturing skills standards and curriculum development.
Manufacturing in Florida
During the past two decades, the Central Florida region near Florida’s Space Coast, Melbourne, Cape Canaveral, Cocoa, Orlando, and the I-4 corridor to Tampa has experienced unprecedented economic growth. This growth has been especially evident in the fields of aerospace, electronics, laser electro-optics, and simulation enterprises. From 1990 to 1997 the area’s population grew by more than 13 percent to approximately 4 million.

Manufacturing companies in the region now number more than 3000. The products manufactured range from aerospace to space launch equipment, advanced technology emergency vehicles, to sophisticated electronic and simulation components, circuit boards, laser equipment, wireless data systems, communication devices, and metals fabrication. Much of the nation’s aerospace, satellite, and space facilities are concentrated in the region, including NASA, Lockheed Martin, E.G. and G. Inc., Boeing, McDonnell Douglas, Rockwell, Raytheon, Grumman, and Harris Corporation. Electronic companies such as Siemens, AT&T, Lucent, and Motorola serve both U.S. and export markets.

Central Florida, with three interstate highways (I-95, I-4, and I-75), is home to the University of Central Florida, its 27,000 students, and programs which include comprehensive engineering and engineering technology. Central Florida’s growth has helped to fuel the State of Florida’s growth to fourth largest state in the U.S. with a population of 14.6 million. By 2010 the state’s population is projected to increase by more than 13 percent with 9 percent of its total workforce involved in manufacturing.

Central Florida Community College
Central Florida Community College (CFCC), serving a total of 6,000 students, offers a center of emphasis in Electronics, a Manufacturing Technology program with an internship requirement, an Industrial Maintenance/Machining program, a CADD program, and a Computer Design/Application program. Ocala, home of the college, has rapidly become an industrial center, with Lockheed Martin’s Microelectronics Circuit Board Facility, and a second plant for Defense/Commercial Satellite Communications Manufacturing. E-One Corporation and other companies contribute to 17 percent of the local workforce being engaged in manufacturing.

Development Team
- **Project Coordinator:** Dr. Hugh Rogers, former Dean of Technical Education; served as the primary administrator and academic coordinator for the MASTER project. He also conducted the occupational skills profile interviews and benchmarked the welding instructional modules with review at four other colleges: Moraine Valley (Palos Hills, IL), IVY Tech (Terra Haute, Ind), Macomb Community College (Sterling Heights, MI), and Henry Ford Community College (Dearborn, MI).
- **Subject Matter Experts:** Mr. Bill Rhodes and Mr. Doug Wilson were responsible for developing skill standards and course/program materials for the welding technology components of the MASTER project. Other colleges and the American Welding Society.
Introduction

MASTER research indicates that a minimum of one year of occupational study and training will prepare students with the entry-level skills. To prepare an advanced Welding Technician that is knowledgeable in mathematics, metallurgy, welding design and fabrication, requires a two-year or A.S. Degree program. This program equips the student with a more complete understanding and the capability to understand systems and solve problems, while allowing time for practical applications and certifications.

In this two-year program, the students progress through a series of basic welding and general preparatory courses of an excellent nature in composition, technical mathematics, physics, and manufacturing/metallurgical processes. Along with comprehensive hands-on training, students also learn about the various types of materials and processes used by today’s manufacturing industries. The Welding program at Central Florida Community College (CFCC) has been training welders for many years and works closely with advisory committee members to ensure that the skills being taught are the skills relevant to industry. Students who graduate from this course of study receive the A.S. Degree in Welding Management Technology from CFCC. Upon graduation, students are able to interpret complex drawings, select the correct materials, and perform all necessary welding processes. The curriculum has been designed to prepare students to enter the welding trades. Laboratory work is emphasized with actual industrial equipment in order to prepare students for interesting, rewarding work in a wide variety of industries. The Welding Management Program falls under the umbrella of Engineering Technology at CFCC. The Welding Department also offers a one-year certificate in welding in exceptional areas of study.

After many interviews with practitioners from industry and discussions with educators, managers, supervisors, and others involved with welding-related occupations, the MASTER Consortium Partners have agreed to present our definition of a welder as follows:

**WELDER – that person who is responsible for the planning, layout, fit up of materials, and operation of welding equipment to prepare the work and perform welding operations necessary to produce a work piece to prescribed engineering standards.**

This volume contains the justification, documentation, and course syllabi for the courses which we recommend as minimum training for individuals desiring to become welders.

The first and most important task of the MASTER program was the development of a foundation upon which all other works could be built. The MASTER Competency Profile is this foundation.
These same duties and tasks were then included in both the Texas and National Surveys for further validation. As a result of the surveys, additional refinements were made in the Competency Profiles. These changes were incorporated into the individual course syllabi which were used for the pilot program.

The MASTER Competency Profile for Welder has been included on the following page.
The MASTER Competency Profile

Development of Competency Profiles at each of the MASTER sites began with visits to representative companies for the purpose of surveying expert workers within the industry and occupational areas under investigation. Each site began the survey process by asking a subject matter expert in the targeted technical area, generally a member of its faculty, to employ a modified version of the generally accepted DACUM (Developing A Curriculum) method to categorize the major skills needed to work in the selected occupation. As source materials, the college instructors drew on their professional knowledge and experience of current industry requirements and trends. The initial skill standards developed by the subject matter experts underwent numerous internal reviews and revisions within each site, assuming final form as a series of structured survey and interview questions designed to elicit a simple yes or no response.

To determine an appropriate survey sample, each site compiled a database of its region’s small and medium-sized manufacturers and searched for companies likely to employ workers in the targeted occupational area. The resulting cross-industry samples were sorted further to achieve a balance of technological capability and workforce size; the sample companies within each region were then asked to participate in the project. Willing respondents were scheduled for interviews.

During the company interviews, the MASTER staff asked expert workers to identify the primary duties and tasks performed by a typical worker and to consider the special skills and knowledge, traits and attitudes, and industry trends that would have an impact on worker training, employability, and performance both now and in the future. The interview results were analyzed to create individual profiles identifying the most common duties and skills required of workers at each company. Summaries from the interviews of expert workers were then placed in a matrix of competencies and skills and further reviewed and confirmed by company supervisors and specialists. These individual company Competency Profiles served three purposes. First, they showed, in a format that could be easily understood by both industries and educators, a picture of the occupational specialty at a given company at that particular time. Second, these individual company Competency Profiles furnished the company with a document for their ownership. This, in effect, made them real partners in the work of MASTER. Third, they often became the basis of the company’s long term training plan. An added benefit was to display this company’s skill base to ISO 9000 auditors and others to clarify the skill levels of the workforce.

Data for all companies were then aggregated to develop a composite Competency Profile of industry skill standards within the selected occupational specialty area of Machining, as shown on the following page.

## Duties

### Communication Skills (D)
- **D-1** Practice being a good listener
- **D-5** Prepare a summarized priority list of work responsibilities
- **D-6** Display ability to follow directions, give directions and accept constructive criticism
- **D-7** Demonstrate positive communication skills with coworkers and supervisors
- **D-8** Demonstrate good personal relations skills

### Work as a Team (E)
- **E-1** Understand the roles of coworkers
- **E-2** Respect peer relationships
- **E-3** Share resources to accomplish necessary tasks
- **E-4** Facilitate the work ethic by completing tasks on time and accurately
- **E-5** Be involved with problem solving
- **E-6** Apply creative thinking
- **E-7** Support a positive attitude
- **E-8** Encourage good feelings and morale
- **E-9** Understand purpose and goals of the organization
- **E-10** Plan and organize work as a team
- **E-11** Be willing to lead in areas of knowledge and expertise
- **E-12** Demonstrate willingness to learn new methods and skills
- **E-13** Demonstrate good personal relations skills

### Mathematical Skills (F)
- **F-1** Exhibit understanding of basic arithmetic functions
- **F-2** Exhibit understanding of converting fractions and decimals
- **F-3** Demonstrate practical mathematics in the use of measurement tools
- **F-4** Inter-convert Metric/English Measurements
- **F-5** Perform practical mathematical applications relevant to area of work
- **F-6** Use applied statistics, graphs, and charts for purpose of analysis and problem solving

### Weld-Related Requirements (G)
- **G-1** Read job method plan
- **G-2** Verify and upgrade paperwork
- **G-3** Interpret drawings and blueprints
- **G-4** Read welding specifications and procedures

The MASTER Pilot Program  
Curriculum and Course Descriptions

After completing the Competency Profile for each occupational specialty area, each MASTER partner reviewed its existing curriculum against the industry-verified skill standards in order to identify a suitable foundation for new pilot training programs. Because each college had to comply with the requirements of its respective college system and appropriate state agency, the resulting pilot curricula for occupational specialty areas tended to vary in format and academic requirements (e.g., some programs were based on the semester system, others on the quarter system). Despite differences in the curricula developed at the partner colleges, each of the pilot programs was designed to achieve the following two goals mandated in the MASTER grant proposal:

**Pilot Program:** “Conduct a one year pilot program with 25 or more selected applicants at each college or advanced technology center to evaluate laboratory content and effectiveness, as measured by demonstrated competencies and indicators of each program area.”

**Student Assessment:** “Identify global skills competencies of program applicants both at point of entrance and point of exit for entry-level and already-employed technicians.”

(Note: Not all occupational specialty areas were pilot-tested at all Development Centers; however, all partner colleges conducted one or more pilot programs.)

Included on the following page is the curriculum listing for the pilot program which was used to validate course syllabi for this occupational specialty area. The curriculum also shows the number of hours assigned to each of the courses (lecture, laboratory and credit hours). Also included is a description of each of the courses.

MASTER Course Descriptions
Welding
(A.S. Degree Program)

First Semester

WLD 1106  Welding I (20-40-3) An introductory course including an overview of welding as an occupation, welding terminology, fundamentals of shielded metal arc welding, and oxyacetylene welding and cutting. Basic blueprint reading, metallurgy, welding codes and symbols are also covered. Practical experience will be gained in shielded metal arc welding and oxyacetylene welding and cutting.

WLD 2122  Shielded Metal Arc Welding (20-40-3) A course in the fundamentals of arc welding including the operation and setup of the arc welding machine, selection and identification of electrode classifications, and an overview of the steel making process. Practical experience will be gained in arc welding of basic joint configurations using a variety of welding electrodes.

WLD 1112  Oxyacetylene Welding (20-40-3) A course in the fundamentals of gas welding including welding terminologies, oxyacetylene welding and cutting procedures, fusion welding in all positions, braze welding, cutting torch operation, gas welding of aluminum and stainless steel, and cast measuring.

ENC 1101  Freshman Composition Skills I (45-0-3) The first course in college composition designed to develop skill in writing multi-paragraph essays with emphasis on exposition, including the selection, restriction, organization, and development of topics. It offers the student opportunities to improve CLAST English skills. Students examine selected writing samples as models of form and sources of ideas for the student's own writing.

MTB 1321  Technical Mathematics (45-15-3) A course in applied mathematics for students enrolled in technical degree programs. This course teaches algebraic functions, geometry, graphs, fundamentals of trigonometry, and applied statistics as tools to analyze and solve technical problems. Course also includes instruction in measurement tools and test equipment required for precision measurements by technicians or technologists. The scientific calculator will also be used to solve problems in both the English and metric systems.
Second Semester

WLD 2137 Advanced Welding I (20-40-30) Intermediate study of metal, industrial practices and procedures, and various testing techniques; arc welding in the flat position, using various thicknesses of metal. Includes structure of the welding program, history of welding, with emphasis on shop safety, welding safety and oxyacetylene safety.

WLD 1101 Blueprint Reading for Welders (30-30-3) This course teaches welding symbols and application of these symbols used on blueprints. Design and structural layout in relation to stress and materials will be introduced.

WLD 1123 TIG (GTAW) Welding (20-40-3) This course delves into the fundamentals of tungsten inert gas (TIG) welding, including the setup and adjustment of the TIG welding machine, selection of proper tungsten electrodes, selection of filler metals, and the use of various shielding gases, practical experience in TIG welding basic welded joints in stainless and mild carbon steel, aluminum sheet and casting, and magnesium castings.

ISS 1010 Introduction to Social Sciences (45-0-3) An introduction to the social sciences and to the major issues facing America today. Topics include population, minorities, cities, crime, poverty, health, the environment, values and international relations.

or

WOH 1012 World Civilizations I (45-0-3) A survey of our past emphasizing the intellectual, cultural, political and economic forces which have shaped our modern heritage from the civilizations of Mesopotamia, Egypt, Greece, Rome, Medieval Christendom, Islam, Africa and the Far East.

or

WOH 1022 World Civilizations II (45-0-3) A survey of the major civilizations of the modern world. Topics include the Age of Reason, the French Revolution, liberalism and socialism, European nationalism, imperialism, the Great War, the Russian Revolution, fascism, national socialism, totalitarianism, World War II, nationalism in Africa and Asia, the Cold War, and the Post-Cold War.

PHY 1020 Elementary Physics for Non-Science Majors (45-0-3) This course provides a basic introduction to the several traditional divisions of classical physics. These include mechanics, heat, material properties, molecular and atomic structure, electricity and magnetism, wave motion, including light and sound, optics, radioactivity, and the basic postulates of relativity.
Third Semester

WLD 1104 Manufacturing and Metallurgical Processes (30-30-3) This course provides an overview of basic manufacturing processes related to welding as well as the study of the science and technology of metals.

HLP 1082 Wellness Applications (30-0-2) This course will cover modules of the basic wellness concepts with concentration on cardiovascular fitness and personal lifestyle improvement.

Fourth Semester

WLD 2132 Advanced Welding II (20-40-3) Advanced study of metal, industrial practices and procedures, and various testing techniques; arc welding in the flat position, using various thicknesses of metal. Includes structure of the welding program, history of welding, with emphasis on shop safety, welding safety and oxyacetylene safety.

WLD 2930 Welding Fabrication Techniques (20-40-3) This course expands the skills and competencies gained in past welding curriculum. Basic layout and material usage, material identification, and welding process selection will be taught.

WLD 1161 Pipe Welding (20-40-3) A course in the fundamentals of pipe welding including pipe welding terminology, oxyacetylene welding and brazing of small diameter pipe, shielded metal arc welding of large diameter pipe. Extensive use of the oxyacetylene cutting process for pipe beveling is an integral aspect of this course.

SPC 2600 Effective Speaking (45-0-3) The nature and basic principles of speech, with emphasis on improving speaking and listening skills common to all forms of communication through a variety of experiences in public speaking.

HUM 1021 Introduction to the Humanities (45-0-3) An exploration of the arts, ideas and values in Western culture.

Fifth Semester

WLD 2931 Welding Design and Fabrication (20-40-3) This course teaches advanced techniques in metal fabrication. Advanced layout and blueprint interpretation will be taught.

WLD 1157 Specialty MIG and Plasma Arc Welding (15-45-3) This course is for students in their final semester of the A.S., A.A.S. option and the Occupational Certificate welding programs. This course will cover the
fundamentals of MIG welding, layout work, fabrication, and repair type welding. The student will have the opportunity to fine-tune gas, arc, TIG, and oxyacetylene cutting skills before entering the job market. This course will also cover job-seeking techniques, such as: application forms, resume writing, and interview procedures.

**WLD 1175 Pipe Fitting (15-45-3)** A course covering the fit up and welding of all common pipe configurations. Extensive use of the shielded metal arc welding and the oxyacetylene cutting processes is an integral aspect of this course.
The MASTER Technical Workplace Competencies and Course Crosswalk

After development of appropriate curricula for the pilot programs, each MASTER college began to develop individual course outlines for its assigned specialty area. The skill standards identified in the Competency Profile were cross walked against the technical competencies of the courses in the pilot curriculum. The resulting matrix provided a valuable tool for assessing whether current course content was sufficient or needed to be modified to ensure mastery of entry-level technical competencies. Exit proficiency levels for each of the technical competencies were further validated through industry wide surveys both in Texas and across the nation.

The Technical Workplace Competencies and Course Crosswalk on the following pages presents the match between industry—identified duties and tasks and the pilot curriculum for Welding. Course titles are shown in columns; duties and tasks, in rows. The Exit Proficiency Level Scale (see Figure 1), an ascending scale with 5 as the highest level of proficiency, includes marked boxes indicating whether the task is covered by the instructor during the course; the numbers 1–5 indicate the degree of attention given to the task and the corresponding proficiency expected on the part of the student upon completion of the course of studies. The crosswalk is intended to serve as an aide to other instructional designers and faculty in community college programs across the nation.

Figure 1

Included on the following pages is the Technical Workplace Competencies and Course Crosswalk for the pilot program curriculum. This crosswalk validates the fact that the duties and tasks which were identified by industry as being necessary for entry-level employees have been incorporated into the development of the course syllabi.
# WELDING TECHNOLOGY

## Technical Workplace Competencies and Course Crosswalk

### A. FOLLOW SAFETY PRACTICES

| A-1 Demonstrate understanding of safety rules | I R R P R R R R R R R R R R R R R R |
| A-2 Assume personal safety standards for self and others | I R R P R R R R R R R R R R R R R R |
| A-3 Describe the purpose and use of protective equipment | I R R P R R R R R R R R R R R R R R |
| A-4 Demonstrate proper handling of hazardous materials | I R R P R R R R R R R R R R R R R R |
| A-5 Demonstrate knowledge of first aid and CPR | I R R P R R R R R R R R R R R R R R |
| A-6 Practice safety precautions when using tools | I R R P R R R R R R R R R R R R R R |
| A-7 Demonstrate proper wearing and use of safety equipment | I R R P R R R R R R R R R R R R R R |
| A-8 Create and maintain a safe work station | I R R P R R R R R R R R R R R R R R |
| A-9 Demonstrate safety precautions regarding ARC flash | I R R P R R R R R R R R R R R R R R |
| A-10 Demonstrate eye safety precautions | I R R P R R R R R R R R R R R R R R |
| A-11 Perform grinding and brushing technique safety | I R R P R R R R R R R R R R R R R R |
| A-12 Maintain adequate ventilation | I R R P R R R R R R R R R R R R R R |
| A-13 Mark "hot-work" | I R R P R R R R R R R R R R R R R R |

### B. TOTAL QUALITY

| B-1 Apply principles and tools of continuous quality improvement | I R R P R R R R R R R R R R R R R R |
| B-2 Understand the importance of quality in the manufacturing process | I R R P R R R R R R R R R R R R R R |
| B-3 Implement concepts of quality in the workplace | I R R P R R R R R R R R R R R R R R |
| B-4 Follow the Quality Plan and recommend improvements in work methods or toolsing | I R R P R R R R R R R R R R R R R R |
| B-5 Establish methods, plans and procedures to maintain quality | I R R P R R R R R R R R R R R R R R |

### C. WORK ETHICS

| C-1 Be prompt and on the job in accordance with work schedule | I R R P R R R R R R R R R R R R R R |
| C-2 Value honest work ethics, dedication, and responsibility in the workplace | I R R P R R R R R R R R R R R R R R |
| C-3 Demonstrate high moral values | R R R P R R R R R R R R R R R R R R |
| C-4 Display a neat and clean workplace | I R R P R R R R R R R R R R R R R R |
| C-5 Practice careful use and maintenance of tools and equipment | I R R P R R R R R R R R R R R R R R |
| C-6 Be committed to excellence and quality | I R R P R R R R R R R R R R R R R R |
| C-7 Present a good company image in attitude and attitude | I R R P R R R R R R R R R R R R R R |

SCANS

The Secretary's Commission on Achieving Necessary Skills (SCANS), U. S. Department of Labor, has identified in its "AMERICA 2000 REPORT" the following five competencies and a three-part foundation of skills and personal qualities that are needed for solid job performance:

COMPETENCIES:

- **Resources:** Identifies, organizes, plans, and allocates resources
- **Interpersonal:** Works with others
- **Information:** Acquires and uses information
- **Systems:** Understands complex inter-relationships
- **Technology:** Works with a variety of technologies

FOUNDATION SKILLS:

- **Basic Skills:** Reads, writes, performs arithmetic and mathematical operations, listens, and speaks well
- **Thinking Skills:** Thinks creatively, makes decisions, solves problems, visualizes, knows how to learn, and reasons
- **Personal Qualities:** Displays responsibility, self-esteem, sociability, self-management, integrity, and honesty

Recognizing the value of SCANS proficiencies to job performance as well as the growing mandate in many states to include SCANS activities in course curricula, MASTER asked survey respondents to review the SCANS skill sets in the context of the draft skill standards for each occupational specialty area. MASTER also incorporated an evaluation of SCANS competencies and foundation skills into its assessment of the pilot training curricula. The results were summarized in a crosswalk that allowed the MASTER staff to modify course contents where needed to strengthen the achievement of SCANS competencies.

As soft skills, the SCANS competencies are inherently difficult to quantify. MASTER realizes that some faculty will emphasize the SCANS more or less than others. In time, faculty will learn to make these types of SCANS activities an integral and important part of the teaching process.

MASTER PROGRAM

Welding I
Course Syllabus

Total lecture hours: 20  Total lab hours: 40  Credit hours: 3

COURSE DESCRIPTION:

An introductory course including an overview of welding as an occupation, welding terminology, fundamentals of shielded metal arc welding, and oxyacetylene welding and cutting. Practical experience will be gained in shielded metal arc welding and oxyacetylene welding and cutting.

PREREQUISITES: None

COURSE OBJECTIVES:

After successful completion of this course, the students will be able to:
1. Identify safety procedures unique to the types of welding covered in this program;
2. Provide guidance for a general understanding of employability;
3. Demonstrate knowledge of welding metallurgy;
4. Demonstrate knowledge of joint design and welding terms;
5. Demonstrate ability to interpret drawings, blueprints, and weld symbols;
6. Increase knowledge of proper application of welding skills;
7. Increase knowledge of American Welding Society Standards (AWS);
8. Demonstrate knowledge of adequate preparation of welding surfaces; and,
9. Increase skill level to pass welding tests offered by an employer.

REQUIRED COURSE MATERIALS:

Lab Manual:  Student handbook

METHODS OF INSTRUCTION:

Lecture:  Presentations and demonstrations.
Laboratory: Practice with coaching and close supervision.

Method of Evaluation: A student's grade will be based on multiple measures of performance, including:
1. Tests and quizzes administered throughout the term;
2. Instructor's observation of hands-on performance; and,
3. Student closely following safety and shop procedures.

COURSE OBJECTIVES: SCANS COMPETENCIES

The Secretary’s Commission on Achieving Necessary Skills (SCANS), U.S. Department of Labor, has identified in its “AMERICA 2000 REPORT” that all students should develop a new set of competencies and foundation skills if they are to enjoy a productive, full and satisfying life. These are in addition to the Technical Workplace Competencies
required by industry. SCANS is made up of five competencies and a three-part foundation of skills and personal qualities that are needed for solid job performance. All italicized headings in this section are direct quotations from "What Work Requires of Schools: A SCANS Report for America 2000."

The following activities will be performed by each student for successful completion of this course:

I. COMPETENCIES
   A. Resources: Identifies, organizes, plans, and allocates resources
      1. Allocates time to complete assigned tasks on schedule
      2. Determines and allocates required materials and resources for meeting objectives
      3. Evaluates skills, performance, and quality of work and provides feedback
   B. Interpersonal: Works with others
      1. Participates as a member of the team, contributing to group effort
      2. Provides individual assistance/direction to peers as requested
      3. Determines and meets expectations
      4. Exercises leadership qualities to effectively communicate ideas and make decisions.
      5. Negotiates resources in order to accomplish objectives
      6. Works well with all members of the class
   C. Information: Acquires and uses information
      1. Acquires and evaluates information
      2. Organizes and maintains information
      3. Interprets and communicates information
   D. Systems: Understands complex inter-relationships
      1. Understands and works well with social, organizational, and technological systems
      2. Monitors and corrects performance of system during operation
      3. Recommends modifications to system to improve performance
   E. Technology: Works with a variety of technologies
      1. Chooses relevant procedures, tools, and equipment
      2. Applies appropriate procedures and techniques to accomplish tasks
      3. Identifies or solves problems to maintain equipment

II. FOUNDATION SKILLS
   A. Basic Skills: Reads, writes, performs arithmetic and mathematical operations, listens and speaks
1. **Reading:** Locates, understands, and interprets written information in prose and in documents such as manuals, graphs, and schedules
   a. Demonstrates basic reading skills including abilities to perceive main ideas, draw appropriate conclusions, detect a sequence, locate answers, find facts, and infer from written texts
   b. Demonstrates course specific reading skills including abilities to read, interpret, and comprehend information from text and supplemental materials on a level to facilitate productive independent and group study
   c. Demonstrates ability to read, interpret, and utilize information from course specific instruments (i.e., charts, diagrams, graphs, schematics, blueprints, flow charts, etc.)
   d. Demonstrates ability to read, interpret, and follow schedules and procedural instructions in a timely and appropriate manner
   e. Demonstrates ability to choose and use most appropriate reading method (skim, scan, or read for comprehension) for materials

2. **Writing:** Communicates thoughts, ideas, information, and messages in writing; and creates documents such as letters, directions, manuals, reports, graphs, and flow charts
   a. Demonstrates basic writing skills including abilities to produce written documents which conform with accepted grammatical and communication standards required for effective daily functioning
   b. Demonstrates effective written study skills including note taking, maintaining course specific journals, workbooks, manuals, etc.
   c. Demonstrates technical writing skills in preparing outlines, summaries, time lines, flow charts, diagrams, etc. appropriate to materials covered
   d. Demonstrates ability to complete all required writings in a timely, complete, and professional manner
   e. Demonstrates competence in subject matter through the organization and presentation of answers to required written assessments

3. **Arithmetic/Mathematics:** Perform basic computations and approaches practical problems by choosing appropriately from a variety of mathematical techniques
a. Demonstrates proficiency in basic arithmetic functions including ability to add, subtract, multiply, and divide whole numbers, fractions, decimals, and percentages
b. Demonstrates ability to read, comprehend, and select appropriate math procedures to work basic math problems
c. Demonstrates ability to understand and perform multi-step computations
d. Demonstrates ability to read, interpret, and use standard measuring devices
e. Demonstrates ability to comprehend, retain, and utilize course specific measuring devices effectively
f. Demonstrates ability to understand, retain, and utilize higher mathematical formulas and functions required for course specific math performance
g. Demonstrates ability to appropriately transfer mathematical calculations and information from paper to machines

4. **Listening:** Receives, attends to, interprets, and responds to verbal messages and other cues
   a. Functions at minimal or above required hearing levels to receive, attend, interpret, and respond to verbal messages and instructions and to safely operate machinery
   b. Demonstrates ability to hear, comprehend, and appropriately follow directions
   c. Demonstrates auditory ability to hear, comprehend, and utilize verbal classroom as well as other auditory instruction
   d. Demonstrates ability to discriminate between essential and non-essential verbal information and react appropriately
   e. Demonstrates ability to focus and fine-tune listening skills to receive, interpret, and respond to various sounds
   f. Demonstrates ability and maturity to seek and receive additional individualized instruction as needed

5. **Speaking:** Organizes ideas and communicates orally
   a. Demonstrates appropriate listening and speaking skills in personal conversations
   b. Demonstrates ability to choose and organize appropriate words to effectively communicate
   c. Demonstrates ability to speak clearly and distinctly with appropriate volume, tone, and body language for situation
d. Demonstrates ability to spontaneously organize and present appropriate answers and/or short presentations for classroom and/or assessment purposes

e. Demonstrates ability to formulate, organize, and deliver major presentations to peers or groups

f. Demonstrates ability to speak effectively in one-on-one, small group, or large group presentations

g. Demonstrates ability to take responsibility for presentations

B. Thinking Skills: Thinks creatively, makes decisions, solves problems, visualizes, knows how to learn and reasons

I. Decision Making: Specifies goals and constraints, generates alternatives, considers risks, and evaluates and chooses best alternative

a. Demonstrates ability to objectively assess personal strengths and weaknesses

b. Demonstrates ability to set realistic short-term and long-term goals

c. Demonstrates ability to recognize and distinguish between positive and negative alternatives

d. Demonstrates ability to identify potential pitfalls and take evasive actions

e. Demonstrates ability to objectively and responsibly evaluate alternatives by testing hypotheses and selecting most appropriate response

f. Demonstrates ability to profit from negative evaluations or mistakes by reformulating, redirecting, reconstructing, or retesting alternatives

g. Demonstrates maturity in taking responsibility for decisions

2. Problem Solving: Recognizes problems and devises and implements plan of action

a. Demonstrates ability to detect problem through observation, inquiry, or directive

b. Demonstrates ability to grasp appropriate overview and degree of seriousness of problem and to behave responsibly in situation

c. Demonstrates ability to generate alternatives or options for problem solution

d. Demonstrates ability to research options, assess and evaluate options, and determine appropriate and best solution

e. Demonstrates ability to initiate and effect solution

f. Demonstrates ability to take responsibility for outcomes
3. **Seeing Things In the Mind's Eye**: Organizes, and processes symbols, pictures, graphs, objects, and other information
   a. Functions at minimum or above required visual levels in order to see, interpret, attend and respond to visual imagery and meet safety requirements for necessary machinery
   b. Demonstrates ability to read, interpret, and act upon signs, symbols, and other visual cues
   c. Demonstrates ability to visually discriminate in gross and fine imagery
   d. Demonstrates ability to visualize abstractly
   e. Demonstrates ability to apply visual imagery to applied tasks

4. **Knowing How to Learn**: Use efficient learning techniques to acquire and apply new knowledge and skills
   a. Demonstrates mastery of basic reading, math, and language skills through application
   b. Demonstrates ability to translate abstract theory into practical application
   c. Demonstrates ability to incorporate and generalize new learning into a sequential learning process
   d. Demonstrates knowledge of good study skills and learning habits

5. **Reasoning**: Discovers a rule or principle underlying the relationship between two or more objects and applies it when solving a problem
   a. Demonstrates use of simple logic
   b. Demonstrates ability to distinguish relationships
   c. Demonstrates ability to determine and isolate factors in relationships
   d. Demonstrates and applies knowledge through practice
   e. Recognizes that attitudes, skills, and practice are essential to productivity
   f. Demonstrates ability to discriminate between positive and negative, and act accordingly

C. **Personal Qualities**: Displays responsibility, self-esteem, sociability, self-management, and integrity and honesty

1. **Responsibility**: Exerts a high level of effort and perseveres towards goal attainment
   a. Demonstrates ability to formulate realistic and useful short and long term goals and complete steps necessary to timely achieve goals
b. Demonstrates ability to make adjustments, revisions, and changes to achieve goals in a cooperative and polite manner

c. Demonstrates ability to focus on task at hand and work to completion

d. Demonstrates good work ethics through regular attendance, adequate classroom preparations, and appropriate use of classroom time

e. Demonstrates maturity to take responsibility for actions

f. Demonstrates ability to cooperatively work in individual, team, and group situations in timely and effective manner

2. **Self-Esteem: Believes in own self-worth and maintains a positive view of self**

   a. Presents a positive attitude toward tasks

   b. Demonstrates ability to separate work and personal behaviors

   c. Actively participates in learning opportunities by sharing knowledge and skills with peers and instructors

   d. Demonstrates ability to accept personal strengths and weaknesses and builds on positive behaviors

   e. Demonstrates ability to accept and use constructive criticism

   f. Accepts positive reinforcement in an appropriate manner

3. **Sociability: Demonstrates understanding, friendliness, adaptability, empathy, and politeness in group settings**

   a. Demonstrates appropriate and acceptable social behaviors in interactions

   b. Demonstrates ability to work cooperatively in individual, team, or group situations

   c. Demonstrates active interest in peers by offering assistance, sharing resources, and sharing knowledge in a professional and acceptable manner

   d. Demonstrates professional work ethic by separating work and personal social behaviors and acting accordingly

4. **Self-Management: Assesses self accurately, sets personal goals, monitors progress, and exhibits self-control**

   a. Accepts personal strengths and weaknesses and uses the same for positive advancement

   b. Demonstrates ability to continuously set, assess, choose, and modify objectives as the situation demands in an appropriate manner

   c. Demonstrates ability to formulate and follow personal schedules
d. Demonstrates ability to wisely use classroom time
e. Demonstrates use of good study habits and skills
f. Demonstrates maturity to take responsibility for own actions

5. **Integrity/Honesty:** Chooses ethical courses of action
   a. Knows and demonstrates ability to distinguish between positive and negative behaviors
   b. Demonstrates honesty and integrity in working with peers and supervisors
   c. Takes full responsibility for personal actions
   d. Demonstrates understanding of consequences for negative ethical behaviors and accepts responsibility for same when applicable
   e. Demonstrates positive work and social ethics in undertakings

**Appropriate Reference Materials:**

1. **MASTER Technical Modules:**
   - WLD-A1 through WLD-A13;
   - WLD-B1 through WLD-B5;
   - WLD-C1 through WLD-C9;
   - WLD-D1 through WLD-D7;
   - WLD-E1 through WLD-E13;
   - WLD-F1 through WLD-F6;
   - WLD-G1 through WLD-G4;
   - WLD-H1 through WLD-H17;
   - WLD-I1 through WLD-I15;
   - WLD-J1 through WLD-J4;
   - WLD-K1 through WLD-K9;
   - WLD-L1 through WLD-L12;
   - WLD-M1 through WLD-M35;
   - WLD-N1 through WLD-N4;
   - WLD-O1 through WLD-O10;
   - WLD-P1 through WLD-P7;
   - WLD-Q1 through WLD-Q2;
   - WLD-R1 through WLD-R5;
   - WLD-S1 through WLD-S5;
   - WLD-T1 through WLD-T3; and,
   - WLD-U1 through WLD-U6.

MASTER PROGRAM
Shielded Metal Arc Welding
Course Syllabus

Total lecture hours: 20  Total lab hours: 40  Credit hours: 3

COURSE DESCRIPTION:

A course in the fundamentals of arc welding including the operation and set up of the arc welding machine, selection and identification of electrode classifications, and an overview of the steel making process. Practical experience will be gained in arc welding of basic joint configurations using a variety of welding electrodes.

PREREQUISITES:  None

COURSE OBJECTIVES:

After successful completion of this course, the students will be able to:
1. Identify safety procedures unique to this type of welding;
2. Become proficient in identifying metal;
3. Demonstrate employability skills;
4. Demonstrate knowledge of adequate preparation of welding surfaces;
5. Give a general understanding of American Welding Society (AWS) standards;
6. Identify proper applications with AC and DC welding;
7. Become proficient in applying Shielded Metal Arc Welding (SMAW) skills;
8. Become proficient in SMAW position welding; and,
9. Identify and select proper electrodes size and alloy.

REQUIRED COURSE MATERIALS:

Lab Manual:  Student handbook

METHODS OF INSTRUCTION:

Lecture:  Presentations and demonstrations.

Laboratory:  Practice with coaching and close supervision.
Method of Evaluation: A student’s grade will be based on multiple measures of performance, including:
1. Tests and quizzes administered throughout the term;
2. Instructor’s observation of hands-on performance; and,
3. Student closely following safety and shop procedures.

COURSE OBJECTIVES: SCANS COMPETENCIES

The Secretary’s Commission on Achieving Necessary Skills (SCANS), U.S. Department of Labor, has identified in its “AMERICA 2000 REPORT” that all students should develop a new set of competencies and foundation skills if they are to enjoy a productive, full and satisfying life. These are in addition to the Technical Workplace Competencies required by industry. SCANS is made up of five competencies and a three-part foundation of skills and personal qualities that are needed for solid job performance.
The following activities will be performed by each student for successful completion of this course:

I. COMPETENCIES

A. **Resources:** Identifies, organizes, plans, and allocates resources
   1. Allocates time to complete assigned tasks on schedule
   2. Determines and allocates required materials and resources for meeting objectives
   3. Evaluates skills, performance, and quality of work and provides feedback

B. **Interpersonal:** Works with others
   1. Participates as a member of the team, contributing to group effort
   2. Provides individual assistance/direction to peers as requested
   3. Determines and meets expectations
   4. Exercises leadership qualities to effectively communicate ideas and make decisions.
   5. Negotiates resources in order to accomplish objectives
   6. Works well with all members of the class

C. **Information:** Acquires and uses information
   1. Acquires and evaluates information
   2. Organizes and maintains information
   3. Interprets and communicates information

D. **Systems:** Understands complex inter-relationships
   1. Understands and works well with social, organizational, and technological systems
   2. Monitors and corrects performance of system during operation
   3. Recommends modifications to system to improve performance

E. **Technology:** Works with a variety of technologies
   1. Chooses relevant procedures, tools, and equipment
   2. Applies appropriate procedures and techniques to accomplish tasks
   3. Identifies or solves problems to maintain equipment

II. FOUNDATION SKILLS

A. **Basic Skills:** Reads, writes, performs arithmetic and mathematical operations, listens and speaks
   1. **Reading:** Locates, understands, and interprets written information in prose and in documents such as manuals, graphs, and schedules
a. Demonstrates basic reading skills including abilities to perceive main ideas, draw appropriate conclusions, detect a sequence, locate answers, find facts, and infer from written texts
b. Demonstrates course specific reading skills including abilities to read, interpret, and comprehend information from text and supplemental materials on a level to facilitate productive independent and group study
c. Demonstrates ability to read, interpret, and utilize information from course specific instruments (i.e., charts, diagrams, graphs, schematics, blueprints, flow charts, etc.)
d. Demonstrates ability to read, interpret, and follow schedules and procedural instructions in a timely and appropriate manner
e. Demonstrates ability to choose and use most appropriate reading method (skim, scan, or read for comprehension) for materials

2. Writing: Communicates thoughts, ideas, information, and messages in writing; and creates documents such as letters, directions, manuals, reports, graphs, and flow charts
a. Demonstrates basic writing skills including abilities to produce written documents which conform with accepted grammatical and communication standards required for effective daily functioning
b. Demonstrates effective written study skills including note taking, maintaining course specific journals, workbooks, manuals, etc.
c. Demonstrates technical writing skills in preparing outlines, summaries, time lines, flow charts, diagrams, etc. appropriate to materials covered
d. Demonstrates ability to complete all required writings in a timely, complete, and professional manner
e. Demonstrates competence in subject matter through the organization and presentation of answers to required written assessments

3. Arithmetic/Mathematics: Perform basic computations and approaches practical problems by choosing appropriately from a variety of mathematical techniques
a. Demonstrates proficiency in basic arithmetic functions including ability to add, subtract, multiply, and divide whole numbers, fractions, decimals, and percentages
b. Demonstrates ability to read, comprehend, and select appropriate math procedures to work basic math problems
c. Demonstrates ability to understand and perform multi-step computations
d. Demonstrates ability to read, interpret, and use standard measuring devices
e. Demonstrates ability to comprehend, retain, and utilize course specific measuring devices effectively
f. Demonstrates ability to understand, retain, and utilize higher mathematical formulas and functions required for course specific math performance
g. Demonstrates ability to appropriately transfer mathematical calculations and information from paper to machines

4. **Listening:** Receives, attends to, interprets, and responds to verbal messages and other cues
   a. Functions at minimal or above required hearing levels to receive, attend, interpret, and respond to verbal messages and instructions and to safely operate machinery
   b. Demonstrates ability to hear, comprehend, and appropriately follow directions
c. Demonstrates auditory ability to hear, comprehend, and utilize verbal classroom as well as other auditory instruction
d. Demonstrates ability to discriminate between essential and non-essential verbal information and react appropriately
e. Demonstrates ability to focus and fine-tune listening skills to receive, interpret, and respond to various sounds
f. Demonstrates ability and maturity to seek and receive additional individualized instruction as needed

5. **Speaking:** Organizes ideas and communicates orally
   a. Demonstrates appropriate listening and speaking skills in personal conversations
   b. Demonstrates ability to choose and organize appropriate words to effectively communicate
c. Demonstrates ability to speak clearly and distinctly with appropriate volume, tone, and body language for situation
d. Demonstrates ability to spontaneously organize and present appropriate answers and/or short presentations for classroom and/or assessment purposes
e. Demonstrates ability to formulate, organize, and deliver major presentations to peers or groups
f. Demonstrates ability to speak effectively in one-on-one, small group, or large group presentations

g. Demonstrates ability to take responsibility for presentations

B. Thinking Skills: Thinks creatively, makes decisions, solves problems, visualizes, knows how to learn and reasons

1. Decision Making: Specifies goals and constraints, generates alternatives, considers risks, and evaluates and chooses best alternative
   a. Demonstrates ability to objectively assess personal strengths and weaknesses
   b. Demonstrates ability to set realistic short-term and long-term goals
   c. Demonstrates ability to recognize and distinguish between positive and negative alternatives
   d. Demonstrates ability to identify potential pitfalls and take evasive actions
   e. Demonstrates ability to objectively and responsibly evaluate alternatives by testing hypotheses and selecting most appropriate response
   f. Demonstrates ability to profit from negative evaluations or mistakes by reformulating, redirecting, reconstructing, or retesting alternatives
   g. Demonstrates maturity in taking responsibility for decisions

2. Problem Solving: Recognizes problems and devises and implements plan of action
   a. Demonstrates ability to detect problem through observation, inquiry, or directive
   b. Demonstrates ability to grasp appropriate overview and degree of seriousness of problem and to behave responsibly in situation
   c. Demonstrates ability to generate alternatives or options for problem solution
   d. Demonstrates ability to research options, assess and evaluate options, and determine appropriate and best solution
   e. Demonstrates ability to initiate and effect solution
   f. Demonstrates ability to take responsibility for outcomes
   g. Demonstrates ability to effectively problem solve in individual, team, or group situations

3. Seeing Things In the Mind’s Eye: Organizes, and processes symbols, pictures, graphs, objects, and other information
a. Functions at minimum or above required visual levels in order to see, interpret, attend and respond to visual imagery and meet safety requirements for necessary machinery
b. Demonstrates ability to read, interpret, and act upon signs, symbols, and other visual cues
c. Demonstrates ability to visually discriminate in gross and fine imagery
d. Demonstrates ability to visualize abstractly
e. Demonstrates ability to apply visual imagery to applied tasks

4. **Knowing How to Learn: Use efficient learning techniques to acquire and apply new knowledge and skills**
   a. Demonstrates mastery of basic reading, math, and language skills through application
   b. Demonstrates ability to translate abstract theory into practical application
   c. Demonstrates ability to incorporate and generalize new learning into a sequential learning process
   d. Demonstrates knowledge of good study skills and learning habits

5. **Reasoning: Discovers a rule or principle underlying the relationship between two or more objects and applies it when solving a problem**
   a. Demonstrates use of simple logic
   b. Demonstrates ability to distinguish relationships
   c. Demonstrates ability to determine and isolate factors in relationships
   d. Demonstrates and applies knowledge through practice
   e. Recognizes that attitudes, skills, and practice are essential to productivity
   f. Demonstrates ability to discriminate between positive and negative, and act accordingly

C. **Personal Qualities:** Displays responsibility, self-esteem, sociability, self-management, and integrity and honesty

1. **Responsibility: Exerts a high level of effort and perseveres towards goal attainment**
   a. Demonstrates ability to formulate realistic and useful short and long term goals and complete steps necessary to timely achieve goals
   b. Demonstrates ability to make adjustments, revisions, and changes to achieve goals in a cooperative and polite manner
c. Demonstrates ability to focus on task at hand and work to completion  
d. Demonstrates good work ethics through regular attendance, adequate classroom preparations, and appropriate use of classroom time  
e. Demonstrates maturity to take responsibility for actions  
f. Demonstrates ability to cooperatively work in individual, team, and group situations in timely and effective manner  

2. **Self-Esteem:** Believes in own self-worth and maintains a positive view of self  
a. Presents a positive attitude toward tasks  
b. Demonstrates ability to separate work and personal behaviors  
c. Actively participates in learning opportunities by sharing knowledge and skills with peers and instructors  
d. Demonstrates ability to accept personal strengths and weaknesses and builds on positive behaviors  
e. Demonstrates ability to accept and use constructive criticism  
f. Accepts positive reinforcement in an appropriate manner  

3. **Sociability:** Demonstrates understanding, friendliness, adaptability, empathy, and politeness in group settings  
a. Demonstrates appropriate and acceptable social behaviors in interactions  
b. Demonstrates ability to work cooperatively in individual, team, or group situations  
c. Demonstrates active interest in peers by offering assistance, sharing resources, and sharing knowledge in a professional and acceptable manner  
d. Demonstrates professional work ethic by separating work and personal social behaviors and acting accordingly  

4. **Self-Management:** Assesses self accurately, sets personal goals, monitors progress, and exhibits self-control  
a. Accepts personal strengths and weaknesses and uses the same for positive advancement  
b. Demonstrates ability to continuously set, assess, choose, and modify objectives as the situation demands in an appropriate manner  
c. Demonstrates ability to formulate and follow personal schedules  
d. Demonstrates ability to wisely use classroom time  
e. Demonstrates use of good study habits and skills
f. Demonstrates maturity to take responsibility for own actions

5. **Integrity/Honesty**: Chooses ethical courses of action
   a. Knows and demonstrates ability to distinguish between positive and negative behaviors
   b. Demonstrates honesty and integrity in working with peers and supervisors
   c. Takes full responsibility for personal actions
   d. Demonstrates understanding of consequences for negative ethical behaviors and accepts responsibility for same when applicable
   e. Demonstrates positive work and social ethics in undertakings

   - WLD-S1 through WLD-S5.

MASTER PROGRAM
Oxyacetylene Welding
Course Syllabus

Total lecture hours: 20  Total lab hours: 40  Credit hours: 3

COURSE DESCRIPTION:
A course in the fundamentals of gas welding including welding terminologies, oxyacetylene welding and cutting procedures, fusion welding in all positions, braze welding, cutting torch operation, gas welding of aluminum and stainless steel, and cast measuring.

PREREQUISITES:  None

COURSE OBJECTIVES:
After successful completion of this course, the students will be able to:
1. Identify safety and set-up procedures;
2. Demonstrate ability in gas welding skills;
3. Demonstrate ability to cut carbon steel using oxyacetylene equipment;
4. Show ability to pre-heat and form metal using oxyacetylene equipment; and,
5. Increase ability to remove distortion using oxyacetylene equipment.

REQUIRED COURSE MATERIALS:
Lab Manual:  Student handbook

METHODS OF INSTRUCTION:
Lecture:  Presentations and demonstrations.
Laboratory:  Practice with coaching and close supervision.

Method of Evaluation: A student's grade will be based on multiple measures of performance, including:
1. Tests and quizzes administered throughout the term;
2. Instructor's observation of hands-on performance; and,
3. Student closely following safety and shop procedures.

**COURSE OBJECTIVES: SCANS COMPETENCIES**

The Secretary's Commission on Achieving Necessary Skills (SCANS), U.S. Department of Labor, has identified in its “AMERICA 2000 REPORT” that all students should develop a new set of competencies and foundation skills if they are to enjoy a productive, full and satisfying life. These are in addition to the Technical Workplace Competencies required by industry. SCANS is made up of five competencies and a three-part foundation of skills and personal qualities that are needed for solid job performance. All italicized headings in this section are direct quotations from “What Work Requires of Schools: A SCANS Report for America 2000.”

The following activities will be performed by each student for successful completion of this course:

**I. COMPETENCIES**

**A. Resources:** Identifies, organizes, plans, and allocates resources
1. Allocates time to complete assigned tasks on schedule
2. Determines and allocates required materials and resources for meeting objectives
3. Evaluates skills, performance, and quality of work and provides feedback

B. **Interpersonal: Works with others**
   1. Participates as a member of the team, contributing to group effort
   2. Provides individual assistance/direction to peers as requested
   3. Determines and meets expectations
   4. Exercises leadership qualities to effectively communicate ideas and make decisions.
   5. Negotiates resources in order to accomplish objectives
   6. Works well with all members of the class

C. **Information: Acquires and uses information**
   1. Acquires and evaluates information
   2. Organizes and maintains information
   3. Interprets and communicates information

D. **Systems: Understands complex inter-relationships**
   1. Understands and works well with social, organizational, and technological systems
   2. Monitors and corrects performance of system during operation
   3. Recommends modifications to system to improve performance

E. **Technology: Works with a variety of technologies**
   1. Chooses relevant procedures, tools, and equipment
   2. Applies appropriate procedures and techniques to accomplish tasks
   3. Identifies or solves problems to maintain equipment

II. **FOUNDATION SKILLS**
A. **Basic Skills: Reads, writes, performs arithmetic and mathematical operations, listens and speaks**
   I. **Reading: Locates, understands, and interprets written information in prose and in documents such as manuals, graphs, and schedules**
      a. Demonstrates basic reading skills including abilities to perceive main ideas, draw appropriate conclusions, detect a sequence, locate answers, find facts, and infer from written texts
      b. Demonstrates course specific reading skills including abilities to read, interpret, and comprehend information from text and supplemental materials on a level to facilitate productive independent and group study
c. Demonstrates ability to read, interpret, and utilize information from course specific instruments (i.e., charts, diagrams, graphs, schematics, blueprints, flow-charts, etc.)

d. Demonstrates ability to read, interpret, and follow schedules and procedural instructions in a timely and appropriate manner

e. Demonstrates ability to choose and use most appropriate reading method (skim, scan, or read for comprehension) for materials

2. **Writing:** Communicates thoughts, ideas, information, and messages in writing; and creates documents such as letters, directions, manuals, reports, graphs, and flow charts

   a. Demonstrates basic writing skills including abilities to produce written documents which conform with accepted grammatical and communication standards required for effective daily functioning

   b. Demonstrates effective written study skills including note taking, maintaining course specific journals, workbooks, manuals, etc.

   c. Demonstrates technical writing skills in preparing outlines, summaries, time lines, flow charts, diagrams, etc. appropriate to materials covered

   d. Demonstrates ability to complete all required writings in a timely, complete, and professional manner

   e. Demonstrates competence in subject matter through the organization and presentation of answers to required written assessments

3. **Arithmetic/Mathematics:** Perform basic computations and approaches practical problems by choosing appropriately from a variety of mathematical techniques

   a. Demonstrates proficiency in basic arithmetic functions including ability to add, subtract, multiply, and divide whole numbers, fractions, decimals, and percentages

   b. Demonstrates ability to read, comprehend, and select appropriate math procedures to work basic math problems

   c. Demonstrates ability to understand and perform multi-step computations

   d. Demonstrates ability to read, interpret, and use standard measuring devices

   e. Demonstrates ability to comprehend, retain, and utilize course specific measuring devices effectively
f. Demonstrates ability to understand, retain, and utilize higher mathematical formulas and functions required for course specific math performance

g. Demonstrates ability to appropriately transfer mathematical calculations and information from paper to machines

4. **Listening:** Receives, attends to, interprets, and responds to verbal messages and other cues
   a. Functions at minimal or above required hearing levels to receive, attend, interpret, and respond to verbal messages and instructions and to safely operate machinery
   b. Demonstrates ability to hear, comprehend, and appropriately follow directions
   c. Demonstrates auditory ability to hear, comprehend, and utilize verbal classroom as well as other auditory instruction
   d. Demonstrates ability to discriminate between essential and non-essential verbal information and react appropriately
   e. Demonstrates ability to focus and fine-tune listening skills to receive, interpret, and respond to various sounds
   f. Demonstrates ability and maturity to seek and receive additional individualized instruction as needed

5. **Speaking:** Organizes ideas and communicates orally
   a. Demonstrates appropriate listening and speaking skills in personal conversations
   b. Demonstrates ability to choose and organize appropriate words to effectively communicate
   c. Demonstrates ability to speak clearly and distinctly with appropriate volume, tone, and body language for situation
   d. Demonstrates ability to spontaneously organize and present appropriate answers and/or short presentations for classroom and/or assessment purposes
   e. Demonstrates ability to formulate, organize, and deliver major presentations to peers or groups
   f. Demonstrates ability to speak effectively in one-on-one, small group, or large group presentations
   g. Demonstrates ability to take responsibility for presentations

B. **Thinking Skills:** Thinks creatively, makes decisions, solves problems, visualizes, knows how to learn and reasons

1. **Decision Making:** Specifies goals and constraints, generates alternatives, considers risks, and evaluates and chooses best alternative
a. Demonstrates ability to objectively assess personal strengths and weaknesses
b. Demonstrates ability to set realistic short-term and long-term goals
c. Demonstrates ability to recognize and distinguish between positive and negative alternatives
d. Demonstrates ability to identify potential pitfalls and take evasive actions
e. Demonstrates ability to objectively and responsibly evaluate alternatives by testing hypotheses and selecting most appropriate response
f. Demonstrates ability to profit from negative evaluations or mistakes by reformulating, redirecting, reconstructing, or retesting alternatives
g. Demonstrates maturity in taking responsibility for decisions

2. **Problem Solving: Recognizes problems and devises and implements plan of action**
   a. Demonstrates ability to detect problem through observation, inquiry, or directive
   b. Demonstrates ability to grasp appropriate overview and degree of seriousness of problem and to behave responsibly in situation
c. Demonstrates ability to generate alternatives or options for problem solution
d. Demonstrates ability to research options, assess and evaluate options, and determine appropriate and best solution
e. Demonstrates ability to initiate and effect solution
f. Demonstrates ability to take responsibility for outcomes
g. Demonstrates ability to effectively problem solve in individual, team, or group situations

3. **Seeing Things In the Mind's Eye: Organizes, and processes symbols, pictures, graphs, objects, and other information**
   a. Functions at minimum or above required visual levels in order to see, interpret, attend and respond to visual imagery and meet safety requirements for necessary machinery
   b. Demonstrates ability to read, interpret, and act upon signs, symbols, and other visual cues
c. Demonstrates ability to visually discriminate in gross and fine imagery
d. Demonstrates ability to visualize abstractly
e. Demonstrates ability to apply visual imagery to applied tasks

4. **Knowing How to Learn**: Use efficient learning techniques to acquire and apply new knowledge and skills
   a. Demonstrates mastery of basic reading, math, and language skills through application
   b. Demonstrates ability to translate abstract theory into practical application
   c. Demonstrates ability to incorporate and generalize new learning into a sequential learning process
   d. Demonstrates knowledge of good study skills and learning habits

5. **Reasoning**: Discovers a rule or principle underlying the relationship between two or more objects and applies it when solving a problem
   a. Demonstrates use of simple logic
   b. Demonstrates ability to distinguish relationships
   c. Demonstrates ability to determine and isolate factors in relationships
   d. Demonstrates and applies knowledge through practice
   e. Recognizes that attitudes, skills, and practice are essential to productivity
   f. Demonstrates ability to discriminate between positive and negative, and act accordingly

C. **Personal Qualities**: Displays responsibility, self-esteem, sociability, self-management, and integrity and honesty

1. **Responsibility**: Exerts a high level of effort and perseveres towards goal attainment
   a. Demonstrates ability to formulate realistic and useful short and long term goals and complete steps necessary to timely achieve goals
   b. Demonstrates ability to make adjustments, revisions, and changes to achieve goals in a cooperative and polite manner
   c. Demonstrates ability to focus on task at hand and work to completion
   d. Demonstrates good work ethics through regular attendance, adequate classroom preparations, and appropriate use of classroom time
   e. Demonstrates maturity to take responsibility for actions
   f. Demonstrates ability to cooperatively work in individual, team, and group situations in timely and effective manner
2. **Self-Esteem:** Believes in own self-worth and maintains a positive view of self  
   a. Presents a positive attitude toward tasks  
   b. Demonstrates ability to separate work and personal behaviors  
   c. Actively participates in learning opportunities by sharing knowledge and skills with peers and instructors  
   d. Demonstrates ability to accept personal strengths and weaknesses and builds on positive behaviors  
   e. Demonstrates ability to accept and use constructive criticism  
   f. Accepts positive reinforcement in an appropriate manner  

3. **Sociability:** Demonstrates understanding, friendliness, adaptability, empathy, and politeness in group settings  
   a. Demonstrates appropriate and acceptable social behaviors in interactions  
   b. Demonstrates ability to work cooperatively in individual, team, or group situations  
   c. Demonstrates active interest in peers by offering assistance, sharing resources, and sharing knowledge in a professional and acceptable manner  
   d. Demonstrates professional work ethic by separating work and personal social behaviors and acting accordingly  

4. **Self-Management:** Assesses self accurately, sets personal goals, monitors progress, and exhibits self-control  
   a. Accepts personal strengths and weaknesses and uses the same for positive advancement  
   b. Demonstrates ability to continuously set, assess, choose, and modify objectives as the situation demands in an appropriate manner  
   c. Demonstrates ability to formulate and follow personal schedules  
   d. Demonstrates ability to wisely use classroom time  
   e. Demonstrates use of good study habits and skills  
   f. Demonstrates maturity to take responsibility for own actions  

5. **Integrity/Honesty:** Chooses ethical courses of action  
   a. Knows and demonstrates ability to distinguish between positive and negative behaviors  
   b. Demonstrates honesty and integrity in working with peers and supervisors  
   c. Takes full responsibility for personal actions
d. Demonstrates understanding of consequences for negative ethical behaviors and accepts responsibility for same when applicable

e. Demonstrates positive work and social ethics in undertakings

   WLD-B1 through WLD-B5;
   WLD-C1 through WLD-C9;
   WLD-D1 through WLD-D7;
   WLD-E1 through WLD-E13;
   WLD-F1 through WLD-F6;
   WLD-G1 through WLD-G4;
   WLD-H1 through WLD-H17;
   WLD-I1 through WLD-I5;
   WLD-J1 through WLD-J4;
   WLD-K1 through WLD-K9;
   WLD-L1 through WLD-L12;
   WLD-M1 through WLD-M35;
   WLD-N1 through WLD-N4;
   WLD-O1 through WLD-O10;
   WLD-P1 through WLD-P7;
   WLD-Q1 through WLD-Q2;
   WLD-R1 through WLD-R5; and,
   WLD-S1 through WLD-S5.

MASTER PROGRAM
Freshman Composition Skills I
Course Syllabus

Total lecture hours: 45       Total lab hours: 0       Credit hours: 3

COURSE DESCRIPTION:

The first course in college composition designed to develop skill in writing multi-paragraph essays with emphasis on exposition including the selection, restriction, organization, and development of topics. It offers the student opportunities to improve CLAST English skills. Students examine selected writing samples as models of form and sources of ideas for the student’s own writing. (This course has a 6,000 word writing requirement.)

PREREQUISITES: None

COURSE OBJECTIVES:

After successful completion of this course, the students will be able to:

1. Display a knowledge of writing multi-paragraph essays arranged to provide relevant and specific detail in support of a thesis; they will use varied and sentence patterns and illustrate effective transition;

2. Write mechanically and grammatically correct essays in accordance with the conventions of standard, written American English; and,

3. Write effective essays and reports in other college courses and should pass the writing and English portions of CLAST.

REQUIRED COURSE MATERIALS:

The Bedford Reader, X. J. Kennedy and Dorothy M. Kennedy, Publisher: St. Martin’s Press, Latest Edition

Lab Manual: None required

METHODS OF INSTRUCTION:

Lecture: Classroom presentations and demonstrations.
Laboratory: None.

**Method of Evaluation:** A student's grade will be based on multiple measures of performance, including:
1. Diagnostic tests, objective and essay;
2. Assessment tests, objective and essay;
3. Analytic and holistic evaluation of essays; and,
4. Final Exam.

**LECTURE OUTLINE:**

<table>
<thead>
<tr>
<th>Lecture Topics</th>
<th>Contact Hrs.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Essays: Eight 500-word essays, four in class and four at home. Two 300-word CLAST practice essays.</td>
<td></td>
</tr>
<tr>
<td>Examinations: One CLAST style comprehensive grammar and mechanics objective exam. One CLAST style final exam – objective and essay (essay counts as 400 words).</td>
<td></td>
</tr>
<tr>
<td>Quizzes: Eight quizzes on selections from the reader will be required. All will be given the first 15 minutes of class; latecomers will not be given extra time and no make-ups will be allowed for these quizzes.</td>
<td></td>
</tr>
<tr>
<td>Research: Topics will be discussed and assigned. The paper must contain a minimum of 1600 words, use at least six sources, and be properly documented.</td>
<td></td>

**COURSE OBJECTIVES: SCANS COMPETENCIES**

The Secretary's Commission on Achieving Necessary Skills (SCANS), U.S. Department of Labor, has identified in its "AMERICA 2000 REPORT" that all students should develop a new set of competencies and foundation skills if they are to enjoy a productive, full and satisfying life. These are in addition to the Technical Workplace Competencies required by industry. SCANS is made up of five competencies and a three-part foundation of skills and personal qualities that are needed for solid job performance. All italicized headings in this section are direct quotations from "What Work Requires of Schools: A SCANS Report for America 2000."
The following activities will be performed by each student for successful completion of this course:

I. COMPETENCIES
A. Resources: Identifies, organizes, plans, and allocates resources
   1. Allocates time to complete assigned tasks on schedule
   2. Determines and allocates required materials and resources for meeting objectives
   3. Evaluates skills, performance, and quality of work and provides feedback
B. Interpersonal: Works with others
   1. Participates as a member of the team, contributing to group effort
   2. Provides individual assistance/direction to peers as requested
   3. Determines and meets expectations
   4. Exercises leadership qualities to effectively communicate ideas and make decisions.
   5. Negotiates resources in order to accomplish objectives
   6. Works well with all members of the class
C. Information: Acquires and uses information
   1. Acquires and evaluates information
   2. Organizes and maintains information
   3. Interprets and communicates information
D. Systems: Understands complex inter-relationships
   1. Understands and works well with social, organizational, and technological systems
   2. Monitors and corrects performance of system during operation
   3. Recommends modifications to system to improve performance
E. Technology: Works with a variety of technologies
   1. Chooses relevant procedures, tools, and equipment
   2. Applies appropriate procedures and techniques to accomplish tasks
   3. Identifies or solves problems to maintain equipment

II. FOUNDATION SKILLS
A. Basic Skills: Reads, writes, performs arithmetic and mathematical operations, listens and speaks
   1. Reading: Locates, understands, and interprets written information in prose and in documents such as manuals, graphs, and schedules
      a. Demonstrates basic reading skills including abilities to perceive main ideas, draw appropriate conclusions, detect a sequence, locate answers, find facts, and infer from written texts
b. Demonstrates course specific reading skills including abilities to read, interpret, and comprehend information from text and supplemental materials on a level to facilitate productive independent and group study

c. Demonstrates ability to read, interpret, and utilize information from course specific instruments (i.e., charts, diagrams, graphs, schematics, blueprints, flow charts, etc.)

d. Demonstrates ability to read, interpret, and follow schedules and procedural instructions in a timely and appropriate manner

e. Demonstrates ability to choose and use most appropriate reading method (skim, scan, or read for comprehension) for materials

2. **Writing:** Communicates thoughts, ideas, information, and messages in writing; and creates documents such as letters, directions, manuals, reports, graphs, and flow charts

   a. Demonstrates basic writing skills including abilities to produce written documents which conform with accepted grammatical and communication standards required for effective daily functioning

   b. Demonstrates effective written study skills including note taking, maintaining course specific journals, workbooks, manuals, etc.

   c. Demonstrates technical writing skills in preparing outlines, summaries, time lines, flow charts, diagrams, etc. appropriate to materials covered

   d. Demonstrates ability to complete all required writings in a timely, complete, and professional manner

   e. Demonstrates competence in subject matter through the organization and presentation of answers to required written assessments

3. **Arithmetic/Mathematics:** Perform basic computations and approaches practical problems by choosing appropriately from a variety of mathematical techniques

   a. Demonstrates proficiency in basic arithmetic functions including ability to add, subtract, multiply, and divide whole numbers, fractions, decimals, and percentages

   b. Demonstrates ability to read, comprehend, and select appropriate math procedures to work basic math problems

   c. Demonstrates ability to understand and perform multi-step computations
d. Demonstrates ability to read, interpret, and use standard measuring devices

e. Demonstrates ability to comprehend, retain, and utilize course specific measuring devices effectively

f. Demonstrates ability to understand, retain, and utilize higher mathematical formulas and functions required for course specific math performance

g. Demonstrates ability to appropriately transfer mathematical calculations and information from paper to machines

4. **Listening**: Receives, attends to, interprets, and responds to verbal messages and other cues

a. Functions at minimal or above required hearing levels to receive, attend, interpret, and respond to verbal messages and instructions and to safely operate machinery

b. Demonstrates ability to hear, comprehend, and appropriately follow directions

c. Demonstrates auditory ability to hear, comprehend, and utilize verbal classroom as well as other auditory instruction

d. Demonstrates ability to discriminate between essential and non-essential verbal information and react appropriately

e. Demonstrates ability to focus and fine-tune listening skills to receive, interpret, and respond to various sounds

f. Demonstrates ability and maturity to seek and receive additional individualized instruction as needed

5. **Speaking**: Organizes ideas and communicates orally

a. Demonstrates appropriate listening and speaking skills in personal conversations

b. Demonstrates ability to choose and organize appropriate words to effectively communicate

c. Demonstrates ability to speak clearly and distinctly with appropriate volume, tone, and body language for situation

d. Demonstrates ability to spontaneously organize and present appropriate answers and/or short presentations for classroom and/or assessment purposes

e. Demonstrates ability to formulate, organize, and deliver major presentations to peers or groups

f. Demonstrates ability to speak effectively in one-on-one, small group, or large group presentations

g. Demonstrates ability to take responsibility for presentations
B. **Thinking Skills:** Thinks creatively, makes decisions, solves problems, visualizes, knows how to learn and reasons

1. **Decision Making:** Specifies goals and constraints, generates alternatives, considers risks, and evaluates and chooses best alternative
   a. Demonstrates ability to objectively assess personal strengths and weaknesses
   b. Demonstrates ability to set realistic short-term and long-term goals
   c. Demonstrates ability to recognize and distinguish between positive and negative alternatives
   d. Demonstrates ability to identify potential pitfalls and take evasive actions
   e. Demonstrates ability to objectively and responsibly evaluate alternatives by testing hypotheses and selecting most appropriate response
   f. Demonstrates ability to profit from negative evaluations or mistakes by reformulating, redirecting, reconstructing, or retesting alternatives
   g. Demonstrates maturity in taking responsibility for decisions

2. **Problem Solving:** Recognizes problems and devises and implements plan of action
   a. Demonstrates ability to detect problem through observation, inquiry, or directive
   b. Demonstrates ability to grasp appropriate overview and degree of seriousness of problem and to behave responsibly in situation
   c. Demonstrates ability to generate alternatives or options for problem solution
   d. Demonstrates ability to research options, assess and evaluate options, and determine appropriate and best solution
   e. Demonstrates ability to initiate and effect solution
   f. Demonstrates ability to take responsibility for outcomes
   g. Demonstrates ability to effectively problem solve in individual, team, or group situations

3. **Seeing Things In the Mind’s Eye:** Organizes, and processes symbols, pictures, graphs, objects, and other information
   a. Functions at minimum or above required visual levels in order to see, interpret, attend and respond to visual imagery and meet safety requirements for necessary machinery

71
b. Demonstrates ability to read, interpret, and act upon signs, symbols, and other visual cues
c. Demonstrates ability to visually discriminate in gross and fine imagery
d. Demonstrates ability to visualize abstractly
e. Demonstrates ability to apply visual imagery to applied tasks

4. **Knowing How to Learn:** Use efficient learning techniques to acquire and apply new knowledge and skills
   a. Demonstrates mastery of basic reading, math, and language skills through application
   b. Demonstrates ability to translate abstract theory into practical application
   c. Demonstrates ability to incorporate and generalize new learning into a sequential learning process
   d. Demonstrates knowledge of good study skills and learning habits

5. **Reasoning:** Discovers a rule or principle underlying the relationship between two or more objects and applies it when solving a problem
   a. Demonstrates use of simple logic
   b. Demonstrates ability to distinguish relationships
   c. Demonstrates ability to determine and isolate factors in relationships
   d. Demonstrates and applies knowledge through practice
   e. Recognizes that attitudes, skills, and practice are essential to productivity
   f. Demonstrates ability to discriminate between positive and negative, and act accordingly

C. **Personal Qualities:** Displays responsibility, self-esteem, sociability, self-management, and integrity and honesty

1. **Responsibility:** Exerts a high level of effort and perseveres towards goal attainment
   a. Demonstrates ability to formulate realistic and useful short and long term goals and complete steps necessary to timely achieve goals
   b. Demonstrates ability to make adjustments, revisions, and changes to achieve goals in a cooperative and polite manner
   c. Demonstrates ability to focus on task at hand and work to completion

1. MASTER Technical Modules: WLD-D1 through WLD-D7.
MASTER PROGRAM

Technical Mathematics

Course Syllabus

Total lecture hours: 45  Total lab hours: 15  Credit hours: 3

COURSE DESCRIPTION:

A course in applied mathematics for students enrolled in technical degree programs. This course teaches algebraic functions, geometry, graphs, fundamentals of trigonometry, and applied statistics as tools to analyze and solve technical problems. Course also includes instruction in measurement tools and test equipment required for precision measurements by technicians or technologists. The scientific calculator will also be used to solve problems in both the English and Metric systems.

PREREQUISITES:  Secondary School Mathematics

COURSE OBJECTIVES:

After successful completion of this course, the students will be able to do:
1. Functions;
2. Percents;
3. Basic Algebra;
4. Linear Equations;
5. Plane Geometry; and,
6. Fundamental Trigonometry.

REQUIRED COURSE MATERIALS:

Lab Manual:  None required

METHODS OF INSTRUCTION:

Lecture:  Presentation and demonstration.

Laboratory:  Supervised exercises with measurement applications.
Method of Evaluation: A student's grade will be based on multiple measures of performance, including:
1. Five tests will be conducted for the purpose of grading.

COURSE OBJECTIVES: SCANS COMPETENCIES

The Secretary's Commission on Achieving Necessary Skills (SCANS), U.S. Department of Labor, has identified in its "AMERICA 2000 REPORT" that all students should develop a new set of competencies and foundation skills if they are to enjoy a productive, full and satisfying life. These are in addition to the Technical Workplace Competencies required by industry. SCANS is made up of five competencies and a three-part foundation of skills and personal qualities that are needed for solid job performance. All italicized headings in this section are direct quotations from "What Work Requires of Schools: A SCANS Report for America 2000."

The following activities will be performed by each student for successful completion of this course:

I. COMPETENCIES
   A. Resources: Identifies, organizes, plans, and allocates resources
      1. Allocates time to complete assigned tasks on schedule
      2. Determines and allocates required materials and resources for meeting objectives
      3. Evaluates skills, performance, and quality of work and provides feedback
   B. Interpersonal: Works with others
      1. Participates as a member of the team, contributing to group effort
      2. Provides individual assistance/direction to peers as requested
      3. Determines and meets expectations
      4. Exercises leadership qualities to effectively communicate ideas and make decisions.
      5. Negotiates resources in order to accomplish objectives
      6. Works well with all members of the class
   C. Information: Acquires and uses information
      1. Acquires and evaluates information
      2. Organizes and maintains information
      3. Interprets and communicates information
   D. Systems: Understands complex inter-relationships
      1. Understands and works well with social, organizational, and technological systems
      2. Monitors and corrects performance of system during operation
      3. Recommends modifications to system to improve performance
   E. Technology: Works with a variety of technologies
      1. Chooses relevant procedures, tools, and equipment
      2. Applies appropriate procedures and techniques to accomplish tasks
3. Identifies or solves problems to maintain equipment

II. FOUNDATION SKILLS
A. Basic Skills: Reads, writes, performs arithmetic and mathematical operations, listens and speaks

1. Reading: Locates, understands, and interprets written information in prose and in documents such as manuals, graphs, and schedules
   a. Demonstrates basic reading skills including abilities to perceive main ideas, draw appropriate conclusions, detect a sequence, locate answers, find facts, and infer from written texts
   b. Demonstrates course specific reading skills including abilities to read, interpret, and comprehend information from text and supplemental materials on a level to facilitate productive independent and group study
   c. Demonstrates ability to read, interpret, and utilize information from course specific instruments (i.e., charts, diagrams, graphs, schematics, blueprints, flow charts, etc.)
   d. Demonstrates ability to read, interpret, and follow schedules and procedural instructions in a timely and appropriate manner
   e. Demonstrates ability to choose and use most appropriate reading method (skim, scan, or read for comprehension) for materials

2. Writing: Communicates thoughts, ideas, information, and messages in writing; and creates documents such as letters, directions, manuals, reports, graphs, and flow charts
   a. Demonstrates basic writing skills including abilities to produce written documents which conform with accepted grammatical and communication standards required for effective daily functioning
   b. Demonstrates effective written study skills including note taking, maintaining course specific journals, workbooks, manuals, etc.
   c. Demonstrates technical writing skills in preparing outlines, summaries, time lines, flow charts, diagrams, etc. appropriate to materials covered
   d. Demonstrates ability to complete all required writings in a timely, complete, and professional manner
   e. Demonstrates competence in subject matter through the organization and presentation of answers to required written assessments
3. Arithmetic/Mathematics: Perform basic computations and approaches practical problems by choosing appropriately from a variety of mathematical techniques
   a. Demonstrates proficiency in basic arithmetic functions including ability to add, subtract, multiply, and divide whole numbers, fractions, decimals, and percentages
   b. Demonstrates ability to read, comprehend, and select appropriate math procedures to work basic math problems
   c. Demonstrates ability to understand and perform multi-step computations
   d. Demonstrates ability to read, interpret, and use standard measuring devices
   e. Demonstrates ability to comprehend, retain, and utilize course specific measuring devices effectively
   f. Demonstrates ability to understand, retain, and utilize higher mathematical formulas and functions required for course specific math performance
   g. Demonstrates ability to appropriately transfer mathematical calculations and information from paper to machines

4. Listening: Receives, attends to, interprets, and responds to verbal messages and other cues
   a. Functions at minimal or above required hearing levels to receive, attend, interpret, and respond to verbal messages and instructions and to safely operate machinery
   b. Demonstrates ability to hear, comprehend, and appropriately follow directions
   c. Demonstrates auditory ability to hear, comprehend, and utilize verbal classroom as well as other auditory instruction
   d. Demonstrates ability to discriminate between essential and non-essential verbal information and react appropriately
   e. Demonstrates ability to focus and fine-tune listening skills to receive, interpret, and respond to various sounds
   f. Demonstrates ability and maturity to seek and receive additional individualized instruction as needed

5. Speaking: Organizes ideas and communicates orally
   a. Demonstrates appropriate listening and speaking skills in personal conversations
   b. Demonstrates ability to choose and organize appropriate words to effectively communicate
c. Demonstrates ability to speak clearly and distinctly with appropriate volume, tone, and body language for situation
d. Demonstrates ability to spontaneously organize and present appropriate answers and/or short presentations for classroom and/or assessment purposes
e. Demonstrates ability to formulate, organize, and deliver major presentations to peers or groups
f. Demonstrates ability to speak effectively in one-on-one, small group, or large group presentations
g. Demonstrates ability to take responsibility for presentations

B. Thinking Skills: Thinks creatively, makes decisions, solves problems, visualizes, knows how to learn and reasons

1. Decision Making: Specifies goals and constraints, generates alternatives, considers risks, and evaluates and chooses best alternative
   a. Demonstrates ability to objectively assess personal strengths and weaknesses
   b. Demonstrates ability to set realistic short-term and long-term goals
   c. Demonstrates ability to recognize and distinguish between positive and negative alternatives
   d. Demonstrates ability to identify potential pitfalls and take evasive actions
   e. Demonstrates ability to objectively and responsibly evaluate alternatives by testing hypotheses and selecting most appropriate response
   f. Demonstrates ability to profit from negative evaluations or mistakes by reformulating, redirecting, reconstructing, or retesting alternatives
   g. Demonstrates maturity in taking responsibility for decisions

2. Problem Solving: Recognizes problems and devises and implements plan of action
   a. Demonstrates ability to detect problem through observation, inquiry, or directive
   b. Demonstrates ability to grasp appropriate overview and degree of seriousness of problem and to behave responsibly in situation
   c. Demonstrates ability to generate alternatives or options for problem solution
   d. Demonstrates ability to research options, assess and evaluate options, and determine appropriate and best solution
e. Demonstrates ability to initiate and effect solution
f. Demonstrates ability to take responsibility for outcomes
g. Demonstrates ability to effectively problem solve in individual, team, or group situations

3. **Seeing Things In the Mind’s Eye:** Organizes, and processes symbols, pictures, graphs, objects, and other information
   a. Functions at minimum or above required visual levels in order to see, interpret, attend and respond to visual imagery and meet safety requirements for necessary machinery
   b. Demonstrates ability to read, interpret, and act upon signs, symbols, and other visual cues
   c. Demonstrates ability to visually discriminate in gross and fine imagery
   d. Demonstrates ability to visualize abstractly
   e. Demonstrates ability to apply visual imagery to applied tasks

4. **Knowing How to Learn:** Use efficient learning techniques to acquire and apply new knowledge and skills
   a. Demonstrates mastery of basic reading, math, and language skills through application
   b. Demonstrates ability to translate abstract theory into practical application
   c. Demonstrates ability to incorporate and generalize new learning into a sequential learning process
   d. Demonstrates knowledge of good study skills and learning habits

5. **Reasoning:** Discovers a rule or principle underlying the relationship between two or more objects and applies it when solving a problem
   a. Demonstrates use of simple logic
   b. Demonstrates ability to distinguish relationships
   c. Demonstrates ability to determine and isolate factors in relationships
   d. Demonstrates and applies knowledge through practice
   e. Recognizes that attitudes, skills, and practice are essential to productivity
   f. Demonstrates ability to discriminate between positive and negative, and act accordingly

C. **Personal Qualities:** Displays responsibility, self-esteem, sociability, self-management, and integrity and honesty

1. **Responsibility:** Exerts a high level of effort and perseveres towards goal attainment
a. Demonstrates ability to formulate realistic and useful short and long term goals and complete steps necessary to timely achieve goals
b. Demonstrates ability to make adjustments, revisions, and changes to achieve goals in a cooperative and polite manner
c. Demonstrates ability to focus on task at hand and work to completion
d. Demonstrates good work ethics through regular attendance, adequate classroom preparations, and appropriate use of classroom time
e. Demonstrates maturity to take responsibility for actions
f. Demonstrates ability to cooperatively work in individual, team, and group situations in timely and effective manner

2. **Self-Esteem: Believes in own self-worth and maintains a positive view of self**
a. Presents a positive attitude toward tasks
b. Demonstrates ability to separate work and personal behaviors
c. Actively participates in learning opportunities by sharing knowledge and skills with peers and instructors
d. Demonstrates ability to accept personal strengths and weaknesses and builds on positive behaviors
e. Demonstrates ability to accept and use constructive criticism
f. Accepts positive reinforcement in an appropriate manner

3. **Sociability: Demonstrates understanding, friendliness, adaptability, empathy, and politeness in group settings**
a. Demonstrates appropriate and acceptable social behaviors in interactions
b. Demonstrates ability to work cooperatively in individual, team, or group situations
c. Demonstrates active interest in peers by offering assistance, sharing resources, and sharing knowledge in a professional and acceptable manner
d. Demonstrates professional work ethic by separating work and personal social behaviors and acting accordingly

4. **Self-Management: Assesses self accurately, sets personal goals, monitors progress, and exhibits self-control**
a. Accepts personal strengths and weaknesses and uses the same for positive advancement
b. Demonstrates ability to continuously set, assess, choose, and modify objectives as the situation demands in an appropriate manner

c. Demonstrates ability to formulate and follow personal schedules

d. Demonstrates ability to wisely use classroom time

e. Demonstrates use of good study habits and skills

f. Demonstrates maturity to take responsibility for own actions

5. Integrity/Honesty: Chooses ethical courses of action

a. Knows and demonstrates ability to distinguish between positive and negative behaviors

b. Demonstrates honesty and integrity in working with peers and supervisors

c. Takes full responsibility for personal actions

d. Demonstrates understanding of consequences for negative ethical behaviors and accepts responsibility for same when applicable

e. Demonstrates positive work and social ethics in undertakings

MASTER PROGRAM
Advanced Welding I
Course Syllabus

Total lecture hours: 20  Total lab hours: 40  Credit hours: 3

COURSE DESCRIPTION:
Intermediate study of metal properties, industrial practices and procedures, and various testing techniques; arc welding in the flat position, using various thicknesses of metal. Includes structure of the welding program, history of welding, with emphasis on shop safety, welding safety, and oxyacetylene safety.

PREREQUISITES: None

COURSE OBJECTIVES:
After successful completion of this course, the students will be able to:
1. Increase knowledge of metallurgy;
2. Demonstrate knowledge on joint design and welding terms;
3. Demonstrate knowledge of proper application of welding skills; and,
4. Increase skill level to pass any welding test offered by an employer.

REQUIRED COURSE MATERIALS:

Textbook: Modern Welding, Althouse, Turnquist, Bowditch, and Bowditch, Publisher: Goodheart-Wilcox, Latest Edition

Supplemental Text Materials:
Handbook of Welding Procedures, Latest Edition
Hobart Institute Audio Visual Materials, Latest Edition
American Welding Society – Competency Standards

Lab Manual: None required

METHODS OF INSTRUCTION:

Lecture: Presentation and demonstration.
Laboratory: Practice with coaching and close supervision.

Method of Evaluation: A student's grade will be based on multiple measures of performance, including:
1. Tests and quizzes administered throughout the term;
2. Instructor's observation of hands-on performance;
3. Student closely following safety and shop procedures; and,
4. Student mastery of competencies.

LECTURE OUTLINE:

COURSE OBJECTIVES: SCANS COMPETENCIES

The Secretary's Commission on Achieving Necessary Skills (SCANS), U.S. Department of Labor, has identified in its "AMERICA 2000 REPORT" that all students should develop a new set of competencies and foundation skills if they are to enjoy a productive, full and satisfying life. These are in addition to the Technical Workplace Competencies required by industry. SCANS is made up of five competencies and a three-part foundation of skills and personal qualities that are needed for solid job performance. All italicized headings in this section are direct quotations from "What Work Requires of Schools: A SCANS Report for America 2000."

The following activities will be performed by each student for successful completion of this course:
I. COMPETENCIES
A. **Resources:** Identifies, organizes, plans, and allocates resources
   1. Allocates time to complete assigned tasks on schedule
   2. Determines and allocates required materials and resources for meeting objectives
   3. Evaluates skills, performance, and quality of work and provides feedback
B. **Interpersonal:** Works with others
   1. Participates as a member of the team, contributing to group effort
   2. Provides individual assistance/direction to peers as requested
   3. Determines and meets expectations
   4. Exercises leadership qualities to effectively communicate ideas and make decisions.
   5. Negotiates resources in order to accomplish objectives
   6. Works well with all members of the class
C. **Information:** Acquires and uses information
   1. Acquires and evaluates information
   2. Organizes and maintains information
   3. Interprets and communicates information
D. **Systems:** Understands complex inter-relationships
   1. Understands and works well with social, organizational, and technological systems
   2. Monitors and corrects performance of system during operation
   3. Recommends modifications to system to improve performance
E. **Technology:** Works with a variety of technologies
   1. Chooses relevant procedures, tools, and equipment
   2. Applies appropriate procedures and techniques to accomplish tasks
   3. Identifies or solves problems to maintain equipment

II. FOUNDATION SKILLS
A. **Basic Skills:** Reads, writes, performs arithmetic and mathematical operations, listens and speaks
   1. **Reading:** Locates, understands, and interprets written information in prose and in documents such as manuals, graphs, and schedules
      a. Demonstrates basic reading skills including abilities to perceive main ideas, draw appropriate conclusions, detect a sequence, locate answers, find facts, and infer from written texts
      b. Demonstrates course specific reading skills including abilities to read, interpret, and comprehend information
from text and supplemental materials on a level to facilitate productive independent and group study

c. Demonstrates ability to read, interpret, and utilize information from course specific instruments (i.e., charts, diagrams, graphs, schematics, blueprints, flow charts, etc.)

d. Demonstrates ability to read, interpret, and follow schedules and procedural instructions in a timely and appropriate manner
e. Demonstrates ability to choose and use most appropriate reading method (skim, scan, or read for comprehension) for materials

2. **Writing**: Communicates thoughts, ideas, information, and messages in writing; and creates documents such as letters, directions, manuals, reports, graphs, and flow charts

a. Demonstrates basic writing skills including abilities to produce written documents which conform with accepted grammatical and communication standards required for effective daily functioning

b. Demonstrates effective written study skills including note taking, maintaining course specific journals, workbooks, manuals, etc.

c. Demonstrates technical writing skills in preparing outlines, summaries, time lines, flow charts, diagrams, etc. appropriate to materials covered

d. Demonstrates ability to complete all required writings in a timely, complete, and professional manner

e. Demonstrates competence in subject matter through the organization and presentation of answers to required written assessments

3. **Arithmetic/Mathematics**: Perform basic computations and approaches practical problems by choosing appropriately from a variety of mathematical techniques

a. Demonstrates proficiency in basic arithmetic functions including ability to add, subtract, multiply, and divide whole numbers, fractions, decimals, and percentages

b. Demonstrates ability to read, comprehend, and select appropriate math procedures to work basic math problems

c. Demonstrates ability to understand and perform multi-step computations

d. Demonstrates ability to read, interpret, and use standard measuring devices
e. Demonstrates ability to comprehend, retain, and utilize course specific measuring devices effectively
f. Demonstrates ability to understand, retain, and utilize higher mathematical formulas and functions required for course specific math performance
g. Demonstrates ability to appropriately transfer mathematical calculations and information from paper to machines

4. **Listening**: Receives, attends to, interprets, and responds to verbal messages and other cues
   a. Functions at minimal or above required hearing levels to receive, attend, interpret, and respond to verbal messages and instructions and to safely operate machinery
   b. Demonstrates ability to hear, comprehend, and appropriately follow directions
   c. Demonstrates auditory ability to hear, comprehend, and utilize verbal classroom as well as other auditory instruction
   d. Demonstrates ability to discriminate between essential and non-essential verbal information and react appropriately
   e. Demonstrates ability to focus and fine-tune listening skills to receive, interpret, and respond to various sounds
   f. Demonstrates ability and maturity to seek and receive additional individualized instruction as needed

5. **Speaking**: Organizes ideas and communicates orally
   a. Demonstrates appropriate listening and speaking skills in personal conversations
   b. Demonstrates ability to choose and organize appropriate words to effectively communicate
   c. Demonstrates ability to speak clearly and distinctly with appropriate volume, tone, and body language for situation
   d. Demonstrates ability to spontaneously organize and present appropriate answers and/or short presentations for classroom and/or assessment purposes
   e. Demonstrates ability to formulate, organize, and deliver major presentations to peers or groups
   f. Demonstrates ability to speak effectively in one-on-one, small group, or large group presentations
   g. Demonstrates ability to take responsibility for presentations

B. **Thinking Skills**: Thinks creatively, makes decisions, solves problems, visualizes, knows how to learn and reasons
1. **Decision Making**: Specifies goals and constraints, generates alternatives, considers risks, and evaluates and chooses best alternative  
   a. Demonstrates ability to objectively assess personal strengths and weaknesses  
   b. Demonstrates ability to set realistic short-term and long-term goals  
   c. Demonstrates ability to recognize and distinguish between positive and negative alternatives  
   d. Demonstrates ability to identify potential pitfalls and take evasive actions  
   e. Demonstrates ability to objectively and responsibly evaluate alternatives by testing hypotheses and selecting most appropriate response  
   f. Demonstrates ability to profit from negative evaluations or mistakes by reformulating, redirecting, reconstructing, or retesting alternatives  
   g. Demonstrates maturity in taking responsibility for decisions  

2. **Problem Solving**: Recognizes problems and devises and implements plan of action  
   a. Demonstrates ability to detect problem through observation, inquiry, or directive  
   b. Demonstrates ability to grasp appropriate overview and degree of seriousness of problem and to behave responsibly in situation  
   c. Demonstrates ability to generate alternatives or options for problem solution  
   d. Demonstrates ability to research options, assess and evaluate options, and determine appropriate and best solution  
   e. Demonstrates ability to initiate and effect solution  
   f. Demonstrates ability to take responsibility for outcomes  
   g. Demonstrates ability to effectively problem solve in individual, team, or group situations  

3. **Seeing Things In the Mind's Eye**: Organizes, and processes symbols, pictures, graphs, objects, and other information  
   a. Functions at minimum or above required visual levels in order to see, interpret, attend and respond to visual imagery and meet safety requirements for necessary machinery  
   b. Demonstrates ability to read, interpret, and act upon signs, symbols, and other visual cues
c. Demonstrates ability to visually discriminate in gross and fine imagery  
d. Demonstrates ability to visualize abstractly  
e. Demonstrates ability to apply visual imagery to applied tasks  

4. **Knowing How to Learn:** Use efficient learning techniques to acquire and apply new knowledge and skills  
a. Demonstrates mastery of basic reading, math, and language skills through application  
b. Demonstrates ability to translate abstract theory into practical application  
c. Demonstrates ability to incorporate and generalize new learning into a sequential learning process  
d. Demonstrates knowledge of good study skills and learning habits  

5. **Reasoning:** Discovers a rule or principle underlying the relationship between two or more objects and applies it when solving a problem  
a. Demonstrates use of simple logic  
b. Demonstrates ability to distinguish relationships  
c. Demonstrates ability to determine and isolate factors in relationships  
d. Demonstrates and applies knowledge through practice  
e. Recognizes that attitudes, skills, and practice are essential to productivity  
f. Demonstrates ability to discriminate between positive and negative, and act accordingly  

C. **Personal Qualities:** Displays responsibility, self-esteem, sociability, self-management, and integrity and honesty  

1. **Responsibility:** Exerts a high level of effort and perseveres towards goal attainment  
a. Demonstrates ability to formulate realistic and useful short and long term goals and complete steps necessary to timely achieve goals  
b. Demonstrates ability to make adjustments, revisions, and changes to achieve goals in a cooperative and polite manner  
c. Demonstrates ability to focus on task at hand and work to completion  
d. Demonstrates good work ethics through regular attendance, adequate classroom preparations, and appropriate use of classroom time  
e. Demonstrates maturity to take responsibility for actions
f. Demonstrates ability to cooperatively work in individual, team, and group situations in timely and effective manner

2. **Self-Esteem: Believes in own self-worth and maintains a positive view of self**
   a. Presents a positive attitude toward tasks
   b. Demonstrates ability to separate work and personal behaviors
   c. Actively participates in learning opportunities by sharing knowledge and skills with peers and instructors
   d. Demonstrates ability to accept personal strengths and weaknesses and builds on positive behaviors
   e. Demonstrates ability to accept and use constructive criticism
   f. Accepts positive reinforcement in an appropriate manner

3. **Sociability: Demonstrates understanding, friendliness, adaptability, empathy, and politeness in group settings**
   a. Demonstrates appropriate and acceptable social behaviors in interactions
   b. Demonstrates ability to work cooperatively in individual, team, or group situations
   c. Demonstrates active interest in peers by offering assistance, sharing resources, and sharing knowledge in a professional and acceptable manner
   d. Demonstrates professional work ethic by separating work and personal social behaviors and acting accordingly

4. **Self-Management: Assesses self accurately, sets personal goals, monitors progress, and exhibits self-control**
   a. Accepts personal strengths and weaknesses and uses the same for positive advancement
   b. Demonstrates ability to continuously set, assess, choose, and modify objectives as the situation demands in an appropriate manner
   c. Demonstrates ability to formulate and follow personal schedules
   d. Demonstrates ability to wisely use classroom time
   e. Demonstrates use of good study habits and skills
   f. Demonstrates maturity to take responsibility for own actions

5. **Integrity/Honesty: Chooses ethical courses of action**
   a. Knows and demonstrates ability to distinguish between positive and negative behaviors
   b. Demonstrates honesty and integrity in working with peers and supervisors
c. Takes full responsibility for personal actions
d. Demonstrates understanding of consequences for negative ethical behaviors and accepts responsibility for same when applicable
e. Demonstrates positive work and social ethics in undertakings

MASTER PROGRAM
Blueprint Reading for Welders
Course Syllabus

Total lecture hours: 30  Total lab hours: 30  Credit hours: 3

COURSE DESCRIPTION:

This course teaches welding symbols and application of these symbols used on blueprints. Design and structural layout in relation to stress and materials will be introduced.

PREREQUISITES:  None

COURSE OBJECTIVES:

After successful completion of this course, the students will be able to:
1. Interpret welding symbols;
2. Interpret detail drawings;
3. List materials for fabrication from blueprints; and,
4. Develop shop drawings.

REQUIRED COURSE MATERIALS:

Textbook:  Modern Welding, Althouse, Turnquist, Bowditch, and Bowditch, Publisher: Goodheart-Wilcox, Latest Edition

Supplemental Text Materials:
Handbook of Welding Procedures, Latest Edition
Hobart Institute Audio Visual Materials, Latest Edition
American Welding Society – Competency Standards

Lab Manual:  Student lab manual

METHODS OF INSTRUCTION:

Lecture:  Presentations and demonstrations.
Laboratory:  Coaching methods with close supervision.
Method of Evaluation: A student's grade will be based on multiple measures of performance, including:
1. Tests and quizzes administered throughout the term;
2. Instructor's observation of hands-on performance;
3. Student closely following safety and shop procedures; and,
4. Student mastery of competencies.

COURSE OBJECTIVES: SCANS COMPETENCIES

The Secretary's Commission on Achieving Necessary Skills (SCANS), U.S. Department of Labor, has identified in its "AMERICA 2000 REPORT" that all students should develop a new set of competencies and foundation skills if they are to enjoy a productive, full and satisfying life. These are in addition to the Technical Workplace Competencies required by industry. SCANS is made up of five competencies and a three-part foundation of skills and personal qualities that are needed for solid job performance. All italicized headings in this section are direct quotations from "What Work Requires of Schools: A SCANS Report for America 2000."

The following activities will be performed by each student for successful completion of this course:

I. COMPETENCIES
   A. Resources: Identifies, organizes, plans, and allocates resources
      1. Allocates time to complete assigned tasks on schedule
2. Determines and allocates required materials and resources for meeting objectives
3. Evaluates skills, performance, and quality of work and provides feedback

B. **Interpersonal: Works with others**
1. Participates as a member of the team, contributing to group effort
2. Provides individual assistance/direction to peers as requested
3. Determines and meets expectations
4. Exercises leadership qualities to effectively communicate ideas and make decisions.
5. Negotiates resources in order to accomplish objectives
6. Works well with all members of the class

C. **Information: Acquires and uses information**
1. Acquires and evaluates information
2. Organizes and maintains information
3. Interprets and communicates information

D. **Systems: Understands complex inter-relationships**
1. Understands and works well with social, organizational, and technological systems
2. Monitors and corrects performance of system during operation
3. Recommends modifications to system to improve performance

E. **Technology: Works with a variety of technologies**
1. Chooses relevant procedures, tools, and equipment
2. Applies appropriate procedures and techniques to accomplish tasks
3. Identifies or solves problems to maintain equipment

II. **FOUNDATION SKILLS**
A. **Basic Skills: Reads, writes, performs arithmetic and mathematical operations, listens and speaks**

   1. **Reading:** Locates, understands, and interprets written information in prose and in documents such as manuals, graphs, and schedules
      a. Demonstrates basic reading skills including abilities to perceive main ideas, draw appropriate conclusions, detect a sequence, locate answers, find facts, and infer from written texts
      b. Demonstrates course specific reading skills including abilities to read, interpret, and comprehend information from text and supplemental materials on a level to facilitate productive independent and group study
      c. Demonstrates ability to read, interpret, and utilize information from course specific instruments (i.e., charts,
diagrams, graphs, schematics, blueprints, flow charts, etc.)

d. Demonstrates ability to read, interpret, and follow schedules and procedural instructions in a timely and appropriate manner
e. Demonstrates ability to choose and use most appropriate reading method (skim, scan, or read for comprehension) for materials

2. **Writing:** Communicates thoughts, ideas, information, and messages in writing; and creates documents such as letters, directions, manuals, reports, graphs, and flow charts

a. Demonstrates basic writing skills including abilities to produce written documents which conform with accepted grammatical and communication standards required for effective daily functioning

b. Demonstrates effective written study skills including note taking, maintaining course specific journals, workbooks, manuals, etc.

c. Demonstrates technical writing skills in preparing outlines, summaries, time lines, flow charts, diagrams, etc. appropriate to materials covered

d. Demonstrates ability to complete all required writings in a timely, complete, and professional manner

e. Demonstrates competence in subject matter through the organization and presentation of answers to required written assessments

3. **Arithmetic/Mathematics:** Perform basic computations and approaches practical problems by choosing appropriately from a variety of mathematical techniques

a. Demonstrates proficiency in basic arithmetic functions including ability to add, subtract, multiply, and divide whole numbers, fractions, decimals, and percentages

b. Demonstrates ability to read, comprehend, and select appropriate math procedures to work basic math problems

c. Demonstrates ability to understand and perform multi-step computations

d. Demonstrates ability to read, interpret, and use standard measuring devices

e. Demonstrates ability to comprehend, retain, and utilize course specific measuring devices effectively

f. Demonstrates ability to understand, retain, and utilize higher mathematical formulas and functions required for course specific math performance
g. Demonstrates ability to appropriately transfer mathematical calculations and information from paper to machines

4. **Listening:** Receives, attends to, interprets, and responds to verbal messages and other cues
   a. Functions at minimal or above required hearing levels to receive, attend, interpret, and respond to verbal messages and instructions and to safely operate machinery
   b. Demonstrates ability to hear, comprehend, and appropriately follow directions
   c. Demonstrates auditory ability to hear, comprehend, and utilize verbal classroom as well as other auditory instruction
   d. Demonstrates ability to discriminate between essential and non-essential verbal information and react appropriately
   e. Demonstrates ability to focus and fine-tune listening skills to receive, interpret, and respond to various sounds
   f. Demonstrates ability and maturity to seek and receive additional individualized instruction as needed

5. **Speaking:** Organizes ideas and communicates orally
   a. Demonstrates appropriate listening and speaking skills in personal conversations
   b. Demonstrates ability to choose and organize appropriate words to effectively communicate
   c. Demonstrates ability to speak clearly and distinctly with appropriate volume, tone, and body language for situation
   d. Demonstrates ability to spontaneously organize and present appropriate answers and/or short presentations for classroom and/or assessment purposes
   e. Demonstrates ability to formulate, organize, and deliver major presentations to peers or groups
   f. Demonstrates ability to speak effectively in one-on-one, small group, or large group presentations
   g. Demonstrates ability to take responsibility for presentations

B. **Thinking Skills:** Thinks creatively, makes decisions, solves problems, visualizes, knows how to learn and reasons

1. **Decision Making:** Specifies goals and constraints, generates alternatives, considers risks, and evaluates and chooses best alternative
   a. Demonstrates ability to objectively assess personal strengths and weaknesses
b. Demonstrates ability to set realistic short-term and long-term goals

c. Demonstrates ability to recognize and distinguish between positive and negative alternatives

d. Demonstrates ability to identify potential pitfalls and take evasive actions

e. Demonstrates ability to objectively and responsibly evaluate alternatives by testing hypotheses and selecting most appropriate response

f. Demonstrates ability to profit from negative evaluations or mistakes by reformulating, redirecting, reconstructing, or retesting alternatives

g. Demonstrates maturity in taking responsibility for decisions

2. **Problem Solving:** Recognizes problems and devises and implements plan of action

   a. Demonstrates ability to detect problem through observation, inquiry, or directive

   b. Demonstrates ability to grasp appropriate overview and degree of seriousness of problem and to behave responsibly in situation

   c. Demonstrates ability to generate alternatives or options for problem solution

   d. Demonstrates ability to research options, assess and evaluate options, and determine appropriate and best solution

   e. Demonstrates ability to initiate and effect solution

   f. Demonstrates ability to take responsibility for outcomes

   g. Demonstrates ability to effectively problem solve in individual, team, or group situations

3. **Seeing Things In the Mind's Eye:** Organizes, and processes symbols, pictures, graphs, objects, and other information

   a. Functions at minimum or above required visual levels in order to see, interpret, attend and respond to visual imagery and meet safety requirements for necessary machinery

   b. Demonstrates ability to read, interpret, and act upon signs, symbols, and other visual cues

   c. Demonstrates ability to visually discriminate in gross and fine imagery

   d. Demonstrates ability to visualize abstractly

   e. Demonstrates ability to apply visual imagery to applied tasks
4. **Knowing How to Learn:** Use efficient learning techniques to acquire and apply new knowledge and skills  
   a. Demonstrates mastery of basic reading, math, and language skills through application  
   b. Demonstrates ability to translate abstract theory into practical application  
   c. Demonstrates ability to incorporate and generalize new learning into a sequential learning process  
   d. Demonstrates knowledge of good study skills and learning habits  

5. **Reasoning:** Discovers a rule or principle underlying the relationship between two or more objects and applies it when solving a problem  
   a. Demonstrates use of simple logic  
   b. Demonstrates ability to distinguish relationships  
   c. Demonstrates ability to determine and isolate factors in relationships  
   d. Demonstrates and applies knowledge through practice  
   e. Recognizes that attitudes, skills, and practice are essential to productivity  
   f. Demonstrates ability to discriminate between positive and negative, and act accordingly  

C. **Personal Qualities:** Displays responsibility, self-esteem, sociability, self-management, and integrity and honesty  

1. **Responsibility:** Exerts a high level of effort and perseveres towards goal attainment  
   a. Demonstrates ability to formulate realistic and useful short and long term goals and complete steps necessary to timely achieve goals  
   b. Demonstrates ability to make adjustments, revisions, and changes to achieve goals in a cooperative and polite manner  
   c. Demonstrates ability to focus on task at hand and work to completion  
   d. Demonstrates good work ethics through regular attendance, adequate classroom preparations, and appropriate use of classroom time  
   e. Demonstrates maturity to take responsibility for actions  
   f. Demonstrates ability to cooperatively work in individual, team, and group situations in timely and effective manner  

2. **Self-Esteem:** Believes in own self-worth and maintains a positive view of self  
   a. Presents a positive attitude toward tasks
b. Demonstrates ability to separate work and personal behaviors

c. Actively participates in learning opportunities by sharing knowledge and skills with peers and instructors

d. Demonstrates ability to accept personal strengths and weaknesses and builds on positive behaviors

e. Demonstrates ability to accept and use constructive criticism

f. Accepts positive reinforcement in an appropriate manner

3. **Sociability**: Demonstrates understanding, friendliness, adaptability, empathy, and politeness in group settings

a. Demonstrates appropriate and acceptable social behaviors in interactions

b. Demonstrates ability to work cooperatively in individual, team, or group situations

c. Demonstrates active interest in peers by offering assistance, sharing resources, and sharing knowledge in a professional and acceptable manner

d. Demonstrates professional work ethic by separating work and personal social behaviors and acting accordingly

4. **Self-Management**: Assesses self accurately, sets personal goals, monitors progress, and exhibits self-control

a. Accepts personal strengths and weaknesses and uses the same for positive advancement

b. Demonstrates ability to continuously set, assess, choose, and modify objectives as the situation demands in an appropriate manner

c. Demonstrates ability to formulate and follow personal schedules

d. Demonstrates ability to wisely use classroom time

e. Demonstrates use of good study habits and skills

f. Demonstrates maturity to take responsibility for own actions

5. **Integrity/Honesty**: Chooses ethical courses of action

a. Knows and demonstrates ability to distinguish between positive and negative behaviors

b. Demonstrates honesty and integrity in working with peers and supervisors

c. Takes full responsibility for personal actions

d. Demonstrates understanding of consequences for negative ethical behaviors and accepts responsibility for same when applicable

e. Demonstrates positive work and social ethics in undertakings

   - WLD-A1 through WLD-A13;
   - WLD-B1 through WLD-B5;
   - WLD-C1 through WLD-C9;
   - WLD-D1 through WLD-D7;
   - WLD-E1 through WLD-E13;
   - WLD-F1 through WLD-F6;
   - WLD-G1 through WLD-G4;
   - WLD-H1 through WLD-H17;
   - WLD-I1 through WLD-I5;
   - WLD-J1 through WLD-J4;
   - WLD-K1 through WLD-K9;
   - WLD-L1 through WLD-L12;
   - WLD-M1 through WLD-M35;
   - WLD-N1 through WLD-N4;
   - WLD-O1 through WLD-O10;
   - WLD-P1 through WLD-P7;
   - WLD-Q1 through WLD-Q2;
   - WLD-R1 through WLD-R5;
   - WLD-S1 through WLD-S5; and,
   - WLD-T1 through WLD-T3.

MASTER PROGRAM
TIG (GTAW) Welding
Course Syllabus

Total lecture hours: 20  Total lab hours: 40  Credit hours: 3

COURSE DESCRIPTION:

This course delves into the fundamentals of tungsten inert gas (TIG) welding, including the setup and adjustment of the TIG welding machine, selection of proper tungsten electrodes, selection of filler metals, and the use of various shielding gases, practical experience in TIG welding basic welded joints in stainless and mild carbon steel, aluminum sheet and casting, and magnesium castings.

PREREQUISITES:  None

COURSE OBJECTIVES:

After successful completion of this course, the students will be able to:
1. Identify safety procedures unique to this type of welding;
2. Identify proper applications with AC and DC welding;
3. Demonstrate knowledge of adequate preparation of welding surfaces;
4. Give a general understanding of American Welding Society (AWS) standards;
5. Become proficient in applying Gas Tungsten Arc Welding (GTAW) skills on various metals;
6. Demonstrate knowledge of purging and purge backing on specialty applications;
7. Increase knowledge of employability skills; and,
8. Become proficient in applying proper size electrode and proper alloy for filler metal.

REQUIRED COURSE MATERIALS:

Lab Manual:  Student handbook
METHODS OF INSTRUCTION:

Lecture: Presentations and demonstrations.

Laboratory: Practice with coaching and close supervision.

Method of Evaluation: A student's grade will be based on multiple measures of performance, including:
1. Tests and quizzes administered throughout the term;
2. Instructor's observation of hands-on performance; and,
3. Student closely following safety and shop procedures.

COURSE OBJECTIVES: SCANS COMPETENCIES

The Secretary's Commission on Achieving Necessary Skills (SCANS), U.S. Department of Labor, has identified in its "AMERICA 2000 REPORT" that all students should develop a new set of competencies and foundation skills if they are to enjoy a productive,
full and satisfying life. These are in addition to the Technical Workplace Competencies required by industry. SCANS is made up of five competencies and a three-part foundation of skills and personal qualities that are needed for solid job performance. All italicized headings in this section are direct quotations from "What Work Requires of Schools: A SCANS Report for America 2000."

The following activities will be performed by each student for successful completion of this course:

I. COMPETENCIES

A. Resources: Identifies, organizes, plans, and allocates resources
   1. Allocates time to complete assigned tasks on schedule
   2. Determines and allocates required materials and resources for meeting objectives
   3. Evaluates skills, performance, and quality of work and provides feedback

B. Interpersonal: Works with others
   1. Participates as a member of the team, contributing to group effort
   2. Provides individual assistance/direction to peers as requested
   3. Determines and meets expectations
   4. Exercises leadership qualities to effectively communicate ideas and make decisions.
   5. Negotiates resources in order to accomplish objectives
   6. Works well with all members of the class

C. Information: Acquires and uses information
   1. Acquires and evaluates information
   2. Organizes and maintains information
   3. Interprets and communicates information

D. Systems: Understands complex inter-relationships
   1. Understands and works well with social, organizational, and technological systems
   2. Monitors and corrects performance of system during operation
   3. Recommends modifications to system to improve performance

E. Technology: Works with a variety of technologies
   1. Chooses relevant procedures, tools, and equipment
   2. Applies appropriate procedures and techniques to accomplish tasks
   3. Identifies or solves problems to maintain equipment

II. FOUNDATION SKILLS

A. Basic Skills: Reads, writes, performs arithmetic and mathematical operations, listens and speaks
1. **Reading:** Locates, understands, and interprets written information in prose and in documents such as manuals, graphs, and schedules
   a. Demonstrates basic reading skills including abilities to perceive main ideas, draw appropriate conclusions, detect a sequence, locate answers, find facts, and infer from written texts
   b. Demonstrates course specific reading skills including abilities to read, interpret, and comprehend information from text and supplemental materials on a level to facilitate productive independent and group study
   c. Demonstrates ability to read, interpret, and utilize information from course specific instruments (i.e., charts, diagrams, graphs, schematics, blueprints, flow charts, etc.)
   d. Demonstrates ability to read, interpret, and follow schedules and procedural instructions in a timely and appropriate manner
   e. Demonstrates ability to choose and use most appropriate reading method (skim, scan, or read for comprehension) for materials

2. **Writing:** Communicates thoughts, ideas, information, and messages in writing; and creates documents such as letters, directions, manuals, reports, graphs, and flow charts
   a. Demonstrates basic writing skills including abilities to produce written documents which conform with accepted grammatical and communication standards required for effective daily functioning
   b. Demonstrates effective written study skills including note taking, maintaining course specific journals, workbooks, manuals, etc.
   c. Demonstrates technical writing skills in preparing outlines, summaries, time lines, flow charts, diagrams, etc. appropriate to materials covered
   d. Demonstrates ability to complete all required writings in a timely, complete, and professional manner
   e. Demonstrates competence in subject matter through the organization and presentation of answers to required written assessments

3. **Arithmetic/Mathematics:** Perform basic computations and approaches practical problems by choosing appropriately from a variety of mathematical techniques
1. **Mathematical Skills:** Demonstrates proficiency in basic arithmetic functions including ability to add, subtract, multiply, and divide whole numbers, fractions, decimals, and percentages.

2. **Mathematical Skills:** Demonstrates ability to read, comprehend, and select appropriate math procedures to work basic math problems.

3. **Mathematical Skills:** Demonstrates ability to understand and perform multi-step computations.

4. **Mathematical Skills:** Demonstrates ability to read, interpret, and use standard measuring devices.

5. **Mathematical Skills:** Demonstrates ability to comprehend, retain, and utilize course specific measuring devices effectively.

6. **Mathematical Skills:** Demonstrates ability to comprehend, retain, and utilize higher mathematical formulas and functions required for course specific math performance.

7. **Mathematical Skills:** Demonstrates ability to appropriately transfer mathematical calculations and information from paper to machines.

4. **Listening:** Receives, attends to, interprets, and responds to verbal messages and other cues.

   a. Functions at minimal or above required hearing levels to receive, attend, interpret, and respond to verbal messages and instructions and to safely operate machinery.

   b. Demonstrates ability to hear, comprehend, and appropriately follow directions.

   c. Demonstrates auditory ability to hear, comprehend, and utilize verbal classroom as well as other auditory instruction.

   d. Demonstrates ability to discriminate between essential and non-essential verbal information and react appropriately.

   e. Demonstrates ability to focus and fine-tune listening skills to receive, interpret, and respond to various sounds.

   f. Demonstrates ability and maturity to seek and receive additional individualized instruction as needed.

5. **Speaking:** Organizes ideas and communicates orally.

   a. Demonstrates appropriate listening and speaking skills in personal conversations.

   b. Demonstrates ability to choose and organize appropriate words to effectively communicate.

   c. Demonstrates ability to speak clearly and distinctly with appropriate volume, tone, and body language for situation.
d. Demonstrates ability to spontaneously organize and present appropriate answers and/or short presentations for classroom and/or assessment purposes

e. Demonstrates ability to formulate, organize, and deliver major presentations to peers or groups

f. Demonstrates ability to speak effectively in one-on-one, small group, or large group presentations

g. Demonstrates ability to take responsibility for presentations

B. Thinking Skills: Thinks creatively, makes decisions, solves problems, visualizes, knows how to learn and reasons

1. Decision Making: Specifies goals and constraints, generates alternatives, considers risks, and evaluates and chooses best alternative

a. Demonstrates ability to objectively assess personal strengths and weaknesses

b. Demonstrates ability to set realistic short-term and long-term goals

c. Demonstrates ability to recognize and distinguish between positive and negative alternatives

d. Demonstrates ability to identify potential pitfalls and take evasive actions

e. Demonstrates ability to objectively and responsibly evaluate alternatives by testing hypotheses and selecting most appropriate response

f. Demonstrates ability to profit from negative evaluations or mistakes by reformulating, redirecting, reconstructing, or retesting alternatives

g. Demonstrates maturity in taking responsibility for decisions

2. Problem Solving: Recognizes problems and devises and implements plan of action

a. Demonstrates ability to detect problem through observation, inquiry, or directive

b. Demonstrates ability to grasp appropriate overview and degree of seriousness of problem and to behave responsibly in situation

c. Demonstrates ability to generate alternatives or options for problem solution

d. Demonstrates ability to research options, assess and evaluate options, and determine appropriate and best solution

e. Demonstrates ability to initiate and effect solution

f. Demonstrates ability to take responsibility for outcomes
g. Demonstrates ability to effectively problem solve in individual, team, or group situations

3. **Seeing Things In the Mind’s Eye:** Organizes, and processes symbols, pictures, graphs, objects, and other information
   a. Functions at minimum or above required visual levels in order to see, interpret, attend and respond to visual imagery and meet safety requirements for necessary machinery
   b. Demonstrates ability to read, interpret, and act upon signs, symbols, and other visual cues
   c. Demonstrates ability to visually discriminate in gross and fine imagery
   d. Demonstrates ability to visualize abstractly
   e. Demonstrates ability to apply visual imagery to applied tasks

4. **Knowing How to Learn:** Use efficient learning techniques to acquire and apply new knowledge and skills
   a. Demonstrates mastery of basic reading, math, and language skills through application
   b. Demonstrates ability to translate abstract theory into practical application
   c. Demonstrates ability to incorporate and generalize new learning into a sequential learning process
   d. Demonstrates knowledge of good study skills and learning habits

5. **Reasoning:** Discovers a rule or principle underlying the relationship between two or more objects and applies it when solving a problem
   a. Demonstrates use of simple logic
   b. Demonstrates ability to distinguish relationships
   c. Demonstrates ability to determine and isolate factors in relationships
   d. Demonstrates and applies knowledge through practice
   e. Recognizes that attitudes, skills, and practice are essential to productivity
   f. Demonstrates ability to discriminate between positive and negative, and act accordingly

C. **Personal Qualities:** Displays responsibility, self-esteem, sociability, self-management, and integrity and honesty

1. **Responsibility:** Exerts a high level of effort and perseveres towards goal attainment
   a. Demonstrates ability to formulate realistic and useful short and long term goals and complete steps necessary to timely achieve goals
b. Demonstrates ability to make adjustments, revisions, and changes to achieve goals in a cooperative and polite manner
c. Demonstrates ability to focus on task at hand and work to completion
d. Demonstrates good work ethics through regular attendance, adequate classroom preparations, and appropriate use of classroom time
e. Demonstrates maturity to take responsibility for actions
f. Demonstrates ability to cooperatively work in individual, team, and group situations in timely and effective manner

2. **Self-Esteem: Believes in own self-worth and maintains a positive view of self**
   a. Presents a positive attitude toward tasks
   b. Demonstrates ability to separate work and personal behaviors
c. Actively participates in learning opportunities by sharing knowledge and skills with peers and instructors
d. Demonstrates ability to accept personal strengths and weaknesses and builds on positive behaviors
e. Demonstrates ability to accept and use constructive criticism
f. Accepts positive reinforcement in an appropriate manner

3. **Sociability: Demonstrates understanding, friendliness, adaptability, empathy, and politeness in group settings**
   a. Demonstrates appropriate and acceptable social behaviors in interactions
   b. Demonstrates ability to work cooperatively in individual, team, or group situations
c. Demonstrates active interest in peers by offering assistance, sharing resources, and sharing knowledge in a professional and acceptable manner
d. Demonstrates professional work ethic by separating work and personal social behaviors and acting accordingly

4. **Self-Management: Assesses self accurately, sets personal goals, monitors progress, and exhibits self-control**
   a. Accepts personal strengths and weaknesses and uses the same for positive advancement
   b. Demonstrates ability to continuously set, assess, choose, and modify objectives as the situation demands in an appropriate manner
   c. Demonstrates ability to formulate and follow personal schedules
d. Demonstrates ability to wisely use classroom time
e. Demonstrates use of good study habits and skills
f. Demonstrates maturity to take responsibility for own actions

5. **Integrity/Honesty: Chooses ethical courses of action**
a. Knows and demonstrates ability to distinguish between positive and negative behaviors
b. Demonstrates honesty and integrity in working with peers and supervisors
c. Takes full responsibility for personal actions
d. Demonstrates understanding of consequences for negative ethical behaviors and accepts responsibility for same when applicable
e. Demonstrates positive work and social ethics in undertakings

COURSE DESCRIPTION:

An introduction to the social sciences and to the major issues facing America today. Topics include population, minorities, cities, crime, poverty, health, the environment, values, and international relations. This course has a minimum writing requirement of 3,000 words.

PREREQUISITES: None

COURSE OBJECTIVES:

After successful completion of this course, the students will be able to:
1. Demonstrate knowledge of the background and nature of the major issues and problems facing America;
2. Demonstrate an ability to weigh the pros and cons of the issues and problems presented and to consider alternative solutions;
3. Demonstrate a knowledge of the American heritage; and,
4. Demonstrate their critical faculties, especially in reading, thinking, speaking and writing.

REQUIRED COURSE MATERIALS:

Lab Manual: None required

METHODS OF INSTRUCTION:

Lecture: Presentations and demonstrations.

Laboratory: None.

Method of Evaluation: A student's grade will be based on multiple measures of performance, including:
1. Tests;
2. Class participation; and,
3. Written assignments.

COURSE OBJECTIVES: SCANS COMPETENCIES

The Secretary's Commission on Achieving Necessary Skills (SCANS), U.S. Department of Labor, has identified in its "AMERICA 2000 REPORT" that all students should develop a new set of competencies and foundation skills if they are to enjoy a productive, full and satisfying life. These are in addition to the Technical Workplace Competencies required by industry. SCANS is made up of five competencies and a three-part foundation of skills and personal qualities that are needed for solid job performance. All italicized headings in this section are direct quotations from "What Work Requires of Schools: A SCANS Report for America 2000."
The following activities will be performed by each student for successful completion of this course:

I. **COMPETENCIES**
   A. **Resources:** Identifies, organizes, plans, and allocates resources
      1. Allocates time to complete assigned tasks on schedule
      2. Determines and allocates required materials and resources for meeting objectives
      3. Evaluates skills, performance, and quality of work and provides feedback
   B. **Interpersonal:** Works with others
      1. Participates as a member of the team, contributing to group effort
      2. Provides individual assistance/direction to peers as requested
      3. Determines and meets expectations
      4. Exercises leadership qualities to effectively communicate ideas and make decisions.
      5. Negotiates resources in order to accomplish objectives
      6. Works well with all members of the class
   C. **Information:** Acquires and uses information
      1. Acquires and evaluates information
      2. Organizes and maintains information
      3. Interprets and communicates information
   D. **Systems:** Understands complex inter-relationships
      1. Understands and works well with social, organizational, and technological systems
      2. Monitors and corrects performance of system during operation
      3. Recommends modifications to system to improve performance
   E. **Technology:** Works with a variety of technologies
      1. Chooses relevant procedures, tools, and equipment
      2. Applies appropriate procedures and techniques to accomplish tasks
      3. Identifies or solves problems to maintain equipment

II. **FOUNDATION SKILLS**
   A. **Basic Skills:** Reads, writes, performs arithmetic and mathematical operations, listens and speaks
      1. **Reading:** Locates, understands, and interprets written information in prose and in documents such as manuals, graphs, and schedules
         a. Demonstrates basic reading skills including abilities to perceive main ideas, draw appropriate conclusions, detect a sequence, locate answers, find facts, and infer from written texts

116
b. Demonstrates course specific reading skills including abilities to read, interpret, and comprehend information from text and supplemental materials on a level to facilitate productive independent and group study

c. Demonstrates ability to read, interpret, and utilize information from course specific instruments (i.e., charts, diagrams, graphs, schematics, blueprints, flow charts, etc.)

d. Demonstrates ability to read, interpret, and follow schedules and procedural instructions in a timely and appropriate manner

e. Demonstrates ability to choose and use most appropriate reading method (skim, scan, or read for comprehension) for materials

2. **Writing:** Communicates thoughts, ideas, information, and messages in writing; and creates documents such as letters, directions, manuals, reports, graphs, and flow charts
a. Demonstrates basic writing skills including abilities to produce written documents which conform with accepted grammatical and communication standards required for effective daily functioning
b. Demonstrates effective written study skills including note taking, maintaining course specific journals, workbooks, manuals, etc.
c. Demonstrates technical writing skills in preparing outlines, summaries, time lines, flow charts, diagrams, etc. appropriate to materials covered
d. Demonstrates ability to complete all required writings in a timely, complete, and professional manner
e. Demonstrates competence in subject matter through the organization and presentation of answers to required written assessments

3. **Arithmetic/Mathematics:** Perform basic computations and approaches practical problems by choosing appropriately from a variety of mathematical techniques
a. Demonstrates proficiency in basic arithmetic functions including ability to add, subtract, multiply, and divide whole numbers, fractions, decimals, and percentages
b. Demonstrates ability to read, comprehend, and select appropriate math procedures to work basic math problems
c. Demonstrates ability to understand and perform multi-step computations
d. Demonstrates ability to read, interpret, and use standard measuring devices

e. Demonstrates ability to comprehend, retain, and utilize course specific measuring devices effectively

f. Demonstrates ability to understand, retain, and utilize higher mathematical formulas and functions required for course specific math performance

g. Demonstrates ability to appropriately transfer mathematical calculations and information from paper to machines

4. **Listening:** Receives, attends to, interprets, and responds to verbal messages and other cues
   a. Functions at minimal or above required hearing levels to receive, attend, interpret, and respond to verbal messages and instructions and to safely operate machinery
   b. Demonstrates ability to hear, comprehend, and appropriately follow directions
   c. Demonstrates auditory ability to hear, comprehend, and utilize verbal classroom as well as other auditory instruction
   d. Demonstrates ability to discriminate between essential and non-essential verbal information and react appropriately
   e. Demonstrates ability to focus and fine-tune listening skills to receive, interpret, and respond to various sounds
   f. Demonstrates ability and maturity to seek and receive additional individualized instruction as needed

5. **Speaking:** Organizes ideas and communicates orally
   a. Demonstrates appropriate listening and speaking skills in personal conversations
   b. Demonstrates ability to choose and organize appropriate words to effectively communicate
   c. Demonstrates ability to speak clearly and distinctly with appropriate volume, tone, and body language for situation
   d. Demonstrates ability to spontaneously organize and present appropriate answers and/or short presentations for classroom and/or assessment purposes
   e. Demonstrates ability to formulate, organize, and deliver major presentations to peers or groups
   f. Demonstrates ability to speak effectively in one-on-one, small group, or large group presentations
   g. Demonstrates ability to take responsibility for presentations
B. Thinking Skills: Thinks creatively, makes decisions, solves problems, visualizes, knows how to learn and reasons

1. Decision Making: Specifies goals and constraints, generates alternatives, considers risks, and evaluates and chooses best alternative
   a. Demonstrates ability to objectively assess personal strengths and weaknesses
   b. Demonstrates ability to set realistic short-term and long-term goals
   c. Demonstrates ability to recognize and distinguish between positive and negative alternatives
   d. Demonstrates ability to identify potential pitfalls and take evasive actions
   e. Demonstrates ability to objectively and responsibly evaluate alternatives by testing hypotheses and selecting most appropriate response
   f. Demonstrates ability to profit from negative evaluations or mistakes by reformulating, redirecting, reconstructing, or retesting alternatives
   g. Demonstrates maturity in taking responsibility for decisions

2. Problem Solving: Recognizes problems and devises and implements plan of action
   a. Demonstrates ability to detect problem through observation, inquiry, or directive
   b. Demonstrates ability to grasp appropriate overview and degree of seriousness of problem and to behave responsibly in situation
   c. Demonstrates ability to generate alternatives or options for problem solution
   d. Demonstrates ability to research options, assess and evaluate options, and determine appropriate and best solution
   e. Demonstrates ability to initiate and effect solution
   f. Demonstrates ability to take responsibility for outcomes
   g. Demonstrates ability to effectively problem solve in individual, team, or group situations

3. Seeing Things In the Mind's Eye: Organizes, and processes symbols, pictures, graphs, objects, and other information
   a. Functions at minimum or above required visual levels in order to see, interpret, attend and respond to visual imagery and meet safety requirements for necessary machinery
b. Demonstrates ability to read, interpret, and act upon signs, symbols, and other visual cues
c. Demonstrates ability to visually discriminate in gross and fine imagery
d. Demonstrates ability to visualize abstractly
e. Demonstrates ability to apply visual imagery to applied tasks

4. Knowledge How to Learn: Use efficient learning techniques to acquire and apply new knowledge and skills
a. Demonstrates mastery of basic reading, math, and language skills through application
b. Demonstrates ability to translate abstract theory into practical application
c. Demonstrates ability to incorporate and generalize new learning into a sequential learning process
d. Demonstrates knowledge of good study skills and learning habits

5. Reasoning: Discovers a rule or principle underlying the relationship between two or more objects and applies it when solving a problem
a. Demonstrates use of simple logic
b. Demonstrates ability to distinguish relationships
c. Demonstrates ability to determine and isolate factors in relationships
d. Demonstrates and applies knowledge through practice
e. Recognizes that attitudes, skills, and practice are essential to productivity
f. Demonstrates ability to discriminate between positive and negative, and act accordingly

C. Personal Qualities: Displays responsibility, self-esteem, sociability, self-management, and integrity and honesty
1. Responsibility: Exerts a high level of effort and perseveres towards goal attainment
a. Demonstrates ability to formulate realistic and useful short and long term goals and complete steps necessary to timely achieve goals
b. Demonstrates ability to make adjustments, revisions, and changes to achieve goals in a cooperative and polite manner
c. Demonstrates ability to focus on task at hand and work to completion
d. Demonstrates good work ethics through regular attendance, adequate classroom preparations, and appropriate use of classroom time
e. Demonstrates maturity to take responsibility for actions
f. Demonstrates ability to cooperatively work in individual, team, and group situations in timely and effective manner

2. **Self-Esteem:** Believes in own self-worth and maintains a positive view of self
   a. Presents a positive attitude toward tasks
   b. Demonstrates ability to separate work and personal behaviors
   c. Actively participates in learning opportunities by sharing knowledge and skills with peers and instructors
   d. Demonstrates ability to accept personal strengths and weaknesses and builds on positive behaviors
   e. Demonstrates ability to accept and use constructive criticism
   f. Accepts positive reinforcement in an appropriate manner

3. **Sociability:** Demonstrates understanding, friendliness, adaptability, empathy, and politeness in group settings
   a. Demonstrates appropriate and acceptable social behaviors in interactions
   b. Demonstrates ability to work cooperatively in individual, team, or group situations
   c. Demonstrates active interest in peers by offering assistance, sharing resources, and sharing knowledge in a professional and acceptable manner
   d. Demonstrates professional work ethic by separating work and personal social behaviors and acting accordingly

4. **Self-Management:** Assesses self accurately, sets personal goals, monitors progress, and exhibits self-control
   a. Accepts personal strengths and weaknesses and uses the same for positive advancement
   b. Demonstrates ability to continuously set, assess, choose, and modify objectives as the situation demands in an appropriate manner
   c. Demonstrates ability to formulate and follow personal schedules
   d. Demonstrates ability to wisely use classroom time
   e. Demonstrates use of good study habits and skills
   f. Demonstrates maturity to take responsibility for own actions

5. **Integrity/Honesty:** Chooses ethical courses of action
   a. Knows and demonstrates ability to distinguish between positive and negative behaviors
b. Demonstrates honesty and integrity in working with peers and supervisors

c. Takes full responsibility for personal actions

d. Demonstrates understanding of consequences for negative ethical behaviors and accepts responsibility for same when applicable

e. Demonstrates positive work and social ethics in undertakings

   WLD-K1 through WLD-K9;
   WLD-L1 through WLD-L12;
   WLD-M1 through WLD-M35;
   WLD-N1 through WLD-N4;
   WLD-O1 through WLD-O10;
   WLD-P1 through WLD-P7;
   WLD-Q1 through WLD-Q2;
   WLD-R1 through WLD-R5; and,
   WLD-S1 through WLD-S5.
MASTER PROGRAM
World Civilizations I
Course Syllabus

Total lecture hours: 45  Total lab hours: 0  Credit hours: 3

COURSE DESCRIPTION:

A survey of our past emphasizing the intellectual, cultural, political and economic forces which have shaped our modern heritage from the civilizations of Mesopotamia, Egypt, Greece, Rome, Medieval Christendom, Islam, Africa and the Far East. This course has a minimum writing requirement of 3,000 words.

PREREQUISITES:    Freshman Composition Skills I

COURSE OBJECTIVES:

After successful completion of this course, the students will be able to:
1. Demonstrate knowledge of the great (political, intellectual, and artistic) men and women of the past;
2. Demonstrate knowledge of the achievements of past civilizations;
3. Demonstrate knowledge of the important political terms, intellectual concepts, social trends, and artistic schools in history;
4. Demonstrate knowledge of the chronology of history; and,
5. Demonstrate an ability to write satisfactorily a minimum of 3,000 words with accurate information, and in standard, acceptable English.

REQUIRED COURSE MATERIALS:

Textbook:   Human Venture to 1500, Vol. 1, Esler, Publisher: Prentice-Hall, Latest Edition

Lab Manual: None required

METHODS OF INSTRUCTION:

Lecture:   Presentations and demonstrations.

Laboratory: None.
Method of Evaluation: A student's grade will be based on multiple measures of performance, including:
1. Tests;
2. Compositions; and,
3. Class discussions.

COURSE OBJECTIVES: SCANS COMPETENCIES

The Secretary's Commission on Achieving Necessary Skills (SCANS), U.S. Department of Labor, has identified in its "AMERICA 2000 REPORT" that all students should develop a new set of competencies and foundation skills if they are to enjoy a productive, full and satisfying life. These are in addition to the Technical Workplace Competencies required by industry. SCANS is made up of five competencies and a three-part foundation of skills and personal qualities that are needed for solid job performance. All italicized headings in this section are direct quotations from "What Work Requires of Schools: A SCANS Report for America 2000."

The following activities will be performed by each student for successful completion of this course:
I. COMPETENCIES

A. **Resources:** Identifies, organizes, plans, and allocates resources
   1. Allocates time to complete assigned tasks on schedule
   2. Determines and allocates required materials and resources for meeting objectives
   3. Evaluates skills, performance, and quality of work and provides feedback

B. **Interpersonal:** Works with others
   1. Participates as a member of the team, contributing to group effort
   2. Provides individual assistance/direction to peers as requested
   3. Determines and meets expectations
   4. Exercises leadership qualities to effectively communicate ideas and make decisions.
   5. Negotiates resources in order to accomplish objectives
   6. Works well with all members of the class

C. **Information:** Acquires and uses information
   1. Acquires and evaluates information
   2. Organizes and maintains information
   3. Interprets and communicates information

D. **Systems:** Understands complex inter-relationships
   1. Understands and works well with social, organizational, and technological systems
   2. Monitors and corrects performance of system during operation
   3. Recommends modifications to system to improve performance

E. **Technology:** Works with a variety of technologies
   1. Chooses relevant procedures, tools, and equipment
   2. Applies appropriate procedures and techniques to accomplish tasks
   3. Identifies or solves problems to maintain equipment

II. FOUNDATION SKILLS

A. **Basic Skills:** Reads, writes, performs arithmetic and mathematical operations, listens and speaks
   1. **Reading:** Locates, understands, and interprets written information in prose and in documents such as manuals, graphs, and schedules
      a. Demonstrates basic reading skills including abilities to perceive main ideas, draw appropriate conclusions, detect a sequence, locate answers, find facts, and infer from written texts
      b. Demonstrates course specific reading skills including abilities to read, interpret, and comprehend information
from text and supplemental materials on a level to facilitate productive independent and group study

c. Demonstrates ability to read, interpret, and utilize information from course specific instruments (i.e., charts, diagrams, graphs, schematics, blueprints, flow charts, etc.)

d. Demonstrates ability to read, interpret, and follow schedules and procedural instructions in a timely and appropriate manner

e. Demonstrates ability to choose and use most appropriate reading method (skim, scan, or read for comprehension) for materials

2. Writing: Communicates thoughts, ideas, information, and messages in writing; and creates documents such as letters, directions, manuals, reports, graphs, and flow charts
   a. Demonstrates basic writing skills including abilities to produce written documents which conform with accepted grammatical and communication standards required for effective daily functioning
   b. Demonstrates effective written study skills including note taking, maintaining course specific journals, workbooks, manuals, etc.
   c. Demonstrates technical writing skills in preparing outlines, summaries, time lines, flow charts, diagrams, etc. appropriate to materials covered
   d. Demonstrates ability to complete all required writings in a timely, complete, and professional manner
   e. Demonstrates competence in subject matter through the organization and presentation of answers to required written assessments

3. Arithmetic/Mathematics: Perform basic computations and approaches practical problems by choosing appropriately from a variety of mathematical techniques
   a. Demonstrates proficiency in basic arithmetic functions including ability to add, subtract, multiply, and divide whole numbers, fractions, decimals, and percentages
   b. Demonstrates ability to read, comprehend, and select appropriate math procedures to work basic math problems
   c. Demonstrates ability to understand and perform multi-step computations
   d. Demonstrates ability to read, interpret, and use standard measuring devices
e. Demonstrates ability to comprehend, retain, and utilize course specific measuring devices effectively
f. Demonstrates ability to understand, retain, and utilize higher mathematical formulas and functions required for course specific math performance
g. Demonstrates ability to appropriately transfer mathematical calculations and information from paper to machines

4. **Listening**: Receives, attends to, interprets, and responds to verbal messages and other cues
   a. Functions at minimal or above required hearing levels to receive, attend, interpret, and respond to verbal messages and instructions and to safely operate machinery
   b. Demonstrates ability to hear, comprehend, and appropriately follow directions
   c. Demonstrates auditory ability to hear, comprehend, and utilize verbal classroom as well as other auditory instruction
   d. Demonstrates ability to discriminate between essential and non-essential verbal information and react appropriately
   e. Demonstrates ability to focus and fine-tune listening skills to receive, interpret, and respond to various sounds
   f. Demonstrates ability and maturity to seek and receive additional individualized instruction as needed

5. **Speaking**: Organizes ideas and communicates orally
   a. Demonstrates appropriate listening and speaking skills in personal conversations
   b. Demonstrates ability to choose and organize appropriate words to effectively communicate
   c. Demonstrates ability to speak clearly and distinctly with appropriate volume, tone, and body language for situation
   d. Demonstrates ability to spontaneously organize and present appropriate answers and/or short presentations for classroom and/or assessment purposes
   e. Demonstrates ability to formulate, organize, and deliver major presentations to peers or groups
   f. Demonstrates ability to speak effectively in one-on-one, small group, or large group presentations
   g. Demonstrates ability to take responsibility for presentations

B. **Thinking Skills**: Thinks creatively, makes decisions, solves problems, visualizes, knows how to learn and reasons
1. **Decision Making**: Specifies goals and constraints, generates alternatives, considers risks, and evaluates and chooses best alternative
   a. Demonstrates ability to objectively assess personal strengths and weaknesses
   b. Demonstrates ability to set realistic short-term and long-term goals
   c. Demonstrates ability to recognize and distinguish between positive and negative alternatives
   d. Demonstrates ability to identify potential pitfalls and take evasive actions
   e. Demonstrates ability to objectively and responsibly evaluate alternatives by testing hypotheses and selecting most appropriate response
   f. Demonstrates ability to profit from negative evaluations or mistakes by reformulating, redirecting, reconstructing, or retesting alternatives
   g. Demonstrates maturity in taking responsibility for decisions

2. **Problem Solving**: Recognizes problems and devises and implements plan of action
   a. Demonstrates ability to detect problem through observation, inquiry, or directive
   b. Demonstrates ability to grasp appropriate overview and degree of seriousness of problem and to behave responsibly in situation
   c. Demonstrates ability to generate alternatives or options for problem solution
   d. Demonstrates ability to research options, assess and evaluate options, and determine appropriate and best solution
   e. Demonstrates ability to initiate and effect solution
   f. Demonstrates ability to take responsibility for outcomes
   g. Demonstrates ability to effectively problem solve in individual, team, or group situations

3. **Seeing Things In the Mind's Eye**: Organizes, and processes symbols, pictures, graphs, objects, and other information
   a. Functions at minimum or above required visual levels in order to see, interpret, attend and respond to visual imagery and meet safety requirements for necessary machinery
   b. Demonstrates ability to read, interpret, and act upon signs, symbols, and other visual cues
c. Demonstrates ability to visually discriminate in gross and fine imagery
d. Demonstrates ability to visualize abstractly
e. Demonstrates ability to apply visual imagery to applied tasks

4. **Knowing How to Learn**: Use efficient learning techniques to acquire and apply new knowledge and skills
   a. Demonstrates mastery of basic reading, math, and language skills through application
   b. Demonstrates ability to translate abstract theory into practical application
   c. Demonstrates ability to incorporate and generalize new learning into a sequential learning process
   d. Demonstrates knowledge of good study skills and learning habits

5. **Reasoning**: Discovers a rule or principle underlying the relationship between two or more objects and applies it when solving a problem
   a. Demonstrates use of simple logic
   b. Demonstrates ability to distinguish relationships
   c. Demonstrates ability to determine and isolate factors in relationships
   d. Demonstrates and applies knowledge through practice
   e. Recognizes that attitudes, skills, and practice are essential to productivity
   f. Demonstrates ability to discriminate between positive and negative, and act accordingly

C. **Personal Qualities**: Displays responsibility, self-esteem, sociability, self-management, and integrity and honesty
   1. **Responsibility**: Exerts a high level of effort and perseveres towards goal attainment
      a. Demonstrates ability to formulate realistic and useful short and long term goals and complete steps necessary to timely achieve goals
      b. Demonstrates ability to make adjustments, revisions, and changes to achieve goals in a cooperative and polite manner
      c. Demonstrates ability to focus on task at hand and work to completion
      d. Demonstrates good work ethics through regular attendance, adequate classroom preparations, and appropriate use of classroom time
      e. Demonstrates maturity to take responsibility for actions
f. Demonstrates ability to cooperatively work in individual, team, and group situations in timely and effective manner

2. **Self-Esteem**: Believes in own self-worth and maintains a positive view of self
   a. Presents a positive attitude toward tasks
   b. Demonstrates ability to separate work and personal behaviors
   c. Actively participates in learning opportunities by sharing knowledge and skills with peers and instructors
   d. Demonstrates ability to accept personal strengths and weaknesses and builds on positive behaviors
   e. Demonstrates ability to accept and use constructive criticism
   f. Accepts positive reinforcement in an appropriate manner

3. **Sociability**: Demonstrates understanding, friendliness, adaptability, empathy, and politeness in group settings
   a. Demonstrates appropriate and acceptable social behaviors in interactions
   b. Demonstrates ability to work cooperatively in individual, team, or group situations
   c. Demonstrates active interest in peers by offering assistance, sharing resources, and sharing knowledge in a professional and acceptable manner
   d. Demonstrates professional work ethic by separating work and personal social behaviors and acting accordingly

4. **Self-Management**: Assesses self accurately, sets personal goals, monitors progress, and exhibits self-control
   a. Accepts personal strengths and weaknesses and uses the same for positive advancement
   b. Demonstrates ability to continuously set, assess, choose, and modify objectives as the situation demands in an appropriate manner
   c. Demonstrates ability to formulate and follow personal schedules
   d. Demonstrates ability to wisely use classroom time
   e. Demonstrates use of good study habits and skills
   f. Demonstrates maturity to take responsibility for own actions

5. **Integrity/Honesty**: Chooses ethical courses of action
   a. Knows and demonstrates ability to distinguish between positive and negative behaviors
   b. Demonstrates honesty and integrity in working with peers and supervisors
c. Takes full responsibility for personal actions
d. Demonstrates understanding of consequences for negative ethical behaviors and accepts responsibility for same when applicable
e. Demonstrates positive work and social ethics in undertakings
COURSE DESCRIPTION:

A survey of the major civilizations of the modern world. Topics include the Age of Reason, the French Revolution, liberalism and socialism, European nationalism, imperialism, the Great War, the Russian Revolution, fascism, national socialism, totalitarianism, World War II, nationalism in Africa and Asia, the Cold War, and the Post-Cold War. This course has a minimum writing requirement of 3,000 words.

PREREQUISITES: Freshman Composition Skills I

COURSE OBJECTIVES:

After successful completion of this course, the students will be able to:

1. Demonstrate knowledge of the great (political, intellectual, and artistic) men and women of the past;
2. Demonstrate knowledge of the achievements of past civilizations;
3. Demonstrate knowledge of the important political terms, intellectual concepts, social trends, and artistic schools in history;
4. Demonstrate knowledge of the chronology of history; and,
5. Demonstrate an ability to write satisfactorily a minimum of 3,000 words with accurate information, and in standard, acceptable English.

REQUIRED COURSE MATERIALS:

*Makers of Western Tradition, Vol. II*, Sowards, Publisher: St. Martin’s Press, Latest Edition

Lab Manual: None required

METHODS OF INSTRUCTION:

Lecture: Presentations and demonstrations.
Laboratory: None

Method of Evaluation: A student's grade will be based on multiple measures of performance, including:
1. Tests;
2. Compositions; and,
3. Class discussions.

COURSE OBJECTIVES: SCANS COMPETENCIES

The Secretary's Commission on Achieving Necessary Skills (SCANS), U.S. Department of Labor, has identified in its "AMERICA 2000 REPORT" that all students should develop a new set of competencies and foundation skills if they are to enjoy a productive, full and satisfying life. These are in addition to the Technical Workplace Competencies required by industry. SCANS is made up of five competencies and a three-part foundation of skills and personal qualities that are needed for solid job performance. All italicized headings in this section are direct quotations from "What Work Requires of Schools: A SCANS Report for America 2000."
The following activities will be performed by each student for successful completion of this course:

I. **COMPETENCIES**

A. **Resources: Identifies, organizes, plans, and allocates resources**
   1. Allocates time to complete assigned tasks on schedule
   2. Determines and allocates required materials and resources for meeting objectives
   3. Evaluates skills, performance, and quality of work and provides feedback

B. **Interpersonal: Works with others**
   1. Participates as a member of the team, contributing to group effort
   2. Provides individual assistance/direction to peers as requested
   3. Determines and meets expectations
   4. Exercises leadership qualities to effectively communicate ideas and make decisions.
   5. Negotiates resources in order to accomplish objectives
   6. Works well with all members of the class

C. **Information: Acquires and uses information**
   1. Acquires and evaluates information
   2. Organizes and maintains information
   3. Interprets and communicates information

D. **Systems: Understands complex inter-relationships**
   1. Understands and works well with social, organizational, and technological systems
   2. Monitors and corrects performance of system during operation
   3. Recommends modifications to system to improve performance

E. **Technology: Works with a variety of technologies**
   1. Chooses relevant procedures, tools, and equipment
   2. Applies appropriate procedures and techniques to accomplish tasks
   3. Identifies or solves problems to maintain equipment

II. **FOUNDATION SKILLS**

A. **Basic Skills: Reads, writes, performs arithmetic and mathematical operations, listens and speaks**
   1. **Reading: Locates, understands, and interprets written information in prose and in documents such as manuals, graphs, and schedules**
      a. Demonstrates basic reading skills including abilities to perceive main ideas, draw appropriate conclusions, detect a sequence, locate answers, find facts, and infer from written texts
b. Demonstrates course specific reading skills including abilities to read, interpret, and comprehend information from text and supplemental materials on a level to facilitate productive independent and group study

c. Demonstrates ability to read, interpret, and utilize information from course specific instruments (i.e., charts, diagrams, graphs, schematics, blueprints, flow charts, etc.)

d. Demonstrates ability to read, interpret, and follow schedules and procedural instructions in a timely and appropriate manner

e. Demonstrates ability to choose and use most appropriate reading method (skim, scan, or read for comprehension) for materials

2. **Writing:** Communicates thoughts, ideas, information, and messages in writing; and creates documents such as letters, directions, manuals, reports, graphs, and flow charts

   a. Demonstrates basic writing skills including abilities to produce written documents which conform with accepted grammatical and communication standards required for effective daily functioning

   b. Demonstrates effective written study skills including note taking, maintaining course specific journals, workbooks, manuals, etc.

   c. Demonstrates technical writing skills in preparing outlines, summaries, time lines, flow charts, diagrams, etc. appropriate to materials covered

   d. Demonstrates ability to complete all required writings in a timely, complete, and professional manner

   e. Demonstrates competence in subject matter through the organization and presentation of answers to required written assessments

3. **Arithmetic/Mathematics:** Perform basic computations and approaches practical problems by choosing appropriately from a variety of mathematical techniques

   a. Demonstrates proficiency in basic arithmetic functions including ability to add, subtract, multiply, and divide whole numbers, fractions, decimals, and percentages

   b. Demonstrates ability to read, comprehend, and select appropriate math procedures to work basic math problems

   c. Demonstrates ability to understand and perform multi-step computations
d. Demonstrates ability to read, interpret, and use standard measuring devices

e. Demonstrates ability to comprehend, retain, and utilize course specific measuring devices effectively

f. Demonstrates ability to understand, retain, and utilize higher mathematical formulas and functions required for course specific math performance

g. Demonstrates ability to appropriately transfer mathematical calculations and information from paper to machines

4. **Listening**: Receives, attends to, interprets, and responds to verbal messages and other cues

a. Functions at minimal or above required hearing levels to receive, attend, interpret, and respond to verbal messages and instructions and to safely operate machinery

b. Demonstrates ability to hear, comprehend, and appropriately follow directions

c. Demonstrates auditory ability to hear, comprehend, and utilize verbal classroom as well as other auditory instruction

d. Demonstrates ability to discriminate between essential and non-essential verbal information and react appropriately

e. Demonstrates ability to focus and fine-tune listening skills to receive, interpret, and respond to various sounds

f. Demonstrates ability and maturity to seek and receive additional individualized instruction as needed

5. **Speaking**: Organizes ideas and communicates orally

a. Demonstrates appropriate listening and speaking skills in personal conversations

b. Demonstrates ability to choose and organize appropriate words to effectively communicate

c. Demonstrates ability to speak clearly and distinctly with appropriate volume, tone, and body language for situation

d. Demonstrates ability to spontaneously organize and present appropriate answers and/or short presentations for classroom and/or assessment purposes

e. Demonstrates ability to formulate, organize, and deliver major presentations to peers or groups

f. Demonstrates ability to speak effectively in one-on-one, small group, or large group presentations

g. Demonstrates ability to take responsibility for presentations
B. **Thinking Skills**: Thinks creatively, makes decisions, solves problems, visualizes, knows how to learn and reasons

1. **Decision Making**: Specifies goals and constraints, generates alternatives, considers risks, and evaluates and chooses best alternative  
   a. Demonstrates ability to objectively assess personal strengths and weaknesses  
   b. Demonstrates ability to set realistic short-term and long-term goals  
   c. Demonstrates ability to recognize and distinguish between positive and negative alternatives  
   d. Demonstrates ability to identify potential pitfalls and take evasive actions  
   e. Demonstrates ability to objectively and responsibly evaluate alternatives by testing hypotheses and selecting most appropriate response  
   f. Demonstrates ability to profit from negative evaluations or mistakes by reformulating, redirecting, reconstructing, or retesting alternatives  
   g. Demonstrates maturity in taking responsibility for decisions

2. **Problem Solving**: Recognizes problems and devises and implements plan of action  
   a. Demonstrates ability to detect problem through observation, inquiry, or directive  
   b. Demonstrates ability to grasp appropriate overview and degree of seriousness of problem and to behave responsibly in situation  
   c. Demonstrates ability to generate alternatives or options for problem solution  
   d. Demonstrates ability to research options, assess and evaluate options, and determine appropriate and best solution  
   e. Demonstrates ability to initiate and effect solution  
   f. Demonstrates ability to take responsibility for outcomes  
   g. Demonstrates ability to effectively problem solve in individual, team, or group situations

3. **Seeing Things In the Mind’s Eye**: Organizes, and processes symbols, pictures, graphs, objects, and other information  
   a. Functions at minimum or above required visual levels in order to see, interpret, attend and respond to visual imagery and meet safety requirements for necessary machinery
b. Demonstrates ability to read, interpret, and act upon signs, symbols, and other visual cues
c. Demonstrates ability to visually discriminate in gross and fine imagery
d. Demonstrates ability to visualize abstractly
e. Demonstrates ability to apply visual imagery to applied tasks

4. **Knowing How to Learn:** Use efficient learning techniques to acquire and apply new knowledge and skills
   a. Demonstrates mastery of basic reading, math, and language skills through application
   b. Demonstrates ability to translate abstract theory into practical application
   c. Demonstrates ability to incorporate and generalize new learning into a sequential learning process
d. Demonstrates knowledge of good study skills and learning habits

5. **Reasoning:** Discovers a rule or principle underlying the relationship between two or more objects and applies it when solving a problem
   a. Demonstrates use of simple logic
   b. Demonstrates ability to distinguish relationships
c. Demonstrates ability to determine and isolate factors in relationships
d. Demonstrates and applies knowledge through practice
e. Recognizes that attitudes, skills, and practice are essential to productivity
f. Demonstrates ability to discriminate between positive and negative, and act accordingly

C. **Personal Qualities:** Displays responsibility, self-esteem, sociability, self-management, and integrity and honesty

1. **Responsibility:** Exerts a high level of effort and perseveres towards goal attainment
   a. Demonstrates ability to formulate realistic and useful short and long term goals and complete steps necessary to timely achieve goals
   b. Demonstrates ability to make adjustments, revisions, and changes to achieve goals in a cooperative and polite manner
c. Demonstrates ability to focus on task at hand and work to completion
d. Demonstrates good work ethics through regular attendance, adequate classroom preparations, and appropriate use of classroom time
e. Demonstrates maturity to take responsibility for actions
f. Demonstrates ability to cooperatively work in individual, team, and group situations in timely and effective manner

2. **Self-Esteem:** Believes in own self-worth and maintains a positive view of self
   a. Presents a positive attitude toward tasks
   b. Demonstrates ability to separate work and personal behaviors
   c. Actively participates in learning opportunities by sharing knowledge and skills with peers and instructors
   d. Demonstrates ability to accept personal strengths and weaknesses and builds on positive behaviors
   e. Demonstrates ability to accept and use constructive criticism
   f. Accepts positive reinforcement in an appropriate manner

3. **Sociability:** Demonstrates understanding, friendliness, adaptability, empathy, and politeness in group settings
   a. Demonstrates appropriate and acceptable social behaviors in interactions
   b. Demonstrates ability to work cooperatively in individual, team, or group situations
   c. Demonstrates active interest in peers by offering assistance, sharing resources, and sharing knowledge in a professional and acceptable manner
   d. Demonstrates professional work ethic by separating work and personal social behaviors and acting accordingly

4. **Self-Management:** Assesses self accurately, sets personal goals, monitors progress, and exhibits self-control
   a. Accepts personal strengths and weaknesses and uses the same for positive advancement
   b. Demonstrates ability to continuously set, assess, choose, and modify objectives as the situation demands in an appropriate manner
   c. Demonstrates ability to formulate and follow personal schedules
   d. Demonstrates ability to wisely use classroom time
   e. Demonstrates use of good study habits and skills
   f. Demonstrates maturity to take responsibility for own actions

5. **Integrity/Honesty:** Chooses ethical courses of action
   a. Knows and demonstrates ability to distinguish between positive and negative behaviors
b. Demonstrates honesty and integrity in working with peers and supervisors

c. Takes full responsibility for personal actions

d. Demonstrates understanding of consequences for negative ethical behaviors and accepts responsibility for same when applicable

e. Demonstrates positive work and social ethics in undertakings
Master Program
Elementary Physics for Non-Science Majors
Course Syllabus

Total lecture hours: 45  Total lab hours: 0  Credit hours: 3

Course Description:
This course provides a basic introduction to the several traditional divisions of classical physics. These include mechanics, heat material properties, molecular and atomic structure, electricity and magnetism, wave motion, including light and sound, optics, radioactivity, and the basic postulates of relativity.

Prerequisites: One year of high school algebra or equivalent. Recommended – one year of high school geometry.

Course Objectives:
After successful completion of this course, the students will be able to:
1. Demonstrate a basic understanding of each of the divisions of physics enumerated above;
2. Demonstrate how to think analytically by investigation of problems in the various physics areas studied;
3. Demonstrate how to better understand popular literature by becoming familiar with scientific terms, units and notation; and,
4. Demonstrate methods of scientific thinking, inquiry and analysis.

Required Course Materials:

Textbook: Conceptual Physics, Hewitt, Publisher: Scott, Foresman and Co., Latest Edition

Lab Manual: None required

Methods of Instruction:

Lecture: Classroom presentations and demonstrations.

Laboratory: None.
Method of Evaluation: Student mastery of the course material is determined by four written, one-hour tests. These tests are half objective type and half written discussion. Grading is not class-curved. If a student misses one test he is given 70% of his average on the other three tests for the one missed test. This does not apply to the last test which must be taken for course completion. No test is dropped.

COURSE OBJECTIVES: SCANS COMPETENCIES

The Secretary’s Commission on Achieving Necessary Skills (SCANS), U.S. Department of Labor, has identified in its “AMERICA 2000 REPORT” that all students should develop a new set of competencies and foundation skills if they are to enjoy a productive, full and satisfying life. These are in addition to the Technical Workplace Competencies required by industry. SCANS is made up of five competencies and a three-part foundation of skills and personal qualities that are needed for solid job performance. All italicized headings in this section are direct quotations from “What Work Requires of Schools: A SCANS Report for America 2000.”

The following activities will be performed by each student for successful completion of this course:

I. COMPETENCIES
   
   A. Resources: Identifies, organizes, plans, and allocates resources
      1. Allocates time to complete assigned tasks on schedule
      2. Determines and allocates required materials and resources for meeting objectives
      3. Evaluates skills, performance, and quality of work and provides feedback
   
   B. Interpersonal: Works with others
      1. Participates as a member of the team, contributing to group effort
      2. Provides individual assistance/direction to peers as requested
      3. Determines and meets expectations
      4. Exercises leadership qualities to effectively communicate ideas and make decisions.
      5. Negotiates resources in order to accomplish objectives
      6. Works well with all members of the class
   
   C. Information: Acquires and uses information
      1. Acquires and evaluates information
      2. Organizes and maintains information
      3. Interprets and communicates information
   
   D. Systems: Understands complex inter-relationships
      1. Understands and works well with social, organizational, and technological systems
2. Monitors and corrects performance of system during operation
3. Recommends modifications to system to improve performance

E. Technology: Works with a variety of technologies
1. Chooses relevant procedures, tools, and equipment
2. Applies appropriate procedures and techniques to accomplish tasks
3. Identifies or solves problems to maintain equipment

II. FOUNDATION SKILLS
A. Basic Skills: Reads, writes, performs arithmetic and mathematical operations, listens and speaks

1. Reading: Locates, understands, and interprets written information in prose and in documents such as manuals, graphs, and schedules
   a. Demonstrates basic reading skills including abilities to perceive main ideas, draw appropriate conclusions, detect a sequence, locate answers, find facts, and infer from written texts
   b. Demonstrates course specific reading skills including abilities to read, interpret, and comprehend information from text and supplemental materials on a level to facilitate productive independent and group study
   c. Demonstrates ability to read, interpret, and utilize information from course specific instruments (i.e., charts, diagrams, graphs, schematics, blueprints, flow charts, etc.)
   d. Demonstrates ability to read, interpret, and follow schedules and procedural instructions in a timely and appropriate manner
   e. Demonstrates ability to choose and use most appropriate reading method (skim, scan, or read for comprehension) for materials

2. Writing: Communicates thoughts, ideas, information, and messages in writing; and creates documents such as letters, directions, manuals, reports, graphs, and flow charts
   a. Demonstrates basic writing skills including abilities to produce written documents which conform with accepted grammatical and communication standards required for effective daily functioning
   b. Demonstrates effective written study skills including note taking, maintaining course specific journals, workbooks, manuals, etc.
c. Demonstrates technical writing skills in preparing outlines, summaries, time lines, flow charts, diagrams, etc. appropriate to materials covered
d. Demonstrates ability to complete all required writings in a timely, complete, and professional manner
e. Demonstrates competence in subject matter through the organization and presentation of answers to required written assessments

3. Arithmetic/Mathematics: Perform basic computations and approaches practical problems by choosing appropriately from a variety of mathematical techniques
   a. Demonstrates proficiency in basic arithmetic functions including ability to add, subtract, multiply, and divide whole numbers, fractions, decimals, and percentages
   b. Demonstrates ability to read, comprehend, and select appropriate math procedures to work basic math problems
c. Demonstrates ability to understand and perform multi-step computations
d. Demonstrates ability to read, interpret, and use standard measuring devices
e. Demonstrates ability to comprehend, retain, and utilize course specific measuring devices effectively
f. Demonstrates ability to understand, retain, and utilize higher mathematical formulas and functions required for course specific math performance
g. Demonstrates ability to appropriately transfer mathematical calculations and information from paper to machines

4. Listening: Receives, attends to, interprets, and responds to verbal messages and other cues
   a. Functions at minimal or above required hearing levels to receive, attend, interpret, and respond to verbal messages and instructions and to safely operate machinery
   b. Demonstrates ability to hear, comprehend, and appropriately follow directions
c. Demonstrates auditory ability to hear, comprehend, and utilize verbal classroom as well as other auditory instruction
d. Demonstrates ability to discriminate between essential and non-essential verbal information and react appropriately
e. Demonstrates ability to focus and fine-tune listening skills to receive, interpret, and respond to various sounds
f. Demonstrates ability and maturity to seek and receive additional individualized instruction as needed

5. **Speaking:** Organizes ideas and communicates orally
   a. Demonstrates appropriate listening and speaking skills in personal conversations
   b. Demonstrates ability to choose and organize appropriate words to effectively communicate
   c. Demonstrates ability to speak clearly and distinctly with appropriate volume, tone, and body language for situation
   d. Demonstrates ability to spontaneously organize and present appropriate answers and/or short presentations for classroom and/or assessment purposes
   e. Demonstrates ability to formulate, organize, and deliver major presentations to peers or groups
   f. Demonstrates ability to speak effectively in one-on-one, small group, or large group presentations
   g. Demonstrates ability to take responsibility for presentations

B. **Thinking Skills:** Thinks creatively, makes decisions, solves problems, visualizes, knows how to learn and reasons

1. **Decision Making:** Specifies goals and constraints, generates alternatives, considers risks, and evaluates and chooses best alternative
   a. Demonstrates ability to objectively assess personal strengths and weaknesses
   b. Demonstrates ability to set realistic short-term and long-term goals
   c. Demonstrates ability to recognize and distinguish between positive and negative alternatives
   d. Demonstrates ability to identify potential pitfalls and take evasive actions
   e. Demonstrates ability to objectively and responsibly evaluate alternatives by testing hypotheses and selecting most appropriate response
   f. Demonstrates ability to profit from negative evaluations or mistakes by reformulating, redirecting, reconstructing, or retesting alternatives
   g. Demonstrates maturity in taking responsibility for decisions

2. **Problem Solving:** Recognizes problems and devises and implements plan of action
   a. Demonstrates ability to detect problem through observation, inquiry, or directive
b. Demonstrates ability to grasp appropriate overview and degree of seriousness of problem and to behave responsibly in situation
c. Demonstrates ability to generate alternatives or options for problem solution
d. Demonstrates ability to research options, assess and evaluate options, and determine appropriate and best solution
e. Demonstrates ability to initiate and effect solution
f. Demonstrates ability to take responsibility for outcomes
g. Demonstrates ability to effectively problem solve in individual, team, or group situations

3. **Seeing Things In the Mind’s Eye: Organizes, and processes symbols, pictures, graphs, objects, and other information**
   a. Functions at minimum or above required visual levels in order to see, interpret, attend and respond to visual imagery and meet safety requirements for necessary machinery
   b. Demonstrates ability to read, interpret, and act upon signs, symbols, and other visual cues
c. Demonstrates ability to visually discriminate in gross and fine imagery
d. Demonstrates ability to visualize abstractly
e. Demonstrates ability to apply visual imagery to applied tasks

4. **Knowing How to Learn: Use efficient learning techniques to acquire and apply new knowledge and skills**
   a. Demonstrates mastery of basic reading, math, and language skills through application
   b. Demonstrates ability to translate abstract theory into practical application
c. Demonstrates ability to incorporate and generalize new learning into a sequential learning process
d. Demonstrates knowledge of good study skills and learning habits

5. **Reasoning: Discovers a rule or principle underlying the relationship between two or more objects and applies it when solving a problem**
   a. Demonstrates use of simple logic
   b. Demonstrates ability to distinguish relationships
c. Demonstrates ability to determine and isolate factors in relationships
d. Demonstrates and applies knowledge through practice
Recognizes that attitudes, skills, and practice are essential to productivity
f. Demonstrates ability to discriminate between positive and negative, and act accordingly

C. **Personal Qualities:** Displays responsibility, self-esteem, sociability, self-management, and integrity and honesty

1. **Responsibility:** *Exerts a high level of effort and perseveres towards goal attainment*
   a. Demonstrates ability to formulate realistic and useful short and long term goals and complete steps necessary to timely achieve goals
   b. Demonstrates ability to make adjustments, revisions, and changes to achieve goals in a cooperative and polite manner
   c. Demonstrates ability to focus on task at hand and work to completion
   d. Demonstrates good work ethics through regular attendance, adequate classroom preparations, and appropriate use of classroom time
   e. Demonstrates maturity to take responsibility for actions
   f. Demonstrates ability to cooperatively work in individual, team, and group situations in timely and effective manner

2. **Self-Esteem:** *Believes in own self-worth and maintains a positive view of self*
   a. Presents a positive attitude toward tasks
   b. Demonstrates ability to separate work and personal behaviors
   c. Actively participates in learning opportunities by sharing knowledge and skills with peers and instructors
   d. Demonstrates ability to accept personal strengths and weaknesses and builds on positive behaviors
   e. Demonstrates ability to accept and use constructive criticism
   f. Accepts positive reinforcement in an appropriate manner

3. **Sociability:** *Demonstrates understanding, friendliness, adaptability, empathy, and politeness in group settings*
   a. Demonstrates appropriate and acceptable social behaviors in interactions
   b. Demonstrates ability to work cooperatively in individual, team, or group situations
   c. Demonstrates active interest in peers by offering assistance, sharing resources, and sharing knowledge in a professional and acceptable manner
d. Demonstrates professional work ethic by separating work and personal social behaviors and acting accordingly

4. Self-Management: Assesses self accurately, sets personal goals, monitors progress, and exhibits self-control
   a. Accepts personal strengths and weaknesses and uses the same for positive advancement
   b. Demonstrates ability to continuously set, assess, choose, and modify objectives as the situation demands in an appropriate manner
   c. Demonstrates ability to formulate and follow personal schedules
   d. Demonstrates ability to wisely use classroom time
   e. Demonstrates use of good study habits and skills
   f. Demonstrates maturity to take responsibility for own actions

5. Integrity/Honesty: Chooses ethical courses of action
   a. Knows and demonstrates ability to distinguish between positive and negative behaviors
   b. Demonstrates honesty and integrity in working with peers and supervisors
   c. Takes full responsibility for personal actions
   d. Demonstrates understanding of consequences for negative ethical behaviors and accepts responsibility for same when applicable
   e. Demonstrates positive work and social ethics in undertakings

Program Totals: 670 LEC, 725 LAB, 64 CR
MASTER PROGRAM
Manufacturing and Metallurgical Processes
Course Syllabus

Total lecture hours: 30  Total lab hours: 30  Credit hours: 3

COURSE DESCRIPTION:

This course provides an overview of basic manufacturing processes related to welding as well as the study of the science and technology of metals.

PREREQUISITES:  None

COURSE OBJECTIVES:

After successful completion of this course, the students will be able to:
1. Demonstrate understanding of shop safety;
2. Demonstrate the effects of heat on a structure;
3. Understand distortion control;
4. Demonstrate understanding of metal, when certain alloy elements are added; and,
5. Understand chemical, physical, and mechanical properties of metal.

REQUIRED COURSE MATERIALS:

Supplemental Text Materials:
*Handbook of Welding Procedures*, Latest Edition
*Hobart Audio-Visual Training Program*, Latest Edition
American Welding Society – Competency Standards
*Miller Audio-Visual Training Program*, Latest Edition

Lab Manual:  Student handbook

METHODS OF INSTRUCTION:

Lecture:  Presentation and demonstration.
Laboratory: Practice with coaching and close supervision.

Method of Evaluation: A student's grade will be based on multiple measures of performance, including:
1. Tests and quizzes administered throughout the term;
2. Instructor's observation of hands-on performance;
3. Student closely following safety and shop procedures; and,
4. Student mastery of competencies.

COURSE OBJECTIVES: SCANS COMPETENCIES

The Secretary's Commission on Achieving Necessary Skills (SCANS), U.S. Department of Labor, has identified in its "AMERICA 2000 REPORT" that all students should develop a new set of competencies and foundation skills if they are to enjoy a productive, full and satisfying life. These are in addition to the Technical Workplace Competencies required by industry. SCANS is made up of five competencies and a three-part foundation of skills and personal qualities that are needed for solid job performance. All italicized headings in this section are direct quotations from "What Work Requires of Schools: A SCANS Report for America 2000."

The following activities will be performed by each student for successful completion of this course:
I. COMPETENCIES
A. **Resources: Identifies, organizes, plans, and allocates resources**
   1. Allocates time to complete assigned tasks on schedule
   2. Determines and allocates required materials and resources for meeting objectives
   3. Evaluates skills, performance, and quality of work and provides feedback
B. **Interpersonal: Works with others**
   1. Participates as a member of the team, contributing to group effort
   2. Provides individual assistance/direction to peers as requested
   3. Determines and meets expectations
   4. Exercises leadership qualities to effectively communicate ideas and make decisions.
   5. Negotiates resources in order to accomplish objectives
   6. Works well with all members of the class
C. **Information: Acquires and uses information**
   1. Acquires and evaluates information
   2. Organizes and maintains information
   3. Interprets and communicates information
D. **Systems: Understands complex inter-relationships**
   1. Understands and works well with social, organizational, and technological systems
   2. Monitors and corrects performance of system during operation
   3. Recommends modifications to system to improve performance
E. **Technology: Works with a variety of technologies**
   1. Chooses relevant procedures, tools, and equipment
   2. Applies appropriate procedures and techniques to accomplish tasks
   3. Identifies or solves problems to maintain equipment

II. FOUNDATION SKILLS
A. **Basic Skills: Reads, writes, performs arithmetic and mathematical operations, listens and speaks**
   1. **Reading: Locates, understands, and interprets written information in prose and in documents such as manuals, graphs, and schedules**
      a. Demonstrates basic reading skills including abilities to perceive main ideas, draw appropriate conclusions, detect a sequence, locate answers, find facts, and infer from written texts
      b. Demonstrates course specific reading skills including abilities to read, interpret, and comprehend information
from text and supplemental materials on a level to facilitate productive independent and group study

c. Demonstrates ability to read, interpret, and utilize information from course specific instruments (i.e., charts, diagrams, graphs, schematics, blueprints, flow charts, etc.)

d. Demonstrates ability to read, interpret, and follow schedules and procedural instructions in a timely and appropriate manner

e. Demonstrates ability to choose and use most appropriate reading method (skim, scan, or read for comprehension) for materials

2. **Writing**: Communicates thoughts, ideas, information, and messages in writing; and creates documents such as letters, directions, manuals, reports, graphs, and flow charts

   a. Demonstrates basic writing skills including abilities to produce written documents which conform with accepted grammatical and communication standards required for effective daily functioning

   b. Demonstrates effective written study skills including note taking, maintaining course specific journals, workbooks, manuals, etc.

   c. Demonstrates technical writing skills in preparing outlines, summaries, time lines, flow charts, diagrams, etc. appropriate to materials covered

   d. Demonstrates ability to complete all required writings in a timely, complete, and professional manner

   e. Demonstrates competence in subject matter through the organization and presentation of answers to required written assessments

3. **Arithmetic/Mathematics**: Perform basic computations and approaches practical problems by choosing appropriately from a variety of mathematical techniques

   a. Demonstrates proficiency in basic arithmetic functions including ability to add, subtract, multiply, and divide whole numbers, fractions, decimals, and percentages

   b. Demonstrates ability to read, comprehend, and select appropriate math procedures to work basic math problems

   c. Demonstrates ability to understand and perform multi-step computations

   d. Demonstrates ability to read, interpret, and use standard measuring devices
e. Demonstrates ability to comprehend, retain, and utilize course specific measuring devices effectively
f. Demonstrates ability to understand, retain, and utilize higher mathematical formulas and functions required for course specific math performance
g. Demonstrates ability to appropriately transfer mathematical calculations and information from paper to machines

4. **Listening**: Receives, attends to, interprets, and responds to verbal messages and other cues
   a. Functions at minimal or above required hearing levels to receive, attend, interpret, and respond to verbal messages and instructions and to safely operate machinery
   b. Demonstrates ability to hear, comprehend, and appropriately follow directions
   c. Demonstrates auditory ability to hear, comprehend, and utilize verbal classroom as well as other auditory instruction
   d. Demonstrates ability to discriminate between essential and non-essential verbal information and react appropriately
   e. Demonstrates ability to focus and fine-tune listening skills to receive, interpret, and respond to various sounds
   f. Demonstrates ability and maturity to seek and receive additional individualized instruction as needed

5. **Speaking**: Organizes ideas and communicates orally
   a. Demonstrates appropriate listening and speaking skills in personal conversations
   b. Demonstrates ability to choose and organize appropriate words to effectively communicate
   c. Demonstrates ability to speak clearly and distinctly with appropriate volume, tone, and body language for situation
   d. Demonstrates ability to spontaneously organize and present appropriate answers and/or short presentations for classroom and/or assessment purposes
   e. Demonstrates ability to formulate, organize, and deliver major presentations to peers or groups
   f. Demonstrates ability to speak effectively in one-on-one, small group, or large group presentations
   g. Demonstrates ability to take responsibility for presentations

B. **Thinking Skills**: Thinks creatively, makes decisions, solves problems, visualizes, knows how to learn and reasons
1. **Decision Making:** Specifies goals and constraints, generates alternatives, considers risks, and evaluates and chooses best alternative
   a. Demonstrates ability to objectively assess personal strengths and weaknesses
   b. Demonstrates ability to set realistic short-term and long-term goals
   c. Demonstrates ability to recognize and distinguish between positive and negative alternatives
   d. Demonstrates ability to identify potential pitfalls and take evasive actions
   e. Demonstrates ability to objectively and responsibly evaluate alternatives by testing hypotheses and selecting most appropriate response
   f. Demonstrates ability to profit from negative evaluations or mistakes by reformulating, redirecting, reconstructing, or retesting alternatives
   g. Demonstrates maturity in taking responsibility for decisions

2. **Problem Solving:** Recognizes problems and devises and implements plan of action
   a. Demonstrates ability to detect problem through observation, inquiry, or directive
   b. Demonstrates ability to grasp appropriate overview and degree of seriousness of problem and to behave responsibly in situation
   c. Demonstrates ability to generate alternatives or options for problem solution
   d. Demonstrates ability to research options, assess and evaluate options, and determine appropriate and best solution
   e. Demonstrates ability to initiate and effect solution
   f. Demonstrates ability to take responsibility for outcomes
   g. Demonstrates ability to effectively problem solve in individual, team, or group situations

3. **Seeing Things In the Mind’s Eye:** Organizes, and processes symbols, pictures, graphs, objects, and other information
   a. Functions at minimum or above required visual levels in order to see, interpret, attend and respond to visual imagery and meet safety requirements for necessary machinery
   b. Demonstrates ability to read, interpret, and act upon signs, symbols, and other visual cues
c. Demonstrates ability to visually discriminate in gross and fine imagery
d. Demonstrates ability to visualize abstractly
e. Demonstrates ability to apply visual imagery to applied tasks

4. **Knowing How to Learn:** Use efficient learning techniques to acquire and apply new knowledge and skills
   a. Demonstrates mastery of basic reading, math, and language skills through application
   b. Demonstrates ability to translate abstract theory into practical application
   c. Demonstrates ability to incorporate and generalize new learning into a sequential learning process
   d. Demonstrates knowledge of good study skills and learning habits

5. **Reasoning:** Discovers a rule or principle underlying the relationship between two or more objects and applies it when solving a problem
   a. Demonstrates use of simple logic
   b. Demonstrates ability to distinguish relationships
   c. Demonstrates ability to determine and isolate factors in relationships
   d. Demonstrates and applies knowledge through practice
   e. Recognizes that attitudes, skills, and practice are essential to productivity
   f. Demonstrates ability to discriminate between positive and negative, and act accordingly

C. **Personal Qualities:** Displays responsibility, self-esteem, sociability, self-management, and integrity and honesty

I. **Responsibility:** Exerts a high level of effort and perseveres towards goal attainment
   a. Demonstrates ability to formulate realistic and useful short and long term goals and complete steps necessary to timely achieve goals
   b. Demonstrates ability to make adjustments, revisions, and changes to achieve goals in a cooperative and polite manner
   c. Demonstrates ability to focus on task at hand and work to completion
   d. Demonstrates good work ethics through regular attendance, adequate classroom preparations, and appropriate use of classroom time
   e. Demonstrates maturity to take responsibility for actions
2. **Self-Esteem:** Believes in own self-worth and maintains a positive view of self  
a. Presents a positive attitude toward tasks  
b. Demonstrates ability to separate work and personal behaviors  
c. Actively participates in learning opportunities by sharing knowledge and skills with peers and instructors  
d. Demonstrates ability to accept personal strengths and weaknesses and builds on positive behaviors  
e. Demonstrates ability to accept and use constructive criticism  
f. Accepts positive reinforcement in an appropriate manner  

3. **Sociability:** Demonstrates understanding, friendliness, adaptability, empathy, and politeness in group settings  
a. Demonstrates appropriate and acceptable social behaviors in interactions  
b. Demonstrates ability to work cooperatively in individual, team, or group situations  
c. Demonstrates active interest in peers by offering assistance, sharing resources, and sharing knowledge in a professional and acceptable manner  
d. Demonstrates professional work ethic by separating work and personal social behaviors and acting accordingly  

4. **Self-Management:** Assesses self accurately, sets personal goals, monitors progress, and exhibits self-control  
a. Accepts personal strengths and weaknesses and uses the same for positive advancement  
b. Demonstrates ability to continuously set, assess, choose, and modify objectives as the situation demands in an appropriate manner  
c. Demonstrates ability to formulate and follow personal schedules  
d. Demonstrates ability to wisely use classroom time  
e. Demonstrates use of good study habits and skills  
f. Demonstrates maturity to take responsibility for own actions  

5. **Integrity/Honesty:** Chooses ethical courses of action  
a. Knows and demonstrates ability to distinguish between positive and negative behaviors  
b. Demonstrates honesty and integrity in working with peers and supervisors
c. Takes full responsibility for personal actions
d. Demonstrates understanding of consequences for negative ethical behaviors and accepts responsibility for same when applicable
e. Demonstrates positive work and social ethics in undertakings

   WLD-A1 through WLD-A13;
   WLD-B1 through WLD-B5;
   WLD-C1 through WLD-C9;
   WLD-D1 through WLD-D7;
   WLD-E1 through WLD-E13;
   WLD-F1 through WLD-F6;
   WLD-G1 through WLD-G4;
   WLD-H1 through WLD-H17;
   WLD-I1 through WLD-I5;
   WLD-J1 through WLD-J4;
   WLD-K1 through WLD-K9;
   WLD-L1 through WLD-L12;
   WLD-M1 through WLD-M35;
   WLD-N1 through WLD-N4;
   WLD-O1 through WLD-O10;
   WLD-P1 through WLD-P7;
   WLD-Q1 through WLD-Q2;
   WLD-R1 through WLD-R5;
   WLD-S1 through WLD-S5;
   WLD-T1 through WLD-T3; and,
   WLD-U1 through WLD-U6.

MASTER PROGRAM
Wellness Applications
Course Syllabus

Total lecture hours: 30  Total lab hours: 0  Credit hours: 2

COURSE DESCRIPTION:

This course will cover modules of the basic wellness concepts with concentration on cardiovascular fitness and personal lifestyle improvement.

PREREQUISITES: None

COURSE OBJECTIVES:

After successful completion of this course, the students will be able to:

1. Assess one’s health and fitness levels by evaluation in lifestyles, fitness components, stress management, nutrition and weight control; and,
2. Develop self-improvement plans based on the concepts developed in class.

REQUIRED COURSE MATERIALS:

Lab Manual: None required

METHODS OF INSTRUCTION:

Lecture: Presentation and demonstration.
Laboratory: None.

Method of Evaluation: Grades will be determined by the use of quizzes/tests, reports, and a student plan for improvement, as well as student class participation. Attendance is required.

COURSE OBJECTIVES: SCANS COMPETENCIES

The Secretary's Commission on Achieving Necessary Skills (SCANS), U.S. Department of Labor, has identified in its “AMERICA 2000 REPORT” that all students should develop a new set of competencies and foundation skills if they are to enjoy a productive, full and satisfying life. These are in addition to the Technical Workplace Competencies required by industry. SCANS is made up of five competencies and a three-part foundation of skills and personal qualities that are needed for solid job performance. All italicized headings in this section are direct quotations from “What Work Requires of Schools: A SCANS Report for America 2000.”

The following activities will be performed by each student for successful completion of this course:

I. COMPETENCIES
   A. Resources: Identifies, organizes, plans, and allocates resources
      1. Allocates time to complete assigned tasks on schedule
      2. Determines and allocates required materials and resources for meeting objectives
      3. Evaluates skills, performance, and quality of work and provides feedback
   B. Interpersonal: Works with others
      1. Participates as a member of the team, contributing to group effort
2. Provides individual assistance/direction to peers as requested
3. Determines and meets expectations
4. Exercises leadership qualities to effectively communicate ideas and make decisions.
5. Negotiates resources in order to accomplish objectives
6. Works well with all members of the class

C. Information: Acquires and uses information
1. Acquires and evaluates information
2. Organizes and maintains information
3. Interprets and communicates information

D. Systems: Understands complex inter-relationships
1. Understands and works well with social, organizational, and technological systems
2. Monitors and corrects performance of system during operation
3. Recommends modifications to system to improve performance

E. Technology: Works with a variety of technologies
1. Chooses relevant procedures, tools, and equipment
2. Applies appropriate procedures and techniques to accomplish tasks
3. Identifies or solves problems to maintain equipment

II. FOUNDATION SKILLS
A. Basic Skills: Reads, writes, performs arithmetic and mathematical operations, listens and speaks

I. Reading: Locates, understands, and interprets written information in prose and in documents such as manuals, graphs, and schedules
a. Demonstrates basic reading skills including abilities to perceive main ideas, draw appropriate conclusions, detect a sequence, locate answers, find facts, and infer from written texts
b. Demonstrates course specific reading skills including abilities to read, interpret, and comprehend information from text and supplemental materials on a level to facilitate productive independent and group study
c. Demonstrates ability to read, interpret, and utilize information from course specific instruments (i.e., charts, diagrams, graphs, schematics, blueprints, flow charts, etc.)
d. Demonstrates ability to read, interpret, and follow schedules and procedural instructions in a timely and appropriate manner
e. Demonstrates ability to choose and use most appropriate reading method (skim, scan, or read for comprehension) for materials

2. **Writing:** Communicates thoughts, ideas, information, and messages in writing; and creates documents such as letters, directions, manuals, reports, graphs, and flow charts
   a. Demonstrates basic writing skills including abilities to produce written documents which conform with accepted grammatical and communication standards required for effective daily functioning
   b. Demonstrates effective written study skills including note taking, maintaining course specific journals, workbooks, manuals, etc.
   c. Demonstrates technical writing skills in preparing outlines, summaries, time lines, flow charts, diagrams, etc. appropriate to materials covered
   d. Demonstrates ability to complete all required writings in a timely, complete, and professional manner
   e. Demonstrates competence in subject matter through the organization and presentation of answers to required written assessments

3. **Arithmetic/Mathematics:** Perform basic computations and approaches practical problems by choosing appropriately from a variety of mathematical techniques
   a. Demonstrates proficiency in basic arithmetic functions including ability to add, subtract, multiply, and divide whole numbers, fractions, decimals, and percentages
   b. Demonstrates ability to read, comprehend, and select appropriate math procedures to work basic math problems
   c. Demonstrates ability to understand and perform multi-step computations
   d. Demonstrates ability to read, interpret, and use standard measuring devices
   e. Demonstrates ability to comprehend, retain, and utilize course specific measuring devices effectively
   f. Demonstrates ability to understand, retain, and utilize higher mathematical formulas and functions required for course specific math performance
   g. Demonstrates ability to appropriately transfer mathematical calculations and information from paper to machines

4. **Listening:** Receives, attends to, interprets, and responds to verbal messages and other cues
a. Functions at minimal or above required hearing levels to receive, attend, interpret, and respond to verbal messages and instructions and to safely operate machinery
b. Demonstrates ability to hear, comprehend, and appropriately follow directions
c. Demonstrates auditory ability to hear, comprehend, and utilize verbal classroom as well as other auditory instruction
d. Demonstrates ability to discriminate between essential and non-essential verbal information and react appropriately
e. Demonstrates ability to focus and fine-tune listening skills to receive, interpret, and respond to various sounds
f. Demonstrates ability and maturity to seek and receive additional individualized instruction as needed

5. **Speaking: Organizes ideas and communicates orally**
   a. Demonstrates appropriate listening and speaking skills in personal conversations
   b. Demonstrates ability to choose and organize appropriate words to effectively communicate
c. Demonstrates ability to speak clearly and distinctly with appropriate volume, tone, and body language for situation
d. Demonstrates ability to spontaneously organize and present appropriate answers and/or short presentations for classroom and/or assessment purposes
e. Demonstrates ability to formulate, organize, and deliver major presentations to peers or groups
f. Demonstrates ability to speak effectively in one-on-one, small group, or large group presentations
g. Demonstrates ability to take responsibility for presentations

B. **Thinking Skills:** Thinks creatively, makes decisions, solves problems, visualizes, knows how to learn and reasons

1. **Decision Making:** Specifies goals and constraints, generates alternatives, considers risks, and evaluates and chooses best alternative
   a. Demonstrates ability to objectively assess personal strengths and weaknesses
   b. Demonstrates ability to set realistic short-term and long-term goals
   c. Demonstrates ability to recognize and distinguish between positive and negative alternatives
d. Demonstrates ability to identify potential pitfalls and take evasive actions
e. Demonstrates ability to objectively and responsibly evaluate alternatives by testing hypotheses and selecting most appropriate response

f. Demonstrates ability to profit from negative evaluations or mistakes by reformulating, redirecting, reconstructing, or retesting alternatives

g. Demonstrates maturity in taking responsibility for decisions

2. **Problem Solving**: Recognizes problems and devises and implements plan of action

a. Demonstrates ability to detect problem through observation, inquiry, or directive

b. Demonstrates ability to grasp appropriate overview and degree of seriousness of problem and to behave responsibly in situation

c. Demonstrates ability to generate alternatives or options for problem solution

d. Demonstrates ability to research options, assess and evaluate options, and determine appropriate and best solution

e. Demonstrates ability to initiate and effect solution

f. Demonstrates ability to take responsibility for outcomes

g. Demonstrates ability to effectively problem solve in individual, team, or group situations

3. **Seeing Things In the Mind's Eye**: Organizes, and processes symbols, pictures, graphs, objects, and other information

a. Functions at minimum or above required visual levels in order to see, interpret, attend and respond to visual imagery and meet safety requirements for necessary machinery

b. Demonstrates ability to read, interpret, and act upon signs, symbols, and other visual cues

c. Demonstrates ability to visually discriminate in gross and fine imagery

d. Demonstrates ability to visualize abstractly

e. Demonstrates ability to apply visual imagery to applied tasks

4. **Knowing How to Learn**: Use efficient learning techniques to acquire and apply new knowledge and skills

a. Demonstrates mastery of basic reading, math, and language skills through application

b. Demonstrates ability to translate abstract theory into practical application
c. Demonstrates ability to incorporate and generalize new learning into a sequential learning process

d. Demonstrates knowledge of good study skills and learning habits

5. **Reasoning:** Discovers a rule or principle underlying the relationship between two or more objects and applies it when solving a problem

a. Demonstrates use of simple logic

b. Demonstrates ability to distinguish relationships

c. Demonstrates ability to determine and isolate factors in relationships

d. Demonstrates and applies knowledge through practice

e. Recognizes that attitudes, skills, and practice are essential to productivity

f. Demonstrates ability to discriminate between positive and negative, and act accordingly

C. **Personal Qualities:** Displays responsibility, self-esteem, sociability, self-management, and integrity and honesty

1. **Responsibility:** Exerts a high level of effort and perseveres towards goal attainment

a. Demonstrates ability to formulate realistic and useful short and long term goals and complete steps necessary to timely achieve goals

b. Demonstrates ability to make adjustments, revisions, and changes to achieve goals in a cooperative and polite manner

c. Demonstrates ability to focus on task at hand and work to completion

d. Demonstrates good work ethics through regular attendance, adequate classroom preparations, and appropriate use of classroom time

e. Demonstrates maturity to take responsibility for actions

f. Demonstrates ability to cooperatively work in individual, team, and group situations in timely and effective manner

2. **Self-Esteem:** Believes in own self-worth and maintains a positive view of self

a. Presents a positive attitude toward tasks

b. Demonstrates ability to separate work and personal behaviors

c. Actively participates in learning opportunities by sharing knowledge and skills with peers and instructors

d. Demonstrates ability to accept personal strengths and weaknesses and builds on positive behaviors
e. Demonstrates ability to accept and use constructive criticism
f. Accepts positive reinforcement in an appropriate manner

3. **Sociability: Demonstrates understanding, friendliness, adaptability, empathy, and politeness in group settings**
a. Demonstrates appropriate and acceptable social behaviors in interactions
b. Demonstrates ability to work cooperatively in individual, team, or group situations
c. Demonstrates active interest in peers by offering assistance, sharing resources, and sharing knowledge in a professional and acceptable manner
d. Demonstrates professional work ethic by separating work and personal social behaviors and acting accordingly

4. **Self-Management: Assesses self accurately, sets personal goals, monitors progress, and exhibits self-control**
a. Accepts personal strengths and weaknesses and uses the same for positive advancement
b. Demonstrates ability to continuously set, assess, choose, and modify objectives as the situation demands in an appropriate manner.
c. Demonstrates ability to formulate and follow personal schedules
d. Demonstrates ability to wisely use classroom time
e. Demonstrates use of good study habits and skills
f. Demonstrates maturity to take responsibility for own actions

5. **Integrity/Honesty: Chooses ethical courses of action**
a. Knows and demonstrates ability to distinguish between positive and negative behaviors
b. Demonstrates honesty and integrity in working with peers and supervisors
c. Takes full responsibility for personal actions
d. Demonstrates understanding of consequences for negative ethical behaviors and accepts responsibility for same when applicable
e. Demonstrates positive work and social ethics in undertakings

MASTER PROGRAM
Advanced Welding II
Course Syllabus

Total lecture hours: 20  Total lab hours: 40  Credit hours: 3

COURSE DESCRIPTION:

Advanced study of metal properties, industrial practices and procedures, and various testing techniques; arc welding in the flat position, using various thicknesses of metal. Includes structure of the welding program, history of welding, with emphasis on shop safety, welding safety, and oxyacetylene safety.

PREREQUISITES: None

COURSE OBJECTIVES:

After successful completion of this course, the students will be able to:
1. Demonstrate shop safety;
2. Identify metals;
3. Demonstrate appropriate communication skills;
4. Demonstrate testing techniques for welding soundness;
5. Demonstrate knowledge of joint design and welding terms; and,
6. Increase knowledge of proper application of welding skills.

REQUIRED COURSE MATERIALS:

Textbook: Modern Welding, Althouse, Turnquist, Bowditch, and Bowditch, Publisher: Goodheart-Wilcox, Latest Edition

Supplemental Text Materials:
   Handbook of Welding Procedures, Latest Edition
   Hobart Audio-Visual Training Program, Latest Edition
   American Welding Society – Competency Standards
   Miller Audio-Visual Training Program, Latest Edition

Lab Manual: None required
METHODS OF INSTRUCTION:

Lecture: Presentations and demonstrations.

Laboratory: Practice with coaching and close supervision.

Method of Evaluation: A student’s grade will be based on multiple measures of performance, including:
1. Tests and quizzes administered throughout the term;
2. Instructor's observation of hands-on performance;
3. Student closely following safety and shop procedures; and,
4. Student mastery of competencies.

COURSE OBJECTIVES: SCANS COMPETENCIES

The Secretary’s Commission on Achieving Necessary Skills (SCANS), U.S. Department of Labor, has identified in its “AMERICA 2000 REPORT” that all students should develop a new set of competencies and foundation skills if they are to enjoy a productive, full and satisfying life. These are in addition to the Technical Workplace Competencies required by industry. SCANS is made up of five competencies and a three-part foundation of skills and personal qualities that are needed for solid job performance. All italicized headings in this section are direct quotations from “What Work Requires of Schools: A SCANS Report for America 2000.”
The following activities will be performed by each student for successful completion of this course:

I. COMPETENCIES
   A. Resources: Identifies, organizes, plans, and allocates resources
      1. Allocates time to complete assigned tasks on schedule
      2. Determines and allocates required materials and resources for meeting objectives
      3. Evaluates skills, performance, and quality of work and provides feedback
   B. Interpersonal: Works with others
      1. Participates as a member of the team, contributing to group effort
      2. Provides individual assistance/direction to peers as requested
      3. Determines and meets expectations
      4. Exercises leadership qualities to effectively communicate ideas and make decisions.
      5. Negotiates resources in order to accomplish objectives
      6. Works well with all members of the class
   C. Information: Acquires and uses information
      1. Acquires and evaluates information
      2. Organizes and maintains information
      3. Interprets and communicates information
   D. Systems: Understands complex inter-relationships
      1. Understands and works well with social, organizational, and technological systems
      2. Monitors and corrects performance of system during operation
      3. Recommends modifications to system to improve performance
   E. Technology: Works with a variety of technologies
      1. Chooses relevant procedures, tools, and equipment
      2. Applies appropriate procedures and techniques to accomplish tasks
      3. Identifies or solves problems to maintain equipment

II. FOUNDATION SKILLS
    A. Basic Skills: Reads, writes, performs arithmetic and mathematical operations, listens and speaks
       1. Reading: Locates, understands, and interprets written information in prose and in documents such as manuals, graphs, and schedules
          a. Demonstrates basic reading skills including abilities to perceive main ideas, draw appropriate conclusions, detect a sequence, locate answers, find facts, and infer from written texts
b. Demonstrates course specific reading skills including abilities to read, interpret, and comprehend information from text and supplemental materials on a level to facilitate productive independent and group study

c. Demonstrates ability to read, interpret, and utilize information from course specific instruments (i.e., charts, diagrams, graphs, schematics, blueprints, flow charts, etc.)

d. Demonstrates ability to read, interpret, and follow schedules and procedural instructions in a timely and appropriate manner

e. Demonstrates ability to choose and use most appropriate reading method (skim, scan, or read for comprehension) for materials

2. Writing: Communicates thoughts, ideas, information, and messages in writing; and creates documents such as letters, directions, manuals, reports, graphs, and flow charts
a. Demonstrates basic writing skills including abilities to produce written documents which conform with accepted grammatical and communication standards required for effective daily functioning

b. Demonstrates effective written study skills including note taking, maintaining course specific journals, workbooks, manuals, etc.

c. Demonstrates technical writing skills in preparing outlines, summaries, time lines, flow charts, diagrams, etc. appropriate to materials covered

d. Demonstrates ability to complete all required writings in a timely, complete, and professional manner

e. Demonstrates competence in subject matter through the organization and presentation of answers to required written assessments

3. Arithmetic/Mathematics: Perform basic computations and approaches practical problems by choosing appropriately from a variety of mathematical techniques
a. Demonstrates proficiency in basic arithmetic functions including ability to add, subtract, multiply, and divide whole numbers, fractions, decimals, and percentages

b. Demonstrates ability to read, comprehend, and select appropriate math procedures to work basic math problems

c. Demonstrates ability to understand and perform multi-step computations
d. Demonstrates ability to read, interpret, and use standard measuring devices  
e. Demonstrates ability to comprehend, retain, and utilize course specific measuring devices effectively  
f. Demonstrates ability to understand, retain, and utilize higher mathematical formulas and functions required for course specific math performance  
g. Demonstrates ability to appropriately transfer mathematical calculations and information from paper to machines

4. **Listening:** Receives, attends to, interprets, and responds to verbal messages and other cues  
a. Functions at minimal or above required hearing levels to receive, attend, interpret, and respond to verbal messages and instructions and to safely operate machinery  
b. Demonstrates ability to hear, comprehend, and appropriately follow directions  
c. Demonstrates auditory ability to hear, comprehend, and utilize verbal classroom as well as other auditory instruction  
d. Demonstrates ability to discriminate between essential and non-essential verbal information and react appropriately  
e. Demonstrates ability to focus and fine-tune listening skills to hear, interpret, and respond to various sounds  
f. Demonstrates ability and maturity to seek and receive additional individualized instruction as needed

5. **Speaking:** Organizes ideas and communicates orally  
a. Demonstrates appropriate listening and speaking skills in personal conversations  
b. Demonstrates ability to choose and organize appropriate words to effectively communicate  
c. Demonstrates ability to speak clearly and distinctly with appropriate volume, tone, and body language for situation  
d. Demonstrates ability to spontaneously organize and present appropriate answers and/or short presentations for classroom and/or assessment purposes  
e. Demonstrates ability to formulate, organize, and deliver major presentations to peers or groups  
f. Demonstrates ability to speak effectively in one-on-one, small group, or large group presentations  
g. Demonstrates ability to take responsibility for presentations
B. Thinking Skills: Thinks creatively, makes decisions, solves problems, visualizes, knows how to learn and reasons

1. **Decision Making:** Specifies goals and constraints, generates alternatives, considers risks, and evaluates and chooses best alternative
   a. Demonstrates ability to objectively assess personal strengths and weaknesses
   b. Demonstrates ability to set realistic short-term and long-term goals
   c. Demonstrates ability to recognize and distinguish between positive and negative alternatives
   d. Demonstrates ability to identify potential pitfalls and take evasive actions
   e. Demonstrates ability to objectively and responsibly evaluate alternatives by testing hypotheses and selecting most appropriate response
   f. Demonstrates ability to profit from negative evaluations or mistakes by reformulating, redirecting, reconstructing, or retesting alternatives
   g. Demonstrates maturity in taking responsibility for decisions

2. **Problem Solving:** Recognizes problems and devises and implements plan of action
   a. Demonstrates ability to detect problem through observation, inquiry, or directive
   b. Demonstrates ability to grasp appropriate overview and degree of seriousness of problem and to behave responsibly in situation
   c. Demonstrates ability to generate alternatives or options for problem solution
   d. Demonstrates ability to research options, assess and evaluate options, and determine appropriate and best solution
   e. Demonstrates ability to initiate and effect solution
   f. Demonstrates ability to take responsibility for outcomes
   g. Demonstrates ability to effectively problem solve in individual, team, or group situations

3. **Seeing Things In the Mind’s Eye:** Organizes, and processes symbols, pictures, graphs, objects, and other information
   a. Functions at minimum or above required visual levels in order to see, interpret, attend and respond to visual imagery and meet safety requirements for necessary machinery
b. Demonstrates ability to read, interpret, and act upon signs, symbols, and other visual cues

c. Demonstrates ability to visually discriminate in gross and fine imagery

d. Demonstrates ability to visualize abstractly

e. Demonstrates ability to apply visual imagery to applied tasks

4. **Knowing How to Learn:** *Use efficient learning techniques to acquire and apply new knowledge and skills*

   a. Demonstrates mastery of basic reading, math, and language skills through application

   b. Demonstrates ability to translate abstract theory into practical application

   c. Demonstrates ability to incorporate and generalize new learning into a sequential learning process

   d. Demonstrates knowledge of good study skills and learning habits

5. **Reasoning:** *Discovers a rule or principle underlying the relationship between two or more objects and applies it when solving a problem*

   a. Demonstrates use of simple logic

   b. Demonstrates ability to distinguish relationships

   c. Demonstrates ability to determine and isolate factors in relationships

   d. Demonstrates and applies knowledge through practice

   e. Recognizes that attitudes, skills, and practice are essential to productivity

   f. Demonstrates ability to discriminate between positive and negative, and act accordingly

C. **Personal Qualities:** Displays responsibility, self-esteem, sociability, self-management, and integrity and honesty

1. **Responsibility:** *Exerts a high level of effort and perseveres towards goal attainment*

   a. Demonstrates ability to formulate realistic and useful short and long term goals and complete steps necessary to timely achieve goals

   b. Demonstrates ability to make adjustments, revisions, and changes to achieve goals in a cooperative and polite manner

   c. Demonstrates ability to focus on task at hand and work to completion

   d. Demonstrates good work ethics through regular attendance, adequate classroom preparations, and appropriate use of classroom time
e. Demonstrates maturity to take responsibility for actions
f. Demonstrates ability to cooperatively work in individual, team, and group situations in timely and effective manner

2. **Self-Esteem:** Believes in own self-worth and maintains a positive view of self
   a. Presents a positive attitude toward tasks
   b. Demonstrates ability to separate work and personal behaviors
   c. Actively participates in learning opportunities by sharing knowledge and skills with peers and instructors
   d. Demonstrates ability to accept personal strengths and weaknesses and builds on positive behaviors
   e. Demonstrates ability to accept and use constructive criticism
   f. Accepts positive reinforcement in an appropriate manner

3. **Sociability:** Demonstrates understanding, friendliness, adaptability, empathy, and politeness in group settings
   a. Demonstrates appropriate and acceptable social behaviors in interactions
   b. Demonstrates ability to work cooperatively in individual, team, or group situations
   c. Demonstrates active interest in peers by offering assistance, sharing resources, and sharing knowledge in a professional and acceptable manner
   d. Demonstrates professional work ethic by separating work and personal social behaviors and acting accordingly

4. **Self-Management:** Assesses self accurately, sets personal goals, monitors progress, and exhibits self-control
   a. Accepts personal strengths and weaknesses and uses the same for positive advancement
   b. Demonstrates ability to continuously set, assess, choose, and modify objectives as the situation demands in an appropriate manner
   c. Demonstrates ability to formulate and follow personal schedules
   d. Demonstrates ability to wisely use classroom time
   e. Demonstrates use of good study habits and skills
   f. Demonstrates maturity to take responsibility for own actions

5. **Integrity/Honesty:** Chooses ethical courses of action
   a. Knows and demonstrates ability to distinguish between positive and negative behaviors
b. Demonstrates honesty and integrity in working with peers and supervisors
c. Takes full responsibility for personal actions
d. Demonstrates understanding of consequences for negative ethical behaviors and accepts responsibility for same when applicable
e. Demonstrates positive work and social ethics in undertakings

   WLD-Q1 through WLD-Q2;
   WLD-R1 through WLD-R5;
   WLD-S1 through WLD-S5;
   WLD-T1 through WLD-T3; and,
   WLD-U1 through WLD-U6.

MASTER PROGRAM
Welding Fabrication Techniques
Course Syllabus

Total lecture hours: 20  Total lab hours: 40  Credit hours: 3

COURSE DESCRIPTION:

This course expands the skills and competencies gained in past welding curriculum. Basic layout and material usage, material identification, and welding process selection will be taught.

PREREQUISITES: None

COURSE OBJECTIVES:

After successful completion of this course, the students will be able to:
1. Demonstrate shop safety;
2. Understand basic layout of materials;
3. Demonstrate proper material identification and usage;
4. Select welding processes, as most appropriate to the job; and,
5. Understand measurement tools.

REQUIRED COURSE MATERIALS:

Textbook:  Modern Welding, Althouse, Turnquist, Bowditch, and Bowditch, Publisher: Goodheart-Wilcox, Latest Edition

Supplemental Text Materials:
   Handbook of Welding Procedures, Latest Edition
   Hobart Audio-Visual Training Program, Latest Edition
   American Welding Society – Competency Standards
   Miller Audio-Visual Training Program, Latest Edition

Lab Manual: None required

METHODS OF INSTRUCTION:

Lecture: Presentations and demonstrations.
Laboratory: Practice with coaching and close supervision.

Method of Evaluation: A student's grade will be based on multiple measures of performance, including:
1. Tests and quizzes administered throughout the term;
2. Instructor's observation of hands-on performance;
3. Student closely following safety and shop procedures; and,
4. Student mastery of competencies.

COURSE OBJECTIVES: SCANS COMPETENCIES

The Secretary's Commission on Achieving Necessary Skills (SCANS), U.S. Department of Labor, has identified in its "AMERICA 2000 REPORT" that all students should develop a new set of competencies and foundation skills if they are to enjoy a productive, full and satisfying life. These are in addition to the Technical Workplace Competencies required by industry. SCANS is made up of five competencies and a three-part foundation of skills and personal qualities that are needed for solid job performance. All italicized headings in this section are direct quotations from "What Work Requires of Schools: A SCANS Report for America 2000."

The following activities will be performed by each student for successful completion of this course:

I. COMPETENCIES
   A. Resources: Identifies, organizes, plans, and allocates resources
1. Allocates time to complete assigned tasks on schedule
2. Determines and allocates required materials and resources for meeting objectives
3. Evaluates skills, performance, and quality of work and provides feedback

B. Interpersonal: Works with others
1. Participates as a member of the team, contributing to group effort
2. Provides individual assistance/direction to peers as requested
3. Determines and meets expectations
4. Exercises leadership qualities to effectively communicate ideas and make decisions.
5. Negotiates resources in order to accomplish objectives
6. Works well with all members of the class

C. Information: Acquires and uses information
1. Acquires and evaluates information
2. Organizes and maintains information
3. Interprets and communicates information

D. Systems: Understands complex inter-relationships
1. Understands and works well with social, organizational, and technological systems
2. Monitors and corrects performance of system during operation
3. Recommends modifications to system to improve performance

E. Technology: Works with a variety of technologies
1. Chooses relevant procedures, tools, and equipment
2. Applies appropriate procedures and techniques to accomplish tasks
3. Identifies or solves problems to maintain equipment

II. FOUNDATION SKILLS
A. Basic Skills: Reads, writes, performs arithmetic and mathematical operations, listens and speaks
I. Reading: Locates, understands, and interprets written information in prose and in documents such as manuals, graphs, and schedules
   a. Demonstrates basic reading skills including abilities to perceive main ideas, draw appropriate conclusions, detect a sequence, locate answers, find facts, and infer from written texts
   b. Demonstrates course specific reading skills including abilities to read, interpret, and comprehend information from text and supplemental materials on a level to facilitate productive independent and group study
c. Demonstrates ability to read, interpret, and utilize information from course specific instruments (i.e., charts, diagrams, graphs, schematics, blueprints, flow charts, etc.)
d. Demonstrates ability to read, interpret, and follow schedules and procedural instructions in a timely and appropriate manner
e. Demonstrates ability to choose and use most appropriate reading method (skim, scan, or read for comprehension) for materials

2. Writing: Communicates thoughts, ideas, information, and messages in writing; and creates documents such as letters, directions, manuals, reports, graphs, and flow charts
   a. Demonstrates basic writing skills including abilities to produce written documents which conform with accepted grammatical and communication standards required for effective daily functioning
   b. Demonstrates effective written study skills including note taking, maintaining course specific journals, workbooks, manuals, etc.
c. Demonstrates technical writing skills in preparing outlines, summaries, time lines, flow charts, diagrams, etc. appropriate to materials covered
d. Demonstrates ability to complete all required writings in a timely, complete, and professional manner
e. Demonstrates competence in subject matter through the organization and presentation of answers to required written assessments

3. Arithmetic/Mathematics: Perform basic computations and approaches practical problems by choosing appropriately from a variety of mathematical techniques
   a. Demonstrates proficiency in basic arithmetic functions including ability to add, subtract, multiply, and divide whole numbers, fractions, decimals, and percentages
   b. Demonstrates ability to read, comprehend, and select appropriate math procedures to work basic math problems
c. Demonstrates ability to understand and perform multi-step computations
d. Demonstrates ability to read, interpret, and use standard measuring devices
e. Demonstrates ability to comprehend, retain, and utilize course specific measuring devices effectively
f. Demonstrates ability to understand, retain, and utilize higher mathematical formulas and functions required for course specific math performance

g. Demonstrates ability to appropriately transfer mathematical calculations and information from paper to machines

4. **Listening:** Receives, attends to, interprets, and responds to verbal messages and other cues
   a. Functions at minimal or above required hearing levels to receive, attend, interpret, and respond to verbal messages and instructions and to safely operate machinery
   b. Demonstrates ability to hear, comprehend, and appropriately follow directions
   c. Demonstrates auditory ability to hear, comprehend, and utilize verbal classroom as well as other auditory instruction
   d. Demonstrates ability to discriminate between essential and non-essential verbal information and react appropriately
   e. Demonstrates ability to focus and fine-tune listening skills to receive, interpret, and respond to various sounds
   f. Demonstrates ability and maturity to seek and receive additional individualized instruction as needed

5. **Speaking:** Organizes ideas and communicates orally
   a. Demonstrates appropriate listening and speaking skills in personal conversations
   b. Demonstrates ability to choose and organize appropriate words to effectively communicate
   c. Demonstrates ability to speak clearly and distinctly with appropriate volume, tone, and body language for situation
   d. Demonstrates ability to spontaneously organize and present appropriate answers and/or short presentations for classroom and/or assessment purposes
   e. Demonstrates ability to formulate, organize, and deliver major presentations to peers or groups
   f. Demonstrates ability to speak effectively in one-on-one, small group, or large group presentations
   g. Demonstrates ability to take responsibility for presentations

B. **Thinking Skills:** Thinks creatively, makes decisions, solves problems, visualizes, knows how to learn and reasons

1. **Decision Making:** Specifies goals and constraints, generates alternatives, considers risks, and evaluates and chooses best alternative
a. Demonstrates ability to objectively assess personal strengths and weaknesses
b. Demonstrates ability to set realistic short-term and long-term goals
c. Demonstrates ability to recognize and distinguish between positive and negative alternatives
d. Demonstrates ability to identify potential pitfalls and take evasive actions
e. Demonstrates ability to objectively and responsibly evaluate alternatives by testing hypotheses and selecting most appropriate response
f. Demonstrates ability to profit from negative evaluations or mistakes by reformulating, redirecting, reconstructing, or retesting alternatives
g. Demonstrates maturity in taking responsibility for decisions

2. **Problem Solving**: Recognizes problems and devises and implements plan of action
   a. Demonstrates ability to detect problem through observation, inquiry, or directive
   b. Demonstrates ability to grasp appropriate overview and degree of seriousness of problem and to behave responsibly in situation
   c. Demonstrates ability to generate alternatives or options for problem solution
   d. Demonstrates ability to research options, assess and evaluate options, and determine appropriate and best solution
   e. Demonstrates ability to initiate and effect solution
   f. Demonstrates ability to take responsibility for outcomes
   g. Demonstrates ability to effectively problem solve in individual, team, or group situations

3. **Seeing Things In the Mind’s Eye**: Organizes, and processes symbols, pictures, graphs, objects, and other information
   a. Functions at minimum or above required visual levels in order to see, interpret, attend and respond to visual imagery and meet safety requirements for necessary machinery
   b. Demonstrates ability to read, interpret, and act upon signs, symbols, and other visual cues
   c. Demonstrates ability to visually discriminate in gross and fine imagery
   d. Demonstrates ability to visualize abstractly
4. **Knowing How to Learn:** Use efficient learning techniques to acquire and apply new knowledge and skills
   a. Demonstrates mastery of basic reading, math, and language skills through application
   b. Demonstrates ability to translate abstract theory into practical application
   c. Demonstrates ability to incorporate and generalize new learning into a sequential learning process
   d. Demonstrates knowledge of good study skills and learning habits

5. **Reasoning:** Discovers a rule or principle underlying the relationship between two or more objects and applies it when solving a problem
   a. Demonstrates use of simple logic
   b. Demonstrates ability to distinguish relationships
   c. Demonstrates ability to determine and isolate factors in relationships
   d. Demonstrates and applies knowledge through practice
   e. Recognizes that attitudes, skills, and practice are essential to productivity
   f. Demonstrates ability to discriminate between positive and negative, and act accordingly

C. **Personal Qualities:** Displays responsibility, self-esteem, sociability, self-management, and integrity and honesty

1. **Responsibility:** Exerts a high level of effort and perseveres towards goal attainment
   a. Demonstrates ability to formulate realistic and useful short and long term goals and complete steps necessary to timely achieve goals
   b. Demonstrates ability to make adjustments, revisions, and changes to achieve goals in a cooperative and polite manner
   c. Demonstrates ability to focus on task at hand and work to completion
   d. Demonstrates good work ethics through regular attendance, adequate classroom preparations, and appropriate use of classroom time
   e. Demonstrates maturity to take responsibility for actions
   f. Demonstrates ability to cooperatively work in individual, team, and group situations in timely and effective manner
2. **Self-Esteem:** Believes in own self-worth and maintains a positive view of self
   a. Presents a positive attitude toward tasks
   b. Demonstrates ability to separate work and personal behaviors
   c. Actively participates in learning opportunities by sharing knowledge and skills with peers and instructors
   d. Demonstrates ability to accept personal strengths and weaknesses and builds on positive behaviors
   e. Demonstrates ability to accept and use constructive criticism
   f. Accepts positive reinforcement in an appropriate manner

3. **Sociability:** Demonstrates understanding, friendliness, adaptability, empathy, and politeness in group settings
   a. Demonstrates appropriate and acceptable social behaviors in interactions
   b. Demonstrates ability to work cooperatively in individual, team, or group situations
   c. Demonstrates active interest in peers by offering assistance, sharing resources, and sharing knowledge in a professional and acceptable manner
   d. Demonstrates professional work ethic by separating work and personal social behaviors and acting accordingly

4. **Self-Management:** Assesses self accurately, sets personal goals, monitors progress, and exhibits self-control
   a. Accepts personal strengths and weaknesses and uses the same for positive advancement
   b. Demonstrates ability to continuously set, assess, choose, and modify objectives as the situation demands in an appropriate manner
   c. Demonstrates ability to formulate and follow personal schedules
   d. Demonstrates ability to wisely use classroom time
   e. Demonstrates use of good study habits and skills
   f. Demonstrates maturity to take responsibility for own actions

5. **Integrity/Honesty:** Chooses ethical courses of action
   a. Knows and demonstrates ability to distinguish between positive and negative behaviors
   b. Demonstrates honesty and integrity in working with peers and supervisors
   c. Takes full responsibility for personal actions
d. Demonstrates understanding of consequences for negative ethical behaviors and accepts responsibility for same when applicable

e. Demonstrates positive work and social ethics in undertakings

MASTER PROGRAM
Pipe Welding
Course Syllabus

Total lecture hours: 20          Total lab Hours: 40          Credit hours: 3

COURSE DESCRIPTION:

A course in the fundamentals of pipe welding including pipe welding terminology, oxyacetylene welding and brazing of small diameter pipe, shielded metal arc welding of large diameter pipe. Extensive use of the oxyacetylene cutting process for pipe beveling is an integral aspect of this course.

PREREQUISITES:    None

COURSE OBJECTIVES:

After successful completion of this course, the students will be able to:
1. Apply basic safety and shop skills;
2. Read blueprint and drawings;
3. Demonstrate knowledge of adequate preparation of welding surfaces;
4. Demonstrate an understanding of American Petroleum Institute (API) standards;
5. Demonstrate an understanding of American Welding Society (AWS) standards;
6. Understand how to read and apply welding procedures;
7. Identify proper applications with AC and DC welding;
8. Become proficient in shielded metal arc welding (SMAW) skills on pipe of various diameters;
9. Become proficient in oxyacetylene cutting and welding skills on pipe of various diameters;
10. Become proficient in flux core arc welding (FCAW) skills on pipe of various diameters;
11. Become proficient in gas tungsten arc welding (GTAW) on pipe; and,
12. Identify the most common problems associated with pipe welding.

REQUIRED COURSE MATERIALS:

Lab Manual:  Student handbook

METHODS OF INSTRUCTION:

Lecture:  Presentations and demonstrations.

Laboratory:  Practice with coaching and close supervision.

Method of Evaluation:  A student’s grade will be based on multiple measures of performance, including:
1. Tests and quizzes administered throughout the term;
2. Instructor’s observation of hands-on performance; and,
3. Student must closely follow safety and shop procedures.

The following activities will be performed by each student for successful completion of this course:

I. COMPETENCIES
   A. Resources: Identifies, organizes, plans, and allocates resources
      1. Allocates time to complete assigned tasks on schedule
      2. Determines and allocates required materials and resources for meeting objectives
      3. Evaluates skills, performance, and quality of work and provides feedback
   B. Interpersonal: Works with others
      1. Participates as a member of the team, contributing to group effort
      2. Provides individual assistance/direction to peers as requested
      3. Determines and meets expectations
      4. Exercises leadership qualities to effectively communicate ideas and make decisions.
      5. Negotiates resources in order to accomplish objectives
      6. Works well with all members of the class
   C. Information: Acquires and uses information
      1. Acquires and evaluates information
      2. Organizes and maintains information
      3. Interprets and communicates information
   D. Systems: Understands complex inter-relationships
      1. Understands and works well with social, organizational, and technological systems
      2. Monitors and corrects performance of system during operation
      3. Recommends modifications to system to improve performance
   E. Technology: Works with a variety of technologies
      1. Chooses relevant procedures, tools, and equipment
      2. Applies appropriate procedures and techniques to accomplish tasks
3. Identifies or solves problems to maintain equipment

II. FOUNDATION SKILLS
   A. Basic Skills: Reads, writes, performs arithmetic and mathematical operations, listens and speaks

   1. Reading: Locates, understands, and interprets written information in prose and in documents such as manuals, graphs, and schedules
      a. Demonstrates basic reading skills including abilities to perceive main ideas, draw appropriate conclusions, detect a sequence, locate answers, find facts, and infer from written texts
      b. Demonstrates course specific reading skills including abilities to read, interpret, and comprehend information from text and supplemental materials on a level to facilitate productive independent and group study
      c. Demonstrates ability to read, interpret, and utilize information from course specific instruments (i.e., charts, diagrams, graphs, schematics, blueprints, flow charts, etc.)
      d. Demonstrates ability to read, interpret, and follow schedules and procedural instructions in a timely and appropriate manner
      e. Demonstrates ability to choose and use most appropriate reading method (skim, scan, or read for comprehension) for materials

   2. Writing: Communicates thoughts, ideas, information, and messages in writing; and creates documents such as letters, directions, manuals, reports, graphs, and flow charts
      a. Demonstrates basic writing skills including abilities to produce written documents which conform with accepted grammatical and communication standards required for effective daily functioning
      b. Demonstrates effective written study skills including note taking, maintaining course specific journals, workbooks, manuals, etc.
      c. Demonstrates technical writing skills in preparing outlines, summaries, time lines, flow charts, diagrams, etc. appropriate to materials covered
      d. Demonstrates ability to complete all required writings in a timely, complete, and professional manner
      e. Demonstrates competence in subject matter through the organization and presentation of answers to required written assessments
3. **Arithmetic/Mathematics: Perform basic computations and approaches practical problems by choosing appropriately from a variety of mathematical techniques**
   a. Demonstrates proficiency in basic arithmetic functions including ability to add, subtract, multiply, and divide whole numbers, fractions, decimals, and percentages
   b. Demonstrates ability to read, comprehend, and select appropriate math procedures to work basic math problems
   c. Demonstrates ability to understand and perform multi-step computations
   d. Demonstrates ability to read, interpret, and use standard measuring devices
   e. Demonstrates ability to comprehend, retain, and utilize course specific measuring devices effectively
   f. Demonstrates ability to understand, retain, and utilize higher mathematical formulas and functions required for course specific math performance
   g. Demonstrates ability to appropriately transfer mathematical calculations and information from paper to machines

4. **Listening: Receives, attends to, interprets, and responds to verbal messages and other cues**
   a. Functions at minimal or above required hearing levels to receive, attend, interpret, and respond to verbal messages and instructions and to safely operate machinery
   b. Demonstrates ability to hear, comprehend, and appropriately follow directions
   c. Demonstrates auditory ability to hear, comprehend, and utilize verbal classroom as well as other auditory instruction
   d. Demonstrates ability to discriminate between essential and non-essential verbal information and react appropriately
   e. Demonstrates ability to focus and fine-tune listening skills to receive, interpret, and respond to various sounds
   f. Demonstrates ability and maturity to seek and receive additional individualized instruction as needed

5. **Speaking: Organizes ideas and communicates orally**
   a. Demonstrates appropriate listening and speaking skills in personal conversations
   b. Demonstrates ability to choose and organize appropriate words to effectively communicate
c. Demonstrates ability to speak clearly and distinctly with appropriate volume, tone, and body language for situation
d. Demonstrates ability to spontaneously organize and present appropriate answers and/or short presentations for classroom and/or assessment purposes
e. Demonstrates ability to formulate, organize, and deliver major presentations to peers or groups
f. Demonstrates ability to speak effectively in one-on-one, small group, or large group presentations
g. Demonstrates ability to take responsibility for presentations

B. **Thinking Skills:** Thinks creatively, makes decisions, solves problems, visualizes, knows how to learn and reasons

1. **Decision Making:** Specifies goals and constraints, generates alternatives, considers risks, and evaluates and chooses best alternative
   a. Demonstrates ability to objectively assess personal strengths and weaknesses
   b. Demonstrates ability to set realistic short-term and long-term goals
   c. Demonstrates ability to recognize and distinguish between positive and negative alternatives
d. Demonstrates ability to identify potential pitfalls and take evasive actions
e. Demonstrates ability to objectively and responsibly evaluate alternatives by testing hypotheses and selecting most appropriate response
   f. Demonstrates ability to profit from negative evaluations or mistakes by reformulating, redirecting, reconstructing, or retesting alternatives
g. Demonstrates maturity in taking responsibility for decisions

2. **Problem Solving:** Recognizes problems and devises and implements plan of action
   a. Demonstrates ability to detect problem through observation, inquiry, or directive
   b. Demonstrates ability to grasp appropriate overview and degree of seriousness of problem and to behave responsibly in situation
c. Demonstrates ability to generate alternatives or options for problem solution
d. Demonstrates ability to research options, assess and evaluate options, and determine appropriate and best solution
e. Demonstrates ability to initiate and effect solution
f. Demonstrates ability to take responsibility for outcomes
g. Demonstrates ability to effectively problem solve in individual, team, or group situations

3. **Seeing Things In the Mind's Eye:** Organizes, and processes symbols, pictures, graphs, objects, and other information
   a. Functions at minimum or above required visual levels in order to see, interpret, attend and respond to visual imagery and meet safety requirements for necessary machinery
   b. Demonstrates ability to read, interpret, and act upon signs, symbols, and other visual cues
   c. Demonstrates ability to visually discriminate in gross and fine imagery
   d. Demonstrates ability to visualize abstractly
   e. Demonstrates ability to apply visual imagery to applied tasks

4. **Knowing How to Learn:** Use efficient learning techniques to acquire and apply new knowledge and skills
   a. Demonstrates mastery of basic reading, math, and language skills through application
   b. Demonstrates ability to translate abstract theory into practical application
   c. Demonstrates ability to incorporate and generalize new learning into a sequential learning process
   d. Demonstrates knowledge of good study skills and learning habits

5. **Reasoning:** Discovers a rule or principle underlying the relationship between two or more objects and applies it when solving a problem
   a. Demonstrates use of simple logic
   b. Demonstrates ability to distinguish relationships
   c. Demonstrates ability to determine and isolate factors in relationships
   d. Demonstrates and applies knowledge through practice
   e. Recognizes that attitudes, skills, and practice are essential to productivity
   f. Demonstrates ability to discriminate between positive and negative, and act accordingly

C. **Personal Qualities:** Displays responsibility, self-esteem, sociability, self-management, and integrity and honesty

I. **Responsibility:** Exerts a high level of effort and perseveres towards goal attainment
a. Demonstrates ability to formulate realistic and useful short and long term goals and complete steps necessary to timely achieve goals
b. Demonstrates ability to make adjustments, revisions, and changes to achieve goals in a cooperative and polite manner
c. Demonstrates ability to focus on task at hand and work to completion
d. Demonstrates good work ethics through regular attendance, adequate classroom preparations, and appropriate use of classroom time
e. Demonstrates maturity to take responsibility for actions
f. Demonstrates ability to cooperatively work in individual, team, and group situations in timely and effective manner

2. **Self-Esteem**: Believes in own self-worth and maintains a positive view of self
   a. Presents a positive attitude toward tasks
   b. Demonstrates ability to separate work and personal behaviors
c. Actively participates in learning opportunities by sharing knowledge and skills with peers and instructors
d. Demonstrates ability to accept personal strengths and weaknesses and builds on positive behaviors
e. Demonstrates ability to accept and use constructive criticism
f. Accepts positive reinforcement in an appropriate manner

3. **Sociability**: Demonstrates understanding, friendliness, adaptability, empathy, and politeness in group settings
   a. Demonstrates appropriate and acceptable social behaviors in interactions
   b. Demonstrates ability to work cooperatively in individual, team, or group situations
c. Demonstrates active interest in peers by offering assistance, sharing resources, and sharing knowledge in a professional and acceptable manner
d. Demonstrates professional work ethic by separating work and personal social behaviors and acting accordingly

4. **Self-Management**: Assesses self accurately, sets personal goals, monitors progress, and exhibits self-control
   a. Accepts personal strengths and weaknesses and uses the same for positive advancement
b. Demonstrates ability to continuously set, assess, choose, and modify objectives as the situation demands in an appropriate manner

c. Demonstrates ability to formulate and follow personal schedules

d. Demonstrates ability to wisely use classroom time

e. Demonstrates use of good study habits and skills

f. Demonstrates maturity to take responsibility for own actions

5. **Integrity/Honesty:** Chooses ethical courses of action

a. Knows and demonstrates ability to distinguish between positive and negative behaviors

b. Demonstrates honesty and integrity in working with peers and supervisors

c. Takes full responsibility for personal actions

d. Demonstrates understanding of consequences for negative ethical behaviors and accepts responsibility for same when applicable

e. Demonstrates positive work and social ethics in undertakings

**Appropriate Reference Materials:**

1. **MASTER Technical Modules:**
   
   WLD-A1 through WLD-A13;
   WLD-B1 through WLD-B5;
   WLD-C1 through WLD-C9;
   WLD-D1 through WLD-D7;
   WLD-E1 through WLD-E13;
   WLD-F1 through WLD-F6;
   WLD-G1 through WLD-G4;
   WLD-H1 through WLD-H17;
   WLD-I1 through WLD-I5;
   WLD-J1 through WLD-J4;
   WLD-K1 through WLD-K9;
   WLD-L1 through WLD-L12;
   WLD-M1 through WLD-M35;
   WLD-N1 through WLD-N4;
   WLD-O1 through WLD-O10;
   WLD-P1 through WLD-P7;
   WLD-Q1 through WLD-Q2;
   WLD-R1 through WLD-R5;
   WLD-S1 through WLD-S5; and,
   WLD-U1 through WLD-U6.
COURSE DESCRIPTION:

The nature and basic principles of speech, with emphasis on improving speaking and listening skills common to all forms of communication through a variety of experiences in public speaking, will include such activities as group discussions, videotaping, and student speeches to inform, to introduce, to persuade, and to commemorate special occasions.

PREREQUISITES: Freshman Composition Skills I

COURSE OBJECTIVES:

After successful completion of this course, the students will be able to:
1. Demonstrate confidence, poise, and self assurance when speaking publicly;
2. Demonstrate clear, logic and objective thinking;
3. Communicate ideas effectively and appropriately through spoken language;
4. Develop good delivery skills;
5. Demonstrate experience speaking impromptu and extemporaneously;
6. Develop the power of imagination and creative thinking;
7. Take responsibility for leadership ethics;
8. Become a better listener;
9. Understand the thoughts and feelings of others; and,
10. Widen horizons of knowledge, including understanding of self and others.

REQUIRED COURSE MATERIALS:

Textbook: The Art of Speaking, Stephan E. Lucas, Publisher: Random House, Latest Edition

Lab Manual: None required

METHODS OF INSTRUCTION:

Lecture: Presentations and demonstrations.
Laboratory: None

Method of Evaluation: A student's grade will be based on multiple measures of performance, including:
1. Speeches – 60%;
2. Exam – 15%;
3. Written work – 10%; and,
4. Participation – 15%.

COURSE OBJECTIVES: SCANS COMPETENCIES

The Secretary’s Commission on Achieving Necessary Skills (SCANS), U.S. Department of Labor, has identified in its “AMERICA 2000 REPORT” that all students should develop a new set of competencies and foundation skills if they are to enjoy a productive, full and satisfying life. These are in addition to the Technical Workplace Competencies required by industry. SCANS is made up of five competencies and a three-part...
The following activities will be performed by each student for successful completion of this course:

I. COMPETENCIES
   A. Resources: Identifies, organizes, plans, and allocates resources
      1. Allocates time to complete assigned tasks on schedule
      2. Determines and allocates required materials and resources for meeting objectives
      3. Evaluates skills, performance, and quality of work and provides feedback
   B. Interpersonal: Works with others
      1. Participates as a member of the team, contributing to group effort
      2. Provides individual assistance/direction to peers as requested
      3. Determines and meets expectations
      4. Exercises leadership qualities to effectively communicate ideas and make decisions.
      5. Negotiates resources in order to accomplish objectives
      6. Works well with all members of the class
   C. Information: Acquires and uses information
      1. Acquires and evaluates information
      2. Organizes and maintains information
      3. Interprets and communicates information
   D. Systems: Understands complex inter-relationships
      1. Understands and works well with social, organizational, and technological systems
      2. Monitors and corrects performance of system during operation
      3. Recommends modifications to system to improve performance
   E. Technology: Works with a variety of technologies
      1. Chooses relevant procedures, tools, and equipment
      2. Applies appropriate procedures and techniques to accomplish tasks
      3. Identifies or solves problems to maintain equipment

II. FOUNDATION SKILLS
   A. Basic Skills: Reads, writes, performs arithmetic and mathematical operations, listens and speaks
1. **Reading:** Locates, understands, and interprets written information in prose and in documents such as manuals, graphs, and schedules
   a. Demonstrates basic reading skills including abilities to perceive main ideas, draw appropriate conclusions, detect a sequence, locate answers, find facts, and infer from written texts
   b. Demonstrates course specific reading skills including abilities to read, interpret, and comprehend information from text and supplemental materials on a level to facilitate productive independent and group study
   c. Demonstrates ability to read, interpret, and utilize information from course specific instruments (i.e., charts, diagrams, graphs, schematics, blueprints, flow charts, etc.)
   d. Demonstrates ability to read, interpret, and follow schedules and procedural instructions in a timely and appropriate manner
   e. Demonstrates ability to choose and use most appropriate reading method (skim, scan, or read for comprehension) for materials

2. **Writing:** Communicates thoughts, ideas, information, and messages in writing; and creates documents such as letters, directions, manuals, reports, graphs, and flow charts
   a. Demonstrates basic writing skills including abilities to produce written documents which conform with accepted grammatical and communication standards required for effective daily functioning
   b. Demonstrates effective written study skills including note taking, maintaining course specific journals, workbooks, manuals, etc.
   c. Demonstrates technical writing skills in preparing outlines, summaries, time lines, flow charts, diagrams, etc. appropriate to materials covered
   d. Demonstrates ability to complete all required writings in a timely, complete, and professional manner
   e. Demonstrates competence in subject matter through the organization and presentation of answers to required written assessments

3. **Arithmetic/Mathematics:** Perform basic computations and approaches practical problems by choosing appropriately from a variety of mathematical techniques

202
a. Demonstrates proficiency in basic arithmetic functions including ability to add, subtract, multiply, and divide whole numbers, fractions, decimals, and percentages
b. Demonstrates ability to read, comprehend, and select appropriate math procedures to work basic math problems
c. Demonstrates ability to understand and perform multi-step computations
d. Demonstrates ability to read, interpret, and use standard measuring devices
e. Demonstrates ability to comprehend, retain, and utilize course specific measuring devices effectively
f. Demonstrates ability to understand, retain, and utilize higher mathematical formulas and functions required for course specific math performance
g. Demonstrates ability to appropriately transfer mathematical calculations and information from paper to machines

4. **Listening:** Receives, attends to, interprets, and responds to verbal messages and other cues
   a. Functions at minimal or above required hearing levels to receive, attend, interpret, and respond to verbal messages and instructions and to safely operate machinery
   b. Demonstrates ability to hear, comprehend, and appropriately follow directions
   c. Demonstrates auditory ability to hear, comprehend, and utilize verbal classroom as well as other auditory instruction
   d. Demonstrates ability to discriminate between essential and non-essential verbal information and react appropriately
   e. Demonstrates ability to focus and fine-tune listening skills to receive, interpret, and respond to various sounds
   f. Demonstrates ability and maturity to seek and receive additional individualized instruction as needed

5. **Speaking:** Organizes ideas and communicates orally
   a. Demonstrates appropriate listening and speaking skills in personal conversations
   b. Demonstrates ability to choose and organize appropriate words to effectively communicate
   c. Demonstrates ability to speak clearly and distinctly with appropriate volume, tone, and body language for situation
d. Demonstrates ability to spontaneously organize and present appropriate answers and/or short presentations for classroom and/or assessment purposes

e. Demonstrates ability to formulate, organize, and deliver major presentations to peers or groups

f. Demonstrates ability to speak effectively in one-on-one, small group, or large group presentations

g. Demonstrates ability to take responsibility for presentations

B. Thinking Skills: Thinks creatively, makes decisions, solves problems, visualizes, knows how to learn and reasons

1. Decision Making: Specifies goals and constraints, generates alternatives, considers risks, and evaluates and chooses best alternative

a. Demonstrates ability to objectively assess personal strengths and weaknesses

b. Demonstrates ability to set realistic short-term and long-term goals

c. Demonstrates ability to recognize and distinguish between positive and negative alternatives

d. Demonstrates ability to identify potential pitfalls and take evasive actions

e. Demonstrates ability to objectively and responsibly evaluate alternatives by testing hypotheses and selecting most appropriate response

f. Demonstrates ability to profit from negative evaluations or mistakes by reformulating, redirecting, reconstructing, or retesting alternatives

g. Demonstrates maturity in taking responsibility for decisions

2. Problem Solving: Recognizes problems and devises and implements plan of action

a. Demonstrates ability to detect problem through observation, inquiry, or directive

b. Demonstrates ability to grasp appropriate overview and degree of seriousness of problem and to behave responsibly in situation

c. Demonstrates ability to generate alternatives or options for problem solution

d. Demonstrates ability to research options, assess and evaluate options, and determine appropriate and best solution

e. Demonstrates ability to initiate and effect solution

f. Demonstrates ability to take responsibility for outcomes
3. **Seeing Things In the Mind’s Eye: Organizes, and processes symbols, pictures, graphs, objects, and other information**
   a. Functions at minimum or above required visual levels in order to see, interpret, attend and respond to visual imagery and meet safety requirements for necessary machinery
   b. Demonstrates ability to read, interpret, and act upon signs, symbols, and other visual cues
   c. Demonstrates ability to visually discriminate in gross and fine imagery
   d. Demonstrates ability to visualize abstractly
   e. Demonstrates ability to apply visual imagery to applied tasks

4. **Knowing How to Learn: Use efficient learning techniques to acquire and apply new knowledge and skills**
   a. Demonstrates mastery of basic reading, math, and language skills through application
   b. Demonstrates ability to translate abstract theory into practical application
   c. Demonstrates ability to incorporate and generalize new learning into a sequential learning process
   d. Demonstrates knowledge of good study skills and learning habits

5. **Reasoning: Discovers a rule or principle underlying the relationship between two or more objects and applies it when solving a problem**
   a. Demonstrates use of simple logic
   b. Demonstrates ability to distinguish relationships
   c. Demonstrates ability to determine and isolate factors in relationships
   d. Demonstrates and applies knowledge through practice
   e. Recognizes that attitudes, skills, and practice are essential to productivity
   f. Demonstrates ability to discriminate between positive and negative, and act accordingly

C. **Personal Qualities: Displays responsibility, self-esteem, sociability, self-management, and integrity and honesty**

1. **Responsibility: Exerts a high level of effort and perseveres towards goal attainment**
   a. Demonstrates ability to formulate realistic and useful short and long term goals and complete steps necessary to timely achieve goals
b. Demonstrates ability to make adjustments, revisions, and changes to achieve goals in a cooperative and polite manner
c. Demonstrates ability to focus on task at hand and work to completion
d. Demonstrates good work ethics through regular attendance, adequate classroom preparations, and appropriate use of classroom time
e. Demonstrates maturity to take responsibility for actions
f. Demonstrates ability to cooperatively work in individual, team, and group situations in timely and effective manner

2. **Self-Esteem: Believes in own self-worth and maintains a positive view of self**
   a. Presents a positive attitude toward tasks
   b. Demonstrates ability to separate work and personal behaviors
   c. Actively participates in learning opportunities by sharing knowledge and skills with peers and instructors
d. Demonstrates ability to accept personal strengths and weaknesses and builds on positive behaviors
e. Demonstrates ability to accept and use constructive criticism
f. Accepts positive reinforcement in an appropriate manner

3. **Sociability: Demonstrates understanding, friendliness, adaptability, empathy, and politeness in group settings**
   a. Demonstrates appropriate and acceptable social behaviors in interactions
   b. Demonstrates ability to work cooperatively in individual, team, or group situations
c. Demonstrates active interest in peers by offering assistance, sharing resources, and sharing knowledge in a professional and acceptable manner
d. Demonstrates professional work ethic by separating work and personal social behaviors and acting accordingly

4. **Self-Management: Assesses self accurately, sets personal goals, monitors progress, and exhibits self-control**
   a. Accepts personal strengths and weaknesses and uses the same for positive advancement
   b. Demonstrates ability to continuously set, assess, choose, and modify objectives as the situation demands in an appropriate manner
c. Demonstrates ability to formulate and follow personal schedules
d. Demonstrates ability to wisely use classroom time
e. Demonstrates use of good study habits and skills
f. Demonstrates maturity to take responsibility for own actions

5. Integrity/Honesty: Chooses ethical courses of action
a. Knows and demonstrates ability to distinguish between positive and negative behaviors
b. Demonstrates honesty and integrity in working with peers and supervisors
c. Takes full responsibility for personal actions
d. Demonstrates understanding of consequences for negative ethical behaviors and accepts responsibility for same when applicable
e. Demonstrates positive work and social ethics in undertakings
INTRODUCTION TO THE HUMANITIES

Course Syllabus

Total lecture hours: 45  Total lab hours: 0  Credit hours: 3

COURSE DESCRIPTION:

An exploration of the arts, ideas, and values in western culture. This course has a minimum writing requirement of 3,000 words.

PREREQUISITES:  Freshman Composition Skills I

COURSE OBJECTIVES:

After successful completion of this course, the students will be able to:

1. Demonstrate knowledge of the major styles and schools of the arts, including:
   two dimensional art, especially painting; sculpture; architecture; literature;
   theater; music; dance; film;
2. Demonstrate knowledge of ideas (philosophical and religious) associated with
   the major cultural periods of western civilization;
3. Demonstrate knowledge of important artists and thinkers and their
   contributions to western culture;
4. Demonstrate knowledge of aesthetic and technical vocabulary used in the
   Humanity;
5. Demonstrate an understanding of the importance of perception and feeling in
   the humanities by attending a variety of cultural activities (3);
6. Demonstrate an awareness of the basic values of western society; and,
7. Demonstrate an ability to write satisfactorily a minimum of 3,000 words with
   accurate information, and in standard, acceptable English.

REQUIRED COURSE MATERIALS:

Textbook:  Culture and Values, Vol II, Cunningham/Reich, Publisher:
Harcourt, Brace, Latest Edition
Study Guide, Holmes, Publisher: Harcourt, Brace, Latest Edition

Lab Manual:  None required
METHODS OF INSTRUCTION:

Lecture: Presentation and demonstration.

Laboratory: None

Method of Evaluation: A student's grade will be based on multiple measures of performance, including:
1. Tests;
2. Class participation; and,
3. Compositions.

COURSE OBJECTIVES: SCANS COMPETENCIES

The Secretary's Commission on Achieving Necessary Skills (SCANS), U.S. Department of Labor, has identified in its "AMERICA 2000 REPORT" that all students should develop a new set of competencies and foundation skills if they are to enjoy a productive, full and satisfying life. These are in addition to the Technical Workplace Competencies required by industry. SCANS is made up of five competencies and a three-part foundation of skills and personal qualities that are needed for solid job performance. All italicized headings in this section are direct quotations from "What Work Requires of Schools: A SCANS Report for America 2000."
The following activities will be performed by each student for successful completion of this course:

I. COMPETENCIES
   A. **Resources:** Identifies, organizes, plans, and allocates resources
      1. Allocates time to complete assigned tasks on schedule
      2. Determines and allocates required materials and resources for meeting objectives
      3. Evaluates skills, performance, and quality of work and provides feedback
   B. **Interpersonal:** Works with others
      1. Participates as a member of the team, contributing to group effort
      2. Provides individual assistance/direction to peers as requested
      3. Determines and meets expectations
      4. Exercises leadership qualities to effectively communicate ideas and make decisions.
      5. Negotiates resources in order to accomplish objectives
      6. Works well with all members of the class
   C. **Information:** Acquires and uses information
      1. Acquires and evaluates information
      2. Organizes and maintains information
      3. Interprets and communicates information
   D. **Systems:** Understands complex inter-relationships
      1. Understands and works well with social, organizational, and technological systems
      2. Monitors and corrects performance of system during operation
      3. Recommends modifications to system to improve performance
   E. **Technology:** Works with a variety of technologies
      1. Chooses relevant procedures, tools, and equipment
      2. Applies appropriate procedures and techniques to accomplish tasks
      3. Identifies or solves problems to maintain equipment

II. FOUNDATION SKILLS
   A. **Basic Skills:** Reads, writes, performs arithmetic and mathematical operations, listens and speaks
      I. **Reading:** Locates, understands, and interprets written information in prose and in documents such as manuals, graphs, and schedules
         a. Demonstrates basic reading skills including abilities to perceive main ideas, draw appropriate conclusions, detect a sequence, locate answers, find facts, and infer from written texts
b. Demonstrates course specific reading skills including abilities to read, interpret, and comprehend information from text and supplemental materials on a level to facilitate productive independent and group study
c. Demonstrates ability to read, interpret, and utilize information from course specific instruments (i.e., charts, diagrams, graphs, schematics, blueprints, flow charts, etc.)
d. Demonstrates ability to read, interpret, and follow schedules and procedural instructions in a timely and appropriate manner
e. Demonstrates ability to choose and use most appropriate reading method (skim, scan, or read for comprehension) for materials

2. **Writing:** Communicates thoughts, ideas, information, and messages in writing; and creates documents such as letters, directions, manuals, reports, graphs, and flow charts
   a. Demonstrates basic writing skills including abilities to produce written documents which conform with accepted grammatical and communication standards required for effective daily functioning
   b. Demonstrates effective written study skills including note taking, maintaining course specific journals, workbooks, manuals, etc.
   c. Demonstrates technical writing skills in preparing outlines, summaries, time lines, flow charts, diagrams, etc. appropriate to materials covered
   d. Demonstrates ability to complete all required writings in a timely, complete, and professional manner
   e. Demonstrates competence in subject matter through the organization and presentation of answers to required written assessments

3. **Arithmetic/Mathematics:** Perform basic computations and approaches practical problems by choosing appropriately from a variety of mathematical techniques
   a. Demonstrates proficiency in basic arithmetic functions including ability to add, subtract, multiply, and divide whole numbers, fractions, decimals, and percentages
   b. Demonstrates ability to read, comprehend, and select appropriate math procedures to work basic math problems
   c. Demonstrates ability to understand and perform multi-step computations
d. Demonstrates ability to read, interpret, and use standard measuring devices

e. Demonstrates ability to comprehend, retain, and utilize course specific measuring devices effectively

f. Demonstrates ability to understand, retain, and utilize higher mathematical formulas and functions required for course specific math performance

g. Demonstrates ability to appropriately transfer mathematical calculations and information from paper to machines

4. **Listening: Receives, attends to, interprets, and responds to verbal messages and other cues**
   
a. Functions at minimal or above required hearing levels to receive, attend, interpret, and respond to verbal messages and instructions and to safely operate machinery
   
b. Demonstrates ability to hear, comprehend, and appropriately follow directions
   
c. Demonstrates auditory ability to hear, comprehend, and utilize verbal classroom as well as other auditory instruction
   
d. Demonstrates ability to discriminate between essential and non-essential verbal information and react appropriately
   
e. Demonstrates ability to focus and fine-tune listening skills to receive, interpret, and respond to various sounds
   
f. Demonstrates ability and maturity to seek and receive additional individualized instruction as needed

5. **Speaking: Organizes ideas and communicates orally**
   
a. Demonstrates appropriate listening and speaking skills in personal conversations
   
b. Demonstrates ability to choose and organize appropriate words to effectively communicate
   
c. Demonstrates ability to speak clearly and distinctly with appropriate volume, tone, and body language for situation
   
d. Demonstrates ability to spontaneously organize and present appropriate answers and/or short presentations for classroom and/or assessment purposes
   
e. Demonstrates ability to formulate, organize, and deliver major presentations to peers or groups
   
f. Demonstrates ability to speak effectively in one-on-one, small group, or large group presentations
   
g. Demonstrates ability to take responsibility for presentations

212
B. **Thinking Skills**: Thinks creatively, makes decisions, solves problems, visualizes, knows how to learn and reasons

1. **Decision Making**: Specifies goals and constraints, generates alternatives, considers risks, and evaluates and chooses best alternative
   - a. Demonstrates ability to objectively assess personal strengths and weaknesses
   - b. Demonstrates ability to set realistic short-term and long-term goals
   - c. Demonstrates ability to recognize and distinguish between positive and negative alternatives
   - d. Demonstrates ability to identify potential pitfalls and take evasive actions
   - e. Demonstrates ability to objectively and responsibly evaluate alternatives by testing hypotheses and selecting most appropriate response
   - f. Demonstrates ability to profit from negative evaluations or mistakes by reformulating, redirecting, reconstructing, or retesting alternatives
   - g. Demonstrates maturity in taking responsibility for decisions

2. **Problem Solving**: Recognizes problems and devises and implements plan of action
   - a. Demonstrates ability to detect problem through observation, inquiry, or directive
   - b. Demonstrates ability to grasp appropriate overview and degree of seriousness of problem and to behave responsibly in situation
   - c. Demonstrates ability to generate alternatives or options for problem solution
   - d. Demonstrates ability to research options, assess and evaluate options, and determine appropriate and best solution
   - e. Demonstrates ability to initiate and effect solution
   - f. Demonstrates ability to take responsibility for outcomes
   - g. Demonstrates ability to effectively problem solve in individual, team, or group situations

3. **Seeing Things In the Mind’s Eye**: Organizes, and processes symbols, pictures, graphs, objects, and other information
   - a. Functions at minimum or above required visual levels in order to see, interpret, attend and respond to visual imagery and meet safety requirements for necessary machinery
b. Demonstrates ability to read, interpret, and act upon signs, symbols, and other visual cues
c. Demonstrates ability to visually discriminate in gross and fine imagery
d. Demonstrates ability to visualize abstractly
e. Demonstrates ability to apply visual imagery to applied tasks

4. **Knowing How to Learn**: Use efficient learning techniques to acquire and apply new knowledge and skills
a. Demonstrates mastery of basic reading, math, and language skills through application
b. Demonstrates ability to translate abstract theory into practical application
c. Demonstrates ability to incorporate and generalize new learning into a sequential learning process
d. Demonstrates knowledge of good study skills and learning habits

5. **Reasoning**: Discovers a rule or principle underlying the relationship between two or more objects and applies it when solving a problem
a. Demonstrates use of simple logic
b. Demonstrates ability to distinguish relationships
c. Demonstrates ability to determine and isolate factors in relationships
d. Demonstrates and applies knowledge through practice
e. Recognizes that attitudes, skills, and practice are essential to productivity
f. Demonstrates ability to discriminate between positive and negative, and act accordingly

C. **Personal Qualities**: Displays responsibility, self-esteem, sociability, self-management, and integrity and honesty

1. **Responsibility**: Exerts a high level of effort and perseveres towards goal attainment
a. Demonstrates ability to formulate realistic and useful short and long term goals and complete steps necessary to timely achieve goals
b. Demonstrates ability to make adjustments, revisions, and changes to achieve goals in a cooperative and polite manner
c. Demonstrates ability to focus on task at hand and work to completion
d. Demonstrates good work ethics through regular attendance, adequate classroom preparations, and appropriate use of classroom time
2. **Self-Esteem:** Believes in own self-worth and maintains a positive view of self
   a. Presents a positive attitude toward tasks
   b. Demonstrates ability to separate work and personal behaviors
   c. Actively participates in learning opportunities by sharing knowledge and skills with peers and instructors
   d. Demonstrates ability to accept personal strengths and weaknesses and builds on positive behaviors
   e. Demonstrates ability to accept and use constructive criticism
   f. Accepts positive reinforcement in an appropriate manner

3. **Sociability:** Demonstrates understanding, friendliness, adaptability, empathy, and politeness in group settings
   a. Demonstrates appropriate and acceptable social behaviors in interactions
   b. Demonstrates ability to work cooperatively in individual, team, or group situations
   c. Demonstrates active interest in peers by offering assistance, sharing resources, and sharing knowledge in a professional and acceptable manner
   d. Demonstrates professional work ethic by separating work and personal social behaviors and acting accordingly

4. **Self-Management:** Assesses self accurately, sets personal goals, monitors progress, and exhibits self-control
   a. Accepts personal strengths and weaknesses and uses the same for positive advancement
   b. Demonstrates ability to continuously set, assess, choose, and modify objectives as the situation demands in an appropriate manner
   c. Demonstrates ability to formulate and follow personal schedules
   d. Demonstrates ability to wisely use classroom time
   e. Demonstrates use of good study habits and skills
   f. Demonstrates maturity to take responsibility for own actions

5. **Integrity/Honesty:** Chooses ethical courses of action
   a. Knows and demonstrates ability to distinguish between positive and negative behaviors
b. Demonstrates honesty and integrity in working with peers and supervisors

c. Takes full responsibility for personal actions

d. Demonstrates understanding of consequences for negative ethical behaviors and accepts responsibility for same when applicable

e. Demonstrates positive work and social ethics in undertakings

COURSE DESCRIPTION:

This course teaches advanced techniques in metal fabrication. Advanced layout and blueprint interpretation will be taught.

PREREQUISITES: None

COURSE OBJECTIVES:

After successful completion of this course, the students will be able to:
1. Interpret welding symbols;
2. Interpret detail drawings;
3. List materials for fabrication from blueprints; and,
4. Develop shop drawings.

REQUIRED COURSE MATERIALS:

Textbook: Modern Welding, Althouse, Turnquist, Bowditch, and Bowditch, Publisher: Goodheart-Wilcox, Latest Edition

Supplemental Text Materials:
Handbook of Welding Procedures, Latest Edition
Hobart Audio-Visual Training Program, Latest Edition
American Welding Society – Competency Standards
Miller Audio-Visual Training Program, Latest Edition

Lab Manual: None required

METHODS OF INSTRUCTION:

Lecture: Presentation and demonstration.

Laboratory: Practice with coaching and close supervision.
Method of Evaluation: A student's grade will be based on multiple measures of performance, including:
1. Tests and quizzes administered throughout the term;
2. Instructor's observation of hands-on performance;
3. Student closely following safety and shop procedures; and,
4. Student mastery of competencies.

LECTURE OUTLINE:

Lecture Topics | Contact Hrs.
--- | ---
The student will develop techniques in metal fabrication, layout and blueprint through various projects developed by the instructor
When the desired level of understanding is reached, the students will then begin their own projects

Total Lecture Hours 20

LAB OUTLINE:

Lab Topics | Contact Hrs.

Total Lab Hours 40

COURSE OBJECTIVES: SCANS COMPETENCIES

The Secretary's Commission on Achieving Necessary Skills (SCANS), U.S. Department of Labor, has identified in its "AMERICA 2000 REPORT" that all students should develop a new set of competencies and foundation skills if they are to enjoy a productive, full and satisfying life. These are in addition to the Technical Workplace Competencies required by industry. SCANS is made up of five competencies and a three-part foundation of skills and personal qualities that are needed for solid job performance. All italicized headings in this section are direct quotations from "What Work Requires of Schools: A SCANS Report for America 2000."

The following activities will be performed by each student for successful completion of this course:

I. COMPETENCIES
   A. Resources: Identifies, organizes, plans, and allocates resources
      1. Allocates time to complete assigned tasks on schedule
2. Determines and allocates required materials and resources for meeting objectives
3. Evaluates skills, performance, and quality of work and provides feedback

B. Interpersonal: Works with others
1. Participates as a member of the team, contributing to group effort
2. Provides individual assistance/direction to peers as requested
3. Determines and meets expectations
4. Exercises leadership qualities to effectively communicate ideas and make decisions.
5. Negotiates resources in order to accomplish objectives
6. Works well with all members of the class

C. Information: Acquires and uses information
1. Acquires and evaluates information
2. Organizes and maintains information
3. Interprets and communicates information

D. Systems: Understands complex inter-relationships
1. Understands and works well with social, organizational, and technological systems
2. Monitors and corrects performance of system during operation
3. Recommends modifications to system to improve performance

E. Technology: Works with a variety of technologies
1. Chooses relevant procedures, tools, and equipment
2. Applies appropriate procedures and techniques to accomplish tasks
3. Identifies or solves problems to maintain equipment

II. FOUNDATION SKILLS
A. Basic Skills: Reads, writes, performs arithmetic and mathematical operations, listens and speaks
   I. Reading: Locates, understands, and interprets written information in prose and in documents such as manuals, graphs, and schedules
      a. Demonstrates basic reading skills including abilities to perceive main ideas, draw appropriate conclusions, detect a sequence, locate answers, find facts, and infer from written texts
      b. Demonstrates course specific reading skills including abilities to read, interpret, and comprehend information from text and supplemental materials on a level to facilitate productive independent and group study
      c. Demonstrates ability to read, interpret, and utilize information from course specific instruments (i.e., charts,
diagrams, graphs, schematics, blueprints, flow charts, etc.)

d. Demonstrates ability to read, interpret, and follow schedules and procedural instructions in a timely and appropriate manner

e. Demonstrates ability to choose and use most appropriate reading method (skim, scan, or read for comprehension) for materials

2. Writing: Communicates thoughts, ideas, information, and messages in writing; and creates documents such as letters, directions, manuals, reports, graphs, and flow charts

a. Demonstrates basic writing skills including abilities to produce written documents which conform with accepted grammatical and communication standards required for effective daily functioning

b. Demonstrates effective written study skills including note taking, maintaining course specific journals, workbooks, manuals, etc.

c. Demonstrates technical writing skills in preparing outlines, summaries, time lines, flow charts, diagrams, etc. appropriate to materials covered

d. Demonstrates ability to complete all required writings in a timely, complete, and professional manner

e. Demonstrates competence in subject matter through the organization and presentation of answers to required written assessments

3. Arithmetic/Mathematics: Perform basic computations and approaches practical problems by choosing appropriately from a variety of mathematical techniques

a. Demonstrates proficiency in basic arithmetic functions including ability to add, subtract, multiply, and divide whole numbers, fractions, decimals, and percentages

b. Demonstrates ability to read, comprehend, and select appropriate math procedures to work basic math problems

c. Demonstrates ability to understand and perform multi-step computations

d. Demonstrates ability to read, interpret, and use standard measuring devices

e. Demonstrates ability to comprehend, retain, and utilize course specific measuring devices effectively

f. Demonstrates ability to understand, retain, and utilize higher mathematical formulas and functions required for course specific math performance
4. **Listening:** Receives, attends to, interprets, and responds to verbal messages and other cues
   a. Functions at minimal or above required hearing levels to receive, attend, interpret, and respond to verbal messages and instructions and to safely operate machinery
   b. Demonstrates ability to hear, comprehend, and appropriately follow directions
   c. Demonstrates auditory ability to hear, comprehend, and utilize verbal classroom as well as other auditory instruction
   d. Demonstrates ability to discriminate between essential and non-essential verbal information and react appropriately
   e. Demonstrates ability to focus and fine-tune listening skills to receive, interpret, and respond to various sounds
   f. Demonstrates ability and maturity to seek and receive additional individualized instruction as needed

5. **Speaking:** Organizes ideas and communicates orally
   a. Demonstrates appropriate listening and speaking skills in personal conversations
   b. Demonstrates ability to choose and organize appropriate words to effectively communicate
   c. Demonstrates ability to speak clearly and distinctly with appropriate volume, tone, and body language for situation
   d. Demonstrates ability to spontaneously organize and present appropriate answers and/or short presentations for classroom and/or assessment purposes
   e. Demonstrates ability to formulate, organize, and deliver major presentations to peers or groups
   f. Demonstrates ability to speak effectively in one-on-one, small group, or large group presentations
   g. Demonstrates ability to take responsibility for presentations

B. **Thinking Skills:** Thinks creatively, makes decisions, solves problems, visualizes, knows how to learn and reasons
1. **Decision Making:** Specifies goals and constraints, generates alternatives, considers risks, and evaluates and chooses best alternative
   a. Demonstrates ability to objectively assess personal strengths and weaknesses
b. Demonstrates ability to set realistic short-term and long-term goals
c. Demonstrates ability to recognize and distinguish between positive and negative alternatives
d. Demonstrates ability to identify potential pitfalls and take evasive actions
e. Demonstrates ability to objectively and responsibly evaluate alternatives by testing hypotheses and selecting most appropriate response
f. Demonstrates ability to profit from negative evaluations or mistakes by reformulating, redirecting, reconstructing, or retesting alternatives
g. Demonstrates maturity in taking responsibility for decisions

2. **Problem Solving:** Recognizes problems and devises and implements plan of action
   a. Demonstrates ability to detect problem through observation, inquiry, or directive
   b. Demonstrates ability to grasp appropriate overview and degree of seriousness of problem and to behave responsibly in situation
c. Demonstrates ability to generate alternatives or options for problem solution
d. Demonstrates ability to research options, assess and evaluate options, and determine appropriate and best solution
e. Demonstrates ability to initiate and effect solution
f. Demonstrates ability to take responsibility for outcomes
g. Demonstrates ability to effectively problem solve in individual, team, or group situations

3. **Seeing Things In the Mind's Eye:** Organizes, and processes symbols, pictures, graphs, objects, and other information
   a. Functions at minimum or above required visual levels in order to see, interpret, attend and respond to visual imagery and meet safety requirements for necessary machinery
   b. Demonstrates ability to read, interpret, and act upon signs, symbols, and other visual cues
c. Demonstrates ability to visually discriminate in gross and fine imagery
d. Demonstrates ability to visualize abstractly
e. Demonstrates ability to apply visual imagery to applied tasks
4. **Knowing How to Learn**: Use efficient learning techniques to acquire and apply new knowledge and skills
   a. Demonstrates mastery of basic reading, math, and language skills through application
   b. Demonstrates ability to translate abstract theory into practical application
   c. Demonstrates ability to incorporate and generalize new learning into a sequential learning process
   d. Demonstrates knowledge of good study skills and learning habits

5. **Reasoning**: Discovers a rule or principle underlying the relationship between two or more objects and applies it when solving a problem
   a. Demonstrates use of simple logic
   b. Demonstrates ability to distinguish relationships
   c. Demonstrates ability to determine and isolate factors in relationships
   d. Demonstrates and applies knowledge through practice
   e. Recognizes that attitudes, skills, and practice are essential to productivity
   f. Demonstrates ability to discriminate between positive and negative, and act accordingly

C. **Personal Qualities**: Displays responsibility, self-esteem, sociability, self-management, and integrity and honesty

1. **Responsibility**: Exerts a high level of effort and perseveres towards goal attainment
   a. Demonstrates ability to formulate realistic and useful short and long term goals and complete steps necessary to timely achieve goals
   b. Demonstrates ability to make adjustments, revisions, and changes to achieve goals in a cooperative and polite manner
   c. Demonstrates ability to focus on task at hand and work to completion
   d. Demonstrates good work ethics through regular attendance, adequate classroom preparations, and appropriate use of classroom time
   e. Demonstrates maturity to take responsibility for actions
   f. Demonstrates ability to cooperatively work in individual, team, and group situations in timely and effective manner

2. **Self-Esteem**: Believes in own self-worth and maintains a positive view of self
   a. Presents a positive attitude toward tasks
b. Demonstrates ability to separate work and personal behaviors
c. Actively participates in learning opportunities by sharing knowledge and skills with peers and instructors
d. Demonstrates ability to accept personal strengths and weaknesses and builds on positive behaviors
e. Demonstrates ability to accept and use constructive criticism
f. Accepts positive reinforcement in an appropriate manner

3. **Sociability:** Demonstrates understanding, friendliness, adaptability, empathy, and politeness in group settings
   a. Demonstrates appropriate and acceptable social behaviors in interactions
   b. Demonstrates ability to work cooperatively in individual, team, or group situations
   c. Demonstrates active interest in peers by offering assistance, sharing resources, and sharing knowledge in a professional and acceptable manner
   d. Demonstrates professional work ethic by separating work and personal social behaviors and acting accordingly

4. **Self-Management:** Assesses self accurately, sets personal goals, monitors progress, and exhibits self-control
   a. Accepts personal strengths and weaknesses and uses the same for positive advancement
   b. Demonstrates ability to continuously set, assess, choose, and modify objectives as the situation demands in an appropriate manner
   c. Demonstrates ability to formulate and follow personal schedules
   d. Demonstrates ability to wisely use classroom time
   e. Demonstrates use of good study habits and skills
   f. Demonstrates maturity to take responsibility for own actions

5. **Integrity/Honesty:** Chooses ethical courses of action
   a. Knows and demonstrates ability to distinguish between positive and negative behaviors
   b. Demonstrates honesty and integrity in working with peers and supervisors
   c. Takes full responsibility for personal actions
   d. Demonstrates understanding of consequences for negative ethical behaviors and accepts responsibility for same when applicable
   e. Demonstrates positive work and social ethics in undertakings

   - WLD-T1 through WLD-T3; and,
   - WLD-U1 through WLD-U6.

MASTER PROGRAM
Specialty MIG and Plasma Arc Welding
Course Syllabus

Total lecture hours: 15  Total lab hours: 45  Credit hours: 3

COURSE DESCRIPTION:

This course will cover the fundamentals of MIG welding, layout work, fabrication, and repair type welding. The student will have the opportunity to fine-tune gas, arc, TIG, and oxyacetylene cutting skills before entering the job market. This course will also cover job-seeking techniques, such as: application forms, resume writing, and interview procedures.

PREREQUISITES:  None

COURSE OBJECTIVES:

After successful completion of this course, the students will be able to:

1. Increase employability skills;
2. Apply basic shop skills;
3. Demonstrate knowledge of joint design, preparation, and welding terms;
4. Demonstrate ability to interpret drawings and blueprints;
5. Demonstrate knowledge of welding symbols;
6. Demonstrate knowledge of the proper applications of welding skills;
7. Demonstrate knowledge of adequate preparation of welding surfaces;
8. Increase skill level to pass certifications tests, or welding tests offered by an employer;
9. Perform a combination of welding skills;
10. Be proficient in welding in all four basic positions utilizing MIG (GMAW) welding; and,
11. Apply plasma arc skills.

REQUIRED COURSE MATERIALS:

Lab Manual:  Student handbook
METHODS OF INSTRUCTION:

Lecture: Presentations and demonstrations.

Laboratory: Practice with coaching and close supervision; lab tests (coupons).

Method of Evaluation: A student's grade will be based on multiple measures of performance, including:
1. Tests and quizzes administered throughout the term;
2. Instructor's observation of hands-on performance; and,
3. Student closely following safety and shop procedures.

COURSE OBJECTIVES: SCANS COMPETENCIES

The Secretary's Commission on Achieving Necessary Skills (SCANS), U.S. Department of Labor, has identified in its "AMERICA 2000 REPORT" that all students should develop a new set of competencies and foundation skills if they are to enjoy a productive, full and satisfying life. These are in addition to the Technical Workplace Competencies required by industry. SCANS is made up of five competencies and a three-part foundation of skills and personal qualities that are needed for solid job performance. All italicized headings in this section are direct quotations from "What Work Requires of Schools: A SCANS Report for America 2000."

The following activities will be performed by each student for successful completion of this course:

I. COMPETENCIES
   A. Resources: Identifies, organizes, plans, and allocates resources
      1. Allocates time to complete assigned tasks on schedule
      2. Determines and allocates required materials and resources for meeting objectives
      3. Evaluates skills, performance, and quality of work and provides feedback
   B. Interpersonal: Works with others
      1. Participates as a member of the team, contributing to group effort
      2. Provides individual assistance/direction to peers as requested
      3. Determines and meets expectations
      4. Exercises leadership qualities to effectively communicate ideas and make decisions.
      5. Negotiates resources in order to accomplish objectives
      6. Works well with all members of the class
   C. Information: Acquires and uses information
      1. Acquires and evaluates information
      2. Organizes and maintains information
      3. Interprets and communicates information
   D. Systems: Understands complex inter-relationships
      1. Understands and works well with social, organizational, and technological systems
      2. Monitors and corrects performance of system during operation
      3. Recommends modifications to system to improve performance
   E. Technology: Works with a variety of technologies
      1. Chooses relevant procedures, tools, and equipment
      2. Applies appropriate procedures and techniques to accomplish tasks
3. Identifies or solves problems to maintain equipment

II. FOUNDATION SKILLS

A. Basic Skills: Reads, writes, performs arithmetic and mathematical operations, listens and speaks

1. Reading: Locates, understands, and interprets written information in prose and in documents such as manuals, graphs, and schedules
   a. Demonstrates basic reading skills including abilities to perceive main ideas, draw appropriate conclusions, detect a sequence, locate answers, find facts, and infer from written texts
   b. Demonstrates course specific reading skills including abilities to read, interpret, and comprehend information from text and supplemental materials on a level to facilitate productive independent and group study
   c. Demonstrates ability to read, interpret, and utilize information from course specific instruments (i.e., charts, diagrams, graphs, schematics, blueprints, flow charts, etc.)
   d. Demonstrates ability to read, interpret, and follow schedules and procedural instructions in a timely and appropriate manner
   e. Demonstrates ability to choose and use most appropriate reading method (skim, scan, or read for comprehension) for materials

2. Writing: Communicates thoughts, ideas, information, and messages in writing; and creates documents such as letters, directions, manuals, reports, graphs, and flow charts
   a. Demonstrates basic writing skills including abilities to produce written documents which conform with accepted grammatical and communication standards required for effective daily functioning
   b. Demonstrates effective written study skills including note taking, maintaining course specific journals, workbooks, manuals, etc.
   c. Demonstrates technical writing skills in preparing outlines, summaries, time lines, flow charts, diagrams, etc. appropriate to materials covered
   d. Demonstrates ability to complete all required writings in a timely, complete, and professional manner
   e. Demonstrates competence in subject matter through the organization and presentation of answers to required written assessments
3. **Arithmetic/Mathematics**: Perform basic computations and approaches practical problems by choosing appropriately from a variety of mathematical techniques
   a. Demonstrates proficiency in basic arithmetic functions including ability to add, subtract, multiply, and divide whole numbers, fractions, decimals, and percentages
   b. Demonstrates ability to read, comprehend, and select appropriate math procedures to work basic math problems
   c. Demonstrates ability to understand and perform multi-step computations
   d. Demonstrates ability to read, interpret, and use standard measuring devices
   e. Demonstrates ability to comprehend, retain, and utilize course specific measuring devices effectively
   f. Demonstrates ability to understand, retain, and utilize higher mathematical formulas and functions required for course specific math performance
   g. Demonstrates ability to appropriately transfer mathematical calculations and information from paper to machines

4. **Listening**: Receives, attends to, interprets, and responds to verbal messages and other cues
   a. Functions at minimal or above required hearing levels to receive, attend, interpret, and respond to verbal messages and instructions and to safely operate machinery
   b. Demonstrates ability to hear, comprehend, and appropriately follow directions
   c. Demonstrates auditory ability to hear, comprehend, and utilize verbal classroom as well as other auditory instruction
   d. Demonstrates ability to discriminate between essential and non-essential verbal information and react appropriately
   e. Demonstrates ability to focus and fine-tune listening skills to receive, interpret, and respond to various sounds
   f. Demonstrates ability and maturity to seek and receive additional individualized instruction as needed

5. **Speaking**: Organizes ideas and communicates orally
   a. Demonstrates appropriate listening and speaking skills in personal conversations
   b. Demonstrates ability to choose and organize appropriate words to effectively communicate
c. Demonstrates ability to speak clearly and distinctly with appropriate volume, tone, and body language for situation
d. Demonstrates ability to spontaneously organize and present appropriate answers and/or short presentations for classroom and/or assessment purposes
e. Demonstrates ability to formulate, organize, and deliver major presentations to peers or groups
f. Demonstrates ability to speak effectively in one-on-one, small group, or large group presentations
g. Demonstrates ability to take responsibility for presentations

B. **Thinking Skills:** Thinks creatively, makes decisions, solves problems, visualizes, knows how to learn and reasons

1. **Decision Making:** Specifies goals and constraints, generates alternatives, considers risks, and evaluates and chooses best alternative
   a. Demonstrates ability to objectively assess personal strengths and weaknesses
   b. Demonstrates ability to set realistic short-term and long-term goals
   c. Demonstrates ability to recognize and distinguish between positive and negative alternatives
d. Demonstrates ability to identify potential pitfalls and take evasive actions
e. Demonstrates ability to objectively and responsibly evaluate alternatives by testing hypotheses and selecting most appropriate response
   f. Demonstrates ability to profit from negative evaluations or mistakes by reformulating, redirecting, reconstructing, or retesting alternatives
g. Demonstrates maturity in taking responsibility for decisions

2. **Problem Solving:** Recognizes problems and devises and implements plan of action

   a. Demonstrates ability to detect problem through observation, inquiry, or directive
   b. Demonstrates ability to grasp appropriate overview and degree of seriousness of problem and to behave responsibly in situation
c. Demonstrates ability to generate alternatives or options for problem solution
d. Demonstrates ability to research options, assess and evaluate options, and determine appropriate and best solution
e. Demonstrates ability to initiate and effect solution
f. Demonstrates ability to take responsibility for outcomes
g. Demonstrates ability to effectively problem solve in individual, team, or group situations

3. **Seeing Things In the Mind's Eye:** Organizes, and processes symbols, pictures, graphs, objects, and other information
   a. Functions at minimum or above required visual levels in order to see, interpret, attend and respond to visual imagery and meet safety requirements for necessary machinery
   b. Demonstrates ability to read, interpret, and act upon signs, symbols, and other visual cues
   c. Demonstrates ability to visually discriminate in gross and fine imagery
   d. Demonstrates ability to visualize abstractly
   e. Demonstrates ability to apply visual imagery to applied tasks

4. **Knowing How to Learn:** Use efficient learning techniques to acquire and apply new knowledge and skills
   a. Demonstrates mastery of basic reading, math, and language skills through application
   b. Demonstrates ability to translate abstract theory into practical application
   c. Demonstrates ability to incorporate and generalize new learning into a sequential learning process
   d. Demonstrates knowledge of good study skills and learning habits

5. **Reasoning:** Discovers a rule or principle underlying the relationship between two or more objects and applies it when solving a problem
   a. Demonstrates use of simple logic
   b. Demonstrates ability to distinguish relationships
   c. Demonstrates ability to determine and isolate factors in relationships
   d. Demonstrates and applies knowledge through practice
   e. Recognizes that attitudes, skills, and practice are essential to productivity
   f. Demonstrates ability to discriminate between positive and negative, and act accordingly

C. **Personal Qualities:** Displays responsibility, self-esteem, sociability, self-management, and integrity and honesty

   I. **Responsibility:** Exerts a high level of effort and perseveres towards goal attainment
a. Demonstrates ability to formulate realistic and useful short and long term goals and complete steps necessary to timely achieve goals
b. Demonstrates ability to make adjustments, revisions, and changes to achieve goals in a cooperative and polite manner
c. Demonstrates ability to focus on task at hand and work to completion
d. Demonstrates good work ethics through regular attendance, adequate classroom preparations, and appropriate use of classroom time
e. Demonstrates maturity to take responsibility for actions
f. Demonstrates ability to cooperatively work in individual, team, and group situations in timely and effective manner

2. **Self-Esteem:** Believes in own self-worth and maintains a positive view of self
a. Presents a positive attitude toward tasks
b. Demonstrates ability to separate work and personal behaviors
c. Actively participates in learning opportunities by sharing knowledge and skills with peers and instructors
d. Demonstrates ability to accept personal strengths and weaknesses and builds on positive behaviors
e. Demonstrates ability to accept and use constructive criticism
f. Accepts positive reinforcement in an appropriate manner

3. **Sociability:** Demonstrates understanding, friendliness, adaptability, empathy, and politeness in group settings
a. Demonstrates appropriate and acceptable social behaviors in interactions
b. Demonstrates ability to work cooperatively in individual, team, or group situations
c. Demonstrates active interest in peers by offering assistance, sharing resources, and sharing knowledge in a professional and acceptable manner
d. Demonstrates professional work ethic by separating work and personal social behaviors and acting accordingly

4. **Self-Management:** Assesses self accurately, sets personal goals, monitors progress, and exhibits self-control
a. Accepts personal strengths and weaknesses and uses the same for positive advancement
b. Demonstrates ability to continuously set, assess, choose, and modify objectives as the situation demands in an appropriate manner

c. Demonstrates ability to formulate and follow personal schedules

d. Demonstrates ability to wisely use classroom time

e. Demonstrates use of good study habits and skills

f. Demonstrates maturity to take responsibility for own actions

5. **Integrity/Honesty:** Chooses ethical courses of action

a. Knows and demonstrates ability to distinguish between positive and negative behaviors

b. Demonstrates honesty and integrity in working with peers and supervisors

c. Takes full responsibility for personal actions

d. Demonstrates understanding of consequences for negative ethical behaviors and accepts responsibility for same when applicable

e. Demonstrates positive work and social ethics in undertakings

WLD-U1 through WLD-U6.

MASTER PROGRAM
Pipe Fitting
Course Syllabus

Total lecture hours: 15  Total lab hours: 45  Credit hours: 3

COURSE DESCRIPTION:

This course will cover the fit up and welding of all common pipe configurations such as branches, laterals, headers and reducers. Extensive use of the shielded metal arc welding and the oxyacetylene cutting processes are an integral aspect of this course.

PREREQUISITES:  None

COURSE OBJECTIVES:

After successful completion of this course, the students will be able to:
1. Enhance the ability to interpret blueprints and drawings;
2. Use common squaring and working point methods;
3. Compare preparation and welding processes for cost efficiency and time;
4. Accurately lay out and cut slopes and rolling tolerances on various structural shapes using a framing square, ruler, protractor, lamps and level;
5. Identify error possibilities;
6. Determine materials needed to produce the part;
7. Determine quantities needed to produce the part;
8. Prepare joint geometry using oxy fuel; and,
9. Identify methods of minimizing effects of high pressure and heat on the life of piping systems.

REQUIRED COURSE MATERIALS:

Lab Manual:  Student handbook

METHODS OF INSTRUCTION:

Lecture:  Presentations and demonstrations.
Laboratory: Practice with coaching and close supervision.

**Method of Evaluation:** A student's grade will be based on multiple measures of performance, including:
1. Tests and quizzes administered throughout the term;
2. Instructor's observation of hands-on performance; and,
3. Student closely following safety and shop procedures.

**COURSE OBJECTIVES: SCANS COMPETENCIES**

*The Secretary's Commission on Achieving Necessary Skills (SCANS), U.S. Department of Labor, has identified in its "AMERICA 2000 REPORT" that all students should*
develop a new set of competencies and foundation skills if they are to enjoy a productive, full and satisfying life. These are in addition to the Technical Workplace Competencies required by industry. SCANS is made up of five competencies and a three-part foundation of skills and personal qualities that are needed for solid job performance. All italicized headings in this section are direct quotations from "What Work Requires of Schools: A SCANS Report for America 2000."

The following activities will be performed by each student for successful completion of this course:

I. COMPETENCIES
   A. Resources: Identifies, organizes, plans, and allocates resources
      1. Allocates time to complete assigned tasks on schedule
      2. Determines and allocates required materials and resources for meeting objectives
      3. Evaluates skills, performance, and quality of work and provides feedback
   B. Interpersonal: Works with others
      1. Participates as a member of the team, contributing to group effort
      2. Provides individual assistance/direction to peers as requested
      3. Determines and meets expectations
      4. Exercises leadership qualities to effectively communicate ideas and make decisions.
      5. Negotiates resources in order to accomplish objectives
      6. Works well with all members of the class
   C. Information: Acquires and uses information
      1. Acquires and evaluates information
      2. Organizes and maintains information
      3. Interprets and communicates information
   D. Systems: Understands complex inter-relationships
      1. Understands and works well with social, organizational, and technological systems
      2. Monitors and corrects performance of system during operation
      3. Recommends modifications to system to improve performance
   E. Technology: Works with a variety of technologies
      1. Chooses relevant procedures, tools, and equipment
      2. Applies appropriate procedures and techniques to accomplish tasks
      3. Identifies or solves problems to maintain equipment

II. FOUNDATION SKILLS

239
A. Basic Skills: Reads, writes, performs arithmetic and mathematical operations, listens and speaks

1. **Reading:** Locates, understands, and interprets written information in prose and in documents such as manuals, graphs, and schedules
   a. Demonstrates basic reading skills including abilities to perceive main ideas, draw appropriate conclusions, detect a sequence, locate answers, find facts, and infer from written texts
   b. Demonstrates course specific reading skills including abilities to read, interpret, and comprehend information from text and supplemental materials on a level to facilitate productive independent and group study
   c. Demonstrates ability to read, interpret, and utilize information from course specific instruments (i.e., charts, diagrams, graphs, schematics, blueprints, flow charts, etc.)
   d. Demonstrates ability to read, interpret, and follow schedules and procedural instructions in a timely and appropriate manner
   e. Demonstrates ability to choose and use most appropriate reading method (skim, scan, or read for comprehension) for materials

2. **Writing:** Communicates thoughts, ideas, information, and messages in writing; and creates documents such as letters, directions, manuals, reports, graphs, and flow charts
   a. Demonstrates basic writing skills including abilities to produce written documents which conform with accepted grammatical and communication standards required for effective daily functioning
   b. Demonstrates effective written study skills including note taking, maintaining course specific journals, workbooks, manuals, etc.
   c. Demonstrates technical writing skills in preparing outlines, summaries, time lines, flow charts, diagrams, etc. appropriate to materials covered
   d. Demonstrates ability to complete all required writings in a timely, complete, and professional manner
   e. Demonstrates competence in subject matter through the organization and presentation of answers to required written assessments

3. **Arithmetic/Mathematics:** Perform basic computations and approaches practical problems by choosing appropriately from a variety of mathematical techniques
a. Demonstrates proficiency in basic arithmetic functions including ability to add, subtract, multiply, and divide whole numbers, fractions, decimals, and percentages
b. Demonstrates ability to read, comprehend, and select appropriate math procedures to work basic math problems
c. Demonstrates ability to understand and perform multi-step computations
d. Demonstrates ability to read, interpret, and use standard measuring devices
e. Demonstrates ability to comprehend, retain, and utilize course specific measuring devices effectively
f. Demonstrates ability to understand, retain, and utilize higher mathematical formulas and functions required for course specific math performance
g. Demonstrates ability to appropriately transfer mathematical calculations and information from paper to machines

4. Listening: Receives, attends to, interprets, and responds to verbal messages and other cues
   a. Functions at minimal or above required hearing levels to receive, attend, interpret, and respond to verbal messages and instructions and to safely operate machinery
   b. Demonstrates ability to hear, comprehend, and appropriately follow directions
   c. Demonstrates auditory ability to hear, comprehend, and utilize verbal classroom as well as other auditory instruction
   d. Demonstrates ability to discriminate between essential and non-essential verbal information and react appropriately
   e. Demonstrates ability to focus and fine-tune listening skills to receive, interpret, and respond to various sounds
   f. Demonstrates ability and maturity to seek and receive additional individualized instruction as needed

5. Speaking: Organizes ideas and communicates orally
   a. Demonstrates appropriate listening and speaking skills in personal conversations
   b. Demonstrates ability to choose and organize appropriate words to effectively communicate
   c. Demonstrates ability to speak clearly and distinctly with appropriate volume, tone, and body language for situation
d. Demonstrates ability to spontaneously organize and present appropriate answers and/or short presentations for classroom and/or assessment-purposes

e. Demonstrates ability to formulate, organize, and deliver major presentations to peers or groups

f. Demonstrates ability to speak effectively in one-on-one, small group, or large group presentations

g. Demonstrates ability to take responsibility for presentations

B. Thinking Skills: Thinks creatively, makes decisions, solves problems, visualizes, knows how to learn and reasons

I. Decision Making: Specifies goals and constraints, generates alternatives, considers risks, and evaluates and chooses best alternative

a. Demonstrates ability to objectively assess personal strengths and weaknesses

b. Demonstrates ability to set realistic short-term and long-term goals

c. Demonstrates ability to recognize and distinguish between positive and negative alternatives

d. Demonstrates ability to identify potential pitfalls and take evasive actions

e. Demonstrates ability to objectively and responsibly evaluate alternatives by testing hypotheses and selecting most appropriate response

f. Demonstrates ability to profit from negative evaluations or mistakes by reformulating, redirecting, reconstructing, or retesting alternatives

g. Demonstrates maturity in taking responsibility for decisions

2. Problem Solving: Recognizes problems and devises and implements plan of action

a. Demonstrates ability to detect problem through observation, inquiry, or directive

b. Demonstrates ability to grasp appropriate overview and degree of seriousness of problem and to behave responsibly in situation

c. Demonstrates ability to generate alternatives or options for problem solution

d. Demonstrates ability to research options, assess and evaluate options, and determine appropriate and best solution

e. Demonstrates ability to initiate and effect solution

f. Demonstrates ability to take responsibility for outcomes
Demonstrates ability to effectively problem solve in individual, team, or group situations

3. **Seeing Things In the Mind’s Eye: Organizes, and processes symbols, pictures, graphs, objects, and other information**
   a. Functions at minimum or above required visual levels in order to see, interpret, attend and respond to visual imagery and meet safety requirements for necessary machinery
   b. Demonstrates ability to read, interpret, and act upon signs, symbols, and other visual cues
   c. Demonstrates ability to visually discriminate in gross and fine imagery
   d. Demonstrates ability to visualize abstractly
   e. Demonstrates ability to apply visual imagery to applied tasks

4. **Knowing How to Learn: Use efficient learning techniques to acquire and apply new knowledge and skills**
   a. Demonstrates mastery of basic reading, math, and language skills through application
   b. Demonstrates ability to translate abstract theory into practical application
   c. Demonstrates ability to incorporate and generalize new learning into a sequential learning process
   d. Demonstrates knowledge of good study skills and learning habits

5. **Reasoning: Discovers a rule or principle underlying the relationship between two or more objects and applies it when solving a problem**
   a. Demonstrates use of simple logic
   b. Demonstrates ability to distinguish relationships
   c. Demonstrates ability to determine and isolate factors in relationships
   d. Demonstrates and applies knowledge through practice
   e. Recognizes that attitudes, skills, and practice are essential to productivity
   f. Demonstrates ability to discriminate between positive and negative, and act accordingly

C. **Personal Qualities: Displays responsibility, self-esteem, sociability, self-management, and integrity and honesty**

1. **Responsibility: Exerts a high level of effort and perseveres towards goal attainment**
   a. Demonstrates ability to formulate realistic and useful short and long term goals and complete steps necessary to timely achieve goals
b. Demonstrates ability to make adjustments, revisions, and changes to achieve goals in a cooperative and polite manner
c. Demonstrates ability to focus on task at hand and work to completion
d. Demonstrates good work ethics through regular attendance, adequate classroom preparations, and appropriate use of classroom time
e. Demonstrates maturity to take responsibility for actions
f. Demonstrates ability to cooperatively work in individual, team, and group situations in timely and effective manner

2. **Self-Esteem: Believes in own self-worth and maintains a positive view of self**
   a. Presents a positive attitude toward tasks
   b. Demonstrates ability to separate work and personal behaviors
   c. Actively participates in learning opportunities by sharing knowledge and skills with peers and instructors
d. Demonstrates ability to accept personal strengths and weaknesses and builds on positive behaviors
e. Demonstrates ability to accept and use constructive criticism
   f. Accepts positive reinforcement in an appropriate manner

3. **Sociability: Demonstrates understanding, friendliness, adaptability, empathy, and politeness in group settings**
   a. Demonstrates appropriate and acceptable social behaviors in interactions
   b. Demonstrates ability to work cooperatively in individual, team, or group situations
c. Demonstrates active interest in peers by offering assistance, sharing resources, and sharing knowledge in a professional and acceptable manner
d. Demonstrates professional work ethic by separating work and personal social behaviors and acting accordingly

4. **Self-Management: Assesses self accurately, sets personal goals, monitors progress, and exhibits self-control**
   a. Accepts personal strengths and weaknesses and uses the same for positive advancement
   b. Demonstrates ability to continuously set, assess, choose, and modify objectives as the situation demands in an appropriate manner
c. Demonstrates ability to formulate and follow personal schedules
d. Demonstrates ability to wisely use classroom time
e. Demonstrates use of good study habits and skills
f. Demonstrates maturity to take responsibility for own actions

5. **Integrity/Honesty**: Chooses ethical courses of action
   a. Knows and demonstrates ability to distinguish between positive and negative behaviors
   b. Demonstrates honesty and integrity in working with peers and supervisors
   c. Takes full responsibility for personal actions
d. Demonstrates understanding of consequences for negative ethical behaviors and accepts responsibility for same when applicable
e. Demonstrates positive work and social ethics in undertakings

EDUCATIONAL RESOURCES
FOR THE
MACHINE TOOL INDUSTRY

Welding Series
INSTRUCTOR'S HANDBOOK
DUTIES A THROUGH J

Supported by the National Science Foundation's Advanced Technological Education Program
ACKNOWLEDGEMENTS

This project was made possible by the cooperation and direct support of the following organizations:

National Science Foundation - Division of Undergraduate Education
MASTER Consortium of Employers and Educators

MASTER has built upon the foundation which was laid by the Machine Tool Advanced Skills Technology (MAST) Program. The MAST Program was supported by the U.S. Department of Education - Office of Vocational and Adult Education. Without this prior support MASTER could not have reached the level of quality and quantity that is contained in these project deliverables.

MASTER DEVELOPMENT CENTERS
Augusta Technical Institute - Central Florida Community College - Itawamba Community College - Moraine Valley Community College - San Diego City College (CACT) - Springfield Technical Community College - Texas State Technical College

INDUSTRIES

COLLEGE AFFILIATES

FEDERAL LABS
Jet Propulsion Lab - Lawrence Livermore National Laboratory - L.B.J. Space Center (NASA) - Los Alamos Laboratory - Oak Ridge National Laboratory - Sandia National Laboratory - Several National Institute of Standards and Technology Centers (NIST) - Tank Automotive Research and Development Center (TARDEC) - Wright Laboratories

SECONDARY SCHOOLS
Aiken Career Center - Chicopee Comprehensive High School - Community High School (Moraine, IL) - Connally ISD - Consolidated High School - Evans High - Greenwood Vocational School - Hoover Sr. High - Killeen ISD - LaVega ISD - Lincoln Sr. High - Marlin ISD - Midway ISD - Moraine Area Career Center - Marble Sr. High - Point Lamar Sr. High -
ASSOCIATIONS
American Vocational Association (AVA) - Center for Occupational Research and Development (CORD) - CIM in Higher Education (CIMHE) - Heart of Texas Tech-Prep - Midwest (Michigan) Manufacturing Technology Center (MMTC) - National Coalition For Advanced Manufacturing (NACFAM) - National Coalition of Advanced Technology Centers (NCATC) - National Skills Standards Pilot Programs - National Tooling and Machining Association (NTMA) - New York Manufacturing Extension Partnership (NYMEP) - Precision Metalforming Association (PMA) - Society of Manufacturing Engineers (SME) - Southeast Manufacturing Technology Center (SMTC)

MASTER PROJECT EVALUATORS
Dr. James Hales, East Tennessee State University and William Ruxton, formerly with the National Tooling and Machine Association (NTMA)

NATIONAL ADVISORY COUNCIL MEMBERS
The National Advisory Council has provided input and guidance into the project since the beginning. Without their contributions, MASTER could not have been nearly as successful as it has been. Much appreciation and thanks go to each of the members of this committee from the project team.

Dr. Hugh Rogers-Dean of Technology-Central Florida Community College
Dr. Don Clark-Professor Emeritus-Texas A&M University
Dr. Don Edwards-Department of Management-Baylor University
Dr. Jon Botsford-Vice President for Technology-Pueblo Community College
Mr. Robert Swanson-Administrator of Human Resources-Bell Helicopter, TEXTRON
Mr. Jack Peck-Vice President of Manufacturing-Mercury Tool & Die
Mr. Don Hancock-Superintendent-Connally ISD

SPECIAL RECOGNITION
Dr. Hugh Rogers recognized the need for this project, developed the baseline concepts and methodology, and pulled together industrial and academic partners from across the nation into a solid consortium. Special thanks and singular congratulations go to Dr. Rogers for his extraordinary efforts in this endeavor.

Dr. Don Pierson served as the Principal Investigator for the first two years of MASTER. His input and guidance of the project during the formative years was of tremendous value to the project team. Special thanks and best wishes go to Dr. Pierson during his retirement and all his worldly travels.

All findings and deliverables resulting from MASTER are primarily based upon information provided by the above companies, schools and labs. We sincerely thank key personnel within these organizations for their commitment and dedication to this project. Including the national survey, more than 2,800 other companies and organizations participated in this project. We commend their efforts in our combined attempt to reach some common ground in precision manufacturing skills standards and curriculum development.
Manufacturing in Florida
During the past two decades, the Central Florida region near Florida's Space Coast, Melbourne, Cape Canaveral, Coala, Orlando, and the I-4 corridor to Tampa has experienced unprecedented economic growth. This growth has been especially evident in the fields of aerospace, electronics, laser electro-optics, and simulation enterprises. From 1990 to 1997 the area's population grew by more than 13 percent to approximately 4 million.

Manufacturing companies in the region now number more than 3000. The products manufactured range from aerospace to space launch equipment, advanced technology emergency vehicles, to sophisticated electronic and simulation components, circuit boards, laser equipment, wireless data systems, communication devices, and metals fabrication. Much of the nation's aerospace, satellite, and space facilities are concentrated in the region, including NASA, Lockheed Martin, E.G. and G. Inc., Boeing, McDonnell Douglas, Rockwell, Raytheon, Grumman, and Harris Corporation. Electronic companies such as Siemens, AT&T, Lucent, and Motorola serve both U.S. and export markets.

Central Florida, with three interstate highways (I-95, I-4, and I-75), is home to the University of Central Florida, its 27,000 students, and programs which include comprehensive engineering and engineering technology. Central Florida's growth has helped to fuel the State of Florida's growth to fourth largest state in the U.S. with a population of 14.6 million. By 2010 the state's population is projected to increase by more than 13 percent with 9 percent of its total workforce involved in manufacturing.

Central Florida Community College
Central Florida Community College (CFCC), serving a total of 6,000 students, offers a center of emphasis in Electronics, a Manufacturing Technology program with an internship requirement, an Industrial Maintenance/Machining program, a CADD program, and a Computer Design/Application program. Ocala, home of the college, has rapidly become an industrial center, with Lockheed Martin's Microelectronics Circuit Board Facility, and a second plant for Defense/Commercial Satellite Communications Manufacturing. E-One Corporation and other companies contribute to 17 percent of the local workforce being engaged in manufacturing.

Development Team
- **Project Coordinator**: Dr. Hugh Rogers, former Dean of Technical Education; served as the primary administrator and academic coordinator for the MASTER project. He also conducted the occupational skills profile interviews and benchmarked the welding instructional modules with review at four other colleges: Moraine Valley (Palos Hills, IL), IVY Tech (Terra Haute, Ind), Macomb Community College (Sterling Heights, MI), and Henry Ford Community College (Dearborn, MI).
- **Subject Matter Experts**: Mr Bill Rhodes and Mr Doug Wilson were responsible for developing skill standards and course/program materials for the welding technology components of the MASTER project. Other colleges and the American Welding Society.
Introduction:
INSTRUCTOR'S HANDBOOK

Prior to the development of this Instructor's Handbook, MASTER project staff visited over 150 companies, conducted interviews with over 500 expert workers, and analyzed data from a national survey involving over 2800 participating companies. These investigations led to the development of a series of Instructor Handbooks, with each being fully industry-driven and specific to one of the technologies shown below.

- Advanced CNC and CAM
- Automated Equipment Repair
- Computer Aided Design & Drafting
- Conventional Machining
- Industrial Maintenance
- Instrumentation
- LASER Machining
- Manufacturing Technology
- Mold Making
- Tool And Die
- Welding

Each Instructor's Handbook contains a collection of Technical Training Modules which are built around a Competency Profile for the specific occupation. The Competency Profile which is the basis for this Instructor's Handbook, may be found on the following page (and on each of the tab pages of this book).

Each Technical Training Module has been designed to be:

* Based on skill standards specified by industry. There must be a direct correlation between what industry needs and what is taught in the classroom and in the laboratory. For many years this type of training has been known as “competency-based training”.

* Generic in nature. The training materials may then be customized by the trainer, for any given training situation based on the training need.

* Modular in design, to allow trainers to select lessons which are applicable to their training needs.

* Comprehensive, include training for advanced and emerging, highly-specialized manufacturing technologies.
Self-contained, including all the components which might be needed by an experienced trainer. These components might include any or all of the following:

- a standardized lesson plan,
- an assessment instrument,
- a listing of commercially available resources (e.g. recommended textbooks, instructor guides, student manuals, and videos),
- new training materials, when suitable existing materials are not available (e.g., classroom handouts, transparency masters, and laboratory exercises).

This Instructor's Handbook is arranged by Duty groupings (Duty A, Duty B, etc.) with technical modules developed for each Task Box on the Competency Profile. Trainers are free to choose modules for a specific training need and combine modules to build individualized training programs.

This Instructor's Handbook is being offered with an accompanying Student Laboratory Manual for use by the students enrolled in the training program.
WELDER ... that person who is responsible for the planning, layout, fit up of materials, and operation of welding equipment to prepare the work and perform welding operations necessary to produce a work piece to prescribed engineering standards.

WELDER SERIES
MASTER Technical Module No. WLD-A01

SUBJECT: WELDING TECHNICIAN
TIME: 3 HOURS

DUTY: FOLLOW SAFETY PRACTICES
TASK: Demonstrate Understanding of Safety Rules

OBJECTIVES:

Upon completion of this unit the student will be able to:
A. Identify safety rules;
B. Describe specific requirements for safety in welding operations;
C. Identify reference resources for welding safety information;
D. Discuss common ability to follow safety practices;
E. Demonstrate ability to follow safety practices; and,
F. Conduct a safety inspection of student work area.

INSTRUCTIONAL MATERIALS:

MASTER Handout (WLD-A1-HO)
MASTER Laboratory Exercise (WLD-A1-LE)
MASTER Laboratory Aid (WLD-A1-LA)
MASTER Self-Assessment

REFERENCES:

OTHER:

Competency Standards, American Welding Society, Latest Edition
STUDENT PREPARATION:

All students must prepare themselves to enhance their attitudes toward safety. Such preparation may begin by the students asking themselves the following basic questions daily:

1. Is my hair properly stowed and secured to prevent accidents?
2. Am I wearing any jewelry?
3. Do I have the proper shoes?
4. Do I have my eye shields or safety glasses required for the job?
5. Is my work area free of debris and clean?
6. Does my machine have all its safeguards?
7. Is my machine working properly?
8. Is there any leaking cases or fire hazards?
9. Do I know where the nearest fire extinguisher is located?
10. Is my workplace properly ventilated?
11. Do I need ear protection from noise or sparks?

INTRODUCTION:

Module A1 is part of the welding series. It introduces the topic of safety, the first and primary consideration in all welding operations.

PRESENTATION OUTLINE:

In this module students, seeking competency as an entry level welder, will receive:

1. A lecture on safety and the hazards found when working in environments involving power equipment, high temperatures, high voltage electricity, combustible gases, high ventilation requirements, sparks and high intensity light from metal arcs.
2. A demonstration of safe practices in the welding lab.

PRACTICAL APPLICATION:

The student is best prepared when forewarned of the dangers he or she faces when completing a competency based performance of tasks in a hazardous environment. This is the practical application of each module within the duty of "Follow Safety Practices."
EVALUATION AND/OR VERIFICATION:

At the conclusion of this module, written examination(s) or competency testing will be given to determine student progress.

SUMMARY:

This module introduces the student to the most important consideration in accomplishing every welding task, safety. SAFETY COMES FIRST.

NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-A2) dealing with assuming personal safety standards for self and others.
WLD-A1-HO
Demonstrate Understanding of Safety Rules
Attachment 1: MASTER Handout

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Identify safety rules;
B. Describe specific requirements for safety in welding operations;
C. Identify reference resources for welding safety information;
D. Discuss common ability to follow safety practices;
E. Demonstrate ability to follow safety practices; and,
F. Conduct a safety inspection of student work area.

MODULE OUTLINE:

In this module students, seeking competency as an entry level welder, will receive:

1. A lecture on safety and the hazards found when working in environments involving power equipment, high temperatures, high voltage electricity, combustible gases, high ventilation requirements, sparks and high intensity light from metal arcs.
2. A demonstration of safe practices in the welding lab.
The purpose of this exercise is to learn to recognize hazards in the workplace. Many of the hazards which you will find are common safety practices by people who simply no longer see the danger.

The instructor will guide all students through the shop and welding facilities. Each student should write down, in the space provided on the form, as many safety hazards as are found.

It should be remembered that anyone can cause a hazard merely by failing to “see the mop bucket that sits in front of the fire exit” or “the hoses that are left on the floor”. Such tunnel vision is the result of familiarity and demonstrates the importance of keeping a fresh perspective every day.

Due to the nature of this laboratory exercise, no universal answer key is presented.

Rules of Conduct

1. Absolutely no horseplay or practical joking will be tolerated
2. Do not talk to anyone who is operating a machine, except in an emergency
3. Walk only in the designated traffic lanes
4. Dress appropriately; at the absolute minimum, you must have:
   a) No loose clothing, including ties;
   b) Long hair properly stowed and secured;
   c) No jewelry;
   d) Hard, closed-toe shoes;
   e) Eye protection (safety glasses); and
   f) Ear protection (plugs or headset).
5. Follow all institutional safety rules
WLD-A1
Demonstrate Understanding of Safety Rules
Self-Assessment

Circle the best answer.

1. A positive attitude towards safety
   a. is the responsibility of the individual
   b. is the responsibility of management
   c. can be developed by all workers, regardless of their work
   d. all of the above
   e. none of the above

2. When is jewelry permitted to be worn?
   a. on slow moving machinery
   b. if all guards are in place
   c. never
   d. if your supervisor knows
   e. none of the above

3. Most accidents occur because
   a. almost every tool is unsafe
   b. there is an unsafe condition and an unsafe action
   c. workers lack motivation
   d. there is a practical joker in every plant
   e. none of the above

4. Who is responsible for safety on the job?
   a. management and employees
   b. employees
   c. union
   d. government
   e. none of the above

5. Your most important motivation for working safely is to
   a. get a raise
   b. avoid being suspended
   c. protect yourself
   d. avoid working too hard
   e. none of the above
6. Your best protection against accidents is often
   a. alertness
   b. union policy
   c. close supervision
   d. buddy system
   e. none of the above

7. Which of the following three things is more important than natural skill in doing a job
   well and safely?
   a. training
   b. attitude
   c. alertness
   d. all of the above
   e. none of the above

8. When you spot something dangerous in your plant, the first thing you should do is
   a. notify OSHA
   b. report it to your supervisor
   c. note it in the company safety log
   d. walk off the job
   e. none of the above

9. OSHA regulations state that machines or equipment are safe after they are
   a. locked or tagged out
   b. turned off
   c. assumed de-energized
   d. written in the maintenance log
   e. none of the above

10. Before operating machines, the operators should
    a. ask a co-worker
    b. operate them until they learn how
    c. read all the operating manuals
    d. wear gloves
    e. none of the above

SUBJECT: WELDING TECHNICIAN  TIME: 3 HOURS

- DUTY: FOLLOW SAFETY PRACTICES
- TASK: Assume Personal Safety Standards for Self and Others

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Identify protective equipment and clothing;
B. Identify the location of others in coordination with the work performed;
C. Identify personal safety hazards of welding operations;
D. Discuss OSHA regulations concerning welding operations;
E. Explain the need for personal responsibility when working;
F. Operate exhaust system;
G. Shield others from "Arc Flash"; and,
H. Discuss the meaning and use of safety signs and symbols.

INSTRUCTIONAL MATERIALS:

MASTER Handout (WLD-A2-HO)

REFERENCES:

TEXT:  

OTHER:  
Competency Standards, American Welding Society, Latest Edition
Specific Company Safety Policy and Procedures Manual

HANDOUT:
Safety Signs and Symbols Found in Welding Shops. (To be prepared by instructor for specific lab sites.)

STUDENT PREPARATION:

Students should have previously completed the following Technical Modules:

WLD-A1 "Demonstrate Understanding of Safety Rules"

INTRODUCTION:

Module A2 of the course Welder, Entry Level, outlines the safety responsibility of each individual welder.

The course introduction will include:
- An overview of a fast growing technical field with many employment opportunities;
- A class demonstration of effective safety techniques; and,
- A discussion on the importance of personal responsibility for safety.

PRESENTATION OUTLINE:

I. Assume Responsibility for the Personal Safety of Oneself and Others
   A. Safety is a way of life, not an option
   B. Always operate with alertness and safety foremost in mind

II. Develop a Personal Attitude Towards Safety
    A. The key to safety is individual safety
    B. Everyone must develop a safe attitude
    C. Each step of the operation must be carefully planned

III. Interpret Safety Manual Directives
     A. Read and understand safety manual
     B. Read machine operation instructions

IV. Comply with Established Safety Practices
    A. Personal safety
       1. Body: body must be protected from burns, cuts, and bruises
       2. Proper lifting technique
          a. Personal lifting
             1) Lift with the legs, not the back
             2) Proper physical position while lifting
             3) Proper clearance for carrying
4) “Buddy system” for heavy lifting
   b. Equipment lifting
      1) Checking ratings for lifting devices
      2) Checking lifting points on lifted item
      3) Overhead clearance requirements
      4) Static lifting devices (slings, jack stands) should be used instead of moving lifting devices (jacks or forklifts) for actually holding heavy items up while working on them

B. Eyes: always wear safety glasses
C. Head: keep long hair up; wear hard hat whenever required
D. Ears: wear protection to prevent damage from noise
E. Jewelry: no rings, watches, bracelets, necklaces (they can get caught in machinery and they are conductors of electricity)
F. Clothing: keep sleeves and pant legs rolled down; and ties, strings, and belts away from moving parts
G. No horse-play
H. Do not talk to someone while that person is operating a welding machine (unless for safety reasons)
I. Do not talk to someone while you are operating a welding machine (unless for safety reasons)

V. Identify and Control Common Machine Shop Hazards
   A. Chip formation
   B. Moving machine parts
   C. Spills and other debris
   D. Electrical lines
   E. Hydraulic and pneumatic lines

VI. Cover specific safety policies of the company

PRACTICAL APPLICATION:

The class safety pledge, a copy of which is signed and carried by each student, provides a constant reference point for safety in the learning process and the student's future work role as a successful welder.

EVALUATION AND/OR VERIFICATION:

At the conclusion of this module, written examination(s) or competency testing will be given to determine student progress.

SUMMARY:

This module establishes the personal responsibility of each student to understand and follow safety rules and practices, both as a student and as a successful working welder.
NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-A3) dealing with describing the purpose and use of protective equipment.
WLD-A2-HO
Assume Personal Safety Standards for Self and Others
Attachment 1: MASTER Handout

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Identify protective equipment and clothing;
B. Identify the location of others in coordination with the work performed;
C. Identify personal safety hazards of welding operations;
D. Discuss OSHA regulations concerning welding operations;
E. Explain the need for personal responsibility when working;
F. Operate exhaust system;
G. Shield others from "Arc Flash"; and,
H. Discuss the meaning and use of safety signs and symbols.

MODULE OUTLINE:

I. Assume Responsibility for the Personal Safety of Oneself and Others
   A. Safety is a way of life, not an option
   B. Always operate with alertness and safety foremost in mind

II. Develop a Personal Attitude Towards Safety
   A. The key to safety is individual safety
   B. Everyone must develop a safe attitude
   C. Each step of the operation must be carefully planned

III. Interpret Safety Manual Directives
   A. Read and understand safety manual
   B. Read machine operation instructions

IV. Comply with Established Safety Practices
   A. Personal safety
      1. Body: body must be protected from burns, cuts, and bruises
      2. Proper lifting technique
         a. Personal lifting
            1) Lift with the legs, not the back
            2) Proper physical position while lifting
            3) Proper clearance for carrying
            4) "Buddy system" for heavy lifting
         b. Equipment lifting
            1) Checking ratings for lifting devices
            2) Checking lifting points on lifted item
            3) Overhead clearance requirements
            4) Static lifting devices (slings, jack stands) should be used
               instead of moving lifting devices (jacks or forklifts) for
               actually holding heavy items up while working on them
   B. Eyes: always wear safety glasses
C. Head: keep long hair up; wear hard hat whenever required
D. Ears: wear protection to prevent damage from noise
E. Jewelry: no rings, watches, bracelets, necklaces (they can get caught in machinery and they are conductors of electricity)
F. Clothing: keep sleeves and pant legs rolled down; and ties, strings, and belts away from moving parts
G. No horse-play
H. Do not talk to someone while that person is operating a welding machine (unless for safety reasons)
I. Do not talk to someone while you are operating a welding machine (unless for safety reasons)

V. Identify and Control Common Machine Shop Hazards
A. Chip formation
B. Moving machine parts
C. Spills and other debris
D. Electrical lines
E. Hydraulic and pneumatic lines

VI. Cover specific safety policies of the company
SUBJECT: WELDING TECHNICIAN

TIME: 3 HOURS

- DUTY: FOLLOW SAFETY PRACTICES
- TASK: Describe the Purpose and Use of Protective Equipment

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Identify safety issues unique to each type of welding;
B. Describe the protective equipment used in welding operations;
C. Explain the hazards which demand the use of protective equipment; and,
D. Demonstrate the proper use and care of protective equipment.

INSTRUCTIONAL MATERIALS:

MASTER Handout No. 1 (WLD-A3-H01)
MASTER Handout No. 2 (WLD-A3-H02)
MASTER Laboratory Aid (WLD-A3-LA)

REFERENCES:

Competency Standards, American Welding Society, Latest Edition
Specific Company Safety Policy and Procedures Manual
STUDENT PREPARATION:

Students should have previously completed the following Technical Modules:

- WLD-A1 “Demonstrate Understanding of Safety Rules”
- WLD-A2 “Assume Personal Safety Standards for Self and Others”

INTRODUCTION:

This is Module A3 of the course Welder, Entry Level, which introduces the student to protective equipment used in welding.

PRESENTATION OUTLINE:

I. Wear Protective Safety Clothing as Required
   A. Different types of safety clothing
      1. Protection from debris, cuts, and blows
         a. Hard hat, safety glasses or goggles, work gloves when necessary
         b. Sturdy footwear
         c. Long sleeved shirt (sleeves rolled down and buttoned)
      2. Fire-retardant and fire-resistant clothing
         a. Long sleeved, 100% cotton shirt
         b. Long pants, 100% cotton
         c. Leather chest protector, sleeves
      3. Optical filters to protect vision from intense light
         a. Welding hood or goggles
         b. Safety glasses or goggles for grinding
         c. Tinted goggles for cutting torch work
      4. Breathing protection
         a. Mask for dust, lint, smoke
   B. Function and use of safety clothing
      1. Man made fiber clothing melts to worker’s skin when ignited
      2. Prevents cuts and abrasions
      3. Keep shirt sleeves rolled down (hangs on equipment)
      4. Do not cuff pant legs (causes tripping)
      5. Do not wear jewelry
         a. Catches in moving parts
         b. Conducts electricity
      6. Do not wear neckties around moving parts of machinery
      7. Keep belts and apron strings tied and away from moving equipment

II. Maintain and Use Protective Guards and Equipment on Machinery
   A. Purposes of various guards
1. Do not operate a machine until guards are in place
2. Stop the machine to make adjustments or repairs
3. Disconnect power before removing guards or panels

B. Evaluation and maintenance of protective equipment
1. Use only those electrical devices which have been approved by UL (Underwriters' Laboratories)
2. Do not use defective equipment
3. Report defective or unsafe equipment immediately
4. Make sure equipment is properly grounded

III. Locate and Properly Use Signs, Devices, and Barriers
A. Install Safety Barriers
B. Use caution signs
C. Install lock and tag devices
D. Know where fire extinguishers are and how to use them

IV. Use Lifting Aids When Necessary
A. Discuss recommended limits on single-person lifting
B. Discuss proper lifting methods (use of the legs)
   1. Use your legs (bend your knees)
   2. Keep the load close to your body
   3. Don’t twist your body while lifting
   4. Make sure you can see where you are going
   5. Wear support belts
C. Discuss team-lifting
   1. Keep load the same height while lifting
   2. Move and lift on command
   3. Use dolly, wheelbarrow, or forklift
D. Determine lifting ratings of lifting equipment
   1. Know how your forklift operates
   2. Understand load characteristics (weight, size, shape)
E. Determine holding ratings of static lifting devices
F. Evaluate positions on the workpiece for placement of lifting and holding devices

PRACTICAL APPLICATION:
The student is best prepared when forewarned of the dangers he or she faces when completing a competency based performance of tasks in a hazardous environment. This is the practical application of each module within the duty; Follow Safety Practices.

EVALUATION AND/OR VERIFICATION:

At the conclusion of this module, written examination(s) or competency testing will be given to determine student progress.
SUMMARY:

This module identifies the protective equipment recommended for use to protect all persons in welding or other hazardous environments from injury or death in accordance with OSHA standards.

NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-A4) dealing with demonstrating proper handling of hazardous materials.
WLD-A3-HO1
Describe the Purpose and Use of Protective Equipment
Attachment 1: MASTER Handout No. 1

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Identify safety issues unique to each type of welding;
B. Describe the protective equipment used in welding operations;
C. Explain the hazards which demand the use of protective equipment; and,
D. Demonstrate the proper use and care of protective equipment.

MODULE OUTLINE:

I. Wear Protective Safety Clothing as Required
   A. Different types of safety clothing
      1. Protection from debris, cuts, and blows
         a. Hard hat, safety glasses or goggles, work gloves when necessary
         b. Sturdy footwear
         c. Long sleeved shirt (sleeves rolled down and buttoned)
      2. Fire-retardant and fire-resistant clothing
         a. Long sleeved, 100% cotton shirt
         b. Long pants, 100% cotton
         c. Leather chest protector, sleeves
      3. Optical filters to protect vision from intense light
         a. Welding hood or goggles
         b. Safety glasses or goggles for grinding
         c. Tinted goggles for cutting torch work
      4. Breathing protection
         a. Mask for dust, lint, smoke
   B. Function and use of safety clothing
      1. Man made fiber clothing melts to worker's skin when ignited
      2. Prevents cuts and abrasions
      3. Keep shirt sleeves rolled down (hangs on equipment)
      4. Do not cuff pant legs (causes tripping)
      5. Do not wear jewelry
         a. Catches in moving parts
         b. Conducts electricity
      6. Do not wear neckties around moving parts of machinery
      7. Keep belts and apron strings tied and away from moving equipment

II. Maintain and Use Protective Guards and Equipment on Machinery
   A. Purposes of various guards
      1. Do not operate a machine until guards are in place
      2. Stop the machine to make adjustments or repairs
3. Disconnect power before removing guards or panels

B. Evaluation and maintenance of protective equipment
   1. Use only those electrical devices which have been approved by UL (Underwriters' Laboratories)
   2. Do not use defective equipment
   3. Report defective or unsafe equipment immediately
   4. Make sure equipment is properly grounded

III. Locate and Properly Use Signs, Devices, and Barriers
   A. Install Safety Barriers
   B. Use caution signs
   C. Install lock and tag devices
   D. Know where fire extinguishers are and how to use them

IV. Use Lifting Aids When Necessary
   A. Discuss recommended limits on single-person lifting
   B. Discuss proper lifting methods (use of the legs)
      1. Use your legs (bend your knees)
      2. Keep the load close to your body
      3. Don’t twist your body while lifting
      4. Make sure you can see where you are going
      5. Wear support belts
   C. Discuss team-lifting
      1. Keep load the same height while lifting
      2. Move and lift on command
      3. Use dolly, wheelbarrow, or forklift
   D. Determine lifting ratings of lifting equipment
      1. Know how your forklift operates
      2. Understand load characteristics (weight, size, shape)
   E. Determine holding ratings of static lifting devices
   F. Evaluate positions on the workpiece for placement of lifting and holding devices
The instructor will display as much protective equipment, such as welding masks, breathers, and hard hats as is practical and desirable. The instructor should demonstrate the proper use of this equipment.
Rules of Conduct

1. Absolutely no horseplay or practical joking will be tolerated
2. Do not talk to anyone who is operating a machine
3. Walk only in the designated traffic lanes
4. Dress appropriately; at the absolute minimum, you must have:
   a. No loose clothing, including ties;
   b. Long hair properly stowed;
   c. No jewelry;
   d. Hard, closed-toe shoes;
   e. Eye protection (safety glasses); and
   f. Ear protection (plugs or headset).
5. Follow all institutional safety rules
WELDER SERIES
MASTER Technical Module No. WLD-A04

SUBJECT: WELDING TECHNICIAN

TIME: 2 HOURS

DUTY: FOLLOW SAFETY PRACTICES

TASK: Demonstrate Proper Handling Of Hazardous Materials

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Use material safety data sheet (MSDS).
B. Identify signs and symbols on hazardous materials used in welding.
C. Discuss safety precautions to be observed with chemical hazards.
D. Discuss safety precautions to be observed welding gas hazards.
E. Demonstrate safe handling of hazardous materials in a work site.

INSTRUCTIONAL MATERIALS:

MASTER Handout (WLD-A4-HO)
MASTER Laboratory Aid (WLD-A4-LA)
MASTER Self-Assessment

INTRODUCTION:

This is Module A4 of the program for welders. It deals with use and handling of hazardous materials.

PRESENTATION OUTLINE:

I. Define Hazardous Materials According to the EPA
   A. What makes a material hazardous?
      1. It is hazardous if it causes harm to people or environment

II. Identify Hazardous Materials
    A. Material Safety Data Sheets (MSDS)
       1. Companies that make and distribute hazardous substances must
          provide your company with a MSDS on hazardous material
       2. MSDS developed by OSHA
       3. MSDS is part of the Hazard Communication Standard or Right to
          Know regulation
       4. MSDS is an easy reference for information on hazardous substances
    B. Information in MSDS
       1. What it is
       2. Who makes or sells it
       3. Where they are located
       4. Why it is hazardous
       5. How you can be exposed to the hazard
       6. Conditions that could increase the hazard
       7. How to handle the substance safely
       8. Protection to use while working with it
       9. What to do if exposed
      10. What to do if there is a spill or emergency

III. Know the Chemical and Physical Characteristics
A. Corrosive
   1. Burns skin or eyes on contact
B. Explosive
C. Flammable
   1. Catches fire easily
D. Radioactive
E. Reactive
   1. Burns, explodes
   2. Releases toxic vapors
F. Toxic
   1. Causes illness or possibly death

IV. Describe Storage, Transportation, Disposal
A. Resource Conservation and Recovery Act (RCRA)
   1. Designed to reduce hazards of waste by tracking and regulating the substance
   2. Method used is called from cradle (creation) to grave (disposal)
   3. Tells what hazards are and how to keep track of them
   4. Sets up rules for handling wastes
   5. Provides strict documentation system to track them
B. Your employer may have to report to the Environmental Protection Agency (EPA) on how the company is meeting the RCRA responsibilities
C. The law requires companies that treat, store, or dispose of hazardous wastes to:
   1. Have a permit
   2. Identify and analyze new hazardous waste
   3. Provide a secure facility that keeps unauthorized people out
   4. Inspect the facility regularly
   5. Have a contingency plan for fire, explosion, and spills
   6. Practice emergency response for fire, explosion, spills
   7. Provide proper protective clothing and equipment
   8. Maintain EPA-required records

PRACTICAL APPLICATION:

The student is best prepared when forewarned of the dangers he or she faces when completing a competency based performance of tasks in a hazardous environment. This is the practical application of each module within the duty; Follow Safety Practices.

EVALUATION AND/OR VERIFICATION:

At the conclusion of this module, written examination(s) or competency testing will be given to determine student progress.
SUMMARY:

This module identifies the hazardous materials to be used in welding and distinguishes between them. It identifies explosive hazards, potential air contaminants, corrosives, and poisonous substances.

NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-A5) dealing with demonstrating knowledge of first aid and CPR.
OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Use material safety data sheet (MSDS).
B. Identify signs and symbols on hazardous materials used in welding.
C. Discuss safety precautions to be observed with chemical hazards.
D. Discuss safety precautions to be observed welding gas hazards.
E. Demonstrate safe handling of hazardous materials in a work site.

MODULE OUTLINE:

I. Define Hazardous Materials According to the EPA
A. What makes a material hazardous?
   1. It is hazardous if it causes harm to people or environment

II. Identify Hazardous Materials
A. Material Safety Data Sheets (MSDS)
   1. Companies that make and distribute hazardous substances must provide your company with a MSDS on hazardous material
   2. MSDS developed by OSHA
   3. MSDS is part of the Hazard Communication Standard or Right to Know regulation
   4. MSDS is an easy reference for information on hazardous substances
B. Information in MSDS
   1. What it is

   7. How to handle the substance safely
   8. Protection to use while working with it
   9. What to do if exposed
   10. What to do if there is a spill or emergency

III. Know the Chemical and Physical Characteristics
A. Corrosive
   1. Burns skin or eyes on contact
B. Explosive
C. Flammable
   1. Catches fire easily
D. Radioactive
E. Reactive
1. Burns, explodes
2. Releases toxic vapors

F. Toxic
1. Causes illness or possibly death

IV. Describe Storage, Transportation, Disposal
A. Resource Conservation and Recovery Act (RCRA)
1. Designed to reduce hazards of waste by tracking and regulating the
   substance
2. Method used is called from cradle (creation) to grave (disposal)
3. Tells what hazards are and how to keep track of them
4. Sets up rules for handling wastes
5. Provides strict documentation system to track them

B. Your employer may have to report to the Environmental Protection Agency
   (EPA) on how the company is meeting the RCRA responsibilities

C. The law requires companies that treat, store, or dispose of hazardous wastes
   to:
1. Have a permit
2. Identify and analyze new hazardous waste
3. Provide a secure facility that keeps unauthorized people out
4. Inspect the facility regularly
5. Have a contingency plan for fire, explosion, and spills
6. Practice emergency response for fire, explosion, spills
7. Provide proper protective clothing and equipment
8. Maintain EPA-required records
Rules of Conduct

1. Absolutely no horseplay or practical joking will be tolerated
2. Do not talk to anyone who is operating a machine
3. Walk only in the designated traffic lanes
4. Dress appropriately; at the absolute minimum, you must have:
   a. No loose clothing, including ties;
   b. Long hair properly stowed;
   c. No jewelry;
   d. Hard, closed-toe shoes;
   e. Eye protection (safety glasses); and
   f. Ear protection (plugs or headset).
5. Follow all institutional safety rules
WLD-A4
Demonstrate Proper Handling of Hazardous Materials
Self-Assessment

Circle the best answer.

1. The law requires companies that treat, store, or dispose of hazardous wastes to
   a. have a permit
   b. give notice before dumping
   c. have OSHA personnel on site at all times
   d. all of the above

2. Your employer may have to report to the _________ on how the company is
   meeting the RCRA responsibility.
   a. OSHA
   b. EPA
   c. RCRA
   d. local authorities

3. The EPA requires paperwork that tracks hazardous waste from _________ to
   _________.
   a. company to company
   b. state to state
   c. cradle to grave
   d. manufacturer to company

4. The key pieces of information in the manifest are _________.
   a. manifest document number
   b. name, address, phone numbers, EPA ID number of generator
   c. description of the hazardous waste
   d. all of the above

5. Who must sign the manifest and keep a copy?
   a. only the manufacturer
   b. only the shipper
   c. only those who dispose of the waste
   d. everyone who handles the waste
6. A material safety data sheet tells you the chemical’s __________.
   a. market value
   b. color
   c. physical and chemical characteristics
   d. all of the above

7. If properly wrapped, hazardous waste
   a. may be disposed of at public dumps
   b. must be disposed of according to the EPA guidelines
   c. dumped on private property
   d. all of the above

8. MSDS stands for
   a. material safety data sheet
   b. military secret dumping site
   c. mine safety division storage
   d. material safe disposal site

9. OSHA developed the MSDS as part of __________
   a. hazard communication standard
   b. right-to-know regulations
   c. Both A and B
   d. Neither A nor B

10. The __________ part of the label can either indicate a specific hazard or what personal protective equipment should be used.
    a. white
    b. red
    c. triangle
    d. cross-hairs
Demonstrate Proper Handling of Hazardous Materials
Self-Assessment Answer Key

1. a
2. b
3. c
4. d
5. d
6. c
7. b
8. a
9. c
10. a
SUBJECT: WELDING TECHNICIAN  TIME: 3 HOURS

• DUTY: FOLLOW SAFETY PRACTICES
• TASK: Demonstrate A Knowledge Of First Aid And CPR

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Discuss injury hazards which may occur in welding operations;
B. Describe the steps in assisting an injured person;
C. Describe the purpose and location of lock-out switches;
D. Outline the steps for performing CPR;
E. Perform first aid on a simulated injury; and,
F. Perform CPR on laboratory mannequin.

INSTRUCTIONAL MATERIALS:

MASTER Handout (WLD-A5-HO)

REFERENCES:

TEXT:

OTHER:

*Competency Standards*, American Welding Society, Latest Edition
Specific Company Safety Policy and Procedures Manual
STUDENT PREPARATION:

Students should have previously completed the following Technical Modules:

- **WLD-A1** "Demonstrate Understanding of Safety Rules"
- **WLD-A2** "Assume Personal Safety Standards for Self and Others"
- **WLD-A3** "Describe the Purpose and Use of Protective Equipment"
- **WLD-A4** "Demonstrate Proper Handling of Hazardous Material"

INTRODUCTION:

This is Module A5 of the course Welder, Entry Level. It presents techniques to aid and assist persons injured or disabled in welding operations.

PRESENTATION OUTLINE:

In this module students, seeking competency as a welder, will receive:

1. Lecture on common trauma injuries.
2. Lecture on burn injuries.
3. Lecture on breathing problems and cardiac arrest.
4. Performance demonstration on simulated wound(s).
5. Performance demonstration of cardiopulmonary resuscitation (CPR).

PRACTICAL APPLICATION:

This module prepares the student to apply basic measures of first aid and assistance to persons injured on the job. Its application is universal and may benefit the student at any time or place.

EVALUATION AND/OR VERIFICATION:

Upon completion of this module, written examination(s) and competency testing of first aid techniques will be given.

SUMMARY:

This module provides first aid and assistance training for injuries occurring while welding.

NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-A6) dealing with practicing safety precautions when using tools.
WLD-A5-HO
Demonstrate Knowledge of First Aid and CPR
Attachment 1: MASTER Handout

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Discuss injury hazards which may occur in welding operations;
B. Describe the steps in assisting an injured person;
C. Describe the purpose and location of lock-out switches;
D. Outline the steps for performing CPR;
E. Perform first aid on a simulated injury; and,
F. Perform CPR on laboratory mannequin.

MODULE OUTLINE:

In this module students, seeking competency as a welder, will receive:
1. Lecture on common trauma injuries.
2. Lecture on burn injuries.
3. Lecture on breathing problems and cardiac arrest.
4. Performance demonstration on simulated wound(s).
5. Performance demonstration of cardiopulmonary resuscitation (CPR).
WELDER SERIES
MASTER Technical Module No. WLD-A06

SUBJECT: WELDING TECHNICIAN TIME: 3 HOURS

• DUTY: FOLLOW SAFETY PRACTICES
• TASK: Practice Safety Precautions When Using Tools

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Understand tool safety;
B. Identify the proper tool to use for specific results;
C. Know the location of others when using tools;
D. List safety precautions for use of manual hand tools;
E. List safety precautions for use of a disc grinder;
F. List safety precautions for use of a bench grinder;
G. List safety precautions for use of a cut off saw;
H. List safety precautions for use of a band saw;
I. List safety precautions for use of a drill press;
J. List safety precautions for use of a hydraulic tool; and,
K. Practice proper maintenance of tools and equipment.

STUDENT PREPARATION:

Students should have previously completed the following Technical Modules:

- WLD-A1 “Demonstrate Understanding of Safety Rules”
- WLD-A2 “Assume Personal Safety Standards for Self and Others”
- WLD-A3 “Describe the Purpose and Use of Protective Equipment”
- WLD-A4 “Demonstrate Proper Handling of Hazardous Material”
- WLD-A5 “Demonstrate Knowledge of First Aid and CPR”

INTRODUCTION:

This is Module A6 of the welding program. It instructs students on safety considerations in the use of tools.

PRESENTATION OUTLINE:

I. Identify and Understand Safe Machine Operating Procedures
   A. Never make adjustments on a machine while it is running
      1. Keep guards in place at all times
      2. Discontinue power before servicing
      3. Keep body parts clear of moving machinery
      4. Beware of sharp edges and flying debris
      5. Secure work pieces to prevent slipping
      6. Never stand directly in line with blades or knives
      7. Avoid kickback
      8. Feed stack into machine correctly
   B. Electrical safety
      1. Use only those electrical devices which have been approved by UL (Underwriters’ Laboratories)
      2. Stand on dry surface when working on electrical equipment
      3. Replace defective cords or plugs on equipment
      4. Use only those tools that are in good condition
      5. Use only carbon dioxide or dry chemical fire extinguishers for control of electrical fires
      6. Obtain help when working on equipment that may become energized
   C. Avoid horseplay and practical jokes
II. Demonstrate Safe Machine Operation

A. Good Housekeeping
1. Materials and equipment should be stacked straight and neat
2. Keep aisles and walkways clear of tools, materials, and debris
3. Dispose of scraps and rubbish daily
4. Clean up spills
5. Clean and store hand tools

B. Good techniques
1. Always walk – do not run
2. Never talk to or interrupt anyone who is operating a machine
3. Never leave tools or pieces of stock lying on table surface of a machine being used
4. When finished with a machine, turn power OFF and wait until blades or cutters have come to a complete stop before leaving
5. Check stock for defects before machining
   a. Do not use a machine until you understand it thoroughly
   b. Do not jam or rush stock into machinery
   c. Keep guards in place
   d. Make sure power is OFF before working on or servicing
6. Keep hands and fingers away from moving parts
7. Don’t try to run too small a piece through the machine
8. Use a brush to clean the surface table
9. Keep your eyes focused on what you are working on
10. Never use an air hose to blow debris off yourself or other workers
11. Report faulty machinery to your supervisor
12. Make sure machinery is properly grounded
13. Never leave a piece of machinery that is running unattended
14. Make sure stack is solidly supported

C. Miscellaneous materials
1. Molten metal – can splash and cause serious burns
2. Chemicals – burn or irritate the skin or cause eye damage
3. Broken glass – causes cuts, can get in the eyes
4. Pointed objects – knives, screwdrivers, punches, staples can puncture the skin
5. Rough material – can scrape your skin and cause infections

D. Machinery
1. Understand the safety regulations that involve the guarding of moving parts
2. Know what parts of the equipment are energized
3. Use all safeguards that have been provided to protect people from machinery
4. See that all guards and protectors are in place before you start to work
5. If you must work nearer, turn the machine off and lock out the power
6. Never work in, around, or near dangerous, unguarded openings
without wearing a safety belt and a lifeline that is properly seamed

E. One-fifth of all injuries on the job involve moving parts, machinery, or tools

PRACTICAL APPLICATION:

The student is best prepared when forewarned of the dangers he or she faces when completing a competency based performance of tasks in a hazardous environment. This is the practical application of each module within the duty; Follow Safety Practices.

EVALUATION AND/OR VERIFICATION:

Upon completion of this module, written examination(s) or competency testing will be given to determine student progress.

SUMMARY:

This module reviews the safety considerations for the proper use of hand and power tools.

NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-A7) dealing with demonstrating proper wearing and use of safety equipment.
WLD-A6-HO
Practice Safety Precautions When Using Tools
Attachment 1: MASTER Handout

OBJECTIVE(S):
Upon completion of this unit the student will be able to:
A. Understand tool safety;
B. Identify the proper tool to use for specific results;
C. Know the location of others when using tools;
D. List safety precautions for use of manual hand tools;
E. List safety precautions for use of a disc grinder;
F. List safety precautions for use of a bench grinder;
G. List safety precautions for use of a cut off saw;
H. List safety precautions for use of a band saw;
I. List safety precautions for use of a drill press;
J. List safety precautions for use of a hydraulic tool; and,
K. Practice proper maintenance of tools and equipment.

MODULE OUTLINE:
I. Identify and Understand Safe Machine Operating Procedures
   A. Never make adjustments on a machine while it is running
      1. Keep guards in place at all times
      2. Discontinue power before servicing
      3. Keep body parts clear of moving machinery
      4. Beware of sharp edges and flying debris
      5. Secure work pieces to prevent slipping
      6. Never stand directly in line with blades or knives
      7. Avoid kickback
      8. Feed stack into machine correctly
   B. Electrical safety
      1. Use only those electrical devices which have been approved by UL (Underwriters’ Laboratories)
      2. Stand on dry surface when working on electrical equipment
      3. Replace defective cords or plugs on equipment
      4. Use only those tools that are in good condition
      5. Use only carbon dioxide or dry chemical fire extinguishers for control of electrical fires
      6. Obtain help when working on equipment that may become energized
   C. Avoid horseplay and practical jokes
   D. Keep work area clean
II. Demonstrate Safe Machine Operation
   A. Good Housekeeping
      1. Materials and equipment should be stacked straight and neat

306
2. Keep aisles and walkways clear of tools, materials, and debris
3. Dispose of scraps and rubbish daily
4. Clean up spills
5. Clean and store hand tools

B. Good techniques
1. Always walk – do not run
2. Never talk to or interrupt anyone who is operating a machine
3. Never leave tools or pieces of stock lying on table surface of a machine being used
4. When finished with a machine, turn power OFF and wait until blades or cutters have come to a complete stop before leaving
5. Check stock for defects before machining
   a. Do not use a machine until you understand it thoroughly
   b. Do not jam or rush stock into machinery
   c. Keep guards in place
   d. Make sure power is OFF before working on or servicing
6. Keep hands and fingers away from moving parts
7. Don’t try to run too small a piece through the machine
8. Use a brush to clean the surface table
9. Keep your eyes focused on what you are working on
10. Never use an air hose to blow debris off yourself or other workers
11. Report faulty machinery to your supervisor
12. Make sure machinery is properly grounded
13. Never leave a piece of machinery that is running unattended
14. Make sure stack is solidly supported

C. Miscellaneous materials
1. Molten metal – can splash and cause serious burns
2. Chemicals – burn or irritate the skin or cause eye damage
3. Broken glass – causes cuts, can get in the eyes
4. Pointed objects – knives, screwdrivers, punches, staples can puncture the skin
5. Rough material – can scrape your skin and cause infections

D. Machinery
1. Understand the safety regulations that involve the guarding of moving parts
2. Know what parts of the equipment are energized
3. Use all safeguards that have been provided to protect people from machinery
4. See that all guards and protectors are in place before you start to work
5. If you must work nearer, turn the machine off and lock out the power
6. Never work in, around, or near dangerous, unguarded openings without wearing a safety belt and a lifeline that is properly seamed

E. One-fifth of all injuries on the job involve moving parts, machinery, or tools
Rules of Conduct

1. Absolutely no horseplay or practical joking will be tolerated
2. Do not talk to anyone who is operating a machine, except in an emergency
3. Walk only in the designated traffic lanes
4. Dress appropriately; at the absolute minimum, you must have:
   a) No loose clothing, including ties;
   b) Long hair properly stowed and secured;
   c) No jewelry;
   d) Hard, closed-toe shoes;
   e) Eye protection (safety glasses); and
   f) Ear protection (plugs or headset).
5. Follow all institutional safety rules
WELDER SERIES
MASTER Technical Module No. WLD-A07

SUBJECT: WELDING TECHNICIAN
TIME: 3 HOURS

• DUTY: FOLLOW SAFETY PRACTICES
• TASK: Demonstrate Proper Wearing And Use Of Safety Equipment

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Identify safety factors;
B. Use face shields, safety glasses, protective apparel, and gloves;
C. Utilize proper breathing apparatus;
D. Demonstrate correct selection of safety equipment for a given task;
E. Demonstrate how the equipment is properly worn; and,
F. Demonstrate proper use of safety equipment for given welding tasks.

INSTRUCTIONAL MATERIALS:

MASTER Handout (WLD-A7-HO)

REFERENCES:

TEXT:

OTHER:

Competency Standards, American Welding Society, Latest Edition
Specific Company Safety Policy and Procedures Manual
STUDENT PREPARATION:

Students should have previously completed the following Technical Modules:

- **WLD-A1**  “Demonstrate Understanding of Safety Rules”
- **WLD-A2**  “Assume Personal Safety Standards for Self and Others”
- **WLD-A3**  “Describe the Purpose and Use of Protective Equipment”
- **WLD-A4**  “Demonstrate Proper Handling of Hazardous Material”
- **WLD-A5**  “Demonstrate Knowledge of First Aid and CPR”
- **WLD-A6**  “Practice Safety Precautions When Using Tools”

INTRODUCTION:

This is Module A7 of the course Welder Entry Level. It deals with the selection and wearing of welding safety equipment.

PRESENTATION OUTLINE:

In this module students, seeking competency as a welder, will receive:

1. Lecture on welding safety equipment.
2. Demonstration of proper selection of welding safety equipment.
3. Wear personal protective equipment
   a. List personal protective equipment for shielded metal arc welding
   b. List personal protective equipment for gas tungsten arc welding
   c. List personal protective equipment for gas metal arc welding
   d. List personal protective equipment for flux cored arc welding
   e. List personal protective equipment for submerged arc welding
   f. List personal protective equipment for oxy fuel cutting
   g. List personal protective equipment for plasma arc cutting
   h. List personal protective equipment for air carbon arc gouging
   i. During shop work, wear applicable personal protective equipment at all times
   j. List personal safety equipment including clothing, shoes, etc.

PRACTICAL APPLICATION:

The student is best prepared when forewarned of the dangers he or she faces when completing a competency based performance of tasks in a hazardous environment. This is the practical application of each module within the duty; Follow Safety Practices.

EVALUATION AND/OR VERIFICATION:

Upon completion of this module, written examination(s) or competency testing will be given to determine student progress.
SUMMARY:

This module presents the safety equipment available for use of the welder, and demonstrations of how to select and wear it.

NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-A8) dealing with creating and maintaining a safe work station.
Demonstrate Proper Wearing and Use of Safety Equipment
Attachment 1: MASTER Handout

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Identify safety factors;
B. Use face shields, safety glasses, protective apparel, and gloves;
C. Utilize proper breathing apparatus;
D. Demonstrate correct selection of safety equipment for a given task;
E. Demonstrate how the equipment is properly worn; and,
F. Demonstrate proper use of safety equipment for given welding tasks.

MODULE OUTLINE:

In this module students, seeking competency as a welder, will receive:
1. Lecture on welding safety equipment.
2. Demonstration of proper selection of welding safety equipment.
3. Wear personal protective equipment
   a. List personal protective equipment for shielded metal arc welding
   b. List personal protective equipment for gas tungsten arc welding
   c. List personal protective equipment for gas metal arc welding
   d. List personal protective equipment for flux cored arc welding
   e. List personal protective equipment for submerged arc welding
   f. List personal protective equipment for oxy fuel cutting
   g. List personal protective equipment for plasma arc cutting
   h. List personal protective equipment for air carbon arc gouging
   i. During shop work, wear applicable personal protective equipment at all times
   j. List personal safety equipment including clothing, shoes, etc.
SUBJECT: WELDING TECHNICIAN

DUTY:

FOLLOW SAFETY PRACTICES

- TASK: Create And Maintain A Safe Work Station

OBJECTIVE(S):

Upon completion of this unit the student will be able to:

A. Understand that a clean work area is a safe work area;
B. Protect self and others from arc flash;
C. Demonstrate eye-safety precautions;
D. Mark "Hot Work";
E. Discuss the safety rules and procedures for using equipment;
F. Identify common hazards in the welding shop, including:
   1. Improper machinery;
   2. Unguarded machinery;
   3. Tripping and falling;
   4. Electrical hazards;
   5. Improper lifting;
   6. Gas and chemical hazards;
G. Explain the importance of "good housekeeping" in the shop; and,
H. Explain the importance of storing material in a secure manner.

INSTRUCTIONAL MATERIALS:

MASTER Handout No. 1 (WLD-A8-HO1)
MASTER Handout No. 2 (WLD-A8-HO2)
MASTER Laboratory Aid (WLD-A8-LA)
MASTER Self-Assessment

- **WLD-A7** “Demonstrate Proper Wearing and Use of Safety Equipment”

INTRODUCTION:

This is Module A8 of the program for welders. It instructs students in the maintenance of a safe work station.

PRESENTATION OUTLINE:

In this module students, seeking competency as an entry level welder, will receive:

1. Lecture on workplace safety and the steps for maintaining a safe work station.
2. Identify work station safety rules
   a. List environmental safety precautions, i.e. fume control, radiation reflection, electrical consideration, fire hazards and control, etc.
   b. List equipment safety rules, i.e. ventilation, grounding
c. Utilize safety when handling and storing compressed gas cylinders
d. List general shop safety rules
e. Maintain safe conditions in workstation. Student demonstrate by setting up safe workstation
   f. Comply with confined spaces
3. The set up and demonstration of a safe work station.
PRACTICAL APPLICATION:

The student is best prepared when forewarned of the dangers he or she faces when completing a competency based performance of tasks in a hazardous environment. This is the practical application of each module within the duty; Follow Safety Practices.

EVALUATION AND/OR VERIFICATION:

Upon completion of this module, written examination(s) or competency testing will be given to determine student progress.

SUMMARY:

This module instructs the student on the need for a safe work station and provides demonstrations of safe work stations.

NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-A9) dealing with demonstrating safety precautions regarding ARC flash.
OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Understand that a clean work area is a safe work area;
B. Protect self and others from arc flash;
C. Demonstrate eye-safety precautions;
D. Mark "Hot Work";
E. Discuss the safety rules and procedures for using equipment;
F. Identify common hazards in the welding shop, including:
   1. Improper machinery;
   2. Unguarded machinery;
   3. Tripping and falling;
   4. Electrical hazards;
   5. Improper lifting;
   6. Gas and chemical hazards;
G. Explain the importance of "good housekeeping" in the shop; and,
H. Explain the importance of storing material in a secure manner.

MODULE OUTLINE:

I. Keep Work Areas Clean
   A. Discuss the associated dangers of the most common hazards of the work place
      1. Tripping/falling hazards caused by spills, loose objects, etc.
         a. Wipe up spills immediately
         b. Dispose of scrap material
         c. Do not wear loose clothing
         d. Never roll sleeves or pants
         e. Keep shoe strings tied
         f. Position electrical cords and air hoses in safe areas
      2. Chemical hazards
         a. Inhalants
         b. Chemical burns
         c. Flammable liquids
         d. Explosives and explosive combinations
         e. Toxins
      3. Electrical hazards
      4. High-pressure hazards
   B. Discuss methods of avoiding and correcting common hazards

II. Clean Machine/Hand Tools When Work Is Completed
III. Put Tools Away When Work Is Finished
IV. Keep Isles Clear of Equipment and Materials
V. Perform Preventive Maintenance as Required
   A. Discuss that certain machines require extra precautions
   B. Discuss how general maintenance enhances general safety

VI. Understand the Use of Material Safety Data Sheets (MSDS)
   A. What chemicals have MSDS?
   B. Where are the MSDS kept?
   C. What information is on the MSDS?
      1. Product identification
         a. Specific product name and common name
         b. Precautionary labeling
         c. Safety equipment
         d. Precautionary label statements
         e. Storage color code
      2. Hazardous components
      3. Physical data
         a. Boiling point
         b. Vapor pressure
         c. Melting point
         d. Vapor density
         e. Specific gravity
         f. Evaporation rate
         g. Solubility in water
         h. Percentage of volatile components by volume
         i. Appearance & odor
      4. Fire and explosion hazard data
         a. Flash point
         b. NFPA 704M rating
         c. Flammable limits (upper and lower)
         d. Fire extinguishing media
         e. Special fire-fighting procedures
         f. Toxic gases produced
      5. Health hazard data
         a. Threshold limit value
         b. Permissible exposure limit
         c. Toxicity
         d. Carcinogenicity
         e. Effects of over-exposure
         f. Target organs (those most affected by exposure)
         g. Medical conditions aggravated by exposure
         h. Routes of entry
         i. Emergency and first-aid procedures
      6. Reactivity data
         a. Stability
         b. Hazardous polymerization
         c. Conditions to avoid
d. Incompatible materials
e. Decomposition products

7. Spill and disposal procedures
   a. Procedures: Spill or discharge
   b. Procedures: disposal
   c. EPA hazardous waste number

8. Protective equipment
   a. Ventilation
   b. Respiratory protection
   c. Eye/skin protection

9. Storage and handling precautions
   a. Storage color code
   b. Special precautions

10. Transportation data and additional information
    a. Domestic transport
        1) DOT shipping name
        2) Hazard class
        3) UN/NA
        4) Labels
        5) Reportable quantity
    b. International
        1) IMO shipping name
        2) Hazard class
        3) UN/NA
        4) Labels

313
STANDARDS OF PERFORMANCE:

Student shall demonstrate safe work habits in the work shop by:
Using OSHA required safety equipment for the shop;
Safety glasses;
Hearing protection;
Face shields;
Gloves;
Not wearing rings, watches, jewelry, or loose clothing while operating equipment;
and,
Not participating in horse play or practical joking.

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Understand that a clean work area is a safe work area;
B. Protect self and others from arc flash;
C. Demonstrate eye-safety precautions;
D. Mark “Hot Work”;
E. Discuss the safety rules and procedures for using equipment;
F. Identify common hazards in the welding shop, including:
   1. Improper machinery;
   2. Unguarded machinery;
   3. Tripping and falling;
   4. Electrical hazards;
   5. Improper lifting;
   6. Gas and chemical hazards;
G. Explain the importance of “good housekeeping” in the shop; and,
H. Explain the importance of storing material in a secure manner.

READING ASSIGNMENTS:

The following chapters are assigned to read from textbook:

Title
Manual Handling Methods; Lifting and Carrying; Equipment for Handling;
Hand Trucks, Ropes, Chains and Slings; Fiber Ropes; Rope Slings
MODULE OUTLINE:

I. Identify Safety Equipment Used When Working Aloft
   Note: Each industry has its own safety manual with rules for working aloft and they may be more stringent than OSHA
   A. Equipment common to most personnel when working aloft
      1. Safety glasses
      2. Hard hat
      3. Safety belt or harness

II. Describe How to Set up a Portable Ladder for Use
   A. Portable ladder are broken down in the CFR’s as metal and wood ladders
   B. Wood ladders see 29 CFR 1910.25
      1. Single section ladder
      2. Two section ladder
      3. Special use wood ladders
      4. Step ladder
   C. Metal ladders see 29 CFR 1910.26
   D. Set up 29 CFR 1910.26
      1. Simple rule is to set the base a length of 1/4 the working length from the vertical wall

III. Basic Safety Concerns While Working from Scaffolding
    Note: This module does not address scaffolding erection because special training is required
    A. Employees working from scaffolding are subject frequently to hazards such as hot pipes, low overhead, possible sharp edges from tiewire
    B. Typical safety equipment would be hard hat, safety glasses, gloves, safety belt or harness
    C. Never lean over the handrails to perform work

IV. Concerns While Working from a Man Basket or Personnel Lift
   A. Use basket or lift for employees and tools only, not freight
   B. If basket has integral test weights insure weights are removed prior to lifting personnel
   C. Hands must be inside basket while basket is moving
   D. Safety belts or harness must be worn and properly affixed to number designed for securing lifeline
   E. Always inspect basket rigging prior to entry
   F. Once the basket is in position it must be tied off if egress from the basket is required

V. Demonstrate Proper Set up and Use of an Extension Ladder
   A. Determine wall to base of ladder distance
   B. Demonstrate how to tie off the ladder and how to use a safety belt when performing work from a ladder
STANDARDS OF PERFORMANCE SAFETY:

Student shall demonstrate safe work habits in the work shop by:
- Using OSHA required safety equipment for the shop;
- Safety glasses;
- Hearing protection;
- Face shields;
- Gloves;
- Not wearing rings, watches, jewelry, or loose clothing while operating equipment; and,
- Not participating in horse play or practical joking.

CONDUCT:

1. If in doubt as to safe operation of the equipment, STOP and seek guidance from the instructor.
WLD-A8
Create and Maintain a Safe Work Station
Self-Assessment

Circle the best answer

1. A chemical label tells:
   A. The carrier where to send the container
   B. Only what the manufacturer wants you to know
   C. Only the maximum hazard
   D. What a chemical's identity is

2. Labels are an important part of
   A. Your company's Hazard Communication Program
   B. Right to know
   C. Both a and b
   D. Neither a nor b

3. On some labels, _____ represent the kind of hazards and _____ represent the degree of hazard.
   A. Colors - numbers
   B. Caution - danger
   C. OSHA - MDS
   D. All of the above

4. Before you start any jobs with chemicals, check the detailed hazard and safety information on the
   A. Supervisor's desk
   B. Material Safety Data Sheet
   C. Dock
   D. Poison control center

5. Chemicals can enter the body by:
   A. Swallowing
   B. Inhaling
   C. Skin contact
   D. All of the above

6. The Control Measures Section of the MSDS covers the:
   A. Protective equipment you might need
   B. Exposure limits
   C. Temperature limits
   D. Spill and leak
7. Which of the following is not a good housekeeping rule?
   A. Always put tools in their proper place
   B. Dispose of waste material properly
   C. Sweep debris from machine with hands
   D. Wipe up spills immediately

8. Which of the following is a fire risk?
   A. Disposing of oily rags in tightly covered containers
   B. Storing flammables in electrical closets
   C. Keeping motors and machines free of dust and grease
   D. Keeping passages and fire exits clear

9. Before performing maintenance on a machine you should:
   A. Shut off power
   B. Warn other people
   C. Bring the machine to a zero energy state
   D. Lock-out power and the valves

10. If you have to work on a suspended load you should:
    A. Make sure you have clearance
    B. Place barricades around the hoist
    C. Watch out for pedestrians
    D. Set the load down first

11. Flammable liquids should be stored in:
    A. Open metal containers
    B. Sealed metal containers
    C. Open glass containers
    D. Sealed glass containers

12. During maintenance, the controls of a power-driven conveyor should be locked in the OFF position to prevent:
    A. Start-up
    B. Theft
    C. Damage
    D. Fire

13. When working aloft, you need:
    A. Guard rail clamps
    B. Safety toed shoes
    C. A safety harness
    D. A helper posted below
14. Scrap material should be:
   A. Stacked around the machine
   B. Cleared from the area
   C. Swept out in aisles
   D. All of the above

15. Danger that is part of the job is a:
   A. Built-in hazard
   B. Walk-on hazard
   C. Accident chain
   D. Hazardous duty
   E. Problem for the insurance company, not me

WELDER SERIES
MASTER Technical Module No. WLD-A09

SUBJECT: WELDING TECHNICIAN
TIME: 2 HOURS

- DUTY: FOLLOW SAFETY PRACTICES
- TASK: Demonstrate Safety Precautions Regarding ARC Flash

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Explain danger to eyes from welding operations;
B. Discuss the function of safety equipment in protecting eyes from ARC flash; and,
C. Demonstrate the correct use of eye protection equipment.

INSTRUCTIONAL MATERIALS:

MASTER Handout (WLD-A9-HO)

REFERENCES:

TEXT:

OTHER:
Competency Standards, American Welding Society, Latest Edition
Specific Company Safety Policy and Procedures Manual
STUDENT PREPARATION:

Students should have previously completed the following Technical Modules:

- WLD-A1 "Demonstrate Understanding of Safety Rules"
- WLD-A2 "Assume Personal Safety Standards for Self and Others"
- WLD-A3 "Describe the Purpose and Use of Protective Equipment"
- WLD-A4 "Demonstrate Proper Handling of Hazardous Material"
- WLD-A5 "Demonstrate Knowledge of First Aid and CPR"
- WLD-A6 "Practice Safety Precautions When Using Tools"
- WLD-A7 "Demonstrate Proper Wearing and Use of Safety Equipment"
- WLD-A8 "Create and Maintain a Safe Work Station"

INTRODUCTION:

This is Module A9 of the course Welder, Entry Level. It outlines the dangers of, and methods for protection from ARC flash.

PRESENTATION OUTLINE:

In this module students, seeking competency as an entry level welder, will receive:

1. Lecture on the danger of ARC flash.
2. Demonstration of ARC flash eye protection equipment.

PRACTICAL APPLICATION:

The student is best prepared when forewarned of the dangers he or she faces when completing a competency based performance of tasks in a hazardous environment. This is the practical application of each module within the duty; Follow Safety Practices.

EVALUATION AND/OR VERIFICATION:

Upon completion of this module, written examination(s) or competency testing will be given to determine student progress.

SUMMARY:

This module discusses the dangers of ARC flash and provides demonstration of safety equipment used to protect the eyes.

NEXT LESSON ASSIGNMENT:

Review: Eye Protection, Seeing is Believing in Keller's Official

MASTER Technical Module (WLD-A10) dealing with demonstrating eye safety precautions.
OBJECTIVE(S):

Upon completion of this unit the student will be able to:

A. Explain danger to eyes from welding operations;
B. Discuss the function of safety equipment in protecting eyes from ARC flash; and,
C. Demonstrate the correct use of eye protection equipment.

MODULE OUTLINE:

In this module students, seeking competency as an entry level welder, will receive:

1. Lecture on the danger of ARC flash.
2. Demonstration of ARC flash eye protection equipment.
WELDER SERIES
MASTER Technical Module No. WLD-A10

SUBJECT: WELDING TECHNICIAN
TIME: 2 HOURS

• DUTY: FOLLOW SAFETY PRACTICES
• TASK: Demonstrate Eye Safety Precautions

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Use safety glasses;
B. Use face shields during operations;
C. Discuss the dangers to eyes found in the welding environment; and,
D. Describe the safety equipment used for eye protection.

INTRODUCTION:

This is Module A10 of the Welder, Entry Level. It deals with the importance of eye protection in welding operations.

PRESENTATION OUTLINE:

In this module students, seeking competency as an entry level welder, will receive:

1. Lecture on eye physiology with emphasis on potential for light and/or heat damage.
2. Demonstration of eye hazards found in the welding environment.

PRACTICAL APPLICATION:

The student is best prepared when forewarned of the dangers he or she faces when completing a competency based performance of tasks in a hazardous environment. This is the practical application of each module within the duty; Follow Safety Practices.

EVALUATION AND/OR VERIFICATION:

Upon completion of this module, written examination(s) or competency testing will be given to determine students progress.

SUMMARY:

This module one of the most critical areas of safety concern for students. It emphasizes the necessity for protecting the eyes at all times during welding operations.
NEXT LESSON ASSIGNMENT:

**MASTER TECHNICAL MODULE (WLD-A11)** dealing with performing grinding and brushing technique safety.
OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Use safety glasses;
B. Use face shields during operations;
C. Discuss the dangers to eyes found in the welding environment; and,
D. Describe the safety equipment used for eye protection.

MODULE OUTLINE:

In this module students, seeking competency as an entry level welder, will receive:
1. Lecture on eye physiology with emphasis on potential for light and/or heat damage.
2. Demonstration of eye hazards found in the welding environment.
WELDER SERIES
MASTER Technical Module No. WLD-A11

SUBJECT: WELDING TECHNICIAN TIME: 2 HOURS

- DUTY: FOLLOW SAFETY PRACTICES
- TASK: Perform Grinding And Brushing Technique Safety

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Identify the locations of people before operating equipment;
B. Identify the location of flammable or hazardous material before grinding;
C. Demonstrate the safe use of a disc grinder;
D. Demonstrate the safe use of a bench grinder; and,
E. Demonstrate safe technique(s) for brushing.

INSTRUCTIONAL MATERIALS:

MASTER Handout No. 1 (WLD-A11-H01)
MASTER Handout No. 2 (WLD-A11-H02)

REFERENCES:

TEXT:

OTHER:
Competency Standards, American Welding Society, Latest Edition
Specific Company Safety Policy and Procedures Manual
STUDENT PREPARATION:

Students should have previously completed the following Technical Modules:

- WLD-A1 "Demonstrate Understanding of Safety Rules"
- WLD-A2 "Assume Personal Safety Standards for Self and Others"
- WLD-A3 "Describe the Purpose and Use of Protective Equipment"
- WLD-A4 "Demonstrate Proper Handling of Hazardous Material"
- WLD-A5 "Demonstrate Knowledge of First Aid and CPR"
- WLD-A6 "Practice Safety Precautions When Using Tools"
- WLD-A7 "Demonstrate Proper Wearing and Use of Safety Equipment"
- WLD-A8 "Create and Maintain a Safe Work Station"
- WLD-A9 "Demonstrate Safety Precautions Regarding Arc Flash"
- WLD-A10 "Demonstrate Eye Safety Precautions"

INTRODUCTION:

This is Module A11 of the course Welder, Entry Level. It outlines safe procedures used when grinding or brushing materials.

PRESENTATION OUTLINE:

In this module students, seeking competency as an entry level welder, will receive:

1. Lecture on safe grinding, brushing techniques.
2. Lab demonstration on grinding and brushing techniques.

PRACTICAL APPLICATION:

The student is best prepared when forewarned of the dangers he or she faces when completing a competency based performance of tasks in a hazardous environment. This is the practical application of each module within the duty; Follow Safety Practices.

EVALUATION AND/OR VERIFICATION:

Upon completion of this module, written examination(s) or competency testing will be to determine student progress.

SUMMARY:

This module continues the instruction on the need for safe practice in the welding environment, outlining the areas of grinding and brushing.
NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-A12) dealing with maintaining adequate ventilation.
OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Identify the locations of people before operating equipment;
B. Identify the location of flammable or hazardous material before grinding;
C. Demonstrate the safe use of a disc grinder;
D. Demonstrate the safe use of a bench grinder; and,
E. Demonstrate safe technique(s) for brushing.

MODULE OUTLINE:

In this module students, seeking competency as an entry level welder, will receive:

1. Lecture on safe grinding, brushing techniques.
2. Lab demonstration on grinding and brushing techniques.
OBJECTIVE(S):

Upon completion of this unit the student will be able to:

a. Identify and understand safe machine operating procedures; and,

b. Demonstrate safe machine operation.

MODULE OUTLINE:

I. Identify and Understand Safe Machine Operating Procedures
   A. Never make adjustments on a machine while it is running
      1. Keep guards in place at all times
      2. Discontinue power before servicing
      3. Keep body parts clear of moving machinery
      4. Beware of sharp edges and flying debris
      5. Secure work pieces to prevent slipping
      6. Never stand directly in line with blades or knives
      7. Avoid kickback
      8. Feed stack into machine correctly
   B. Electrical safety
      1. Use only those electrical devices which have been approved by UL (Underwriters' Laboratories)
      2. Stand on dry surface when working on electrical equipment
      3. Replace defective cords or plugs on equipment
      4. Use only those tools that are in good condition
      5. Use only carbon dioxide or dry chemical fire extinguishers for control of electrical fires
      6. Obtain help when working on equipment that may become energized
   C. Avoid horseplay and practical jokes
   D. Keep work area clean.

II. Demonstrate Safe Machine Operation
   A. Good housekeeping
      1. Materials and equipment should be stacked straight and neat
      2. Keep aisles and walkways clear of tools, materials, and debris
      3. Dispose of scraps and rubbish daily
      4. Clean up spills
      5. Clean and store hand tools
   B. Good techniques
      1. Always walk - do not run
      2. Never talk to or interrupt anyone who is operating a machine
3. Never leave tools or pieces of stock lying on table surface of a machine being used
4. When finished with a machine, turn power OFF and wait until blades or cutters have come to a complete stop before leaving
5. Check stock for defects before machining
   a. Do not use a machine until you understand it thoroughly
   b. Do not jam or rush stock into machinery
   c. Keep guards in place
   d. Make sure power is OFF before working on or servicing
6. Keep hands and fingers away from moving parts
7. Don't try to run too small a piece through the machine
8. Use a brush to clean the surface table
9. Keep your eyes focused on what you are working on
10. Never use an air hose to blow debris off yourself or other workers
11. Report faulty machinery to your supervisor
12. Make sure machinery is properly grounded
13. Never leave a piece of machinery that is running unattended
14. Make sure stack is solidly supported

C. Miscellaneous materials
1. Molten metal - can splash and cause serious burns
2. Chemicals - burn or irritate the skin or cause eye damage
3. Broken glass - causes cuts, can get in the eyes
4. Pointed objects - knives, screwdrivers, punches, staples can puncture the skin
5. Rough material - can scrape your skin and cause infections

D. Machinery
1. Understand the safety regulations that involve the guarding of moving parts
2. Know what parts of the equipment are energized
3. Use all safeguards that have been provided to protect people from machinery
4. See that all guards and protectors are in place before you start to work
5. If you must work nearer, turn the machine off and lock out the power
6. Never work in, around, or near dangerous, unguarded openings without wearing a safety belt and a lifeline that is properly seamed

E. One-fifth of all injuries on the job involve moving parts, machinery, or tools
WELDER SERIES
MASTER Technical Module No. WLD-A12

SUBJECT: WELDING TECHNICIAN  TIME: 2 HOURS

- DUTY: FOLLOW SAFETY PRACTICES
- TASK: Maintain Adequate Ventilation

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Understand chemical hazards and MSDS;
B. Use ventilation systems;
C. Use proper breathing apparatus;
D. Recognize a closed work environment;
E. Identify the composition of a normal atmosphere;
F. Discuss the potential dangers to the normal atmosphere during welding operations; and
G. Describe the ventilation requirements for safe welding operations.

INSTRUCTIONAL MATERIALS:

WLD-A10 "Demonstrate Eye Safety Precautions"
WLD-A11 "Perform Grinding and Brushing Technique Safety"

INTRODUCTION:

This is Module A12 of the program for welders. It presents the requirements for ventilation in welding operations.

PRESENTATION OUTLINE:

I. Keep Work Areas Clean
   A. Discuss the associated dangers of the lack of ventilation in the workplace
      1. Chemical Hazards
         a. Inhalants
         b. Chemical burns
         c. Flammable liquids
         d. Explosives and explosive combinations
         e. Toxins
      2. Electrical hazards
      3. High-pressure hazards
   B. Discuss methods of avoiding and correcting common hazards

II. Clean Machine/Hand Tools When Work Is Completed

III. Put Tools Away When Work Is Finished

IV. Keep Isles Clear Of Equipment And Materials

V. Perform Preventive Maintenance As Required
   A. Discuss that certain machines require extra precautions
   B. Discuss how general maintenance enhances general safety
VI. Understand the Use of Material Safety Data Sheets (MSDS)

A. What chemicals have MSDS?

B. Where are the MSDS kept?

C. What information is on the MSDS?

1. Product identification
   a. Specific product name and common name
   b. Precautionary labeling
   c. Safety equipment
   d. Precautionary label statements
   e. Storage color code

2. Hazardous components

3. Physical data
   a. Boiling point
   b. Vapor pressure
   c. Melting point
   d. Vapor density
   e. Specific gravity
   f. Evaporation rate
   g. Solubility in water
   h. Percentage of volatile components by volume
   i. Appearance and odor

4. Fire and explosion hazard data
   a. Flash point
   b. NFPA 704M rating
   c. Flammable limits (upper and lower)
   d. Fire extinguishing media
   e. Special fire-fighting procedures
   f. Toxic gases produced

5. Health hazard data
   a. Threshold limit value
   b. Permissible exposure limit
   c. Toxicity
   d. Carcinogenicity
   e. Effects of over-exposure
   f. Target organs (those most affected by exposure)
   g. Medical conditions aggravated by exposure
   h. Routes of entry
   i. Emergency and first-aid procedures

6. Reactivity data
   a. Stability
   b. Hazardous polymerization
   c. Conditions to avoid
   d. Incompatible materials
   e. Decomposition products

7. Spill and disposal procedures
a. Procedures: spill or discharge
b. Procedures: disposal
c. EPA hazardous waste number

8. Protective equipment
   a. Ventilation
   b. Respiratory protection
   c. Eye/skin protection

9. Storage and handling precautions
   a. Storage color code
   b. Special precautions

10. Transportation data and additional information
    a. Domestic transport
        1) DOT shipping name
        2) Hazard class
        3) UN/NA
        4) Labels
        5) Reportable quantity
    b. International
        1) IMO shipping name
        2) Hazard class
        3) UN/NA
        4) Labels

PRACTICAL APPLICATION:

The student is best prepared when forewarned of the dangers he or she faces when completing a competency based performance of tasks in a hazardous environment. This is the practical application of each module within the duty; Follow Safety Practices.

EVALUATION AND/OR VERIFICATION:

Upon completion of this module, written examination(s) or competency testing will be given to determine student progress.

SUMMARY:

This module describes the requirements for adequate ventilation in welding operations and/or environments.

NEXT LESSON ASSIGNMENT:

Read: Proper Marking and Identify of "Hot Work" (Lab handout, produced by instructor).

MASTER Technical Module (WLD-A13) dealing with marking hot work.
OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Understand chemical hazards and MSDS;
B. Use ventilation systems;
C. Use proper breathing apparatus;
D. Recognize a closed work environment;
E. Identify the composition of a normal atmosphere;
F. Discuss the potential dangers to the normal atmosphere during welding operations; and
G. Describe the ventilation requirements for safe welding operations.

MODULE OUTLINE:

I. Keep Work Areas Clean
   A. Discuss the associated dangers of the lack of ventilation in the workplace
      1. Chemical Hazards
         a. Inhalants
         b. Chemical burns
         c. Flammable liquids
         d. Explosives and explosive combinations
         e. Toxins
      2. Electrical hazards
      3. High-pressure hazards
   B. Discuss methods of avoiding and correcting common hazards

II. Clean Machine/Hand Tools When Work Is Completed

III. Put Tools Away When Work Is Finished

IV. Keep Isles Clear Of Equipment And Materials

V. Perform Preventive Maintenance As Required
   A. Discuss that certain machines require extra precautions
   B. Discuss how general maintenance enhances general safety

VI. Understand the Use of Material Safety Data Sheets (MSDS)
   A. What chemicals have MSDS?
   B. Where are the MSDS kept?
   C. What information is on the MSDS?
      1. Product identification
         a. Specific product name and common name
         b. Precautionary labeling
c. Safety equipment
d. Precautionary label statements
e. Storage color code

2. Hazardous components

3. Physical data
a. Boiling point
b. Vapor pressure
c. Melting point
d. Vapor density
e. Specific gravity
f. Evaporation rate
g. Solubility in water
h. Percentage of volatile components by volume
i. Appearance and odor

4. Fire and explosion hazard data
a. Flash point
b. NFPA 704M rating
c. Flammable limits (upper and lower)
d. Fire extinguishing media
e. Special fire-fighting procedures
f. Toxic gases produced

5. Health hazard data
a. Threshold limit value
b. Permissible exposure limit
c. Toxicity
d. Carcinogenicity
e. Effects of over-exposure
f. Target organs (those most affected by exposure)
g. Medical conditions aggravated by exposure
h. Routes of entry
i. Emergency and first-aid procedures

6. Reactivity data
a. Stability
b. Hazardous polymerization
c. Conditions to avoid
d. Incompatible materials
e. Decomposition products

7. Spill and disposal procedures
a. Procedures: spill or discharge
b. Procedures: disposal
c. EPA hazardous waste number

8. Protective equipment
a. Ventilation
b. Respiratory protection
c. Eye/skin protection
9. Storage and handling precautions
   a. Storage color code
   b. Special precautions
10. Transportation data and additional information
    a. Domestic transport
       1) DOT shipping name
       2) Hazard class
       3) UN/NA
       4) Labels
       5) Reportable quantity
    b. International
       1) IMO shipping name
       2) Hazard class
       3) UN/NA
       4) Labels
OBJECTIVE(S):

Upon completion of this unit the student will be able to:

a. Keep work areas clean;
b. Clean machine/hand tools when work is completed;
c. Put tools away when work is finished;
d. Keep isles clear of equipment and materials;
e. Perform preventive maintenance as required; and,
f. Understand chemical hazards and the use of Material Safety Data Sheets (MSDS).

MODULE OUTLINE:

I. Keep Work Areas Clean
   A. Discuss the associated dangers of the lack of ventilation in the workplace
      1. Chemical Hazards
         a. Inhalants
         b. Chemical burns
         c. Flammable liquids
         d. Explosives and explosive combinations
         e. Toxins
      2. Electrical hazards
      3. High-pressure hazards
   B. Discuss methods of avoiding and correcting common hazards

IV. Keep Isles Clear Of Equipment And Materials

V. Perform Preventive Maintenance As Required
   A. Discuss that certain machines require extra precautions
   B. Discuss how general maintenance enhances general safety

VI. Understand the Use of Material Safety Data Sheets (MSDS)
   A. What chemicals have MSDS?
   B. Where are the MSDS kept?
   C. What information is on the MSDS?
      1. Product identification
         a. Specific product name and common name
         b. Precautionary labeling
         c. Safety equipment
         d. Precautionary label statements
         e. Storage color code
      2. Hazardous components
      3. Physical data
a. Boiling point
b. Vapor pressure
c. Melting point
d. Vapor density
e. Specific gravity
f. Evaporation rate
g. Solubility in water
h. Percentage of volatile components by volume
i. Appearance and odor

4. Fire and explosion hazard data
   a. Flash point
   b. NFPA 704M rating
c. Flammable limits (upper and lower)
d. Fire extinguishing media
e. Special fire-fighting procedures
f. Toxic gases produced

5. Health hazard data
   a. Threshold limit value
   b. Permissible exposure limit
c. Toxicity
d. Carcinogenicity
e. Effects of over-exposure
f. Target organs (those most affected by exposure)
g. Medical conditions aggravated by exposure
h. Routes of entry
i. Emergency and first-aid procedures

6. Reactivity data
   a. Stability
   b. Hazardous polymerization
c. Conditions to avoid
d. Incompatible materials
e. Decomposition products

7. Spill and disposal procedures
   a. Procedures: spill or discharge
   b. Procedures: disposal
c. EPA hazardous waste number

8. Protective equipment
   a. Ventilation
   b. Respiratory protection
c. Eye/skin protection

WELDER SERIES
MASTER Technical Module No. WLD-A13

SUBJECT: WELDING TECHNICIAN
TIME: 2 HOURS

• DUTY: FOLLOW SAFETY PRACTICES
• TASK: Mark “Hot-Work”

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Define “Hot Work”,
B. Identify materials used when marking “Hot Work”,
C. Demonstrate techniques for safety marking “Hot Work”; and,
D. Use safety precautions for self and others.

INSTRUCTIONAL MATERIALS:

MASTER Handout (WLD-A13-HO)

REFERENCES:

TEXT:

OTHER:
Competency Standards, American Welding Society, Latest Edition
Specific Company Safety Policy and Procedures Manual
STUDENT PREPARATION:

Students should have previously completed the following Technical Modules:

- WLD-A1 “Demonstrate Understanding of Safety Rules”
- WLD-A2 “Assume Personal Safety Standards for Self and Others”
- WLD-A3 “Describe the Purpose and Use of Protective Equipment”
- WLD-A4 “Demonstrate Proper Handling of Hazardous Material”
- WLD-A5 “Demonstrate Knowledge of First Aid and CPR”
- WLD-A6 “Practice Safety Precautions When Using Tools”
- WLD-A7 “Demonstrate Proper Wearing and Use of Safety Equipment”
- WLD-A8 “Create and Maintain a Safe Work Station”
- WLD-A9 “Demonstrate Safety Precautions Regarding Arc Flash”
- WLD-A10 “Demonstrate Eye Safety Precautions”
- WLD-A11 “Perform Grinding and Brushing Technique Safety”
- WLD-A12 “Maintain Adequate Ventilation”

INTRODUCTION:

This is Module A13 of the course Welder, Entry Level. It pertains to the need for properly marking “Hot Work”.

PRESENTATION OUTLINE:

In this module students, seeking competency as an entry level welder, will receive:

1. Lecture on the precautions to be taken when “Hot Work” is present in the shop.
2. Demonstration of proper marking and warning of “Hot Work”.

PRACTICAL APPLICATION:

The student is best prepared when forewarned of the dangers he or she faces when completing a competency based performance of tasks in a hazardous environment. This is the practical application of each module within the duty; Follow Safety Practices.

EVALUATION AND/OR VERIFICATION:

Upon completion of this module, written examination(s) or competency testing will be given to determine student progress.

SUMMARY:

This module describes the proper handling of “Hot Work”. It is the final module within the duty; Follow Safety Practices. It ends with the reminder that every task in the curriculum for each welder has, as its first enabling objective, follow safety practices!
NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-B1) dealing with applying principles and tools of continuous quality improvement.
OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Define “Hot Work”;
B. Identify materials used when marking “Hot Work”;
C. Demonstrate techniques for safety marking “Hot Work”; and,
D. Use safety precautions for self and others.

MODULE OUTLINE:

In this module students, seeking competency as an entry level welder, will receive:
1. Lecture on the precautions to be taken when “Hot Work” is present in the shop.
2. Demonstration of proper marking and warning of “Hot Work”.
WELDER ... that person who is responsible for the planning, layout, fit up of materials, and operation of welding equipment to prepare the work and perform welding operations necessary to produce a work piece to prescribed engineering standards.

### A - Aims

- A-1 Demonstrate understanding of safety rules and other standard practices
- A-2 Assess personal safety standards for all tasks
- A-3 Describe the purpose of using welding equipment and why it is necessary
- A-4 Demonstrate proper handling of welding equipment and its components
- A-5 Demonstrate the purpose and importance of safety precautions
- A-6 Practice proper use of personal safety equipment
- A-7 Demonstrate proper use of welding equipment
- A-8 Create and maintain a safe work station
- A-9 Demonstrate safety precautions regarding ARC flash
- A-10 Demonstrate safe use of welding equipment
- A-11 Perform grinding and finishing techniques
- A-12 Maintain adequate ventilation
- A-13 Maintain mark "not work"
WELDER ... that person who is responsible for the planning, layout, fit up of materials, and operation of welding equipment to prepare the work and perform welding operations necessary to produce a work piece to prescribed engineering standards.

  - M.25 Pass performance qualification tests on various materials in various positions
SUBJECT: WELDING TECHNICIAN

TIME: 10 HOURS

- DUTY: TOTAL QUALITY
- TASK: Apply Principles And Tools Of Continuous Quality Improvement

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Recognize and solve problems; and,
B. Understand what worker empowerment is and how to effectively use.

INSTRUCTIONAL MATERIALS:

Overhead Projector
Prepared overlays
ISO 9000 Procedures
ANSI Standards
MASTER Handout (WLD-B1-HO)

INTRODUCTION:

Course Description: An advanced study of “Total Quality Management” principles concentrating in the areas of Worker Empowerment.

PRESENTATION OUTLINE:

Major Topics: Worker Empowerment For Continuous Improvement

I. What is Empowerment?
   A. Define Empowerment
      1. Philosophy that provides each employee an “opportunity” to be creative and make changes to the product and life-cycle processes.
      2. Opportunity includes both the authority to make changes and the authority to do what it takes to enable the change.
      3. Opportunity also means accepting responsibility for your decisions.
   B. Discuss what this means to the class.
      1. Empowerment is more complex than just giving permission to make changes.
      2. Authority or decision-making is a given right and can be easily taken away if proper responsibility is not demonstrated.
      3. Authority is often granted in steps. i.e. You can do up to this before getting further approval from management.
      4. Authority is not to be taken likely. Decision making decisions will be evaluated just as your production etc.
   C. Define Product life cycle processes. Processes refer to those processes that define, design, develop, produce, deliver, sell, service, use of, disposal/recycling of our products and by-products.

II. Why is empowerment necessary?
   A. To effectively create quality!
   B. The Manufacturers’ Alliance for Productivity and Innovation stated that “Organizations that empower employees as a part of their total management effort are twice as likely as other firms to report significant product or service improvement.”
   C. Employees will be more motivated to accomplish organizational goals and objectives if they have the authority to make decisions.

III. 4 critical dimensions of empowerment
   A. Teamwork and communication
   B. The evolution of empowerment
C. The bounds of empowerment
D. Education and training

IV. Evolution of empowerment
A. Empowerment is not a quick fix, attitudes and habits are hard to change and come slowly.
B. Empowerment usually requires a change to the company infrastructure.
C. Effective empowerment demands personal growth in the areas of trust, technical knowledge.
D. Effective empowerment demands a maturing in accepting/using responsibility and authority.
E. The growth and maturing will be evolutionary and not accomplished instantly.
F. People need time to learn and adjust; some will need to grow more than others.
G. Certain individual cannot or will not change and may require removal from the team.

V. Discuss Workplace Environment Stages and compare traditional, employee involvement and employee empowerment.

VI. Discuss Six conditions for empowerment - Is a trust-based model.
A. Character-Refers to what a person is. i.e. personal virtues such as Vision and enthusiasm, wisdom, courage, commitment, self-discipline, responsibility, persistence, patience, faith, compassion, trustworthiness, and honesty
B. Skills-Refers to what a person can do. i.e. personal knowledge of and proficiency in job related activities.
C. Win-win agreement-Refers to a social contract which delineates results (desired outcomes), guidelines (policies and procedures), resources (human machine, financial), accountability (performance standards and methods of evaluation), and consequences (organizational and personal impact). Basically an agreement that neither party is harmed at the expense of another. The most difficult and intricate condition.
D. Self-supervision-Refers to self-initiation and self-control with respect to the win-win agreement.
E. Structures-Refers to the organizational format and functional activities with respect to executing the win-win agreement.
F. Accountability-Refers to the establishment and acceptance of personal responsibility for affecting and producing results.

VII. Barriers to success
A. Management not supportive, means giving up authority, control by senior management
B. Personnel issues
C. Supervisor resistance
D. Lack of transfer of power to teams
E. Misalignment (compensation and team structure)
F. Difficulty with new roles (team members, supervisors, or management)

VIII. Bounds on empowerment
A. The new boundaries must be identified and communicated to team members to be effective.
1. A new set of expectations must be developed.
2. Without careful planning and communication in these areas, misunderstanding and coordination problems will develop.

B. Responsibilities are typically assigned to the team, shared, or the supervisors.
   1. Team Responsibilities: Survey of responsibilities and percent of teams with.

   - 69% Safety and housekeeping
   - 58% Assign tasks to members
   - 53% Work with internal customers
   - 46% Stop work for quality issues
   - 45% Routing equipment maintenance

   - 44% Vacation scheduling
   - 42% Process improvements
   - 38% Select work methods
   - 34% External customers
   - 33% Determine training needs
   - 29% Set production goals

   2. Shared responsibilities:

   - 54% Select work methods
   - 53% Determine training methods
   - 51% Process improvements
   - 49% Set production goals

   - 44% Individual performance problems
   - 42% Process improvements
   - 38% Select work methods
   - 34% External customers

   3. Supervisors responsibility:

   - 70% Compensation decisions
   - 55% Prepare and manage budgets

   - 46% Performance appraisals
   - 41% Individual performance problems

C. Key differences between traditional and empowered organizations
   1. Empowered firms:

   - Accomplish work through independent teams.
   - Fosters an environment that develops, encourages, and rewards empowered people and teams.
   - Encourage people to build social and technical skills.
   - Align personal and firm goals and see that people understand their roles.
   - Exhibit a high level of individual and team self-management
   - Participate in work design, set direction, and resolve problems.
   - Provide people with the information they need - without asking

**PRACTICAL APPLICATION:**

The student will be able to:

- Recognize problems and solve them;
- Know what worker empowerment is and why it is important;
- Understand the four critical dimensions of worker empowerment;
- Realize how worker empowerment evolved and the six conditions necessary for worker empowerment;
- Recognize the barriers to success and the bounds on worker empowerment; and,
- Know the differences between traditional and empowered organizations.

**EVALUATION AND/OR VERIFICATION:**

Class participation, assigned homework, quizzes and exams.

**SUMMARY:**

There will be a review of each module reemphasizing the important points.

**NEXT LESSON ASSIGNMENT:**

MASTER Technical Module (WLD-B2) dealing with understanding the importance of quality in the manufacturing process.
OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Recognize and solve problems; and,
B. Understand what worker empowerment is and how to effectively use.

MODULE OUTLINE:

Major Topics: Worker Empowerment For Continuous Improvement

I. What is Empowerment?
   A. Define Empowerment
      1. Philosophy that provides each employee an “opportunity” to be creative and make changes to the product and life-cycle processes.
      2. Opportunity includes both the authority to make changes and the authority to do what it takes to enable the change.
      3. Opportunity also means accepting responsibility for your decisions.
   B. Discuss what this means to the class.
      1. Empowerment is more complex than just giving permission to make changes.
      2. Authority or decision-making is a given right and can be easily taken away if proper responsibility is not demonstrated.
      3. Authority is often granted in steps. i.e. You can do up to this before getting further approval from management.
      4. Authority is not to be taken likely. Decision making decisions will be evaluated just as your production etc.
   C. Define Product life cycle processes
      1. Processes refer to those processes that define, design, develop, produce, deliver, sell, service, use of, disposal/recycling of our products and by-products.

II. Why is empowerment necessary?
   A. To effectively create quality!
   B. The Manufacturers’ Alliance for Productivity and Innovation stated that “Organizations that empower employees as a part of their total management effort are twice as likely as other firms to report significant product or service improvement.”
   C. Employees will be more motivated to accomplish organizational goals and objectives if they have the authority to make decisions.

III. 4 critical dimensions of empowerment
   A. Teamwork and communication
   B. The evolution of empowerment
   C. The bounds of empowerment
D. Education and training

IV. Evolution of empowerment
A. Empowerment is not a quick fix, attitudes and habits are hard to change and come slowly.
B. Empowerment usually requires a change to the company infrastructure.
C. Effective empowerment demands personal growth in the areas of trust, technical knowledge.
D. Effective empowerment demands a maturing in accepting/using responsibility and authority.
E. The growth and maturing will be evolutionary and not accomplished instantly.
F. People need time to learn and adjust; some will need to grow more than others.
G. Certain individual can not or will not change and may require removal from the team.

V. Discuss Workplace Environment Stages and compare traditional, employee involvement and employee empowerment.

VI. Discuss Six conditions for empowerment - Is a trust-based model.
A. Character-Refers to what a person is. i.e. personal virtues such as Vision and enthusiasm, wisdom, courage, commitment, self-discipline, responsibility, persistence, patience, faith, compassion, trustworthiness, and honesty
B. Skills-Refers to what a person can do. i.e. personal knowledge of and proficiency in job related activities.
C. Win-win agreement-Refers to a social contract which delineates results (desired outcomes), guidelines (policies and procedures), resources (human machine, financial), accountability (performance standards and methods of evaluation), and consequences (organizational and personal impact). Basically an agreement that neither party is harmed at the expense of another. The most difficult and intricate condition.
D. Self-supervision-Refers to self-initiation and self-control with respect to the win-win agreement.
E. Structures-Refers to the organizational format and functional activities with respect to executing the win-win agreement.
F. Accountability-Refers to the establishment and acceptance of personal responsibility for affecting and producing results.

VII. Barriers to success
A. Management not supportive, means giving up authority, control by senior management
B. Personnel issues
C. Supervisor resistance
D. Lack of transfer of power to teams
E. Misalignment (compensation and team structure)
F. Difficulty with new roles (team members, supervisors, or management)

VIII. Bounds on empowerment
A. The new boundaries must be identified and communicated to team members to be effective.
   1. A new set of expectations must be developed.
2. Without careful planning and communication in these areas, misunderstanding and coordination problems will develop.

B. Responsibilities are typically assigned to the team, shared, or the supervisors.

1. Team Responsibilities: Survey of responsibilities and percent of teams with.

- 69% Safety and housekeeping
- 58% Assign tasks to members
- 53% Work with internal customers
- 46% Stop work for quality issues
- 45% Routing equipment maintenance
- 44% Vacation scheduling
- 42% Process improvements
- 38% Select work methods
- 34% External customers
- 33% Determine training needs
- 29% Set production goals

2. Shared responsibilities:

- 54% Select work methods
- 53% Determine training methods
- 51% Process improvements
- 49% Set production goals
- 44% Individual performance problems
- 44% Routine equipment maintenance
- 44% External customers

3. Supervisors responsibility:

- 70% Compensation decisions
- 55% Prepare and manage budgets
- 46% Performance appraisals
- 41% Individual performance problems

C. Key differences between traditional and empowered organizations

1. Empowered firms:
   - Accomplish work through independent teams.
   - Fosters an environment that develops, encourages, and rewards empowered people and teams.
   - Encourage people to build social and technical skills.
   - Align personal and firm goals and see that people understand their roles.
   - Exhibit a high level of individual and team self-management.
   - Participate in work design, set direction, and resolve problems.
   - Provide people with the information they need - without asking.

SUBJECT: WELDING TECHNICIAN  
TIME: 10 HOURS

DUTY: TOTAL QUALITY

TASK: Understand The Importance Of Quality In The Manufacturing Process

OBJECTIVE(S):

Upon completion of this unit the student will be able to:

A. Define TQM;
B. Understand management philosophy for TQM;
C. Define the concepts of TQM;
D. Understand the cultural changes needed for TQM;
E. Understand TQM organizations; and,
F. Identify quality and the segments to achieve.

INSTRUCTIONAL MATERIALS:

Overhead Projector
Prepared overlays
ISO 9000 Procedures
ANSI Standards
MASTER Handout (WLD-B2-HO)

REFERENCES:

*The New Manufacturing Challenge-Techniques for Continuous Improvement*, Kiyoshi Suzaki, Latest Edition
*Quality System Requirements QS-9000*, Chrysler, Ford, General Motors Corporations, Latest Editions
STUDENT PREPARATION:

Students should have previously completed the following Technical Modules:

WLD-B1  “Apply Principles And Tools Of Continuous Quality Improvement”

INTRODUCTION:

Course Description: An advanced study of “Total Quality Management” emphasizing the principles of leadership, customer satisfaction, employee involvement, continuous process improvement, supplier management, and performance measures.

PRESENTATION OUTLINE:

Major Topics: Total Quality Management
I. Introduction to TQM
   A. Definition of TQM
      1. A leadership philosophy
      2. A process, not product orientation
      3. A philosophy of continuous improvement
II. Management Philosophy
   A. Management responsible for the system, not the worker
III. Concepts of TQM
IV. Cultural changes for TQM
V. TQM Organizations
VI. Quality
   A. Defining Quality
   B. A Customer Right
   C. Strategy for TQM Implementation
   D. Planning and Organization for Quality
   E. Plan-Do-Check-Act

PRACTICAL APPLICATION:

The student will be able to:
- Understand TQM and its definition, responsibility, concepts, and organization; and,
- Determine quality and its definition, strategy for implementation, and organization.
EVALUATION AND/OR VERIFICATION:

Class participation, assigned homework, quizzes and exams.

SUMMARY:

There will be a review of each module reemphasizing the important points.

NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-B3) dealing with implementing concepts of quality in the workplace.
OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Define TQM;
B. Understand management philosophy for TQM;
C. Define the concepts of TQM;
D. Understand the cultural changes needed for TQM;
E. Understand TQM organizations, and,
F. Identify quality and the segments to achieve.

MODULE OUTLINE:

Major Topics:  Total Quality Management
I. Introduction to TQM
   A. Definition of TQM
      1. A leadership philosophy
      2. A process, not product orientation
      3. A philosophy of continuous improvement
II. Management Philosophy
   A. Management responsible for the system, not the worker
III. Concepts of TQM
IV. Cultural changes for TQM
V. TQM Organizations
VI. Quality
   A. Defining Quality
   B. A Customer Right
   C. Strategy for TQM Implementation
   D. Planning and Organization for Quality
   E. Plan-Do-Check-Act
WELDER SERIES
MASTER Technical Module No. WLD-B03

SUBJECT: WELDING TECHNICIAN TIME: 10 HOURS

- DUTY: TOTAL QUALITY
- TASK: Implement Concepts Of Quality In The Workplace

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Understand the concepts of continuous process improvement; and,
B. Work through a structured problem solving exercise to improve quality.

INSTRUCTIONAL MATERIALS:

Overhead Projector
Prepared overlays
ISO 9000 Procedures
ANSI Standards
MASTER Handout (WLD-B3-HO)

*Organizational Teams-Building Continuous Quality Improvement*, Peter Mears, Latest Edition
STUDENT PREPARATION:

Students should have previously completed the following Technical Modules:

- **WLD-B1**: "Apply Principles And Tools Of Continuous Quality Improvement"
- **WLD-B2**: "Understand The Importance Of Quality In The Manufacturing Process"

INTRODUCTION:

Course Description: An advanced study of "Total Quality Management" emphasizing the principles of leadership, customer satisfaction, employee involvement, continuous process improvement, supplier management, and performance measures.

PRESENTATION OUTLINE:

Major Topics: Total Quality Management

I. Continuous Process Improvement
   A. Principles
      1. Sources
      2. Causes
      3. Statistical Concept of Variation versus Engineering Concept
      4. Improving for stability

II. Structured Problem Solving
    A. Defining the Problem
    B. Implementing Containment Actions
    C. Identifying Root Causes
    D. Developing and Verifying the Solution
    E. Implementing the Solution
    F. Standardize the Improvement

PRACTICAL APPLICATION:

The student will be able to:
- Identify the principles of continuous quality improvement; and,
- Use techniques learned to identify a problem and problem solve.

EVALUATION AND/OR VERIFICATION:

Class participation, assigned homework, quizzes and exams.

SUMMARY:

There will be a review of each module reemphasizing the important points.
NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-B4) dealing with following the Quality Plan and recommending improvements in work methods or tooling.
OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Understand the concepts of continuous process improvement; and,
B. Work through a structured problem solving exercise to improve quality.

MODULE OUTLINE:

Major Topics: Total Quality Management

I. Continuous Process Improvement
   A. Principles
      1. Sources
      2. Causes
      3. Statistical Concept of Variation versus Engineering Concept
      4. Improving for stability

II. Structured Problem Solving
   A. Defining the Problem
   B. Implementing Containment Actions
   C. Identifying Root Causes
   D. Developing and Verifying the Solution
   E. Implementing the Solution
   F. Standardize the Improvement
WELDER SERIES
MASTER Technical Module No. WLD-B04

SUBJECT: WELDING TECHNICIAN TIME: 10 HOURS

- DUTY: TOTAL QUALITY
- TASK: Follow The Quality Plan And Recommend Improvements In Work Methods Or Tooling

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Understand the concepts of quality control;
B. Identify common investigative questions; and,
C. Identify sources of process variations.

INSTRUCTIONAL MATERIALS:

Overhead Projector
Prepared overlays
ISO 9000 Procedures
ANSI Standards
MASTER Handout (WLD-B4-HO)

REFERENCES:

The New Manufacturing Challenge-Techniques for Continuous Improvement, Kiyoshi Suzaki, Latest Edition

STUDENT PREPARATION:

Students should have previously completed the following Technical Modules:

- **WLD-B1** “Apply Principles And Tools Of Continuous Quality Improvement”
- **WLD-B2** “Understand The Importance Of Quality In The Manufacturing Process”
- **WLD-B3** “Implement Concepts Of Quality In The Workplace”

INTRODUCTION:

**Course Description:** An advanced study of “Total Quality Management” emphasizing the principles of leadership, customer satisfaction, employee involvement, continuous process improvement, supplier management, and performance measures.

PRESENTATION OUTLINE:

**Major Topics:**

- **Total Quality Management**
  - Quality Control
    - **A. History and Concepts of Quality Control**
      1. Corrective Actions
      2. Measurements
      3. Data Used
      4. Implementation
    - **B. Common Investigative questions**
    - **C. Sources of Process Variations**

PRACTICAL APPLICATION:

The student will be able to:

- Use techniques learned to identify a problem and problem solve; and,
- Utilize concepts in Quality Control.

EVALUATION AND/OR VERIFICATION:

Class participation, assigned homework, quizzes and exams.

SUMMARY:

There will be a review of each module reemphasizing the important points.
NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-B5) dealing with establishing methods, plans and procedures to maintain quality.
WLD-B4-HO
Follow the Quality Plan and Recommend Improvements
in Work Methods or Tooling
Attachment 1: MASTER Handout

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Understand the concepts of quality control;
B. Identify common investigative questions; and,
C. Identify sources of process variations.

MODULE OUTLINE:

Major Topics: Total Quality Management
I. Quality Control
   A. History and Concepts of Quality Control
      1. Corrective Actions
      2. Measurements
      3. Data Used
      4. Implementation

*The Ethics of Excellence*, Price Prichett, Dallas, TX: Prichett and Associates, Latest
Edition
*The Power Principle – Influence with Honor*, Blaine Lee (Avery Leadership
Center), New York: Simon and Shuster, Latest Edition
STUDENT PREPARATION:

Student must demonstrate appropriate communication skills and understand principles of basic physical science and mathematics as verified by placement test or completion of required courses.

INTRODUCTION:

The course introduction will include:
- The need for good production planning and scheduling of work
- The need for a responsive workforce that is well motivated, willing to work, and capable of work

PRESENTATION OUTLINE:

Instructional Topics:
1. Typical company policies and procedures on attendance and tardiness
2. Policies on disciplinary actions for repeated absences or tardiness
3. Personal planning methods for time scheduling, preparation for work, and travel to work to ensure timely arrival
4. Timely notification of employer in event of emergencies
5. Safety factors, job hazards, and actions to continue operations in event of emergencies
6. Contingency planning for continuation of operations
7. Job transition between shift crews to insure and provide continuation of operations
8. Team advisories for quality, production in planning, materials, and tools
9. Completing the production hand-off transition in an efficient and courteous manner
10. Job priorities and emergency operations plans
11. Personal habits and planning of leisure activities to prevent interferences with work schedule

Student Activities:
Prepare a work schedule that forecasts the cost impact on equipment down time, reduction of production, and project with one hour tardiness of the workforce at 5/10/15% and absenteeism at one work day per month per employee

PRACTICAL APPLICATION:

Organizing personal time and recreational activities, enabling employees to be well rested, prompt, and ready to work at the scheduled time with tools and raw materials
EVALUATION AND/OR VERIFICATION:

Written examination on time scheduling methods and examples of intelligent use of personal time

SUMMARY:

Those employees that arrive late to begin work, and those who fall behind on work schedules are problems of great magnitude in many industries and enterprises. Costs of lost time and lost production can reduce profit by as much as 50% or more.

NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-C02) dealing with valuing honest work ethics, dedication, and responsibility in the workplace.
OBJECTIVE(S): 

Upon completion of this unit the student will be able to:
A. Understand the importance of work schedules;
B. Understand various scheduling methods;
C. Understand the need for promptness and readiness to work on time;
D. Be flexible and willing to help others in case of emergencies; and,
E. Recognize his/her role as a team member.

MODULE OUTLINE:

Instructional Topics:
A. Typical company policies and procedures on attendance and tardiness
B. Policies on disciplinary actions for repeated absences or tardiness
C. Personal planning methods for time scheduling, preparation for work, and travel to work to ensure timely arrival
D. Timely notification of employer in event of emergencies
E. Safety factors, job hazards, and actions to continue operations in event of emergencies
F. Contingency planning for continuation of operations
G. Job transition between shift crews to insure and provide continuation of operations
H. Team advisories for quality, production in planning, materials, and tools
I. Completing the production hand-off transition in an efficient and courteous manner
J. Job priorities and emergency operations plans
K. Personal habits and planning of leisure activities to prevent interferences with work schedule

Student Activities:
Prepare a work schedule that forecasts the cost impact on equipment down time, reduction of production, and project with one hour tardiness of the workforce at 5/10/15% and absenteeism at one work day per month per employee
WLD-C1-H02
Be Prompt and on the Job in Accordance with Work Schedule
Attachment 2: MASTER Handout No. 2

Safety Incentives Program
General Safety Checklist

1. Are empty compressed gas cylinders appropriately marked and their valves closed?
   [29 CFR 1910.253(b)(1)(ii), (5)(ii)(H)] □ YES □ NO

2. Are fuel gas cylinders and oxygen cylinders separated by distance, fire resistant barriers, etc., while in storage?
   [29 CFR 1910.253(b)(6)(iii)] □ YES □ NO

3. Does type of PPE used match the needs of current operations?
   [29 CFR 1910.132(d)(1)(i)] □ YES □ NO

4. Is each work area adequately ventilated?
   □ YES □ NO

5. Are exhaust hazards controlled from forklifts or other gas, or diesel powered equipment?
   [29 CFR 1910.1000(a)] □ YES □ NO

6. Is the facility free of environmental hazards – dust, chemicals, radiation, welding rays, heat, cold, or excessive noise -- that result from working?
   [29 USC 654, Sec. 5(a)(1)] □ YES □ NO

7. Are all hazardous chemicals appropriately labeled?
   [29 CFR 1910.1200(f)(5)&(6)] □ YES □ NO

8. If hazardous waste is stored, are all hazardous waste requirements complied with?
   □ YES □ NO

9. Are rotating or moving parts of equipment guarded to prevent physical contact?
   [29 CFR 1910.212(a)(1); 243] □ YES □ NO
| 10 | Are grinders, saws, and similar equipment provided with appropriate safety guards?  
[29 CFR 1910.243(a)(1), (c)(1)-(4), (e)(1)(i)] |
| 11 | Are power tools used with the correct shield, guard, or attachment recommended by the manufacturer? |
| 12 | Are storage cabinets used to hold flammable liquids, labeled "Flammable-Keep Fire Away"?  
[29 CFR 1910.106(d)(3)(ii)] |
| 13 | Are flammable liquids, such as gasoline, kept in an approved safety can?  
[29 CFR 1910.106(d)(2); 144(a)(1)] |
| 14 | Are work areas clean?  
[29 CFR 1910.22(a)] |
| 15 | Are work surfaces kept dry or are appropriate means taken to assure the surfaces are slip-resistant?  
[29 CFR 1910.22(a)(2)] |

SUBJECT: WELDING TECHNICIAN  

DUTY: WORK ETHICS  
TASK: Value Honest Work Ethics, Dedication, and Responsibility in the Workplace  

OBJECTIVE(S):  

Upon completion of this unit the student will be able to:  
A. Assess core values of the individual with those of the work group and corporation; and,  
B. Understand the importance of personal ethics to product quality and production outcomes.  

INSTRUCTIONAL MATERIALS:  

MASTER Handout No. 1 (WLD-C2-HO1)  
MASTER Handout No. 2 (WLD-C2-HO2)  

REFERENCES:  

TEXT:  

OTHER:  
Specific Company Safety Policy and Procedures Manual  
The Ethics of Excellence, Price Prichett, Dallas, TX: Prichett and Associates, Latest Edition  
STUDENT PREPARATION:

Student must demonstrate appropriate communication skills and understand principles of basic physical science and mathematics as verified by placement test or completion of required prerequisite courses. Student must complete the following module:

WLD-C1  “Be Prompt and on the Job in Accordance with Work Schedule”

INTRODUCTION:

The course introduction will include:

- Violations of honesty and integrity, however small, dilutes ethical strength and reputation in the job
- High standards and ethics of excellence are necessary for quality production and quality products

PRESENTATION OUTLINE:

Instructional Topics:

1. A code of ethics for professionals
2. The process of values clarification
3. Permit some mistakes so employees can learn
4. Be concerned about small things as well as larger or major events
5. Demonstrate what you believe about ethics in your work
6. Do the right thing, with full consideration of your values
7. Stay out of ethical debt to others
8. Communicate with others
9. Understand the position of each person on the work team

Student Activities:

1. Discuss a case study in situational work ethics
2. Define professional integrity

PRACTICAL APPLICATION:

Don’t say what you believe about ethics, demonstrate what you believe by your actions and product outcomes.

EVALUATION AND/OR VERIFICATION:

Students will participate in a core values study and compare their values with those of others in the company
SUMMARY:

Ethics are important elements in the company's culture and reputation. Small indications of the core values can enhance the company's business success, or can devalue it. Each worker's beliefs and actions reflect the aggregate values of the company.

NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-C03) dealing with demonstrating high moral values.
WLD-C2-HO1
Value Honest Work Ethics, Dedication, and Responsibility in the Workplace
Attachment 1: MASTER Handout No. 1

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Assess core values of the individual with those of the work group and corporation; and,
B. Understand the importance of personal ethics to product quality and production outcomes.

SUBJECT: WELDING TECHNICIAN TIME: 3 HOURS

- DUTY: WORK ETHICS
- TASK: Demonstrate High Moral Values

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Understand that the act of hiring a new employee involves trust by the employer;
B. Understand how to work with honor and respect; and,
C. Follow the principles of honesty on the job.

INSTRUCTIONAL MATERIALS:

MASTER Handout No. 1 (WLD-C3-HO1)
MASTER Handout No. 2 (WLD-C3-HO2)

REFERENCES:

TEXT:

OTHER:

Specific Company Safety Policy and Procedures Manual
The Ethics of Excellence, Price Prichett, Dallas, TX: Prichett and Associates, Latest Edition
STUDENT PREPARATION:

Student must demonstrate appropriate communication skills and understand principles of basic physical science and mathematics as verified by placement test or completion of required prerequisite courses. Students must complete the following modules:

WLD-C1  “Be Prompt and on the Job in Accordance with Work Schedule”
WLD-C2  “Value Honest Work Ethics, Dedication, and Responsibility in the Workplace”

INTRODUCTION:

The course introduction will include:

- An overview of the hiring process will be presented
- The importance of honor and respect in the workplace is introduced

PRESENTATION OUTLINE:

Instructional Activities:

1. Continue individual values clarification
2. Meanings and applications of honesty in the workplace
3. Employees in a position of trust and responsibility
4. Working from a perspective of honor and respect

Student Activities:

1. Students will discuss the meaning of “honesty” on the job
2. Students will be asked to take a position on case studies of honesty reflected by the use of property, materials, time, reporting, production rates, and communications

PRACTICAL APPLICATION:

An employee must not only must be skillful in performance of work, but must possess personal values such as honesty and integrity, promptness, and a willingness to work

EVALUATION AND/OR VERIFICATION:

Students will be asked to take a position on case studies of honesty reflected by the use of property, materials, time, reporting, production rates, and communications
SUMMARY:

High moral values are reflected by the employee’s stewardship of the assets entrusted by the employer and the “value added” by his efforts and contributions to the work team and the overall enterprise.

NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-C04) dealing with displaying a neat and clean workplace.
Demonstrate High Moral Values
Attachment 1: MASTER Handout No. 1

OBJECTIVE(S):

Upon completion of this unit the student will be able to:

A. Understand that the act of hiring a new employee involves trust by the employer;
B. Understand how to work with honor and respect; and,
C. Follow the principles of honesty on the job.

MODULE OUTLINE:

Instructional Activities:
1. Continue individual values clarification
2. Meanings and applications of honesty in the workplace
3. Employees in a position of trust and responsibility
4. Working from a perspective of honor and respect

Student Activities:
1. Students will discuss the meaning of “honesty” on the job
2. Students will be asked to take a position on case studies of honesty reflected by the use of property, materials, time, reporting, production rates, and communications

Check if item/Practice not in compliance

Welding

☒ Are only authorized and trained personnel permitted to use welding, cutting or brazing equipment? 29 CFR 1910.225(a)(7)(ii)(C)

☒ Does each operator have a copy of the appropriate operating instructions and are they directed to follow them? 29 CFR 1910.225(a)(4), (d)(6), (7)(7)(A)

☒ Are pressure-reducing regulators used only for the gas and pressures for which they are intended? 29 CFR 1910.225(e)(3)(i)

☒ Is a check made for appropriate ventilation in and where welding or cutting is performed? 29 CFR 1910.225(c)(1)(iii), (ii), (iv)

☒ When working in confined places, are environmental monitoring tests taken and means provided for quick removal of welders in case of an emergency? 29 CFR 1910.225(c)(4)

Equipment

☒ Are only approved apparatus (torches, regulators, pressure-reducing valves, acetylene generators, manifolds) used? 29 CFR 1910.225(a)(3)

☒ Is open circuit (No Load) voltage of arc welding and cutting machines as low as possible and not in excess of the recommended limits? 29 CFR 1910.254(b)(3)(iv)

☒ Is grounding of the welding machine frame and safety ground connections of portable machines checked periodically? 29 CFR 1910.254(d)(3); .255(b)(9), (c)(6)

Equipment Markings

☒ Marked to identify acetylene (and other fuel-gas) hose, green for oxygen hose, and black for inert gas and air hose? 29 CFR 1910.225(b)(5)(i)

Compressed Gas Cylinder Management

☒ Are compressed gas cylinders regularly examined for obvious signs of defects, deep rusting, or leakage? 29 CFR 1910.254(d)(4); .255(e)

☒ Is care used in handling and storage of cylinders, safety valves, relief valves, etc., to prevent damage? 29 CFR 1910.253(b)(2)(i), (ii)(ii)

☒ Are liquefied gases stored and shipped valve-end up with valve covers in place? 29 CFR 1910.253(b)(5)(iii)(A)

☒ Before a regulator is removed, is the valve closed and gas released from the regulator? 29 CFR 1910.225(b)(5)(iii)(D)

☒ Are cylinders, cylinder valves, couplings, regulators, hoses, and apparatus kept free of oily or greasy substances? 29 CFR 1910.225(b)(9)(i)

☒ Are the cylinders kept away from elevators, stairs, or gangways? 29 CFR 1910.253(b)(2)(g)(5)

☒ Is it prohibited to use cylinders as rollers or supports? 29 CFR 1910.253(b)(5)(ii)(C)

☒ Is care taken not to drop or strike cylinders? 29 CFR 1910.225(b)(5)(ii)(B)

☒ Unless secured on special trucks, are regulators removed and valve—protection caps put in place before moving cylinders? 29 CFR 1910.253(b)(5)(ii)

☒ Do cylinders without fixed hand wheels have keys, handles, or non-adjustable wrenches on stem valves when in service? 29 CFR 1910.253(b)(5)(iii)(E)

☒ Are fuel gas cylinders and oxygen cylinders separated by distance, fire resistant barriers, etc., while in storage? 29 CFR 1910.253(b)(4)(iii)

Personal Protective Equipment

☒ is PPE functional and in good repair? Does it have ANSI or ASTM specifications marked on it? 29 CFR 1910.132(a)

☒ Are all employees required to use personal protective clothing and equipment when handling chemicals (gloves, eye protection, respirators, etc.)? 29 CFR 1910.132(a)

☒ Are employees exposed to the hazards created by welding, cutting, or brazing operations protected with personal protective equipment and clothing? 29 CFR 1910.132(b)

☒ Is personal protective equipment provided and are all employees required to use PPE as needed to protect against eye and face injury? 29 CFR 1910.132(a); .133(a)(1)

☒ Are protective goggles or face shields provided and worn where there is any danger of flying particulates or corrosive materials? 29 CFR 1910.133(a)(1)

☒ Are approved safety glasses required to be worn at all times in areas where there is a risk of eye injuries such as punctures, abrasions, contusions, or burns? 29 CFR 1910.133(a)(2)

☒ Are appropriate safety glasses, face shields, etc., used while using hand tools or equipment which might produce flying materials or be subject to breakage? 29 CFR 1910.133(a)(1)

☒ Are employees who need corrective lenses (glasses or contact lenses) in working environments having harmful exposures required to wear only approved safety glasses, protective goggles, or use other medically approved precautionary procedures? 29 CFR 1910.134(a)(3)

☒ Is appropriate foot protection required where there is the risk of foot injuries? 29 CFR 1910.133(a)(4); 133(a)(5)

☒ Is appropriate hand protection required where there is the risk of hand injury? 29 CFR 1910.133(a)(11)

☒ Are hard hats provided and worn where danger of falling objects exists? 29 CFR 1910.133(a)(11)

☒ Are hard hats inspected periodically for damage to the shell and suspension system? 29 CFR 1910.133(b)

Air Emissions

☒ If welding creates hazardous air emissions, is the welding area appropriately marked to indicate this? 29 CFR 1910.252(2)(w)(A)—(C)

☒ If welding creates hazardous air emissions, are ventilation or local exhaust systems been provided to keep fumes below the maximum allowable concentrations? 29 CFR 1910.252(c)(ii)

Fire Prevention

☒ Are precautions taken to prevent the mixture of air or oxygen with flammable gases, except at a burner or in a standard torch? 29 CFR 1910.253(a)(11)

☒ Are signs reading "DANGER NO SMOKING, MATCHES, OR OPEN LIGHTS" or the equivalent, posted in welding areas? 29 CFR 1910.253(c)(7)

☒ Are provisions made to prevent damage to valves when a regulator is removed? 29 CFR 1910.253(b)(5)(iii)(A)

☒ When welding is done on metal walls, are precautions taken to protect combustibles on the other side? 29 CFR 1910.252(a)(2)(v)

☒ Before hot work is begun, are used drums, barreled, tanks, and other containers so thoroughly cleaned that no substances remain that could explode, ignite, or produce toxic vapors? 29 CFR 1910.252(a)(5)(ii)

☒ If welding gases are stored, are oxygen and acetylene separated by a 5-foot noncombustible barrier? 29 CFR 1910.253(b)(4)(v)(ii)(ii)

☒ Are combustible scrap, debris, and waste stored safely and removed from the work site promptly? 29 CFR 1910.252(b)(3)(ii), (vi), (vii)(C)

☒ Are fire watchers assigned when welding or cutting is performed in locations where a serious fire might develop? 29 CFR 1910.252(b)(2)(v)

Fire Alarm Systems

☒ If you have a supervised fire alarm system, is it tested bimonthly? 29 CFR 1910.165(g)(2)

☒ If you have a supervised employee alarm system (that is, doth the alarm have a device that indicates system malfunction), is it tested yearly? 29 CFR 1910.165(d)(4)

Portable Fire Extinguishers

☒ Are portable fire extinguishers mounted, located, and identified so that they are readily accessible to employees? 29 CFR 1910.157(c)(1)

☒ Are all fire extinguishers inspected and recharged regularly, and noted on the inspection tag? 29 CFR 1910.157(a)

☒ Are portable fire extinguishers provided in adequate number and type? 29 CFR 1910.157(d)

Aisles/Housekeeping

☒ Are aisles marked? 29 CFR 1910.223(b)(2)

☒ Are aisle widths maintained? 29 CFR 1910.223(b)(1)

☒ Are aisles in good condition? 29 CFR 1910.223(b)(1)

☒ Are aisles marked? 29 CFR 1910.223(b)(1)

☒ Are work areas clean? 29 CFR 1910.223(a)

Repairs/corrections must be completed by (date) ____________________________ Date: ____________________________

Repairs/corrections from above have been done.

Supervisor: ____________________________ Date: ____________________________ Page: ______ of ______
SUBJECT: WELDING TECHNICIAN

TIME: 4 HOURS

DUTY: WORK ETHICS

TASK: Display a Neat and Clean Workplace

OBJECTIVE(S):

Upon completion of this unit the student will be able to:

A. Understand the rationale for a clean workplace; and,
B. Apply the principles of planning to the layout of a safe and well-arranged area.

INSTRUCTIONAL MATERIALS:

MASTER Handout No. 1 (WLD-C4-HO1)
MASTER Handout No. 2 (WLD-C4-HO2)

REFERENCES

TEXT:

OTHER:

Specific Company Safety Policy and Procedures Manual
The Ethics of Excellence, Price Prichett, Dallas, TX: Prichett and Associates, Latest Edition
STUDENT PREPARATION:

Student must demonstrate appropriate communication skills and understand principles of basic physical science and mathematics as verified by placement test or completion of required prerequisite courses. Student must complete the following modules:

- **WLD-C1** “Be prompt and on the Job in Accordance with Work Schedule”
- **WLD-C2** “Value Honest Work Ethics, Dedication, and Responsibility in the Workplace”
- **WLD-C3** “Demonstrate High Moral Values”

INTRODUCTION:

The course introduction will include:
- Overview of the need for safety and proper use/maintenance of tools in the workplace
- Understand that welding is a hazardous occupation that requires exceptional skill in organizing the workplace due to the scope of work and multiple processes and the wide variety of tools that are involved

PRESENTATION OUTLINE:

**Instructional Topics:**
1. Locating and storing tools, fixtures, and raw materials (metals, electrodes, etc.) for efficiency
2. Scheduling of time for cleanup of area and preventive maintenance of tools
3. Scheduling preventive maintenance of machines and apparatus
4. Storage and work accessibility of gases, hoses, and regulators used in welding processes
5. Disposal of generated waste or scrap metal
6. Cleaning methods and tools in support of shop operation

**Student Activities:**
1. Students will inventory, reorganize, and clean a welding shop in disarray
2. A discussion on “lessons learned” will follow

PRACTICAL APPLICATION:

The use of a disciplined and intelligent approach to workplace layout and maintenance is learned by practice, trial, and errors that must not involve hazardous mistakes. Prescriptive solutions will not always be followed if the student is not convinced of their necessity.
EVALUATION AND/OR VERIFICATION:

Student will assess and evaluate the need for a detailed clean-up of the workplace following a welding exercise; go through equipment shut down and preventive maintenance; and lay out tools, equipment, and raw materials for work plan of the following day.

SUMMARY:

Welders need to follow a disciplined and professional approach to layout and maintenance of the workstation. The alternatives to the professional approach are poor planning, lower production rates, less quality, and even greater hazard for accidents and fires.

NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-C05) dealing with practicing careful use and maintenance of tools and equipment.
WLD-C4-HO1
Display a Neat and Clean Workplace
Attachment 1: MASTER Handout No. 1

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Understand the rationale for a clean workplace; and,
B. Apply the principles of planning to the layout of a safe and well-arranged area.

PRESENTATION OUTLINE:

Instructional Topics:
1. Locating and storing tools, fixtures, and raw materials (metals, electrodes, etc.) for efficiency

21 Are approved safety glasses required to be worn at all times in areas when there is a risk of eye injuries such as punctures, abrasions, contusions, or burns?
[29 CFR 1910.133(a)(2)] □ YES □ NO

22 Are appropriate safety glasses, face shields, etc., used while using hand tools or equipment which might produce flying materials or be subject to breakage?
[29 CFR 1910.133(a)(1)] □ YES □ NO
Welding

- Are only authorized and trained personnel permitted to use welding, cutting or brazing equipment? 29 CFR 1910.225(a)(2)(iii)(C)
- Does each operator have a copy of the appropriate operating instructions and are they directed to follow them? 29 CFR 1910.225(a)(4), (d)(6), (f)(7)(A)
- Is red used to identify acetylene (and other fuel-gas) hose, green for oxygen hose, and black for inert gas and air hose? 29 CFR 1910.225(e)(5)(ii)
- Are pressure-reducing regulators used only for the gas and pressures for which they are intended? 29 CFR 1910.225(e)(6)(ii)
- Is a check made for appropriate ventilation in and where welding or cutting is performed? 29 CFR 1910.225(c)(1)(ii)(A), (2)(13), (b)(4)(i)
- When working in confined places, are environmental monitoring tests taken and means provided for quick removal of welders in case of an emergency? 29 CFR 1910.223(c)(4)

Equipment

- Are only approved apparatus (torches, regulators, pressure-reducing valves, acetylene generators, manifolds) used? 29 CFR 1910.225(a)(3)
- Is open circuit (No Load) voltage of arc welding and cutting machines as low as possible and not in excess of the recommended limits? 29 CFR 1910.254(b)(3)(iii)(v)
- Is grounding of the welding machine frame and safety ground connections of portable machines checked periodically? 29 CFR 1910.245(d)(3); .255(b)(9), (c)(6)

Equipment Markings

- Is red used to identify acetylene (and other fuel-gas) hose, green for oxygen hose, and black for inert gas and air hose? 29 CFR 1910.233(e)(5)(i)

Compressed Gas Cylinder Management

- Are compressed gas cylinders regularly examined for obvious signs of defects, deep rusting, or leakage? 29 CFR 1910.225(d)(4); .255(e)
- Is care used in handling and storage of cylinders, safety valves, relief valves, etc. to prevent damage? 29 CFR 1910.223 (b)(5)(iii)(B)
- Are liquified gases stored and shipped valve-end up with valve covers in place? 29 CFR 1910.225(b)(5)(iii)(A)
- Before a regulator is removed, is the valve closed and gas released from the regulator? 29 CFR 1910.225(b)(5)(iii)(D)
- Are cylinders, cylinder valves, couplings, regulators, hoses, and apparatus kept free of oil or greasy substances? 29 CFR 1910.225(b)(5)(ii)
- Are the cylinders kept away from elevators, stairs, or doorways? 29 CFR 1910.225(b)(2)(ii)
- Is it prohibited to use cylinders as rollers or supports? 29 CFR 1910.225(b)(5)(ii)(A)
- Is care taken not to drop or strike cylinders? 29 CFR 1910.223(b)(5)(ii)(B)
- Unless secured on special trucks, are regulators removed and valve-protection caps put in place before moving cylinders? 29 CFR 1910.225(b)(2)(iii)
- Do cylinders without fixed hand wheels have keys, handles, or non-adjustable wrenches on stem valves when in service? 29 CFR 1910.225(b)(5)(ii)(E)
- Are fuel gas cylinders and oxygen cylinders separated by distance, fire resistant barriers, etc., while in storage? 29 CFR 1910.223(b)(4)(ii)

Personal Protective Equipment

- Is PPE functional and in good repair? Does it have ANSI or ASTM specifications marked on it? 29 CFR 1910.132(e)
- Are all employees required to use personal protective clothing and equipment when handling chemicals (gloves, eye protection, respirators, etc.)? 29 CFR 1910.132(a)
- Are employees exposed to the hazards created by welding, cutting, or brazing operations protected with personal protective equipment and clothing? 29 CFR 1910.225(b)(3)
- Is personal protective equipment provided and are all employees required to use PPE as needed to protect against eye and face injury? 29 CFR 1910.133(a); .135(a)(1)
- Are protective goggles or face shields provided and worn where there is any danger of flying particles or corrosive materials? 29 CFR 1910.133(a)(1)
- Are approved safety glasses required to be worn at all times in areas where there is a risk of eye injuries such as punctures, abrasions, contusions, or burns? 29 CFR 1910.133(a)(2)
- Are appropriate safety glasses, face shields, etc., used while using hand tools or equipment which might produce flying materials or be subject to breakage? 29 CFR 1910.133(a)(1)
- Are employees who need corrective lenses (glasses or contacts) in working environments having harmful exposures required to wear only approved safety glasses, protective goggles, or use other medically approved precautionary procedures? 29 CFR 1910.133(a)(3)
- Is appropriate loose clothing required where there is the risk of fire injury? 29 CFR 1910.133(a); .135(a)
- Is appropriate hand protection required where there is the risk of hand injury? 29 CFR 1910.133(a); .135(a)
- Are hard hats provided and worn where danger of falling objects exists? 29 CFR 1910.133(a)(1)
- Are hard hats inspected periodically for damage to the shell and suspension system? 29 CFR 1910.133(b)

Air Emissions

- If welding creates hazardous air emissions, is the welding area appropriately marked to indicate this? 29 CFR 1910.225(b)(iv)(A)-(C)
- If welding creates hazardous air emissions, have ventilation or local exhaust systems been provided to keep fumes below the maximum allowable concentrations? 29 CFR 1910.225(c)(iii)

Fire Prevention

- Are precautions taken to prevent the mixture of air or oxygen with flammable gases, except at a burner or in a standard torch? 29 CFR 1910.233(a)(1)
- Are signs reading "DANGEROUS NO SMOKING, MATCHES, OR OPEN LIGHTS" or the equivalent, posted in welding areas? 29 CFR 1910.225(b)(5)(ii)(B)
- When welding is done on metal walls, are precautions taken to protect combustibles on the other side? 29 CFR 1910.225(a)(2)(x)
- Before hot work is begun, are used drums, barrels, tanks, and other containers so thoroughly cleaned that no substances remain that could explode, ignite, or produce toxic vapors? 29 CFR 1910.225(a)(2)(x)
- If welding gases are stored, are oxygen and acetylene separated by a 5-foot non-combustible barrier? 29 CFR 1910.225(b)(4)(ii)-(iii)
- Are fire watches assigned when welding or cutting is performed in locations where a serious fire might develop? 29 CFR 1910.225(a)(2)(x)(A), (d)(4)(iv)

Fire Alarm Systems

- If you have a supervised fire alarm system, is it tested bimonthly? 29 CFR 1910.165(b)(2)
- If you have a supervised employee alarm system (that is, does the alarm have a device that indicates system malfunction), is it tested yearly? 29 CFR 1910.165(d)(4)

Portable Fire Extinguishers

- Are appropriate fire extinguishers mounted, located, and identified so that the fire is accessible to employees? 29 CFR 1910.157(c)(1)
- Are all fire extinguishers inspected and recharged regularly, and noted on the inspection tag? 29 CFR 1910.157(a)
- Are portable fire extinguishers provided in adequate number and type? 29 CFR 1910.157(c)

Alates/Housekeeping

- Are aisles marked? 29 CFR 1910.122(b)(2)
- Are aisle widths maintained? 29 CFR 1910.222(b)(1)
- Are aisles in good condition? 29 CFR 1910.222(b)(1)
- Are work areas clean? 29 CFR 1910.22(a)
WELDER SERIES
MASTER Technical Module No. WLD-C05

SUBJECT: WELDING TECHNICIAN TIME: 4 HOURS

• DUTY: WORK ETHICS
• TASK: Practice Careful Use and Maintenance of Tools and Equipment

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Understand that careful use means the conduct of safe welding operations with proper tools; and,
B. Understand that preventive maintenance means daily checkout, troubleshooting, and clean-up of equipment and surrounding area.

INSTRUCTIONAL MATERIALS:

MASTER Handout No. 1 (WLD-C5-H01)
MASTER Handout No. 2 (WLD-C5-H02)

REFERENCES:

TEXT:

OTHER:
Specific Company Safety Policy and Procedures Manual
The Ethics of Excellence, Price Prichett, Dallas, TX: Prichett and Associates, Latest Edition
STUDENT PREPARATION:

Student must demonstrate appropriate communication skills and understand principles of basic physical science and mathematics as verified by placement test or completion of required prerequisite courses. Student must complete the following modules:

- **WLD-C1** “Be Prompt and on the Job in Accordance With Work Schedule”
- **WLD-C2** “Value Honest Work Ethics, Dedication, and Responsibility in the Workplace”
- **WLD-C3** “Demonstrate High Moral Values”
- **WLD-C4** “Display a Neat and Clean Workplace”

INTRODUCTION:

An overview of the welder’s extensive scope of responsibilities with scheduling, inventory, classification and maintenance of tools, shop equipment, welding equipment, gases, and regulators.

PRESENTATION OUTLINE:

A. Classification of tools by intended purpose or use
B. Specified location of tools and equipment to perform the scope of work
C. Check-out of tools and equipment prior to each shift
D. Reporting of deficiencies, tagging, or replacement of equipment
E. Minor repairs

PRACTICAL APPLICATION:

Student will organize, inspect, and use tools and equipment in a safe and efficient manner

EVALUATION AND/OR VERIFICATION:

Students will inventory, inspect, and lay out the contents of a comprehensive welding shop truck or mobile unit for specified operations

SUMMARY:

The welder is also a multi-skilled specialist in the use and maintenance of shop tools and equipment. He must also apply a structured and disciplined approach to safety, location, maintenance, and availability.

NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-C6) dealing with being committed to excellence and quality.
OBJECTIVE(S):

Upon completion of this unit the student will be able to:

A. Understand that careful use means the conduct of safe welding operations with proper tools; and,

B. Understand that preventive maintenance means daily checkout, troubleshooting, and clean-up of equipment and surrounding area.

MODULE OUTLINE:

A. Classification of tools by intended purpose or use
B. Specified location of tools and equipment to perform the scope of work
C. Check-out of tools and equipment prior to each shift
D. Reporting of deficiencies, tagging, or replacement of equipment
E. Minor repairs

Audit Item/Practice | Check (✓) if Item/Practice not in compliance

Welding

☐ Are only authorized and trained personnel permitted to use welding, cutting or brazing equipment? 29 CFR 1910.225(a)(2)(ii)(C)
☐ Does each operator have a copy of the appropriate operating instructions and are they directed to follow them? 29 CFR 1910.225(a)(4), (d)(6), (f)(7)(A)
☐ Is red used to identify acetylene (and other fuel-gas) hose, green for oxygen hose, and black for inert gas and air hose? 29 CFR 1910.225(e)(5)(i)
☐ Are pressure-reducing regulators used only for the gas and pressures for which they are intended? 29 CFR 1910.225(e)(6)(i)
☐ Is a check made for appropriate ventilation in and where welding or cutting is performed? 29 CFR 1910.225(c)(1)(ii), (2)-(13), (b)(4)(G)
☐ When working in confined spaces, are environmental monitoring tests taken and means provided for quick removal of welders in case of an emergency? 29 CFR 1910.225(c)(4)

Equipment

☐ Are only approved apparatus (torches, regulators, pressure-reducing valves, acetylene generators, manifolds) used? 29 CFR 1910.225(a)(3)
☐ Is open circuit (No Load) voltage of arc welding and cutting machines as low as possible and not in excess of the recommended limits? 29 CFR 1910.225(b)(3)(i)-(iv)
☐ Is grounding of the welding machine frame and safety ground connections of portable machines checked periodically? 29 CFR 1910.225(d)(3), 255(b)(9), (c)(6)

Equipment Markings

☐ Is pressed to identify acetylene (and other fuel-gas) hose, green for oxygen hose, and black for inert gas and air hose? 29 CFR 1910.225(e)(5)(i)

Compressed Gas Cylinder Management

☐ Are compressed gas cylinders regularly examined for obvious signs of defects, decay, or leakage? 29 CFR 1910.225(d)(4)(4), 255(e)
☐ Is care used in handling and storage of cylinders, safety valves, relief valves, etc., to prevent damage? 29 CFR 1910.225(b)(2), (b)(3)(B)
☐ Are liquefied gases stored and shipped valve-end up with valve covers in place? 29 CFR 1910.225(b)(6)(i)(A)
☐ Before a regulator is removed, is the valve closed and gas released from the regulator? 29 CFR 1910.225(b)(5)(6)(D)
☐ Are cylinders, cylinder valves, couplings, regulators, hoses, and apparatus kept free of oil or greasy substances? 29 CFR 1910.225(b)(5)(i)(A)
☐ Are the cylinders kept away from elevators, stairs, or gangways? 29 CFR 1910.225(b)(2)(G)
☐ Is it prohibited to use cylinders as rollers or supports? 29 CFR 1910.225(b)(3)(i)(K)
☐ Is care taken not to drop or strike cylinders? 29 CFR 1910.225(b)(5)(i)(B)
☐ Unless secured on special trucks, are regulators removed and valve-protection caps put in place before moving cylinders? 29 CFR 1910.225(b)(5)(ii)(D)
☐ Do cylinders without fixed hand wheels have keys, handles, or non-adjustable wrenches on stem valves when in service? 29 CFR 1910.225(b)(5)(i)(E)
☐ Are fuel gas cylinders and oxygen cylinders separated by distance, fire resistant barriers, etc., while in storage? 29 CFR 1910.225(b)(4)(ii)

Personal Protective Equipment

☐ Is PPE functional and in good repair? Does it have ANSI or ASTM specifications marked on it? 29 CFR 1910.132(a)
☐ Are all employees required to use personal protective clothing and equipment when handling chemicals (gloves, eye protection, respirators, etc.)? 29 CFR 1910.132(a)
☐ Are employees exposed to the hazards created by welding, cutting, or brazing operations protected with personal protective equipment and clothing? 29 CFR 1910.225(b)(3)
☐ Is personal protective equipment provided and are all employees required to use PPE as needed to protect against eye and face injury? 29 CFR 1910.129(a); .133(a)(1)
☐ Are protective goggles or face shields provided and worn where there is any danger of flying particles or corrosive materials? 29 CFR 1910.133(a)(1)
☐ Are approved safety glasses required to be worn at all times in areas where there is a risk of eye injuries such as punctures, abrasions, contusions, or burns? 29 CFR 1910.133(a)(2)
☐ Are appropriate safety glasses, face shields, etc., used while using hand tools or equipment which might produce flying materials or be subject to breakage? 29 CFR 1910.133(a)(1)
☐ Are employees who need corrective lenses (glasses or contacts) in working environments having harmful exposures required to wear only approved safety glasses, protective goggles, or use other medically approved precautionary procedures? 29 CFR 1910.133(a)(3)
☐ Is appropriate personal protection required where there is the risk of foot injuries? 29 CFR 1910.132(a)(1).136(a)
☐ Is appropriate hand protection required where is the risk of hand injury? 29 CFR 1910.132(a)(1)
☐ Are hard hats provided and worn where danger of falling objects exists? 29 CFR 1910.135(a)(1)
☐ Are hard hats inspected periodically for damage to the shell and suspension system? 29 CFR 1910.135(b)

Air Emissions

☐ If welding creates hazardous air emissions, is the welding area appropriately marked to indicate this? 29 CFR 1910.225(c)(1)(ii)-C
☐ If welding creates hazardous air emissions, have ventilation or local exhaust systems been provided to keep fumes below the maximum allowable concentrations? 29 CFR 1910.225(c)(9)

Fire Prevention

☐ Are precautions taken to prevent the mixture of air or oxygen with flammable gases, except at a burner or in a standard torch? 29 CFR 1910.225(a)(1)
☐ Are signs reading "DANGER NO SMOKING, MATCHES, OR OPEN LIGHTS" or the equivalent, posted in welding areas? 29 CFR 1910.132(a)
☐ When welding is done on metal walls, are precautions taken to protect combustibles on the other side? 29 CFR 1910.225(d)(1)(x)
☐ Before hot work is begun, are used drums, barrels, tanks, and other containers so thoroughly cleaned that no substances remain that could explode, ignite, or produce toxic vapors? 29 CFR 1910.225(b)(3)(i)(G)
☐ If welding gases are stored, are oxygen and acetylene separated by a 5-foot noncombustible barrier? 29 CFR 1910.225(b)(4)(k)(ii)
☐ Are combustible scrap, debris, and waste stored safely and removed from the work site promptly? 29 CFR 1910.225(a)(22)(D), (V), (W), (C)(1)(C)
☐ Are fire watchers assigned when welding or cutting is performed in locations where a serious fire might develop? 29 CFR 1910.225(a)(22)(D), (G)(3)(A), (D)(4)(IV)

Fire Alarm Systems

☐ If you have a non-supervised fire alarm system, is it tested bimonthly? 29 CFR 1910.165(d)(2)
☐ If you have a supervised employee alarm system (that is, does the alarm have a device that indicates system malfunction), is it tested yearly? 29 CFR 1910.165(d)(4)

Portable Fire Extinguishers

☐ Are appropriate fire extinguishers mounted, located, and identified so that they are readily accessible to employees? 29 CFR 1910.157(c)(1)
☐ Are all fire extinguishers inspected and recharged regularly, and noted on the inspection tag? 29 CFR 1910.157(a)
☐ Are portable fire extinguishers provided in adequate number and type? 29 CFR 1910.157(d)

Aisles/Housekeeping

☐ Are aisles marked? 29 CFR 1910.222(b)(2)
☐ Are aisle widths maintained? 29 CFR 1910.222(b)(1)
☐ Are aisles in good condition? 29 CFR 1910.222(b)(1)
☐ Are work areas clean? 29 CFR 1910.222(a)

SUBJECT: WELDING TECHNICIAN  TIME: 3 HOURS

DUTY: WORK ETHICS

TASK: Be Committed to Excellence and Quality

OBJECTIVE(S):

Upon completion of this unit the student will be able to:

A. Practice the selection and use of the right tools for the right job at the right time in the right location;
B. Understand the need for precision and quality in products produced or services delivered; and,
C. Be motivated to achieve only the highest quality through continuous improvement.

INSTRUCTIONAL MATERIALS:

MASTER Handout No. 1 (WLD-C6-H01)
MASTER Handout No. 2 (WLD-C6-H02)

REFERENCES:

TEXT:

OTHER:

Specific Company Safety Policy and Procedures Manual
The Ethics of Excellence, Price Prichett, Dallas, TX: Prichett and Associates, Latest Edition
STUDENT PREPARATION:

Student must demonstrate appropriate communication skills and understand principles of basic physical science and mathematics as verified by placement test or completion of required prerequisite courses. Student must complete the following modules:

- **WLD-C1**  "Be Prompt and on the Job in Accordance With Work Schedule"
- **WLD-C2**  "Value Honest Work Ethics, Dedication, and Responsibility in the Workplace"
- **WLD-C3**  "Demonstrate High Moral Values"
- **WLD-C4**  "Display a Neat and Clean Workplace"
- **WLD-C5**  "Practice Careful Use and Maintenance of Tools and Equipment"

INTRODUCTION:

Commitment to excellence is analogous to continued professional effort to achieve a scientific understanding and control of variables in the welding processes. There is also a need for continuous study, practice, and application of skills.

PRESENTATION OUTLINE:

A. Problem solving for welders  
B. Benchmarking with the best  
C. Continuous improvement methods for welders  
D. Control of variables in the welding processes  
E. Verifications and inspections for quality weldments

PRACTICAL APPLICATION:

There is proof that welding is a scientific enterprise, but is practiced as a highly-skilled artisan craft based upon techniques and skills that benefit from continuous improvement.

EVALUATION AND/OR VERIFICATION:

Written examination on practical quality methods as used by welding professionals

SUMMARY:

Welders achieve quality by scientific job planning and analysis; job layout, fixturing, and measurements; selection of the right methods, processes, and raw materials for the job; selection and preparation of base materials; application of filler metals, shielding gases (as
appropriate); fuel gas mixtures or voltage/amperage combinations, appropriate electrodes, alloys; and use of superb, individually applied, techniques of welding.

NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-C7) dealing with presenting a good company image in attire and attitude.
OBJECTIVE(S):

Upon completion of this unit the student will be able to:

A. Practice the selection and use of the right tools for the right job at the right time in the right location;

B. Understand the need for precision and quality in products produced or services delivered; and,

C. Be motivated to achieve only the highest quality through continuous improvement.

MODULE OUTLINE:

A. Problem solving for welders
B. Benchmarking with the best
C. Continuous improvement methods for welders
D. Control of variables in the welding processes
E. Verifications and inspections for quality weldments

1. SUBJECT: WELDING TECHNICIAN TIME: 3 HOURS

- DUTY: WORK ETHICS
- TASK: Present a Good Company Image in Attire and Attitude

OBJECTIVE(S):

Upon completion of this unit the student will be able to:

A. Understand how impressions and public images are important to product success; and,

B. Understand the significance of company employee attitude, as displayed in public, that may convey lack of respect and concern for customers perceptions.

INSTRUCTIONAL MATERIALS:

MASTER Handout No. 1 (WLD-C7-HO1)
MASTER Handout No. 2 (WLD-C7-HO2)

Specific Company Safety Policy and Procedures Manual
The Ethics of Excellence, Price Prichett, Dallas, TX: Prichett and Associates, Latest Edition
STUDENT PREPARATION:

Student must demonstrate appropriate communication skills and understand principles of basic physical science and mathematics as verified by placement test or completion of required prerequisite courses. Student must complete the following modules:

- WLD-C1 "Be Prompt and on the Job in Accordance With Work Schedule"
- WLD-C2 "Value Honest Work Ethics, Dedication, and Responsibility in the Workplace"
- WLD-C3 "Demonstrate High Moral Values"
- WLD-C4 "Display a Neat and Clean Workplace"
- WLD-C5 "Practice Careful Use and Maintenance of Tools and Equipment"
- WLD-C6 "Be Committed to Excellence and Quality"

INTRODUCTION:

An overview on the need for professionals to present themselves in appropriate attire, and appropriate demeanor that demonstrates an attitude of dedication to their profession as well as the production of the highest quality products.

PRESENTATION OUTLINE:

1. Welder clothing and protective equipment
2. Actions of a professional versus carefree “party animal” caricature
3. Implications for company reputation and liability if customer has wrong impression of welder
4. Attitudes and demeanor that affect customer opinion of products and services
5. Appearance of equipment or mobile welding truck that influences customer opinion
6. Appropriate use of company logo and markings
7. Inappropriate clothing, bumper stickers, and markings

PRACTICAL APPLICATION:

Assess impact upon company reputation if welders show disregard for personal and public safety; displays bad attitude or demeanor toward customer, product, or company; or, uses unclean, unmaintained equipment.

EVALUATION AND/OR VERIFICATION:

Interview customers concerning their impressions of welder activities on their premises and assess the probability of repeat business from customers interviewed.
SUMMARY:

A good product or service, delivered by employee with carefree attitude, driving in a reckless manner in a company truck, with offensive clothing, caps, or bumper stickers, makes an unforgettable impression on the customer. Some of these impressions may be difficult to overcome.

NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-C08) dealing with supporting a positive work environment.
OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Understand how impressions and public images are important to product success; and,
B. Understand the significance of company employee attitude, as displayed in public, that may convey lack of respect and concern for customers perceptions.

MODULE OUTLINE:

| Equipment |
|------------------|------------------|
| ☐ Are only approved apparatus (torches, regulators, pressure-reducing valves, acetylene generators, manifolds) used? 29 CFR 1910.252(a)(9) |
| ☐ Is open circuit (No Load) voltage of arc welding and cutting machines as low as possible and not in excess of the recommended limits? 29 CFR 1910.254(b)(3)(i)–(iv) |
| ☐ Is grounding of the welding machine frame and safety ground connections of portable machines checked periodically? 29 CFR 1910.254(d)(3); .255(b)(9), (c)(6) |

| Equipment Markings |
|------------------|------------------|
| ☐ Is red used to identify acetylene (and other fuel-gas) hose, green for oxygen hose, and black for inert gas and air hose? 29 CFR 1910.252(e)(5)(i) |
| ☐ Are empty compressed gas cylinders appropriately marked and their valves closed? 29 CFR 1910.101(b); .253(b)(1)(c), (2)(d), (g)(5)(i) |
| ☐ Are compressed gas cylinders regularly examined for obvious signs of defects, deep rusting, or leakages? 29 CFR 1910.252(d)(4); .255(e) |
| ☐ Is care used in handling and storage of cylinders, safety valves, relief valves, etc., to prevent damage? 29 CFR 1910.253(b)(2)(i), (b)(3)(b) |
| ☐ Are liquidated gases stored and shipped valve-end up with valve covers in place? 29 CFR 1910.252(b)(5)(d)(i)(A) |
| ☐ Before a regulator is removed, is the valve closed and gas released from the regulator? 29 CFR 1910.253(b)(5)(i)(b)(1) |
| ☐ Are cylinders, cylinder valves, couplings, regulators, hoses, and apparatus kept free of oil or greasy substances? 29 CFR 1910.252(b)(5)(ii) |
| ☐ Are the cylinders kept away from elevators, stairs, or gangways? 29 CFR 1910.253(b)(2)(i) |
| ☐ Is it prohibited to use cylinders as rollers or supports? 29 CFR 1910.253(b)(5)(ii)(K) |
| ☐ Is care taken not to drop or strike cylinders? 29 CFR 1910.253(b)(5)(ii)(b) |
| ☐ Unless secured on special trucks, are regulators removed and valve-protection device put in place before moving cylinders? 29 CFR 1910.253(b)(5)(ii)(b) |
| ☐ Do cylinders without fixed hand wheels have keys, handles, or non-adjustable wrenches on stem valves when in service? 29 CFR 1910.252(b)(5)(ii)(E) |
| ☐ Are empty compressed gas cylinders appropriately marked and their valves closed? 29 CFR 1910.253(b)(2)(i), (2)(d), (g)(5)(ii) |
| ☐ Are fuel gas cylinders and oxygen cylinders separated by distance, fire resistant barriers, etc., while in storage? 29 CFR 1910.253(b)(4)(i)(ii) |

| Personal Protective Equipment |
|------------------|------------------|
| ☐ Is personal protective equipment provided and are all employees required to use it as needed to protect against eye and face injury? 29 CFR 1910.252(c) .133(a)(1) |
| ☐ Are protective goggles or face shields provided and worn where there is any danger of flying particles or corrosive materials? 29 CFR 1910.133(a)(1) |
| ☐ Are approved safety glasses required to be worn at all times in areas where there is a risk of eye injuries such as punctures, abrasions, contusions, or burns? 29 CFR 1910.133(a)(2) |
| ☐ Are appropriate safety glasses, face shields, etc., used while using hand tools or equipment which might produce flying materials or be subject to breakage? 29 CFR 1910.133(a)(1) |
| ☐ Are employees who need corrective lenses (glasses or contacts) in working environments having harmful exposures required to wear only approved safety glasses, protective goggles, or use other medically approved precautionary procedures? 29 CFR 1910.133(a)(3) |
| ☐ Is appropriate foot protection required where there is the risk of foot injuries? 29 CFR 1910.133(a); .135(a) |
| ☐ Is appropriate hand protection required where there is the risk of hand injury? 29 CFR 1910.132(a) |
| ☐ Is fire watchers assigned when welding or cutting is performed in locations where the equipment or materials which might produce flying materials or be subject to breakage are? 29 CFR 1910.132(a) |
| ☐ Are hard hats provided and worn where danger of falling objects exists? 29 CFR 1910.133(a)(1) |
| ☐ Are hard hats inspected periodically for damage to the shell and suspension system? 29 CFR 1910.133(b) |
| ☐ Is combustible scrap, debris, and waste stored safely and removed from the work site promptly? 29 CFR 1910.352(a)(2)(i), (v), (vi), (vi)(c) |
| ☐ Are fire watchers assigned when welding or cutting is performed in locations where there is a risk of eye injuries such as punctures, abrasions, contusions, or burns? 29 CFR 1910.133(a)(2) |
| ☐ Are approved safety glasses required to be worn at all times in areas where there is a risk of eye injuries such as punctures, abrasions, contusions, or burns? 29 CFR 1910.133(a)(2) |

WELDER SERIES
MASTER Technical Module No. WLD-C08

SUBJECT: WELDING TECHNICIAN TIME: 3 HOURS

- DUTY: WORK ETHICS
- TASK: Support a Positive Work Environment

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Demonstrate positive attitude and active in support of quality goals; and,
B. Share resources to support fellow workers and work teams.

INSTRUCTIONAL MATERIALS:

MASTER Handout No. 1 (WLD-C8-HO1)
MASTER Handout No. 2 (WLD-C8-HO2)

REFERENCES:

TEXT:

OTHER:
Specific Company Safety Policy and Procedures Manual
The Ethics of Excellence, Price Prichett, Dallas, TX: Prichett and Associates, Latest Edition
STUDENT PREPARATION:

Student must demonstrate appropriate communication skills and understand principles of basic physical science and mathematics as verified by placement test or completion of required prerequisite courses. Student must complete the following modules:

- **WLD-C1** "Be Prompt and on the Job in Accordance With Work Schedule"
- **WLD-C2** "Value Honest Work Ethics, Dedication, and Responsibility in the Workplace"
- **WLD-C3** "Demonstrate High Moral Values"
- **WLD-C4** "Display a Neat and Clean Workplace"
- **WLD-C5** "Practice Careful Use and Maintenance of Tools and Equipment"
- **WLD-C6** "Be Committed to Excellence and Quality"
- **WLD-C7** "Present a Good Company Image in Attire and Attitude"

INTRODUCTION:

Overview of methods for increasing employee participation by participative management, worker empowerment, team participation, and motivation for excellent performance of work.

PRESENTATION OUTLINE:

1. Definition of a positive work environment
2. Characteristics and indicators of a positive work environment versus a "negative" work environment
3. Worker attitudes and belief systems
4. Helping workers define needs and assisting workers to meet needs
5. Consensus on company goals and worker goals
6. The establishment of "win-win" situations for workers, work teams, and management.

PRACTICAL APPLICATION:

Discuss a case study of the employee owned enterprise, as compared to publicly held corporation of stockholders. Discuss the establishment of positive work environment in each example with similarity of methods and differences in motivational perspectives.

EVALUATION AND/OR VERIFICATION:

Students will compare personal goals with those of a typical enterprise; decide how their needs can be met; accept their responsibilities for participation; and discuss the advantages of a positive work environment.
SUMMARY:

Employees that participate in company planning and goal setting, and those that find that their needs are being met while linked to company success are most supportive of a positive work environment.

NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-C9) dealing with practicing a positive attitude.
OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Demonstrate positive attitude and active in support of quality goals; and,
B. Share resources to support fellow workers and work teams.

MODULE OUTLINE:

1. Definition of a positive work environment
2. Characteristics and indicators of a positive work environment versus a "negative" work environment
3. Worker attitudes and belief systems
4. Helping workers define needs and assisting workers to meet needs
5. Consensus on company goals and worker goals
6. The establishment of "win - win" situations for workers, work teams, and management.

WORKPLACE AUDIT / INSPECTION REPORT
Welding Area

Location: ____________________________

Audited by: __________________________

Date: __________________________

Audit Item/Practice | Check (✓) if item/Practice not in compliance |
--- | --- |
**Welding**
- Are only authorized and trained personnel permitted to use welding, cutting or brazing equipment? 29 CFR 1910.252(a)(2)(iii)(C)
- Does each operator have a copy of the appropriate operating instructions and are they directed to follow them? 29 CFR 1910.252(a)(4), (d)(6), (f)(7)(A)
- Is red used to identify acetylene (and other fuel-gas) hose, green for oxygen hose, and black for inert gas and air hose? 29 CFR 1910.253(e)(5)
- Are pressure-Reducing regulators used only for the gas and pressures for which they are intended? 29 CFR 1910.253(e)(6)(i)
- Is a check made for appropriate ventilation in and where welding or cutting is performed? 29 CFR 1910.252(c)(1)(B), (2)(13), (b)(4)(i)
- When working in confined places, are environmental monitoring tests taken and means provided for quick removal of welders in case of an emergency? 29 CFR 1910.252(c)(4)

**Equipment**
- Are only approved apparatus (torches, regulators, pressure-reducing valves, acetylene generators, manifolds) used? 29 CFR 1910.253(a)(3)
- Is open circuit (No Load) voltag of arc welding and cutting machines as low as possible and not in excess of the recommended limits? 29 CFR 1910.254(b)(3)(ii)(iv)
- Is grounding of the welding machine frame and safety ground connections of portable machines checked periodically? 29 CFR 1910.254(d)(3); .255(b)(9), (c)

**Equipment Markings**
- Is red used to identify acetylene (and other fuel-gas) hose, green for oxygen hose, and black for inert gas and air hose? 29 CFR 1910.253(e)(9)(i)

**Compressed Gas Cylinder Management**
- Is care used in handling and storage of cylinders, safety valves, relief valves, etc., to prevent damage? 29 CFR 1910.253(b)(4)(ii), (ii)(b)
- Are liquefied gases stored and shipped valve-end up with valve covers in place? 29 CFR 1910.253(b)(1)(ii)(A)
- Before a regulator is removed, is the valve closed and gas released from the regulator? 29 CFR 1910.253(b)(5)(ii)(D)
- Are cylinders, cylinder valves, couplings, regulators, hoses, and apparatus kept free of oily or greasy substances? 29 CFR 1910.253(b)(5)(i)
- Are the cylinders kept away from elevators, stairs, or gangways? 29 CFR 1910.253(b)(2)(ii)
- Is it prohibited to use cylinders as rollers or supports? 29 CFR 1910.253(b)(5)(ii)(C)
- Is care taken not to drop or strike cylinders? 29 CFR 1910.253(b)(5)(ii)(B)
- Unless secured on special trucks, are regulators removed and valve-protection caps put in place before moving cylinders? 29 CFR 1910.253(b)(5)(ii)(D)
- Do cylinders without fixed hand wheels have keys, handles, or non-adjustable wrenches on stem valves when in service? 29 CFR 1910.253(b)(5)(ii)(C)
- Are fuel gas cylinders and oxygen cylinders separated by distance, fire resistant barriers, etc., while in storage? 29 CFR 1910.253(b)(4)(ii)

**Personal Protective Equipment**
- Is PPE functional and in good repair? Does it have ANSI or ASTM specifications marked on it? 29 CFR 1910.132(a)
- Are all employees required to use personal protective clothing and equipment when handling chemicals (gloves, eye protection, respirators, etc.)? 29 CFR 1910.132(a)
- Are employees exposed to the hazards created by welding, cutting, or brazing operations protected with personal protective equipment and clothing? 29 CFR 1910.252(b)(3)
- Is personal protective equipment provided and are all employees required to use PPE as needed to protect against eye and face injury? 29 CFR 1910.132(a); 133(a)(1)
- Are protective goggles or face shields provided and worn where there is any danger of flying particles or corrosive materials? 29 CFR 1910.133(a)(1)
- Are approved safety glasses required to be worn at all times in areas where there is a risk of eye injuries such as punctures, abrasions, contusions, or burns? 29 CFR 1910.133(a)(2)
- Are approved safety glasses, face shields, etc., used while using hand tools or equipment which might produce flying materials or be subject to breakage? 29 CFR 1910.133(a)(1)
- Are employees who need corrective lenses (glasses or contacts) in working environments having harmful exposures required to wear only approved safety glasses, protective goggles, or use other medically approved precautionary procedures? 29 CFR 1910.133(a)(3)
- Is are appropriate tool protection required where there is the risk of tool injuries? 29 CFR 1910.132(a); 135(a)
- Is appropriate hand protection required where there is the risk of hand injury? 29 CFR 1910.132(a); 135(a)
- Are hard hats provided and worn where danger of falling objects exists? 29 CFR 1910.135(a)(1)
- Are hard hats inspected periodically for damage to the shell and suspension system? 29 CFR 1910.135(b)

**Fire Prevention**
- Are precautions taken to prevent the mixture of air or oxygen with flammable gases, except at a burner or in a standard torch? 29 CFR 1910.252(a)(11)
- Are signs reading "DANGER NO SMOKING. MATCHES. OR OPEN LIGHTS" or the equivalent, posted in welding areas? 29 CFR 1910.133(a)(2)
- When welding is done on metal walls, are precautions taken to protect combustibles on the other side? 29 CFR 1910.252(a)(2)(x)
- Before hot work is begun, are used drums, barrels, tanks, and other containers so thoroughly cleaned that no substances remain that could explode, ignite, or produce toxic vapors? 29 CFR 1910.252(a)(3)(i)
- If welding gases are stored, are oxygen and acetylene separated by a 5-foot noncombustible barrier? 29 CFR 1910.253(b)(4)(ii)(iii)
- Are combustible scrap, debris, and waste stored safely and removed from the work site promptly? 29 CFR 1910.02(1)(ii)(B), (iv), (vi)(C)(ii)
- Are fire watchmen assigned when welding or cutting is performed in locations where a serious fire might develop? 29 CFR 1910.252(a)(2)(B)(ii)(A), .(d)(4)(iv)

**Fire Alarm Systems**
- If you have a non-supervised fire alarm system, is it tested bimonthly? 29 CFR 1910.165(d)(2)
- If you have a supervised employee alarm system (that is, doth the alarm have a device that indicates system malfunction), is it tested yearly? 29 CFR 1910.165(d)(4)

**Portable Fire Extinguishers**
- Are portable fire extinguishers mounted, identified, and identified so that they are readily accessible to employees? 29 CFR 1910.157(e)(1)
- Are all fire extinguishers inspected and recharged regularly, and noted on the inspection tag? 29 CFR 1910.157(a)
- Are portable fire extinguishers provided in adequate number and type? 29 CFR 1910.157(d)

**Aisles/Housekeeping**
- Are work areas clean? 29 CFR 1910.22(a)

Page 443 of ___
SUBJECT: WELDING TECHNICIAN  

DUTY: WORK ETHICS  

TASK: Practice a Positive Attitude

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Understand basic needs of individuals and groups; and,
B. Understand the benefits of a positive approach to meeting those needs.

INSTRUCTIONAL MATERIALS:

MASTER Handout No. 1 (WLD-C9-H01)  
MASTER Handout No. 2 (WLD-C9-H02)

REFERENCES:

TEXT:

OTHER:

Specific Company Safety Policy and Procedures Manual  
The Ethics of Excellence, Price Prichett, Dallas, TX: Prichett and Associates, Latest Edition  
STUDENT PREPARATION:

Student must demonstrate appropriate communication skills and understand principles of basic physical science and mathematics as verified by placement test or completion of required prerequisite courses. Student must complete the following modules:

- WLD-C1 “Be Prompt and on the Job in Accordance With Work Schedule”
- WLD-C2 “Value Honest Work Ethics, Dedication, and Responsibility in the Workplace”
- WLD-C3 “Demonstrate High Moral Values”
- WLD-C4 “Display a Neat and Clean Workplace”
- WLD-C5 “Practice Careful Use and Maintenance of Tools and Equipment”
- WLD-C6 “Be Committed to Excellence and Quality”
- WLD-C7 “Present a Good Company Image in Attire and Attitude”
- WLD-C8 “Support a Positive Work Environment”

INTRODUCTION:

Overview of the perception of needs, how needs are reinforced by the “culture” of the individual, those he/she holds in high esteem, and the company. Development of positive goals that can be successful in meeting needs and avoiding of self-destructive behavior that can result in false pursuit of some form of “recognition” or “image.”

PRESENTATION OUTLINE:

1. Basic human needs as depicted in Maslow's hierarchy
2. Individual needs, family, and group needs
3. Importance of the relationships of honor and trust with others
4. The importance of recognition for a positive goal of a job well done versus recognition for being “bad” or “cool”
5. The company culture and individual acceptance or denial of this culture
6. Alternatives for the individual in denial of company culture to be discussed
7. Individual attitude toward the work, the workplace, and the co-workers
8. Attitude assessment, process and examples
9. Attitude change process and belief systems from the worker perspective

PRACTICAL APPLICATION:

Discuss case studies of worker attitudes and outcomes that result from positive and negative attitudes

EVALUATION AND/OR VERIFICATION:

Students will participate in an attitude survey process, study their attitudes as a group, and relate this to probabilities of individual and group success
SUMMARY:

Employees need to be equipped with a higher level of interpersonal skills and understanding than in the past, particularly with the advent of work teams and continuous improvement. If they understand themselves better, they will develop positive goals and reach those goals without seeking out destructive or “high risk” behavior patterns.

NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-D1) dealing with practicing being a good listener.
WLD-C9-HO1
Practice a Positive Attitude
Attachment 1: MASTER Handout No. 1

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Understand basic needs of individuals and groups; and,
B. Understand the benefits of a positive approach to meeting those needs.

PRESENTATION OUTLINE:

1. Basic human needs as depicted in Maslow’s hierarchy
2. Individual needs, family, and group needs
3. Importance of the relationships of honor and trust with others
4. The importance of recognition for a positive goal of a job well done versus recognition for being “bad” or “cool”
5. The company culture and individual acceptance or denial of this culture
6. Alternatives for the individual in denial of company culture to be discussed
7. Individual attitude toward the work, the workplace, and the co-workers
8. Attitude assessment, process and examples
9. Attitude change process and belief systems from the worker perspective
### Safety Incentives Program
#### General Safety Checklist

1. Are empty compressed gas cylinders appropriately marked and their valves closed?  
   [29 CFR 1910.253(b)(1)(ii), (5)(ii)(H)]  
   - YES [ ]  
   - NO [ ]

2. Are fuel gas cylinders and oxygen cylinders separated by distance, fire resistant barriers, etc., while in storage?  
   [29 CFR 1910.253(b)($)(iii)]  
   - YES [ ]  
   - NO [ ]

3. Does type of PPE used match the needs of current operations?  
   [29 CFR 1910.132(d)(1)(i)]  
   - YES [ ]  
   - NO [ ]

4. Is each work area adequately ventilated?  
   - YES [ ]  
   - NO [ ]

5. Are exhaust hazards controlled from forklifts or other gas, or diesel powered equipment?  
   [29 CFR 1910.1000(a)]  
   - YES [ ]  
   - NO [ ]

6. Is the facility free of environmental hazards – dust, chemicals, radiation, welding rays, heat, cold, or excessive noise – that result from working?  
   [29 USC 654, Sec. 5(a)(1)]  
   - YES [ ]  
   - NO [ ]

7. Are all hazardous chemicals appropriately labeled?  
   [29 CFR 1910.1200(f)(5)&(6)]  
   - YES [ ]  
   - NO [ ]

8. If hazardous waste is stored, are all hazardous waste requirements complied with?  
   - YES [ ]  
   - NO [ ]

9. Are rotating or moving parts of equipment guarded to prevent physical contact?  
   [29 CFR 1910.212(a)(1); 243]  
   - YES [ ]  
   - NO [ ]
10 Are grinders, saws, and similar equipment provided with appropriate safety guards?  
[29 CFR 1910.243(a)(1), (c)(1)-(4), (e)(1)(i)]  
☐ YES ☐ NO

11 Are power tools used with the correct shield, guard, or attachment recommended by the manufacturer?  
☐ YES ☐ NO

12 Are storage cabinets used to hold flammable liquids, labeled “Flammable-Keep Fire Away”?  
[29 CFR 1910.106(d)(3)(ii)]  
☐ YES ☐ NO

13 Are flammable liquids, such as gasoline, kept in an approved safety can?  
[29 CFR 1910.106(d)(2); 144(a)(1)]  
☐ YES ☐ NO

14 Are work areas clean?  
[29 CFR 1910.22(a)]  
☐ YES ☐ NO

15 Are work surfaces kept dry or are appropriate means taken to assure the surfaces are slip-resistant?  
[29 CFR 1910.22(a)(2)]  
☐ YES ☐ NO

16 Are all spilled materials or liquids cleaned up immediately?  
[29 CFR 1910.141(a)(3)(ii)]  
☐ YES ☐ NO

17 Are aisles kept clean and free of obstructions?  
[29 CFR 1910.22(b)(1)]  
☐ YES ☐ NO

18 Are fire aisles, access to stairways, and fire equipment kept clear?  
[29 CFR 1910.178(m)(14)]  
☐ YES ☐ NO

19 Are exits kept free of obstructions?  
[29 CFR 1910.36(d)(1)]  
☐ YES ☐ NO

20 Do you control dusts vapors, gases, fumes, smoke, solvents, or mists which may be generated in your workplace through general dilution or local exhaust ventilation systems?  
[29 CFR 1910.94(a)(2)(ii); (b)(2); (c)(2); (d)(1)(ii), (5), (6)]  
☐ YES ☐ NO

454
21 Are approved safety glasses required to be worn at all times in areas when there is a risk of eye injuries such as punctures, abrasions, contusions, or bums?  
[29 CFR 1910.133(a)(2)] □ YES □ NO

22 Are appropriate safety glasses, face shields, etc., used while using hand tools or equipment which might produce flying materials or be subject to breakage?  
[29 CFR 1910.133(a)(1)] □ YES □ NO

WELDER SERIES
MASTER Technical Module No. WLD-D01

SUBJECT: WELDING TECHNICIAN TIME: 2 HOURS

• DUTY: COMMUNICATION SKILLS
• TASK: Practice Being A Good Listener

OBJECTIVE(S):

Upon completion of this module the student will be able to:
A. Explain the preparations necessary to be an active listener;
B. Describe how to stay involved as a listener;
C. Discuss the importance of listening in the classroom; and,
D. List the barriers to becoming a good listener.

INSTRUCTIONAL MATERIALS:

TEXT:
Communicating Today, Zeuschner, Raymond, Allyn and Bacon, Needham, MA.,
MASTER Handout (WLD-D1-HO)

REFERENCES:

Modern Welding, Althouse, Turnquist, Bowditch, & Bowditch, The Goodheart-

STUDENT PREPARATION:

This module was designed to improve communications skills among welders. All students
will be able to relate to listening problems “other people” have. Students should come to
class with an open mind on this issue and be ready to actively participate in the
demonstrations.

INTRODUCTION:

This is Module D1 of the program for welders. It introduces the student to the vital role
communication skills play in accomplishing welding tasks. The module examines the first
requirement of good communications, being an effective listener.
PRESENTATION OUTLINE:

In this module students, seeking competency as an entry level welder, will receive:
1. A presentation on listening skills, including:
   A. Preparation for listening,
   B. Staying involved as a listener,
   C. Keeping an open mind,
   D. Eliminating barriers to listening.
2. A class discussion group in which every student participates as a speaker and an “active” listener. Each student will be asked to list the main point of every other student speaker.

PRACTICAL APPLICATION:

American technology has brought us to a new phase. We are entering an era of very rapid change often called “the information society”. Students seeking vocational skills must master the ability to communicate effectively in order to get and maintain employment in this competitive, constantly evolving work environment. Welders, in particular, need to listen to customers and supervisors as work specifications are being described.

EVALUATION AND/OR VERIFICATION:

At the conclusion of this module, written examination(s) or competency testing will be given to determine student progress.

SUMMARY:

This module introduces the student to the first, and most important step in communication: effective listening.

NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-D2) dealing with demonstrating good reading, comprehension and writing skills.
OBJECTIVE(S):

Upon completion of this module the student will be able to:
A. Explain the preparations necessary to be an active listener;
B. Describe how to stay involved as a listener;
C. Discuss the importance of listening in the classroom; and,
D. List the barriers to becoming a good listener.

MODULE OUTLINE:

In this module students, seeking competency as an entry level welder, will receive:

1. A presentation on listening skills, including:
   A. Preparation for listening,
   B. Staying involved as a listener,
   C. Keeping an open mind,
   D. Eliminating barriers to listening.

2. A class discussion group in which every student participates as a speaker and an “active” listener. Each student will be asked to list the main point of every other student speaker.
WELDER SERIES
MASTER Technical Module No. WLD-D02

SUBJECT: WELDING TECHNICIAN

TIME: 3 HOURS

- DUTY: COMMUNICATION SKILLS
- TASK: Demonstrate Good Reading, Comprehension and Writing Skills

OBJECTIVE(S):

Upon completion of this module the student will be able to:
A. Read and discuss technical documents on welding;
B. Define important technical welding terms;
C. Explain the need for, and use of, written technical materials; and,
D. Write technical notes, using complete sentences.

INSTRUCTIONAL MATERIALS:

TEXT:
MASTER Handout (WLD-D2-HO)

REFERENCES:

STUDENT PREPARATION:

Students should have previously completed the following Technical Modules:
WLD-D1 "Practice Being A Good Listener"

INTRODUCTION:

This is Module D2 of the course for welders. It provides exercises to assist the student in reading and comprehending technical manuals for welding. The exercises require written responses of the student, providing practice in writing effective technical notes in complete sentences.
PRESENTATION OUTLINE:

In this module students, seeking competency as an entry level welder, will receive:

1. Lecture(s) containing word exercises on how to read and comprehend technical welding materials.
2. Presentation of technical job functions, responsibilities, and tasks that need to be interpreted and written and transmitted to others.
3. Methods of definition, analysis, and language of the trade that conveys precise meaning.

PRACTICAL APPLICATION:

American technology has brought us to a new phase. We are entering an era of very rapid change often called “the information society”. Student will be assigned to write a summary of three of the technical welding exercises that will be presented by the instructor. They will need to interpret the technical terms and write the instructions in language that can be readily understood by others.

EVALUATION AND/OR VERIFICATION:

Each student and the instructor will evaluate the clarity of writing. Students will discuss the instructions if they were to be applied in the welding environment.

SUMMARY:

This module presents methods and exercises in reading and comprehending technical welding materials. Students are instructed in writing effective technical notes in summary exercises. Students seeking vocational skills must master the ability to communicate effectively in order to get and maintain employment in this competitive, constantly evolving work environment.

NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-D3) dealing with documenting manufacturing processes.
**WLD-D2-HO**

Demonstrate Good Reading, Comprehension and Writing Skills

Attachment 1: MASTER Handout

---

**OBJECTIVE(S):**

Upon completion of this module the student will be able to:

A. Read and discuss technical documents on welding;
B. Define important technical welding terms;
C. Explain the need for, and use of, written technical materials; and,
D. Write technical notes, using complete sentences.

---

**MODULE OUTLINE:**

In this module students, seeking competency as an entry level welder, will receive:

1. Lecture(s) containing word exercises on how to read and comprehend technical welding materials.
2. Presentation of technical job functions, responsibilities, and tasks that need to be interpreted and written and transmitted to others.
3. Methods of definition, analysis, and language of the trade that conveys precise meaning.
WELDER SERIES
MASTER Technical Module No. WLD-D03

SUBJECT: WELDING TECHNICIAN TIME: 3 HOURS

- DUTY: COMMUNICATION SKILLS
- TASK: Document Manufacturing Processes

OBJECTIVE(S):

Upon completion of this module the student will be able to:
A. Describe a simple welding manufacturing process;
B. Discuss the steps in a welding manufacturing process;
C. Define the terms in a welding manufacturing process; and,
D. When given specifications, document a welding manufacturing process.

INSTRUCTIONAL MATERIALS:

TEXT:
*Communicating Today*, Zeuschner, Raymond, Allyn and Bacon, Needham, MA.,
MASTER Handout (WLD-D3-HO)

REFERENCES:

*Modern Welding*, Althouse, Turnquist, Bowditch, & Bowditch, The Goodheart-

STUDENT PREPARATION:

Students should have previously completed the following Technical Modules:

- **WLD-D1** “Practice Being A Good Listener”
- **WLD-D2** “Demonstrate Good Reading, Comprehension and Writing Skills”

INTRODUCTION:

This is Module D3 of the program for welders. It presents the purpose and techniques for
documenting (welding) manufacturing processes.
PRESENTATION OUTLINE:

In this module students, seeking competency as an entry level welder, will receive:
1. Lecture on the purposes and techniques for documenting welding manufacturing processes.
2. A description of the layout of welding manufacturing work stations
3. A typical sequence of operations
4. Instructions on documenting a typical welding manufacturing process.

PRACTICAL APPLICATION:

Students will document a flow chart and fully describe a typical welding process.

EVALUATION AND/OR VERIFICATION:

Students will critique the work of others for clarity, completeness, technical adequacy, and format. They will also speculate on actions others may take when following the written directions or procedures offered by class members.

SUMMARY:

This module instructs students in documenting (welding) manufacturing processes using written practice exercises.

NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-D4) dealing with preparing a recommendation for continuous improvement.
OBJECTIVE(S):

Upon completion of this module the student will be able to:
A. Describe a simple welding manufacturing process;
B. Discuss the steps in a welding manufacturing process;
C. Define the terms in a welding manufacturing process; and,
D. When given specifications, document a welding manufacturing process.

MODULE OUTLINE:

In this module students, seeking competency as an entry level welder, will receive:
1. Lecture on the purposes and techniques for documenting welding manufacturing processes.
2. A description of the layout of welding manufacturing work stations
3. A typical sequence of operations
4. Instructions on documenting a typical welding manufacturing process.
WELDING TECHNICIAN

TIME: 5 HOURS

OBJECTIVE(S):

Upon completion of this module the student will be able to:
A. Describe the steps in a continuous improvement program;
B. Discuss the importance of communication in continuous improvement;
C. Outline the parts of a written recommendation; and,
D. Prepare the data for a continuous improvement recommendation.

INSTRUCTIONAL MATERIALS:

TEXT:

MASTER Handout (WLD-D4-HO)

REFERENCES:

STUDENT PREPARATION:

Students should have previously completed the following Technical Modules:

- WLD-D1 “Practice Being A Good Listener”
- WLD-D2 “Demonstrate Good Reading, Comprehension and Writing Skills”
- WLD-D3 “Document Manufacturing Processes”

INTRODUCTION:

This is Module D4 of the course Welder, Entry Level. It pertains to writing a continuous improvement recommendation for a job or process.
PRESENTATION OUTLINE:

I. Continuous Process Improvement
   A. Principles
      1. Sources
      2. Causes
      3. Statistical concept of variation vs. engineering concept
      4. Improving for stability
   
II. Structured Problem Solving
    A. Defining the problem
    B. Implementing containment actions
    C. Identifying root causes
    D. Developing and verifying the solution
       1. Implementing the solution
       2. Standardize the improvement

III. Quality Control
    A. History and concepts of Quality Control
       1. Corrective actions
       2. Measurements
       3. Data used
       4. Implementation
    B. Common investigative questions
    C. Sources of process variations

PRACTICAL APPLICATION:

Students will review assigned shops, facilities, and procedures for potential improvements, corrective actions, or recommendations for improvements will be made.

EVALUATION AND/OR VERIFICATION:

Students will read and evaluate the work of others. Finally, the instructor will provide an overall critique.

SUMMARY:

This module provides practical exercises in teaching students how to create written documentation of suggestions for corrective activities and continuous improvement.

NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-D5) dealing with preparing a summarized priority list of work responsibilities.
OBJECTIVE(S):

Upon completion of this module the student will be able to:
A. Describe the steps in a continuous improvement program;
B. Discuss the importance of communication in continuous improvement;
C. Outline the parts of a written recommendation; and,
D. Prepare the data for a continuous improvement recommendation.

MODULE OUTLINE:

I. Continuous Process Improvement
   A. Principles
      1. Sources
      2. Causes
      3. Statistical concept of variation vs. engineering concept
      4. Improving for stability

II. Structured Problem Solving
   A. Defining the problem
   B. Implementing containment actions
   C. Identifying root causes
   D. Developing and verifying the solution
      1. Implementing the solution
      2. Standardize the improvement

III. Quality Control
   A. History and concepts of Quality Control
      1. Corrective actions
      2. Measurements
      3. Data used
      4. Implementation
   B. Common investigative questions
   C. Sources of process variations
SUBJECT: WELDING TECHNICIAN  
TIME: 3 HOURS

DUTY: COMMUNICATION SKILLS

TASK: Prepare A Summarized Priority List Of Work Responsibilities

OBJECTIVE(S):

Upon completion of this module the student will be able to:

A. Explain the need for a priority list of work responsibilities;
B. Discuss how work responsibilities are determined; and,
C. Describe the steps in preparing a priority list of work responsibilities.

INSTRUCTIONAL MATERIALS:

TEXT:

MASTER Handout (WLD-D5-HO)

REFERENCES:

STUDENT PREPARATION:

Students should have previously completed the following Technical Modules:

- **WLD-D1** "Practice Being A Good Listener"
- **WLD-D2** "Demonstrate Good Reading, Comprehension and Writing Skills"
- **WLD-D3** "Document Manufacturing Processes"
- **WLD-D4** "Prepare A Recommendation For Continuous Improvement"

INTRODUCTION:

This is Module D5 of the program for welders. It outlines the need for developing priority listing of work responsibilities and instructs students on how these lists are created.
PRESENTATION OUTLINE:

1. The need for work priorities
2. How to identify work priorities
3. Criteria for ranking work priorities
4. Creation of summarized work priority lists
5. Priority lists and production methods
6. Work priorities and KANBAN
7. Work schedules and just-in-time methods
8. Sharing resources with the work team

PRACTICAL APPLICATION:

Students will review current shop operations and introduce instructor-provided job orders and create summarized work priority lists. They will then begin the daily planning and assess the time they had previously allotted for work.

EVALUATION AND/OR VERIFICATION:

At the conclusion of this module, students will visit a well organized welding shop and benchmark their work priorities and production flow with a well organized state-of-the-art facility.

SUMMARY:

This module instructs students in the need for, and the creation of, priority lists of work responsibilities. It also allows them to benchmark their ideas with current standards and practices.

NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-D6) dealing with displaying ability to follow directions, give directions and accept constructive criticism.
OBJECTIVE(S):

Upon completion of this module the student will be able to:
A. Explain the need for a priority list of work responsibilities;
B. Discuss how work responsibilities are determined; and,
C. Describe the steps in preparing a priority list of work responsibilities.

MODULE OUTLINE:

1. The need for work priorities
2. How to identify work priorities
3. Criteria for ranking work priorities
4. Creation of summarized work priority lists
5. Priority lists and production methods
6. Work priorities and KANBAN
7. Work schedules and just-in-time methods
8. Sharing resources with the work team
WELDER SERIES
MASTER Technical Module No. WLD-D06

SUBJECT: WELDING TECHNICIAN    TIME: 3 HOURS

• DUTY: COMMUNICATION SKILLS
• TASK: Display Ability To Follow Directions, Give Directions And Accept Constructive Criticism

OBJECTIVE(S):

Upon completion of this module the student will be able to:
A. Explain the importance of following direction and instructions of others in the production of quality work;
B. Discuss the ability to convey clear directions when explaining work to others; and,
C. Describe the need to accept, understand, and use constructive criticism in the production of quality work.

INSTRUCTIONAL MATERIALS:

TEXT:
MASTER Handout (WLD-D6-HO)

REFERENCES:

STUDENT PREPARATION:

Students should have previously completed the following Technical Modules:
WLD-D1 “Practice Being A Good Listener”
WLD-D2 “Demonstrate Good Reading, Comprehension and Writing Skills”
WLD-D3 “Document Manufacturing Processes”
WLD-D4 “Prepare A Recommendation For Continuous Improvement”
WLD-D5 “Prepare A Summarized Priority List Of Work Responsibilities”
INTRODUCTION:

This is Module D6 of the program for welders. It emphasizes the role of receiving and giving direction in the process of welding work production while giving the students an appreciation of the levels of interpersonal skills needed. It instructs on the positive role of constructive criticism in the process of quality work production.

PRESENTATION OUTLINE:

1. Listening to directions
2. Understanding directions clearly, and asking questions when uncertain.
3. The importance of clarity to the production of quality work.
4. The need to convey clear directions to others on the job when needed.
5. The use of welding terms and definitions
   a. Follow verbal instructions
   b. Follow written details
   c. Prepare time and job cards (reports & records)
6. The need to accept and give constructive criticism while maintaining good working relationships with others.
7. The methods of conflict resolution generally accepted in the workplace.

PRACTICAL APPLICATION:

The instructor will explain the need for the use of constructive criticism, and its value in the production of quality work and the process of continuous quality improvement. Students seeking vocational skills must master the ability to communicate effectively in order to get and maintain employment in this competitive, constantly evolving work environment.

EVALUATION AND/OR VERIFICATION:

At the conclusion of this module, written examination(s) or competency testing will be given to determine student progress.

SUMMARY:

This module deals with instructing the student in receiving and giving directions for work in the process of welding. It outlines as well the essential need for constructive criticism and its positive acceptance by the student or employee.

NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-D7) dealing with demonstrating positive communication skills with co-workers and supervisors.
WLD-D6-HO
Display Ability to Follow Directions, Give Directions
And Accept Constructive Criticism
Attachment 1: MASTER Handout

OBJECTIVE(S):

Upon completion of this module the student will be able to:
A. Explain the importance of following direction and instructions of others in the production of quality work;
B. Discuss the ability to convey clear directions when explaining work to others; and,
C. Describe the need to accept, understand, and use constructive criticism in the production of quality work.

MODULE OUTLINE:

1. Listening to directions
2. Understanding directions clearly, and asking questions when uncertain.
3. The importance of clarity to the production of quality work.
4. The need to convey clear directions to others on the job when needed.
5. The use of welding terms and definitions
   a. Follow verbal instructions
   b. Follow written details
   c. Prepare time and job cards (reports & records)
6. The need to accept and give constructive criticism while maintaining good working relationships with others.
7. The methods of conflict resolution generally accepted in the workplace.
SUBJECT: WELDING TECHNICIAN  TIME: 3 HOURS

- DUTY: COMMUNICATION SKILLS
- TASK: Demonstrate Positive Communication Skills With Co-Workers And Supervisors

OBJECTIVE(S):

Upon completion of this module the student will be able to:
A. Discuss the importance of communications on the job;
B. Describe the conditions for positive communication to take place;
C. Discuss the role one’s attitude plays in positive communication; and,
D. Adapt to changing job or work conditions with a positive approach in communicating with one’s supervisors.

INSTRUCTIONAL MATERIALS:

TEXT: 
MASTER Handout (WLD-D7-HO)

REFERENCES:

STUDENT PREPARATION:

Students should have previously completed the following Technical Modules:
- WLD-D1 “Practice Being A Good Listener”
- WLD-D2 “Demonstrate Good Reading, Comprehension and Writing Skills”
- WLD-D3 “Document Manufacturing Processes”
- WLD-D4 “Prepare A Recommendation For Continuous Improvement”
- WLD-D5 “Prepare A Summarized Priority List Of Work Responsibilities”
- WLD-D6 “Display Ability To Follow Directions, Give Directions And Accept Constructive Criticism”
INTRODUCTION:

This is Module D7 of the course Welder, Entry Level. It presents the reasons for developing and using positive communication skills in the workplace for quality work production and worker success and achievement.

PRESENTATION OUTLINE:

1. The use of positive communication skills
2. Workers attitudes and beliefs
3. The need of individual positive reinforcement
4. Goals and positive reinforcement
5. Incentives for quality work

PRACTICAL APPLICATION:

Role playing scenarios will be followed by each student emphasizing the use of good or bad communication skills. Each scenario will be video recorded and critiqued by the class. If communications skills are undesirable, students will then be asked to present a more acceptable solution.

EVALUATION AND/OR VERIFICATION:

At the conclusion of this module, each student will complete an attitude survey or assessment concerning their involvement in the workplace.

SUMMARY:

This module, which concludes instruction on communication skills, repeats the emphasis on the need to develop and use the techniques of positive communication in assuring efficient workers producing quality work.

NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-E1) dealing with understanding the roles of coworkers.
OBJECTIVE(S):

Upon completion of this module the student will be able to:
A. Discuss the importance of communications on the job;
B. Describe the conditions for positive communication to take place;
C. Discuss the role one’s attitude plays in positive communication; and,
D. Adapt to changing job or work conditions with a positive approach in communicating with one’s supervisors.

MODULE OUTLINE:

1. The use of positive communication skills
2. Workers attitudes and beliefs
3. The need of individual positive reinforcement
4. Goals and positive reinforcement
5. Incentives for quality work

**Explanation:**

- **A1**: Demonstrates understanding of safety rules and regulations.
- **A2**: Assumes personal safety responsibilities for self and others.
- **A3**: Describes the purpose and use of protective equipment.
- **A4**: Demonstrates proper handling of material.
- **A5**: Demonstrates proper use of welding equipment.
- **A6**: Practices safety precautions.
- **A7**: Creates a safe welding environment.
- **A8**: Demonstrates eye safety precautions.
- **A9**: Creates and maintains a safe work station.
- **A10**: Demonstrates safety precautions regarding ARO.
- **A11**: Demonstrates eye safety precautions.
- **A12**: Marks safety equipment.
- **A13**: Demonstrates hand-eye coordination.
- **A14**: Maintains adequate ventilation.
- **A16**: Marks safety equipment.
- **A18**: Marks safety equipment.

**Tasks Listed:**

- **A1**: Demonstrates understanding of safety rules and regulations.
- **A2**: Assumes personal safety responsibilities for self and others.
- **A3**: Describes the purpose and use of protective equipment.
- **A4**: Demonstrates proper handling of material.
- **A5**: Demonstrates proper use of welding equipment.
- **A6**: Practices safety precautions.
- **A7**: Creates a safe welding environment.
- **A8**: Demonstrates eye safety precautions.
- **A9**: Creates and maintains a safe work station.
- **A10**: Demonstrates safety precautions regarding ARO.
- **A11**: Demonstrates eye safety precautions.
- **A12**: Marks safety equipment.
- **A13**: Demonstrates hand-eye coordination.
- **A14**: Maintains adequate ventilation.
- **A16**: Marks safety equipment.
- **A18**: Marks safety equipment.
WELDER ... that person who is responsible for the planning, layout, fit up of materials, and operation of welding equipment to prepare the work and perform welding operations necessary to produce a work piece to prescribed engineering standards.

### Duties

- O1 Gas Tungsten Arc Welding (OTAW) (Basic)
- O2 Gas Tungsten Arc Welding (OTAW) (Advanced)
- P Plasma Arc Cutting and Welding
- Q In-Process Weld Inspection
- R Pre-Process Rewind
- S Hourly Consumables
- T Emergency Vehicle Technology
- U Wellness/Physical Abilities

### Tasks

<table>

WELDER SERIES
MASTER Technical Module No. WLD-E01 and WLD-E02

SUBJECT: WELDING TECHNICIAN
TIME: 4 HOURS

- DUTY: WORK AS A TEAM
- TASK: Understand The Roles Of Co-Workers
- TASK: Respect Peer Relationships

OBJECTIVE(S):

Upon completion of this module the student will be able to:
A. Understand and apply the concepts of teams and team building;
B. Apply principles and tools of continuous quality improvement;
C. Understand the importance of quality in manufacturing process;
D. Understand the roles of team members; and,
E. Respect peer relationships.

INSTRUCTIONAL MATERIALS:

The New Manufacturing Challenge – Techniques for Continuous Improvement, Kiyoshi Suzaki, Latest Edition
Quality System Requirements QS9000, Chrysler, Ford, General Motors Corporation, Latest Editions
Organizational Teams – Building Continuous Quality Improvement, Peter Mears, Latest Edition
Team Excellence, Lorber Kamai Associates, Latest Edition
STUDENT PREPARATION:

Students will prepare by reading text assignments prior to coming to class and will complete prerequisite modules.

INTRODUCTION:

This module prepares the student with teamwork information and an appreciation of the value of his co-workers as they strive to reach shared goals.

PRESENTATION OUTLINE:

I. Definition of Team-A group of people working together to achieve common goals and objectives
   • Teamwork is planned because it results from preparation and organization
   • The nucleus of team building is trust
   • One cornerstone of TQ is a team-based structure
   • Synergy – The whole (team) is greater than the sum of its parts (members)

II. Major elements of team synergy
   • Listening and clarifying (concentrate on what is being said)
   • Supporting (create a positive climate)
   • Quality (make a personal commitment to improve)
   • Acceptance (respect other member’s viewpoints)
   • Feedback (honest communication)

III. Achieving positive team synergy
   • Getting to know team members

IV. Need for a team
   • Most problems occur across functional lines
   • 85% of teams are cross-functional
   • Change is critical to enable an organization to remain competitive in today’s world
   • Increasing quality and productivity main reasons for teams

V. Advantages of teamwork
   • Improved skills – by accessing more talent, expertise, and technical competence
   • Improved communication – communication is both vertical and lateral, is across department lines, more ideas, mutual respect.
   • Improved participation – boosts morale, allows for buy-in to changes, higher job satisfaction
   • Improved effectiveness – solutions more likely to be implemented, people have process ownership

VI. Team Size
   A. Three basic types of teams
1. Quality Council – Normally high level functional leaders/managers. The council is responsible for establishing and sustaining commitment, direction, and energy for the organization’s quality improvement.

2. Work Unit – A group of employees that are responsible for the entire process, including such items as meeting technical specs, schedules, basic production problems, and interface with to some degree, with suppliers and external customers. Supervisors and functional experts take on the role as facilitators and coaches.

3. Cross Functional – A special team put together to address specific situations that require knowledge and expertise from different fields. Team selection normally chosen from those that are affected by the problem, that possess knowledge or expertise related to the problem, and that will be involved with carrying out the solution. Cross functional teams have two distinct advantages; most use a consensus

VII. Roles of Team Members
   • Responsibilities
   • Accountability

PRACTICAL APPLICATION:

The student will be able to:
   • Define what a team is, reasons for a team, and major elements of a team;
   • Understand advantages of teamwork, basic types of teams, and types of team conflict;
   • Recognize characteristics/conditions of an effective team and main roles for team members; and,
   • Recognize problems and solve them.

EVALUATION AND/OR VERIFICATION:

Class participation, assigned homework, quizzes and exams.

SUMMARY:

There will be a review of each module reemphasizing the important points.

NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-E3) dealing with sharing resources to accomplish necessary tasks.
OBJECTIVE(S):

Upon completion of this module the student will be able to:
A. Understand and apply the concepts of teams and team building;
B. Apply principles and tools of continuous quality improvement;
C. Understand the importance of quality in manufacturing process;
D. Understand the roles of team members; and,
E. Respect peer relationships.

WELDER SERIES
MASTER Technical Module No. WLD-E03

SUBJECT: WELDING TECHNICIAN
TIME: 4 HOURS

DUTY:

TASK:
Share Resources to Accomplish Necessary Tasks

OBJECTIVE(S):

Upon completion of this module the student will be able to:
A. Define resources that are individually held and commonly held in production operations;
B. Demonstrate how resources can be more economically applied, with greater force, and with more lasting effect if they are shared by workers; and,
C. Explain the responsibility and outcomes of sharing resources.

INSTRUCTIONAL MATERIALS:

Quality System Requirements QS9000, Chrysler, Ford, General Motors Corporation, Latest Editions
Organizational Teams — Building Continuous Quality Improvement, Peter Mears, Latest Edition
Team Excellence, Lorber Kamai Associates, Latest Edition

STUDENT PREPARATION:

Students should have previously completed the following Technical Modules:
INTRODUCTION:

This module will demonstrate to each student the importance of sharing resources.

PRESENTATION OUTLINE:

I. Characteristics of an Effective Team
   - The atmosphere is informal and relaxed, without obvious tension
   - Everyone participates in the discussion
   - The team's task is understood and accepted by the members
   - Members listen to each other; each idea is given a hearing.
   - The team is comfortable with disagreement and does not avoid conflict simply to keep everything in agreement.
   - Decisions are reached by consensus.
   - Criticism is frequent, frank, and relatively comfortable with no personal attacks.
   - People are free to express their feelings and ideas on the team's problems.
   - When action is taken, clear assignments are made and accepted.
   - The leader does not dominate, nor does the team.
   - The team is self-conscious about how it functions and examines how it is performing.
   - Team members can recognize and can work with a variety of personalities
   - Each team member is aware of the skills of the other members and how these skills can be applied to reach the team's goals.

II. Reasons Why Teamwork and Sharing is Crucial for Effectiveness/Excellence
   - Is a crucial element of the empowerment process.
   - Allows for the pooling or complement of each other's skills.
   - Not all change results in improvement.
   - A change (improvement) in one area may result in an impact for another area.

III. Conditions for an Effective Team
   - Interdependence - Working on problems that each person has a stake. Teamwork is crucial.
   - Effective leadership - The leader will take risks to improve group performance.
   - Joint Decision - All members agree to participate.
   - Equal influence - Each member has an equal vote, equal say. Teams must become proficient in both problem-solving and decision-making processes.

IV. Three Main Roles for Team Members
   - Group task. Initiator-contributor, information seeker, opinion seeker, opinion giver, elaborator, coordinator, orienter, evaluator, critic, energizer, procedural technician, recorder
• Group maintenance. Encourager, harmonizer, compromiser, gate keeper and expediter, standard setter, group observer, follower.
• Individual. Team player, aggressor, blocker, recognition seeker, self-professor, playboy, dominator, help seeker, special interest pleader.

V. Importance of sharing resources to improve mission accomplishment

PRACTICAL APPLICATION:

Students will participate in exercises that can not be accomplished unless resources are shared.

EVALUATION AND/OR VERIFICATION:

Class participation, assigned homework, quizzes and exams.

SUMMARY:

The sharing of resources and the need to work well together go hand in hand for successful mission accomplishment.

NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-E4) dealing with facilitating the work ethic by completing tasks in time and accurately.
OBJECTIVE(S):

Upon completion of this module the student will be able to:
A. Define resources that are individually held and commonly held in production operations;
B. Demonstrate how resources can be more economically applied, with greater force, and with more lasting effect if they are shared by workers; and,
C. Explain the responsibility and outcomes of sharing resources.

MODULE OUTLINE:

I. Characteristics of an Effective Team
   - The atmosphere is informal and relaxed, without obvious tension
   - Everyone participates in the discussion
   - The team’s task is understood and accepted by the members
   - Members listen to each other, each idea is given a hearing.
   - The team is comfortable with disagreement and does not avoid conflict simply to keep everything in agreement.

   - Joint Decision – All members agree to participate.
Equal influence – Each member has an equal vote, equal say. Teams must become proficient in both problem-solving and decision making processes.

IV. Three Main Roles for Team Members

- **Group task.** Initiator-contributor, information seeker, opinion seeker, opinion giver, elaborator, coordinator, orienter, evaluator critic, energizer, procedural technician, recorder
- **Group maintenance.** Encourager, harmonizer, compromiser, gate keeper and expeditor, standard setter, group observer, follower.
- **Individual.** Team player, aggressor, blocker, recognition seeker, self-professor, playboy, dominator, help seeker, special interest pleader.

V. Importance of sharing resources to improve mission accomplishment
WELDER SERIES
MASTER Technical Module No. WLD-E04

SUBJECT: WELDING TECHNICIAN
TIME: 3 HOURS

- DUTY: WORK AS A TEAM
- TASK: Facilitate the Work Ethic by Completing Tasks On Time and Accurately

OBJECTIVE(S):

Upon completion of this module the student will be able to:
A. Encourage good work ethics;
B. Maintain time and work attendance;
C. Encourage honesty, quality work and high standards; and,
D. Provide a fair rate of work at high quality for the invested time.

INSTRUCTIONAL MATERIALS:

Quality System Requirements QS9000, Chrysler, Ford, General Motors Corporation, Latest Editions
Organizational Teams – Building Continuous Quality Improvement, Peter Mears, Latest Edition
Team Excellence, Lorber Kamai Associates, Latest Edition

STUDENT PREPARATION:

Students should have previously completed the following Technical Modules:
This module will demonstrate to each student that good work ethics are the hallmark of the professional.

**PRESENTATION OUTLINE:**

1. Why be concerned about work ethics?
   A technician or craftsman’s reputation has great value (to be enhanced or diminished). Responsibility to employer for quality work performed in a timely manner without defect.

2. What is a fair rate of work?
   Supply, demand, and ethics. Team roles and responsibilities.

**PRACTICAL APPLICATION:**

Students will be placed in situational circumstances where work ethics are demonstrated and discussed. Students will be placed in teams and given work to perform.

**EVALUATION AND/OR VERIFICATION:**

Students will make a list of the work ethics they will follow and this will be referred to instructor for evaluation or further discussion. Students will evaluate the effectiveness of work before and after team assignments.

**SUMMARY:**

Work ethics are required before work teams can become effective.

**NEXT LESSON ASSIGNMENT:**

MASTER Technical Modules (WLD-E5 and WLD-E6) dealing with being involved with problem solving and applying creative thinking.
WLD-E4-HO
Facilitate the Work Ethic by Completing Tasks
On Time and Accurately
Attachment 1: MASTER Handout

OBJECTIVE(S):

Upon completion of this module the student will be able to:

Quality System Requirements QS9000, Chrysler, Ford, General Motors Corporation, Latest Editions
Organizational Teams – Building Continuous Quality Improvement, Peter Mears, Latest Edition
Team Excellence, Lorber Kamai Associates, Latest Edition

STUDENT PREPARATION:

Students should have previously completed the following Technical Modules:
INTRODUCTION:

This module will demonstrate to each student problem solving techniques necessary for all high skill workers and technicians.

PRESENTATION OUTLINE:

Students will receive information on:

1. Problem definition
2. Determining facts pertaining to this problem
3. Problem indicators
4. Major considerations pertaining to the problem
5. Affinity method
6. Pareto chart
7. Cause-effect diagrams
8. The scientific method
9. Cost-benefits method
10. Creative thinking
11. Consideration of alternatives
12. Testing of recommended solutions
13. Trial and follow-up
14. Design and experiments

PRACTICAL APPLICATION:

Problems from the workplace will be selected and defined using several problem-solving methods.

EVALUATION AND/OR VERIFICATION:

Students will make a list of the work ethics they will follow and this will be referred to instructor for evaluation or further discussion. Students will evaluate the effectiveness of work before and after team assignments.
SUMMARY:

Welders have to become knowledgeable problem solvers by the nature of their work and the expectations of their employers. Creative thinking is a must for designers and fabricators.

NEXT LESSON ASSIGNMENT:

MASTER Technical Modules (WLD-E7 and E8) dealing with supporting a positive attitude and encouraging good feelings and morale.
OBJECTIVE(S):

Upon completion of this module the student will be able to:
A. Enable students to experience and solve problems with various methods and tools;
B. Encourage proper definition of the problem; and,
C. Understand root cause failure analysis.

MODULE OUTLINE:

Students will receive information on:
1. Problem definition
2. Determining facts pertaining to this problem
3. Problem indicators
4. Major considerations pertaining to the problem
5. Affinity method
6. Pareto chart
7. Cause-effect diagrams
8. The scientific method
9. Cost-benefits method
10. Creative thinking
11. Consideration of alternatives
12. Testing of recommended solutions
13. Trial and follow-up
14. Design and experiments
WELDER SERIES
MASTER Technical Module No. WLD-E07 and WLD-E08

SUBJECT: WELDING TECHNICIAN TIME: 2 HOURS

- **DUTY**: WORK AS A TEAM
- **TASK**: Support A Positive Attitude
- **TASK**: Encourage Good Feelings and Morale

OBJECTIVE(S):

Upon completion of this module the student will be able to:
A. Encourage an attitude of work that is geared toward positive achievement; and,
B. Promote high morale and good feeling among the work force instead of negative attitudes that may become barriers.

INSTRUCTIONAL MATERIALS:

TEXT:
*The Motivating Team Leader*, Dr. Lewis E. Losoncy, Latest Edition

MASTER Handout (WLD-E7 and WLD-E8-HO)

REFERENCES:

*Quality System Requirements QS9000*, Chrysler, Ford, General Motors Corporation, Latest Editions
*Organizational Teams – Building Continuous Quality Improvement*, Peter Mears, Latest Edition

STUDENT PREPARATION:

Students should have previously completed the following Technical Modules:
WLD-E1  “Understand the Roles of Co-Workers”
WLD-E2  “Respect Peer Relationships”
WLD-E3  “Share Resources to Accomplish Necessary Tasks”
WLD-E4  “Facilitate the Work Ethic by Completing Tasks on Time and Accurately”
WLD-E5  “Be Involved with Problem Solving”
WLD-E6  “Apply Creative Thinking”

INTRODUCTION:

This module will demonstrate to each student that companies often succeed or fail, depending upon the feeling of trust and confidence, and feelings of potential achievement.

PRESENTATION OUTLINE:

Students will receive information on the following:
1. The basis for trust and confidence
2. Employer belief systems and outcomes in the workplace
3. Case studies where employee morale made a difference

PRACTICAL APPLICATION:

Students will example case studies that feature the significance of attitudes and feelings of employers to important outcomes.

EVALUATION AND/OR VERIFICATION:

Students will make a list of the work ethics they will follow and this will be referred to instructor for evaluation or further discussion. Students will evaluate the effectiveness of work before and after team assignments.

SUMMARY:

There are those that say that attitude and feelings are part of the company’s belief systems, which are sold and traded every day in the marketplace.

NEXT LESSON ASSIGNMENT:

MASTER Technical Modules (WLD-E9 and WLD-E10) dealing with understanding purpose and goals of the organization and planning and organizing work as a team.
OBJECTIVE(S):

Upon completion of this module the student will be able to:
A. Encourage an attitude of work that is geared toward positive achievement; and,
B. Promote high morale and good feeling among the work force instead of negative attitudes that may become barriers.

MODULE OUTLINE:

Students will receive information on the following:
1. The basis for trust and confidence
2. Employer belief systems and outcomes in the workplace
3. Case studies where employee morale made a difference
WELDER SERIES
MASTER Technical Module No. WLD-E09 and WLD-E10

SUBJECT: WELDING TECHNICIAN  TIME: 3 HOURS

- DUTY: WORK AS A TEAM
- TASK: Understand Purpose and Goals of the Organization
- TASK: Plan and Organize Work as a Team

OBJECTIVE(S):

Upon completion of this module the student will be able to:
A. Understand the process of developing company purposes and goals; and,
B. Understand the planning and organizing of work in an organization with teams.

INSTRUCTIONAL MATERIALS:

TEXT:
The Motivating Team Leader, Dr. Lewis E. Losoncy, Latest Edition

MASTER Handout (WLD-E9 and WLD-E10-H0)

REFERENCES:

Quality System Requirements QS9000, Chrysler, Ford, General Motors Corporation, Latest Editions
Organizational Teams – Building Continuous Quality Improvement, Peter Mears, Latest Edition
Team Excellence, Lorber Kamai Associates, Latest Edition

STUDENT PREPARATION:

Students should have previously completed the following Technical Modules:
WLD-E1 “Understand the Roles of Co-Workers”
WLD-E2 “Respect Peer Relationships”
INTRODUCTION:

This module will demonstrate to each student that the development of a company’s purposes and goals is related to how it plans and organizes its work.

PRESENTATION OUTLINE:

Students will receive information on the following:
1. The goals process
2. Company vision – a shared experience
3. Purposes of the enterprise
4. Means of accountability
5. Goods, work tasks, and work teams
6. A robust enterprise
7. The house of quality

PRACTICAL APPLICATION:

Use of case studies in the subject, examining successes and failures, with possible explanations for each.

EVALUATION AND/OR VERIFICATION:

Students will make a list of the work ethics they will follow and this will be referred to instructor for evaluation or further discussion. Students will evaluate the effectiveness of work before and after team assignments.

SUMMARY:

This module examines the realities of success and failure that result from goal setting and organizing to do work.
NEXT LESSON ASSIGNMENT:

MASTER Technical Modules (WLD-E11, WLD-E12, and WLD-E13) dealing with being willing to lead in areas of knowledge and expertise, demonstrating willingness to learn new methods and skills, and demonstrating good personal relations skills.
OBJECTIVE(S):

Upon completion of this module the student will be able to:
A. Understand the process of developing company purposes and goals; and,
B. Understand the planning and organizing of work in an organization with teams.

MODULE OUTLINE:

Students will receive information on the following:
1. The goals process
2. Company vision – a shared experience
3. Purposes of the enterprise
4. Means of accountability
5. Goods, work tasks, and work teams
6. A robust enterprise
7. The house of quality
WELDER SERIES
MASTER Technical Module No. WLD-E11, WLD-E12 & WLD-E13

SUBJECT: WELDING TECHNICIAN TIME: 8 HOURS

- **DUTY:** WORK AS A TEAM
- **TASK:** Be Willing to Lead in Areas of Knowledge and Expertise
- **TASK:** Demonstrate Willingness to Learn New Methods and Skills
- **TASK:** Demonstrate Good Personal Relations Skills

OBJECTIVES:

Upon completion of this module the student will be able to:

A. Understand leadership and be willing to lead in areas of knowledge and expertise;
B. Be willing to learn new methods and skills; and,
C. Understand the need for good personal relations and interpersonal skills.

INSTRUCTIONAL MATERIALS:

INTRODUCTION:

This module will demonstrate to each student that each person can and should exercise leadership potential.

PRESENTATION OUTLINE:

Students will receive information on the following:

1. Definition of leadership
2. Leadership - situations and circumstances
3. Is knowledge all there is?
4. Leadership success is related to style, meeting needs, and maintaining good interpersonal relations
5. How is leadership learned?
6. Is a good leader a role model?
7. What values does the leader need?
8. Does the leader share resources and ideas?
9. Where does the leader change?
10. Are there levels of leadership and new responsibility?
11. Can leadership be distributed?
12. Does a leader need new methods and skills?
13. How important are human relation and interpersonal skills?

PRACTICAL APPLICATION:

Situational exercises where the leader must respond. Class will determine if the response was appropriate. Leadership will change among class members.
EVALUATION AND/OR VERIFICATION:

Students will make a list of the leadership principles they will follow and this will be referred to instructor for evaluation or further discussion. Students will evaluate the effectiveness of work before and after team assignments.

SUMMARY:

To work as a team, one must often think and act as a leader. The definition of leadership may differ among individuals, but people always respect the leader and he or she respects them.

NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-F1) dealing with exhibiting understanding of basic arithmetic functions.
OBJECTIVE(S):

Upon completion of this module the student will be able to:
A. Understand leadership and be willing to lead in areas of knowledge and expertise
B. Be willing to learn new methods and skills
C. Understand the need for good personal relations and interpersonal skills

MODULE OUTLINE:

Students will receive information on the following:
1. Definition of leadership
2. Leadership – situations and circumstances
3. Is knowledge all there is?
4. Leadership success is related to style, meeting needs, and maintaining good interpersonal relations
5. How is leadership learned?
6. Is a good leader a role model?

| M2 OMAW Short Circuit Transfer (Intermediate) | M-14 Demonstrate machine adjustments (voltage, amps, wire speed)  
M-15 Perform weld sequence  
M-16 Perform weld technique  
M-17 Understand welding characteristics of various shielding gases  
M-18 Post-class weld  
M-19 Perform weld preparation  
M-20 Demonstrate short circuit OMAW flat weld  
M-21 OMAW filler wires  
M-22 Describe basic weld discontinuities |
| M3 OMAW Spray and Pulsed Spray, Pulse Transfer (Advanced) | M-23 Demonstrate pre-weld cleaning  
M-24 Demonstrate interpass cleaning  
M-25 Demonstrate OMAW in all horizontal, vertical and overhead positions  
M-26 Pre-weld joint, if required; understand joint preparation  
M-27 Interpass weld process  
M-28 Perform weld sequence |
| N Plasma Arc Welding (PACW) | N-1 Understand the safety factors using PACW equipment  
N-2 Perform weld sequence  
N-3 Shut down PACW equipment  
N-4 Describe the protective equipment and their effects upon weld quality  
N-5 Discuss AWS electrode classification system  
N-6 Describe A2B2 filler metal classification system  |
| O1 OSA Tungsten Arc Welding (GTAW) (Basic) | O-1 Identify the safety standards  
O-2 Perform weld sequence  
O-3 Describe the welding variables and their effects upon weld quality  
O-4 Discuss AWS electrode classification system  
O-5 Describe A2B2 filler metal classification system  
O-6 Perform GTAW on pipe and grooves welds on T and butt joints on various materials in various positions |
| O2 OSA Tungsten Arc Welding (GTAW) (Advanced) | O-7 Pass a performance qualification test using GTAW equipment in all horizontal, vertical and overhead positions on pipe |
| P Plasma Arc Cutting and Welding | P-1 Identify and describe the Plasma Arc Cutting (PAC) equipment  
P-2 Understand the safety factors associated with Plasma Arc Welding (PAW) processes  
P-3 Select the shielding gases  
P-4 Perform Plasma Arc Cutting equipment  
P-5 Set-up Plasma Arc Welding equipment  
P-6 Perform Plasma Arc Cutting on various materials  
P-7 Perform Plasma Arc Welding on various materials |
| Q In-Process Weld Inspection | Q-1 Check weld zone  
Q-2 Perform visual inspection  
Q-3 Perform weld test  
Q-4 Perform weld  
Q-5 Repeat in-process inspection  |
| R Remove weld defects and repair for welding | R-1 Remove weld defects and repair for welding  
R-2 Verify defect removal  
R-3 Pre-weld weld (if required)  
R-4 Perform weld  
R-5 Repeat in-process inspection |
| S Handi-acting Activities | S-1 Return stored consumables  
S-2 Secure weld equipment  
S-3 Secure consumables  
S-4 Clean work area(s) |
| T Emergency Response - Technology | T-1 Display a general understanding of emergency equipment being used  
T-2 Understand how components relate as a total system |
| U Wellness/Physical Abilities | U-1 Demonstrate ability to lift 50 pounds  
U-2 Perform ability to work from various positions while standing on concrete for extended periods |

---

WELDER: WELDING IN THE CARPET MAKER'S SHOP, BY WELDERS' NATIONAL TRADE ASSOCIATION, P. 515
WELDER SERIES
MASTER Technical Module No. WLD-F01

SUBJECT: WELDING TECHNICIAN  TIME: 5 HOURS

- DUTY:  MATHEMATICAL SKILLS
- TASK:  Exhibit Understanding of Basic Arithmetic Functions

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Perform operations and applications with real numbers;
B. Perform addition operations with whole numbers;
C. Perform subtraction operations with whole numbers;
D. Perform multiplication operations with whole numbers;
E. Perform division operations with whole numbers;
F. Utilize hand-held calculators for problem solving with whole numbers; and,
G. Understand the roots of numbers and the percent base.

INSTRUCTIONAL MATERIALS:

A classroom set of scientific calculators
Overhead projector
Prepared overlays
Measurement Tools
MASTER Handout (WLD-F1-HO)

REFERENCES:

*Understanding Mathematics in the Plant*, TPC (lesson plans, transparencies, and training guide), Latest Edition
*Shop Inspection Techniques*, Oak Ridge National Lab (measurement tools and activities), Latest Edition

517
STUDENT PREPARATION:

Passing scores on the math and algebra portions of the College Placement Test for degree seeking students.

INTRODUCTION:

This module teaches applied mathematics for students in the technical field. It features operations and applications with real numbers and applied statistics as tools to analyze and solve technical problems. The scientific calculator will also be used to solve problems in both the English and Metric systems.

PRESENTATION OUTLINE:

Major Topics

I. The hand-held calculator - Operations with real numbers
   A. Whole numbers
II. Estimation
   A. Addition and subtraction
   B. Multiplication and division
III. Problem solving: Using calculators
   A. Whole numbers
IV. The roots of numbers as the opposite of powers
V. The percent base and how to solve for each variable

PRACTICAL APPLICATION:

- Students will review the key symbols and functions of the calculator. With students working in groups of two or three, using both an individual and team approach, emphasize whole numbers and the concepts of place value, expanded form, rounding to estimate, and math vocabulary.
- Demonstrate the meaning of addition, subtraction, multiplication, and division with whole numbers.
- Emphasize multiplying and dividing by powers of ten. Demonstrate the roots of numbers as the opposite of powers. Review the percent base and how to solve for each variable.

EVALUATION AND/OR VERIFICATION:

The evaluation will consist of a test on this module that consists of both standard testing and physical demonstration of understanding of material.
SUMMARY:

There will be a review of each module reemphasizing the important points.

NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-F2) dealing with exhibiting understanding of converting fractions and decimals.
OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Perform operations and applications with real numbers;
B. Perform addition operations with whole numbers;
C. Perform subtraction operations with whole numbers;
D. Perform multiplication operations with whole numbers;
E. Perform division operations with whole numbers;
F. Utilize hand-held calculators for problem solving with whole numbers; and,
G. Understand the roots of numbers and the percent base.

MODULE OUTLINE:

Major Topics

I. The hand-held calculator - Operations with real numbers
   A. Whole numbers
II. Estimation
   A. Addition and subtraction
   B. Multiplication and division
III. Problem solving: Using calculators
   A. Whole numbers
IV. The roots of numbers as the opposite of powers
V. The percent base and how to solve for each variable
WELDER SERIES
MASTER Technical Module No. WLD-F02

SUBJECT: WELDING TECHNICIAN TIME: 15 HOURS

- DUTY: MATHEMATICAL SKILLS
- TASK: Exhibit Understanding of Converting Fractions and Decimals

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Perform operations and applications with fractions and decimals;
B. Perform addition operations with fractions and decimals;
C. Perform subtraction operations with fractions and decimals;
D. Perform multiplication operations with fractions and decimals;
E. Perform division operations with fractions and decimals; and,
F. Utilize hand-held calculators for problem solving with fractions and decimals.

INSTRUCTIONAL MATERIALS:

A classroom set of scientific calculators
Overhead projector
Prepared overlays
MASTER Handout (WLD-F2-HO)

REFERENCES:

Understanding Mathematics in the Plant, TPC (lesson plans, transparencies, and training guide), Latest Edition
Shop Inspection Techniques, Oak Ridge National Lab (measurement tools and activities), Latest Edition
STUDENT PREPARATION:

Passing scores on the math and algebra portions of the College Placement Test for degree seeking students.

Students should have previously completed the following Technical Modules:

WLD-F1 "Exhibit Understanding of Basic Arithmetic Functions"

INTRODUCTION:

This module teaches decimals, percentages, and applied statistics as tools to analyze and solve technical problems required for precision measurements by technicians or technologists. The scientific calculator will also be used to solve problems in both the English and Metric systems.

PRESENTATION OUTLINE:

Major Topics

I. The Hand-Held Calculator - Operations with Fractions
   A. Fractions: Percent (%) forms

II. Estimation of Fractions
   A. Addition and Subtraction
   B. Multiplication and Division

III. Problem Solving: Using Calculators
   A. Fractions: Percent (%) forms
   B. Fractions: Decimal forms

PRACTICAL APPLICATION:

1. Students will review the key symbols and functions of the calculator. With students working in groups of two or three, using both an individual and team approach, emphasize fractions and decimals and math vocabulary.

2. Demonstrate the meaning of addition, subtraction, multiplication, and division with fractions. Demonstrate estimating techniques with operations of fractions.

3. Demonstrate changing from fractions to decimals and percents and conversely.

EVALUATION AND/OR VERIFICATION:

The evaluation will consist of a test on this module that consists of both standard testing and physical demonstration of understanding of material.

SUMMARY:

There will be a review of each module reemphasizing the important points.
NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-F3) dealing with demonstrating practical mathematics in the use of measurement tools"
WLD-F2-HO
Exhibit Understanding of Converting Fractions and Decimals
Attachment 1: MASTER Handout

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Perform operations and applications with fractions and decimals;
B. Perform addition operations with fractions and decimals;
C. Perform subtraction operations with fractions and decimals;
D. Perform multiplication operations with fractions and decimals;
E. Perform division operations with fractions and decimals; and,
F. Utilize hand-held calculators for problem solving with fractions and decimals.

MODULE OUTLINE:

Major Topics

I. The Hand-Held Calculator - Operations with Fractions
   A. Fractions: Percent (%) forms

II. Estimation of Fractions
   A. Addition and Subtraction
   B. Multiplication and Division

III. Problem Solving: Using Calculators
   A. Fractions: Percent (%) forms
   B. Fractions: Decimal forms
SUBJECT: WELDING TECHNICIAN  TIME: 15 HOURS

- DUTY: MATHEMATICAL SKILLS
- TASK: Demonstrate Practical Mathematics in the use of Measurement Tools

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Understand Industrial Concepts of measurement;
B. Demonstrate ability to correctly solve problem applications;
C. Understand the proper utilization of measuring tools; and,
D. Demonstrate ability to properly use measuring tools.

INSTRUCTIONAL MATERIALS:

*Technical Mathematics*, Smith, Robert D., Delmar Publishers,
Overhead projector
Prepared overlays
Scientific Calculator
Tools for each student:
Tape Measure
Folding Rule
Steel Tape and Steel Rules
Vernier and Dial Calipers
Micrometers
MASTER Handout No. 1 (WLD-F3-HO1)
MASTER Handout No. 2 (WLD-F3-HO2)
MASTER Handout No. 3 (WLD-F3-HO3)
MASTER Handout No. 4 (WLD-F3-HO4)
MASTER Laboratory Aid (WLD-F3-LA)
MASTER Self-Assessment No. 1
MASTER Self-Assessment No. 2

Latest Edition
STUDENT PREPARATION:

Passing scores on the math and algebra portions of the College Placement Test for degree seeking students.

Students should have previously completed the following Technical Modules:

WLD-F1 “Exhibit Understanding of Basic Arithmetic Functions”
WLD-F2 “Exhibit Understanding of Converting Fractions and Decimals”

INTRODUCTION:

This module teaches the use of applied mathematics with measurement tools in the technical field. Measurement tools needed for precision measurements by technicians or technologists will be featured. The scientific calculator will also be used to solve problems in both the English and Metric systems.

PRESENTATION OUTLINE:

Major Topics

I. Industrial Concepts of Measurement
   A. Approximate and Exact Numbers
   B. Precision
   C. Accuracy
   D. Tolerance
   E. Significant Numbers
   F. Absolute and Relative Error
   G. Problem Solving Applications

II. Measuring Tools and Problem Solving
   A. Tape Measure
   B. Steel Tape
   C. Vernier Caliper
   D. Micrometers
PRACTICAL APPLICATION:

1. Discuss and illustrate differences between exact and approximate numbers. Illustrate, by using measurements, the concepts of both precision, significant digits, and accuracy.

2. Show examples of common linear measuring instruments and involve class in discussion on applications of these instruments.

3. Illustrate how to find the degree of precision when adding or subtracting measurements.

4. List and apply rules for determining significant digits.

5. Demonstrate, using a range of examples, the concept of accuracy and absolute and relative error.

6. Demonstrate the concept of tolerance, both unilateral and bilateral as well as the concept of interference fit.

7. Have class practice performing selected measures with both an English and metric rule.

8. Demonstrate the use of Vernier and Dial Calipers and have class perform selected measurements to indicate understanding.

9. Demonstrate micrometers and have class perform selected measurements to indicate understanding.

EVALUATION AND/OR VERIFICATION:

The evaluation will consist of a test on this module that consists of both standard testing and physical demonstration of understanding of material.

SUMMARY:

There will be a review of each module reemphasizing the important points.

NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-F4) dealing with interconverting Metric/English measurements.
WLD-F3-HO1
Demonstrate Practical Mathematics in the Use of Measurement Tools
Attachment 1: MASTER Handout No. 1

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Understand Industrial Concepts of measurement;
B. Demonstrate ability to correctly solve problem applications;
C. Understand the proper utilization of measuring tools; and,
D. Demonstrate ability to properly use measuring tools.

MODULE OUTLINE:

Major Topics

I. Industrial Concepts of Measurement
   A. Approximate and Exact Numbers
   B. Precision
   C. Accuracy
   D. Tolerance
   E. Significant Numbers
   F. Absolute and Relative Error
   G. Problem Solving Applications

II. Measuring Tools and Problem Solving
   A. Tape Measure
   B. Steel Tape
   C. Vernier Caliper
   D. Micrometers
OBJECTIVE(S):

Upon completion of this unit the student will be able to:

a. Discuss the use of metrology in manufacturing;
b. Discuss the Inch system of measurement;
c. Discuss the Metric system of measurement;
d. Discuss semi-precision and precision measurement; and,
e. Discuss the following: precision, reliability, discrimination, and accuracy.

MODULE OUTLINE:

I. Discuss the Use of Metrology in Manufacturing
   A. Discuss the function and reason for measurements in manufacturing
   B. Discuss the changes (metrology related) in manufacturing today
      1. Interchangeable manufacture
      2. World trade
      3. High precision

II. Discuss the Inch System of Measurement
    A. Discuss fractional (scale) dimensions for linear measurement
    B. Discuss decimal dimensions for linear measurement
    C. Convert fractional to decimal
       1. Review mathematical conversion method
       2. Fractional/decimal conversion charts
    D. Practice and demonstration of skills listed above

III. Discuss the Metric System of Measurement
     A. Discuss the units of measure commonly used in the metric system
     B. Convert inch to metric
        1. Review mathematical method (1 inch = 25.4 mm)
        2. Conversion charts
     C. Practice and demonstration of skills listed above

IV. Discuss Semi-Precision and Precision Measurement
    A. Discuss the difference between semi-precision and precision measurement
       1. Semi-precision measurements are 1/64" (.5mm) or greater
       2. Precision measurements are less than 1/64" (.5mm)
    B. Discuss the five categories of precision measurement
       1. Outside measurement
       2. Inside measurement
       3. Depth measurement
       4. Thread measurement
       5. Height measurement
Discuss the Following Measurement Terms: Accuracy, Precision, Reliability, and Discrimination

A. *Accuracy* - whether or not something is made according to standard. (The standard for manufacturing is the blueprint.)

B. *Precision* - the degree of exactness required for an application or design requirement.

C. *Reliability* - the ability to consistently obtain the desired result

D. *Discrimination* - the degree that a measuring instrument divides its basic unit of length
OBJECTIVE(S):

Upon completion of this unit the student will be able to:

a. Identify basic semi-precision measuring tools;
b. Identify precision measuring tools;
c. Justify use of particular measurement tools based on tool characteristics;
d. Identify error possibilities in measurement tool selection; and,
e. Demonstrate proper care of precision measuring tools.

MODULE OUTLINE:

I. Describe and Discuss the Following Semi-Precision Measuring Tools
   A. Steel rules
   B. Calipers
   C. Squares

II. Describe and Discuss the Following Precision Measuring Tools
    A. Micrometers (outside, inside and depth)
    B. Verniers (calipers and height gage)
    C. Gages (small hole, telescope, fixed, and dial bore)

III. Justify Use of Particular Measurement Tools Based on Tool Characteristics
     A. What tolerance is required by the print?
     B. What physical characteristics of the part influence tool selection?
     C. What is the discrimination of the tool?
     D. How much time is available for part measurement/inspection?
     E. Will the tool be used by itself or in conjunction with some other tool?
     F. What is the most reliable tool for this application?

IV. Identify Error Possibilities in Measurement Tool Selection
    A. Part not being produced to specifications
    B. Too much time spent trying to measure correctly by not having the right tool

V. Demonstrate Proper Care of Precision Measuring Tools
   A. Storage
   B. Handling
   C. Cleaning
OBJECTIVE(S):

Upon completion of this unit the student will be able to:

a. Measure with steel rules (metric and inch);
b. Measure with micrometers;
c. Measure with comparison measuring instruments (e.g., calipers, telescope gages);
d. Measure with direct measuring instruments (e.g., vernier, dial and digital instruments); and,
e. Measure with fixed gages (go and no-go gages).

MODULE OUTLINE:

I. Discuss the Importance of Learning and Practicing Proper Measurement Techniques
   A. Show the video "Measuring Tools"
   B. Give each student a copy of the handout "Proper Measuring Techniques"

II. Discuss and Demonstrate Proper Measurement Techniques Using the Steel Rule

III. Discuss and Demonstrate the Use of Micrometer Type Measuring Instruments
   A. Outside micrometers
   B. Inside micrometers
   C. Depth micrometers
   D. Practice and demonstration of skills listed above

IV. Discuss and Demonstrate the Use of Transfer Type Measuring Instruments
   A. Spring calipers (inside and outside)
   B. Telescope gages
   C. Small hole gages
   D. Practice and demonstration of skills listed above

V. Discuss and Demonstrate the Use of Direct Measuring Instruments
   A. Vernier calipers
   B. Dial calipers
   C. Digital calipers
   D. Practice and demonstration of skills listed above

VI. Discuss the Purpose of Fixed Gages and Demonstrate Their Use
   A. Cylindrical plug and ring gages
   B. Taper plug and ring gages
   C. Snap gages
   D. Thread plug gages
   E. Practice and demonstration of skills listed above

VII. Complete Practical Exercises on all above material
Rules of Conduct

1. Absolutely no horseplay or practical joking will be tolerated
2. Do not talk to anyone who is operating a machine
3. Walk only in the designated traffic lanes
4. Dress appropriately; at the absolute minimum, you must have:
   a. No loose clothing, including ties;
   b. Long hair properly stowed;
   c. No jewelry;
   d. Hard, closed-toe shoes;
   e. Eye protection (safety glasses); and
   f. Ear protection (plugs or headset).
5. Follow all institutional safety rules
WLD-F3
Demonstrate Practical Mathematics in the Use of Measurement Tools
Self-Assessment No. 1

Circle the best answer

1. Which of the following is not a term for the science of measuring?
   A. Calibration
   B. Comparison
   C. Measurology
   D. Metrology

2. Name two systems of measurement presently used in the United States.
   A. Fractions and decimals
   B. Metric and inch
   C. Precision and non-precision
   D. Inside and outside

3. What is the most common inch to metric conversion factor in use today?
   A. 1" = 25.4mm
   B. 1mm = .25.4"
   C. 1' = 12mm
   D. 1/16" = 64mm

4. Precision measurement can be defined as any measurement made to a degree finer than:
   A. 1/8"
   B. 1/16"
   C. 1/32"
   D. 1/64"

5. Precision measurement can also be defined as any measurement made to a degree finer than:
   A. .25mm.
   B. .5mm.
   C. .10mm.
   D. 3.24mm.
6. _________ in metrology refers to whether or not a specific measurement is actually within its stated size.
   A. Precision
   B. Reliability
   C. Discrimination
   D. Accuracy

7. _________ in metrology is relative to the specific measurement being made, with regard to the degree of exactness required.
   A. Precision
   B. Reliability
   C. Discrimination
   D. Accuracy

8. _________ in metrology refers to the degree to which a measuring instrument divides the basic unit of length it is using for measurement.
   A. Precision
   B. Reliability
   C. Discrimination
   D. Accuracy

9. _________ in metrology refers to the ability to obtain the desired result to the degree of precision required.
   A. Precision
   B. Reliability
   C. Discrimination
   D. Accuracy

10. The five categories of precision measurement are outside, inside, length, depth, and:
    A. Taper
    B. Rpm
    C. Thread
    D. Rms

WLD-F3
Demonstrate Practical Mathematics in the Use of Measurement Tools
Self-Assessment No. 2

Circle the best answer.

1. A _________ is a linear measuring instrument whose graduations represent real units of length.
   A. Steeltape
   B. Scale
   C. Rule
   D. Yardstick

2. A vernier caliper has two scales: the vernier scale and the _________
   A. Top scale
   B. Main scale
   C. Principle scale
   D. Inside scale

3. What is the discrimination for vernier instruments used for Linear measurement?
   A. .001"
   B. .02mm
   C. 1/64"
   D. A and B above

4. How are metric scales usually graduated?
   A. Meters
   B. Feet and inches
   C. Milliliters
   D. MM and .5mm

5. The technician combination set includes 4 components: the steel rule, the protractor head, the square head, and _________
   A. Magnetic base
   B. Protective cover
   C. Center head
   D. Adjustable depth gage
SUBJECT: WELDING TECHNICIAN

TIME: 15 HOURS

- DUTY: MATHEMATICAL SKILLS
- TASK: Inter-Convert Metric/English Measurements

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Understand the concepts of ratios;
B. Understand the concepts of proportions;
C. Understand the concepts of measures (linear, area, capacity, weight);
D. Show proficiency in the English system;
E. Show proficiency in the Metric system;
F. Understand Integers; and,
G. Demonstrate ability to solve problems in these areas.

INSTRUCTIONAL MATERIALS:

Overhead projector
Prepared overlays
Scientific Calculator
Tools for each student:
- Tape Measure
- Folding Rule
- Steel Tape and Steel Rules
- Vernier and Dial Calipers
- Micrometers

STUDENT PREPARATION:

Passing scores on the math and algebra portions of the College Placement Test for degree seeking students.

Students should have previously completed the following Technical Modules:

- **WLD-F1** “Exhibit Understanding of Basic Arithmetic Functions”
- **WLD-F2** “Exhibit Understanding of Converting Fractions and Decimals”
- **WLD-F3** “Demonstrate Practical Mathematics in the use of Measurement Tools”

INTRODUCTION:

This module will teach metric/English terms used for ratios, proportions, linear, area measures, capacities and weights. The module also includes instruction in measurement tools and test equipment required for precision measurements by technicians or technologists. The scientific calculator will also be used to solve problems in both the English and Metric systems.

PRESENTATION OUTLINE:

Major Topics

I. The Concept of Ratios
   A. A numerical Comparison
   B. Percent as a Ratio
   C. Equivalent Fractions
   D. Problem Solving Applications

II. The Concept of Proportions
   A. The Equality of Ratios
   B. Direct Relationships
   C. Inverse Relationships
D. Problem Solving Applications

III. Measurement Concepts: Selecting/Counting/Units
A. Linear Measures
B. Area Measures
C. Capacity Measures
D. Weight Measures

IV. The English System
V. The Metric System
VI. Problem Solving Applications
VII. The Integers
A. The meaning of Signed Numbers
B. The Real Number Line Graph
C. Operations with Integers
D. Problem Solving Applications

PRACTICAL APPLICATION:

1. Define and illustrate ratio and proportion and demonstrate proper set-up of ratios.
2. Problem solve for missing numerators or denominators. Illustrate direct and inverse relationships.
3. Select appropriate units for selected measures. Effectively utilize the English and Metric systems.
4. Solve measurement problems involving compound and complex compound units.
5. Define meaning of/demonstrate understanding of signed numbers, integers, and real number line graphs.

EVALUATION AND/OR VERIFICATION:

The evaluation will consist of a test on this module that consists of both standard testing and physical demonstration of understanding of material.

SUMMARY:

There will be a review of each module reemphasizing the important points.

NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-F5) dealing with performing practical mathematical applications relevant to area of work.

540
OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Understand the concepts of ratios;
B. Understand the concepts of proportions;
C. Understand the concepts of measures (linear, area, capacity, weight);
D. Show proficiency in the English system;
E. Show proficiency in the Metric system;
F. Understand Integers; and,
G. Demonstrate ability to solve problems in these areas.

MODULE OUTLINE:

Major Topics

I. The Concept of Ratios
   A. A numerical Comparison
   B. Percent as a Ratio
   C. Equivalent Fractions
   D. Problem Solving Applications

II. The Concept of Proportions
   A. The Equality of Ratios
   B. Direct Relationships
   C. Inverse Relationships
   D. Problem Solving Applications

III. Measurement Concepts: Selecting/Counting/Units
   A. Linear Measures
   B. Area Measures
   C. Capacity Measures
   D. Weight Measures

IV. The English System

V. The Metric System

VI. Problem Solving Applications

VII. The Integers
   A. The meaning of Signed Numbers
   B. The Real Number Line Graph
   C. Operations with Integers
   D. Problem Solving Applications
OBJECTIVE(S):

Upon completion of this unit the student will be able to:

a. Discuss the use of metrology in manufacturing;
b. Discuss the Inch system of measurement;
c. Discuss the Metric system of measurement;
d. Discuss semi-precision and precision measurement; and,
e. Discuss the following: precision, reliability, discrimination, and accuracy.

MODULE OUTLINE:

I. Discuss the Use of Metrology in Manufacturing
   A. Discuss the function and reason for measurements in manufacturing
   B. Discuss the changes (metrology related) in manufacturing today
      1. Interchangeable manufacture
      2. World trade
      3. High precision

II. Discuss the Inch System of Measurement
    A. Discuss fractional (scale) dimensions for linear measurement
    B. Discuss decimal dimensions for linear measurement
    C. Convert fractional to decimal
       1. Review mathematical conversion method
       2. Fractional/decimal conversion charts
    D. Practice and demonstration of skills listed above

III. Discuss the Metric System of Measurement
     A. Discuss the units of measure commonly used in the metric system
     B. Convert inch to metric
        1. Review mathematical method (1 inch = 25.4 mm)
        2. Conversion charts
     C. Practice and demonstration of skills listed above

IV. Discuss Semi-Precision and Precision Measurement
    A. Discuss the difference between semi-precision and precision measurement
       1. Semi-precision measurements are 1/64" (.5mm) or greater
       2. Precision measurements are less than 1/64" (.5mm)
    B. Discuss the five categories of precision measurement
       1. Outside measurement
       2. Inside measurement
       3. Depth measurement
       4. Thread measurement
       5. Height measurement
V. Discuss the Following Measurement Terms: Accuracy, Precision, Reliability, and Discrimination

A. **Accuracy** - whether or not something is made according to standard. (The standard for manufacturing is the blueprint.)

B. **Precision** - the degree of exactness required for an application or design requirement

C. **Reliability** - the ability to consistently obtain the desired result

D. **Discrimination** - the degree that a measuring instrument divides its basic unit of length
OBJECTIVE(S):

Upon completion of this unit the student will be able to:

a. Identify basic semi-precision measuring tools;
b. Identify precision measuring tools;
c. Justify use of particular measurement tools based on tool characteristics;
d. Identify error possibilities in measurement tool selection; and,
e. Demonstrate proper care of precision measuring tools.

MODULE OUTLINE:

I. Describe and Discuss the Following Semi-Precision Measuring Tools
   A. Steel rules
   B. Calipers
   C. Squares

II. Describe and Discuss the Following Precision Measuring Tools
   A. Micrometers (outside, inside and depth)
   B. Verniers (calipers and height gage)
   C. Gages (small hole, telescope, fixed, and dial bore)

III. Justify Use of Particular Measurement Tools Based on Tool Characteristics
   A. What tolerance is required by the print?
   B. What physical characteristics of the part influence tool selection?
   C. What is the discrimination of the tool?
   D. How much time is available for part measurement/inspection?
   E. Will the tool be used by itself or in conjunction with some other tool?
   F. What is the most reliable tool for this application?

IV. Identify Error Possibilities in Measurement Tool Selection
   A. Part not being produced to specifications
   B. Too much time spent trying to measure correctly by not having the right tool

V. Demonstrate Proper Care of Precision Measuring Tools
   A. Storage
   B. Handling
   C. Cleaning
OBJECTIVE(S):

Upon completion of this unit the student will be able to:

a. Measure with steel rules (metric and inch);
b. Measure with micrometers;
c. Measure with comparison measuring instruments (e.g., calipers, telescope gages);
d. Measure with direct measuring instruments (e.g., vernier, dial and digital instruments); and,
e. Measure with fixed gages (go and no-go gages).

MODULE OUTLINE:

I. Discuss the Importance of Learning and Practicing Proper Measurement Techniques
   A. Show the video "Measuring Tools"
   B. Give each student a copy of the handout "Proper Measuring Techniques"

II. Discuss and Demonstrate Proper Measurement Techniques Using the Steel Rule

III. Discuss and Demonstrate the Use of Micrometer Type Measuring Instruments
    A. Outside micrometers
    B. Inside micrometers
    C. Depth micrometers
    D. Practice and demonstration of skills listed above

IV. Discuss and Demonstrate the Use of Transfer Type Measuring Instruments
    A. Spring calipers (inside and outside)
    B. Telescope gages
    C. Small hole gages
    D. Practice and demonstration of skills listed above

V. Discuss and Demonstrate the Use of Direct Measuring Instruments
    A. Vernier calipers
    B. Dial calipers
    C. Digital calipers
    D. Practice and demonstration of skills listed above

VI. Discuss the Purpose of Fixed Gages and Demonstrate Their Use
    A. Cylindrical plug and ring gages
    B. Taper plug and ring gages
    C. Snap gages
    D. Thread plug gages
    E. Practice and demonstration of skills listed above

VII. Complete Practical Exercises on all above material
Rules of Conduct

1. Absolutely no horseplay or practical joking will be tolerated
2. Do not talk to anyone who is operating a machine
3. Walk only in the designated traffic lanes
4. Dress appropriately; at the absolute minimum, you must have:
   a. No loose clothing, including ties;
   b. Long hair properly stowed;
   c. No jewelry;
   d. Hard, closed-toe shoes;
   e. Eye protection (safety glasses); and
   f. Ear protection (plugs or headset).
5. Follow all institutional safety rules

WELDER SERIES
MASTER Technical Module No. WLD-F05

SUBJECT: WELDING TECHNICIAN  TIME: 20 HOURS

- DUTY: MATHEMATICAL SKILLS
- TASK: Perform Practical Mathematical Applications Relevant to Area of Work

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Demonstrate proficiency in algebraic operations;
B. Understand Laws of Exponents;
C. Understand Scientific Notation;
D. Solve basic equations;
E. Solve formulas through substitution and with variables;
F. Solve linear equations;
G. Understand the systems of linear equations;
H. Understand the basic concepts of Trigonometry such as:
   • Ratios and right angles;
   • Naming trigonometric ratios;
   • Functions for given angles and angles for given functions;
   • Proficiency in calculator usage to solve trig functions;
I. Understand right triangle applications;
J. Understand and solve problems in angular measures;
K. Understand and solve problems with circles;
L. Understand and solve problems with geometric shapes; and,
M. Understand and solve problems with geometric solids.

INSTRUCTIONAL MATERIALS:

Overhead projector
Prepared overlays
Scientific Calculator
Set of hands-on equation activities
Graph paper for class use
MASTER Handout (WLD-F5-HO)

STUDENT PREPARATION:

Passing scores on the math and algebra portions of the College Placement Test for degree seeking students.

Students should have previously completed the following Technical Modules:

- **WLD-F1**  “Exhibit Understanding of Basic Arithmetic Functions”
- **WLD-F2**  “Exhibit Understanding of Converting Fractions and Decimals”
- **WLD-F3**  “Demonstrate Practical Mathematics in the use of Measurement Tools”
- **WLD-F4**  “Inter-Convert Metric/English Measurements”

INTRODUCTION:

This module presents algebraic functions, geometry, graphs, fundamentals of trigonometry, and applied statistics as tools to analyze and solve technical problems. Module also includes instruction in measurement tools and test equipment required for precision measurements by technicians or technologists. The scientific calculator will also be used to solve problems in both the English and Metric systems.

PRESENTATION OUTLINE:

Major Topics

I. Algebraic Operations
   A. Addition of Algebraic Expressions
   B. Subtraction of Algebraic Expressions
   C. Multiplication of Algebraic Expressions
   D. Division of Algebraic Expressions
   E. Problem Solving Applications

II. Laws of Exponents
   A. Multiplication
B. Division

III. Scientific Notation

IV. Solving Equations: Introduction
   A. Addition/Subtraction Principles
   B. Multiplication/Division Principles
   C. Combined Operations
   D. Problem Solving Applications

V. Solving Formulas: Introduction
   A. Substitution
   B. Solving for a Variable
   C. Problem Solving Applications

VI. Solving Linear Equations
   A. The Coordinate Plane
   B. Locating Points: Ordered Pairs
   C. Graphing Procedures
   D. Slope/Intercept
   E. Problem Solving Applications

VII. Solving Systems of Linear Equations
   A. Graphing Procedures
   B. Substitution Procedures
   C. Elimination of a Variable
   D. Problem Solving Applications

VIII. Introductory Trigonometry
   A. Ratios and Right Angles
   B. Naming Trigonometric Ratios
   C. Functions for Given Angles
   D. Angles for Given Functions
   E. Calculator Skills with Trig Functions
   F. Problem Solving Applications

IX. The Right Triangle-Applications
   A. Ratios and Proportions
   B. Problem Solving Techniques
   C. Problem Solving Applications

X. Angular Measures
   A. The Protractor/Units
   B. Naming Angles/Triangles
   C. The Pythagorean Theorem
   D. Complimentary/Supplementary Angles
   E. Problem Solving Applications

XI. The Circle
   A. Properties of Circles - Common Terms
   B. Circumference
   C. Arc Length/Cords/Tangents
   D. Problem Solving Applications

XII. Geometric Shapes - Area Measures
PRACTICAL APPLICATION:

1. Discuss concepts and provide examples of algebraic terms, like and unlike terms, literal terms, factors, and numerical coefficient and their differences.
2. Demonstrate and establish procedures for the addition, subtraction, multiplication, and division of algebraic terms.
3. Discuss the concept of powers and roots and clarify the relationship between each.
4. Provide class activity with examples of laws of exponents.
5. Demonstrate procedures for proper order of operations in mathematical formulas.
6. Introduce the concept of scientific notation and procedures for multiplying/dividing by powers of ten.
7. Practice solving mathematical sentences and translating from verbal to mathematical equations.
8. Construct the Cartesian coordinate system using provided graph paper and locate ordered pairs.
9. Demonstrate the concepts of origin, x-axis/coordinate, y-axis/coordinate, quadrants, and ordered pairs.
10. Demonstrate the procedure for constructing the graph of a linear equation and explaining the ratio of rise over run.
11. Explain the slope of a linear equation may be positive, negative, zero, or undefined and express the general equation for slope-intercept. Construct graphs from equation.
12. Demonstrate procedures for solving a system of two linear equations.
13. Draw a right triangle and have class label and name the sides of triangle.
14. Demonstrate the six basic ratios and their names by comparing the lengths of two sides.
15. Explain the numerical value of a ratio.
16. Demonstrate trigonometric functions on calculators and problem solve values of given angles and how to find angles when given values.
17. The student will acquire the necessary knowledge and skills to:
   - Use protractor to measure a given angle
   - Define the Pythagorean Theorem
   - Identify acute, obtuse, and right angles
   - Identify right, isosceles, and equilateral triangles
   - Define and illustrate the common terms associated with a circle
   - Demonstrate skill in finding the area of a given circle, common polygons,
cylinders, prisms, cones, spheres, and solids.

- Demonstrate skill in finding the weight and/or capacity of cylinders and prisms.
- Demonstrate problem solving skills involving Circles, Angles, Shapes and Solids.
- Demonstrate problem solving skills involving area, surface area, volume, capacity, and weight.

EVALUATION AND/OR VERIFICATION:

The evaluation will consist of a test on this module that consists of both standard testing and physical demonstration of understanding of material.

SUMMARY:

There will be a review of each module reemphasizing the important points.

NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-F6) dealing with using applied statistics, graphs, and charts for purpose of analysis and problem-solving.
WLD-F5-HO
Perform Practical Mathematical Applications
Relevant to Area of Work
Attachment 1: MASTER Handout

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Demonstrate proficiency in algebraic operations;
B. Understand Laws of Exponents;
C. Understand Scientific Notation;
D. Solve basic equations;
E. Solve formulas through substitution and with variables;
F. Solve linear equations;
G. Understand the systems of linear equations;
H. Understand the basic concepts of Trigonometry such as:
   • Ratios and right angles;
   • naming trigonometric ratios;
   • Functions for given angles and Angles for given functions;
   • Proficiency in calculator usage to solve trig functions;
I. Understand right triangle applications;
J. Understand and solve problems in angular measures;
K. Understand and solve problems with circles;
L. Understand and solve problems with geometric shapes; and,
M. Understand and solve problems with geometric solids.

Cord Communications, Inc., Latest Edition
*Understanding Mathematics in the Plant*, TPC (lesson plans, transparencies,
and training guide), Latest Edition
*Shop Inspection Techniques*, Oak Ridge National Lab (measurement tools
and activities), Latest Edition
STUDENT PREPARATION:

Passing scores on the math and algebra portions of the College Placement Test for degree seeking students.

Students should have previously completed the following Technical Modules:

- **WLD-F1**: "Exhibit Understanding of Basic Arithmetic Functions"
- **WLD-F2**: "Exhibit Understanding of Converting Fractions and Decimals"
- **WLD-F3**: "Demonstrate Practical Mathematics in the use of Measurement Tools"
- **WLD-F4**: "Inter-Convert Metric/English Measurements"
- **WLD-F5**: "Perform Practical Mathematical Applications Relevant to Area of Work"

INTRODUCTION:

This module teaches applied statistics for graphs, charts, and tools for analysis and problem solving.

PRESENTATION OUTLINE:

Major Topics

I. The Interpretation of Graphs
   A. The Purpose of Graphs
   B. The Structure of Graphs
   C. Reading Graphs

II. The Construction of Graphs
   A. Bar Graphs
   B. Line Graphs
   C. Broken-Line Graphs
   D. Curve-Line Graphs
   E. Problem Solving Applications

PRACTICAL APPLICATION:

The student will acquire the necessary knowledge and skills to:

- Demonstrate skill in reading selected line graphs
- Demonstrate skill in constructing Vertical and Horizontal Bar Graphs
- Demonstrate skill in constructing Broken Line, Straight Line, and Curve Line Graphs
- Demonstrate skill in problem solving with bar and line graphs
EVALUATION AND/OR VERIFICATION:

The evaluation will consist of a test on this module that consists of both standard testing and physical demonstration of understanding of material.

SUMMARY:

There will be a review of each module reemphasizing the important points.

NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-G1) dealing with reading job method plan.
OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Understand the interpretation of graphs; and,
B. Construct various graphs.

MODULE OUTLINE:

Major Topics

I. The Interpretation of Graphs
   A. The Purpose of Graphs
   B. The Structure of Graphs
   C. Reading Graphs
II. The Construction of Graphs
   A. Bar Graphs
   B. Line Graphs
   C. Broken-Line Graphs
   D. Curve-Line Graphs
   E. Problem Solving Applications
**WELDER** ... that person who is responsible for the planning, layout, fit up of materials, and operation of welding equipment to prepare the work and perform welding operations necessary to produce a work piece to prescribed engineering standards.

WELDER SERIES
MASTER Technical Module No. WLD-G01

SUBJECT: WELDING TECHNICIAN
TIME: 3 HOURS

• DUTY: WELD RELATED REQUIREMENTS
• TASK: Read Job Method Plan

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Understand job method plan; and,
B. Understand blueprint requirements.

INSTRUCTIONAL MATERIALS:

Student Workbook
One written test on GMAW Basic
Transparencies will be prepared to emphasize each subject
Hobart Institute Video Material V10.0-V10.04
Classroom handouts consisting of job worksheets and drawings
MASTER Handout (WLD-G1-H0)

Competency Standards, American Welding Society, Latest Edition
Tool and Manufacturing Engineers Handbook (Volumes 3 and 4), Society of
Latest Edition
STUDENT PREPARATION:

Students should prepare by completing the Technical Mathematics modules and any course in drawing and engineering measurement tools:

INTRODUCTION:

This module assists the student in job planning, review of specifications of work, and understanding of welding terminology.

PRESENTATION OUTLINE:

Instruction Topics:

a) Identify symbols and specifications
b) Add, subtract, multiply and divide whole numbers, fractions and decimals
c) Convert SI (metric) to US (customary) units and vice versa
d) Use calculator to perform basic arithmetic operations
e) Use standard tapes, rules and square
f) Use angle devices, such as inclinometer and protractor
g) Determine weld requirements for specific material
h) Perform measurement and inspection
i) Identify error possibilities within measurement procedures
j) Identify calibration requirements of various precision instruments
k) Alloys and selection of proper welding rod

Student Activities:

a) Review blueprints and/or drawings
b) Perform measurements with precision instruments
c) Find angles with precision instruments
d) Review the benefit of a jig or fixture to increase production and accuracy
e) Identify alloy of parent metal
f) Identify alloy for welding rod to be compatible with parent metal

PRACTICAL APPLICATION:

Students will perform preliminary job planning of an assigned welding project.

EVALUATION AND/OR VERIFICATION:

An examination will be given at the end of this section to determine student progress.

SUMMARY:

This module will assist the student in job methods, planning for work, and understanding specifications.
NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-G2) dealing with verifying and upgrading paperwork.
OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Understand job method plan; and,
B. Understand blueprint requirements.

MODULE OUTLINE:

Instruction Topics:

a) Identify symbols and specifications
b) Add, subtract, multiply and divide whole numbers, fractions and decimals
c) Convert SI (metric) to US (customary) units and vice versa
d) Use calculator to perform basic arithmetic operations
e) Use standard tapes, rules and square
f) Use angle devices, such as inclinometer and protractor
g) Determine weld requirements for specific material
h) Perform measurement and inspection
i) Identify error possibilities within measurement procedures
j) Identify calibration requirements of various precision instruments
k) Alloys and selection of proper welding rod

Student Activities:

a) Review blueprints and/or drawings
b) Perform measurements with precision instruments
c) Find angles with precision instruments
d) Review the benefit of a jig or fixture to increase production and accuracy
e) Identify alloy of parent metal
f) Identify alloy for welding rod to be compatible with parent metal
WELDER SERIES
MASTER Technical Module No. WLD-G02

SUBJECT: WELDING TECHNICIAN
TIME: HOURS

• DUTY: WELD RELATED REQUIREMENTS
• TASK: Verify and Upgrade Paperwork

INSTRUCTIONAL MATERIALS

Student Workbook
Transparencies will be prepared to emphasize each subject
Hobart Institute Video Material V10.0-V10.04
Classroom handouts
MASTER Handout (WLD-G2-HO)

OTHER:
Competency Standards, American Welding Society, Latest Edition

STUDENT PREPARATION:

Students should prepare by completing the Technical Mathematics modules and any course in drawing and engineering measurement tools.
INTRODUCTION:

This module will prepare the student in work orders, shop procedures, codes, and production planning.

PRESENTATION OUTLINE:

Instruction Topics:
   a) Identify symbols and specifications
   b) Work orders
   c) Production planning
   d) Job tickets or packets
   e) Obtaining proper materials and alloys

Student Activities (in practical exercise format):
   a) Review blueprints and/or drawings
   b) Review codes and specifications
   c) Follow job order process
   d) Ordering and casting of appropriate materials
   e) Complete production planning

PRACTICAL APPLICATION:

This module will teach job evaluation, sourcing and casting of materials and labor, and production layout.

EVALUATION AND/OR VERIFICATION:

Student will complete the planning and paperwork steps in class and then visit a state-of-the-art facility for questions/answers.

SUMMARY:

Students must learn the steps to job assessment, planning and casting in order to have a productive and viable operation.

NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-G3) dealing with interpreting drawings and blueprints.
WLD-G2-HO
Verify and Upgrade Paperwork
Attachment 1: MASTER Handout

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Review work orders, standard procedures, codes and requirements; and,
B. Make changes to paperwork when necessary.

MODULE OUTLINE:

Instruction Topics:

a) Identify symbols and specifications
b) Work orders
c) Production planning
d) Job tickets or packets
e) Obtaining proper materials and alloys

Student Activities (in practical exercise format):

a) Review blueprints and/or drawings
b) Review codes and specifications
c) Follow job order process
d) Ordering and casting of appropriate materials
e) Complete production planning
SUBJECT: WELDING TECHNICIAN  TIME: 4 HOURS

- DUTY: WELD RELATED REQUIREMENTS
- TASK: Interpret Drawings and Blueprints

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Understand information given from a blueprint or drawing;
B. Understand lines, letter descriptions and abbreviations;
C. Understand types of projections; and,
D. Understand section views.

INSTRUCTIONAL MATERIALS:

Student Workbook EW-269 GMAW Basic
Transparencies will be prepared to emphasize each subject
Classroom handouts will consist of student drawings, worksheets, and alloy charts
MASTER Handout No. 1 (WLD-G3-HO1)

TEXT:  

OTHER:  
STUDENT PREPARATION:

Students should prepare by completing the Technical Mathematics modules and any course in drawing and engineering measurement tools.

INTRODUCTION:

This module will prepare the welder for interpretation of drawings and blueprints.

PRESENTATION OUTLINE:

Instruction Topics:
- a) Identify symbols and specifications
- b) The layouts of blueprints
- c) Lines and abbreviations
- d) Special instructions for welders

Student Activities:
- a) Review blueprints and/or drawings
- b) Prepare a drawing for an assigned welding project

PRACTICAL APPLICATION:

Drawing interpretation may determine those parts that are made or out-sourced. It also has major cost implications and can result in profit or loss.

EVALUATION AND/OR VERIFICATION:

An examination will be given at the end of this section. The drawing will also be evaluated.

SUMMARY:

The interpretation of drawings is an important skill for welders. If properly used, it can prevent non-conforming product and rework.
NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-G4) dealing with reading welding specifications and procedures.
OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Understand information given from a blueprint or drawing;
B. Understand lines, letter descriptions and abbreviations;
C. Understand types of projections; and,
D. Understand section views.

MODULE OUTLINE:

Instruction Topics:

a) Identify symbols and specifications
b) The layouts of blueprints
c) Lines and abbreviations
d) Special instructions for welders

Student Activities:

a) Review blueprints and/or drawings
b) Prepare a drawing for an assigned welding project
OBJECTIVE(S):

Upon completion of this unit the student will be able to:

a. Identify organizations that classify metals;
b. Distinguish between types of metal by manufacturing method and/or shape;
c. Identify designation of each digit of a metal classification;
d. Identify carbon and alloy content of a metal using classification system;
e. Identify content of an unknown metal using shop tests; and,
f. Identify conformity of a metal to a specification system.

MODULE OUTLINE:

I. Identify the Organizations That Classify Metals and Discuss the Significance of Each
   A. American Iron and Steel Institute (AISI)
   B. Society of Automotive Engineers (SAE)
   C. American Society for Testing and Materials (ASTM)
   D. American National Standards Institute (ANSI)
   E. Aluminum Association

II. Identify Classifications by Manufacturing Methods or Processes
   A. Hot rolled
   B. Cold rolled
   C. Turned and polished (sometimes referred to as ground and polished)
   D. Castings
   E. Forgings
   F. Galvanized

III. Identify Classifications by Shape
   A. Sheet and plate
   B. Bar stock
   C. Pipe and tubing
   D. Rod and wire
   E. Coil or strip
   F. Structural steel

IV. Discuss the AISI-SAE Numbering Systems for Carbon Steels
   A. Plain carbon steels (AISI-SAE 10xx and 15xx)
   B. Free-cutting steels (AISI-SAE 11xx and 12xx)

V. Discuss the AISI-SAE Classification Systems for Alloy Steels
   A. Manganese steels (AISI-SAE 13xx)
   B. Nickel steels (AISI-SAE 2xxx)
   C. Nickel-chromium steels (AISI-SAE 3xxx)
   D. Molybdenum steels (AISI-SAE 4xxx)
   E. Low chromium steels (AISI-SAE 5xxx)
VI. Discuss the AISI-SAE Classification of Stainless Steels
   A. Chromium-nickel austenitic steels (SAE 30xxx or AISI 20x and 3xx)
   B. Ferritic chromium steels (SAE 5xxx or AISI 4xx and 50x)
   C. Martensitic chromium steels (SAE 5bxxx or AISI 4xx and 50x)

VII. Discuss the AISI Classification of Tool Steels
   A. High speed tool steels (AISI type M and T)
   B. Hot work tool steels (AISI type H)
   C. Cold work tool steels (AISI type D, A, and O)
   D. Shock resisting tool steels (AISI type S)
   E. Mold steels (AISI type P)
   F. Special purpose tool steels (AISI type L and F)
   G. Water hardening tool steels (AISI type W)

VIII. Discuss the Classification of Nonferrous Alloys
   A. Aluminum and aluminum alloys (Aluminum Association four digit system)
   B. Magnesium alloys (SAE type 5x and 5xx)
   C. Nickel and nickel alloys (by name)
   D. Titanium and titanium alloys (titanium and chief alloying element)
   E. Copper and copper alloys (by name and SAE standard number)

IX. Discuss the Classification of Castings
    A. Brass and bronze castings (SAE standard number)
    B. Aluminum casting alloys (Aluminum Association four digit system)
    C. Cast Iron (ASTM grade)
    D. Steel Castings (ASTM grade)

X. Discuss the Unified Numbering System (UNS) for Metals and Alloys

XI. Discuss the Basic Identification of an Unmarked Piece of Steel Using Shop Tests
    A. Observation
    B. Magnet test
    C. Hardness test
    D. Scratch test
    E. File test
    F. Chemical test
    G. Spark test

XII. Identify Specification Systems for Metals and Alloys
     A. American Society for Testing and Materials (ASTM)
     B. American National Standards Institute (ANSI)
     C. U.S. Department of Defense (military specifications)
     D. General Accounting Office (federal specifications)

List of Materials for Shop Tests and Illustration

1. **Observation Test**
   Sample of round bars with various surface finishes (cold finished, hot rolled, ground and polished)

2. **Magnet Test**
   Sample of carbon steel, ferritic or martensitic stainless steel, austenitic stainless steel, aluminum, and nickel steel

3. **Hardness Test**
   Sample of mild steel, medium carbon steel, high carbon steel, alloy steel, and tool steel

4. **Scratch Test**
   Sample of mild steel, medium carbon steel, high carbon steel, alloy steel, and tool steel

5. **File Test**
   Sample of mild steel, medium carbon steel, high carbon steel, alloy steel, and tool steel

6. **Chemical Test**
   Sample of carbon steel, type 302 or 304 stainless steel, type 316 or 317 stainless steel

7. **Spark Test**
   Sample of low carbon steel, high carbon steel, cast iron, high speed steel, tool steel, and manganese steel

8. **Observation Test**
   Samples of bar stock (round and square), hot rolled sheet, cold finished coil strip, galvanized sheet, small diameter pipe, small diameter tubing, small gauge wire, hot rolled rod, and cold finished rod
1. The instructor will:
   a. Demonstrate use of drafting machine;
   b. Demonstrate use of drafting instruments;
   c. Demonstrate drafting techniques to create basic geometric elements;
   d. Demonstrate sketching techniques, including:
      (1) Isometric sketching;
      (2) Oblique sketching; and,
      (3) One-point and two-point perspective sketching.

2. The student will:
   a. Demonstrate use of drafting machine;
   b. Demonstrate use of drafting instruments;
   c. Demonstrate drafting techniques to create basic geometric elements, which include:
      (1) Bisecting a line or a circular arc;
      (2) Bisecting an angle and to transfer an angle;
      (3) Constructing a line parallel to a given line at a given distance;
      (4) Dividing a line into equal or proportional parts;
      (5) Constructing a triangle with the length of the sides given;
      (6) Inscribing a circle in a triangle;
      (7) Constructing a right triangle with hypotenuse and one side given;
      (8) Constructing a line through a point and perpendicular to a given line at the prescribed point and from a point off the given line;
      (9) Constructing a square with a side given;
      (10) Inscribing a regular pentagon in a given circle;
      (11) Inscribing and circumscribing a hexagon on a given circle;
      (12) Inscribing an octagon in a given square;
      (13) Constructing a circle through three given points not in a straight line;
      (14) Constructing a circle of a given size tangent to a given line and passing through a given point;
      (15) Constructing a circle tangent to a given line at a prescribed point on that line and passing through a given point not on that line;
      (16) Constructing a circle of a given size tangent to a given circle and passing through a given point;
      (17) Constructing an arc of a given size tangent to two given intersecting lines at acute or obtuse angles;
      (18) Constructing a given size circle tangent to two given circles;
      (19) Constructing an ellipse using the concentric circle method with major and minor diameters given;
d. Demonstrate sketching techniques, including:
(1) Isometric sketching;
(2) Oblique sketching; and,
(3) One-point and two-point perspective sketching.

3. The instructor will grade the student's performance on the student's ability to:
   a. Demonstrate use of drafting machine;
   b. Demonstrate use of drafting instruments;
   c. Demonstrate drafting techniques to create basic geometric elements, which include:
      (1) Bisecting a line or a circular arc;
      (2) Bisecting an angle and to transfer an angle;
      (3) Constructing a line parallel to a given line at a given distance;
      (4) Dividing a line into equal or proportional parts;
      (5) Constructing a triangle with the length of the sides given;
      (6) Inscribing a circle in a triangle;
      (7) Constructing a right triangle with hypotenuse and one side given;
      (8) Constructing a line through a point and perpendicular to a given line at the prescribed point and from a point off the given line;
      (9) Constructing a square with a side given;
      (10) Inscribing a regular pentagon in a given circle;
      (11) Inscribing and circumscribing a hexagon on a given circle;
      (12) Inscribing an octagon in a given square;
      (13) Constructing a circle through three given points not in a straight line;
      (14) Constructing a circle of a given size tangent to a given line and passing through a given point;
      (15) Constructing a circle tangent to a given line at a prescribed point on that line and passing through a given point not on that line;
      (16) Constructing a circle of a given size tangent to a given circle and passing through a given point;
      (17) Constructing an arc of a given size tangent to two given intersecting lines at acute or obtuse angles;
      (18) Constructing a given size circle tangent to two given circles;
      (19) Constructing an ellipse using the concentric circle method with major and minor diameters given;
      (20) Construct an approximate ellipse with major and minor diameters given.

   d. Demonstrate sketching techniques, including:
      (1) Isometric sketching;
      (2) Oblique sketching; and,
      (3) One-point and two-point perspective sketching.
I. Identify the following:
   a. AISI
   b. SAE
   c. ASTM
   d. ANSI
   e. UNS

II. Complete the following charts:

III. Answer the following questions:

A. What is the out-of-round tolerance for 2-1/2" diameter hot rolled bar?

B. What is the size tolerance for 1-3/4" cold finished hexagon bar made from 1045?

C. If the only requirements given you were 1" 1018 square bar with a size tolerance of .006, would you choose hot rolled (much cheaper) or cold finished stock?
IV. Record the results of your shop test below.

WLD-G3
Interpret Drawings and Blueprints
Self-Assessment

1. Who is the AISI?

2. Who is the SAE?

3. What organization's classification system of aluminum and aluminum alloys is accepted by industry and used by commercial producers?

4. What organization has published a specification system for metals and alloys?

5. Name three classes of metals by manufacturing method, process, or material finish.

6. Identify four basic shapes that metals are produced in.

7. What do the first two digits of a steel name designate?
8. What do the last two digits (in a four-digit name) designate?

9. What is the approximate percent of carbon in 1045 carbon steel?

10. What is the approximate percent of carbon in 52100 chromium steel?

11. What type steel is 4147?

12. What is the alloying element in 2517 steel? What percent of that element is present?

13. If the element chromium makes steel stainless, why are the 5xxx and 5xxxx steels not included in the stainless steel group?

14. Name three types of stainless steel.

15. Which types are magnetic?
16. What element is added to austenitic stainless steels to improve ductility and other properties?

17. What type steel is indicated by the symbol W1 or A6?

18. What type tool steel is designated by the symbol D (category and group designations)?

19. What three groups of cold work tool steels are available?

20. What is the designation for water hardening tool steel?

21. Identify three categories of nonferrous alloys.

22. What category of nonferrous metals does brass and bronze belong to?

23. What does the first digit of an aluminum designation identify?

24. What are the basic temper designations and subdivisions for aluminum alloys?
25. Name 5 basic types of cast iron.

26. Name 2 basic types of steel castings.

27. What is the UNS designation for 1212 free cutting carbon steel?

28. What type metal are the T series numbers reserved for in the UNS numbering system?

29. What does a G as the first digit of a UNS classification designate?

30. What is the AISI-SAE classification for a G13300 steel?

31. When checking the hardness of a piece of steel with the file test, the file slides over the surface without cutting. What type steel is it most likely to be?

32. What can you determine about a metal by observation?
33. If an unknown sample can not be scratched by a piece of mild steel keystock but the keystock can be scratched by the sample, what conclusion can you draw about the sample?

________________________________________________________________________

________________________________________________________________________

34. If a hardness tester is not available, how can you determine relative hardness of a sample?

________________________________________________________________________

________________________________________________________________________

35. When spark testing a sample to determine carbon content, what does orange carrier lines ending in pear-shaped globules and very little branching indicate?

________________________________________________________________________

________________________________________________________________________

36. What is the out-of-round tolerance for 2-1/2" diameter hot rolled bar?

________________________________________________________________________

________________________________________________________________________

37. What is the maximum width of 1-1/4" key made from 1045 cold finished square bar? What is the minimum width?

________________________________________________________________________

________________________________________________________________________

38. What is the maximum diameter of a shaft made from 5" hot rolled 1018 bar? What is the minimum?

________________________________________________________________________

________________________________________________________________________

39. Name two other specification systems in use.

________________________________________________________________________

________________________________________________________________________

40. Define color coding and explain what it is used for.

________________________________________________________________________

________________________________________________________________________
SUBJECT: WELDING TECHNICIAN  
TIME: 4 HOURS

DUTY: WELD RELATED REQUIREMENTS

TASK: Read Welding Specifications and Procedures

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Understand specifications and procedures; and,
B. Understand tolerances, defects, and discontinuities.

INSTRUCTIONAL MATERIALS:

Student Workbook
Transparencies will be prepared to emphasize each subject
Hobart Institute Video Material V10.0-V10.04
Classroom handouts
MASTER Handout No. 1 (WLD-G4-H01)
MASTER Handout No. 2 (WLD-G4-H02)
MASTER Handout No. 3 (WLD-G4-H03)
MASTER Handout No. 4 (WLD-G4-H04)
MASTER Handout No. 5 (WLD-G4-H05)
MASTER Handout No. 6 (WLD-G4-H06)
MASTER Handout No. 7 (WLD-G4-H07)
MASTER Handout No. 8 (WLD-G4-H08)
MASTER Handout No. 9 (WLD-G4-H09)
MASTER Laboratory Aid (WLD-G4-LA)
MASTER Laboratory Worksheet (WLD-G4-LW)
MASTER Self-Assessment

REFERENCES:

STUDENT PREPARATION:

Students should prepare by completing the Technical Mathematics modules and any course in drawing and engineering measurement tools.

INTRODUCTION:

Welding specifications and procedures require much training and preparation. Students need the requisite welding practice and knowledge of reference materials that range from AWS symbols, metallurgy, procedures for many types of welding, and standards on desired welding outcomes.

PRESENTATION OUTLINE:

Instruction Topics:

a) Identify symbols and specifications
b) Accepted procedures for types of welding operations (sources)
c) Dimensioning tolerancing
d) Weld defects and discontinuities
e) Weld quality standards

Student Activities:

a) Review blueprints and/or drawings
b) See examples of weld defects and discontinuities

PRACTICAL APPLICATION:

Students will review the many types of weld defects and discontinuities.

EVALUATION AND/OR VERIFICATION:

An examination will be given at the end of this section to determine the progress of the class.

SUMMARY:

Welding specifications require exact procedures to be followed by the welder who must also be skilled in the inspection of his own work.
NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-H1) dealing with understanding parts of blueprint.
OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Understand specifications and procedures; and,
B. Understand tolerances, defects, and discontinuities.

MODULE OUTLINE:

Instruction Topics:
- a) Identify symbols and specifications
- b) Accepted procedures for types of welding operations (sources)
- c) Dimensioning tolerancing
- d) Weld defects and discontinuities
- e) Weld quality standards

Student Activities:
- a) View blueprints and/or drawings
- b) See examples of weld defects and discontinuities
OBJECTIVE(S):

Upon completion of this unit the student will be able to:

a. Identify organizations that classify metals;

b. Distinguish between types of metal by manufacturing method and/or shape;

c. Identify designation of each digit of a metal classification;

d. Identify carbon and alloy content of a metal using classification system;

e. Identify content of an unknown metal using shop tests; and,

f. Identify conformity of a metal to a specification system.

MODULE OUTLINE:

I. Identify the Organizations That Classify Metals and Discuss the Significance of Each
   A. American Iron and Steel Institute (AISI)
   B. Society of Automotive Engineers (SAE)
   C. American Society for Testing and Materials (ASTM)
   D. American National Standards Institute (ANSI)
   E. Aluminum Association

II. Identify Classifications by Manufacturing Methods or Processes
   A. Hot rolled
   B. Cold rolled
   C. Turned and polished (sometimes referred to as ground and polished)
   D. Castings
   E. Forgings
   F. Galvanized

III. Identify Classifications by Shape
   A. Sheet and plate
   B. Bar stock
   C. Pipe and tubing
   D. Rod and wire
   E. Coil or strip
   F. Structural steel

IV. Discuss the AISI-SAE Numbering Systems for Carbon Steels
   A. Plain carbon steels (AISI-SAE 10xx and 15xx)
   B. Free-cutting steels (AISI-SAE 11xx and 12xx)

V. Discuss the AISI-SAE Classification Systems for Alloy Steels
   A. Manganese steels (AISI-SAE 13xx)
   B. Nickel steels (AISI-SAE 2xxx)
   C. Nickel-chromium steels (AISI-SAE 3xxx)
   D. Molybdenum steels (AISI-SAE 4xxx)
   E. Low chromium steels (AISI-SAE 5xxx)
   F. Other alloy steels (AISI-SAE 6xxx, 8xxx, and 9xxx)

VI. Discuss the AISI-SAE Classification of Stainless Steels
A. Chromium-nickel austenitic steels (SAE 30xxx or AISI 20x and 3xx)  
B. Ferritic chromium steels (SAE 5 lxxx or AISI 4xx and 50x)  
C. Martensitic chromium steels (SAE 5lxxx or AISI 4xx and 50x)  

VII. Discuss the AISI Classification of Tool Steels  
A. High speed tool steels (AISI type M and T)  
B. Hot work tool steels (AISI type H)  
C. Cold work tool steels (AISI type D, A, and O)  
D. Shock resisting tool steels (AISI type S)  
E. Mold steels (AISI type P)  
F. Special purpose tool steels (AISI type L and F)  
G. Water hardening tool steels (AISI type W)  

VIII. Discuss the Classification of Nonferrous Alloys  
A. Aluminum and aluminum alloys (Aluminum Association four digit system)  
B. Magnesium alloys (SAE type 5x and 5xx)  
C. Nickel and nickel alloys (by name)  
D. Titanium and titanium alloys (titanium and chief alloying element)  
E. Copper and titanium alloys (by name and SAE standard number)  

IX. Discuss the Classification of Castings  
A. Brass and bronze castings (SAE standard number)  
B. Aluminum casting alloys (Aluminum Association four digit system)  
C. Cast Iron (ASTM grade)  
D. Steel Castings (ASTM grade)  

X. Discuss the Unified Numbering System (UNS) for Metals and Alloys  

XI. Discuss the Basic Identification of an Unmarked Piece of Steel Using Shop Tests  
A. Observation  
B. Magnet test  
C. Hardness test  
D. Scratch test  
E. File test  
F. Chemical test  
G. Spark test  

XII. Identify Specification Systems for Metals and Alloys  
A. American Society for Testing and Materials (ASTM)  
B. American National Standards Institute (ANSI)  
C. U.S. Department of Defense (military specifications)  
D. General Accounting Office (federal specifications)

OBJECTIVE(S):

Upon completion of this unit the student will be able to:

a. Discuss classification system for metals; and,
b. Describe general characteristics for carbon steels, tool steels, stainless steels, structural steels, cast irons, aluminum, and other commonly used metals.

MODULE OUTLINE:

I. Discuss the Physical Properties of Metal
   A. Brittleness - the property of a metal which permits no permanent distortion before breaking
   B. Ductility - the ability of the metal to be permanently deformed without breaking
   C. Elasticity - the ability of a metal to return to its original shape after any force acting upon it has been removed
   D. Hardness - the resistance to forcible penetration
   E. Malleability - the property of a metal which permits it to be hammered or rolled into other sizes and shapes
   F. Tensile strength - the maximum amount of pull that a material will withstand before breaking
   G. Toughness - the property of a metal to withstand shock or impact

II. Discuss the Classification System for Steel
   A. Carbon steels
      1. Low carbon steel - contains from 0.02 to 0.20 percent of carbon
      2. Medium carbon steel - contains from 0.30 to 0.60 percent of carbon
      3. High carbon steel (tool steel) - contains over 0.60 percent of carbon
   B. Alloy steels - alloying elements allow steels to possess special characteristics
      Discuss Table 1.1 "Effects of Alloying Elements on Steel"
      Discuss Table 1.2 "SAE-ANSI Numerical Designation of Alloy Steels"

III. Describe General Characteristics For:
   A. Carbon Steels
   B. Tool Steels
   C. Stainless Steels
   D. Structural Steels
   E. Cast Irons
   F. Non-Ferrous Metals
      1. Aluminum and Its Alloys
      2. Copper and Its Alloys
      3. Nickel Alloys
      4. Precious Metals
      5. Others

OBJECTIVE(S):

Upon completion of this unit the student will be able to:

a. Briefly describe and list the advantages and disadvantages for each of the following: casting processes, hot working processes, and cold working processes;

b. Discuss service requirements (strength, hardness, etc.);

c. Discuss fastening processes (fasteners, welding, bonding, etc.); and,

d. Discuss corrosion resistance methods.

MODULE OUTLINE:

I. Describe Casting Processes
   A. Discuss the following casting processes: sand, evaporative, shell molding, permanent mold, centrifugal, investment, and die casting
   B. Discuss pattern and mold design factors for each of the above casting processes
   C. List the advantages and disadvantages of the casting processes

II. Describe Hot Working Processes
   A. Discuss the following hot working processes: rolling, strand casting, forging, drawing, extrusion, spinning, and roll forming
   B. List the advantages and disadvantages of the hot working processes

III. Describe Cold Working Processes
   A. Discuss the following cold working processes: rolling, blanking, pressing, drawing, extruding, wire and bar drawing, bending, shearing, and roll forming
   B. List the advantages and disadvantages of the cold working process

IV. Evaluate Alternative Manufacturing Processes
   A. Discuss the powder metallurgy process (PM)
   B. Discuss the following nontraditional machining processes: EDM, laser machining, ultrasonic machining, hydrojet machining, electron beam machining, and plasma beam machining
List of Materials for Shop Tests and Illustration

1. **Observation Test**  
   Sample of round bars with various surface finishes (cold finished, hot rolled, ground and polished)

2. **Magnet Test**  
   Sample of carbon steel, ferritic or martensitic stainless steel, austenitic stainless steel, aluminum, and nickel steel

3. **Hardness Test**  
   Sample of mild steel, medium carbon steel, high carbon steel, alloy steel, and tool steel

4. **Scratch Test**  
   Sample of mild steel, medium carbon steel, high carbon steel, alloy steel, and tool steel

5. **File Test**  
   Sample of mild steel, medium carbon steel, high carbon steel, alloy steel, and tool steel

6. **Chemical Test**  
   Sample of carbon steel, type 302 or 304 stainless steel, type 316 or 317 stainless steel

7. **Spark Test**  
   Sample of low carbon steel, high carbon steel, cast iron, high speed steel, tool steel, and manganese steel

8. **Observation Test**  
   Samples of bar stock (round and square), hot rolled sheet, cold finished coil strip, galvanized sheet, small diameter pipe, small diameter tubing, small gauge wire, hot rolled rod, and cold finished rod
I. Identify the following:
   a. AISI
   b. SAE
   c. ASTM
   d. ANSI
   e. UNS

II. Complete the following charts:

### III. Answer the following questions:

**A.** What is the out-of-round tolerance for 2-1/2" diameter hot rolled bar?

**B.** What is the size tolerance for 1-3/4" cold finished hexagon bar made from 1045?

**C.** If the only requirements given you were 1" 1018 square bar with a size tolerance of -.006, would you choose hot rolled (much cheaper) or cold finished stock?
IV. Record the results of your shop test below.

Self-Assessment

Circle the best answer.

1. Using the SAE system, 1008 indicates
   a. plain carbon steel, 8% carbon
   b. plain carbon steel, 0.8% carbon
   c. plain carbon steel, 0.08% carbon
   d. low chromium steel, 0.08% carbon
   e. none of the above

2. In the SAE system, triple-alloy steels are designated by the numeral ____
   a. 6
   b. 7
   c. 8
   d. 9
   e. none of the above

3. The AISI system uses ________ to indicate the process used to manufacture the steel.
   a. numerical prefixes
   b. numerical suffixes
   c. capital letter prefixes
   d. capital letter suffixes
   e. none of the above

4. Which of the following does NOT increase the tensile strength of steel?
   a. carbon
   b. molybdenum
   c. nickel
   d. all of the above
   e. none of the above

5. Which of the following elements decreases the toughness of steel?
   a. cobalt
   b. phosphorus
   c. vanadium
   d. all of the above
   e. none of the above
6. Which of the following elements imparts fine grain structure to steel?
   a. chromium
   b. manganese
   c. silicon
   d. tungsten
   e. none of the above

7. The AISI prefix B designates that the steel is
   a. acid bessemer carbon steel
   b. basic open hearth carbon steel
   c. acid open hearth carbon steel
   d. brass
   e. none of the above

8. ________ Steels have their own alphabetic classification system.
   a. stainless
   b. low carbon
   c. tool
   d. austenitic
   e. none of the above

9. ________ stainless steel can not be hardened by quenching.
   a. austenitic
   b. ferritic
   c. martensitic
   d. all of the above
   e. none of the above

10. Which of the following metals is magnetic?
    a. phosphorus
    b. silicon
    c. sulfur
    d. all of the above
    e. none of the above

Note: The table includes a variety of tasks and duties related to welding operations, equipment, and process understanding. The content is extensive and detailed, covering aspects such as welding techniques, equipment setup, and safety standards.
SUBJECT: WELDING TECHNICIAN 

TIME: 4 HOURS

DUTY: BLUEPRINTING, STRUCTURAL LAYOUT AND FIT-UP

TASK: Understand Parts of Blueprint

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Introduce related terms and definitions;
B. Define proper terms and definitions;
C. Define lines, dimensions and notes;
D. Perform metric conversions;
E. Discuss orthographic views;
F. Interpret blueprint information; and,
G. Depict proper layout.

INSTRUCTIONAL MATERIALS:

Student Workbook
Written tests
Transparencies will be prepared to emphasize each subject
Hobart Institute Video Material
Classroom handouts
MASTER Handout No. 1 (WLD-H1-H01)
MASTER Handout No. 2 (WLD-H1-H02)
MASTER Handout No. 3 (WLD-H1-H03)

TEXT:

OTHER:
Competency Standards, American Welding Society, Latest Edition
STUDENT PREPARATION:

The purpose of this program is to assist the student in the use of facilities and equipment to improve skill levels. Blueprinting of structural layout and fit-up are important areas of knowledge and skills for the welder.

INTRODUCTION:

The Module Introduction will Include:

- The importance of blueprints and drawings to successful welding outcomes; and,
- A class demonstration of effective drawing and interpretation techniques.

PRESENTATION OUTLINE:

Instructional Topics:

A. Review the use of jigs and fixtures in layout and fitup
B. Demonstrate how to use the reference on a blueprint
C. Lines, dimensions and notes
D. Demonstrate how to scribe a line using a square and a protractor
E. Illustrate how to use the print to find angles
F. Define the following: precision, reliability and accuracy
G. Define tolerance and how to find it on a blueprint
H. Metrics for welders
I. Demonstrate semi-precision measurements techniques
J. Discuss the importance of the tolerance
K. Discriminate between accepted measurement procedures and improper measurement procedures
L. Explain calibration requirements of various precision instruments
M. Illustrate where to locate measurements

Student Activities:

A. Frame and scribe parts for welding and cutting
B. Use measuring techniques on parts
C. Produce a drawing which includes weld symbols
PRACTICAL APPLICATION:

This lesson will cover where to look for a specific measurement on a blueprint and how to determine tolerance from the information given on a blueprint. The students will have the opportunity to demonstrate understanding by following the instructions provided by the blueprint or drawing.

EVALUATION AND/OR VERIFICATION:

An examination will be given at the end of this section to determine the progress of the class.

SUMMARY:

The instructor will emphasize the benefits of precise drawing interpretation. The need to depict proper layout of work will be reinforced in the class. The types of lines, angles, and measurement points contain important reference for the welder.

NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-H2) dealing with describing alphabet of lines.
OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Introduce related terms and definitions;
B. Define proper terms and definitions;
C. Define lines, dimensions and notes;
D. Perform metric conversions;
E. Discuss orthographic views;
F. Interpret blueprint information; and,
G. Depict proper layout.

PRESENTATION OUTLINE:

Instructional Topics:
A. Review the use of jigs and fixtures in layout and fitup
B. Demonstrate how to use the reference on a blueprint
C. Lines, dimensions and notes
D. Demonstrate how to scribe a line using a square and a protractor
E. Illustrate how to use the print to find angles
F. Define the following: precision, reliability and accuracy
G. Define tolerance and how to find it on a blueprint
H. Metrics for welders
I. Demonstrate semi-precision measurements techniques
J. Discuss the importance of the tolerance
K. Discriminate between accepted measurement procedures and improper measurement procedures
L. Explain calibration requirements of various precision instruments
M. Illustrate where to locate measurements

Student Activities:
A. Frame and scribe parts for welding and cutting
B. Use measuring techniques on parts
C. Produce a drawing which includes weld symbols
OBJECTIVE(S):

Upon completion of this unit the student will be able to:

a. Distinguish between general and specific notes;
b. Interpret and apply general and specific notes;
c. Determine and apply dimensions on a drawing;
d. Identify basic symbols and abbreviations found on a drawing;
e. Identify tolerances or limits on a drawing; and,
f. Identify ANSI limits and fits.

MODULE OUTLINE:

I. Distinguish Between General and Specific Notes
   A. General notes
   B. Specific notes/local notes

II. Interpret and Apply General and Specific Notes
   A. General notes applied
      1. Title strip/title block
      2. Parts list/bill of material
   B. Interpret general notes
      1. Including material
      2. General tolerances
      3. Heat treatment
      4. Pattern information
      5. Processes of manufacture
      6. Requirements of the product
   C. Interpret specific notes
      1. Apply to specific operations
      2. Apply to specific processes of manufacture
      3. Apply to the requirements of the product

III. Determine and Apply Dimensions on a Drawing
   A. Identify organizations that determine dimension standards
      1. American National Standards Institutes (ANSI)
      2. International Standards Organization (ISO)
   B. Determine dimensions on a drawing
      1. Size dimensions
      2. Location dimensions
   C. Applying dimensions on a drawing
      1. Scale of drawing
      2. Techniques of dimensioning
      3. Placement of dimensions
4. Choice of dimensions
5. Types of lines used in the dimensioning process
6. Arrowheads used on drawings
7. Leaders used on drawings
8. Dimensioning systems
   a. Fractional
   b. Decimal
   c. Metric
   d. Combination dimensioning
9. Dimension figures
10. Direction of dimension figures
    a. Unidirectional system
    b. Aligned system
11. Dimensioning angles
12. Dimensioning arcs
13. Dimensioning fillets and rounds
14. Identify surfaces to be machined
15. Contour dimensioning
16. Dimensioning of curves
17. Dimensioning of rounded-end shapes
18. Dimensioning of threads
19. Dimensioning of tapers
20. Dimensioning of chamfers
21. Dimensioning shaft centers
22. Dimensioning keyways
23. Dimensioning knurls
   a. Diamond
   b. Straight
24. Dimensioning along curved surfaces
25. Tabular dimensions
26. Dimensioning standards
27. Coordinate dimensioning

IV. Identify Basic Symbols and Abbreviations Found on a Drawing
   A. Traditional terms used to describe various shapes, processes, and sizes
   B. Identify abbreviations used to describe various shapes, processes, and size
   C. Identify a variety of dimensioning symbols used to replace traditional terms and abbreviations

V. Identify Tolerances or Limits on a Drawing
   A. Identify tolerances or limits
      1. Nominal size
      2. Basic size or dimension
      3. Actual size
      4. Tolerance
      5. Limits
      6. Allowance
B. Methods of expressing tolerances
1. General tolerances
2. Limit dimensioning
3. Plus and minus dimensioning
   a. Unilateral system
   b. Bilateral system
4. Single-limit dimensioning
5. Angular tolerances

VI. Identify ANSI Limits and Fits
A. Fits between mating parts
1. Clearance fit
2. Interference fit
3. Transition fit
4. Line fit

B. Limits and fits for cylindrical parts
1. Running or sliding clearance fits
2. Locational clearance fits
3. Transition clearance interference fits
4. Locational interference fits
5. Force or shrink fits
WLD-H1-HO3
Understand Parts of Blueprint
Attachment 3: MASTER Handout No. 3

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
a. Distinguish between conventional and geometric dimensioning and tolerancing;
b. Explain and use geometric positional tolerancing and symbols;
c. Explain and use tolerances of form and symbols;
d. Explain and use the feature control symbol; and,
e. Explain and use modifiers in geometric dimensioning and tolerancing.

MODULE OUTLINE:

I. Distinguish Between Conventional and Geometric Dimensioning and Tolerancing
   A. General/conventional tolerancing
      1. Definitions of general/conventional tolerancing
         a. Dimension
         b. Reference dimension
         c. Feature
         d. Feature of size
         e. Actual size
         f. Stock size
      2. Maximum material condition
      3. Least material condition
      4. Basic fits
      5. Clearance fit
      6. Allowance
      7. Clearance
      8. Force fit
   B. Geometric dimensioning and tolerancing
      1. Definition of geometric dimensioning and tolerancing
      2. Dimensioning rules
      3. Dimensioning units

II. Explain and Use Geometric Positional Tolerancing and Symbols
   A. Explain positional / location tolerances
   B. Identify and use geometric position tolerancing symbols
      1. Position
      2. Concentricity
      3. Symmetry

III. Explain and Use Tolerances of Form Symbols
   A. Explain form tolerances
   B. Identify and use tolerances of form symbols
      1. Straightness
2. Flatness
3. Circularity
4. Cylindrical

IV. Explain and Use Profile Tolerances
   A. Explain profile tolerance
   B. Identify and use profile tolerance symbols
      1. Profile of a line
      2. Profile of a surface
      3. Profile of an arc
      4. Profile of irregular curves
      5. Profile of coplanar surfaces

V. Explain and Use Tolerances of Orientation
   A. Explain orientation tolerances
   B. Identify and use orientation tolerance symbols
      1. Parallelism
      2. Perpendicularity
      3. Angularity

VI. Explain and Use Runout Tolerances
    A. Explain runouts
       1. Circular
       2. Total
    B. Identify and use runout tolerances symbols
       1. Circular
       2. Total

VII. Explain and Use Modifiers in Geometric Dimensioning and Tolerancing
     A. Maximum Material Condition (MMC)
     B. Regardless of Feature Size (RFS)
     C. Least Material Condition (LMC)
     D. Datum feature symbol
     E. Datum reference frame concept
        1. Primary datum plane
        2. Secondary datum plane
        3. Tertiary datum plane
     F. Datum target symbol
        1. Target point
        2. Target line
        3. Target area

VIII. Explain and Use the Feature Control Frame
      A. Explain feature control frame
      B. Explain the compartments of a feature control frame
         1. Geometric characteristic symbol
         2. Geometric tolerance
         3. Zone descriptor
         4. Material condition symbol
         5. Primary datum reference
96. Secondary datum reference
7. Tertiary datum reference

IX. Additional Supplementary Modifying Symbols
A. Explain and use additional modifying symbols.
   1. Diameter
   2. Radius R
   3. Reference ( )
   4. Counterbore/spotface L/
   5. Square
   6. Dimension origin O
   7. Slope
   8. Projected tolerance zone
   9. Spherical diameter
   10. Spherical radius
   11. Arc length
   12. Counter sink
   13. Depth
   14. Conical taper
   15. Place, times, or by
   16. Basic dimension
WELDER SERIES
MASTER Technical Module No. WLD-H02

SUBJECT: WELDING TECHNICIAN TIME: 5 HOURS

- DUTY: BLUEPRINTING, STRUCTURAL LAYOUT AND FIT-UP
- TASK: Describe Alphabet of Lines

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Identify orthographic views;
B. Understand standard drawing lines and symbols; and,
C. Interpret blueprint information.

INSTRUCTIONAL MATERIALS:

Student Workbook
Written tests
Transparencies will be prepared to emphasize each subject

MASTER Handout No. 3 (WLD-H2-H03)

REFERENCES:

TEXT:

OTHER:
Competency Standards, American Welding Society, Latest Edition
STUDENT PREPARATION:

The purpose of this program is to assist the student to improve skill levels for employment as a welding technician, or to provide supplemental training for persons needing instruction for interpreting drawing lines, views, or symbols.

Students should have previously completed the following Technical Modules:

WLD-H1  "Understand Parts of Blueprint"

INTRODUCTION:

The Course Introduction Will Include:
- The importance of precise use and interpretation of lines on drawings
- A class demonstration of effective drawing and interpretation techniques
- A discussion on methods of leading to an increase of skill and knowledge in order to be diversified, and a more valuable employee

PRESENTATION OUTLINE:

Instructional Topics:
A. Present basic lines and views
B. Locations and alignment of views
C. Review print notes, dimensions and symbols
   1) Interpret AWS standard welding symbols
   2) List essential components found in general notes on drawing
   3) Determine acceptable tolerances for drawing
   4) Determine code requirements, process and procedure requirements required by drawing
   5) Interpret multi-view drawings
   6) Work from drawings
D. Identify basic layouts of drawings
E. Interpret drawing lines, views, and symbols
F. Interpret welding symbols
G. Convert metric to English
H. Understand print specifications
I. List assembly procedure per print
J. Understand various types of welding prints
K. Visualize final weldment from print
L. List flaws and mistakes on drawings
M. Interpret AWS standard welding symbols

Student Activities:
A. Use basic sketching techniques
B. Frame and scribe parts for welding and cutting
C. Use measuring techniques on parts
D. Produce a drawing which includes weld symbols

PRACTICAL APPLICATION:

This lesson will cover where to look for specific measurements on a blueprint and how to describe tolerance with the information specified on a blueprint. The students will have the opportunity to sketch or draw part layout and explain the work to be performed, based upon the drawing information.

EVALUATION AND/OR VERIFICATION:

An examination will be given at the end of this section to determine the progress of the class.

SUMMARY:

The instructor will emphasize the benefits of using proper drawing symbols and measurement specifications that will make the welder understand the job requirements and produce quality welded parts.

NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-H3) dealing with demonstrating tape reading and measurement techniques.
Describe Alphabet of Lines
Attachment 1: MASTER Handout No. 1

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Identify orthographic views;
B. Understand standard drawing lines and symbols; and,
C. Interpret blueprint information.

MODULE OUTLINE:

Instructional Topics:
A. Present basic lines and views
B. Locations and alignment of views
C. Review print notes, dimensions and symbols
   1) Interpret AWS standard welding symbols
   2) List essential components found in general notes on drawing
   3) Determine acceptable tolerances for drawing
   4) Determine code requirements, process and procedure requirements required by drawing
   5) Interpret multi-view drawings
   6) Work from drawings
D. Identify basic layouts of drawings
E. Interpret drawing lines, views, and symbols
F. Interpret welding symbols
G. Convert metric to English
H. Understand print specifications
I. List assembly procedure per print
J. Understand various types of welding prints
K. Visualize final weldment from print
L. List flaws and mistakes on drawings
M. Interpret AWS standard welding symbols

Student Activities:
A. Use basic sketching techniques
B. Frame and scribe parts for welding and cutting
C. Use measuring techniques on parts
D. Produce a drawing which includes weld symbols
OBJECTIVE(S):

Upon completion of this unit the student will be able to:

a. Distinguish between general and specific notes;
b. Interpret and apply general and specific notes;
c. Determine and apply dimensions on a drawing;
d. Identify basic symbols and abbreviations found on a drawing;
e. Identify tolerances or limits on a drawing; and,
f. Identify ANSI limits and fits.

MODULE OUTLINE:

I. Distinguish Between General and Specific Notes
   A. General notes
   B. Specific notes/local notes

II. Interpret and Apply General and Specific Notes
   A. General notes applied
      1. Title strip/title block
      2. Parts list/bill of material
   B. Interpret general notes
      1. Including material
      2. General tolerances
      3. Heat treatment
      4. Pattern information
      5. Processes of manufacture
      6. Requirements of the product
   C. Interpret specific notes
      1. Apply to specific operations
      2. Apply to specific processes of manufacture
      3. Apply to the requirements of the product

III. Determine and Apply Dimensions on a Drawing
   A. Identify organizations that determine dimension standards
      1. American National Standards Institutes (ANSI)
      2. International Standards Organization (ISO)
   B. Determine dimensions on a drawing
      1. Size dimensions
      2. Location dimensions
   C. Applying dimensions on a drawing
      1. Scale of drawing
      2. Techniques of dimensioning
      3. Placement of dimensions
4. Choice of dimensions
5. Types of lines used in the dimensioning process
6. Arrowheads used on drawings
7. Leaders used on drawings
8. Dimensioning systems
   a. Fractional
   b. Decimal
   c. Metric
   d. Combination dimensioning
9. Dimension figures
10. Direction of dimension figures
    a. Unidirectional system
    b. Aligned system
11. Dimensioning angles
12. Dimensioning arcs
13. Dimensioning fillets and rounds
14. Identify surfaces to be machined
15. Contour dimensioning
16. Dimensioning of curves
17. Dimensioning of rounded-end shapes
18. Dimensioning of threads
19. Dimensioning of tapers
20. Dimensioning of chamfers
21. Dimensioning shaft centers
22. Dimensioning keyways
23. Dimensioning knurls
   a. Diamond
   b. Straight
24. Dimensioning along curved surfaces
25. Tabular dimensions
26. Dimensioning standards
27. Coordinate dimensioning

IV. Identify Basic Symbols and Abbreviations Found on a Drawing
A. Traditional terms used to describe various shapes, processes, and sizes
B. Identify abbreviations used to describe various shapes, processes, and sizes
C. Identify a variety of dimensioning symbols used to replace traditional terms and abbreviations

V. Identify Tolerances or Limits on a Drawing
A. Identify tolerances or limits
   1. Nominal size
   2. Basic size or dimension
   3. Actual size
   4. Tolerance
   5. Limits
   6. Allowance
B. Methods of expressing tolerances
1. General tolerances
2. Limit dimensioning
3. Plus and minus dimensioning
   a. Unilateral system
   b. Bilateral system
4. Single-limit dimensioning
5. Angular tolerances

VI. Identify ANSI Limits and Fits
A. Fits between mating parts
   1. Clearance fit
   2. Interference fit
   3. Transition fit
   4. Line fit

B. Limits and fits for cylindrical parts
   1. Running or sliding clearance fits
   2. Locational clearance fits
   3. Transition clearance interference fits
   4. Locational interference fits
   5. Force or shrink fits
OBJECTIVE(S):

Upon completion of this unit the student will be able to:

a. Distinguish between conventional and geometric dimensioning and tolerancing;
b. Explain and use geometric positional tolerancing and symbols;
c. Explain and use tolerances of form and symbols;
d. Explain and use the feature control symbol; and,
e. Explain and use modifiers in geometric dimensioning and tolerancing.

MODULE OUTLINE:

I. Distinguish Between Conventional and Geometric Dimensioning and Tolerancing
   A. General/conventional tolerancing
      1. Definitions of general/conventional tolerancing
         a. Dimension
         b. Reference dimension
         c. Feature
         d. Feature of size
         e. Actual size
         f. Stock size
      2. Maximum material condition
      3. Least material condition
      4. Basic fits
      5. Clearance fit
      6. Allowance
      7. Clearance
      8. Force fit
   B. Geometric dimensioning and tolerancing
      1. Definition of geometric dimensioning and tolerancing
      2. Dimensioning rules
      3. Dimensioning units

II. Explain and Use Geometric Positional Tolerancing and Symbols
   A. Explain positional / location tolerances
   B. Identify and use geometric position tolerancing symbols
      1. Position
      2. Concentricity
      3. Symmetry

III. Explain and Use Tolerances of Form Symbols
   A. Explain form tolerances
   B. Identify and use tolerances of form symbols
      1. Straightness
2. Flatness
3. Circularity
4. Cylindrical

IV. Explain and Use Profile Tolerances
A. Explain profile tolerance
B. Identify and use profile tolerance symbols
   1. Profile of a line
   2. Profile of a surface
   3. Profile of an arc
   4. Profile of irregular curves
   5. Profile of coplanar surfaces

V. Explain and Use Tolerances of Orientation
A. Explain orientation tolerances
B. Identify and use orientation tolerance symbols
   1. Parallelism
   2. Perpendicularity
   3. Angularity

VI. Explain and Use Runout Tolerances
A. Explain runouts
   1. Circular
   2. Total
B. Identify and use runout tolerances symbols
   1. Circular
   2. Total

VII. Explain and Use Modifiers in Geometric Dimensioning and Tolerancing
A. Maximum Material Condition (MMC)
B. Regardless of Feature Size (RFS)
C. Least Material Condition (LMC)
D. Datum feature symbol
E. Datum reference frame concept
   1. Primary datum plane
   2. Secondary datum plane
   3. Tertiary datum plane
F. Datum target symbol
   1. Target point
   2. Target line
   3. Target area

VIII. Explain and Use the Feature Control Frame
A. Explain feature control frame
B. Explain the compartments of a feature control frame
   1. Geometric characteristic symbol
   2. Geometric tolerance
   3. Zone descriptor
   4. Material condition symbol
   5. Primary datum reference
Secondary datum reference
7. Tertiary datum reference

IX. Additional Supplementary Modifying Symbols

A. Explain and use additional modifying symbols.
1. Diameter
2. Radius R
3. Reference ( )
4. Counterbore/spotface L/
5. Square
6. Dimension origin O
7. Slope
8. Projected tolerance zone
9. Spherical diameter
10. Spherical radius
11. Arc length
12. Counter sink
13. Depth

WELDER SERIES
MASTER Technical Module No. WLD-H03

SUBJECT: WELDING TECHNICIAN
TIME: 5 HOURS

DUTY: BLUEPRINTING, STRUCTURAL LAYOUT AND FIT-UP

TASK: Demonstrate Tape Reading and Measurement Techniques

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Understand the function of measurement tools;
B. Demonstrate the capabilities of shop lay-out tools; and,
C. Understand related terms and definitions.

INSTRUCTIONAL MATERIALS:

Student Workbook
Written tests
Transparencies will be prepared to emphasize each subject
Hobart Institute Video Material
Steel rule, tape, micrometer, and vernier caliper for each student
Classroom handouts
MASTER Handout No. 1 (WLD-H3-H01)
MASTER Handout No. 2 (WLD-H3-H02)
MASTER Handout No. 3 (WLD-H3-H03)

STUDENT PREPARATION:

This module prepares the student to measure dimensions that are specified in a sketch or engineering drawing, understanding the concept of tolerance, and produce a quality product.

Students should have previously completed the following Technical Modules:

WLD-H2  “Describe Alphabet of lines”

INTRODUCTION:

The Course Introduction will Include:

- The importance of measurement tool applications, proper selection and the use of measurement tools
- A class demonstration of techniques
- A discussion on methods leading to an increase of skill and knowledge in the use of measurement tools

PRESENTATION OUTLINE:

Instructional Topics:

A. Review the use of jigs and fixtures in layout and fitup
B. Demonstrate how to use the reference on a blueprint
C. Demonstrate how to scribe a line using a square and a protractor
D. Illustrate how to use the print to find angles
E. Define the following: precision, reliability and accuracy
F. Define tolerance and how to find it on a blueprint
G. Demonstrate semi-precision measurements techniques
H. Demonstrate use of steel rules, tapes, micrometers, and vernier calipers
I. Discuss the importance of the tolerance
J. Discriminate between accepted measurement procedures and improper measurement procedures
K. Explain calibration requirements of various precision instruments
L. Illustrate where to locate measurements

Student Activities:

A. Frame and scribe parts for welding and cutting
B. Use measuring techniques on parts
C. Practice use of measurement tools with measurement exercises assigned by the instructor.
D. Interpret engineering drawings provided by the instructor
PRACTICAL APPLICATION:

This lesson will cover where to look for a specific measurement on a blueprint and explain how to determine tolerance from the information given on a blueprint. The students will have the opportunity to use precision measuring tools to take measurements and to layout test coupons.

EVALUATION AND/OR VERIFICATION:

An examination will be given at the end of this section to determine the progress of the class.

SUMMARY:

The instructor will emphasize the benefit of using appropriate measurement tools for the job. The ability to use precision tools will require continued practice with measurement tools frequently used by welders. Review welding symbols and provide the students with a copy of AWS weld symbols.

NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-H4) dealing with using framing square to square parts.
OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Understand the function of measurement tools;
B. Demonstrate the capabilities of shop lay-out tools; and,
C. Understand related terms and definitions.

PRESENTATION OUTLINE:

Instructional Topics:
A. Review the use of jigs and fixtures in layout and fitup
B. Demonstrate how to use the reference on a blueprint
C. Demonstrate how to scribe a line using a square and a protractor
D. Illustrate how to use the print to find angles
E. Define the following: precision, reliability and accuracy
F. Define tolerance and how to find it on a blueprint
G. Demonstrate semi-precision measurements techniques
H. Demonstrate use of steel rules, tapes, micrometers, and vernier calipers
I. Discuss the importance of the tolerance
J. Discriminate between accepted measurement procedures and improper measurement procedures
K. Explain calibration requirements of various precision instruments
L. Illustrate where to locate measurements

Student Activities:
A. Frame and scribe parts for welding and cutting
B. Use measuring techniques on parts
C. Practice use of measurement tools with measurement exercises assigned by the instructor
D. Interpret engineering drawings provided by the instructor
OBJECTIVE(S):

Upon completion of this unit the student will be able to:

a. Distinguish between general and specific notes;
b. Interpret and apply general and specific notes;
c. Determine and apply dimensions on a drawing;
d. Identify basic symbols and abbreviations found on a drawing;
e. Identify tolerances or limits on a drawing; and,
f. Identify ANSI limits and fits.

MODULE OUTLINE:

I. Distinguish Between General and Specific Notes
   A. General notes
   B. Specific notes/local notes

II. Interpret and Apply General and Specific Notes
   A. General notes applied
      1. Title strip/title block
      2. Parts list/bill of material
   B. Interpret general notes
      1. Including material
      2. General tolerances
      3. Heat treatment
      4. Pattern information
      5. Processes of manufacture
      6. Requirements of the product
   C. Interpret specific notes
      1. Apply to specific operations
      2. Apply to specific processes of manufacture
      3. Apply to the requirements of the product

III. Determine and Apply Dimensions on a Drawing
    A. Identify organizations that determine dimension standards
       1. American National Standards Institutes (ANSI)
       2. International Standards Organization (ISO)
    B. Determine dimensions on a drawing
       1. Size dimensions
       2. Location dimensions
    C. Applying dimensions on a drawing
       1. Scale of drawing
       2. Techniques of dimensioning
       3. Placement of dimensions
4. Choice of dimensions
5. Types of lines used in the dimensioning process
6. Arrowheads used on drawings
7. Leaders used on drawings
8. Dimensioning systems
   a. Fractional
   b. Decimal
   c. Metric
   d. Combination dimensioning
9. Dimension figures
10. Direction of dimension figures
    a. Unidirectional system
    b. Aligned system
11. Dimensioning angles
12. Dimensioning arcs
13. Dimensioning fillets and rounds
14. Identify surfaces to be machined
15. Contour dimensioning
16. Dimensioning of curves
17. Dimensioning of rounded-end shapes
18. Dimensioning of threads
19. Dimensioning of tapers
20. Dimensioning of chamfers
21. Dimensioning shaft centers
22. Dimensioning keyways
23. Dimensioning knurls
   a. Diamond
   b. Straight
24. Dimensioning along curved surfaces
25. Tabular dimensions
26. Dimensioning standards
27. Coordinate dimensioning

IV. Identify Basic Symbols and Abbreviations Found on a Drawing
A. Traditional terms used to describe various shapes, processes, and sizes
B. Identify abbreviations used to describe various shapes, processes, and size
C. Identify a variety of dimensioning symbols used to replace traditional terms and abbreviations

V. Identify Tolerances or Limits on a Drawing
A. Identify tolerances or limits
   1. Nominal size
   2. Basic size or dimension
   3. Actual size
   4. Tolerance
   5. Limits
   6. Allowance
B. Methods of expressing tolerances
   1. General tolerances
   2. Limit dimensioning
   3. Plus and minus dimensioning
      a. Unilateral system
      b. Bilateral system
   4. Single-limit dimensioning
   5. Angular tolerances

VI. Identify ANSI Limits and Fits
A. Fits between mating parts
   1. Clearance fit
   2. Interference fit
   3. Transition fit
   4. Line fit

B. Limits and fits for cylindrical parts
   1. Running or sliding clearance fits
   2. Locational clearance fits
   3. Transition clearance interference fits
   4. Locational interference fits
   5. Force or shrink fits
OBJECTIVE(S):

Upon completion of this unit the student will be able to:

a. Distinguish between conventional and geometric dimensioning and tolerancing;
b. Explain and use geometric positional tolerancing and symbols;
c. Explain and use tolerances of form and symbols;
d. Explain and use the feature control symbol; and,
e. Explain and use modifiers in geometric dimensioning and tolerancing.

MODULE OUTLINE:

I. Distinguish Between Conventional and Geometric Dimensioning and Tolerancing
   A. General/conventional tolerancing
      1. Definitions of general/conventional tolerancing
         a. Dimension
         b. Reference dimension
         c. Feature
         d. Feature of size
         e. Actual size
         f. Stock size
      2. Maximum material condition
      3. Least material condition
      4. Basic fits
      5. Clearance fit
      6. Allowance
      7. Clearance
      8. Force fit
   B. Geometric dimensioning and tolerancing
      1. Definition of geometric dimensioning and tolerancing
      2. Dimensioning rules
      3. Dimensioning units

II. Explain and Use Geometric Positional Tolerancing and Symbols
    A. Explain positional / location tolerances
    B. Identify and use geometric position tolerancing symbols
       1. Position
       2. Concentricity
       3. Symmetry

III. Explain and Use Tolerances of Form Symbols
     A. Explain form tolerances
     B. Identify and use tolerances of form symbols
        1. Straightness
2. Flatness
3. Circularity
4. Cylindrical

IV. Explain and Use Profile Tolerances
A. Explain profile tolerance
B. Identify and use profile tolerance symbols
   1. Profile of a line
   2. Profile of a surface
   3. Profile of an arc
   4. Profile of irregular curves
   5. Profile of coplanar surfaces

V. Explain and Use Tolerances of Orientation
A. Explain orientation tolerances
B. Identify and use orientation tolerance symbols
   1. Parallelism
   2. Perpendicularity
   3. Angularity

VI. Explain and Use Runout Tolerances
A. Explain runouts
   1. Circular
   2. Total
B. Identify and use runout tolerances symbols
   1. Circular
   2. Total

VII. Explain and Use Modifiers in Geometric Dimensioning and Tolerancing
A. Maximum Material Condition (MMC)
B. Regardless of Feature Size (RFS)
C. Least Material Condition (LMC)
D. Datum feature symbol
E. Datum reference frame concept
   1. Primary datum plane
   2. Secondary datum plane
   3. Tertiary datum plane
F. Datum target symbol
   1. Target point
   2. Target line
   3. Target area

VIII. Explain and Use the Feature Control Frame
A. Explain feature control frame
B. Explain the compartments of a feature control frame
   1. Geometric characteristic symbol
   2. Geometric tolerance
   3. Zone descriptor
   4. Material condition symbol
   5. Primary datum reference

646
6. Secondary datum reference
7. Tertiary datum reference

IX. Additional Supplementary Modifying Symbols

A. Explain and use additional modifying symbols.
1. Diameter
2. Radius R
3. Reference ( )
4. Counterbore/spotface L/
5. Square
6. Dimension origin O
7. Slope
8. Projected tolerance zone
9. Spherical diameter
10. Spherical radius
11. Arc length
12. Counter sink
13. Depth
14. Conical taper
15. Place, times, or by
16. Basic dimension
SUBJECT: WELDING TECHNICIAN  
TIME: 4 HOURS

- DUTY: BLUEPRINTING, STRUCTURAL LAYOUT AND FIT-UP
- TASK: Use Framing Square to Square Parts

OBJECTIVE(S): 

Upon completion of this unit the student will be able to:
A. Demonstrate the use of shop lay-out tools in a safe manner;
B. Understand the function of shop lay-out tools; and,
C. Demonstrate the capabilities of shop lay-out tools.

OTHER:  
Competency Standards, American Welding Society, Latest Edition  
STUDENT PREPARATION:

The purpose of this program is to assist the student in the use of framing square measurement equipment to perform structural layout and fit-up. Supplemental training can also be presented to persons previously or currently employed in welding occupations.

Students should have previously completed the following Technical Modules:

**WLD-H3**  "Demonstrate Tape Reading and Measurement Techniques"

INTRODUCTION:

The Course Introduction will Include:

- The purpose of structural layout and fit-up
- A class demonstration of effective structural layout and framing techniques
- A discussion on methods of leading to an increase of skill and knowledge in the occupational area

PRESENTATION OUTLINE:

Instructional Topics:

- A. Review the use of jigs and fixtures in layout and fitup
- B. Demonstrate how to use references on a blueprint
- C. Demonstrate the application of the framing square
- D. Demonstrate how to scribe a line using a square and a protractor
- E. Illustrate how to use the print to find angles
- F. Define the following: precision, reliability and accuracy
- G. Define tolerance and how to find it on a blueprint
- H. Demonstrate semi-precision measurements techniques
- I. Understand the difference between accepted measurement procedures and improper measurement procedures
- J. Illustrate where to locate measurements

Student Activities:

- A. Frame and scribe parts for welding and cutting
- B. Use measuring techniques on parts
- C. Layout a welding job with framing square, jigs, and fixtures

PRACTICAL APPLICATION:

This lesson will cover the use of framing square, jigs, and fixtures in laying out the work in a production environment.
EVALUATION AND/OR VERIFICATION:

An examination will be given at the end of this section to determine the progress of the class.

SUMMARY:

In this module, the instructor emphasizes the benefits of using the framing square, jigs, and fixtures for production and quality.

NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-H5) dealing with using level and other devices to verify layout.
WLD-H4-HO1
Use Framing Square to Square Parts
Attachment 1: MASTER Handout No. 1

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Demonstrate the use of shop lay-out tools in a safe manner;
B. Understand the function of shop lay-out tools; and,
C. Demonstrate the capabilities of shop lay-out tools.

MODULE OUTLINE:

Instructional Topics:
A. Review the use of jigs and fixtures in layout and fitup
B. Demonstrate how to use references on a blueprint
C. Demonstrate the application of the framing square
D. Demonstrate how to scribe a line using a square and a protractor
E. Illustrate how to use the print to find angles
F. Define the following: precision, reliability and accuracy
G. Define tolerance and how to find it on a blueprint
H. Demonstrate semi-precision measurements techniques
I. Understand the difference between accepted measurement procedures
   and improper measurement procedures
J. Illustrate where to locate measurements

Student Activities:
A. Frame and scribe parts for welding and cutting
B. Use measuring techniques on parts
C. Layout a welding job with framing square, jigs, and fixtures
Use Framing Square to Square Parts
Attachment 2: MASTER Handout No. 2

OBJECTIVE(S):

Upon completion of this unit the student will be able to:

a. Distinguish between general and specific notes;
b. Interpret and apply general and specific notes;
c. Determine and apply dimensions on a drawing;
d. Identify basic symbols and abbreviations found on a drawing;
e. Identify tolerances or limits on a drawing; and,
f. Identify ANSI limits and fits.

MODULE OUTLINE:

I. Distinguish Between General and Specific Notes
   A. General notes
   B. Specific notes/local notes

II. Interpret and Apply General and Specific Notes
   A. General notes applied
      1. Title strip/title block
      2. Parts list/bill of material
   B. Interpret general notes
      1. Including material
      2. General tolerances
      3. Heat treatment
      4. Pattern information
      5. Processes of manufacture
      6. Requirements of the product
   C. Interpret specific notes
      1. Apply to specific operations
      2. Apply to specific processes of manufacture
      3. Apply to the requirements of the product

III. Determine and Apply Dimensions on a Drawing
   A. Identify organizations that determine dimension standards
      1. American National Standards Institutes (ANSI)
      2. International Standards Organization (ISO)
   B. Determine dimensions on a drawing
      1. Size dimensions
      2. Location dimensions
   C. Applying dimensions on a drawing
      1. Scale of drawing
      2. Techniques of dimensioning
      3. Placement of dimensions
4. Choice of dimensions
5. Types of lines used in the dimensioning process
6. Arrowheads used on drawings
7. Leaders used on drawings
8. Dimensioning systems
   a. Fractional
   b. Decimal
   c. Metric
   d. Combination dimensioning
9. Dimension figures
10. Direction of dimension figures
    a. Unidirectional system
    b. Aligned system
11. Dimensioning angles
12. Dimensioning arcs
13. Dimensioning fillets and rounds
14. Identify surfaces to be machined
15. Contour dimensioning
16. Dimensioning of curves
17. Dimensioning of rounded-end shapes
18. Dimensioning of threads
19. Dimensioning of tapers
20. Dimensioning of chamfers
21. Dimensioning shaft centers
22. Dimensioning keyways
23. Dimensioning knurls
   a. Diamond
   b. Straight
24. Dimensioning along curved surfaces
25. Tabular dimensions
26. Dimensioning standards
27. Coordinate dimensioning

IV. Identify Basic Symbols and Abbreviations Found on a Drawing
   A. Traditional terms used to describe various shapes, processes, and sizes
   B. Identify abbreviations used to describe various shapes, processes, and size
   C. Identify a variety of dimensioning symbols used to replace traditional terms and abbreviations

V. Identify Tolerances or Limits on a Drawing
   A. Identify tolerances or limits
      1. Nominal size
      2. Basic size or dimension
      3. Actual size
      4. Tolerance
      5. Limits
      6. Allowance
B. Methods of expressing tolerances
   1. General tolerances
   2. Limit dimensioning
   3. Plus and minus dimensioning
      a. Unilateral system
      b. Bilateral system
   4. Single-limit dimensioning
   5. Angular tolerances

VI. Identify ANSI Limits and Fits
A. Fits between mating parts
   1. Clearance fit
   2. Interference fit
   3. Transition fit
   4. Line fit

B. Limits and fits for cylindrical parts
   1. Running or sliding clearance fits
   2. Locational clearance fits
   3. Transition clearance interference fits
   4. Locational interference fits
   5. Force or shrink fits
OBJECTIVE(S):

Upon completion of this unit the student will be able to:

a. Distinguish between conventional and geometric dimensioning and tolerancing;
b. Explain and use geometric positional tolerancing and symbols;
c. Explain and use tolerances of form and symbols;
d. Explain and use the feature control symbol; and,
e. Explain and use modifiers in geometric dimensioning and tolerancing.

MODULE OUTLINE:

I. Distinguish Between Conventional and Geometric Dimensioning and Tolerancing
   A. General/conventional tolerancing
      1. Definitions of general/conventional tolerancing
         a. Dimension
         b. Reference dimension
         c. Feature
         d. Feature of size
         e. Actual size
         f. Stock size
      2. Maximum material condition
      3. Least material condition
      4. Basic fits
      5. Clearance fit
      6. Allowance
      7. Clearance
      8. Force fit
   B. Geometric dimensioning and tolerancing
      1. Definition of geometric dimensioning and tolerancing
      2. Dimensioning rules
      3. Dimensioning units

II. Explain and Use Geometric Positional Tolerancing and Symbols
   A. Explain positional / location tolerances
   B. Identify and use geometric position tolerancing symbols
      1. Position
      2. Concentricity
      3. Symmetry

III. Explain and Use Tolerances of Form Symbols
   A. Explain form tolerances
   B. Identify and use tolerances of form symbols
      1. Straightness
2. Flatness
3. Circularity
4. Cylindrical

IV. Explain and Use Profile Tolerances
A. Explain profile tolerance
B. Identify and use profile tolerance symbols
   1. Profile of a line
   2. Profile of a surface
   3. Profile of an arc
   4. Profile of irregular curves
   5. Profile of coplanar surfaces

V. Explain and Use Tolerances of Orientation
A. Explain orientation tolerances
B. Identify and use orientation tolerance symbols
   1. Parallelism
   2. Perpendicularity
   3. Angularity

VI. Explain and Use Runout Tolerances
A. Explain runouts
   1. Circular
   2. Total
B. Identify and use runout tolerances symbols
   1. Circular
   2. Total

VII. Explain and Use Modifiers in Geometric Dimensioning and Tolerancing
A. Maximum Material Condition (MMC)
B. Regardless of Feature Size (RFS)
C. Least Material Condition (LMC)
D. Datum feature symbol
E. Datum reference frame concept
   1. Primary datum plane
   2. Secondary datum plane
   3. Tertiary datum plane
F. Datum target symbol
   1. Target point
   2. Target line
   3. Target area

VIII. Explain and Use the Feature Control Frame
A. Explain feature control frame
B. Explain the compartments of a feature control frame
   1. Geometric characteristic symbol
   2. Geometric tolerance
   3. Zone descriptor
   4. Material condition symbol
   5. Primary datum reference
6. Secondary datum reference
7. Tertiary datum reference

IX. Additional Supplementary Modifying Symbols
A. Explain and use additional modifying symbols.
   1. Diameter
   2. Radius R
   3. Reference ( )
   4. Counterbore/spotface L /
   5. Square
   6. Dimension origin O
   7. Slope
   8. Projected tolerance zone
   9. Spherical diameter
  10. Spherical radius
  11. Arc length
  12. Counter sink
  13. Depth
  14. Conical taper
  15. Place, times, or by
  16. Basic dimension
WELDER SERIES
MASTER Technical Module No. WLD-H05

SUBJECT: WELDING TECHNICIAN  TIME: 4 HOURS

- DUTY: BLUEPRINTING, STRUCTURAL LAYOUT AND FIT-UP
- TASK: Use Level and Other Devices to Verify Layout

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Demonstrate the use and care of shop lay-out tools; and,
B. Perform leveling methods related to part lay-out for sheet metal, structural and pipe fabrication.

INSTRUCTIONAL MATERIALS:

TEXT:

OTHER:
Competency Standards, American Welding Society, Latest Edition
STUDENT PREPARATION:

The purpose of this module is to assist the student in the use of levels, alignment devices, and measurement equipment to improve skills in organization of the workplace for welding operations.

Students should have previously completed the following Technical Modules:
WLD-H4 "Use Framing Square to Square Parts"

INTRODUCTION:

The Course Introduction will Include:
- The importance of leveling, squaring, and measurement of the work prior to welding
- A class demonstration of effective leveling, squaring, and fitup techniques
- A discussion on methods of leading to an increase of skill and knowledge in order to be diversified, and a more valuable employee

PRESENTATION OUTLINE:

Instructional Topics:
A. Review the use of jigs and fixtures in layout and fitup
B. Demonstrate how to use levels and squaring tools
C. Illustrate how to use the print to establishing layout
D. Demonstrate semi-precision measurements techniques
E. Discuss the importance of fixturing to insure alignment

Student Activities:
A. Use of levels and squaring tools
B. Use measuring techniques on parts
C. Produce a sketch or drawing of the fit-up workplace

PRACTICAL APPLICATION:

This lesson has application for job layout as the fit-up of materials for welding is planned and accomplished.
EVALUATION AND/OR VERIFICATION:

An examination will be given at the end of this section to determine the progress of the class.

SUMMARY:

The instructor emphasizes the benefits of using levels and fixtures for alignment to insure production and quality. The ability to plan the work will create an attitude for precision.

NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-H6) dealing with understanding and interpreting shop drawings for precise layout.
OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Demonstrate the use and care of shop lay-out tools; and,
B. Perform leveling methods related to part lay-out for sheet metal, structural and pipe fabrication.

MODULE OUTLINE:

Instructional Topics:
A. Review the use of jigs and fixtures in layout and fitup
B. Demonstrate how to use levels and squaring tools
C. Illustrate how to use the print to establishing layout
D. Demonstrate semi-precision measurements techniques
E. Discuss the importance of fixturing to insure alignment

Student Activities:
A. Use of levels and squaring tools
B. Use measuring techniques on parts
C. Produce a sketch or drawing of the fit-up workplace
OBJECTIVE(S):

Upon completion of this unit the student will be able to:
a. Distinguish between general and specific notes;
b. Interpret and apply general and specific notes;
c. Determine and apply dimensions on a drawing;
d. Identify basic symbols and abbreviations found on a drawing;
e. Identify tolerances or limits on a drawing; and,
f. Identify ANSI limits and fits.

MODULE OUTLINE:

I. Distinguish Between General and Specific Notes
   A. General notes
   B. Specific notes/local notes

II. Interpret and Apply General and Specific Notes
   A. General notes applied
      1. Title strip/title block
      2. Parts list/bill of material
   B. Interpret general notes
      1. Including material
      2. General tolerances
      3. Heat treatment
      4. Pattern information
      5. Processes of manufacture
      6. Requirements of the product
   C. Interpret specific notes
      1. Apply to specific operations
      2. Apply to specific processes of manufacture
      3. Apply to the requirements of the product

III. Determine and Apply Dimensions on a Drawing
   A. Identify organizations that determine dimension standards
      1. American National Standards Institutes (ANSI)
      2. International Standards Organization (ISO)
   B. Determine dimensions on a drawing
      1. Size dimensions
      2. Location dimensions
   C. Applying dimensions on a drawing
      1. Scale of drawing
      2. Techniques of dimensioning
      3. Placement of dimensions
4. Choice of dimensions
5. Types of lines used in the dimensioning process
6. Arrowheads used on drawings
7. Leaders used on drawings
8. Dimensioning systems
   a. Fractional
   b. Decimal
   c. Metric
   d. Combination dimensioning
9. Dimension figures
10. Direction of dimension figures
    a. Unidirectional system
    b. Aligned system
11. Dimensioning angles
12. Dimensioning arcs
13. Dimensioning fillets and rounds
14. Identify surfaces to be machined
15. Contour dimensioning
16. Dimensioning of curves
17. Dimensioning of rounded-end shapes
18. Dimensioning of threads
19. Dimensioning of tapers
20. Dimensioning of chamfers
21. Dimensioning shaft centers
22. Dimensioning keyways
23. Dimensioning knurls
   a. Diamond
   b. Straight
24. Dimensioning along curved surfaces
25. Tabular dimensions
26. Dimensioning standards
27. Coordinate dimensioning

IV. Identify Basic Symbols and Abbreviations Found on a Drawing
A. Traditional terms used to describe various shapes, processes, and sizes
B. Identify abbreviations used to describe various shapes, processes, and size
C. Identify a variety of dimensioning symbols used to replace traditional terms and abbreviations

V. Identify Tolerances or Limits on a Drawing
A. Identify tolerances or limits
   1. Nominal size
   2. Basic size or dimension
   3. Actual size
   4. Tolerance
   5. Limits
   6. Allowance

663
B. Methods of expressing tolerances
   1. General tolerances
   2. Limit dimensioning
   3. Plus and minus dimensioning
      a. Unilateral system
      b. Bilateral system
   4. Single-limit dimensioning
   5. Angular tolerances

VI. Identify ANSI Limits and Fits
A. Fits between mating parts
   1. Clearance fit
   2. Interference fit
   3. Transition fit
   4. Line fit

B. Limits and fits for cylindrical parts
   1. Running or sliding clearance fits
   2. Locational clearance fits
   3. Transition clearance interference fits
   4. Locational interference fits
   5. Force or shrink fits
OBJECTIVE(S):

Upon completion of this unit the student will be able to:

a. Distinguish between conventional and geometric dimensioning and tolerancing;
b. Explain and use geometric positional tolerancing and symbols;
c. Explain and use tolerances of form and symbols;
d. Explain and use the feature control symbol; and,
e. Explain and use modifiers in geometric dimensioning and tolerancing.

MODULE OUTLINE:

I. Distinguish Between Conventional and Geometric Dimensioning and Tolerancing
   A. General/conventional tolerancing
      1. Definitions of general/conventional tolerancing
         a. Dimension
         b. Reference dimension
         c. Feature
         d. Feature of size
         e. Actual size
         f. Stock size
      2. Maximum material condition
      3. Least material condition
      4. Basic fits
      5. Clearance fit
      6. Allowance
      7. Clearance
      8. Force fit
   B. Geometric dimensioning and tolerancing
      1. Definition of geometric dimensioning and tolerancing
      2. Dimensioning rules
      3. Dimensioning units

II. Explain and Use Geometric Positional Tolerancing and Symbols
    A. Explain positional / location tolerances
    B. Identify and use geometric position tolerancing symbols
       1. Position
       2. Concentricity
       3. Symmetry

III. Explain and Use Tolerances of Form Symbols
    A. Explain form tolerances
    B. Identify and use tolerances of form symbols
       1. Straightness
2. Flatness
3. Circularity
4. Cylindrical

IV. Explain and Use Profile Tolerances
A. Explain profile tolerance
B. Identify and use profile tolerance symbols
1. Profile of a line
2. Profile of a surface
3. Profile of an arc
4. Profile of irregular curves
5. Profile of coplanar surfaces

V. Explain and Use Tolerances of Orientation
A. Explain orientation tolerances
B. Identify and use orientation tolerance symbols
1. Parallelism
2. Perpendicularity
3. Angularity

VI. Explain and Use Runout Tolerances
A. Explain runouts
1. Circular
2. Total
B. Identify and use runout tolerances symbols
1. Circular
2. Total

VII. Explain and Use Modifiers in Geometric Dimensioning and Tolerancing
A. Maximum Material Condition (MMC)
B. Regardless of Feature Size (RFS)
C. Least Material Condition (LMC)
D. Datum feature symbol
E. Datum reference frame concept
1. Primary datum plane
2. Secondary datum plane
3. Tertiary datum plane
F. Datum target symbol
1. Target point
2. Target line
3. Target area

VIII. Explain and Use the Feature Control Frame
A. Explain feature control frame
B. Explain the compartments of a feature control frame
1. Geometric characteristic symbol
2. Geometric tolerance
3. Zone descriptor
4. Material condition symbol
5. Primary datum reference
IX. Additional Supplementary Modifying Symbols

A. Explain and use additional modifying symbols.

1. Diameter
2. Radius R
3. Reference ( )
4. Counterbore/spotface L/
5. Square
6. Dimension origin O
7. Slope
8. Projected tolerance zone
9. Spherical diameter
10. Spherical radius
11. Arc length
12. Counter sink
13. Depth
14. Conical taper
15. Place, times, or by
16. Basic dimension
WELDER SERIES
MASTER Technical Module No. WLD-H06

SUBJECT: WELDING TECHNICIAN  TIME: 5 HOURS

- DUTY: BLUEPRINTING, STRUCTURAL LAYOUT AND FIT-UP
- TASK: Understand and Interpret Shop Drawings for Precise Layout

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Understand concept related to work area preparation;
B. Understand drawing, sketching and specifications; and,
C. Interpret shop drawings.

INSTRUCTIONAL MATERIALS:

Student Workbook
Written tests
Transparencies will be prepared to emphasize each subject
Hobart Institute Video Material
Classroom handouts
MASTER Handout No. 1 (WLD-H6-H01)
MASTER Handout No. 2 (WLD-H6-H02)
MASTER Handout No. 3 (WLD-H6-H03)
MASTER Handout No. 4 (WLD-H6-H04)

Competency Standards, American Welding Society, Latest Edition

668
STUDENT PREPARATION:

The purpose of this module is to assist the student in interpreting and fully understanding shop drawings for precise layout.

Students should have previously completed the following Technical Modules:

WLD-H5 "Use Level and Other Devices to Verify Layout"

INTRODUCTION:

The Course Introduction will Include:

- An overview of the interpretation of methods and techniques needed for quality production welding
- A class demonstration of effective layout, fitup and measurement techniques used in production environment

PRESENTATION OUTLINE:

Instructional Topics:

A. Interpretation of linear and angular dimensions
B. Use of fractional dimensions and decimal fractions
C. Terms for hole preparation - drill, ream, or flame cut
D. Dimensioning chambers and bevels
E. Dimensioning radius and arc
F. Use of tolerance dimensions
G. Use of thread dimensions
H. Symbols or geometric tolerancing and dimensioning

Student Activities:

A. Interpret engineering drawings by answering questions in each area represented
B. Prepare a sketch that will be critiqued by others in the class for specific meaning and clarity

PRACTICAL APPLICATION:

This lesson will cover where to look for a specific measurements on a drawing and how to determine tolerance from the information given on the drawing.
EVALUATION AND/OR VERIFICATION:

An examination will be given at the end of this section to determine the progress of the class.

SUMMARY:

Drawing interpretation is a special skill needed by the professional welder. He must insure the finished product meets all specifications and that no re-work is required to additional cost, time and money.

NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-H7) dealing with demonstrating knowledge of welding symbols.
WLD-H6-HO1
Understand and Interpret Shop Drawings for Precise Layout
Attachment 1: MASTER Handout No. 1

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Understand concept related to work area preparation;
B. Understand drawing, sketching and specifications; and,
C. Interpret shop drawings.

MODULE OUTLINE:

Instructional Topics:
A. Interpretation of linear and angular dimensions
B. Use of fractional dimensions and decimal fractions
C. Terms for hole preparation - drill, ream, or flame cut
D. Dimensioning chambers and bevels
E. Dimensioning radius and arc
F. Use of tolerance dimensions
G. Use of thread dimensions
H. Symbols or geometric tolerancing and dimensioning

Student Activities:
A. Interpret engineering drawings by answering questions in each area represented
B. Prepare a sketch that will be critiqued by others in the class for specific
   meaning and clarity
OBJECTIVE(S):

Upon completion of this unit the student will be able to:

a. Distinguish between general and specific notes;
b. Interpret and apply general and specific notes;
c. Determine and apply dimensions on a drawing;
d. Identify basic symbols and abbreviations found on a drawing;
e. Identify tolerances or limits on a drawing; and,
f. Identify ANSI limits and fits.

MODULE OUTLINE:

I. Distinguish Between General and Specific Notes
   A. General notes
   B. Specific notes/local notes

II. Interpret and Apply General and Specific Notes
   A. General notes applied
      1. Title strip/title block
      2. Parts list/bill of material
   B. Interpret general notes
      1. Including material
      2. General tolerances
      3. Heat treatment
      4. Pattern information
      5. Processes of manufacture
      6. Requirements of the product
   C. Interpret specific notes
      1. Apply to specific operations
      2. Apply to specific processes of manufacture
      3. Apply to the requirements of the product

III. Determine and Apply Dimensions on a Drawing
   A. Identify organizations that determine dimension standards
      1. American National Standards Institutes (ANSI)
      2. International Standards Organization (ISO)
   B. Determine dimensions on a drawing
      1. Size dimensions
      2. Location dimensions
   C. Applying dimensions on a drawing
      1. Scale of drawing
      2. Techniques of dimensioning
      3. Placement of dimensions
4. Choice of dimensions
5. Types of lines used in the dimensioning process
6. Arrowheads used on drawings
7. Leaders used on drawings
8. Dimensioning systems
   a. Fractional
   b. Decimal
   c. Metric
   d. Combination dimensioning
9. Dimension figures
10. Direction of dimension figures
    a. Unidirectional system
    b. Aligned system
11. Dimensioning angles
12. Dimensioning arcs
13. Dimensioning fillets and rounds
14. Identify surfaces to be machined
15. Contour dimensioning
16. Dimensioning of curves
17. Dimensioning of rounded-end shapes
18. Dimensioning of threads
19. Dimensioning of tapers
20. Dimensioning of chamfers
21. Dimensioning shaft centers
22. Dimensioning keyways
23. Dimensioning knurls
   a. Diamond
   b. Straight
24. Dimensioning along curved surfaces
25. Tabular dimensions
26. Dimensioning standards
27. Coordinate dimensioning

IV. Identify Basic Symbols and Abbreviations Found on a Drawing
A. Traditional terms used to describe various shapes, processes, and sizes
B. Identify abbreviations used to describe various shapes, processes, and size
C. Identify a variety of dimensioning symbols used to replace traditional terms and abbreviations

V. Identify Tolerances or Limits on a Drawing
A. Identify tolerances or limits
   1. Nominal size
   2. Basic size or dimension
   3. Actual size
   4. Tolerance
   5. Limits
   6. Allowance
B. Methods of expressing tolerances
   1. General tolerances
   2. Limit dimensioning
   3. Plus and minus dimensioning
      a. Unilateral system
      b. Bilateral system
   4. Single-limit dimensioning
   5. Angular tolerances

VI. Identify ANSI Limits and Fits
A. Fits between mating parts
   1. Clearance fit
   2. Interference fit
   3. Transition fit
   4. Line fit

B. Limits and fits for cylindrical parts
   1. Running or sliding clearance fits
   2. Locational clearance fits
   3. Transition clearance interference fits
   4. Locational interference fits
   5. Force or shrink fits
OBJECTIVE(S):

Upon completion of this unit the student will be able to:

a. Distinguish between conventional and geometric dimensioning and tolerancing;
b. Explain and use geometric positional tolerancing and symbols;
c. Explain and use tolerances of form and symbols;
d. Explain and use the feature control symbol; and,
e. Explain and use modifiers in geometric dimensioning and tolerancing.

MODULE OUTLINE:

I. Distinguish Between Conventional and Geometric Dimensioning and Tolerancing
   A. General/conventional tolerancing
      1. Definitions of general/conventional tolerancing
         a. Dimension
         b. Reference dimension
         c. Feature
         d. Feature of size
         e. Actual size
         f. Stock size
      2. Maximum material condition
      3. Least material condition
      4. Basic fits
      5. Clearance fit
      6. Allowance
      7. Clearance
      8. Force fit
   B. Geometric dimensioning and tolerancing
      1. Definition of geometric dimensioning and tolerancing
      2. Dimensioning rules
      3. Dimensioning units

II. Explain and Use Geometric Positional Tolerancing and Symbols
    A. Explain positional / location tolerances
    B. Identify and use geometric position tolerancing symbols
       1. Position
       2. Concentricity
       3. Symmetry

III. Explain and Use Tolerances of Form Symbols
     A. Explain form tolerances
     B. Identify and use tolerances of form symbols
        1. Straightness
IV. Explain and Use Profile Tolerances
   A. Explain profile tolerance
   B. Identify and use profile tolerance symbols
      1. Profile of a line
      2. Profile of a surface
      3. Profile of an arc
      4. Profile of irregular curves
      5. Profile of coplanar surfaces

V. Explain and Use Tolerances of Orientation
   A. Explain orientation tolerances
   B. Identify and use orientation tolerance symbols
      1. Parallelism
      2. Perpendicularity
      3. Angularity

VI. Explain and Use Runout Tolerances
   A. Explain runouts
      1. Circular
      2. Total
   B. Identify and use runout tolerances symbols
      1. Circular
      2. Total

VII. Explain and Use Modifiers in Geometric Dimensioning and Tolerancing
    A. Maximum Material Condition (MMC)
    B. Regardless of Feature Size (RFS)
    C. Least Material Condition (LMC)
    D. Datum feature symbol
    E. Datum reference frame concept
       1. Primary datum plane
       2. Secondary datum plane
       3. Tertiary datum plane
    F. Datum target symbol
       1. Target point
       2. Target line
       3. Target area

VIII. Explain and Use the Feature Control Frame
   A. Explain feature control frame
   B. Explain the compartments of a feature control frame
      1. Geometric characteristic symbol
      2. Geometric tolerance
      3. Zone descriptor
      4. Material condition symbol
      5. Primary datum reference
6. Secondary datum reference
7. Tertiary datum reference

IX. Additional Supplementary Modifying Symbols
A. Explain and use additional modifying symbols.
   1. Diameter
   2. Radius R
   3. Reference ( )
   4. Counterbore/spotface L/
   5. Square
   6. Dimension origin O
   7. Slope
   8. Projected tolerance zone
   9. Spherical diameter
  10. Spherical radius
  11. Arc length
  12. Counter sink
  13. Depth
  14. Conical taper
  15. Place, times, or by
  16. Basic dimension
WLD-H6-HO4
Understand and Interpret Shop Drawings for Precise layout
Attachment 4: MASTER Handout No. 4

Objective(s):

Upon completion of this unit the student will be able to:

a. Identify types of drawings;
b. Identify parts of a drawing and list components of each;
c. Identify types of lines on a drawing;
d. List and describe the different views found on a drawing;
e. List and apply the three primary planes of projection;
f. List and apply the six principal views;
g. Apply auxiliary views; and,
h. Apply sectional views.

Module Outline:

I. Interpret and Understand Basic Layout of Drawings
   A. ANSI & ISO sheet size layout
   B. ANSI & ISO forms of lettering arrangements

II. Interpret and Understand Types of Drawings
    A. Orthographic and multi-view projection
    B. Perspective or central projection
    C. Oblique projection
    D. Axonometric projection

III. Identify Parts of a Blue Print/Drawing and List Components of Each
     A. Body
     B. Title block
        1. Drawing number
        2. Drawing title
        3. Scale
        4. Signatures
        5. Job number
        6. Material list number
        7. Reference drawings
        8. Distribution section
        9. Revision
        10. Work order number
     C. Bill of Materials
        1. Piece mark number
        2. Number of pieces required for each piece mark
        3. Description of materials
        4. Traceability requirements
        5. Material specifications
6. Length
7. Gross weight
8. Total weight

IV. Identify Types of Lines on a Drawing
A. Visible line
B. Hidden line
C. Center line
D. Section line
E. Dimension line
F. Extension line
G. Leaders line
H. Cutting plane/viewing plane line
I. Short-break line
J. Long-break line
K. Phantom line
L. Stitch line
M. Chain line
N. Cylindrical break/conventional break lines

V. List and Describe the Different Views Found on a Drawing
A. One view
   1. Sphere
   2. Plate
B. Two view
   1. Cylinder
   2. Rectangle
C. Three view
   1. Pyramids
   2. Multi-view projection

VI. List and Apply the Three Primary Planes of Projection
A. Frontal projection plane
B. Profile projection plane
   1. Right side
   2. Left side
C. Horizontal projection plane

VII. List and Apply the Six Principal Views
A. Front view
B. Rear view
C. Right side view
D. Left side view
E. Top view
F. Bottom view

VIII. List and Apply Auxiliary Views
A. Surfaces needing auxiliary views
   1. Inclined surfaces
   2. Oblique surfaces
B. Primary auxiliary views
C. Secondary auxiliary views
D. To generate an auxiliary view
   1. Folding-line method
   2. Reference-plane method
E. Classifications of auxiliary views
   1. Depth auxiliary views
   2. Height auxiliary views
   3. Width auxiliary views
F. Dihedral angles
G. Partial auxiliary views
H. Half auxiliary views
I. Auxiliary sections
J. Basic four uses of auxiliary views
   1. True length of line
   2. Point view of line
   3. Edge view of plane
   4. True size of plane

IX. List and Apply Sectional Views
A. Need for sectional views
B. Cutting plane
   1. Direction
   2. Labels
   3. Alternate styles
C. Section lining
   1. Techniques
   2. Symbols
D. Types of sectional views
   1. Full section
   2. Half/partial section
   3. Broken-out section
   4. Revolved section
   5. Removed section
   6. Offset section
   7. Aligned section
   8. Auxiliary section
   9. Partial section
WELDER SERIES
MASTER Technical Module No. WLD-H07

SUBJECT: WELDING TECHNICIAN

TIME: 5 HOURS

- DUTY: BLUEPRINTING, STRUCTURAL LAYOUT AND FIT-UP
- TASK: Demonstrate Knowledge of Welding Symbols

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Understand the basic elements of the A.W.S. Welding Symbol System;
B. Identify welding symbols for basic joints for weldment fabrication;
C. Use fillet weld in combination with other symbols;
D. Understand supplementary symbols and arrangements;
E. Understand plug and slot-weld symbols;
F. Understand spot weld and seam weld symbols;
G. Understand groove weld symbols;
H. Understand backing, back, melt through and surfacing symbols;
I. Understand flange and combination weld symbols; and,
J. Compare AWS symbols to international symbols.

INSTRUCTIONAL MATERIALS:

Student Workbook
Written tests
Transparencies will be prepared to emphasize each subject
Hobart Institute Video Material
Classroom handouts
MASTER Handout No. 1 (WLD-H7-H01)
MASTER Handout No. 2 (WLD-H7-H02)
MASTER Handout No. 3 (WLD-H7-H03)

TEXT:

OTHER:
STUDENT PREPARATION:

The purpose of this program is to assist the student in the use of welding symbols that are part of the American Welding Society welding symbol system, and are accepted throughout the industry. A special study of these symbols must be made by the student in order to perform work at the professional level.

Students should have previously completed the following Technical Modules:

WLD-H6 "Understand and Interpret Shop Drawings for Precise Layout"

INTRODUCTION:

The Course Introduction will Include:

- The need for understanding of both AWS and ISO welding symbols
- A class demonstration of effective use of welding symbols to convey ideas and calculations to welders

PRESENTATION OUTLINE:

Instructional Topics:

A. Present the basic elements of the A.W.S. Welding Symbol System
B. Present welding symbols for basic joints for weldment fabrication
C. Present fillet weld in combination with other symbols
D. Present supplementary symbols and arrangements
E. Present plug and slot-weld symbols
F. Present spot weld and seam weld symbols
G. Present groove weld symbols
H. Present backing, back, melt through and surfacing symbols
I. Present flange and combination weld symbols
J. Compare AWS symbols to international symbols

Student Activities:

A. Identify AWS symbols on drawings
B. Identify ISO symbols on drawings
C. Plan a job that includes symbols and specifications from AWS and ISO
PRACTICAL APPLICATION:

This lesson will have relevance to the welder in day to day work planning, estimating and layout of the work.

EVALUATION AND/OR VERIFICATION:

An examination will be given at the end of this section to determine the progress of the class.

SUMMARY:

Welding technicians must become knowledgeable in the use of welding symbols, since they have become the language of the industry.

NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-H8) dealing with identifying various structural shapes and their respective parts.
WLD-H7-HO1
Demonstrate Knowledge of Welding Symbols
Attachment 1: MASTER Handout No. 1

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Understand the basic elements if the A.W.S. Welding Symbol System;
B. Identify welding symbols for basic joints for weldment fabrication;
C. Use fillet weld in combination with other symbols;
D. Understand supplementary symbols and arrangements;
E. Understand plug and slot-weld symbols;
F. Understand spot weld and seam weld symbols;
G. Understand groove weld symbols;
H. Understand backing, back, melt through and surfacing symbols;
I. Understand flange and combination weld symbols; and,
J. Compare AWS symbols to international symbols.

MODULE OUTLINE:

Instructional Topics:
A. Present the basic elements if the A.W.S. Welding Symbol System
B. Present welding symbols for basic joints for weldment fabrication
C. Present fillet weld in combination with other symbols
D. Present supplementary symbols and arrangements
E. Present plug and slot-weld symbols
F. Present spot weld and seam weld symbols
G. Present groove weld symbols
H. Present backing, back, melt through and surfacing symbols
I. Present flange and combination weld symbols
J. Compare AWS symbols to international symbols

Student Activities:
A. Identify AWS symbols on drawings
B. Identify ISO symbols on drawings
C. Plan a job that includes symbols and specifications from AWS and ISO
WLD-H7-HO2
Demonstrate Knowledge of Welding Symbols
Attachment 2: MASTER Handout No. 2

OBJECTIVE(S):

Upon completion of this unit the student will be able to:

a. Distinguish between general and specific notes;
b. Interpret and apply general and specific notes;
c. Determine and apply dimensions on a drawing;
d. Identify basic symbols and abbreviations found on a drawing;
e. Identify tolerances or limits on a drawing, and,
f. Identify ANSI limits and fits.

MODULE OUTLINE:

I. Distinguish Between General and Specific Notes
   A. General notes
   B. Specific notes/local notes

II. Interpret and Apply General and Specific Notes
   A. General notes applied
      1. Title strip/title block
      2. Parts list/bill of material
   B. Interpret general notes
      1. Including material
      2. General tolerances
      3. Heat treatment
      4. Pattern information
      5. Processes of manufacture
      6. Requirements of the product
   C. Interpret specific notes
      1. Apply to specific operations
      2. Apply to specific processes of manufacture
      3. Apply to the requirements of the product

III. Determine and Apply Dimensions on a Drawing
   A. Identify organizations that determine dimension standards
      1. American National Standards Institutes (ANSI)
      2. International Standards Organization (ISO)
   B. Determine dimensions on a drawing
      1. Size dimensions
      2. Location dimensions
   C. Applying dimensions on a drawing
      1. Scale of drawing
      2. Techniques of dimensioning
      3. Placement of dimensions
4. Choice of dimensions
5. Types of lines used in the dimensioning process
6. Arrowheads used on drawings
7. Leaders used on drawings
8. Dimensioning systems
   a. Fractional
   b. Decimal
   c. Metric
   d. Combination dimensioning
9. Dimension figures
10. Direction of dimension figures
    a. Unidirectional system
    b. Aligned system
11. Dimensioning angles
12. Dimensioning arcs
13. Dimensioning fillets and rounds
14. Identify surfaces to be machined
15. Contour dimensioning
16. Dimensioning of curves
17. Dimensioning of rounded-end shapes
18. Dimensioning of threads
19. Dimensioning of tapers
20. Dimensioning of chamfers
21. Dimensioning shaft centers
22. Dimensioning keyways
23. Dimensioning knurls
    a. Diamond
    b. Straight
24. Dimensioning along curved surfaces
25. Tabular dimensions
26. Dimensioning standards
27. Coordinate dimensioning

IV. Identify Basic Symbols and Abbreviations Found on a Drawing
   A. Traditional terms used to describe various shapes, processes, and sizes
   B. Identify abbreviations used to describe various shapes, processes, and size
   C. Identify a variety of dimensioning symbols used to replace traditional terms and abbreviations

V. Identify Tolerances or Limits on a Drawing
   A. Identify tolerances or limits
      1. Nominal size
      2. Basic size or dimension
      3. Actual size
      4. Tolerance
      5. Limits
      6. Allowance
B. Methods of expressing tolerances
   1. General tolerances
   2. Limit dimensioning
   3. Plus and minus dimensioning
      a. Unilateral system
      b. Bilateral system
   4. Single-limit dimensioning
   5. Angular tolerances

VI. Identify ANSI Limits and Fits
A. Fits between mating parts
   1. Clearance fit
   2. Interference fit
   3. Transition fit
   4. Line fit

B. Limits and fits for cylindrical parts
   1. Running or sliding clearance fits
   2. Locational clearance fits
   3. Transition clearance interference fits
   4. Locational interference fits
   5. Force or shrink fits
WLD-H7-HO3
Demonstrate Knowledge of Welding Symbols
Attachment 3: MASTER Handout No. 3

OBJECTIVE(S):

Upon completion of this unit the student will be able to:

a. Distinguish between conventional and geometric dimensioning and tolerancing;
b. Explain and use geometric positional tolerancing and symbols;
c. Explain and use tolerances of form and symbols;
d. Explain and use the feature control symbol; and,
e. Explain and use modifiers in geometric dimensioning and tolerancing.

MODULE OUTLINE:

I. Distinguish Between Conventional and Geometric Dimensioning and Tolerancing
   A. General/conventional tolerancing
      1. Definitions of general/conventional tolerancing
         a. Dimension
         b. Reference dimension
         c. Feature
         d. Feature of size
         e. Actual size
         f. Stock size
      2. Maximum material condition
      3. Least material condition
      4. Basic fits
      5. Clearance fit
      6. Allowance
      7. Clearance
      8. Force fit
   B. Geometric dimensioning and tolerancing
      1. Definition of geometric dimensioning and tolerancing
      2. Dimensioning rules
      3. Dimensioning units

II. Explain and Use Geometric Positional Tolerancing and Symbols
    A. Explain positional / location tolerances
    B. Identify and use geometric position tolerancing symbols
       1. Position
       2. Concentricity
       3. Symmetry

III. Explain and Use Tolerances of Form Symbols
    A. Explain form tolerances
    B. Identify and use tolerances of form symbols
       1. Straightness
2. Flatness
3. Circularity
4. Cylindrical

IV. Explain and Use Profile Tolerances
A. Explain profile tolerance
B. Identify and use profile tolerance symbols
   1. Profile of a line
   2. Profile of a surface
   3. Profile of an arc
   4. Profile of irregular curves
   5. Profile of coplanar surfaces

V. Explain and Use Tolerances of Orientation
A. Explain orientation tolerances
B. Identify and use orientation tolerance symbols
   1. Parallelism
   2. Perpendicularity
   3. Angularity

VI. Explain and Use Runout Tolerances
A. Explain runouts
   1. Circular
   2. Total
B. Identify and use runout tolerances symbols
   1. Circular
   2. Total

VII. Explain and Use Modifiers in Geometric Dimensioning and Tolerancing
A. Maximum Material Condition (MMC)
B. Regardless of Feature Size (RFS)
C. Least Material Condition (LMC)
D. Datum feature symbol
E. Datum reference frame concept
   1. Primary datum plane
   2. Secondary datum plane
   3. Tertiary datum plane
F. Datum target symbol
   1. Target point
   2. Target line
   3. Target area

VIII. Explain and Use the Feature Control Frame
A. Explain feature control frame
B. Explain the compartments of a feature control frame
   1. Geometric characteristic symbol
   2. Geometric tolerance
   3. Zone descriptor
   4. Material condition symbol
   5. Primary datum reference
Secondary datum reference
Tertiary datum reference

IX. Additional Supplementary Modifying Symbols
A. Explain and use additional modifying symbols.
   1. Diameter
   2. Radius R
   3. Reference ( )
   4. Counterbore/spotface L/
   5. Square
   6. Dimension origin O
   7. Slope
   8. Projected tolerance zone
   9. Spherical diameter
  10. Spherical radius
  11. Arc length
  12. Counter sink
  13. Depth
  14. Conical taper
  15. Place, times, or by
  16. Basic dimension
SUBJECT: WELDING TECHNICIAN

DUTY: BLUEPRINTING, STRUCTURAL LAYOUT AND FIT-UP

TASK: Identify Various Structural Shapes and Their Respective Parts

OBJECTIVE(S):

Upon completion of this unit the student will be able to:

A. Understand structural shapes; and,
B. Understand how to measure structural shapes.

INSTRUCTIONAL MATERIALS:

Student Workbook
Written tests
Transparencies will be prepared to emphasize each subject
Hobart Institute Video Material
Classroom handouts
MASTER Handout No. 1 (WLD-H8-H01)
MASTER Handout No. 2 (WLD-H8-H02)
MASTER Handout No. 3 (WLD-H8-H03)

OTHER:

STUDENT PREPARATION:

The purpose of this module is to assist the student in identifying various structural shapes and their respective parts.

Students should have previously completed the following Technical Modules:

WLD-H7 “Demonstrate Knowledge of Welding Symbols”

INTRODUCTION:

The Course Introduction will Include:

- The importance of knowing the structural shapes available and how their sizes are specified
- A class demonstration of effective layout techniques with structural shapes and work planning
- The criticality of knowing how and where to measure structural shapes

PRESENTATION OUTLINE:

Instructional Topics:

A. Structural shapes frequently encountered by the welder
B. How sizes are specified
C. Measurement techniques for structural shapes
D. Use of gages for sheet steel, brass, aluminum, copper and others
E. Weight and size specifications for reinforcing members of the structure
F. Sizing of pipe
G. Structural beams classified as four shapes
H. Ordering structural metal

Student Activities:

A. Use of appropriate measurement techniques for structural shapes
B. Selection of gages for sheet metal
C. Ordering of materials

PRACTICAL APPLICATION:

This lesson will cover structural shapes, drawing symbols, and specifications. The students will have the opportunity to use precision measuring tools and prepare bills of materials to support drawing specifications.
EVALUATION AND/OR VERIFICATION:

An examination will be given at the end of this section to determine the progress of the class.

SUMMARY:

The instructor will emphasize major considerations for dimensioning and tolerancing of structural shapes as they are planned as elements of the total welding requirements.

NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-H9) dealing with identifying structural components and support frameworks of buildings and their components.
OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Understand structural shapes; and,
B. Understand how to measure structural shapes.

MODULE OUTLINE:

Instructional Topics:
A. Structural shapes frequently encountered by the welder
B. How sizes are specified
C. Measurement techniques for structural shapes
D. Use of gages for sheet steel, brass, aluminum, copper and others
E. Weight and size specifications for reinforcing members of the structure
F. Sizing of pipe
G. Structural beams classified as four shapes
H. Ordering structural metal

Student Activities:
A. Use of appropriate measurement techniques for structural shapes
B. Selection of gages for sheet metal
C. Ordering of materials
OBJECTIVE(S):

Upon completion of this unit the student will be able to:

a. Distinguish between general and specific notes;
b. Interpret and apply general and specific notes;
c. Determine and apply dimensions on a drawing;
d. Identify basic symbols and abbreviations found on a drawing;
e. Identify tolerances or limits on a drawing; and,
f. Identify ANSI limits and fits.

MODULE OUTLINE:

I. Distinguish Between General and Specific Notes
   A. General notes
   B. Specific notes/local notes

II. Interpret and Apply General and Specific Notes
   A. General notes applied
      1. Title strip/title block
      2. Parts list/bill of material
   B. Interpret general notes
      1. Including material
      2. General tolerances
      3. Heat treatment
      4. Pattern information
      5. Processes of manufacture
      6. Requirements of the product
   C. Interpret specific notes
      1. Apply to specific operations
      2. Apply to specific processes of manufacture
      3. Apply to the requirements of the product

III. Determine and Apply Dimensions on a Drawing
   A. Identify organizations that determine dimension standards
      1. American National Standards Institutes (ANSI)
      2. International Standards Organization (ISO)
   B. Determine dimensions on a drawing
      1. Size dimensions
      2. Location dimensions
   C. Applying dimensions on a drawing
      1. Scale of drawing
      2. Techniques of dimensioning
      3. Placement of dimensions
4. Choice of dimensions
5. Types of lines used in the dimensioning process
6. Arrowheads used on drawings
7. Leaders used on drawings
8. Dimensioning systems
   a. Fractional
   b. Decimal
   c. Metric
   d. Combination dimensioning
9. Dimension figures
10. Direction of dimension figures
    a. Unidirectional system
    b. Aligned system
11. Dimensioning angles
12. Dimensioning arcs
13. Dimensioning fillets and rounds
14. Identify surfaces to be machined
15. Contour dimensioning
16. Dimensioning of curves
17. Dimensioning of rounded-end shapes
18. Dimensioning of threads
19. Dimensioning of tapers
20. Dimensioning of chamfers
21. Dimensioning shaft centers
22. Dimensioning keyways
23. Dimensioning knurls
    a. Diamond
    b. Straight
24. Dimensioning along curved surfaces
25. Tabular dimensions
26. Dimensioning standards
27. Coordinate dimensioning

IV. Identify Basic Symbols and Abbreviations Found on a Drawing
A. Traditional terms used to describe various shapes, processes, and sizes
B. Identify abbreviations used to describe various shapes, processes, and size
C. Identify a variety of dimensioning symbols used to replace traditional terms and abbreviations

V. Identify Tolerances or Limits on a Drawing
A. Identify tolerances or limits
   1. Nominal size
   2. Basic size or dimension
   3. Actual size
   4. Tolerance
   5. Limits
   6. Allowance
B. Methods of expressing tolerances
   1. General tolerances
   2. Limit dimensioning
   3. Plus and minus dimensioning
      a. Unilateral system
      b. Bilateral system
   4. Single-limit dimensioning
   5. Angular tolerances

VI. Identify ANSI Limits and Fits
A. Fits between mating parts
   1. Clearance fit
   2. Interference fit
   3. Transition fit
   4. Line fit

B. Limits and fits for cylindrical parts
   1. Running or sliding clearance fits
   2. Locational clearance fits
   3. Transition clearance interference fits
   4. Locational interference fits
   5. Force or shrink fits
OBJECTIVE(S):

Upon completion of this unit the student will be able to:

a. Distinguish between conventional and geometric dimensioning and tolerancing;
b. Explain and use geometric positional tolerancing and symbols;
c. Explain and use tolerances of form and symbols;
d. Explain and use the feature control symbol; and,
e. Explain and use modifiers in geometric dimensioning and tolerancing.

MODULE OUTLINE:

I. Distinguish Between Conventional and Geometric Dimensioning and Tolerancing
   A. General/conventional tolerancing
      1. Definitions of general/conventional tolerancing
         a. Dimension
         b. Reference dimension
         c. Feature
         d. Feature of size
         e. Actual size
         f. Stock size
      2. Maximum material condition
      3. Least material condition
      4. Basic fits
      5. Clearance fit
      6. Allowance
      7. Clearance
      8. Force fit
   B. Geometric dimensioning and tolerancing
      1. Definition of geometric dimensioning and tolerancing
      2. Dimensioning rules
      3. Dimensioning units

II. Explain and Use Geometric Positional Tolerancing and Symbols
   A. Explain positional / location tolerances
   B. Identify and use geometric position tolerancing symbols
      1. Position
      2. Concentricity
      3. Symmetry

III. Explain and Use Tolerances of Form Symbols
    A. Explain form tolerances
    B. Identify and use tolerances of form symbols
       1. Straightness
2. Flatness
3. Circularity
4. Cylindrical

IV. Explain and Use Profile Tolerances
A. Explain profile tolerance
B. Identify and use profile tolerance symbols
   1. Profile of a line
   2. Profile of a surface
   3. Profile of an arc
   4. Profile of irregular curves
   5. Profile of coplanar surfaces

V. Explain and Use Tolerances of Orientation
A. Explain orientation tolerances
B. Identify and use orientation tolerance symbols
   1. Parallelism
   2. Perpendicularity
   3. Angularity

VI. Explain and Use Runout Tolerances
A. Explain runouts
   1. Circular
   2. Total
B. Identify and use runout tolerances symbols
   1. Circular
   2. Total

VII. Explain and Use Modifiers in Geometric Dimensioning and Tolerancing
A. Maximum Material Condition (MMC)
B. Regardless of Feature Size (RFS)
C. Least Material Condition (LMC)
D. Datum feature symbol
E. Datum reference frame concept
   1. Primary datum plane
   2. Secondary datum plane
   3. Tertiary datum plane
F. Datum target symbol
   1. Target point
   2. Target line
   3. Target area

VIII. Explain and Use the Feature Control Frame
A. Explain feature control frame
B. Explain the compartments of a feature control frame
   1. Geometric characteristic symbol
   2. Geometric tolerance
   3. Zone descriptor
   4. Material condition symbol
   5. Primary datum reference
6. Secondary datum reference
7. Tertiary datum reference

IX. Additional Supplementary Modifying Symbols
A. Explain and use additional modifying symbols.
   1. Diameter
   2. Radius R
   3. Reference ()
   4. Counterbore/spotface L/
   5. Square
   6. Dimension origin O
   7. Slope
   8. Projected tolerance zone
   9. Spherical diameter
  10. Spherical radius
  11. Arc length
  12. Counter sink
  13. Depth
  14. Conical taper
  15. Place, times, or by
  16. Basic dimension
WELDER SERIES
MASTER Technical Module No. WLD-H09

SUBJECT: WELDING TECHNICIAN TIME: 5 HOURS

• DUTY: BLUEPRINTING, STRUCTURAL LAYOUT AND FIT-UP

• TASK: Identify Structural Components and Support Frameworks of Buildings and Their Components

OBJECTIVE(S):

Upon completion of this unit the student will be able to understand metal structures and foundation of buildings

INSTRUCTIONAL MATERIALS:

STUDENT PREPARATION:

The purpose of this module is to assist the student in the preparation of cutting and welding of metal beams as used in building construction.

Students should have previously completed the following Technical Modules:

WLD-H8 “Identify Various Structural Shapes and Their Respective Parts”

INTRODUCTION:

The Module Introduction will Include:

- The wide variety of work that may be performed by welders in different occupational fields
- A demonstration of the application of metal structures in building construction

PRESENTATION OUTLINE:

Instructional Topics:

A. Discuss the types of metal beams used in building construction
B. Discuss the types of metal piping used in building and fluid distribution systems
C. Discuss methods of construction that require welding skills

Student Activities:

A. Visit a construction site where metal beams and piping are being installed
B. Demonstrate cutting or welding of metal components used in construction

PRACTICAL APPLICATION:

This lesson will cover the general use of metals and weldments in construction. The students will have the opportunity to review these applications at the work site.

EVALUATION AND/OR VERIFICATION:

An examination will be given at the end of this section to determine the progress of the class.

SUMMARY:

The instructor will emphasize the variety of work applications available to the welder, with major consideration again for planning and safety in all welding activities.
NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-H10) dealing with describing proper placement of stiffeners and supports when modifying existing structures.
OBJECTIVE(S):

Upon completion of this unit the student will be able to understand metal structures and foundation of buildings

MODULE OUTLINE:

Instructional Topics:
A. Discuss the types of metal beams used in building construction
B. Discuss the types of metal piping used in building and fluid distribution systems
C. Discuss methods of construction that require welding skills

Student Activities:
A. Visit a construction site where metal beams and piping are being installed
B. Demonstrate cutting or welding of metal components used in construction
OBJECTIVE(S):

Upon completion of this unit the student will be able to:

a. Distinguish between general and specific notes;
b. Interpret and apply general and specific notes;
c. Determine and apply dimensions on a drawing;
d. Identify basic symbols and abbreviations found on a drawing;
e. Identify tolerances or limits on a drawing; and,
f. Identify ANSI limits and fits.

MODULE OUTLINE:

I. Distinguish Between General and Specific Notes
   A. General notes
   B. Specific notes/local notes

II. Interpret and Apply General and Specific Notes
   A. General notes applied
      1. Title strip/title block
      2. Parts list/bill of material
   B. Interpret general notes
      1. Including material
      2. General tolerances
      3. Heat treatment
      4. Pattern information
      5. Processes of manufacture
      6. Requirements of the product
   C. Interpret specific notes
      1. Apply to specific operations
      2. Apply to specific processes of manufacture
      3. Apply to the requirements of the product

III. Determine and Apply Dimensions on a Drawing
   A. Identify organizations that determine dimension standards
      1. American National Standards Institutes (ANSI)
      2. International Standards Organization (ISO)
   B. Determine dimensions on a drawing
      1. Size dimensions
      2. Location dimensions
   C. Applying dimensions on a drawing
      1. Scale of drawing
      2. Techniques of dimensioning
3. Placement of dimensions
4. Choice of dimensions
5. Types of lines used in the dimensioning process
6. Arrowheads used on drawings
7. Leaders used on drawings
8. Dimensioning systems
   a. Fractional
   b. Decimal
   c. Metric
   d. Combination dimensioning
9. Dimension figures
10. Direction of dimension figures
    a. Unidirectional system
    b. Aligned system
11. Dimensioning angles
12. Dimensioning arcs
13. Dimensioning fillets and rounds
14. Identify surfaces to be machined
15. Contour dimensioning
16. Dimensioning of curves
17. Dimensioning of rounded-end shapes
18. Dimensioning of threads
19. Dimensioning of tapers
20. Dimensioning of chamfers
21. Dimensioning shaft centers
22. Dimensioning keyways
23. Dimensioning knurls
    a. Diamond
    b. Straight
24. Dimensioning along curved surfaces
25. Tabular dimensions
26. Dimensioning standards
27. Coordinate dimensioning

IV. Identify Basic Symbols and Abbreviations Found on a Drawing
A. Traditional terms used to describe various shapes, processes, and sizes
B. Identify abbreviations used to describe various shapes, processes, and size
C. Identify a variety of dimensioning symbols used to replace traditional terms and abbreviations

V. Identify Tolerances or Limits on a Drawing
A. Identify tolerances or limits
   1. Nominal size
   2. Basic size or dimension
   3. Actual size
   4. Tolerance
   5. Limits
6. Allowance

B. Methods of expressing tolerances
   1. General tolerances
   2. Limit dimensioning
   3. Plus and minus dimensioning
      a. Unilateral system
      b. Bilateral system
   4. Single-limit dimensioning
   5. Angular tolerances

VI. Identify ANSI Limits and Fits

A. Fits between mating parts
   1. Clearance fit
   2. Interference fit
   3. Transition fit
   4. Line fit

B. Limits and fits for cylindrical parts
   1. Running or sliding clearance fits
   2. Locational clearance fits
   3. Transition clearance interference fits
   4. Locational interference fits
   5. Force or shrink fits
OBJECTIVE(S):

Upon completion of this unit the student will be able to:

a. Distinguish between conventional and geometric dimensioning and tolerancing;
b. Explain and use geometric positional tolerancing and symbols;
c. Explain and use tolerances of form and symbols;
d. Explain and use the feature control symbol; and,
e. Explain and use modifiers in geometric dimensioning and tolerancing.

MODULE OUTLINE:

I. Distinguish Between Conventional and Geometric Dimensioning and Tolerancing
   A. General/conventional tolerancing
      1. Definitions of general/conventional tolerancing
         a. Dimension
         b. Reference dimension
         c. Feature
         d. Feature of size
         e. Actual size
         f. Stock size
      2. Maximum material condition
      3. Least material condition
      4. Basic fits
      5. Clearance fit
      6. Allowance
      7. Clearance
      8. Force fit
   B. Geometric dimensioning and tolerancing
      1. Definition of geometric dimensioning and tolerancing

       1. Position
       2. Concentricity
       3. Symmetry

III. Explain and Use Tolerances of Form Symbols
    A. Explain form tolerances
    B. Identify and use tolerances of form symbols
1. Straightness
2. Flatness
3. Circularity
4. Cylindrical

IV. Explain and Use Profile Tolerances
A. Explain profile tolerance
B. Identify and use profile tolerance symbols
   1. Profile of a line
   2. Profile of a surface
   3. Profile of an arc
   4. Profile of irregular curves
   5. Profile of coplanar surfaces

V. Explain and Use Tolerances of Orientation
A. Explain orientation tolerances
B. Identify and use orientation tolerance symbols
   1. Parallelism
   2. Perpendicularity
   3. Angularity

VI. Explain and Use Runout Tolerances
A. Explain runouts
   1. Circular
   2. Total
B. Identify and use runout tolerances symbols
   1. Circular
   2. Total

VII. Explain and Use Modifiers in Geometric Dimensioning and Tolerancing
A. Maximum Material Condition (MMC)
B. Regardless of Feature Size (RFS)
C. Least Material Condition (LMC)
D. Datum feature symbol
E. Datum reference frame concept
   1. Primary datum plane
   2. Secondary datum plane
   3. Tertiary datum plane
F. Datum target symbol
   1. Target point
   2. Target line
   3. Target area

VIII. Explain and Use the Feature Control Frame
A. Explain feature control frame
B. Explain the compartments of a feature control frame
   1. Geometric characteristic symbol
   2. Geometric tolerance
   3. Zone descriptor
   4. Material condition symbol
5. Primary datum reference
6. Secondary datum reference
7. Tertiary datum reference

**IX. Additional Supplementary Modifying Symbols**

A. Explain and use additional modifying symbols.
1. Diameter
2. Radius R
3. Reference ( )
4. Counterbore/spotface L/
5. Square
6. Dimension origin Ø
7. Slope
8. Projected tolerance zone
9. Spherical diameter
10. Spherical radius
11. Arc length
12. Counter sink
13. Depth
14. Conical taper
15. Place, times, or by
16. Basic dimension

TEXT:  

OTHER:  
Competency Standards, American Welding Society, Latest Edition  
STUDENT PREPARATION:

The purpose of this module is to assist the student in the layout and use of metal supports in modifying existing structures.

Students should have previously completed the following Technical Modules:

**WLD-H9** “Identify Structural Components and Support Frameworks of Buildings and Their Components”

INTRODUCTION:

The Course Introduction will Include:

- An overview of the strength characteristics of various metals
- A class demonstration of effective use of welded supports in structures
- A discussion on methods leading to an increase of skill and knowledge in order to be diversified, and a more valuable employee

PRESENTATION OUTLINE:

Instructional Topics:

A. Use of welded supports in structures
B. Selection of metal support members
C. Types of welds for supports
D. Verification of quality in welds
E. Codes and standards for supporting structures

Student Activities:

A. Visit a construction site where this work is done
B. Visit a metals manufacturer where design work is performed

PRACTICAL APPLICATION:

This module will assist the student in planning work in placement of metal stiffeners and supports.

EVALUATION AND/OR VERIFICATION:

An examination will be given at the end of this section to determine the progress of the class.
SUMMARY:

The instructor will emphasize the importance of following engineering drawings, codes, and specifications for this work. The welder will benefit by understanding the planning, placement and the welding operations that follow.

NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-H11) dealing with identifying fillet weld sizes for various thicknesses of base metals.
Describe Proper Placement of Stiffeners and Supports When Modifying Existing Structures
Attachment 1: MASTER Handout No. 1

OBJECTIVE(S):

Upon completion of this unit the student will be able to understand gussets and cross members for support of structures

MODULE OUTLINE:

Instructional Topics:
A. Use of welded supports in structures
B. Selection of metal support members
C. Types of welds for supports
D. Verification of quality in welds
E. Codes and standards for supporting structures

Student Activities:
A. Visit a construction site where this work is done
B. Visit a metals manufacturer where design work is performed
Describe Proper Placement of Stiffeners and Supports
When Modifying Existing Structures
Attachment 2: MASTER Handout No. 2

OBJECTIVE(S):

Upon completion of this unit the student will be able to:

a. Distinguish between general and specific notes;
b. Interpret and apply general and specific notes;
c. Determine and apply dimensions on a drawing;
d. Identify basic symbols and abbreviations found on a drawing;
e. Identify tolerances or limits on a drawing; and,
f. Identify ANSI limits and fits.

MODULE OUTLINE:

I. Distinguish Between General and Specific Notes
   A. General notes
   B. Specific notes/local notes

II. Interpret and Apply General and Specific Notes
   A. General notes applied
      1. Title strip/title block
      2. Parts list/bill of material
   B. Interpret general notes
      1. Including material
      2. General tolerances
      3. Heat treatment
      4. Pattern information
      5. Processes of manufacture
      6. Requirements of the product
   C. Interpret specific notes
      1. Apply to specific operations
      2. Apply to specific processes of manufacture
      3. Apply to the requirements of the product

III. Determine and Apply Dimensions on a Drawing
   A. Identify organizations that determine dimension standards
      1. American National Standards Institutes (ANSI)
      2. International Standards Organization (ISO)
   B. Determine dimensions on a drawing
      1. Size dimensions
      2. Location dimensions
   C. Applying dimensions on a drawing
      1. Scale of drawing
      2. Techniques of dimensioning
3. Placement of dimensions
4. Choice of dimensions
5. Types of lines used in the dimensioning process
6. Arrowheads used on drawings
7. Leaders used on drawings
8. Dimensioning systems
   a. Fractional
   b. Decimal
   c. Metric
   d. Combination dimensioning
9. Dimension figures
10. Direction of dimension figures
    a. Unidirectional system
    b. Aligned system
11. Dimensioning angles
12. Dimensioning arcs
13. Dimensioning fillets and rounds
14. Identify surfaces to be machined
15. Contour dimensioning
16. Dimensioning of curves
17. Dimensioning of rounded-end shapes
18. Dimensioning of threads
19. Dimensioning of tapers
20. Dimensioning of chamfers
21. Dimensioning shaft centers
22. Dimensioning keyways
23. Dimensioning knurls
   a. Diamond
   b. Straight
24. Dimensioning along curved surfaces
25. Tabular dimensions
26. Dimensioning standards
27. Coordinate dimensioning

IV. Identify Basic Symbols and Abbreviations Found on a Drawing
A. Traditional terms used to describe various shapes, processes, and sizes
B. Identify abbreviations used to describe various shapes, processes, and size
C. Identify a variety of dimensioning symbols used to replace traditional terms and abbreviations

V. Identify Tolerances or Limits on a Drawing
A. Identify tolerances or limits
   1. Nominal size
   2. Basic size or dimension
   3. Actual size
   4. Tolerance
   5. Limits
6. Allowance

B. Methods of expressing tolerances
   1. General tolerances
   2. Limit dimensioning
   3. Plus and minus dimensioning
      a. Unilateral system
      b. Bilateral system
   4. Single-limit dimensioning
   5. Angular tolerances

VI. Identify ANSI Limits and Fits
   A. Fits between mating parts
      1. Clearance fit
      2. Interference fit
      3. Transition fit
      4. Line fit
   B. Limits and fits for cylindrical parts
      1. Running or sliding clearance fits
      2. Locational clearance fits
      3. Transition clearance interference fits
      4. Locational interference fits
      5. Force or shrink fits
OBJECTIVE(S):

Upon completion of this unit the student will be able to:

a. Distinguish between conventional and geometric dimensioning and tolerancing;
b. Explain and use geometric positional tolerancing and symbols;
c. Explain and use tolerances of form and symbols;
d. Explain and use the feature control symbol; and,
e. Explain and use modifiers in geometric dimensioning and tolerancing.

MODULE OUTLINE:

I. Distinguish Between Conventional and Geometric Dimensioning and Tolerancing
   A. General/conventional tolerancing
      1. Definitions of general/conventional tolerancing
         a. Dimension
         b. Reference dimension
         c. Feature
         d. Feature of size
         e. Actual size
         f. Stock size
      2. Maximum material condition
      3. Least material condition
      4. Basic fits
      5. Clearance fit
      6. Allowance
      7. Clearance
      8. Force fit
   B. Geometric dimensioning and tolerancing
      1. Definition of geometric dimensioning and tolerancing
      2. Dimensioning rules
      3. Dimensioning units

II. Explain and Use Geometric Positional Tolerancing and Symbols
    A. Explain positional / location tolerances
    B. Identify and use geometric position tolerancing symbols
       1. Position
       2. Concentricity
       3. Symmetry

III. Explain and Use Tolerances of Form Symbols
     A. Explain form tolerances
     B. Identify and use tolerances of form symbols
1. Straightness
2. Flatness
3. Circularity
4. Cylindrical

IV. Explain and Use Profile Tolerances
   A. Explain profile tolerance
   B. Identify and use profile tolerance symbols
      1. Profile of a line
      2. Profile of a surface
      3. Profile of an arc
      4. Profile of irregular curves
      5. Profile of coplanar surfaces

V. Explain and Use Tolerances of Orientation
   A. Explain orientation tolerances
   B. Identify and use orientation tolerance symbols
      1. Parallelism
      2. Perpendicularity
      3. Angularity

VI. Explain and Use Runout Tolerances
    A. Explain runouts
       1. Circular
       2. Total
    B. Identify and use runout tolerances symbols
       1. Circular
       2. Total

VII. Explain and Use Modifiers in Geometric Dimensioning and Tolerancing
     A. Maximum Material Condition (MMC)
     B. Regardless of Feature Size (RFS)
     C. Least Material Condition (LMC)
     D. Datum feature symbol
     E. Datum reference frame concept
        1. Primary datum plane
        2. Secondary datum plane
        3. Tertiary datum plane
     F. Datum target symbol
        1. Target point
        2. Target line
        3. Target area

VIII. Explain and Use the Feature Control Frame
      A. Explain feature control frame
      B. Explain the compartments of a feature control frame
         1. Geometric characteristic symbol
         2. Geometric tolerance
         3. Zone descriptor
         4. Material condition symbol
5. Primary datum reference
6. Secondary datum reference
7. Tertiary datum reference

IX. Additional Supplementary Modifying Symbols
A. Explain and use additional modifying symbols.
   1. Diameter
   2. Radius R
   3. Reference ( )
   4. Counterbore/spotface L/
   5. Square
   6. Dimension origin O
   7. Slope
   8. Projected tolerance zone
   9. Spherical diameter
  10. Spherical radius
  11. Arc length
  12. Counter sink
  13. Depth
  14. Conical taper
  15. Place, times, or by
  16. Basic dimension
WELDER SERIES
MASTER Technical Module No. WLD-H11

SUBJECT: WELDING TECHNICIAN

DUTY: BLUEPRINTING, STRUCTURAL LAYOUT AND FIT-UP

TASK: Identify Fillet Weld Sizes for Various Thicknesses of Base Metals

TIME: 3 HOURS

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Understand blueprint requirements for welds; and,
B. Understand weld size gauges.

INSTRUCTIONAL MATERIALS:

Student Workbook
Written tests
Transparencies will be prepared to emphasize each subject
Hobart Institute Video Material
Classroom handouts
MASTER Handout No. 1 (WLD-H11-H01)
MASTER Handout No. 2 (WLD-H11-H02)
MASTER Handout No. 3 (WLD-H11-H03)

REFERENCES:

Competency Standards, American Welding Society, Latest Edition

721
STUDENT PREPARATION:

The purpose of this module is to assist the student in one of the most widely used type of welds.

Students should have previously completed the following Technical Modules:

WLD-H10 “Describe Proper Placement of Stiffeners and Supports When Modifying Existing Structures”

INTRODUCTION:

The Module Introduction will Include:

- An overview of fillet weld applications
- The importance of sizing pitch, contours, and finishing of base metals
- A discussion on methods leading to an increase of skill and knowledge in order to be diversified, and a more valuable employee
- The use of appropriate symbols to convey concepts and specifications

PRESENTATION OUTLINE:

Instructional Topics:

A. Selection of the base metals
B. Sizing of the weld
C. Use of gages
D. Length of weld and extent of welding
E. Pitch, contour, and finishing

Student Activities:

A. Practice use of symbols for fillet welds
B. Interpret specifications and plan work from a drawing with fillet welds

PRACTICAL APPLICATION:

This module will cover the symbols and drawing specifications for fillet welds.

EVALUATION AND/OR VERIFICATION:

An examination will be given at the end of this section to determine the progress of the class.
SUMMARY:

The instructor will emphasize variety and scope of fillet welds that are specified for the welder. Sizing for various thicknesses of base metals was emphasized. Welding symbols were reviewed and the students were provided with a copy of AWS weld symbols.

NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-H12) dealing with describing proper sequence when cutting various shapes to structural drawing specs.
OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Understand blue print requirements for welds; and,
B. Understand weld size gauges.

MODULE OUTLINE:

Instructional Topics:
A. Selection of the base metals
B. Sizing of the weld
C. Use of gages
D. Length of weld and extent of welding
E. Pitch, contour, and finishing

Student Activities:
A. Practice use of symbols for fillet welds
B. Interpret specifications and plan work from a drawing with fillet welds
OBJECTIVE(S):

Upon completion of this unit the student will be able to:

a. Distinguish between general and specific notes;
b. Interpret and apply general and specific notes;
c. Determine and apply dimensions on a drawing;
d. Identify basic symbols and abbreviations found on a drawing;
e. Identify tolerances or limits on a drawing; and,
f. Identify ANSI limits and fits.

MODULE OUTLINE:

I. Distinguish Between General and Specific Notes
   A. General notes
   B. Specific notes/local notes

II. Interpret and Apply General and Specific Notes
   A. General notes applied
      1. Title strip/title block
      2. Parts list/bill of material
   B. Interpret general notes
      1. Including material
      2. General tolerances
      3. Heat treatment
      4. Pattern information
      5. Processes of manufacture
      6. Requirements of the product
   C. Interpret specific notes
      1. Apply to specific operations
      2. Apply to specific processes of manufacture
      3. Apply to the requirements of the product

III. Determine and Apply Dimensions on a Drawing
    A. Identify organizations that determine dimension standards
       1. American National Standards Institutes (ANSI)
       2. International Standards Organization (ISO)
    B. Determine dimensions on a drawing
       1. Size dimensions
       2. Location dimensions
    C. Applying dimensions on a drawing
       1. Scale of drawing
       2. Techniques of dimensioning
       3. Placement of dimensions
4. Choice of dimensions
5. Types of lines used in the dimensioning process
6. Arrowheads used on drawings
7. Leaders used on drawings
8. Dimensioning systems
   a. Fractional
   b. Decimal
   c. Metric
   d. Combination dimensioning
9. Dimension figures
10. Direction of dimension figures
    a. Unidirectional system
    b. Aligned system
11. Dimensioning angles
12. Dimensioning arcs
13. Dimensioning fillets and rounds
14. Identify surfaces to be machined
15. Contour dimensioning
16. Dimensioning of curves
17. Dimensioning of rounded-end shapes
18. Dimensioning of threads
19. Dimensioning of tapers
20. Dimensioning of chamfers
21. Dimensioning shaft centers
22. Dimensioning keyways
23. Dimensioning knurls
    a. Diamond
    b. Straight
24. Dimensioning along curved surfaces
25. Tabular dimensions
26. Dimensioning standards
27. Coordinate dimensioning

IV. Identify Basic Symbols and Abbreviations Found on a Drawing
A. Traditional terms used to describe various shapes, processes, and sizes
B. Identify abbreviations used to describe various shapes, processes, and size
C. Identify a variety of dimensioning symbols used to replace traditional terms and abbreviations

V. Identify Tolerances or Limits on a Drawing
A. Identify tolerances or limits
   1. Nominal size
   2. Basic size or dimension
   3. Actual size
   4. Tolerance
   5. Limits
   6. Allowance
B. Methods of expressing tolerances
   1. General tolerances
   2. Limit dimensioning
   3. Plus and minus dimensioning
      a. Unilateral system
      b. Bilateral system
   4. Single-limit dimensioning
   5. Angular tolerances

VI. Identify ANSI Limits and Fits
A. Fits between mating parts
   1. Clearance fit
   2. Interference fit
   3. Transition fit
   4. Line fit

B. Limits and fits for cylindrical parts
   1. Running or sliding clearance fits
   2. Locational clearance fits
   3. Transition clearance interference fits
   4. Locational interference fits
   5. Force or shrink fits
OBJECTIVE(S):

Upon completion of this unit the student will be able to:
a. Distinguish between conventional and geometric dimensioning and tolerancing;
b. Explain and use geometric positional tolerancing and symbols;
c. Explain and use tolerances of form and symbols;
d. Explain and use the feature control symbol; and,
e. Explain and use modifiers in geometric dimensioning and tolerancing.

MODULE OUTLINE:

I. Distinguish Between Conventional and Geometric Dimensioning and Tolerancing
   A. General/conventional tolerancing
      1. Definitions of general/conventional tolerancing
         a. Dimension
         b. Reference dimension
         c. Feature
         d. Feature of size
         e. Actual size
         f. Stock size
      2. Maximum material condition
      3. Least material condition
      4. Basic fits
      5. Clearance fit
      6. Allowance
      7. Clearance
      8. Force fit
   B. Geometric dimensioning and tolerancing
      1. Definition of geometric dimensioning and tolerancing
      2. Dimensioning rules
      3. Dimensioning units

II. Explain and Use Geometric Positional Tolerancing and Symbols
   A. Explain positional / location tolerances
   B. Identify and use geometric position tolerancing symbols
      1. Position
      2. Concentricity
      3. Symmetry

III. Explain and Use Tolerances of Form Symbols
    A. Explain form tolerances
    B. Identify and use tolerances of form symbols
IV. Explain and Use Profile Tolerances
   A. Explain profile tolerance
   B. Identify and use profile tolerance symbols
      1. Profile of a line
      2. Profile of a surface
      3. Profile of an arc
      4. Profile of irregular curves
      5. Profile of coplanar surfaces

V. Explain and Use Tolerances of Orientation
   A. Explain orientation tolerances
   B. Identify and use orientation tolerance symbols
      1. Parallelism
      2. Perpendicularity
      3. Angularity

VI. Explain and Use Runout Tolerances
   A. Explain runouts
      1. Circular
      2. Total
   B. Identify and use runout tolerances symbols
      1. Circular
      2. Total

VII. Explain and Use Modifiers in Geometric Dimensioning and Tolerancing
    A. Maximum Material Condition (MMC)
    B. Regardless of Feature Size (RFS)
    C. Least Material Condition (LMC)
    D. Datum feature symbol
    E. Datum reference frame concept
       1. Primary datum plane
       2. Secondary datum plane
       3. Tertiary datum plane
    F. Datum target symbol
       1. Target point
       2. Target line
       3. Target area

VIII. Explain and Use the Feature Control Frame
    A. Explain feature control frame
    B. Explain the compartments of a feature control frame
       1. Geometric characteristic symbol
       2. Geometric tolerance
       3. Zone descriptor
       4. Material condition symbol
5. Primary datum reference
6. Secondary datum reference
7. Tertiary datum reference

IX. Additional Supplementary Modifying Symbols
A. Explain and use additional modifying symbols.
1. Diameter
2. Radius R
3. Reference ( )
4. Counterbore/spotface L/
5. Square
6. Dimension origin O
7. Slope
8. Projected tolerance zone
9. Spherical diameter
10. Spherical radius
11. Arc length
12. Counter sink
13. Depth
14. Conical taper
15. Place, times, or by
16. Basic dimension

Competency Standards, American Welding Society, Latest Edition
STUDENT PREPARATION:

The purpose of this module is to assist the student in understanding the proper cutting sequence when cutting various structural shapes.

Students should have previously completed the following Technical Modules:

WLD-H11 “Identify Fillet Weld Sizes for VariousThicknesses of Base Metals”

INTRODUCTION:

The Module Introduction will include:

- The importance of cutting metal to specification with the proper shape required by specification
- A class demonstration of effective cutting sequence for specifications
- A discussion on methods leading to an increase in skill and knowledge in order to be diversified, and a more valuable employee

PRESENTATION OUTLINE:

Instructional Topics:

A. Preparation of the base material
B. Grinding and heat treating required
C. Surfaces and edges to be welded (surface roughness)
D. How to avoid cutting beyond prescribed lines
E. Inspection and repair of cut edges
F. Limits of acceptability and repair of discontinuities
G. Control of distortion and shrinkage

Student Activities:

A. Practice cutting to specification
B. Examine quality of finished part

PRACTICAL APPLICATION:

This lesson will cover where to look for a specific measurement on a blueprint and how to determine tolerance from the information given on a blueprint.
EVALUATION AND/OR VERIFICATION:

An examination will be given at the end of this section to determine the progress of the class.

SUMMARY:

The instructor emphasizes proper cutting preparation and sequence, and the visual inspection and repair of cut edges. Welding symbols were reviewed.

NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-H13) dealing with describing methods for layout slopes and rolling tolerances.
WLD-H12-HO1
Describe Proper Sequence When Cutting Various Shapes
To Structural Drawing Specs
Attachment 1: MASTER Handout No. 1

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Understand removal of components to specifications; AND,
B. Understand replacement of components to specification.

MODULE OUTLINE:

Instructional Topics:
A. Preparation of the base material
B. Grinding and heat treating required
C. Surfaces and edges to be welded (surface roughness)
D. How to avoid cutting beyond prescribed lines
E. Inspection and repair of cut edges
F. Limits of acceptability and repair of discontinuities
G. Control of distortion and shrinkage

Student Activities:
A. Practice cutting to specification
B. Examine quality of finished part

9. Dimension figures
10. Direction of dimension figures
    a. Unidirectional system
    b. Aligned system
11. Dimensioning angles
12. Dimensioning arcs
13. Dimensioning fillets and rounds
14. Identify surfaces to be machined
15. Contour dimensioning
16. Dimensioning of curves
17. Dimensioning of rounded-end shapes
18. Dimensioning of threads
19. Dimensioning of tapers
20. Dimensioning of chamfers
21. Dimensioning shaft centers
22. Dimensioning keyways
23. Dimensioning knurls
   a. Diamond
   b. Straight
24. Dimensioning along curved surfaces
25. Tabular dimensions
26. Dimensioning standards
27. Coordinate dimensioning

IV. Identify Basic Symbols and Abbreviations Found on a Drawing
   A. Traditional terms used to describe various shapes, processes, and sizes
   B. Identify abbreviations used to describe various shapes, processes, and size
   C. Identify a variety of dimensioning symbols used to replace traditional terms and abbreviations

V. Identify Tolerances or Limits on a Drawing
   A. Identify tolerances or limits
      1. Nominal size
      2. Basic size or dimension
      3. Actual size
      4. Tolerance
      5. Limits
6. Allowance

B. Methods of expressing tolerances
   1. General tolerances
   2. Limit dimensioning
   3. Plus and minus dimensioning
      a. Unilateral system
      b. Bilateral system
   4. Single-limit dimensioning
   5. Angular tolerances

VI. Identify ANSI Limits and Fits
   A. Fits between mating parts
      1. Clearance fit
      2. Interference fit
      3. Transition fit
      4. Line fit
   B. Limits and fits for cylindrical parts
      1. Running or sliding clearance fits
      2. Locational clearance fits
      3. Transition clearance interference fits
      4. Locational interference fits
      5. Force or shrink fits
Upon completion of this unit the student will be able to:

a. Distinguish between conventional and geometric dimensioning and tolerancing;
b. Explain and use geometric positional tolerancing and symbols;
c. Explain and use tolerances of form and symbols;
d. Explain and use the feature control symbol; and,
e. Explain and use modifiers in geometric dimensioning and tolerancing.

I. Distinguish Between Conventional and Geometric Dimensioning and Tolerancing
   A. General/conventional tolerancing
      1. Definitions of general/conventional tolerancing
         a. Dimension
         b. Reference dimension
         c. Feature
         d. Feature of size
         e. Actual size
         f. Stock size
      2. Maximum material condition
      3. Least material condition
      4. Basic fits
      5. Clearance fit
      6. Allowance
      7. Clearance
      8. Force fit
   B. Geometric dimensioning and tolerancing
      1. Definition of geometric dimensioning and tolerancing
      2. Dimensioning rules
      3. Dimensioning units

II. Explain and Use Geometric Positional Tolerancing and Symbols
    A. Explain positional / location tolerances
    B. Identify and use geometric position tolerancing symbols
       1. Position
       2. Concentricity
       3. Symmetry

III. Explain and Use Tolerances of Form Symbols
     A. Explain form tolerances
B. Identify and use tolerances of form symbols
   1. Straightness
   2. Flatness
   3. Circularity
   4. Cylindrical

IV. Explain and Use Profile Tolerances
A. Explain profile tolerance
B. Identify and use profile tolerance symbols
   1. Profile of a line
   2. Profile of a surface
   3. Profile of an arc
   4. Profile of irregular curves
   5. Profile of coplanar surfaces

V. Explain and Use Tolerances of Orientation
A. Explain orientation tolerances
B. Identify and use orientation tolerance symbols
   1. Parallelism
   2. Perpendicularity
   3. Angularity

VI. Explain and Use Runout Tolerances
A. Explain runouts
   1. Circular
   2. Total
B. Identify and use runout tolerances symbols
   1. Circular
   2. Total

VII. Explain and Use Modifiers in Geometric Dimensioning and Tolerancing
A. Maximum Material Condition (MMC)
B. Regardless of Feature Size (RFS)
C. Least Material Condition (LMC)
D. Datum feature symbol
E. Datum reference frame concept
   1. Primary datum plane
   2. Secondary datum plane
   3. Tertiary datum plane
F. Datum target symbol
   1. Target point
   2. Target line
   3. Target area

VIII. Explain and Use the Feature Control Frame
A. Explain feature control frame
B. Explain the compartments of a feature control frame
   1. Geometric characteristic symbol
   2. Geometric tolerance
   3. Zone descriptor
4. Material condition symbol
5. Primary datum reference
6. Secondary datum reference
7. Tertiary datum reference

IX. Additional Supplementary Modifying Symbols
A. Explain and use additional modifying symbols.
   1. Diameter
   2. Radius R
   3. Reference ( )
   4. Counterbore/spotface L/
   5. Square
   6. Dimension origin O
   7. Slope
   8. Projected tolerance zone
   9. Spherical diameter
  10. Spherical radius
  11. Arc length
  12. Counter sink
  13. Depth
  14. Conical taper
  15. Place, times, or by
  16. Basic dimension
## WELDER SERIES

### MASTER Technical Module No. WLD-H13

**SUBJECT:** WELDING TECHNICIAN  
**TIME:** 4 HOURS

- **DUTY:** BLUEPRINTING, STRUCTURAL LAYOUT AND FIT-UP  
- **TASK:** Describe Methods for Layout Slopes and Rolling Tolerances

### OBJECTIVE(S):

Upon completion of this unit the student will be able to:

A. Understand the references of a blueprint and drawing; and,
B. Understand precision, reliability, accuracy.

### INSTRUCTIONAL MATERIALS:

- Student Workbook
- Written tests
- Transparencies will be prepared to emphasize each subject
- Hobart Institute Video Material
- Classroom handouts
- MASTER Handout No. 1 (WLD-H13-H01)
- MASTER Handout No. 2 (WLD-H13-H02)
- MASTER Handout No. 3 (WLD-H13-H03)

### REFERENCES:

**TEXT:**

**OTHER:**

*Competency Standards*, American Welding Society, Latest Edition  
STUDENT PREPARATION:

The purpose of this module is to assist the student in the use of slope, dimensions, and tolerances.

Students should have previously completed the following Technical Modules:

- **WLD-H12** “Describe Proper Sequence When Cutting Various Shapes to Structural Drawing Specs”

INTRODUCTION:

The Module Introduction will Include:

- An overview of drawing references and tolerances.

PRESENTATION OUTLINE:

**Instructional Topics:**

A. Demonstrate how to use the reference on a blueprint  
B. Define precision, reliability and accuracy  
C. Define tolerance and how to find it on a blueprint  
D. Demonstrate semi-precision measurement techniques  
E. Discuss the importance of the tolerance  
F. Discriminate between accepted measurement procedures and improper measurement procedures

**Student Activities:**

A. Use measuring techniques on parts  
B. Produce a drawing which includes weld symbols

PRACTICAL APPLICATION:

This module will cover where to look for a specific measurement on a blueprint and how to determine tolerance from the information given on a blueprint.

EVALUATION AND/OR VERIFICATION:

An examination will be given at the end of this section to determine the progress of the class.

SUMMARY:

The instructor explained the benefit of using precise layout for production and quality. The effective use of slopes and tolerances was emphasized.
NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-H14) dealing with describing the use of jigs and fixtures in layout and fit-up.
OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Understand the references of a blueprint and drawing; and,
B. Understand precision, reliability, accuracy.

MODULE OUTLINE:

Instructional Topics:
A. Demonstrate how to use the reference on a blueprint
B. Define precision, reliability and accuracy
C. Define tolerance and how to find it on a blueprint
D. Demonstrate semi-precision measurement techniques
E. Discuss the importance of the tolerance
F. Discriminate between accepted measurement procedures and improper measurement procedures

Student Activities:
A. Use measuring techniques on parts
B. Produce a drawing which includes weld symbols
OBJECTIVE(S):

Upon completion of this unit the student will be able to:

a. Distinguish between general and specific notes;
b. Interpret and apply general and specific notes;
c. Determine and apply dimensions on a drawing;
d. Identify basic symbols and abbreviations found on a drawing;
e. Identify tolerances or limits on a drawing; and,
f. Identify ANSI limits and fits.

MODULE OUTLINE:

I. Distinguish Between General and Specific Notes
   A. General notes
   B. Specific notes/local notes

II. Interpret and Apply General and Specific Notes
    A. General notes applied
       1. Title strip/title block
       2. Parts list/bill of material
    B. Interpret general notes
       1. Including material
       2. General tolerances
       3. Heat treatment
       4. Pattern information
       5. Processes of manufacture
       6. Requirements of the product
    C. Interpret specific notes
       1. Apply to specific operations
       2. Apply to specific processes of manufacture
       3. Apply to the requirements of the product

III. Determine and Apply Dimensions on a Drawing
    A. Identify organizations that determine dimension standards
       1. American National Standards Institutes (ANSI)
       2. International Standards Organization (ISO)
    B. Determine dimensions on a drawing
       1. Size dimensions
       2. Location dimensions
    C. Applying dimensions on a drawing
       1. Scale of drawing
       2. Techniques of dimensioning
       3. Placement of dimensions
4. Choice of dimensions
5. Types of lines used in the dimensioning process
6. Arrowheads used on drawings
7. Leaders used on drawings
8. Dimensioning systems
   a. Fractional
   b. Decimal
   c. Metric
   d. Combination dimensioning
9. Dimension figures
10. Direction of dimension figures
    a. Unidirectional system
    b. Aligned system
11. Dimensioning angles
12. Dimensioning arcs
13. Dimensioning fillets and rounds
14. Identify surfaces to be machined
15. Contour dimensioning
16. Dimensioning of curves
17. Dimensioning of rounded-end shapes
18. Dimensioning of threads
19. Dimensioning of tapers
20. Dimensioning of chamfers
21. Dimensioning shaft centers
22. Dimensioning keyways
23. Dimensioning knurls
   a. Diamond
   b. Straight
24. Dimensioning along curved surfaces
25. Tabular dimensions
26. Dimensioning standards
27. Coordinate dimensioning

IV. Identify Basic Symbols and Abbreviations Found on a Drawing
   A. Traditional terms used to describe various shapes, processes, and sizes
   B. Identify abbreviations used to describe various shapes, processes, and sizes
   C. Identify a variety of dimensioning symbols used to replace traditional terms and abbreviations

V. Identify Tolerances or Limits on a Drawing
   A. Identify tolerances or limits
      1. Nominal size
      2. Basic size or dimension
      3. Actual size
      4. Tolerance
      5. Limits
      6. Allowance
B. Methods of expressing tolerances
   1. General tolerances
   2. Limit dimensioning
   3. Plus and minus dimensioning
      a. Unilateral system
      b. Bilateral system
   4. Single-limit dimensioning
   5. Angular tolerances

VI. Identify ANSI Limits and Fits
A. Fits between mating parts
   1. Clearance fit
   2. Interference fit
   3. Transition fit
   4. Line fit

B. Limits and fits for cylindrical parts
   1. Running or sliding clearance fits
   2. Locational clearance fits
   3. Transition clearance interference fits
   4. Locational interference fits
   5. Force or shrink fits
OBJECTIVE(S):

Upon completion of this unit the student will be able to:

a. Distinguish between conventional and geometric dimensioning and tolerancing;

b. Explain and use geometric positional tolerancing and symbols;

c. Explain and use tolerances of form and symbols;

d. Explain and use the feature control symbol; and,

e. Explain and use modifiers in geometric dimensioning and tolerancing.

MODULE OUTLINE:

I. Distinguish Between Conventional and Geometric Dimensioning and Tolerancing
   A. General/conventional tolerancing
      1. Definitions of general/conventional tolerancing
         a. Dimension
         b. Reference dimension
         c. Feature
         d. Feature of size
         e. Actual size
         f. Stock size
      2. Maximum material condition
      3. Least material condition
      4. Basic fits
      5. Clearance fit
      6. Allowance
      7. Clearance
      8. Force fit
   B. Geometric dimensioning and tolerancing
      1. Definition of geometric dimensioning and tolerancing
      2. Dimensioning rules
      3. Dimensioning units

II. Explain and Use Geometric Positional Tolerancing and Symbols
   A. Explain positional / location tolerances
   B. Identify and use geometric position tolerancing symbols
      1. Position
      2. Concentricity
      3. Symmetry

III. Explain and Use Tolerances of Form Symbols
   A. Explain form tolerances
   B. Identify and use tolerances of form symbols
1. Straightness
2. Flatness
3. Circularity
4. Cylindrical

IV. Explain and Use Profile Tolerances
A. Explain profile tolerance
B. Identify and use profile tolerance symbols
   1. Profile of a line
   2. Profile of a surface
   3. Profile of an arc
   4. Profile of irregular curves
   5. Profile of coplanar surfaces

V. Explain and Use Tolerances of Orientation
A. Explain orientation tolerances
B. Identify and use orientation tolerance symbols
   1. Parallelism
   2. Perpendicularity
   3. Angularity

VI. Explain and Use Runout Tolerances
A. Explain runouts
   1. Circular
   2. Total
B. Identify and use runout tolerances symbols
   1. Circular
   2. Total

VII. Explain and Use Modifiers in Geometric Dimensioning and Tolerancing
A. Maximum Material Condition (MMC)
B. Regardless of Feature Size (RFS)
C. Least Material Condition (LMC)
D. Datum feature symbol
E. Datum reference frame concept
   1. Primary datum plane
   2. Secondary datum plane
   3. Tertiary datum plane
F. Datum target symbol
   1. Target point
   2. Target line
   3. Target area

VIII. Explain and Use the Feature Control Frame
A. Explain feature control frame
B. Explain the compartments of a feature control frame
   1. Geometric characteristic symbol
   2. Geometric tolerance
   3. Zone descriptor
   4. Material condition symbol
5. Primary datum reference
6. Secondary datum reference
7. Tertiary datum reference

IX. Additional Supplementary Modifying Symbols
A. Explain and use additional modifying symbols.
1. Diameter
2. Radius R
3. Reference ( )
4. Counterbore/spotface L/
5. Square
6. Dimension origin O
7. Slope
8. Projected tolerance zone
9. Spherical diameter
10. Spherical radius
11. Arc length
12. Counter sink
13. Depth
14. Conical taper
15. Place, times, or by
16. Basic dimension
SUBJECT: WELDING TECHNICIAN

DUTY: BLUEPRINTING, STRUCTURAL LAYOUT AND FIT-UP

TASK: Describe the Use of Jigs and Fixtures in Layout and Fit-Up

OBJECTIVE(S):

Upon completion of this unit the student will be able to understand the use of fixtures and jigs for assembly and accuracy.

INSTRUCTIONAL MATERIALS:

Student Workbook
Written test
Transparencies will be prepared to emphasize each subject
Hobart Institute Video Material
Classroom handout
MASTER Handout No. 1 (WLD-H14-H01)
MASTER Handout No. 2 (WLD-H14-H02)
MASTER Handout No. 3 (WLD-H14-H03)

TEXT:

OTHER:

Competency Standards, American Welding Society, Latest Edition
STUDENT PREPARATION:

The purpose of this module is to assist the student in the planning of work with the use of jigs and fixtures.

Students should have previously completed the following Technical Modules:
   WLD-H13  "Describe Methods for Layout Slopes and Rolling Tolerances"

INTRODUCTION:

The Module Introduction will Include:
   • A class demonstration of effective use of jigs and fixtures
   • A discussion on methods that will insure correct alignment of parts or components

PRESENTATION OUTLINE:

Instructional Topics:
   A. Review the use of jigs and fixtures in layout and fitup
   B. Use of clamps and holding devices for correct alignment
   C. Placement of tack welds

Student Activities:
   A. Use clamps and holding devices to properly align parts to be welded
   B. Weld or prepare a fixture for production welding

PRACTICAL APPLICATION:

This module describes the essential purpose and practicality of jigs and fixtures.

EVALUATION AND/OR VERIFICATION:

An examination will be given at the end of this section to determine the progress of the class.

SUMMARY:

Members to be welded shall be brought into correct alignment and held in position by fixtures, clamps, or by torch welds until the welding has been completed.

NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-H15) dealing with listing the steps to be followed when planning a job.
WLD-H14-HO1
Describe the Use of Jigs and Fixtures in Layout and Fit-Up
Attachment 1: MASTER Handout No. 1

OBJECTIVE(S):

Upon completion of this unit the student will be able to understand the use of fixtures and jigs for assembly and accuracy.

MODULE OUTLINE:

Instructional Topics:
A. Review the use of jigs and fixtures in layout and fitup
B. Use of clamps and holding devices for correct alignment
C. Placement of tack welds

Student Activities:
A. Use clamps and holding devices to properly align parts to be welded
B. Weld or prepare a fixture for production welding
OBJECTIVE(S):

Upon completion of this unit the student will be able to:

a. Distinguish between general and specific notes;
b. Interpret and apply general and specific notes;
c. Determine and apply dimensions on a drawing;
d. Identify basic symbols and abbreviations found on a drawing;
e. Identify tolerances or limits on a drawing; and,
f. Identify ANSI limits and fits.

MODULE OUTLINE:

I. Distinguish Between General and Specific Notes
   A. General notes
   B. Specific notes/local notes

II. Interpret and Apply General and Specific Notes
   A. General notes applied
      1. Title strip/title block
      2. Parts list/bill of material
   B. Interpret general notes
      1. Including material
      2. General tolerances
      3. Heat treatment
      4. Pattern information
      5. Processes of manufacture
      6. Requirements of the product
   C. Interpret specific notes
      1. Apply to specific operations
      2. Apply to specific processes of manufacture
      3. Apply to the requirements of the product

III. Determine and Apply Dimensions on a Drawing
    A. Identify organizations that determine dimension standards
       1. American National Standards Institutes (ANSI)
       2. International Standards Organization (ISO)
    B. Determine dimensions on a drawing
       1. Size dimensions
       2. Location dimensions
    C. Applying dimensions on a drawing
       1. Scale of drawing
       2. Techniques of dimensioning
       3. Placement of dimensions
4. Choice of dimensions
5. Types of lines used in the dimensioning process
6. Arrowheads used on drawings
7. Leaders used on drawings
8. Dimensioning systems
   a. Fractional
   b. Decimal
   c. Metric
   d. Combination dimensioning
9. Dimension figures
10. Direction of dimension figures
    a. Unidirectional system
    b. Aligned system
11. Dimensioning angles
12. Dimensioning arcs
13. Dimensioning fillets and rounds
14. Identify surfaces to be machined
15. Contour dimensioning
16. Dimensioning of curves
17. Dimensioning of rounded-end shapes
18. Dimensioning of threads
19. Dimensioning of tapers
20. Dimensioning of chamfers
21. Dimensioning shaft centers
22. Dimensioning keyways
23. Dimensioning knurls
   a. Diamond
   b. Straight
24. Dimensioning along curved surfaces
25. Tabular dimensions
26. Dimensioning standards
27. Coordinate dimensioning

IV. Identify Basic Symbols and Abbreviations Found on a Drawing
   A. Traditional terms used to describe various shapes, processes, and sizes
   B. Identify abbreviations used to describe various shapes, processes, and sizes
   C. Identify a variety of dimensioning symbols used to replace traditional terms and abbreviations

V. Identify Tolerances or Limits on a Drawing
   A. Identify tolerances or limits
   1. Nominal size
   2. Basic size or dimension
   3. Actual size
   4. Tolerance
   5. Limits
   6. Allowance
B. Methods of expressing tolerances
   1. General tolerances
   2. Limit dimensioning
   3. Plus and minus dimensioning
      a. Unilateral system
      b. Bilateral system
   4. Single-limit dimensioning
   5. Angular tolerances

VI. Identify ANSI Limits and Fits
A. Fits between mating parts
   1. Clearance fit
   2. Interference fit
   3. Transition fit
   4. Line fit

B. Limits and fits for cylindrical parts
   1. Running or sliding clearance fits
   2. Locational clearance fits
   3. Transition clearance interference fits
   4. Locational interference fits
   5. Force or shrink fits
OBJECTIVE(S):

Upon completion of this unit the student will be able to:

a. Distinguish between conventional and geometric dimensioning and tolerancing;

b. Explain and use geometric positional tolerancing and symbols;

c. Explain and use tolerances of form and symbols;

d. Explain and use the feature control symbol; and,

e. Explain and use modifiers in geometric dimensioning and tolerancing.

MODULE OUTLINE:

I. Distinguish Between Conventional and Geometric Dimensioning and Tolerancing
   A. General/conventional tolerancing
      1. Definitions of general/conventional tolerancing
         a. Dimension
         b. Reference dimension
         c. Feature
         d. Feature of size
         e. Actual size
         f. Stock size
      2. Maximum material condition
      3. Least material condition
      4. Basic fits
      5. Clearance fit
      6. Allowance
      7. Clearance
      8. Force fit
   B. Geometric dimensioning and tolerancing
      1. Definition of geometric dimensioning and tolerancing
      2. Dimensioning rules
      3. Dimensioning units

II. Explain and Use Geometric Positional Tolerancing and Symbols
   A. Explain positional / location tolerances
   B. Identify and use geometric position tolerancing symbols
      1. Position
      2. Concentricity
      3. Symmetry

III. Explain and Use Tolerances of Form Symbols
    A. Explain form tolerances
    B. Identify and use tolerances of form symbols
1. Straightness
2. Flatness
3. Circularity
4. Cylindrical

IV. Explain and Use Profile Tolerances
A. Explain profile tolerance
B. Identify and use profile tolerance symbols
   1. Profile of a line
   2. Profile of a surface
   3. Profile of an arc
   4. Profile of irregular curves
   5. Profile of coplanar surfaces

V. Explain and Use Tolerances of Orientation
A. Explain orientation tolerances
B. Identify and use orientation tolerance symbols
   1. Parallelism
   2. Perpendicularity
   3. Angularity

VI. Explain and Use Runout Tolerances
A. Explain runouts
   1. Circular
   2. Total
B. Identify and use runout tolerances symbols
   1. Circular
   2. Total

VII. Explain and Use Modifiers in Geometric Dimensioning and Tolerancing
A. Maximum Material Condition (MMC)
B. Regardless of Feature Size (RFS)
C. Least Material Condition (LMC)
D. Datum feature symbol
E. Datum reference frame concept
   1. Primary datum plane
   2. Secondary datum plane
   3. Tertiary datum plane
F. Datum target symbol
   1. Target point
   2. Target line
   3. Target area

VIII. Explain and Use the Feature Control Frame
A. Explain feature control frame
B. Explain the compartments of a feature control frame
   1. Geometric characteristic symbol
   2. Geometric tolerance
   3. Zone descriptor
   4. Material condition symbol
5. Primary datum reference
6. Secondary datum reference
7. Tertiary datum reference

IX. Additional Supplementary Modifying Symbols

A. Explain and use additional modifying symbols.
   1. Diameter
   2. Radius R
   3. Reference ( )
   4. Counterbore/spotface L/
   5. Square
   6. Dimension origin O
   7. Slope
   8. Projected tolerance zone
   9. Spherical diameter
  10. Spherical radius
   11. Arc length
   12. Counter sink
   13. Depth
   14. Conical taper
   15. Place, times, or by
   16. Basic dimension
SUBJECT: WELDING TECHNICIAN

DUTY: BLUEPRINTING, STRUCTURAL LAYOUT AND FIT-UP

TASK: List the Steps to be Followed When Planning a Job

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Understand job lists for materials; and,
B. Understand work orders and sequence of work.

STUDENT PREPARATION:

The purpose of this program is to assist the student in job planning, bills of material, and sequence of work.

Students should have previously completed the following Technical Modules:
WLD-H14 "Describe the Use of Jigs and Fixtures in Layout and Fit-Up”

INTRODUCTION:

The Course Introduction will Include:
- The essential purpose of planning the work and preparation of a list or bill of materials that will meet work specifications

PRESENTATION OUTLINE:

Instructional Topics:
A. Review the steps in job planning
B. Demonstrate how to select materials based upon drawing specifications
C. How to source and obtain prices for the materials
D. How to use sourcebooks and vendor information for availability and price
E. How to use modern systems for job orders and tracking of raw materials
F. How to deliver the work, close out the job, and bill for payment

Student Activities:
A. Prepare a project summary worksheet to track the progress and cost of the project

PRACTICAL APPLICATION:

This module presents job planning, ordering of materials, job tracking, and closing out the job.

EVALUATION AND/OR VERIFICATION:

An examination will be given at the end of this section to determine the progress of the class.

SUMMARY:

Emphasis is placed on job planning, obtaining new materials, job tracking, costing, and completion of the job by payment and any necessary follow-up.
NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-H16) dealing with interpreting structural detail sheets.
OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Understand job lists for materials; and,
B. Understand work orders and sequence of work.

MODULE OUTLINE:

Instructional Topics:
A. Review the steps in job planning
B. Demonstrate how to select materials based upon drawing specifications
C. How to source and obtain prices for the materials
D. How to use sourcebooks and vendor information for availability and price
E. How to use modern systems for job orders and tracking of raw materials
F. How to deliver the work, close out the job, and bill for payment

Student Activities:
A. Prepare a project summary worksheet to track the progress and cost of the project
OBJECTIVE(S):

Upon completion of this unit the student will be able to:

a. Distinguish between general and specific notes;
b. Interpret and apply general and specific notes;
c. Determine and apply dimensions on a drawing;
d. Identify basic symbols and abbreviations found on a drawing;
e. Identify tolerances or limits on a drawing; and,
f. Identify ANSI limits and fits.

MODULE OUTLINE:

I. Distinguish Between General and Specific Notes
   A. General notes
   B. Specific notes/local notes

II. Interpret and Apply General and Specific Notes
   A. General notes applied
      1. Title strip/title block
      2. Parts list/bill of material
   B. Interpret general notes
      1. Including material
      2. General tolerances
      3. Heat treatment
      4. Pattern information
      5. Processes of manufacture
      6. Requirements of the product
   C. Interpret specific notes
      1. Apply to specific operations
      2. Apply to specific processes of manufacture
      3. Apply to the requirements of the product

III. Determine and Apply Dimensions on a Drawing
   A. Identify organizations that determine dimension standards
      1. American National Standards Institutes (ANSI)
      2. International Standards Organization (ISO)
   B. Determine dimensions on a drawing
      1. Size dimensions
      2. Location dimensions
   C. Applying dimensions on a drawing
      1. Scale of drawing
      2. Techniques of dimensioning
      3. Placement of dimensions
4. Choice of dimensions
5. Types of lines used in the dimensioning process
6. Arrowheads used on drawings
7. Leaders used on drawings
8. Dimensioning systems
   a. Fractional
   b. Decimal
   c. Metric
   d. Combination dimensioning
9. Dimension figures
10. Direction of dimension figures
    a. Unidirectional system
    b. Aligned system
11. Dimensioning angles
12. Dimensioning arcs
13. Dimensioning fillets and rounds
14. Identify surfaces to be machined
15. Contour dimensioning
16. Dimensioning of curves
17. Dimensioning of rounded-end shapes
18. Dimensioning of threads
19. Dimensioning of tapers
20. Dimensioning of chamfers
21. Dimensioning shaft centers
22. Dimensioning keyways
23. Dimensioning knurls
   a. Diamond
   b. Straight
24. Dimensioning along curved surfaces
25. Tabular dimensions
26. Dimensioning standards
27. Coordinate dimensioning

IV. Identify Basic Symbols and Abbreviations Found on a Drawing
A. Traditional terms used to describe various shapes, processes, and sizes
B. Identify abbreviations used to describe various shapes, processes, and sizes
C. Identify a variety of dimensioning symbols used to replace traditional terms and abbreviations

V. Identify Tolerances or Limits on a Drawing
A. Identify tolerances or limits
   1. Nominal size
   2. Basic size or dimension
   3. Actual size
   4. Tolerance
   5. Limits
   6. Allowance
B. Methods of expressing tolerances
1. General tolerances
2. Limit dimensioning
3. Plus and minus dimensioning
   a. Unilateral system
   b. Bilateral system
4. Single-limit dimensioning
5. Angular tolerances

VI. Identify ANSI Limits and Fits
A. Fits between mating parts
1. Clearance fit
2. Interference fit
3. Transition fit
4. Line fit

B. Limits and fits for cylindrical parts
1. Running or sliding clearance fits
2. Locational clearance fits
3. Transition clearance interference fits
4. Locational interference fits
5. Force or shrink fits
WLD-H15-H03
List the Steps to be Followed When Planning a Job
Attachment 3: MASTER Handout No. 3

OBJECTIVE(S):

Upon completion of this unit the student will be able to:

a. Distinguish between conventional and geometric dimensioning and tolerancing;
b. Explain and use geometric positional tolerancing and symbols;
c. Explain and use tolerances of form and symbols;
d. Explain and use the feature control symbol; and,
e. Explain and use modifiers in geometric dimensioning and tolerancing.

MODULE OUTLINE:

I. Distinguish Between Conventional and Geometric Dimensioning and Tolerancing
   A. General/conventional tolerancing
      1. Definitions of general/conventional tolerancing
         a. Dimension
         b. Reference dimension
         c. Feature
         d. Feature of size
         e. Actual size
         f. Stock size
      2. Maximum material condition
      3. Least material condition
      4. Basic fits
      5. Clearance fit
      6. Allowance
      7. Clearance
      8. Force fit
   B. Geometric dimensioning and tolerancing
      1. Definition of geometric dimensioning and tolerancing
      2. Dimensioning rules
      3. Dimensioning units

II. Explain and Use Geometric Positional Tolerancing and Symbols
   A. Explain positional / location tolerances
   B. Identify and use geometric position tolerancing symbols
      1. Position
      2. Concentricity
      3. Symmetry

III. Explain and Use Tolerances of Form Symbols
    A. Explain form tolerances
    B. Identify and use tolerances of form symbols
1. Straightness
2. Flatness
3. Circularity
4. Cylindrical

IV. Explain and Use Profile Tolerances
A. Explain profile tolerance
B. Identify and use profile tolerance symbols
   1. Profile of a line
   2. Profile of a surface
   3. Profile of an arc
   4. Profile of irregular curves
   5. Profile of coplanar surfaces

V. Explain and Use Tolerances of Orientation
A. Explain orientation tolerances
B. Identify and use orientation tolerance symbols
   1. Parallelism
   2. Perpendicularity
   3. Angularity

VI. Explain and Use Runout Tolerances
A. Explain runouts
   1. Circular
   2. Total
B. Identify and use runout tolerances symbols
   1. Circular
   2. Total

VII. Explain and Use Modifiers in Geometric Dimensioning and Tolerancing
A. Maximum Material Condition (MMC)
B. Regardless of Feature Size (RFS)
C. Least Material Condition (LMC)
D. Datum feature symbol
E. Datum reference frame concept
   1. Primary datum plane
   2. Secondary datum plane
   3. Tertiary datum plane
F. Datum target symbol
   1. Target point
   2. Target line
   3. Target area

VIII. Explain and Use the Feature Control Frame
A. Explain feature control frame
B. Explain the compartments of a feature control frame
   1. Geometric characteristic symbol
   2. Geometric tolerance
   3. Zone descriptor
   4. Material condition symbol
5. Primary datum reference
6. Secondary datum reference
7. Tertiary datum reference

IX. Additional Supplementary Modifying Symbols
A. Explain and use additional modifying symbols.
   1. Diameter
   2. Radius R
   3. Reference ( )

  14. Conical taper
  15. Place, times, or by
  16. Basic dimension
WELDER SERIES
MASTER Technical Module No. WLD-H16

SUBJECT: WELDING TECHNICIAN       TIME: 3 HOURS

- DUTY: BLUEPRINTING, STRUCTURAL LAYOUT AND FIT-UP
- TASK: Interpret Structural Detail Sheets

OBJECTIVE(S):

Upon completion of this unit the student will be able to use detail drawings and structural details

INSTRUCTIONAL MATERIALS:

Student Workbook
Written test
Transparencies will be prepared to emphasize each subject
Hobart Institute Video Material
Classroom handout
MASTER Handout No. 1 (WLD-H16-HO1)
MASTER Handout No. 2 (WLD-H16-HO2)
MASTER Handout No. 3 (WLD-H16-HO3)

770
STUDENT PREPARATION:

The purpose of this module is to assist the student in the use of detail drawings, assembly prints, and structural details in welding operations.

Students should have previously completed the following Technical Modules:
- WLD-H15 “List the Steps to be Followed When Planning a Job”

INTRODUCTION:

The Module Introduction will Include:
- The purpose of detail drawings and working prints

PRESENTATION OUTLINE:

Instructional Topics:
A. Detail drawings as compared to the general engineering drawing
B. Dimensions needed for construction
C. Directions, as may be indicated by notes and symbols for the work required
D. The assembly print, showing the complete and assembled item, with relationships
E. Subassembly prints, which assist as preparation of the bill of materials
F. General structural shape and size specifications

Student Activities:
A. Use subassembly prints to prepare bill of materials
B. Practice size specifications with assigned structural shapes

PRACTICAL APPLICATION:

This module applies to obtaining materials and necessary information from the detailed and assembly drawings.

EVALUATION AND/OR VERIFICATION:

An examination will be given at the end of this section to determine the progress of the class.

SUMMARY:

The instructor will emphasize the benefit of using the detailed drawings for speed and precision. Structural shapes also have size specifications. Welding symbols were reviewed.
NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-H17) dealing with describing methods for straightening and removing damaged structural and machinery parts.
OBJECTIVE(S):

Upon completion of this unit the student will be able to use detail drawings and structural details

MODULE OUTLINE:

Instructional Topics:
A. Detail drawings as compared to the general engineering drawing
B. Dimensions needed for construction
C. Directions, as may be indicated by notes and symbols for the work required
D. The assembly print, showing the complete and assembled item, with relationships
E. Subassembly prints, which assist as preparation of the bill of materials
F. General structural shape and size specifications

Student Activities:
A. Use subassembly prints to prepare bill of materials
B. Practice size specifications with assigned structural shapes
OBJECTIVE(S):

Upon completion of this unit the student will be able to:

a. Distinguish between general and specific notes;
b. Interpret and apply general and specific notes;
c. Determine and apply dimensions on a drawing;
d. Identify basic symbols and abbreviations found on a drawing;
e. Identify tolerances or limits on a drawing; and,
f. Identify ANSI limits and fits.

MODULE OUTLINE:

I. Distinguish Between General and Specific Notes
   A. General notes
   B. Specific notes/local notes

II. Interpret and Apply General and Specific Notes
   A. General notes applied
      1. Title strip/title block
      2. Parts list/bill of material
   B. Interpret general notes
      1. Including material
      2. General tolerances
      3. Heat treatment
      4. Pattern information
      5. Processes of manufacture
      6. Requirements of the product
   C. Interpret specific notes
      1. Apply to specific operations
      2. Apply to specific processes of manufacture
      3. Apply to the requirements of the product

III. Determine and Apply Dimensions on a Drawing
   A. Identify organizations that determine dimension standards
      1. American National Standards Institutes (ANSI)
      2. International Standards Organization (ISO)
   B. Determine dimensions on a drawing
      1. Size dimensions
      2. Location dimensions
   C. Applying dimensions on a drawing
      1. Scale of drawing
      2. Techniques of dimensioning
      3. Placement of dimensions
4. Choice of dimensions
5. Types of lines used in the dimensioning process
6. Arrowheads used on drawings
7. Leaders used on drawings
8. Dimensioning systems
   a. Fractional
   b. Decimal
   c. Metric
   d. Combination dimensioning
9. Dimension figures
10. Direction of dimension figures
    a. Unidirectional system
    b. Aligned system
11. Dimensioning angles
12. Dimensioning arcs
13. Dimensioning fillets and rounds
14. Identify surfaces to be machined
15. Contour dimensioning
16. Dimensioning of curves
17. Dimensioning of rounded-end shapes
18. Dimensioning of threads
19. Dimensioning of tapers
20. Dimensioning of chamfers
21. Dimensioning shaft centers
22. Dimensioning keyways
23. Dimensioning knurls
    a. Diamond
    b. Straight
24. Dimensioning along curved surfaces
25. Tabular dimensions
26. Dimensioning standards
27. Coordinate dimensioning

IV. Identify Basic Symbols and Abbreviations Found on a Drawing
A. Traditional terms used to describe various shapes, processes, and sizes
B. Identify abbreviations used to describe various shapes, processes, and size
C. Identify a variety of dimensioning symbols used to replace traditional terms and abbreviations

V. Identify Tolerances or Limits on a Drawing
A. Identify tolerances or limits
   1. Nominal size
   2. Basic size or dimension
   3. Actual size
   4. Tolerance
   5. Limits
   6. Allowance
B. Methods of expressing tolerances
   1. General tolerances
   2. Limit dimensioning
   3. Plus and minus dimensioning
      a. Unilateral system
      b. Bilateral system
   4. Single-limit dimensioning
   5. Angular tolerances

VI. Identify ANSI Limits and Fits
A. Fits between mating parts
   1. Clearance fit
   2. Interference fit
   3. Transition fit
   4. Line fit

B. Limits and fits for cylindrical parts
   1. Running or sliding clearance fits
   2. Locational clearance fits
   3. Transition clearance interference fits
   4. Locational interference fits
   5. Force or shrink fits
OBJECTIVE(S):

Upon completion of this unit the student will be able to:

a. Distinguish between conventional and geometric dimensioning and tolerancing;
b. Explain and use geometric positional tolerancing and symbols;
c. Explain and use tolerances of form and symbols;
d. Explain and use the feature control symbol; and,
e. Explain and use modifiers in geometric dimensioning and tolerancing.

MODULE OUTLINE:

I. Distinguish Between Conventional and Geometric Dimensioning and Tolerancing
   A. General/conventional tolerancing
      1. Definitions of general/conventional tolerancing
         a. Dimension
         b. Reference dimension
         c. Feature
         d. Feature of size
         e. Actual size
         f. Stock size
      2. Maximum material condition
      3. Least material condition
      4. Basic fits
      5. Clearance fit
      6. Allowance
      7. Clearance
      8. Force fit
   B. Geometric dimensioning and tolerancing
      1. Definition of geometric dimensioning and tolerancing
      2. Dimensioning rules
      3. Dimensioning units

II. Explain and Use Geometric Positional Tolerancing and Symbols
    A. Explain positional / location tolerances
    B. Identify and use geometric position tolerancing symbols
       1. Position
       2. Concentricity
       3. Symmetry

III. Explain and Use Tolerances of Form Symbols
     A. Explain form tolerances
     B. Identify and use tolerances of form symbols
1. Straightness
2. Flatness
3. Circularity
4. Cylindrical

IV. Explain and Use Profile Tolerances
   A. Explain profile tolerance
   B. Identify and use profile tolerance symbols
      1. Profile of a line
      2. Profile of a surface
      3. Profile of an arc
      4. Profile of irregular curves
      5. Profile of coplanar surfaces

V. Explain and Use Tolerances of Orientation
   A. Explain orientation tolerances
   B. Identify and use orientation tolerance symbols
      1. Parallelism
      2. Perpendicularity
      3. Angularity

VI. Explain and Use Runout Tolerances
    A. Explain runouts
       1. Circular
       2. Total
    B. Identify and use runout tolerances symbols
       1. Circular
       2. Total

VII. Explain and Use Modifiers in Geometric Dimensioning and Tolerancing
    A. Maximum Material Condition (MMC)
    B. Regardless of Feature Size (RFS)
    C. Least Material Condition (LMC)
    D. Datum feature symbol
    E. Datum reference frame concept
       1. Primary datum plane
       2. Secondary datum plane
       3. Tertiary datum plane
    F. Datum target symbol
       1. Target point
       2. Target line
       3. Target area

VIII. Explain and Use the Feature Control Frame
    A. Explain feature control frame
    B. Explain the compartments of a feature control frame
       1. Geometric characteristic symbol
       2. Geometric tolerance
       3. Zone descriptor
       4. Material condition symbol
5. Primary datum reference
6. Secondary datum reference
7. Tertiary datum reference

IX. Additional Supplementary Modifying Symbols
A. Explain and use additional modifying symbols.
   1. Diameter
   2. Radius R
   3. Reference ( )
   4. Counterbore/spotface L/
   5. Square
   6. Dimension origin 0
   7. Slope
   8. Projected tolerance zone
   9. Spherical diameter
  10. Spherical radius
  11. Arc length
  12. Counter sink
  13. Depth
  14. Conical taper
  15. Place, times, or by
  16. Basic dimension
SUBJECT: WELDING TECHNICIAN  TIME: 4 HOURS

- DUTY: BLUEPRINTING, STRUCTURAL LAYOUT AND FIT-UP
- TASK: Describe Methods for Straightening and Removing Damaged Structural and Machinery Parts

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Understand heat expansion of metal; and,
B. Understand methods for structural repairs.

INSTRUCTIONAL MATERIALS:

Student Workbook
Written test
Transparencies will be prepared to emphasize each subject
Hobart Institute Video Material
Classroom handout
MASTER Handout (WLD-H17-HO)

STUDENT PREPARATION:

The purpose of this module is to assist the student in understanding methods for straightening and removal of components.

Students should have previously completed the following Technical Modules:

WLD-H16 "Interpret Structural Detail Sheets"

INTRODUCTION:

The Course Introduction will Include:

- Background on types of damage that welders are assigned to repair or remove
- A class demonstration of effective structural repair techniques

PRESENTATION OUTLINE:

Instructional Topics:

A. Metal properties and methods of repair
B. Types of structural damage that can usually not be repaired
C. Inspection and test of repaired items
D. Common machine repairs and testing of outcomes

Student Activities:

A. Use cutting methods for assigned removal of damaged parts
B. Use welding methods for assigned repairs of machinery

PRACTICAL APPLICATION:

This module pertains to removal of damaged structural items and repairs to machinery.

EVALUATION AND/OR VERIFICATION:

An examination will be given at the end of this section to determine the progress of the class.

SUMMARY:

The instructor will emphasize safe welding operations in removal/replacement of damaged structural components and repairs to machinery.

NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-I1) dealing with gathering materials for the job.
WLD-H17-HO
Describe Methods for Straightening and Removing Damaged Structural and Machinery Parts
Attachment 1: MASTER Handout

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Understand heat expansion of metal; and,
B. Understand methods for structural repairs.

MODULE OUTLINE:

Instructional Topics:
A. Metal properties and methods of repair
B. Types of structural damage that can usually not be repaired
C. Inspection and test of repaired items
D. Common machine repairs and testing of outcomes

Student Activities:
A. Use cutting methods for assigned removal of damaged parts
B. Use welding methods for assigned repairs of machinery
WELDER ... that person who is responsible for the planning, layout, fit up of materials, and operation of welding equipment to prepare the work and perform welding operations necessary to produce a work piece to prescribed engineering standards.

WELDER ... that person who is responsible for the planning, layout, fit up of materials, and operation of welding equipment to prepare the work and perform welding operations necessary to produce a work piece to prescribed engineering standards.

**Tasks**

- 16-18 Demonstrate machine adjustments (voltage, amps, wire speed)
- 16-18 Perform weld sequence
- 16-18 Control weld technique
- 16-18 Understand welding characteristics of various shielding gases
- 16-18 Post-clean weld
- 16-18 Perform interferance preparation
- 14-15 Find oneself
- 14-16 Outline
- 14-17 Understand OMAW in gas, horizontal, vertical and overhead positions
- 14-16 Pre-heat joint, if required, understand joint preparation
- 14-18 Tackle welding process
- 14-20 Demonstrate OMAW filler wire
- 14-22 Perform weld
- 14-24 Describe OMAW filler wire
- 14-26 Demonstrate OMAW with straight and overhead systems
- 14-28 Demonstrate OMAW with flat horizontal, vertical and overhead systems
- 14-30 Perform weld
- 14-32 Describe straight and overhead systems
- 14-34 Describe flat horizontal, vertical and overhead systems

**Duties**

- M2: OMAW Short Circuit Transfer (Intermediate)
  - M2-1 Demonstrate machine adjustments (voltage, amps, wire speed)
  - M2-3 Perform weld sequence
  - M2-5 Control weld technique
  - M2-7 Understand welding characteristics of various shielding gases
  - M2-8 Post-clean weld
  - M2-9 Perform interferance preparation
  - M3: OMAW Spray and Pulse Spray (Advanced)
  - M3-1 Demonstrate OMAW in gas, horizontal, vertical and overhead positions
  - M3-3 Pre-heat joint, if required, understand joint preparation
  - M3-5 Tackle welding process
  - M3-7 Demonstrate OMAW with straight and overhead systems
  - M3-9 Demonstrate OMAW with flat horizontal, vertical and overhead systems
  - N: Plasma Arc Cutting and Welding (PLAW)
  - N-1 Understand the safety factors using PLAW equipment
  - N-2 Perform weld sequence
  - N-4 Blow down PLAW equipment
  - N-6 Perform weld sequence
  - O1: Tungsten Arc Welding (TAW)
  - O1-1 Identify OMAW equipment
  - O1-2 Identify the safety standards
  - O1-8 Describe the welding variables and their effects upon weld quality
  - O1-9 Identify the safety factors using OMAW equipment
  - O1-10 Perform weld sequence
  - O2: Tungsten Arc Welding (TAW)
  - O2-1 Identify the function of Plasma Arc Cutting (PAC) equipment
  - O2-2 Perform weld sequence
  - O2-4 Setup Plasma Arc Cutting equipment
  - O2-6 Perform Plasma Arc Cutting and Plasma Arc Welding processes
  - O2-8 Perform Plasma Arc Cutting and Plasma Arc Welding equipment
  - O2-10 Perform weld sequence
  - P: Plasma Arc Cutting and Welding
  - P-1 Identify the function of Plasma Arc Cutting and Welding equipment
  - P-3 Perform weld sequence
  - P-5 Perform weld sequence
  - P-7 Perform weld sequence
  - Q: Pre-Process Weld Inspection
  - Q-1 Check weld for
  - Q-4 Perform visual inspection
  - R: Pre-Process Rainproof
  - R-1 Remove weld defect and prepare for
  - R-2 Verify weld removal
  - R-4 Perform weld (if required)
  - R-6 Repeat pre-process inspection
  - S: Pre-Process Rainproof
  - S-1 Clean work area(s)
  - S-3 Store tool and consumables
  - S-5 Store tool and consumables
  - S-7 Secure work area(s)
  - S-9 Secure work area(s)
  - T: Emergency Vehicle Terminology
  - T-1 Display a general understanding of equipment being used
  - T-3 Understand the function of equipment being used
  - T-5 Display ability to work in various positions while standing or sitting for extended periods
  - U: Wellness/Physical Abilities
  - U-1 Demonstrate ability to lift 50 pounds
  - U-3 Demonstrate ability to lift 100 pounds
  - U-5 Ability to work from various and positions while standing or sitting for extended periods
  - U-7 Displayability to work in various positions for 8-10 hours
  - U-9 Demonstrate understanding of welding requirements at work
  - U-11 Apply welding information to maintain health
SUBJECT: WELDING TECHNICIAN    TIME: 3 HOURS

• DUTY: SET-UP WELDING PROCESS(ES)
• TASK: Gather Materials for the Job

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Demonstrate the ability to list material requirements from drawings, sketches and specification package;
B. Understand how to identify material requirements from a material list; and,
C. Select the material from information given by drawings, sketches and specification packages.

INSTRUCTIONAL MATERIALS:

Student Workbook
Written test
Transparencies will be prepared to emphasize each subject
Hobart Institute Video Material
Classroom handout
MASTER Handout (WLD-I1-HO)

REFERENCES:

TEXT:

OTHER:
Competency Standards, American Welding Society, Latest Edition
STUDENT PREPARATION:

The purpose of this program is to assist the student in the planning and organization of welding operations.

INTRODUCTION:

The Course Introduction will Include:
- The need to plan the material requirements of the job
- A class demonstration of effective welding preparation techniques
- A discussion on methods leading to an increase of skill and knowledge to perform high-quality welds
- The need to plan the equipment and tooling requirements of the job

PRESENTATION OUTLINE:

Instructional Topics:
A. Illustrate how to determine the blueprints material requirements
B. Demonstrate effective techniques on the choice weld process and equipment to be used
C. Illustrate proper procedure to set up a weld station
D. Sources of information for compatible alloys for base metal, filler metal, electrodes, or appropriate materials for the job.
E. Demonstrate how to set-up a safe work environment
F. Demonstrate layout of work table and tools

Student Activities:
A. Gather and assemble raw materials, preparing for the job specified in the engineering drawing or other job instructions
B. Begin the process of setting up equipment and welding apparatus appropriate to the job
C. Layout work table and tools in a safe and efficient manner

PRACTICAL APPLICATION:

The lesson will assist the student in job planning. The instructor will discuss some points on how to anticipate the tools, materials, and equipment needed for different types of welding.

EVALUATION AND/OR VERIFICATION

An examination will be given at the end of this section to determine the progress of the class. Students will perform activities under close supervision of instructor.
SUMMARY:

The instructor will stress the importance of safety within the workplace, and demonstrate the types and sources of equipment needed in a comprehensive welding operation. He will emphasize the need to complete job planning and have all materials available prior to the start of welding processes.

NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-12) dealing with gathering welding equipment and tools.
OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Demonstrate the ability to list material requirements from drawings, sketches and specification package;
B. Understand how to identify material requirements from a material list; and,
C. Select the material from information given by drawings, sketches and specification packages.

MODULE OUTLINE:

Instructional Topics:
A. Illustrate how to determine the blueprints material requirements
B. Demonstrate effective techniques on the choice weld process and equipment to be used
C. Illustrate proper procedure to set up a weld station
D. Sources of information for compatible alloys for base metal, filler metal, electrodes, or appropriate materials for the job
E. Demonstrate how to set-up a safe work environment
F. Demonstrate layout of work table and tools

Student Activities:
A. Gather and assemble raw materials, preparing for the job specified in the engineering drawing or other job instructions
B. Begin the process of setting up equipment and welding apparatus appropriate to the job
C. Layout work table and tools in a safe and efficient manner
SUBJECT: WELDING TECHNICIAN

DUTY: SET-UP WELDING PROCESS(ES)

TASK: Gather Welding Equipment and Tools

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Perform initial safety inspection of equipment and accessories;
B. Make minor external repairs or adjustments to equipment and accessories;
C. Understand related terms and definitions; and,
D. Identify the necessary tools to perform specific tasks.

INSTRUCTIONAL MATERIALS:

Student Workbook
Written test
Transparencies will be prepared to emphasize each subject
Hobart Institute Video Material
Classroom handout
MASTER Handout (WLD-I2-HO)

Competency Standards, American Welding Society, Latest Edition
STUDENT PREPARATION:

The purpose of this module is to assist the student in determining the welding equipment and tools needed for the job.

INTRODUCTION:

The Course Introduction will Include:

- The importance of proper assembly and set up of tools and equipment
- A class demonstration of effective welding techniques
- Methods leading to an increase of skill and knowledge in shut down and maintenance of equipment

PRESENTATION OUTLINE:

Instructional Topics:

A. Proper selection procedures for welding tools and equipment
B. Schedule availability of tools and equipment for the duration of the job
C. Demonstrate effective techniques on the choice of equipment to be used
D. Demonstrate set-up, operate, and shut down procedures
E. Demonstrate a post production weld process
F. Plan for use testing techniques set by the American Welding Society or specified by the customer
G. Demonstrate how to perform layout to insure safe working conditions
H. Explain the fundamental characteristics of AC and DC current and how this applies to welding and cutting devices

Student Activities:

A. Identify the importance of safety unique to each type of welding
B. Practice job planning and determine equipment needs for the duration of job operations
C. Make minor repairs under supervision of instructor

PRACTICAL APPLICATION:

The lesson will assist the student in planning the welding operations, availability of materials, and availability of equipment.

EVALUATION AND/OR VERIFICATION:

An examination will be given at the end of this section to determine the progress of the class.
SUMMARY:

The instructor will re-emphasize the importance of safety within the workplace, and demonstrate the setup and work steps in the complete process, enabling the student to predict the need for tools and equipment for all job operations.

NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-I3) dealing with checking welding equipment for safety.
OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Perform initial safety inspection of equipment and accessories;
B. Make minor external repairs or adjustments to equipment and accessories;
C. Understand related terms and definitions; and,
D. Identify the necessary tools to perform specific tasks.

MODULE OUTLINE:

Instructional Topics:
A. Proper selection procedures for welding tools and equipment
B. Schedule availability of tools and equipment for the duration of the job
C. Demonstrate effective techniques on the choice of equipment to be used
D. Demonstrate set-up, operate, and shut down procedures
E. Demonstrate a post production weld process
F. Plan for use testing techniques set by the American Welding Society or specified by the customer
G. Demonstrate how to perform layout to insure safe working conditions
H. Explain the fundamental characteristics of AC and DC current and how this applies to welding and cutting devices

Student Activities:
A. Identify the importance of safety unique to each type of welding
B. Practice job planning and determine equipment needs for the duration of job operations
C. Make minor repairs under supervision of instructor
WELDING TECHNICIAN

TIME: 4 HOURS

- DUTY: SET-UP WELDING PROCESS(ES)
- TASK: Check Welding Equipment for Safety

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Understand safety in welding and cutting (ANSI/ASC Z49.1);
B. Perform work area inspection;
C. Identify safety hazards; and,
D. Perform minor repairs to equipment to insure safety in operations.

INSTRUCTIONAL MATERIALS:

Student Workbook
Written test
Transparencies will be prepared to emphasize each subject
Hobart Institute Video Material
Classroom handout
MASTER Handout (WLD-I3-HO)

REFERENCES:

TEXT:

OTHER:
Competency Standards, American Welding Society, Latest Edition
STUDENT PREPARATION:
The purpose of this module is to assist the student in the assessment of safety hazards and the performance of safe operations

INTRODUCTION:
The Course Introduction will Include:
- An overview of the particular need for safety in an occupational area that is hazardous in nature
- A class demonstration of effective welding techniques
- A discussion on methods leading to the identification and prevention of potentially unsafe operations

PRESENTATION OUTLINE:

Instructional Topics:
A. Illustrate proper procedure to set up a weld station
B. Demonstrate effective techniques on the choice of weld process equipment to be used
C. Practice safety in welding and cutting (ANSI/ASC Z49.1)
D. Demonstrate set-up, operate, and shut down procedures
E. Demonstrate a post production weld process
F. Use testing techniques set by the American Welding Society
G. Demonstrate how to maintain a safe work environment

Student Activities:
A. Identify the importance of safety unique to each type of welding
B. Perform work area inspection
C. Identify safety hazards
D. Remove flammable materials from the welding area
E. Assemble required accessories and safety equipment (fire extinguishers, curtains and shields, and special protective clothing)
F. Position welding apparatus or machine

PRACTICAL APPLICATION:
The module will emphasize safe operational methods and the assessment of safety hazards. The instructor will discuss some points on how to anticipate the tools needed for different types of welding.
EVALUATION AND/OR VERIFICATION:

An examination will be given at the end of this section to determine the progress of the class.

SUMMARY:

The students will be thoroughly cognizant of safety requirements before any welding operations take place. Welding is a hazardous occupation and safety needs to be emphasized at every opportunity until the student thinks "safety first" before attempting any job.

NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-I4) dealing with setting up equipment.
WLD-I3-HO
Check Welding Equipment for Safety
Attachment 1: MASTER Handout

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Understand safety in welding and cutting (ANSI/ASC Z49.1);
B. Perform work area inspection;
C. Identify safety hazards; and,
D. Perform minor repairs to equipment to insure safety in operations.

MODULE OUTLINE:

Instructional Topics:
A. Illustrate proper procedure to set up a weld station
B. Demonstrate effective techniques on the choice of weld process equipment to be used
C. Practice safety in welding and cutting (ANSI/ASC Z49.1)
D. Demonstrate set-up, operate, and shut down procedures
E. Demonstrate a post production weld process
F. Use testing techniques set by the American Welding Society
G. Demonstrate how to maintain a safe work environment

Student Activities:
A. Identify the importance of safety unique to each type of welding
B. Perform work area inspection
C. Identify safety hazards
D. Remove flammable materials from the welding area
E. Assemble required accessories and safety equipment (fire extinguishers, curtains and shields, and special protective clothing)
F. Position welding apparatus or machine
# WELDER SERIES

MASTER Technical Module No. WLD-I04

## SUBJECT:

WELDING TECHNICIAN

## TIME: 8 HOURS

- **DUTY:** SET-UP WELDING PROCESS(ES)
- **TASK:** Set-Up Equipment

## OBJECTIVE(S):

Upon completion of this unit the student will be able to:

B. Perform safety inspection of work area and equipment;

C. Position welding apparatus or machine;

D. Check position of work for welding;

E. Check and adjust controls for apparatus and machines; and,

F. Understand gas bottle storage and ventilation requirements.

## INSTRUCTIONAL MATERIALS:

- Student Workbook
- Written test

*Competency Standards*, American Welding Society, Latest Edition

STUDENT PREPARATION:

The purpose of this module is to assist the student in the use of facilities and equipment to improve skill levels.

INTRODUCTION:

The Course Introduction will Include:
• The need for prescribed welding preparations and procedural set up for equipment

PRESENTATION OUTLINE:

Instructional Topics:
A. Illustrate proper procedures to select weld process and to set up a weld station
B. Demonstrate effective techniques in inspection of equipment to be used
C. Plan set-up, operate, and shut down procedures
D. Practice initial welding set up operations and shut-down procedures
E. Review of compatible alloys for processes to be practiced
F. Demonstrate how to set-up a safe work environment

Student Activities:
A. Identify the importance of safety unique to each type of welding
B. Use of safety equipment and personal protective equipment
C. Set up individual welding machine
D. Make safe power on settings and adjustments on welding machine as necessary
E. Perform pre-production weld to assure proper adjustment
F. Practice selection and handling of electrodes, filler metals, hoses, cables, tips, holders, and other materials used in the demonstration process

PRACTICAL APPLICATION:

The lesson will include presentations on how to handle material safely based upon the welding processes selected by the instructor. The instructor will guide the student in planning and anticipating the use of tools needed for different types of welding.

EVALUATION AND/OR VERIFICATION:

An examination will be given at the end of this section to determine the progress of the class. The planning and set-up procedures will be supervised and evaluated by the instructor.
SUMMARY:

The instructor will re-emphasize the importance of safety in the workplace, proper equipment setup, and demonstrate the adjustments of the welding apparatus or machines in order to maintain safety and achieve weld quality.

NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-I5) dealing with making test-weld to verify parameters.
Objective(s):

Upon completion of this unit the student will be able to:
B. Perform safety inspection of work area and equipment;
C. Position welding apparatus or machine;
D. Check position of work for welding;
E. Check and adjust controls for apparatus and machines; and,
F. Understand gas bottle storage and ventilation requirements.

Module Outline:

Instructional Topics:
A. Illustrate proper procedures to select weld process and to set up a weld station
B. Demonstrate effective techniques in inspection of equipment to be used
C. Plan set-up, operate, and shut down procedures
D. Practice initial welding set up operations and shut-down procedures
E. Review of compatible alloys for processes to be practiced
F. Demonstrate how to set-up a safe work environment

Student Activities:
A. Identify the importance of safety unique to each type of welding
B. Use of safety equipment and personal protective equipment
C. Set up individual welding machine
D. Make safe power on settings and adjustments on welding machine as necessary
E. Perform pre-production weld to assure proper adjustment
F. Practice selection and handling of electrodes, filler metals, hoses, cables, tips, holders, and other materials used in the demonstration process
WELDER SERIES
MASTER Technical Module No. WLD-I05

SUBJECT: WELDING TECHNICIAN
TIME: 8 HOURS

• DUTY: SET-UP WELDING PROCESS(ES)
• TASK: Make Test-Weld to Verify Parameters

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Understand welding equipment and principles of operation;
B. Perform weld to set parameters; and,
C. Make adjustments on equipment for a maximum quality weld.

INSTRUCTIONAL MATERIALS:

Student Workbook
Written test
Transparencies will be prepared to emphasize each subject
Hobart Institute Video Material
Classroom handout
MASTER Handout (WLD-I5-HO)

TEXT:

OTHER:
Competency Standards, American Welding Society, Latest Edition
STUDENT PREPARATION:

The purpose of this module is to assist the student in the use of welding equipment to improve skill levels and perform test welds to verify adequacy of the process selected.

INTRODUCTION:

The Course Introduction will Include:
- An overview of pre-production methods to verify and assure that current adjustments or techniques are being used to perform quality welds.
- A class demonstration of weld-test techniques

PRESENTATION OUTLINE:

Instructional Topics:
A. Illustrate proper procedure to set up a weld station
B. Demonstrate effective techniques on the choice of equipment to be used
C. Demonstrate set-up, operate, and shut down procedures
D. Demonstrate the usability of the planned production weld process
E. Use testing techniques set by the American Welding Society or customer specification
F. Illustrate how to determine the blueprints material requirements
G. Review of compatible alloys, filler metals, electrodes (as appropriate)
H. Demonstrate how to set-up and maintain a safe work environment
I. Demonstrate a fundamental knowledge of AC and DC current and how it applies to welding and cutting devices

Student Activities:
A. Identify the importance of safety unique to each type of welding
B. Set up individual welding apparatus or machine
C. Make adjustments to welding apparatus or machine as necessary
D. Perform pre-production weld to assure proper adjustment

PRACTICAL APPLICATION:

The lesson will demonstrate how to perform pre-production operations. The instructor will emphasize the procedural and safety processes necessary for production level.

EVALUATION AND/OR VERIFICATION:

An examination will be given at the end of this section to determine the progress of the class. The instructor will evaluate for quality the test welds performed by students.
SUMMARY:

The instructor emphasized the importance of safety in the workplace, the use of weld-test techniques, and proper adjustments of the welding machine in order to achieve proper penetration and weld quality.

NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-J1) dealing with preparing joint geometry using mechanical method.
WLD-I5-HO
Make Test-Weld to Verify Parameters
Attachment 1: MASTER Handout

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Understand welding equipment and principles of operation;
B. Perform weld to set parameters; and,
C. Make adjustments on equipment for a maximum quality weld.

MODULE OUTLINE:

Instructional Topics:
A. Illustrate proper procedure to set up a weld station
B. Demonstrate effective techniques on the choice of equipment to be used
C. Demonstrate set-up, operate, and shut down procedures
D. Demonstrate the usability of the planned production weld process
E. Use testing techniques set by the American Welding Society or customer specification
F. Illustrate how to determine the blueprints material requirements
G. Review of compatible alloys, filler metals, electrodes (as appropriate)
H. Demonstrate how to set-up and maintain a safe work environment
I. Demonstrate a fundamental knowledge of AC and DC current and how it applies to welding and cutting devices

Student Activities:
A. Identify the importance of safety unique to each type of welding
B. Set up individual welding apparatus or machine
C. Make adjustments to welding apparatus or machine as necessary
D. Perform pre-production weld to assure proper adjustment

WELDER SERIES
MASTER Technical Module No. WLD-J01

SUBJECT: WELDING TECHNICIAN
TIME: 8 HOURS

• DUTY: PREPARE JOINT FOR WELDING
• TASK: Prepare Joint Geometry Using Mechanical Method

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Understand groove angle must be large enough to permit proper manipulation of the filler metal and deposition of stringer or weave weld beads;
B. Understand the many factors that influence joint design; and,
C. Understand the most common design adjustment is to locate the welded joints in regions of known low stress.

INSTRUCTIONAL MATERIALS:

Student Workbook
Written test on joint design
Transparencies will be prepared to emphasize each subject
Hobart Institute Video Material
The classroom handouts will consist of student worksheets
Personal protective equipment
Welding shop tools and equipment
MASTER Handout No. 1 (WLD-J1-HO1)
MASTER Handout No. 2 (WLD-J1-HO2)
MASTER Handout No. 3 (WLD-J1-HO3)
MASTER Handout No. 4 (WLD-J1-HO4)
MASTER Handout No. 5 (WLD-J1-HO5)
MASTER Self-Assessment No. 1
MASTER Self-Assessment No. 2

TEXT:

OTHER:

STUDENT PREPARATION:

The purpose of this program is to assist the student in the use of facilities and equipment to improve skill levels in order to pass any welding test or certification test for employment as a welding technician, or to provide supplemental training for persons previously or currently employed in these occupations.

INTRODUCTION:

The Course Introduction will Include:

- An overview of a fast growing technical field with many opportunities and excellent pay
- A class demonstration of effective joint layout and design techniques
- A discussion on methods leading to an increase of skill and knowledge in order to be diversified, and a more valuable employee

PRESENTATION OUTLINE:

Instructor Topic:

A. Identify clean welding surfaces  
B. Demonstrate adequate cleaning techniques on various metals  
C. Illustrate how to assemble weld joints  
D. Use measurement devices to check weld opening or verify setup  
E. Illustrate proper tacking of a part  
F. Utilize visuals for instruction emphasis  
G. Illustrate how to identify impurities on parent metal  
H. Demonstrate the purge process on specialty metals  
I. Explain the use of chemicals for cleaning and preparing metals  
J. Explain the use of particles for cleaning metal

Student Activities:

A. Study joint design using AWS standards  
B. Clean weld area using wire brush  
C. Tack together test plates and practice plates  
D. Check the gap size in practice and test plates  
E. Clean weld area using grinders and files
PRACTICAL APPLICATION:

This lesson will focus on joint design, using tools such as a wire brush, electric grinder, and a file to prepare the joint to weld. Also a focus on proper assembly and angle of weld joint as used in the American Welding Society (AWS).

EVALUATION AND/OR VERIFICATION:

An examination will be given at the end of this section to determine the progress of the class.

SUMMARY:

There are several different weld designs, and the AWS is a good standard to use as a guideline. The instructor will demonstrate the use of a grinder, file and a wire brush to prepare the weld surface for welding.

NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-J2) dealing with cleaning weld area.
Upon completion of this unit the student will be able to:

A. Understand groove angle must be large enough to permit proper manipulation of the filler metal and deposition of stringer or weave weld beads;
B. Understand the many factors that influence joint design; and,
C. Understand the most common design adjustment is to locate the welded joints in regions of known low stress.

Instructor Topic:
A. Identify clean welding surfaces
B. Demonstrate adequate cleaning techniques on various metals
C. Illustrate how to assemble weld joints
D. Use measurement devices to check weld opening or verify setup
E. Illustrate proper tacking of a part
F. Utilize visuals for instruction emphasis
G. Illustrate how to identify impurities on parent metal
H. Demonstrate the purge process on specialty metals
I. Explain the use of chemicals for cleaning and preparing metals
J. Explain the use of particles for cleaning metal

Student Activities:
A. Study joint design using AWS standards
B. Clean weld area using wire brush
C. Tack together test plates and practice plates
D. Check the gap size in practice and test plates
E. Clean weld area using grinders and files
OBJECTIVE(S):

Upon completion of this unit the student will be able to:

a. Discuss classification system for metals; and,
b. Describe general characteristics for carbon steels, tool steels, stainless steels, structural steels, cast irons, aluminum, and other commonly used metals.

MODULE OUTLINE:

I. Discuss the Physical Properties of Metal
   A. Brittleness - the property of a metal which permits no permanent distortion before breaking
   B. Ductility - the ability of the metal to be permanently deformed without breaking
   C. Elasticity - the ability of a metal to return to its original shape after any force acting upon it has been removed
   D. Hardness - the resistance to forcible penetration
   E. Malleability - the property of a metal which permits it to be hammered or rolled into other sizes and shapes
   F. Tensile strength - the maximum amount of pull that a material will withstand before breaking
   G. Toughness - the property of a metal to withstand shock or impact

II. Discuss the Classification System for Steel
   A. Carbon steels
      1. Low carbon steel - contains from 0.02 to 0.20 percent of carbon
      2. Medium carbon steel - contains from 0.30 to 0.60 percent of carbon
      3. High carbon steel (tool steel) - contains over 0.60 percent of carbon
   B. Alloy steels - alloying elements allow steels to possess special characteristics
      Discuss Table 1.1 "Effects of Alloying Elements on Steel"
      Discuss Table 1.2 "SAE-ANSI Numerical Designation of Alloy Steels"

III. Describe General Characteristics For:
   A. Carbon Steels
   B. Tool Steels
   C. Stainless Steels
   D. Structural Steels
   E. Cast Irons
   F. Non-Ferrous Metals
      1. Aluminum and Its Alloys
      2. Copper and Its Alloys
      3. Nickel Alloys
      4. Precious Metals
      5. Others

OBJECTIVE(S):

Upon completion of this unit the student will be able to:

a. Briefly describe and list the advantages and disadvantages for each of the following: casting processes, hot working processes, and cold working processes;

b. Discuss service requirements (strength, hardness, etc.);

c. Discuss fastening processes (fasteners, welding, bonding, etc.); and,

d. Discuss corrosion resistance methods.

MODULE OUTLINE:

I. Describe Casting Processes
   A. Discuss the following casting processes: sand, evaporative, shell molding, permanent mold, centrifugal, investment, and die casting
   B. Discuss pattern and mold design factors for each of the above casting processes
   C. List the advantages and disadvantages of the casting processes

II. Describe Hot Working Processes
   A. Discuss the following hot working processes: rolling, strand casting, forging, drawing, extrusion, spinning, and roll forming
   B. List the advantages and disadvantages of the hot working processes

III. Describe Cold Working Processes
   A. Discuss the following cold working processes: rolling, blanking, pressing, drawing, extruding, wire and bar drawing, bending, shearing, and roll forming
   B. List the advantages and disadvantages of the cold working process

IV. Evaluate Alternative Manufacturing Processes
   A. Discuss the powder metallurgy process (PM)
   B. Discuss the following nontraditional machining processes: EDM, laser machining, ultrasonic machining, hydrojet machining, electron beam machining, and plasma beam machining
Circle the best answer.

1. Using the SAE system, 1008 indicates
   a. plain carbon steel, 8% carbon
   b. plain carbon steel, 0.8% carbon
   c. plain carbon steel, 0.08% carbon
   d. low chromium steel, 0.08% carbon
   e. none of the above

2. In the SAE system, triple-alloy steels are designated by the numeral ______
   a. 6
   b. 7
   c. 8
   d. 9
   e. none of the above

3. The AISI system uses __________ to indicate the process used to manufacture the steel.
   a. numerical prefixes
   b. numerical suffixes
   c. capital letter prefixes
   d. capital letter suffixes
   e. none of the above

4. Which of the following does NOT increase the tensile strength of steel?
   a. carbon
   b. molybdenum
   c. nickel
   d. all of the above
   e. none of the above

5. Which of the following elements decreases the toughness of steel?
   a. cobalt
   b. phosphorus
   c. vanadium
   d. all of the above
   e. none of the above
6. Which of the following elements imparts fine grain structure to steel?
   a. chromium  
   b. manganese  
   c. silicon  
   d. tungsten  
   e. none of the above

7. The AISI prefix B designates that the steel is
   a. acid bessemer carbon steel  
   b. basic open hearth carbon steel  
   c. acid open hearth carbon steel  
   d. brass  
   e. none of the above

8. ________ Steels have their own alphabetic classification system.
   a. stainless  
   b. low carbon  
   c. tool  
   d. austenitic  
   e. none of the above

9. ________ stainless steel can not be hardened by quenching.
   a. austenitic  
   b. ferritic  
   c. martensitic  
   d. all of the above  
   e. none of the above

10. Which of the following metals is magnetic?
    a. phosphorus  
    b. silicon  
    c. sulfur  
    d. all of the above  
    e. none of the above

Circle the best answer.

1. In ________ casting, the mold is composed of sand and resin.
   a. green-sand
   b. shell
   c. V-process
   d. squeeze
   e. none of the above

2. Which of the following is NOT a method of injecting material into a mold?
   a. gravitic flow
   b. pressure
   c. centrifugal force
   d. all of the above
   e. none of the above

3. What is the skin effect?
   a. the vacuoles created when the surface of a casting cools faster than its interior
   b. the thin, weak, exterior layer on castings caused by improper mixing of alloys
   c. the layers of metal formed in die casting
   d. abrasions caused by excessive polishing of the casting
   e. goose bumps

4. Die castings should be designed with ________ to relieve cooling stresses.
   a. cores of simple shapes
   b. heavy sections
   c. small cores
   d. uniform wall thicknesses
   e. none of the above

5. Which of the following is a major problem of the hot extrusion process?
   a. cost of glass-powder lubricants
   b. graphite lubricants contaminating the billet
   c. construction of the equipment
   d. scarcity of metals that can be successfully extruded
   e. none of the above
6. Extrusion generates _________ force, but not _________ force.
   a. tensile - compressive
   b. tensile - shear
   c. compressive - shear
   d. compressive - tensile
   e. none of the above

7. Plasma cutters can generate heat in excess of _________.
   a. 20,000°F
   b. 30,000°F
   c. 40,000°F
   d. 80,000°F
   e. 120,000°F

SUBJECT: WELDING TECHNICIAN  
TIME: 5 HOURS

- DUTY: PREPARE JOINT FOR WELDING
- TASK: Clean Weld Area

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Understand surface preparation;
B. Determine specifications for weld appearance; and,
C. Prepare surfaces appropriate to the type joint design and strength requirement.

INSTRUCTIONAL MATERIALS:

- Student Workbook
- Written test on joint design and weld appearance
- Transparencies will be prepared to emphasize each subject
- Hobart Institute Video Material
- The classroom handouts will consist of student worksheets
- Personal protective equipment
- Welding shop tools and equipment
- MASTER Handout No. 1 (WLD-J2-HO1)
- MASTER Handout No. 2 (WLD-J2-HO2)
- MASTER Handout No. 3 (WLD-J2-HO3)
- MASTER Handout No. 4 (WLD-J2-HO4)
- MASTER Handout No. 5 (WLD-J2-HO5)

REFERENCES:

TEXT:

OTHER:

Competency Standards, American Welding Society, Latest Edition
STUDENT PREPARATION:

The purpose of this program is to assist the student in the preparation of weld joints, with full consideration for appearance and strength requirements employed in these occupations.

INTRODUCTION:

The Course Introduction will Include:

- The need for joint preparation
- The need for understanding metal preparation, cleaning, and the reduction of spatter
- Metal preparation for meeting appearance and strength specifications

PRESENTATION OUTLINE:

Instructor Topic:

A. Identify clean welding surfaces
B. Demonstrate adequate cleaning techniques for various metals
C. Demonstrate use of iron-powder electrodes and automatic welding, minimizing spatter and roughness
D. Removal of moisture
E. Eliminate organic contaminants
F. Remove oxide films left by flame beveling and machining
G. Avoid metal contamination from brushes or tools
H. Demonstrate the purge process on specialty metals
I. Explain the use of chemicals for cleaning and preparing metals
J. Explain the use of particles for cleaning metal

Student Activities:

A. Review joint design using AWS standards
B. Check the gap size in practice and test plates
C. Clean weld area grinders, chemicals, and files
D. Minimize spatter with weld techniques

PRACTICAL APPLICATION:

This lesson will focus on joint design and weld surface preparation, using tools such as a wire brush, electric grinder, and a file to prepare the joint to weld. The use of chemicals will also be demonstrated.
EVALUATION AND/OR VERIFICATION:

An examination will be given at the end of this section to determine the progress of the class. Practical exercises will be supervised and evaluated by the instructor.

SUMMARY:

Pieces to be welded are usually formed, sheared, sawed, or machined prior to the welding operation. Particular care must be taken to remove oil, moisture, and loose particles from cutting processes. Oxides can be removed by chemicals, proprietary dioxidizers or by approved mechanical brushing, filing, or grinding. Each welding process and type of metal will have particular specifications for cleaning processes.

NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-J3) dealing with fitting up joint.
OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Understand surface preparation;
B. Determine specifications for weld appearance; and,
C. Prepare surfaces appropriate to the type joint design and strength requirement.

MODULE OUTLINE:

Instructor Topic:
A. Identify clean welding surfaces
B. Demonstrate adequate cleaning techniques for various metals
C. Demonstrate use of iron-powder electrodes and automatic welding, minimizing spatter and roughness
D. Removal of moisture
E. Eliminate organic contaminants
F. Remove oxide films left by flame beveling and machining
G. Avoid metal contamination from brushes or tools
H. Demonstrate the purge process on specialty metals
I. Explain the use of chemicals for cleaning and preparing metals
J. Explain the use of particles for cleaning metal

Student Activities:
A. Review joint design using AWS standards
B. Check the gap size in practice and test plates
C. Clean weld area grinders, chemicals, and files
D. Minimize spatter with weld techniques
OBJECTIVE(S):

Upon completion of this unit the student will be able to:

a. Discuss classification system for metals; and,
b. Describe general characteristics for carbon steels, tool steels, stainless steels, structural steels, cast irons, aluminum, and other commonly used metals.

MODULE OUTLINE:

I. Discuss the Physical Properties of Metal
   
   A. Britteness - the property of a metal which permits no permanent distortion before breaking
   B. Ductility - the ability of the metal to be permanently deformed without breaking
   C. Elasticity - the ability of a metal to return to its original shape after any force acting upon it has been removed
   D. Hardness - the resistance to forcible penetration
   E. Malleability - the property of a metal which permits it to be hammered or rolled into other sizes and shapes
   F. Tensile strength - the maximum amount of pull that a material will withstand before breaking
   G. Toughness - the property of a metal to withstand shock or impact

II. Discuss the Classification System for Steel
   
   A. Carbon steels
      1. Low carbon steel - contains from 0.02 to 0.20 percent of carbon
      2. Medium carbon steel - contains from 0.30 to 0.60 percent of carbon
      3. High carbon steel (tool steel) - contains over 0.60 percent of carbon
   B. Alloy steels - alloying elements allow steels to possess special characteristics
      Discuss Table 1.1 "Effects of Alloying Elements on Steel"
      Discuss Table 1.2 "SAE-ANSI Numerical Designation of Alloy Steels"

III. Describe General Characteristics For:
   
   A. Carbon Steels
   B. Tool Steels
   C. Stainless Steels
   D. Structural Steels
   E. Cast Irons
   F. Non-Ferrous Metals
      1. Aluminum and Its Alloys
      2. Copper and Its Alloys
      3. Nickel Alloys
      4. Precious Metals
      5. Others

OBJECTIVE(S):

Upon completion of this unit the student will be able to:

a. Briefly describe and list the advantages and disadvantages for each of the following: casting processes, hot working processes, and cold working processes;

b. Discuss service requirements (strength, hardness, etc.);

c. Discuss fastening processes (fasteners, welding, bonding, etc.); and,

d. Discuss corrosion resistance methods.

MODULE OUTLINE:

I. Describe Casting Processes
   A. Discuss the following casting processes: sand, evaporative, shell molding, permanent mold, centrifugal, investment, and die casting
   B. Discuss pattern and mold design factors for each of the above casting processes
   C. List the advantages and disadvantages of the casting processes

II. Describe Hot Working Processes
    A. Discuss the following hot working processes: rolling, strand casting, forging, drawing, extrusion, spinning, and roll forming
    B. List the advantages and disadvantages of the hot working processes

III. Describe Cold Working Processes
     A. Discuss the following cold working processes: rolling, blanking, pressing, drawing, extruding, wire and bar drawing, bending, shearing, and roll forming
     B. List the advantages and disadvantages of the cold working process

IV. Evaluate Alternative Manufacturing Processes
    A. Discuss the powder metallurgy process (PM)
    B. Discuss the following nontraditional machining processes: EDM, laser machining, ultrasonic machining, hydrojet machining, electron beam machining, and plasma beam machining
Circle the best answer.

1. Using the SAE system, 1008 indicates
   a. plain carbon steel, 8% carbon
   b. plain carbon steel, 0.8% carbon
   c. plain carbon steel, 0.08% carbon
   d. low chromium steel, 0.08% carbon
   e. none of the above

2. In the SAE system, triple-alloy steels are designated by the numeral ______
   a. 6
   b. 7
   c. 8
   d. 9
   e. none of the above

3. The AISI system uses ________ to indicate the process used to manufacture the steel.
   a. numerical prefixes
   b. numerical suffixes
   c. capital letter prefixes
   d. capital letter suffixes
   e. none of the above

4. Which of the following does NOT increase the tensile strength of steel?
   a. carbon
   b. molybdenum
   c. nickel
   d. all of the above
   e. none of the above

5. Which of the following elements decreases the toughness of steel?
   a. cobalt
   b. phosphorus
   c. vanadium
   d. all of the above
   e. none of the above
6. Which of the following elements imparts fine grain structure to steel?
   a. chromium
   b. manganese
   c. silicon
   d. tungsten
   e. none of the above

7. The AISI prefix B designates that the steel is
   a. acid bessemer carbon steel
   b. basic open hearth carbon steel
   c. acid open hearth carbon steel
   d. brass
   e. none of the above

8. __________ Steels have their own alphabetic classification system.
   a. stainless
   b. low carbon
   c. tool
   d. austenitic
   e. none of the above

9. __________ stainless steel cannot be hardened by quenching.
   a. austenitic
   b. ferritic
   c. martensitic
   d. all of the above
   e. none of the above

10. Which of the following metals is magnetic?
    a. phosphorus
    b. silicon
    c. sulfur
    d. all of the above
    e. none of the above

WELDER SERIES
MASTER Technical Module No. WLD-J03

SUBJECT: WELDING TECHNICIAN    TIME: 5 HOURS

• DUTY: PREPARE JOINT FOR WELDING
• TASK: Fit-Up Joint

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Understand fit-up requirements specified;
B. Understand orthographic views;
C. Understand surface to center line relationships;
D. Understand auxiliary views; and,
E. Perform joint preparation and fit-up.

INSTRUCTIONAL MATERIALS:

Student Workbook
Written test on joint design and weld appearance
Transparencies will be prepared to emphasize each subject
Hobart Institute Video Material
The classroom handouts will consist of student worksheets
Personal protective equipment
Welding shop tools and equipment
MASTER Handout No. 1 (WLD-J3-HO1)
MASTER Handout No. 2 (WLD-J3-HO2)
MASTER Handout No. 3 (WLD-J3-HO3)
MASTER Handout No. 4 (WLD-J3-HO4)
MASTER Handout No. 5 (WLD-J3-HO5)

REFERENCES:

Competency Standards, American Welding Society, Latest Edition
Tool and Manufacturing Engineers Handbook (Volumes 3 and 4), Society
STUDENT PREPARATION:

The purpose of this program is to assist the student in understanding joint design, cleaning, fit-up, verification, and tack welds.

INTRODUCTION:

The Course Introduction will Include:
- Joint design and weld preparation
- Fit-up and alignment for precise welds

PRESENTATION OUTLINE:

Instructor Topic:
A. Prepare clean welding surfaces
B. Demonstrate adequate cleaning techniques on various metals
C. Perform spacing, alignment, and arrangement of joint edges
D. Illustrate how to assemble weld joints
E. Use of vise, clamps, braces or special jigs for alignment
F. Use measurement devices to check weld opening or verify fit-up
G. Cleaning joint edges and surfaces
H. Cutting bevels for grooves by machining, grinding, or gas flame cutting
I. Illustrate proper tacking of a part
J. Explain shape, size, and dimensional considerations
K. Explain the use of chemicals for cleaning and preparing metals
L. Explain the use of particles for cleaning metal

Student Activities:
A. Study joint design using AWS standards
B. Clean weld area using recommended method
C. Tack together test plates and practice plates
D. Check the gap size in practice and test plates
E. Clean weld area using chemicals, grinders and files, and other methods as appropriate

PRACTICAL APPLICATION:

This lesson will focus on joint design and fit-up, using fixtures and alignment tools.

EVALUATION AND/OR VERIFICATION:

An examination will be given at the end of this section to determine the progress of the class. Instructor will evaluate student practical exercises.
SUMMARY:

There are several different weld designs and AWS guidelines and references are most appropriate. The instructor will demonstrate cleaning methods and the use of a grinder file and a wire brush to prepare the weld surface for welding. Joint design, spacing, weld fixtures and alignment tools are elements that must be learned by the welder in the laboratory environment.

NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-J4) dealing with verifying joint preparation.
WLD-J3-HO1
Fit-Up Joint
Attachment 1: MASTER Handout No. 1

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Understand fit-up requirements specified;

OBJECTIVE(S):

Upon completion of this unit the student will be able to:

a. Briefly describe and list the advantages and disadvantages for each of the following: casting processes, hot working processes, and cold working processes;
b. Discuss service requirements (strength, hardness, etc.);
c. Discuss fastening processes (fasteners, welding, bonding, etc.); and,
d. Discuss corrosion resistance methods.

MODULE OUTLINE:

I. Describe Casting Processes
   A. Discuss the following casting processes: sand, evaporative, shell molding, permanent mold, centrifugal, investment, and die casting
   B. Discuss pattern and mold design factors for each of the above casting processes
   C. List the advantages and disadvantages of the casting processes

II. Describe Hot Working Processes
   A. Discuss the following hot working processes: rolling, strand casting, forging, drawing, extrusion, spinning, and roll forming
   B. List the advantages and disadvantages of the hot working processes

III. Describe Cold Working Processes
   A. Discuss the following cold working processes: rolling, blanking, pressing, drawing, extruding, wire and bar drawing, bending, shearing, and roll forming
   B. List the advantages and disadvantages of the cold working process

IV. Evaluate Alternative Manufacturing Processes
   A. Discuss the powder metallurgy process (PM)
   B. Discuss the following nontraditional machining processes: EDM, laser machining, ultrasonic machining, hydrojet machining, electron beam machining, and plasma beam machining
WLD-J3

Self-Assessment No. 1

Circle the best answer.

1. Using the SAE system, 1008 indicates
   a. plain carbon steel, 8% carbon
   b. plain carbon steel, 0.8% carbon
   c. plain carbon steel, 0.08% carbon
   d. low chromium steel, 0.08% carbon
   e. none of the above

2. In the SAE system, triple-alloy steels are designated by the numeral _____
   a. 6
   b. 7
   c. 8
   d. 9
   e. none of the above

3. The AISI system uses ________ to indicate the process used to manufacture the steel.
   a. numerical prefixes
   b. numerical suffixes
   c. capital letter prefixes
   d. capital letter suffixes
   e. none of the above

4. Which of the following does NOT increase the tensile strength of steel?
   a. carbon
   b. molybdenum
   c. nickel
   d. all of the above
   e. none of the above

5. Which of the following elements decreases the toughness of steel?
   a. cobalt
   b. phosphorus
   c. vanadium
   d. all of the above
   e. none of the above
6. Which of the following elements imparts fine grain structure to steel?
   a. chromium
   b. manganese
   c. silicon
   d. tungsten
   e. none of the above

7. The AISI prefix B designates that the steel is
   a. acid bessemer carbon steel
   b. basic open hearth carbon steel
   c. acid open hearth carbon steel
   d. brass
   e. none of the above

8. ________ Steels have their own alphabetic classification system.
   a. stainless
   b. low carbon
   c. tool
   d. austenitic
   e. none of the above

9. ________ stainless steel can not be hardened by quenching.
   a. austenitic
   b. ferritic
   c. martensitic
   d. all of the above
   e. none of the above

10. Which of the following metals is magnetic?
    a. phosphorus
    b. silicon
    c. sulfur
    d. all of the above
    e. none of the above

1. In _______ casting, the mold is composed of sand and resin.
   a. green-sand
   b. shell
   c. V-process
   d. squeeze
   e. none of the above

2. Which of the following is NOT a method of injecting material into a mold?
   a. gravitic flow
   b. pressure
   c. centrifugal force
   d. all of the above
   e. none of the above

3. What is the skin effect?
   a. the vacuoles created when the surface of a casting cools faster than its interior
   b. the thin, weak, exterior layer on castings caused by improper mixing of alloys
   c. the layers of metal formed in die casting
   d. abrasions caused by excessive polishing of the casting
   e. goose bumps

4. Die castings should be designed with _________ to relieve cooling stresses.
   a. cores of simple shapes
   b. heavy sections
   c. small cores
   d. uniform wall thicknesses
   e. none of the above

5. Which of the following is a major problem of the hot extrusion process?
   a. cost of glass-powder lubricants
   b. graphite lubricants contaminating the billet
   c. construction of the equipment
   d. scarcity of metals that can be successfully extruded
   e. none of the above
6. Extrusion generates _________ force, but not _________ force.
   a. tensile - compressive
   b. tensile - shear
   c. compressive - shear
   d. compressive - tensile
   e. none of the above

7. Plasma cutters can generate heat in excess of _________.
   a. 20,000°F
   b. 30,000°F
   c. 40,000°F
   d. 80,000°F
   e. 120,000°F

WELDER SERIES
MASTER Technical Module No. WLD-J04

SUBJECT: WELDING TECHNICIAN

<table>
<thead>
<tr>
<th>DUTY:</th>
<th>PREPARE JOINT FOR WELDING</th>
</tr>
</thead>
<tbody>
<tr>
<td>TASK:</td>
<td>Verify Joint Preparation</td>
</tr>
</tbody>
</table>

**OBJECTIVE(S):**

Upon completion of this unit the student will be able to:

A. Use prior modules in sequence with applications;
B. Understand the requirements for joint preparation; and,
C. Inspect the joint preparation.

**INSTRUCTIONAL MATERIALS:**

- Student Workbook
- Written test on joint design and weld appearance
- Transparencies will be prepared to emphasize each subject
- Hobart Institute Video Material
- The classroom handouts will consist of student worksheets
- Personal protective equipment
- Welding shop tools and equipment
- MASTER Handout No. 1 (WLD-J4-H01)
- MASTER Handout No. 2 (WLD-J4-H02)
- MASTER Handout No. 3 (WLD-J4-H03)
- MASTER Handout No. 4 (WLD-J4-H04)
- MASTER Handout No. 5 (WLD-J4-H05)

**REFERENCES:**

**TEXT:**

**OTHER:**

*Competency Standards*, American Welding Society, Latest Edition
STUDENT PREPARATION:

The purpose of this module is to assist the student in the use of methods and equipment to verify joint preparation.

INTRODUCTION:

The Course Introduction will Include:
- The importance of proper sequence in joint design and preparation
- A listing of reference materials for students to use to determine and verify preparation methods for welding specific materials with selected welding processes

PRESENTATION OUTLINE:

Instructor Topic:
A. Identify clean welding surfaces  
B. Demonstrate adequate cleaning techniques on various metals  
C. Illustrate how to assemble weld joints  
D. Use measurement devices to check weld opening or verify setup  
E. Illustrate proper tacking of a part  
F. Explain considerations for economical use of filler metal  
G. Explain consideration for base metal type and thickness  
H. Demonstrate positions for welding  
I. Discuss welding techniques used  
J. Discuss type of gases used (as applicable)  
K. Demonstrate appropriate power source as having impact upon the weld

Student Activities:
A. Study joint design using AWS guidelines  
B. Clean weld area  
C. Tack together test plates and practice plates  
D. Measure the gap size in practice and test plates  
E. Demonstrate understanding of selected welding technique

PRACTICAL APPLICATION:

This module provides the student with practical applications in joint design and preparation. The proper assembly and angle of weld joint as recommended by the American Welding Society (AWS) was also described. Welding positions, techniques, and methods were demonstrated.

EVALUATION AND/OR VERIFICATION:

An examination will be given at the end of this section to determine the progress of the class. Instructor will evaluate practical work performance by each student.
SUMMARY:

A joint design shows the actual geometry of the joint with angles and dimensions of the joint. Joint
design is critical in many weldments. Preparation of the joint, materials, and surfaces is critical to the
strength of a welded joint, which is expressed as a percentage of the guaranteed minimum strength of
the unwelded base metal.

NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-K1) dealing with identifying and describing the function of
each piece of equipment.
OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Use prior modules in sequence with applications;
B. Understand the requirements for joint preparation; and,
C. Inspect the joint preparation.

MODULE OUTLINE:

Instructor Topic:
A. Identify clean welding surfaces
B. Demonstrate adequate cleaning techniques on various metals
C. Illustrate how to assemble weld joints
D. Use measurement devices to check weld opening or verify setup
E. Illustrate proper tacking of a part
F. Explain considerations for economical use of filler metal
G. Explain consideration for base metal type and thickness
H. Demonstrate positions for welding
I. Discuss welding techniques used
J. Discuss type of gases used (as applicable)
K. Demonstrate appropriate power source as having impact upon the weld

Student Activities:
A. Study joint design using AWS guidelines
B. Clean weld area
C. Tack together test plates and practice plates
D. Measure the gap size in practice and test plates
E. Demonstrate understanding of selected welding technique
OBJECTIVE(S):

Upon completion of this unit the student will be able to:

a. Discuss classification system for metals; and,
b. Describe general characteristics for carbon steels, tool steels, stainless steels, structural steels, cast irons, aluminum, and other commonly used metals.

MODULE OUTLINE:

I. Discuss the Physical Properties of Metal
   A. Britteness - the property of a metal which permits no permanent distortion before breaking
   B. Ductility - the ability of the metal to be permanently deformed without breaking
   C. Elasticity - the ability of a metal to return to its original shape after any force acting upon it has been removed
   D. Hardness - the resistance to forcible penetration
   E. Malleability - the property of a metal which permits it to be hammered or rolled into other sizes and shapes
   F. Tensile strength - the maximum amount of pull that a material will withstand before breaking
   G. Toughness - the property of a metal to withstand shock or impact

II. Discuss the Classification System for Steel
   A. Carbon steels
      1. Low carbon steel - contains from 0.02 to 0.20 percent of carbon
      2. Medium carbon steel - contains from 0.30 to 0.60 percent of carbon
      3. High carbon steel (tool steel) - contains over 0.60 percent of carbon
   B. Alloy steels - alloying elements allow steels to possess special characteristics
      Discuss Table 1.1 "Effects of Alloying Elements on Steel"
      Discuss Table 1.2 "SAE-ANSI Numerical Designation of Alloy Steels"

III. Describe General Characteristics For:
    A. Carbon Steels
    B. Tool Steels
    C. Stainless Steels
    D. Structural Steels
    E. Cast Irons
    F. Non-Ferrous Metals
       1. Aluminum and Its Alloys
       2. Copper and Its Alloys
       3. Nickel Alloys
       4. Precious Metals
       5. Others

OBJECTIVE(S):

Upon completion of this unit the student will be able to:

a. Briefly describe and list the advantages and disadvantages for each of the following: casting processes, hot working processes, and cold working processes;

b. Discuss service requirements (strength, hardness, etc.);

c. Discuss fastening processes (fasteners, welding, bonding, etc.); and,

d. Discuss corrosion resistance methods.

MODULE OUTLINE:

I. Describe Casting Processes
   A. Discuss the following casting processes: sand, evaporative, shell molding, permanent mold, centrifugal, investment, and die casting
   B. Discuss pattern and mold design factors for each of the above casting processes
   C. List the advantages and disadvantages of the casting processes

II. Describe Hot Working Processes
   A. Discuss the following hot working processes: rolling, strand casting, forging, drawing, extrusion, spinning, and roll forming
   B. List the advantages and disadvantages of the hot working processes

III. Describe Cold Working Processes
   A. Discuss the following cold working processes: rolling, blanking, pressing, drawing, extruding, wire and bar drawing, bending, shearing, and roll forming
   B. List the advantages and disadvantages of the cold working process

IV. Evaluate Alternative Manufacturing Processes
   A. Discuss the powder metallurgy process (PM)
   B. Discuss the following nontraditional machining processes: EDM, laser machining, ultrasonic machining, hydrojet machining, electron beam machining, and plasma beam machining
Circle the best answer.

1. Using the SAE system, 1008 indicates
   a. plain carbon steel, 8% carbon
   b. plain carbon steel, 0.8% carbon
   c. plain carbon steel, 0.08% carbon
   d. low chromium steel, 0.08% carbon
   e. none of the above

2. In the SAE system, triple-alloy steels are designated by the numeral ______
   a. 6
   b. 7
   c. 8
   d. 9
   e. none of the above

3. The AISI system uses ________ to indicate the process used to manufacture the steel.
   a. numerical prefixes
   b. numerical suffixes
   c. capital letter prefixes
   d. capital letter suffixes
   e. none of the above

4. Which of the following does NOT increase the tensile strength of steel?
   a. carbon
   b. molybdenum
   c. nickel
   d. all of the above
   e. none of the above

5. Which of the following elements decreases the toughness of steel?
   a. cobalt
   b. phosphorus
   c. vanadium
   d. all of the above
   e. none of the above
6. Which of the following elements imparts *fine grain structure* to steel?
   a. chromium
   b. manganese
   c. silicon
   d. tungsten
   e. none of the above

7. The AISI prefix B designates that the steel is
   a. acid bessemer carbon steel
   b. basic open hearth carbon steel
   c. acid open hearth carbon steel
   d. brass
   e. none of the above

8. __________ Steels have their own alphabetic classification system.
   a. stainless
   b. low carbon
   c. tool
   d. austenitic
   e. none of the above

9. __________ stainless steel can not be hardened by quenching.
   a. austenitic
   b. ferritic
   c. martensitic
   d. all of the above
   e. none of the above

10. Which of the following metals is magnetic?
    a. phosphorus
    b. silicon
    c. sulfur
    d. all of the above
    e. none of the above

Circle the best answer.

1. In _________ casting, the mold is composed of sand and resin.
   a. green-sand
   b. shell
   c. V-process
   d. squeeze
   e. none of the above

2. Which of the following is NOT a method of injecting material into a mold?
   a. gravitic flow
   b. pressure
   c. centrifugal force
   d. all of the above
   e. none of the above

3. What is the skin effect?
   a. the vacuoles created when the surface of a casting cools faster than its interior
   b. the thin, weak, exterior layer on castings caused by improper mixing of alloys
   c. the layers of metal formed in die casting
   d. abrasions caused by excessive polishing of the casting
   e. goose bumps

4. Die castings should be designed with _________ to relieve cooling stresses.
   a. cores of simple shapes
   b. heavy sections
   c. small cores
   d. uniform wall thicknesses
   e. none of the above

5. Which of the following is a major problem of the hot extrusion process?
   a. cost of glass-powder lubricants
   b. graphite lubricants contaminating the billet
   c. construction of the equipment
   d. scarcity of metals that can be successfully extruded
   e. none of the above
6. Extrusion generates _______ force, but not _______ force.
a. tensile - compressive
b. tensile - shear
c. compressive - shear
d. compressive - tensile
e. none of the above

7. Plasma cutters can generate heat in excess of _______.
a. 20,000°F
d. 30,000°F
c. 40,000°F
d. 80,000°F
e. 120,000°F

WELDER ... that person who is responsible for the planning, layout, fit up of materials, and operation of welding equipment to prepare the work and perform welding operations necessary to produce a work piece to prescribed engineering standards.

### Duties

| M-1 | Demonstrate machine adjustments (voltage, age, speed) |
| M-2 | Demonstrate pre-weld cleaning |
| M-3 | Demonstrate post-weld cleaning |
| N-1 | Understand safety before using FCAW equipment |
| O1 | Identify FCAW equipment |
| O2 | Pass a performance qualification test using GTAW on carbon steel in the 6G position on pipe |
| P-1 | Check weld site |
| Q-1 | Perform visual inspection |
| R-1 | Remove weld defect and prepare for rework |
| S-1 | Inspect weld area(s) |
| T-1 | Display a general understanding of welding terminology |
| U-1 | Demonstrate ability to lift 50 pounds |

### Tasks

| M-1 | Perform weld sequence |
| M-2 | Perform post-weld cleaning |
| M-3 | Perform pre-weld cleaning |
| N-2 | Perform weld sequence |
| O1-1 | Describe AWS electrode classification system |
| O1-2 | Describe AWS filler metal classification system |
| O2-1 | Perform plasma arc welding on various materials |
| O2-3 | Perform shut-down procedures on Plasma Arc and Plasma Arc Equipment |
| P-1 | Inspect weld area(s) |
| Q-2 | Perform visual inspection |
| R-2 | Repeat in-process inspection |
| S-2 | Store tools |
| T-2 | Understand the functions of equipment being assembled |
| U-2 | Demonstrate ability to lift 100 pounds |

870
SUBJECT: WELDING TECHNICIAN       TIME: 15 HOURS

• DUTY: OXYACETYLENE CUTTING AND WELDING
• TASK: Identify and Describe the Function of Each Piece of Equipment

OBJECTIVE(S):

Upon completion of this unit, the student will be able to:
A. Understand basic fundamentals and scientific principles involved in the welding process;
B. Demonstrate the safe handling, use, and storage of oxygen and fuel gas cylinders;
C. Identify oxygen and fuel gas cylinders, oxygen and fuel gas regulators, torch handles, welding tips, cutting torch assemblies, and friction lighters;
D. Use a tip cleaner on oxyacetylene equipment;
E. Demonstrate the assembly and function of each piece of oxyfuel equipment; and,
F. Perform leak detection, safe startup, lighting, and shutdown of equipment.

INSTRUCTIONAL MATERIALS:

Student Workbook
Written tests on Oxyacetylene Safety, Equipment nomenclature, and Basic Procedures
Transparencies will be used to emphasize each subject
Hobart Institute Video Material
Classroom handouts consisting of student worksheets and base metals and filler metals
Personal protective equipment
Oxyfuel welding equipment
Oxygen and fuel gas cylinders
Oxygen and fuel gas regulators
Torch handles
Welding and cutting tips
Cutting torch assemblies
Lighters
Selection of filler metals and oxyfuel welding rod
Selection of base metals for welding and cutting
Welding shop tools
REFERENCES:

TEXT:

OTHER:

*Competency Standards*, American Welding Society, Latest Edition

*Specification for Qualification and Certification for Entry Level Welders*, AWS QC10, Latest Edition

STUDENT PREPARATION:

Student must demonstrate appropriate communication skills and understand principles of basic physical science and mathematics as verified by placement test or completion of required prerequisite courses.
INTRODUCTION:

The Course Introduction will Include:
- An overview of a fast growing technical field with many career opportunities and excellent pay
- Class demonstrations of safe welding operations
- A discussion on training activities resulting in an increase of skill and knowledge leading to certification in related program areas, becoming a more valuable employee

PRESENTATION OUTLINE:

Instruction Topics:
A. Identify oxygen and fuel gas cylinders
B. Describe preventive and protective measures in use of tools and equipment
C. Illustrate the function of oxygen equipment, fuel gas regulators, and gages
D. Demonstrating pressure adjustments, and inlet/outlet connections
E. Emphasize nomenclature and purpose of components.
F. Demonstrate the selection and use of torches, tips, and friction lighters
G. Illustrate techniques for start up, lighting, and shut down of equipment
H. Introduce methods associated with cutting and welding

Student Activities:
A. Identify, understand, and demonstrate the safe use of equipment at the introductory level.
B. Observe and be coached by the instructor in the introductory set up and shutdown of oxyacetylene gas welding equipment.

PRACTICAL APPLICATION:

Students will set-up and shut-down oxyacetylene equipment in a safe and cautious manner, wearing personal protective equipment, and being aware of the location of gas hoses and the "direction of the oxygen stream and sparks" which could possibly cause fires.

EVALUATION AND/OR VERIFICATION:

Two written examinations and a set-up and a shut-down procedural laboratory exercise will be given to determine individual student progress.

SUMMARY:

In the oxyfuel welding process, heat is transferred from a flame to the work by forced connection and radiation. The flame is produced by supplying nearly equal volumes of oxygen and acetylene to a torch, serving the function of bringing together nearly equal
volumes of the fuel gas and oxygen, mix them efficiently and pass them through a nozzle to form a flame with characteristics suitable for welding. The chemical characteristics of the flame can be altered to suit the requirements of the welding process.

Emphasis will be upon oxyacetylene equipment nomenclature and the safety precautions for using oxygen, fuel gas cylinders, regulators, and hoses. Students will understand the purpose, proper use, and maintenance of all equipment.

NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-K2) dealing with identifying the safety hazards.
OBJECTIVE(S):

Upon completion of this unit, the student will be able to:

A. Understand basic fundamentals and scientific principles involved in the welding process;
B. Demonstrate the safe handling, use, and storage of oxygen and fuel gas cylinders;
C. Identify oxygen and fuel gas cylinders, oxygen and fuel gas regulators, torch handles, welding tips, cutting torch assemblies, and friction lighters;
D. Use a tip cleaner on oxyacetylene equipment;
E. Demonstrate the assembly and function of each piece of oxyfuel equipment; and,
F. Perform leak detection, safe startup, lighting, and shutdown of equipment.

MODULE OUTLINE:

Instruction Topics:

A. Identify oxygen and fuel gas cylinders
B. Describe preventive and protective measures in use of tools and equipment
C. Illustrate the function of oxygen equipment, fuel gas regulators, and gages
D. Demonstrating pressure adjustments, and inlet/outlet connections
E. Emphasize nomenclature and purpose of components.
F. Demonstrate the selection and use of torches, tips, and friction lighters
G. Illustrate techniques for start up, lighting, and shut down of equipment
H. Introduce methods associated with cutting and welding

Student Activities:

A. Identify, understand, and demonstrate the safe use of equipment at the introductory level.
B. Observe and be coached by the instructor in the introductory set up and shutdown of oxyacetylene gas welding equipment.
Caution: Specific preventive and protective safety measures must be followed when using oxyacetylene equipment.

a. Use goggles or shield with a number five shade.
b. Wear gloves, long sleeve shirts, pants of high cotton or wool content, leather boots, and soft cotton caps.
c. When lighting the torch, direct the torch away from yourself and other personnel.
d. Never leave a lit torch unattended. When leaving your work station, always extinguish your torch.
e. Never use matches or butane lighters for lighting a torch. Only use spark or friction lighters.
f. Never cut on containers that have contained flammable or toxic substances.
g. Either move work away from or protect wooden or other flammable materials which may be close to the work.
h. When cutting, cover, concrete floors with sheet metal where sparks and molten metal are being directed.
i. Before beginning to work, locate the nearest fire alarm and the nearest fire extinguisher.
j. Cut in a well-ventilated area. If adequate ventilation is not possible, use a respirator.
k. Keep all petroleum products away from oxyacetylene equipment and operations. The combination of pure oxygen and oil is explosive.

Caution: Handle acetylene and oxygen cylinders carefully:

a. Keep acetylene operating pressures at or below 15 psi.
b. Open the acetylene cylinder valve one-half to one full turn when using a portable rig to be sure that the cylinder can be quickly turned off in the event of burnback or a fire at a leak in the hose or at a connection.
c. Do not open the acetylene torch valve where acetylene could flow into a bucket or other container and cause a fire.
d. Never attempt to connect an acetylene hose to an oxygen torch connection. Damage to the torch or an explosion could result. Acetylene hoses are colored red and acetylene fittings are left-hand threaded and usually notched.
e. Never use oxygen or fuel gas from a cylinder except through an approved pressure-reducing regulator.
f. Do not use pipe-fitting compounds or thread lubricants for making connections.
g. Never use a cylinder that is leaking.
h. Store and transport cylinders in the upright position.
i. Secure all cylinders with chain when storing, transporting, or using, to prevent them from being turned over by accident.
j. Never tamper with fusible plugs or other safety devices on cylinders.
k. To open and close acetylene cylinder valves not provided with handwheels always use the special wrench or key. When cutting leave the key in place for rapid shutdown in case of fire.
l. Never use any cylinder, full or empty, as a roller or support.
m. Never use oxygen as though it were compressed air.
n. Do not handle oxygen cylinders on the same platform with oil.
o. Never use wire-rope slings or electromagnets for lifting cylinders. Do not lift cylinders by the protective cap alone.
p. Store oxygen cylinders separately from fuel gas cylinders.
q. Always keep empty cylinders separate from full cylinders.
r. Mark all empty cylinders as such after use.
s. Keep all cylinders stored inside buildings at least 20 feet away from combustible materials.
t. Never bring any arc or flame close to or directly into contact with a cylinder.
u. Never exceed the maximum safe withdrawal rate for acetylene cylinders (one seventh of the cylinder's current contents per hour). If acetylene is withdrawn from the cylinder at a greater rate, acetone will also be withdrawn from the cylinder, damaging the cutting equipment. If additional flow is needed, then manifold the required number of cylinders together.
Answer the following questions and compare your answers to those listed below.

1. What are the precautions recommended to prevent accidents and protect the welder during oxyacetylene cutting?

2. What are the precautions for safely handling and storing acetylene and oxygen cylinders?

3. What are the precautions for minimizing the risk of regulatory burn out (R.B.O.)?

4. What are the steps in preparing to cut with oxyacetylene?

5. What are the steps in lighting the torch?

6. What are the steps in cutting metal with the torch?

7. What are the steps in extinguishing the torch?

8. What are the steps in closing down the welding station?

Answers:

1. Precautions recommended to prevent accidents and to protect the welder during oxyacetylene cutting:
   a. Use goggles or shield with a number five shade.
   b. Wear gloves, long-sleeve shirts, pants of high cotton or wool content, leather boots and soft cotton caps.
   c. When lighting the torch, direct the torch away from yourself and other personnel.
   d. Never leave a lit torch unattended. When leaving your work station, always extinguish your torch.
   e. Never use matches or butane lighters for lighting a torch. Only use spark or friction lighters.
   f. Never cut on containers that have contained flammable or toxic substances.
   g. Either move work away from or protect wooden or other flammable materials which may be close to the work.
   h. When cutting, cover concrete floors with sheet metal where sparks and molten metal are being directed.
1. Before beginning to work, locate the nearest fire alarm and the nearest fire extinguisher.

   j. Cut in a well ventilated area. If adequate ventilation is not possible, use a respirator.

   k. Keep all petroleum products away from oxyacetylene equipment and operations. The combination of pure oxygen and oil is explosive.

2. Precautions for safely handling oxygen and acetylene cylinders:
   a. Keep acetylene operating pressures at or below 15 psi.
   b. Open the acetylene cylinder valve one-half to one full turn when using a portable rig to be sure that the cylinder can be quickly turned off in the event of burn-back or a fire at a leak in the hose or at a connection.
   c. Do not open an acetylene torch's valve where acetylene could flow into a bucket or other container and cause a fire.
   d. Never attempt to connect an acetylene hose to an oxygen torch connection. Damage to the torch or an explosion could result. Acetylene hoses are colored red and acetylene fittings are left hand threaded and usually notched.
   e. Never use oxygen or fuel gas from a cylinder except through an approved pressure-reducing regulator.
   f. Do not use pipe-fitting compounds or thread lubricants for making connections.
   g. Never use a cylinder that is leaking.
   h. Store and transport cylinders in the upright position.
   i. Secure all cylinders with chain when storing, transporting, or using, to prevent them from being turned over by accident.
   j. Never tamper with fusible plugs or other safety devices on cylinders.
   k. To open and close acetylene cylinder valves not provided with handwheels, always use the special wrench or key. When cutting, leave the key in place for rapid shutdown in case of fire.
   l. Never use any cylinder, full or empty, as a roller or support.
   m. Never use oxygen as though it were compressed air.
   n. Do not handle oxygen cylinders on the same platform with oil.
   o. Never use wire-rope slings or electromagnets for lifting cylinders. Do not lift cylinders by the protective cap alone.
   p. Store oxygen cylinders separately from fuel gas cylinders.
   q. Always keep empty cylinders separate from full cylinders.
   r. Mark all empty cylinders as such after use.
   s. Keep all cylinders stored inside buildings at least 20 feet away from combustible materials.
   t. Never bring any arc or flame close to or directly into contact with a cylinder.
   u. Never exceed the maximum safe withdrawal rate for acetylene cylinders (one seventh of the cylinder's current contents per hour). If acetylene is withdrawn from the cylinder at a greater rate, acetone will also be withdrawn from the cylinder, damaging the cutting equipment. If additional flow is needed, then manifold the required number of cylinders together.
3. Precautions for minimizing the risks of regulatory burn out (R.B.O).
   a. "Crack" the oxygen cylinder valve before attaching the regulator. Stand to one side or the rear of the cylinder outlet. Open the cylinder valve slightly for an instant and then close it to clean the valve of dust and dirt which may have accumulated during storage. Dirt can damage an oxygen regulator and may cause R.B.O.
   b. Use only oxygen regulators to control oxygen supply. A pressure reducing regulator must be connected to the oxygen cylinder valve. Make certain the regulator is clean, free of grease and oil, and has a clean filter installed in its inlet nipple. Oil, grease, coal dust, and other combustibles can cause regulator burnouts. Never use an oxygen regulator for other gases.
   c. Before opening an oxygen cylinder valve, make sure the oxygen regulator pressure-adjusting screw is released. This is done by rotating the screw counterclockwise until it turns freely. This closes the regulator valve and prevents damage due to a sudden pressure surge.
   d. While opening the oxygen cylinder valve, stand to one side of the oxygen regulator. Do not stand in line with the front or the back of the pressure-adjusting screw. Open the cylinder valve as slowly as possible, until the high pressure gauge reaches cylinder pressure. Never open a cylinder valve suddenly. Sudden surges of high pressure can cause R.B.O.

4. Steps in preparing to cut with oxyacetylene:
   a. Obtain the proper size cutting tip.
      (1) Consult the equipment manufacturer's cutting tip data charts. The charts match up the thickness of the steel being cut with the cutting tip size and also give recommended pressure settings for oxygen and acetylene.
      (2) Be sure that the metal can be cut with an oxyacetylene torch. Oxy-fuel cutting is not used on metals like aluminum, copper, magnesium, and chromium, where the oxide of that metal melts at a higher temperature than the metal itself. Also, stainless steels cannot be easily cut with oxy-fuel because they contain relatively large amounts of chromium and/or nickel.
   b. Screw the cutting torch head in place, hand-tight only.
   c. Before attaching the regulators to the cylinder valves, crack the valves to blow out any dirt and debris.
   d. Attach the regulators, hoses, torch, and correct-sized torch tip.
   e. Make sure the pressure adjusting screws of the acetylene and oxygen regulators are backed out. (That is, that they have been turned counterclockwise until there is a little free play.)
   f. Make sure all cutting torch valves are initially closed.
   g. Open the oxygen cylinder valve all the way. Open the acetylene cylinder valve one full turn only.
   h. Open the acetylene torch valve. Turn the acetylene torch valve off.
i. Turn the acetylene regulator pressure-adjusting screw clockwise until the needle on the regulator dial indicates the proper pressure.

j. Turn the acetylene torch valve off.

k. Turn both oxygen torch valves on.

l. Turn the oxygen regulator pressure-adjusting screw clockwise until the needle on the regulator dial indicates the proper pressure.

m. Turn off the oxygen torch valve on the torch head only.

5. Steps in lighting the torch:
   a. Put on gloves.
   b. Put on welding goggles.
   c. Open the torch acetylene valve one-half turn.
   d. Immediately light the torch with a friction lighter only.
   e. Reduce the acetylene flow at the torch's acetylene valve until the flame just starts to produce black smoke around its edges. Then increase the acetylene flow just enough to get rid of the black smoke.
   f. Open the torch's oxygen valve slowly until the desired type flame is obtained.

   (1) The preheat flame needs to be of the neutral type, which means that equal parts of oxygen and acetylene are being burnt.

   (2) The preheat flame needs to be the right size. Set the pressure correctly, and then follow the directions in "Step e" again. If the preheat flame is too large, there will be or tend to be slag or dross hanging onto the bottom of the cut-assuming that travel speed, tip size, etc., are all correct.

6. Steps in cutting metal with the torch:
   a. Follow the steps in Operation 1 and Operation 2 for the following oxyacetylene cutting variables:

   (1) Cutting tip size.

   (2) Oxygen operating pressure.

   (3) Acetylene operating pressure.

   (4) Preheat flame type.

   (5) Size of preheat flame

   b. Clean the cutting tip. Be sure that the preheat and cutting orifices of the tip are clean. A dirty tip, especially a dirty cutting orifice, will adversely affect the quality of the cut. Dirty orifices can produce such defects as wide kerfs, adherent slag, and rough appearance.

   c. Select the correct flame-to-work distance. The bottom of the preheat flame should be 1/16" to 1/2" from the base metal. Right-handed people should progress from right to left and left-handed people should cut left to right.

   d. Select the correct torch angle.

   (1) For square cuts, the torch should be perpendicular (at 90°) to the base metal and tipped slightly in the direction of travel.

   (2) For beveled cuts, the torch should be held at the angle of the bevel throughout the cutting procedure.
(3) For holes, the torch must be held perpendicular to the base metal throughout the cut.

e. Cut at the proper travel speed. At the correct travel speed, the lines of the cut which project through the thickness of the base metal will be in a straight line. At too fast a travel speed, the lines of the cut will curve back from the progress of the cut and form clearly defined lines termed lag or drag lines. (The amount of drag is often expressed as a percent.)

f. Assure the oxygen level. Although it is possible to make a good weld with an oxygen purity level of only 95%, in order to make good oxy-fuel cut, an oxygen purity level of 99.5% is required. Where leaks in oxygen lines or hoses allow air to be mixed with the oxygen, the quality of the cut can be very seriously affected.

7. Steps in extinguishing the torch:
   a. Close the torch acetylene valve, thus extinguishing the flame.
   b. Close the torch oxygen valve.

8. Steps in closing down the welding station:
   a. Close the oxygen cylinder valve.
   b. Close the acetylene cylinder valve.
   c. Open the torch acetylene valve and bleed the acetylene from the line.
   d. Close the torch acetylene valve.
   e. Turn the acetylene regulator pressure adjusting screw counterclockwise until there is a little free play. Avoid backing out the pressure adjusting screws so much that they come totally out.
   f. Open the torch oxygen valve and bleed the oxygen from the line.
   g. Close the torch oxygen valve.
   h. Turn the oxygen regulator pressure adjusting screw counterclockwise until there is a little free play. Avoid backing out the pressure adjusting screws so much that they come totally out.
Identify and Describe the Function of Each Piece of Equipment
Attachment 4: MASTER Laboratory Worksheet No. 2

1. Instructor will demonstrate how to:
   - Braze with bronze rod;
   - Run a bead with a bronze rod;
   - Square butt braze on light steel plate;
   - Braze lap joints;
   - Braze tee joints;
   - Braze beveled butt joints on heavy steel plate; Braze beveled joints on cast iron;
   - Silver soldering of nonferrous metals; and,
   - Silver soldering of ferrous and nonferrous metals.

2. Student will practice:
   - Brazing with bronze rod;
   - Running beads with bronze rod;
   - Square butt brazing on light steel plate;
   - Brazed lap joints;
   - Brazing tee joints;
   - Brazing beveled butt joints on heavy steel plate; Brazing beveled joints on cast iron;
   - Silver soldering nonferrous metals; and,
   - Silver soldering ferrous and nonferrous metals.

3. Instructor will grade students performance on:
   - Brazing with bronze rod:
   - Running beads with bronze rod;
   - Square butt brazing on light steel plate;
   - Brazed lap joints;
   - Brazing tee joints;
   - Brazing beveled butt joints on heavy steel plate; Building-up on cast iron;
   - Brazing beveled joints on cast iron;
   - Silver soldering nonferrous metals; and,
   - Silver soldering ferrous and nonferrous metals.
WLD-K1
Identify and Describe the Function of Each Piece of Equipment
Self-Assessment No. 1

Circle the best answer.

1. Which of the following can be used to ignite an oxyacetylene torch?
   a. Matches
   b. A cigarette lighter
   c. A spark or friction lighter
   d. Any of the above
   e. None of the above

2. Technician A says that they can cut into an old gasoline can with the torch. Technician B says that containers of flammable or toxic substances should never be cut with a torch. Who is correct?
   a. Technician A only
   b. Technician B only
   c. Both Technicians A and B
   d. Neither Technician A nor B

3. If adequate ventilation is unavailable, the technician should:
   a. Cut the metal anyway; ventilation is not important.
   b. Cut the metal while wearing a respirator.
   c. Cut the metal while wearing a heavy-duty dust mask.
   d. Refuse to make the cut.

4. Acetylene operating pressures must be kept at or below:
   a. 5 psi.
   b. 15 psi.
   c. 25 psi.
   d. Acetylene operating pressures are immaterial.

5. Acetylene hoses are _______; acetylene fittings are _______.
   a. Red - left-handed
   b. Blue - left-handed
   c. Red - right-handed
   d. Blue - left-handed
   e. None of the above
6. All cylinders should be secured except when:
   a. Transporting them.
   b. Storing them.
   c. Using them.
   d. Always secure cylinders with chains or in permanent racks.
   e. Securing cylinders is unnecessary.

7. Technician A says that oxygen cylinders should be stored well away from fuel gas cylinders. Technician B says that separate storage is unnecessary. Who is correct?
   a. Technician A only
   b. Technician B only
   c. Both Technicians A and B
   d. Neither Technician A nor B

8. The maximum safe withdrawal rate for acetylene cylinders is:
   a. One fourth of current content per hour.
   b. One fifth of current content per hour.
   c. One seventh of current content per hour.
   d. One tenth of current content per hour.
   e. None of the above

9. Technician A says that only oxygen-specific regulators can be used on oxygen cylinders. Technician B says that it is acceptable to use oxygen regulators on other gas cylinders. Who is correct?
   a. Technician A only
   b. Technician B only
   c. Both Technicians A and B
   d. Neither Technician A nor B

10. Which of the following can be cut with an oxyacetylene torch?
    a. Aluminum
    b. Copper
    c. Chromium
    d. All of the above
    e. None of the above

11. Technician A says that the acetylene cylinder's valve should be opened all the way. Technician B says that the oxygen cylinder's valve should be opened no more than one full turn. Who is correct?
    a. Technician A only
    b. Technician B only
    c. Both Technicians A and B
    d. Neither Technician A nor B
12. Before attaching the regulators to the cylinder valves:
   a. Clean the nipples with acetone.
   b. Crack the valves to blow out any dirt.
   c. Lubricate the threads with oil.
   d. All of the above
   e. None of the above

13. Technician A says that they must reduce the acetylene flow until the flame just starts
to produce black smoke around its edges. Technician B says that the acetylene flow
must then be increased until the smoke disappears. Who is correct?
   a. Technician A only
   b. Technician B only
   c. Both Technicians A and B
   d. Neither Technician A nor B

14. Dirty orifices on the cutting tip can produce:
   a. Wide kerfs.
   b. Adherent slag.
   c. Rough cut appearance.
   d. All of the above.
   e. None of the above

15. Technician A says that, for cutting holes, the torch must be held parallel to the base
metal throughout the cut. Technician B says that square cuts require the torch to be
held at 45° to the base metal. Who is correct?
   a. Technician A only
   b. Technician B only
   c. Both Technicians A and B
   d. Neither Technician A nor B

16. Lag lines are the result of
   a. Correct travel speed.
   b. Too great a travel speed.
   c. Too slow a travel speed.
   d. Incorrect torch angle.
   e. None of the above

17. When extinguishing the torch, Technician A says that the acetylene torch valve should
be closed first. Technician B says that the oxygen torch valve should be closed first.
Who is correct?
   a. Technician A only
   b. Technician B only
   c. Both Technicians A and B
   d. Neither Technician A nor B
18. Good oxy-fuel cuts require an oxygen purity of at least:
   a. 99.5%.
   b. 95.9%.
   c. 59.9%.
   d. None of the above.

19. Both acetylene and oxygen lines should be _________ when closing down the work station.
   a. Removed
   b. Cleaned with acetone
   c. Bled free of gas or fuel
   d. All of the above
   e. None of the above

20. Technician A says that since B is left-handed, B should cut from left to right.
    Technician B says that the pre-heat flame should still be from 1/6" to 1/2" from the base metal, regardless of the direction of travel. Who is correct?
    a. Technician A only
    b. Technician B only
    c. Both Technicians A and B
    d. Neither Technician A nor B

1. What is the major difference between a brazed joint and a welded joint?

2. What two conditions determines whether the joint is brazed or welded?

3. How does flux act as a guide to the temperature of the joint?

4. What is the color of the plate when it is at the proper temperature for welding?

5. Is brazing stronger than fusion welding?

6. For silver soldering: what is a 3x flame?

7. What alloys are contained in typical silver soldering?

8. How can material be prepared for silver soldering?
9. Is it possible to make fillets when using silver soldering alloys?
SUBJECT: WELDING TECHNICIAN     TIME: 6 HOURS

- DUTY: OXYACETYLENE CUTTING AND WELDING
- TASK: Identify the Safety Hazards

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Discuss the safety hazards associated with ignition and combustion;
B. Discuss the effect of an oxygen enriched environment;
C. Discuss the importance of ventilation in the oxyacetylene area;
D. Illustrate how to check the connections for leaks;
E. Review the use of check valves and flash arresters;
F. Discuss the importance of making sure o-rings are in good condition;
G. Demonstrate practice of indicators and detection measures for gas leaks;
H. Explain the function of Material Safety Data Sheets; and,
I. Explain the classes of fires and the types of extinguishers.

INSTRUCTIONAL MATERIALS:

Student Workbook
Written tests on Oxyacetylene Safety, Equipment nomenclature, and Basic Procedures
Transparencies will be used to emphasize each subject
Hobart Institute Video Material
Classroom handouts consisting of student worksheets and base metals and filler metals
Personal protective equipment
Oxyfuel welding equipment
Oxygen and fuel gas cylinders
Oxygen and fuel gas regulators
Torch handles
Welding and cutting tips
Cutting torch assemblies
Lighters
Selection of filler metals and oxyfuel welding rod
Selection of base metals for welding and cutting
Welding shop tools
MASTER Handout No. 1 (WLD-K2-H01)
REFERENCES:

TEXT:

OTHER:

Competency Standards, American Welding Society, Latest Edition

Welding Handbook, Volume One, Welding Technology WHB-1.8, Latest Edition

Specification for Qualification and Certification for Entry Level Welders, AWS QC10, Latest Edition

STUDENT PREPARATION:

Student must demonstrate appropriate communication skills and understand principles of basic physical science and mathematics as verified by placement test or completion of required prerequisite courses.

WLD-K1 “Identify and Describe the Function of Each Piece of Equipment”
INTRODUCTION:

The Course Introduction will Include:

- An overview of the welding profession and opportunities in a fast growing technical field with many opportunities and excellent pay
- A class demonstration of effective safety techniques
- A discussion on areas of welding practice that will enhance skill and knowledge leading to certification.

PRESENTATION OUTLINE:

Instruction Topics:

A. Identify safety hazards
B. Demonstrate preventive and protective measures
C. Describe the function of Material Safety and Data Sheets
D. Explain and practice safe lockout/tagout procedures
E. Practice safe work procedures around electrical hazards
F. Use respiratory protection equipment
G. Safe use of welders hand tools and power tools
H. Demonstrate how to set up and connect equipment
I. Demonstrate how to make pressure adjustments

Student Activities:

A. Inspection of welding shop for all possible safety hazards.
B. Select and demonstrate proper use of personal protective equipment, to include eye protection with required shade of lens, hearing protection, radiation and heat protection methods, and respiratory protection
C. Practice safe methods for lighting, safe use of ladders and scaffolds
D. Practice safe methods for electrical hazards and protection against shock
E. Review HazCom Standards and locate Material Safety Data Sheets

PRACTICAL APPLICATION:

The student will set-up oxyacetylene equipment in a safe and cautious manner, wearing safety equipment, and being aware of the location of gas hoses and the direction of "the oxygen stream and sparks". Student will practice the use of respiratory equipment, all safety protection equipment, and use of welders hand tools and power tools.

EVALUATION AND/OR VERIFICATION:

Written examinations will be given during this module to determine student progress. Students will practice safe operational procedures for instructor evaluation.
SUMMARY:

Emphasis will be on safe handling and operation of equipment, tools, and oxyfuel containers and hoses. Students will demonstrate teamwork and assisting others in carrying out responsibilities to prevent injuries, accidents, fires, and prepare the appropriate coordinated response in emergencies.

NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-K3) dealing with describing preventive and/or protective measures.
OBJECTIVE(S):
Upon completion of this unit the student will be able to:
A. Discuss the safety hazards associated with ignition and combustion;
B. Discuss the effect of an oxygen enriched environment;
C. Discuss the importance of ventilation in the oxyacetylene area;
D. Illustrate how to check the connections for leaks;
E. Review the use of check valves and flash arresters;
F. Discuss the importance of making sure o-rings are in good condition;
G. Demonstrate practice of indicators and detection measures for gas leaks;
H. Explain the function of Material Safety Data Sheets; and,
I. Explain the classes of fires and the types of extinguishers.

PRESENTATION OUTLINE:
Instruction Topics:
A. Identify safety hazards
B. Demonstrate preventive and protective measures
C. Describe the function of Material Safety and Data Sheets
D. Explain and practice safe lockout/tagout procedures
E. Practice safe work procedures around electrical hazards
F. Use respiratory protection equipment
G. Safe use of welders hand tools and power tools
H. Demonstrate how to set up and connect equipment
I. Demonstrate how to make pressure adjustments

Student Activities:
A. Inspection of welding shop for all possible safety hazards.
B. Select and demonstrate proper use of personal protective equipment, to include eye protection with required shade of lens, hearing protection, radiation and heat protection methods, and respiratory protection
C. Practice safe methods for lighting, safe use of ladders and scaffolds
D. Practice safe methods for electrical hazards and protection against shock
E. Review HazCom Standards and locate Material Safety Data Sheets
WLD-K2-HO2
Identify the Safety Hazards
Attachment 2: MASTER Handout No. 2

INTRODUCTION:

Welding is considered to be a hazardous occupation. Welding operations are used to cut, repair, and fabricate. Successful use of the welding torch, welding apparatus, and welding machines is based in safe operating procedures.

MODULE OUTLINE:

DON'T CARRY A BOMB IN YOUR POCKET!

NEVER carry a butane lighter into a welding area. These are mini-Molotov cocktails.

I. Safety Procedures Specific to the Welding Process
   A. Specific safety precautions must be taken to ensure a proper breathing atmosphere in all welding areas.
      1. Weld only in ventilated areas. Welding shielding gases can displace the air needed for breathing. These gases are odorless and colorless, and most are heavier than air.
      2. Weld in a position that will allow your head to be out of the welding plume, but will still give a good view of the welding arc. The welding plume could contain harmful fumes and gases.
      3. Provide enough ventilation wherever welding and cutting are performed. Welding in confined spaces may require special procedures, such as the use of an air-supplied hood or hose mask.
      4. Do not weld on dirty plate or plate contaminated with an unknown material. The fumes and gases which are formed could be hazardous to health.
   B. Electrical shock can be avoided by following specific safety precautions.
      1. Do not touch live electrical parts.
      2. Ground all electrical equipment and the work-piece to prevent accidental electrical shocks.
      3. Use the correct welding cable size for both the ground lead and the welding lead. Sustained overloading will cause cable failure and result in possible electrical shock or fire hazard.
      4. Be sure all electrical connections are tight, clean, and dry. Poor electrical connections can heat up and even melt, causing dangerous arcs and sparks.
      6. Keep welding cables and connectors in good condition. Improper or worn electrical connections can cause short circuits and can increase the chance of an electrical shock.
7. Avoid open-circuit voltage. Open-circuit voltage is much higher than welding voltage.

8. Shut off electrical power when working on welding equipment.

C. Ultraviolet and infrared rays emitted by the welding arc, as well as the spatter from the welding arc, can injure eyes and burn skin. Specific safety precautions must be followed to ensure adequate protection.

1. Wear 100% cotton clothing. It will not catch fire easily, it offers good protection from light welding spatter, and it is cooler in the summer and warmer in the winter.

2. Cover all skin surfaces. Keep shirt sleeves rolled down.

3. Wear cuffless pants to eliminate spatter traps.

4. Wear leather boots. Pant legs should cover boot tops.

5. Wear clean clothing. Oil- and grease-stained clothes will tend to ignite from welding spatter.

6. For more severe welding conditions, wear protective clothing such as heat resistant jackets, aprons, and leggings.

7. Wear safety glasses to protect from arc flashes, mechanical injury, or other mishaps.

8. Wear ear protection, not only where there is noise but where there is a chance that spatter or sparks could get into the ears.

9. Wear a 100% cotton cap to protect the head from sparks or spatter.

10. Wear long-gauntlet leather gloves.

11. Do not touch hot metal with bare hands. Use tongs or pliers and wear leather gloves.

12. Protect nearby workers from exposure to the welding arc by putting up shields.

13. Wear a welding helmet with the correct shade of welding lens. Choose the correct lens from a filter recommendations table (See Figure 1).

<table>
<thead>
<tr>

</table>

* As a general rule, start with a shade that is too dark to see the arc zone. Then go to the next lighter shade until you find one which gives you sufficient view of the arc zone without exerting a strain on your eyes.

FIGURE 1 FILTER RECOMMENDATIONS
D. Specific precautions must be taken to ensure that there is no loss of property due to welding sparks, spatter, and heat.

1. If possible, weld in specially designated areas or enclosures of noncombustible construction.
2. Remove combustibles from the work area by at least 35 feet if possible.
3. Cover combustibles that cannot be removed from the welding area with tight-fitting, flame-resistant material. Items that should be covered include combustible walls, floors, ceilings, and any cracks or other openings that might let a spark pass through it.
4. If welding is to be performed on or adjacent to a metal wall, ceiling, or partition, move combustibles on the other side to a safe location.
5. If combustibles cannot be adequately sealed off or removed, station a fire watcher at that location. The fire watcher must have adequate fire extinguishing capabilities.
6. Do not weld on materials having either a coating or internal structure that is combustible.
7. Place hot scrap and slag in non-combustible containers.
8. Ensure that fire extinguishers are available nearby.
9. Conduct a thorough examination for evidence of a fire before leaving the work area, and continue a fire check for at least 30 minutes after the welding operation has been completed.
10. Follow all company safety procedures regarding welding in hazardous areas.

E. Specific Safety Precautions for Oxyacetylene Equipment

CAUTION: Specific preventive and protective safety measures must be followed when using oxyacetylene equipment:

1. Use goggles or shield with a number five shade.
2. Wear gloves, long sleeve shirts, pants of high cotton or wool content, leather boots, and soft cotton caps.
3. When lighting the torch, direct the torch away from yourself and other personnel.
4. Never leave a lit torch unattended. When leaving your work station, always extinguish your torch.
5. Never use matches or butane lighters for lighting a torch. Only use spark or friction lighters.
6. Never cut on containers that have contained flammable or toxic substances.
7. Either move work away from or protect wooden or other flammable materials which may be close to the work.
8. When cutting, cover concrete floors with sheet metal where sparks and molten metal are being directed.
9. Before beginning to work, locate the nearest fire alarm and the nearest fire extinguisher.
10. Cut in a well-ventilated area. If adequate ventilation is not possible, use a respirator.

11. Keep all petroleum products away from oxyacetylene equipment and operations. The combination of pure oxygen and oil is explosive.

F. Specific Safety Precautions for Acetylene and Oxygen Cylinders

CAUTION: Handle acetylene and oxygen cylinders carefully:

1. Keep acetylene operating pressures at or below 15 psi.
2. Open the acetylene cylinder valve one-half to one full turn when using a portable rig to be sure that the cylinder can be quickly turned off in the event of burn-back or a fire at a leak in the hose or at a connection.
3. Do not open the acetylene torch valve where acetylene could flow into a bucket or other container and cause a fire.
4. Never attempt to connect an acetylene hose to an oxygen torch connection. Damage to the torch or an explosion could result. Acetylene, hoses are colored red and acetylene fittings are left-hand threaded and usually notched.
5. Never use oxygen or fuel gas from a cylinder except through an approved pressure-reducing regulator.
6. Do not use pipe-fitting compounds or thread lubricants for making connections.
7. Never use a cylinder that is leaking.
8. Store and transport cylinders in the upright position.
9. Secure all cylinders with chain when storing, transporting, or using, to prevent them from being turned over by accident.
10. Never tamper with fusible plugs or other safety devices on cylinders.
11. To open and dose acetylene cylinder valves not provided with hand-wheels, always use the special wrench or key. When cutting, leave the key in place for rapid shutdown in case of fire.
12. Never use any cylinder, full or empty, as a roller or support.
13. Never use oxygen as though it were compressed air.
14. Do not handle oxygen cylinders on the same platform with oil.
15. Never use wire-rope slings or electromagnets for lifting cylinders. Do not lift cylinders by the protective cap alone.
17. Always keep empty cylinders separate from full cylinders.
18. Mark all empty cylinders as such after use.
19. Keep all cylinders stored inside buildings at least 20 feet away from combustible materials.
20. Never bring any arc or flame close to or directly into contact with a cylinder.
21. Never exceed the maximum safe withdrawal rate for acetylene cylinders (one seventh of the cylinder's current contents per hour). If acetylene is withdrawn from the cylinder at a greater rate, acetone will also be withdrawn from the cylinder, damaging the cutting equipment.
If additional flow is needed, then manifold the required number of cylinders together.

G. Specific Safety Precautions for Regulator Burnout (R.B.O.)

CAUTION: Avoid potentially deadly regulator burnout (R.B.O.). Regulator burnout is a spontaneous explosion that happens when a torch is being lit. To minimize the risk of R.B.O., follow these safety precautions:

1. "Crack" the oxygen cylinder valve (open it slightly) before attaching the regulator. Stand to one side or the rear of the cylinder outlet. Open the cylinder valve slightly for an instant and then close it to clean the valve of dust and dirt which may have accumulated during storage. Dirt can damage an oxygen regulator and may cause R.B.O.

2. Use only oxygen regulators to control oxygen supply. A pressure-reducing regulator must be connected to the oxygen cylinder valve. Make certain the regulator is clean, free of grease and oil, and has a clean filter installed in its inlet nipple. Oil, grease, coal, dust, and other combustibles can cause regulator burnout. Never use an oxygen regulator for other gases.

3. Before opening an oxygen cylinder valve, make sure the oxygen regulator pressure-adjusting screw is released. This is done by rotating the screw counterclockwise until it turns freely. This closes the regulator valve and prevents damage due to a sudden pressure surge.

4. While opening the oxygen cylinder valve, stand to one side of the oxygen regulator. Do not stand in line with the front or the back of the pressure-adjusting screw. Open the cylinder valve as slowly as possible, until the high pressure gauge reaches cylinder pressure. Never open a cylinder valve suddenly. Sudden surges of high pressure can cause R.B.O.

II. Describe the SMAW Process

Shielded Metal Arc Welding is a welding process which joins metals by heating them with an arc between a covered metal electrode and the metals being joined. Shielding is obtained from the decomposition (breakdown) of the electrode covering. Pressure is not used and filler metal is obtained from the electrode. The electric arc flowing across an air gap produces very intense heat and light. An electric arc has been measured at 10,000°F. Considering that steel melts at around 2800°F, the electric arc is indeed a very fast and efficient heat source for melting steel when welding.

III. Describe the Oxyacetylene Cutting and Welding Process

Oxyacetylene cutting requires the use of specific procedures and specific techniques in order to work safely and to produce acceptable cuts. Proper flame adjustments, torch angles, and flame-to-work distances must be maintained in order to produce good cuts. Oxyacetylene cutting can be done from both fixed cutting stations and from portable cutting stations. The key operations to oxyacetylene cutting are as follows:

1. Prepare to cut.
2. Light the torch.
3. Cut metal with the torch.
4. Extinguish the torch.

**HOW TO SELECT THE CORRECT NUMBER OF ACETYLENE CYLINDERS**

To determine the number of cylinders required for proper manifold operation, follow the guidelines below:

1. The number of cylinders in the manifold is determined by the volume of gas in cubic feet per hour required. Determine the cubic feet per hour required for the largest tip used and multiply that by the number of torches or stations in operation at the same time. This will give the total volume of each gas required per hour.

2. The manifold should have enough cylinders to provide a minimum of one day's requirements.

3. Maximum acetylene withdrawal for continuous operation is 1/7 (of 14%) of each cylinder capacity per hour. The chart allows for 7.8% excess capacity.

Acetylene Cylinder Manifold Guide

IV. Describe the GTAW (Heliarc) Process
V. Describe the GMAW (MIG) Process
VI. Describe the Band/Flash Welding Machine and Process
Caution: Specific preventive and protective safety measures must be followed when using oxyacetylene equipment.

a. Use goggles or shield with a number five shade.
b. Wear gloves, long sleeve shirts, pants of high cotton or wool content, leather boots, and soft cotton caps.
c. When lighting the torch, direct the torch away from yourself and other personnel.
d. Never leave a lit torch unattended. When leaving your work station, always extinguish your torch.
e. Never use matches or butane lighters for lighting a torch. Only use spark or friction lighters.
f. Never cut on containers that have contained flammable or toxic substances.
g. Either move work away from or protect wooden or other flammable materials which may be close to the work.
h. When cutting, cover, concrete floors with sheet metal where sparks and molten metal are being directed.
i. Before beginning to work, locate the nearest fire alarm and the nearest fire extinguisher.
j. Cut in a well-ventilated area. If adequate ventilation is not possible, use a respirator.
k. Keep all petroleum products away from oxyacetylene equipment and operations. The combination of pure oxygen and oil is explosive.

Caution: Handle acetylene and oxygen cylinders carefully:

a. Keep acetylene operating pressures at or below 15 psi.
b. Open the acetylene cylinder valve one-half to one full turn when using a portable rig to be sure that the cylinder can be quickly turned off in the event of burnback or a fire at a leak in the hose or at a connection.
c. Do not open the acetylene torch valve where acetylene could flow into a bucket or other container and cause a fire.
d. Never attempt to connect an acetylene hose to an oxygen torch connection. Damage to the torch or an explosion could result. Acetylene hoses are colored red and acetylene fittings are left-hand threaded and usually notched.
e. Never use oxygen or fuel gas from a cylinder except through an approved pressure-reducing regulator.
f. Do not use pipe-fitting compounds or thread lubricants for making connections.
g. Never use a cylinder that is leaking.
h. Store and transport cylinders in the upright position.
i. Secure all cylinders with chain when storing, transporting, or using, to prevent them from being turned over by accident.
j. Never tamper with fusible plugs or other safety devices on cylinders.
k. To open and close acetylene cylinder valves not provided with handwheels always use the special wrench or key. When cutting leave the key in place for rapid shutdown in case of fire.
l. Never use any cylinder, full or empty, as a roller or support.
m. Never use oxygen as though it were compressed air.
n. Do not handle oxygen cylinders on the same platform with oil.
o. Never use wire-rope slings or electromagnets for lifting cylinders. Do not lift cylinders by the protective cap alone.
p. Store oxygen cylinders separately from fuel gas cylinders.
q. Always keep empty cylinders separate from full cylinders.
r. Mark all empty cylinders as such after use.
s. Keep all cylinders stored inside buildings at least 20 feet away from combustible materials.
t. Never bring any arc or flame close to or directly into contact with a cylinder.
u. Never exceed the maximum safe withdrawal rate for acetylene cylinders (one seventh of the cylinder's current contents per hour). If acetylene is withdrawn from the cylinder at a greater rate, acetone will also be withdrawn from the cylinder, damaging the cutting equipment. If additional flow is needed, then manifold the required number of cylinders together.
Answer the following questions and compare your answers to those listed below.

1. What are the precautions recommended to prevent accidents and protect the welder during oxyacetylene cutting?

2. What are the precautions for safely handling and storing acetylene and oxygen cylinders?

3. What are the precautions for minimizing the risk of regulatory burn out (R.B.O.)?

4. What are the steps in preparing to cut with oxyacetylene?

5. What are the steps in lighting the torch?

6. What are the steps in cutting metal with the torch?

7. What are the steps in extinguishing the torch?

8. What are the steps in closing down the welding station?

Answers:

1. Precautions recommended to prevent accidents and to protect the welder during oxyacetylene cutting:
   a. Use goggles or shield with a number five shade.
   b. Wear gloves, long sleeve shirts, pants of high cotton or wool content, leather boots and soft cotton caps.
   c. When lighting the torch, direct the torch away from yourself and other personnel.
   d. Never leave a lit torch unattended. When leaving your work station, always extinguish your torch.
   e. Never use matches or butane lighters for lighting a torch. Only use spark or friction lighters.
   f. Never cut on containers that have contained flammable or toxic substances.
   g. Either move work away from or protect wooden or other flammable materials which may be close to the work.
   h. When cutting, cover concrete floors with sheet metal where sparks and molten metal are being directed.
Before beginning to work, locate the nearest fire alarm and the nearest fire extinguisher.

Cut in a well ventilated area. If adequate ventilation is not possible, use a respirator.

Keep all petroleum products away from oxyacetylene equipment and operations. The combination of pure oxygen and oil is explosive.

### Precautions for Safely Handling Oxygen and Acetylene Cylinders:

- **a.** Keep acetylene operating pressures at or below 15 psi.
- **b.** Open the acetylene cylinder valve one-half to one full turn when using a portable rig to be sure that the cylinder can be quickly turned off in the event of burn-back or a fire at a leak in the hose or at a connection.
- **c.** Do not open an acetylene torch’s valve where acetylene could flow into a bucket or other container and cause a fire.
- **d.** Never attempt to connect an acetylene hose to an oxygen torch connection. Damage to the torch or an explosion could result. Acetylene hoses are colored red and acetylene fittings are left hand threaded and usually notched.
- **e.** Never use oxygen or fuel gas from a cylinder except through an approved pressure-reducing regulator.
- **f.** Do not use pipe-fitting compounds or thread lubricants for making connections.
- **g.** Never use a cylinder that is leaking.
- **h.** Store and transport cylinders in the upright position.
- **i.** Secure all cylinders with chain when storing, transporting, or using, to prevent them from being turned over by accident.
- **j.** Never tamper with fusible plugs or other safety devices on cylinders.
- **k.** To open and close acetylene cylinder valves not provided with handwheels, always use the special wrench or key. When cutting, leave the key in place for rapid shutdown in case of fire.
- **l.** Never use any cylinder, full or empty, as a roller or support.
- **m.** Never use oxygen as though it were compressed air.
- **n.** Do not handle oxygen cylinders on the same platform with oil.
- **o.** Never use wire-rope slings or electromagnets for lifting cylinders. Do not lift cylinders by the protective cap alone.
- **p.** Store oxygen cylinders separately from fuel gas cylinders.
- **q.** Always keep empty cylinders separate from full cylinders.
- **r.** Mark all empty cylinders as such after use.
- **s.** Keep all cylinders stored inside buildings at least 20 feet away from combustible materials.
- **t.** Never bring any arc or flame close to or directly into contact with a cylinder.
- **u.** Never exceed the maximum safe withdrawal rate for acetylene cylinders (one seventh of the cylinder's current contents per hour). If acetylene is withdrawn from the cylinder at a greater rate, acetone will also be withdrawn from the cylinder, damaging the cutting equipment. If additional flow is needed, then manifold the required number of cylinders together.
3. Precautions for minimizing the risks of regulatory burn out (R.B.O).
   a. "Crack" the oxygen cylinder valve before attaching the regulator. Stand to one side or the rear of the cylinder outlet. Open the cylinder valve slightly for an instant and then close it to clean the valve of dust and dirt which may have accumulated during storage. Dirt can damage an oxygen regulator and may cause R.B.O.
   b. Use only oxygen regulators to control oxygen supply. A pressure reducing regulator must be connected to the oxygen cylinder valve. Make certain the regulator is clean, free of grease and oil, and has a clean filter installed in its inlet nipple. Oil, grease, coal dust, and other combustibles can cause regulator burnouts. Never use an oxygen regulator for other gases.
   c. Before opening an oxygen cylinder valve, make sure the oxygen regulator pressure-adjusting screw is released. This is done by rotating the screw counterclockwise until it turns, freely. This closes the regulator valve and prevents damage due to a sudden pressure surge.
   d. While opening the oxygen cylinder valve, stand to one side of the oxygen regulator. Do not stand in line with the front or the back of the pressure-adjusting screw. Open the cylinder valve as slowly as possible, until the high pressure gauge reaches cylinder pressure. Never open a cylinder valve suddenly. Sudden surges of high pressure can cause R.B.O.

4. Steps in preparing to cut with oxyacetylene:
   a. Obtain the proper size cutting tip.
      (1) Consult the equipment manufacturer's cutting tip data charts. The charts match up the thickness of the steel being cut with the cutting tip size and also give recommended pressure settings for oxygen and acetylene.
      (2) Be sure that the metal can be cut with an oxyacetylene torch. Oxy-fuel cutting is not used on metals like aluminum, copper, magnesium, and chromium, where the oxide of that metal melts at a higher temperature than the metal itself. Also, stainless steels cannot be easily cut with oxy-fuel because they contain relatively large amounts of chromium and/or nickel.
   b. Screw the cutting torch head in place, hand-tight only.
   c. Before attaching the regulators to the cylinder valves, crack the valves to blow out any dirt and debris.
   d. Attach the regulators, hoses, torch, and correct-sized torch tip.
   e. Make sure the pressure adjusting screws of the acetylene and oxygen regulators are backed out. (That is, that they have been turned counterclockwise until there is a little free play.)
   f. Make sure all cutting torch valves are initially closed.
   g. Open the oxygen cylinder valve all the way. Open the acetylene cylinder valve one full turn only.
   h. Open the acetylene torch valve. Turn the acetylene torch valve off.
i. Turn the acetylene regulator pressure-adjusting screw clockwise until the needle on the regulator dial indicates the proper pressure.

j. Turn the acetylene torch valve off.

k. Turn both oxygen torch valves on.

l. Turn the oxygen regulator pressure-adjusting screw clockwise until the needle on the regulator dial indicates the proper pressure.

m. Turn off the oxygen torch valve on the torch head only.

5. Steps in lighting the torch:
   a. Put on gloves.
   b. Put on welding goggles.
   c. Open the torch acetylene valve one-half turn.
   d. Immediately light the torch with a friction lighter only.
   e. Reduce the acetylene flow at the torch's acetylene valve until the flame just starts to produce black smoke around its edges. Then increase the acetylene flow just enough to get rid of the black smoke.
   f. Open the torch's oxygen valve slowly until the desired type flame is obtained.
      (1) The preheat flame needs to be of the neutral type, which means that equal parts of oxygen and acetylene are being burnt.
      (2) The preheat flame needs to be the right size. Set the pressure correctly, and then follow the directions in "Step e" again. If the preheat flame is too large, there will be or tend to be slag or dross hanging onto the bottom of the cut—assuming that travel speed, tip size, etc., are all correct.

6. Steps in cutting metal with the torch:
   a. Follow the steps in Operation 1 and Operation 2 for the following oxyacetylene cutting variables:
      (1) Cutting tip size.
      (2) Oxygen operating pressure.
      (3) Acetylene operating pressure.
      (4) Preheat flame type.
      (5) Size of preheat flame
   b. Clean the cutting tip. Be sure that the preheat and cutting orifices of the tip are clean. A dirty tip, especially a dirty cutting orifice, will adversely affect the quality of the cut. Dirty orifices can produce such defects as wide kerfs, adherent slag, and rough appearance.
   c. Select the correct flame-to-work distance. The bottom of the preheat flame should be 1/16" to 1/2" from the base metal. Right-handed people should progress from right to left and left-handed people should cut left to right.
   d. Select the correct torch angle.
      (1) For square cuts, the torch should be perpendicular (at 90°) to the base metal and tipped slightly in the direction of travel.
      (2) For beveled cuts, the torch should be held at the angle of the bevel throughout the cutting procedure.
(3) For holes, the torch must be held perpendicular to the base metal throughout the cut.

e. Cut at the proper travel speed. At the correct travel speed, the lines of the cut which project through the thickness of the base metal will be in a straight line. At too fast a travel speed, the lines of the cut will curve back from the progress of the cut and form clearly defined lines termed lag or drag lines. (The amount of drag is often expressed as a percent.)

f. Assure the oxygen level. Although it is possible to make a good weld with an oxygen purity level of only 95%, in order to make good oxy-fuel cut, an oxygen purity level of 99.5% is required. Where leaks in oxygen lines or hoses allow air to be mixed with the oxygen, the quality of the cut can be very seriously affected.

7. Steps in extinguishing the torch:
   a. Close the torch acetylene valve, thus extinguishing the flame.
   b. Close the torch oxygen valve.

8. Steps in closing down the welding station:
   a. Close the oxygen cylinder valve.
   b. Close the acetylene cylinder valve.
   c. Open the torch acetylene valve and bleed the acetylene from the line.
   d. Close the torch acetylene valve.
   e. Turn the acetylene regulator pressure adjusting screw counterclockwise until there is a little free play. Avoid backing out the pressure adjusting screws so much that they come totally out.
   f. Open the torch oxygen valve and bleed the oxygen from the line.
   g. Close the torch oxygen valve.
   h. Turn the oxygen regulator pressure adjusting screw counterclockwise until there is a little free play. Avoid backing out the pressure adjusting screws so much that they come totally out.
1. Instructor will demonstrate how to:
   - Braze with bronze rod;
   - Run a bead with a bronze rod;
   - Square butt braze on light steel plate;
   - Braze lap joints;
   - Braze tee joints;
   - Braze beveled butt joints on heavy steel plate; Braze beveled joints on cast iron;
   - Silver soldering of nonferrous metals; and,
   - Silver soldering of ferrous and nonferrous metals.

2. Student will practice:
   - Brazing with bronze rod;
   - Running beads with bronze rod;
   - Square butt brazing on light steel plate;
   - Brazed lap joints;
   - Brazing tee joints;
   - Brazing beveled butt joints on heavy steel plate; Brazing beveled joints on cast iron;
   - Silver soldering nonferrous metals; and,
   - Silver soldering ferrous and nonferrous metals.

3. Instructor will grade students performance on: Brazing with bronze rod:
   - Running beads with bronze rod;
   - Square butt brazing on light steel plate;
   - Brazed lap joints;
   - Brazing tee joints;
   - Brazing beveled butt joints on heavy steel plate; Building-up on cast iron;
   - Brazing beveled joints on cast iron;
   - Silver soldering nonferrous metals; and,
   - Silver soldering ferrous and nonferrous metals.
WLD-K2
Identify the Safety Hazards
Self-Assessment No. 1

Circle the best answer.

1. Which of the following can be used to ignite an oxyacetylene torch?
   a. Matches
   b. A cigarette lighter
   c. A spark or friction lighter
   d. Any of the above
   e. None of the above

2. Technician A says that they can cut into an old gasoline can with the torch. Technician B says that containers of flammable or toxic substances should never be cut with a torch. Who is correct?
   a. Technician A only
   b. Technician B only
   c. Both Technicians A and B
   d. Neither Technician A nor B

3. If adequate ventilation is unavailable, the technician should:
   a. Cut the metal anyway; ventilation is not important.
   b. Cut the metal while wearing a respirator.
   c. Cut the metal while wearing a heavy-duty dust mask.
   d. Refuse to make the cut.

4. Acetylene operating pressures must be kept at or below:
   a. 5 psi.
   b. 15 psi.
   c. 25 psi.
   d. Acetylene operating pressures are immaterial.

5. Acetylene hoses are _________; acetylene fittings are _________.
   a. Red - left-handed
   b. Blue - left-handed
   c. Red - right-handed
   d. Blue - left-handed
   e. None of the above
6. All cylinders should be secured except when:
   a. Transporting them.
   b. Storing them.
   c. Using them.
   d. Always secure cylinders with chains or in permanent racks.
   e. Securing cylinders is unnecessary.

7. Technician A says that oxygen cylinders should be stored well away from fuel gas cylinders. Technician B says that separate storage is unnecessary. Who is correct?
   a. Technician A only
   b. Technician B only
   c. Both Technicians A and B
   d. Neither Technician A nor B

8. The maximum safe withdrawal rate for acetylene cylinders is:
   a. One fourth of current content per hour.
   b. One fifth of current content per hour.
   c. One seventh of current content per hour.
   d. One tenth of current content per hour.
   e. None of the above

9. Technician A says that only oxygen-specific regulators can be used on oxygen cylinders. Technician B says that it is acceptable to use oxygen regulators on other gas cylinders. Who is correct?
   a. Technician A only
   b. Technician B only
   c. Both Technicians A and B
   d. Neither Technician A nor B

10. Which of the following can be cut with an oxyacetylene torch?
    a. Aluminum
    b. Copper
    c. Chromium
    d. All of the above
    e. None of the above

11. Technician A says that the acetylene cylinder's valve should be opened all the way. Technician B says that the oxygen cylinder's valve should be opened no more than one full turn. Who is correct?
    a. Technician A only
    b. Technician B only
    c. Both Technicians A and B
    d. Neither Technician A nor B
12. Before attaching the regulators to the cylinder valves:
   a. Clean the nipples with acetone.
   b. Crack the valves to blow out any dirt.
   c. Lubricate the threads with oil.
   d. All of the above
   e. None of the above

13. Technician A says that they must reduce the acetylene flow until the flame just starts to produce black smoke around its edges. Technician B says that the acetylene flow must then be increased until the smoke disappears. Who is correct?
   a. Technician A only
   b. Technician B only
   c. Both Technicians A and B
   d. Neither Technician A nor B

14. Dirty orifices on the cutting tip can produce:
   a. Wide kerfs.
   b. Adherent slag.
   c. Rough cut appearance.
   d. All of the above.
   e. None of the above

15. Technician A says that, for cutting holes, the torch must be held parallel to the base metal throughout the cut. Technician B says that square cuts require the torch to be held at 45° to the base metal. Who is correct?
   a. Technician A only
   b. Technician B only
   c. Both Technicians A and B
   d. Neither Technician A nor B

16. Lag lines are the result of
   a. Correct travel speed.
   b. Too great a travel speed.
   c. Too slow a travel speed.
   d. Incorrect torch angle.
   e. None of the above

17. When extinguishing the torch, Technician A says that the acetylene torch valve should be closed first. Technician B says that the oxygen torch valve should be closed first. Who is correct?
   a. Technician A only
   b. Technician B only
   c. Both Technicians A and B
   d. Neither Technician A nor B
18. Good oxy-fuel cuts require an oxygen purity of at least:
   a. 99.5%.
   b. 95.9%.
   c. 59.9%.
   d. None of the above.

19. Both acetylene and oxygen lines should be ________ when closing down the work station.
   a. Removed
   b. Cleaned with acetone
   c. Bled free of gas or fuel
   d. All of the above
   e. None of the above

20. Technician A says that since B is left-handed, B should cut from left to right. Technician B says that the pre-heat flame should still be from 1/6" to 1/2" from the base metal, regardless of the direction of travel. Who is correct?
   a. Technician A only
   b. Technician B only
   c. Both Technicians A and B
   d. Neither Technician A nor B
Identify the Safety Hazards
Self-Assessment No. 1 Answer Key

1.  c
2.  b
3.  b
4.  b
5.  a
6.  d
7.  a
8.  c
9.  a
10. e

13. c
14. d
15. d
16. b
17. a
18. a
19. c
20. c
**Identify the Safety Hazards**

Self-Assessment No. 2

1. **What is the major difference between a brazed joint and a welded joint?**

2. **What two conditions determine whether the joint is brazed or welded?**

3. **How does flux act as a guide to the temperature of the joint?**

4. **What is the color of the plate when it is at the proper temperature for welding?**

5. **Is brazing stronger than fusion welding?**

6. **For silver soldering: what is a 3x flame?**

7. **What alloys are contained in typical silver soldering?**

8. **How can material be prepared for silver soldering?**
9. Is it possible to make fillets when using silver soldering alloys?
WLD-K2
Identify the Safety Hazards
Self-Assessment No. 3

Circle the best answer.

1. Technician A says that they can cut into an old water can with the torch. Technician B says that containers of flammable or toxic substances should never be cut with a torch. Who is correct?
   A. Technician A only
   B. Technician B only
   C. Both Technicians A and B
   D. Neither Technician A nor B

2. Before attaching the regulators to the cylinder valves:
   A. Clean the nipples with acetone.
   B. Crack the valves to blow out any dirt.
   C. Lubricate the threads with oil.
   D. All of the above
   E. None of the above

3. Technician A says that since B is left-handed, B should cut from left to right. Technician B says that the pre-heat flame should still be from 1/6" to 1/2" from the base metal, regardless of the direction of travel. Who is correct?
   A. Technician A only
   B. Technician B only
   C. Both Technicians A and B
   D. Neither Technician A nor B

4. If adequate ventilation is unavailable, the technician should:
   A. Cut the metal anyway; ventilation is not important.
   B. Cut the metal while wearing a respirator.
   C. Cut the metal while wearing a heavy-duty dust mask.
   D. Refuse to make the cut.

5. Technician A says that they must reduce the acetylene flow until the flame just starts to produce black smoke around its edges. Technician B says that the acetylene flow must then be increased until the smoke disappears. Who is correct?
   A. Technician A only
   B. Technician B only
   C. Both Technicians A and B
   D. Neither Technician A nor B
6. Acetylene operating pressures must be kept at or below:
   A. 5 psi
   B. 15 psi
   C. 25 psi
   D. Acetylene operating pressures are immaterial.

7. Dirty orifices on the cutting tip can produce:
   A. Wide kerfs.
   B. Adherent slag.
   C. Rough cut appearance.
   D. All of the above.
   E. None of the above.

8. Acetylene hoses are ________; acetylene fittings are ________
   A. Red - left-handed
   B. Blue - left-handed
   C. Red - right-handed
   D. Blue - left-handed

9. Technician A says that, for cutting holes, the torch must be held parallel to the base metal throughout the cut. Technician B says that square cuts require the torch to be held at 45° to the base metal. Who is correct?
   A. Technician A only
   B. Technician B only
   C. Both Technicians A and B
   D. Neither Technician A nor B

10. Lag lines are the result of
    A. Correct travel speed.
    B. Too great a travel speed.
    C. Too slow a travel speed.
    D. Incorrect torch angle.
    E. None of the above

11. All cylinders should be secured except when:
    A. Transporting them.
    B. Storing them.
    C. Using them.
    D. Always secure cylinders with chains or in permanent racks.
    E. Securing cylinders is unnecessary.
12. Technician A says that the acetylene cylinder's valve should be opened all the way. Technician B says that the oxygen cylinder's valve should be opened no more than one full turn. Who is correct?
   A. Technician A only
   B. Technician B only
   C. Both Technicians A and B
   D. Neither Technician A nor B

13. Which of the following can be used to ignite an oxyacetylene torch?
   A. Matches
   B. A cigarette lighter
   C. A spark or friction lighter
   D. Any of the above
   E. None of the above

14. Both acetylene and oxygen lines should be _________ when closing down the work station.
   A. Removed
   B. Cleaned with acetone
   C. Bled free of gas or fuel
   D. All of the above

15. Technician A says that only oxygen-specific regulators can be used on oxygen cylinders. Technician B says that it is acceptable to use oxygen regulators on other gas cylinders. Who is correct?
   A. Technician A only
   B. Technician B only
   C. Both Technicians A and B
   D. Neither Technician A nor B

16. When extinguishing the torch, Technician A says that the acetylene torch valve should be closed first. Technician B says that the oxygen torch valve should be closed first. Who is correct?
   A. Technician A only
   B. Technician B only
   C. Both Technicians A and B
   D. Neither Technician A nor B

17. Good oxy-fuel cuts require an oxygen purity of at least:
   A. 99.5%.
   B. 95.9%.
   C. 59.9%.
   D. None of the above.
18. Technician A says that oxygen cylinders should be stored well away from fuel gas cylinders. Technician B says that separate storage is unnecessary. Who is correct?  
A. Technician A only  
B. Technician B only  
C. Both technicians A and B  
D. Neither Technician A nor B  

19. The maximum safe withdrawal rate for acetylene cylinders is:  
A. One fourth of current content per hour  
B. One fifth of current content per hour  
C. One seventh of current content per hour  
D. One tenth of current content per hour  

20. Which of the following can be cut with an oxy-acetylene torch?  
A. Aluminum  
B. Copper  
C. Chromium  
D. All of the above  
E. None of the above

SUBJECT: WELDING TECHNICIAN

TIME: 5 HOURS

• DUTY: OXYACETYLENE CUTTING AND WELDING
• TASK: Describe Preventive and/or Protective Measures

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Identify the protective clothing and equipment used by welders;
B. Explain the purpose and use of personal protective equipment;
C. Identify the safety precautions such as the importance of locating gas lines and checking for leaks before operating equipment; and
D. Demonstrate proper body position, protective measures involving positioning the body in safe relationship to the work and the torch, and layout of the work with clamps and fixtures.

INSTRUCTIONAL MATERIALS:

Student Workbook
Written tests on Personal Protective Equipment and accident prevention procedures
Transparencies will be used to emphasize each subject
Hobart Institute Video Material
Miller Module Method Video Materials
Classroom handouts consisting of student worksheets and personal safety checklists
Safety and protective equipment
Personal protective equipment
Oxyfuel welding equipment
Oxygen and fuel gas cylinders
Oxygen and fuel gas regulators
Torch handles
Welding and cutting tips
Cutting torch assemblies
Lighters
Selection of filler metals and oxyfuel welding rod
Selection of base metals for welding and cutting
Welding shop tools
MASTER Handout (WLD-K3-HO)
MASTER Laboratory Aid (WLD-K3-LA)
REFERENCES:

TEXT:  

OTHER:  
Competency Standards, American Welding Society, Latest Edition  
Welding Handbook, Volume One, Welding Technology WHB-1.8, Latest Edition  
Specification for Qualification and Certification for Entry Level Welders, AWS QC10, Latest Edition  
Guide for the Training and Qualifications of Welding Personnel Entry Level Welder, AWS EG2.0-95, Latest Edition

STUDENT PREPARATION:

Student must demonstrate appropriate communication skills and understand principles of basic physical science and mathematics as verified by placement test or completion of required prerequisite courses.

WLD-K1  “Identify and Describe the Function of Each Piece of Equipment”
WLD-K2  “Identify the Safety Hazards”
INTRODUCTION:
The Course Introduction will Include:
- An overview of the need for preventive and protective measures
- A class demonstration of the use of personal protective equipment
- A discussion of training activities resulting in an increase of skill and knowledge leading to certification in related program areas.

PRESENTATION OUTLINE:

Instruction Topics:
A. Purpose of wearing personal protective equipment
B. Identify potential safety hazards for all items of equipment
C. Describe protective and accident preventive measures
D. Illustrate the function of personal protective equipment (Hard Hat, Required Lens Shade, Safety Glasses, Safety Shoes, Hearing Protection Devices, and Respiratory Protection Equipment)
E. Understand the U.S. Dept. of Labor’s Occupational Safety and Health Administration’s Hazard Communication Standard (HazCom)

Student Activities:
A. Select and demonstrate proper use of personal protective equipment, to include eye protection with required shade of lens, hearing protection, radiation and heat protection methods, and respiratory protection
B. Practice safe methods for lighting, safe use of ladders and scaffolds
C. Practice safe methods for electrical hazards and protection against shock
D. Review HazCom Standards and locate Material Safety Data Sheets
E. Practice the use of respiratory equipment

PRACTICAL APPLICATION:
The student will set-up practice equipment in a safe and cautious manner, wearing personal protective equipment. Student will practice the use of respiratory equipment, all safety protection equipment, and use of welder’s hand tools and power tools.

EVALUATION AND/OR VERIFICATION:
Examinations will be given at the end of this section to determine student progress. Students will practice the use of personal protective equipment and safe operational procedures for instructor evaluation.
SUMMARY:

Students need to be able to demonstrate the proper use of personal protective equipment, followed by assessment of safety hazards using HazCom Standards and Material Safety Data Sheets.

NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-K4) dealing with listing the welding variables and describe their effects on weld quality
OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Identify the protective clothing and equipment used by welders;
B. Explain the purpose and use of personal protective equipment;
C. Identify the safety precautions such as the importance of locating gas lines and checking for leaks before operating equipment; and;
D. Demonstrate proper body position, protective measures involving positioning the body in safe relationship to the work and the torch, and layout of the work with clamps and fixtures.

PRESENTATION OUTLINE:

Instruction Topics:
A. Purpose of wearing personal protective equipment
B. Identify potential safety hazards for all items of equipment
C. Describe protective and accident preventive measures
D. Illustrate the function of personal protective equipment (Hard Hat, Required Lens Shade, Safety Glasses, Safety Shoes, Hearing Protection Devices, and Respiratory Protection Equipment)
E. Understand the U.S. Dept. of Labor’s Occupational Safety and Health Administration’s Hazard Communication Standard (HazCom)

Student Activities:
A. Select and demonstrate proper use of personal protective equipment, to include eye protection with required shade of lens, hearing protection, radiation and heat protection methods, and respiratory protection
B. Practice safe methods for lighting, safe use of ladders and scaffolds
C. Practice safe methods for electrical hazards and protection against shock
D. Review HazCom Standards and locate Material Safety Data Sheets
E. Practice the use of respiratory equipment
Caution: Specific preventive and protective safety measures must be followed when using oxyacetylene equipment.

a. Use goggles or shield with a number five shade.
b. Wear gloves, long sleeve shirts, pants of high cotton or wool content, leather boots, and soft cotton caps.
c. When lighting the torch, direct the torch away from yourself and other personnel.
d. Never leave a lit torch unattended. When leaving your work station, always extinguish your torch.
e. Never use matches or butane lighters for lighting a torch. Only use spark or friction lighters.
f. Never cut on containers that have contained flammable or toxic substances.
g. Either move work away from or protect wooden or other flammable materials which may be close to the work.
h. When cutting, cover, concrete floors with sheet metal where sparks and molten metal are being directed.
i. Before beginning to work, locate the nearest fire alarm and the nearest fire extinguisher.
j. Cut in a well-ventilated area. If adequate ventilation is not possible, use a respirator.
k. Keep all petroleum products away from oxyacetylene equipment and operations. The combination of pure oxygen and oil is explosive.

Caution: Handle acetylene and oxygen cylinders carefully:

a. Keep acetylene operating pressures at or below 15 psi.
b. Open the acetylene cylinder valve one-half to one full turn when using a portable rig to be sure that the cylinder can be quickly turned off in the event of burnback or a fire at a leak in the hose or at a connection.
c. Do not open the acetylene torch valve where acetylene could flow into a bucket or other container and cause a fire.
d. Never attempt to connect an acetylene hose to an oxygen torch connection. Damage to the torch or an explosion could result. Acetylene hoses are colored red and acetylene fittings are left-hand threaded and usually notched.
e. Never use oxygen or fuel gas from a cylinder except through an approved pressure-reducing regulator.
f. Do not use pipe-fitting compounds or thread lubricants for making connections.
g. Never use a cylinder that is leaking.
h. Store and transport cylinders in the upright position.
i. Secure all cylinders with chain when storing, transporting, or using, to prevent them from being turned over by accident.
j. Never tamper with fusible plugs or other safety devices on cylinders.
To open and close acetylene cylinder valves not provided with handwheels always use the special wrench or key. When cutting leave the key in place for rapid shutdown in case of fire.

Never use any cylinder, full or empty, as a roller or support.

Never use oxygen as though it were compressed air.

Do not handle oxygen cylinders on the same platform with oil.

Never use wire-rope slings or electromagnets for lifting cylinders. Do not lift cylinders by the protective cap alone.

Store oxygen cylinders separately from fuel gas cylinders.

Always keep empty cylinders separate from full cylinders.

Mark all empty cylinders as such after use.

Keep all cylinders stored inside buildings at least 20 feet away from combustible materials.

Never bring any arc or flame close to or directly into contact with a cylinder.

Never exceed the maximum safe withdrawal rate for acetylene cylinders (one seventh of the cylinder's current contents per hour). If acetylene is withdrawn from the cylinder at a greater rate, acetone will also be withdrawn from the cylinder, damaging the cutting equipment. If additional flow is needed, then manifold the required number of cylinders together.
Answer the following questions and compare your answers to those listed below.

1. What are the precautions recommended to prevent accidents and protect the welder during oxyacetylene cutting?
2. What are the precautions for safely handling and storing acetylene and oxygen cylinders?
3. What are the precautions for minimizing the risk of regulatory burn out (R.B.O.)?
4. What are the steps in preparing to cut with oxyacetylene?
5. What are the steps in lighting the torch?
6. What are the steps in cutting metal with the torch?
7. What are the steps in extinguishing the torch?
8. What are the steps in closing down the welding station?

Answers:

1. Precautions recommended to prevent accidents and to protect the welder during oxyacetylene cutting:
   a. Use goggles or shield with a number five shade.
   b. Wear gloves, long sleeve shirts, pants of high cotton or wool content, leather boots and soft cotton caps.
   c. When lighting the torch, direct the torch away from yourself and other personnel.
   d. Never leave a lit torch unattended. When leaving your work station, always extinguish your torch.
   e. Never use matches or butane lighters for lighting a torch. Only use spark or friction lighters.
   f. Never cut on containers that have contained flammable or toxic substances.
   g. Either move work away from or protect wooden or other flammable materials which may be close to the work.
   h. When cutting, cover concrete floors with sheet metal where sparks and molten metal are being directed.
i. Before beginning to work, locate the nearest fire alarm and the nearest fire extinguisher.

j. Cut in a well ventilated area. If adequate ventilation is not possible, use a respirator.

k. Keep all petroleum products away from oxyacetylene equipment and operations. The combination of pure oxygen and oil is explosive.

2. Precautions for safely handling oxygen and acetylene cylinders:
   a. Keep acetylene operating pressures at or below 15 psi.
   b. Open the acetylene cylinder valve one-half to one full turn when using a portable rig to be sure that the cylinder can be quickly turned off in the event of burn-back or a fire at a leak in the hose or at a connection.
   c. Do not open an acetylene torch's valve where acetylene could flow into a bucket or other container and cause a fire.
   d. Never attempt to connect an acetylene hose to an oxygen torch connection. Damage to the torch or an explosion could result. Acetylene hoses are colored red and acetylene fittings are left hand threaded and usually notched.
   e. Never use oxygen or fuel gas from a cylinder except through an approved pressure-reducing regulator.
   f. Do not use pipe-fitting compounds or thread lubricants for making connections.
   g. Never use a cylinder that is leaking.
   h. Store and transport cylinders in the upright position.
   i. Secure all cylinders with chain when storing, transporting, or using, to prevent them from being turned over by accident.
   j. Never tamper with fusible plugs or other safety devices on cylinders.
   k. To open and close acetylene cylinder valves not provided with handwheels, always use the special wrench or key. When cutting, leave the key in place for rapid shutdown in case of fire.
   l. Never use any cylinder, full or empty, as a roller or support.
   m. Never use oxygen as though it were compressed air.
   n. Do not handle oxygen cylinders on the same platform with oil.
   o. Never use wire-rope slings or electromagnets for lifting cylinders. Do not lift cylinders by the protective cap alone.
   p. Store oxygen cylinders separately from fuel gas cylinders.
   q. Always keep empty cylinders separate from full cylinders.
   r. Mark all empty cylinders as such after use.
   s. Keep all cylinders stored inside buildings at least 20 feet away from combustible materials.
   t. Never bring any arc or flame close to or directly into contact with a cylinder.
   u. Never exceed the maximum safe withdrawal rate for acetylene cylinders (one seventh of the cylinder's current contents per hour). If acetylene is withdrawn from the cylinder at a greater rate, acetone will also be withdrawn from the cylinder, damaging the cutting equipment. If additional flow is needed, then manifold the required number of cylinders together.
3. Precautions for minimizing the risks of regulatory burn out (R.B.O).
   a. "Crack" the oxygen cylinder valve before attaching the regulator. Stand to one side or the rear of the cylinder outlet. Open the cylinder valve slightly for an instant and then close it to clean the valve of dust and dirt which may have accumulated during storage. Dirt can damage an oxygen regulator and may cause R.B.O.
   b. Use only oxygen regulators to control oxygen supply. A pressure reducing regulator must be connected to the oxygen cylinder valve. Make certain the regulator is clean, free of grease and oil, and has a clean filter installed in its inlet nipple. Oil, grease, coal dust, and other combustibles can cause regulator burnouts. Never use an oxygen regulator for other gases.
   c. Before opening an oxygen cylinder valve, make sure the oxygen regulator pressure-adjusting screw is released. This is done by rotating the screw counterclockwise until it turns, freely. This closes the regulator valve and prevents damage due to a sudden pressure surge.
   d. While opening the oxygen cylinder valve, stand to one side of the oxygen regulator. Do not stand in line with the front or the back of the pressure-adjusting screw. Open the cylinder valve as slowly as possible, until the high pressure gauge reaches cylinder pressure. Never open a cylinder valve suddenly. Sudden surges of high pressure can cause R.B.O.

4. Steps in preparing to cut with oxyacetylene:
   a. Obtain the proper size cutting tip.
      (1) Consult the equipment manufacturer's cutting tip data charts. The charts match up the thickness of the steel being cut with the cutting tip size and also give recommended pressure settings for oxygen and acetylene.
      (2) Be sure that the metal can be cut with an oxyacetylene torch. Oxy-fuel cutting is not used on metals like aluminum, copper, magnesium, and chromium, where the oxide of that metal melts at a higher temperature than the metal itself. Also, stainless steels cannot be easily cut with oxy-fuel because they contain relatively large amounts of chromium and/or nickel.
   b. Screw the cutting torch head in place, hand-tight only.
   c. Before attaching the regulators to the cylinder valves, crack the valves to blow out any dirt and debris.
   d. Attach the regulators, hoses, torch, and correct-sized torch tip.
   e. Make sure the pressure adjusting screws of the acetylene and oxygen regulators are backed out. (That is, that they have been turned counterclockwise until there is a little free play.)
   f. Make sure all cutting torch valves are initially closed.
   g. Open the oxygen cylinder valve all the way. Open the acetylene cylinder valve one full turn only.
   h. Open the acetylene torch valve. Turn the acetylene torch valve off.
i. Turn the acetylene regulator pressure-adjusting screw clockwise until the needle on the regulator dial indicates the proper pressure.

j. Turn the acetylene torch valve off.

k. Turn both oxygen torch valves on.

l. Turn the oxygen regulator pressure-adjusting screw clockwise until the needle on the regulator dial indicates the proper pressure.

m. Turn off the oxygen torch valve on the torch head only.

5. Steps in lighting the torch:
   a. Put on gloves.
   b. Put on welding goggles.
   c. Open the torch acetylene valve one-half turn.
   d. Immediately light the torch with a friction lighter only.
   e. Reduce the acetylene flow at the torch's acetylene valve until the flame just starts to produce black smoke around its edges. Then increase the acetylene flow just enough to get rid of the black smoke.
   f. Open the torch's oxygen valve slowly until the desired type flame is obtained.
      (1) The preheat flame needs to be of the neutral type, which means that equal parts of oxygen and acetylene are being burnt.
      (2) The preheat flame needs to be the right size. Set the pressure correctly, and then follow the directions in "Step e" again. If the preheat flame is too large, there will be or tend to be slag or dross hanging onto the bottom of the cut-assuming that travel speed, tip size, etc., are all correct.

6. Steps in cutting metal with the torch:
   a. Follow the steps in Operation 1 and Operation 2 for the following oxyacetylene cutting variables:
      (1) Cutting tip size.
      (2) Oxygen operating pressure.
      (3) Acetylene operating pressure.
      (4) Preheat flame type.
      (5) Size of preheat flame
   b. Clean the cutting tip. Be sure that the preheat and cutting orifices of the tip are clean. A dirty tip, especially a dirty cutting orifice, will adversely affect the quality of the cut. Dirty orifices can produce such defects as wide kerfs, adherent slag, and rough appearance.
   c. Select the correct flame-to-work distance. The bottom of the preheat flame should be 1/16" to 1/2" from the base metal. Right-handed people should progress from right to left and left-handed people should cut left to right.
   d. Select the correct torch angle.
      (1) For square cuts, the torch should be perpendicular (at 90°) to the base metal and tipped slightly in the direction of travel.
      (2) For beveled cuts, the torch should be held at the angle of the bevel throughout the cutting procedure.
(3) For holes, the torch must be held perpendicular to the base metal throughout the cut.

e. Cut at the proper travel speed. At the correct travel speed, the lines of the cut which project through the thickness of the base metal will be in a straight line. At too fast a travel speed, the lines of the cut will curve back from the progress of the cut and form clearly defined lines termed lag or drag lines. (The amount of drag is often expressed as a percent.)

f. Assure the oxygen level. Although it is possible to make a good weld with an oxygen purity level of only 95%, in order to make good oxy-fuel cut, an oxygen purity level of 99.5% is required. Where leaks in oxygen lines or hoses allow air to be mixed with the oxygen, the quality of the cut can be very seriously affected.

7. Steps in extinguishing the torch:
   a. Close the torch acetylene valve, thus extinguishing the flame.
   b. Close the torch oxygen valve.

8. Steps in closing down the welding station:
   a. Close the oxygen cylinder valve.
   b. Close the acetylene cylinder valve.
   c. Open the torch acetylene valve and bleed the acetylene from the line.
   d. Close the torch acetylene valve.
   e. Turn the acetylene regulator pressure adjusting screw counterclockwise until there is a little free play. Avoid backing out the pressure adjusting screws so much that they come totally out.
   f. Open the torch oxygen valve and bleed the oxygen from the line.
   g. Close the torch oxygen valve.
   h. Turn the oxygen regulator pressure adjusting screw counterclockwise until there is a little free play. Avoid backing out the pressure adjusting screws so much that they come totally out.
Describe Preventive and/or Protective Measures
Attachment 4: MASTER Laboratory Worksheet No. 2

1. Instructor will demonstrate how to:
   Brahze with bronze rod;
   Run a bead with a bronze rod;
   Square butt braze on light steel plate;
   Brahze lap joints;
   Brahze tee joints;
   Brahze beveled butt joints on heavy steel plate; Brahze beveled joints on cast iron;
   Silver soldering of nonferrous metals; and,
   Silver soldering of ferrous and nonferrous metals.

2. Student will practice:
   Brahzing with bronze rod;
   Running beads with bronze rod;
   Square butt brazing on light steel plate;
   Braided lap joints;
   Brahzing tee joints;
   Brahzing beveled butt joints on heavy steel plate; Brahzing beveled joints on cast iron;
   Silver soldering nonferrous metals; and,
   Silver soldering ferrous and nonferrous metals.

3. Instructor will grade students performance on: Brahzing with bronze rod:
   Running beads with bronze rod;
   Square butt brazing on light steel plate;
   Braided lap joints;
   Brahzing tee joints;
   Brahzing beveled butt joints on heavy steel plate; Building-up on cast iron;
   Brahzing beveled joints on cast iron;
   Silver soldering nonferrous metals; and,
   Silver soldering ferrous and nonferrous metals.
WLD-K3
Describe Preventive and/or Protective Measures
Self-Assessment No. 1

Circle the best answer.

1. Which of the following can be used to ignite an oxyacetylene torch?
   a. Matches
   b. A cigarette lighter
   c. A spark or friction lighter
   d. Any of the above
   e. None of the above

2. Technician A says that they can cut into an old gasoline can with the torch. Technician B says that containers of flammable or toxic substances should never be cut with a torch. Who is correct?
   a. Technician A only
   b. Technician B only
   c. Both Technicians A and B
   d. Neither Technician A nor B

3. If adequate ventilation is unavailable, the technician should:
   a. Cut the metal anyway; ventilation is not important.
   b. Cut the metal while wearing a respirator.
   c. Cut the metal while wearing a heavy-duty dust mask.
   d. Refuse to make the cut.

4. Acetylene operating pressures must be kept at or below:
   a. 5 psi.
   b. 15 psi.
   c. 25 psi.
   d. Acetylene operating pressures are immaterial.

5. Acetylene hoses are _________; acetylene fittings are _________.
   a. Red - left-handed
   b. Blue - left-handed
   c. Red - right-handed
   d. Blue - left-handed
   e. None of the above
6. All cylinders should be secured except when:
   a. Transporting them.
   b. Storing them.
   c. Using them.
   d. Always secure cylinders with chains or in permanent racks.
   e. Securing cylinders is unnecessary.

7. Technician A says that oxygen cylinders should be stored well away from fuel gas cylinders. Technician B says that separate storage is unnecessary. Who is correct?
   a. Technician A only
   b. Technician B only
   c. Both Technicians A and B
   d. Neither Technician A nor B

8. The maximum safe withdrawal rate for acetylene cylinders is:
   a. One fourth of current content per hour.
   b. One fifth of current content per hour.
   c. One seventh of current content per hour.
   d. One tenth of current content per hour.
   e. None of the above

9. Technician A says that only oxygen-specific regulators can be used on oxygen cylinders. Technician B says that it is acceptable to use oxygen regulators on other gas cylinders. Who is correct?
   a. Technician A only
   b. Technician B only
   c. Both Technicians A and B
   d. Neither Technician A nor B

10. Which of the following can be cut with an oxyacetylene torch?
    a. Aluminum
    b. Copper
    c. Chromium
    d. All of the above
    e. None of the above

11. Technician A says that the acetylene cylinder's valve should be opened all the way. Technician B says that the oxygen cylinder's valve should be opened no more than one full turn. Who is correct?
    a. Technician A only
    b. Technician B only
    c. Both Technicians A and B
    d. Neither Technician A nor B
12. Before attaching the regulators to the cylinder valves:
   a. Clean the nipples with acetone.
   b. Crack the valves to blow out any dirt.
   c. Lubricate the threads with oil.
   d. All of the above
   e. None of the above

13. Technician A says that they must reduce the acetylene flow until the flame just starts to produce black smoke around its edges. Technician B says that the acetylene flow must then be increased until the smoke disappears. Who is correct?
   a. Technician A only
   b. Technician B only
   c. Both Technicians A and B
   d. Neither Technician A nor B

14. Dirty orifices on the cutting tip can produce:
   a. Wide kerfs.
   b. Adherent slag.
   c. Rough cut appearance.
   d. All of the above.
   e. None of the above

15. Technician A says that, for cutting holes, the torch must be held parallel to the base metal throughout the cut. Technician B says that square cuts require the torch to be held at 45° to the base metal. Who is correct?
   a. Technician A only
   b. Technician B only
   c. Both Technicians A and B
   d. Neither Technician A nor B

16. Lag lines are the result of
   a. Correct travel speed.
   b. Too great a travel speed.
   c. Too slow a travel speed.
   d. Incorrect torch angle.
   e. None of the above

17. When extinguishing the torch, Technician A says that the acetylene torch valve should be closed first. Technician B says that the oxygen torch valve should be closed first. Who is correct?
   a. Technician A only
   b. Technician B only
   c. Both Technicians A and B
   d. Neither Technician A nor B
18. Good oxy-fuel cuts require an oxygen purity of at least:
   a. 99.5%.
   b. 95.9%.
   c. 59.9%.
   d. None of the above.

19. Both acetylene and oxygen lines should be _________ when closing down the work station.
   a. Removed
   b. Cleaned with acetone
   c. Bled free of gas or fuel
   d. All of the above
   e. None of the above

20. Technician A says that since B is left-handed, B should cut from left to right. Technician B says that the pre-heat flame should still be from 1/6" to 1/2" from the base metal, regardless of the direction of travel. Who is correct?
   a. Technician A only
   b. Technician B only
   c. Both Technicians A and B
   d. Neither Technician A nor B
WLD-K3

WLD-K3
Describe Preventive and/or Protective Measures
Self-Assessment No. 2

1. What is the major difference between a brazed joint and a welded joint?

2. What two conditions determines whether the joint is brazed or welded?

3. How does flux act as a guide to the temperature of the joint?

4. What is the color of the plate when it is at the proper temperature for welding?

5. Is brazing stronger than fusion welding?

6. For silver soldering: what is a 3x flame?

7. What alloys are contained in typical silver soldering?

8. How can material be prepared for silver soldering?
9. Is it possible to make fillets when using silver soldering alloys?
SUBJECT: WELDING TECHNICIAN  TIME: 12 HOURS

• DUTY: OXYACETYLENE CUTTING AND WELDING
• TASK: List the Welding Variables and Describe Their Effects on Weld Quality

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Provide demonstrations related to the visual examination of welds;
B. Perform visual examination of welds;
C. Discuss common weld discontinuities;
D. Explain the impact of welding variables on oxyacetylene processes; and,
E. Demonstrate brazing and soldering techniques.

INSTRUCTIONAL MATERIALS:

Student Workbook
Written tests on oxyacetylene welding variables and operational procedures
Transparencies will be used to emphasize each subject
Hobart Institute Video Material
Miller Module Method Video Material
Classroom handouts consisting of student worksheets demonstrating proper beading technique and welding variables
Hobart OAW wall chart
Personal protective equipment
Oxyfuel welding equipment
Oxygen and fuel gas cylinders
Oxygen and fuel gas regulators
Torch handles
Welding and cutting tips
Cutting torch assemblies
Lighters
Selection of filler metals and oxyfuel welding rod
Selection of base metals for welding and cutting
Welding shop tools
MASTER Handout (WLD-K4-HO)
MASTER Laboratory Aid (WLD-K4-LA)
MASTER Laboratory Worksheet No. 1 (WLD-K4-LW1)
REFERENCES:

TEXT:

OTHER:

*Competency Standards*, American Welding Society, Latest Edition

*Specification for Qualification and Certification for Entry Level Welders*, AWS QC10, Latest Edition

STUDENT PREPARATION:

Student must demonstrate appropriate communication skills and understand principles of basic physical science and mathematics as verified by placement test or completion of required college prerequisite courses.

WLD-K1 "Identify and Describe the Function of Each Piece of Equipment"

WLD-K2 "Identify the Safety Hazards"

WLD-K3 "Describe Preventive and/or Protective Measures"

INTRODUCTION:

The Course Introduction will Include:

- An overview of weld variables and their effects on weld quality
• A class demonstration of welding variables and their effects on weld quality
• A discussion on professional development activities that will lead to certification in related program areas

PRESENTATION OUTLINE:

Instruction Topics:
A. Continue to illustrate the function of Oxyacetylene equipment
B. Demonstrate discontinuities and their effects on weld quality
C. Illustrate welding variables and how procedures can maintain weld quality
D. Illustrate proper techniques of applying welds or beads in various positions
E. Illustrate variables associated with cutting
F. Demonstrate brazing and soldering of various metals in various positions

Student Activities:
A. Identify weld discontinuities
B. Remove discontinuities from cut area using grinders and files
C. Remove oxidation for welding
D. Demonstrate proper cleaning techniques
E. Oxyacetylene weld practice pieces
F. Explain weld variables and use of filler metal for each welding example
G. Evaluate the process followed for each example
H. Braze and silver solder mild steel in various positions

PRACTICAL APPLICATION:

Utilizing all safety measures and protective equipment, the student will set-up oxyacetylene equipment. When welding various metals the student will chart the welding variables and understand their effects on weld quality.

EVALUATION AND/OR VERIFICATION:

Two examinations will be given in this module to determine student progress. Practical exercises will be evaluated by student and instructor.

SUMMARY:

The class will discuss filler metal compatibility with metals using the oxyacetylene welding process. The methods to prevent or reduce weld related distortion will be discussed and demonstrated in laboratory exercises. Proper methods of applying beads and a complete understanding of welding variables for oxyacetylene welding will be taught and emphasized with practical exercises.
NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-K5) dealing with describing the AWS oxyfuel gas welding rod classification system.
WLD-K4-HO
List the Welding Variables and Describe Their Effects on Weld Quality
Attachment 1: MASTER Handout

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Provide demonstrations related to the visual examination of welds;
B. Perform visual examination of welds;
C. Discuss common weld discontinuities;
D. Explain the impact of welding variables on oxyacetylene processes; and,
E. Demonstrate brazing and soldering techniques.

MODULE OUTLINE:

Instruction Topics:
A. Continue to illustrate the function of Oxyacetylene equipment
B. Demonstrate discontinuities and their effects on weld quality
C. Illustrate welding variables and how procedures can maintain weld quality
D. Illustrate proper techniques of applying welds or beads in various positions
E. Illustrate variables associated with cutting
F. Demonstrate brazing and soldering of various metals in various positions

Student Activities:
A. Identify weld discontinuities
B. Remove discontinuities from cut area using grinders and files
C. Remove oxidation for welding
D. Demonstrate proper cleaning techniques
E. Oxyacetylene weld practice pieces
F. Explain weld variables and use of filler metal for each welding example
G. Evaluate the process followed for each example
H. Braze and silver solder mild steel in various positions
Caution: Specific preventive and protective safety measures must be followed when using oxyacetylene equipment.

a. Use goggles or shield with a number five shade.
b. Wear gloves, long sleeve shirts, pants of high cotton or wool content, leather boots, and soft cotton caps.
c. When lighting the torch, direct the torch away from yourself and other personnel.
d. Never leave a lit torch unattended. When leaving your work station, always extinguish your torch.
e. Never use matches or butane lighters for lighting a torch. Only use spark or friction lighters.
f. Never cut on containers that have contained flammable or toxic substances.
g. Either move work away from or protect wooden or other flammable materials which may be close to the work.
h. When cutting, cover, concrete floors with sheet metal where sparks and molten metal are being directed.
i. Before beginning to work, locate the nearest fire alarm and the nearest fire extinguisher.
j. Cut in a well-ventilated area. If adequate ventilation is not possible, use a respirator.
k. Keep all petroleum products away from oxyacetylene equipment and operations. The combination of pure oxygen and oil is explosive.

Caution: Handle acetylene and oxygen cylinders carefully:

a. Keep acetylene operating pressures at or below 15 psi.
b. Open the acetylene cylinder valve one-half to one full turn when using a portable rig to be sure that the cylinder can be quickly turned off in the event of burnback or a fire at a leak in the hose or at a connection.
c. Do not open the acetylene torch valve where acetylene could flow into a bucket or other container and cause a fire.
d. Never attempt to connect an acetylene hose to an oxygen torch connection. Damage to the torch or an explosion could result. Acetylene hoses are colored red and acetylene fittings are left-hand threaded and usually notched.
e. Never use oxygen or fuel gas from a cylinder except through an approved pressure-reducing regulator.
f. Do not use pipe-fitting compounds or thread lubricants for making connections.
g. Never use a cylinder that is leaking.
h. Store and transport cylinders in the upright position.
i. Secure all cylinders with chain when storing, transporting, or using, to prevent them from being turned over by accident.
j. Never tamper with fusible plugs or other safety devices on cylinders.
To open and close acetylene cylinder valves not provided with handwheels always use the special wrench or key. When cutting leave the key in place for rapid shutdown in case of fire.

Never use any cylinder, full or empty, as a roller or support.

Never use oxygen as though it were compressed air.

Do not handle oxygen cylinders on the same platform with oil.

Never use wire-rope slings or electromagnets for lifting cylinders. Do not lift cylinders by the protective cap alone.

Store oxygen cylinders separately from fuel gas cylinders.

Always keep empty cylinders separate from full cylinders.

Mark all empty cylinders as such after use.

Keep all cylinders stored inside buildings at least 20 feet away from combustible materials.

Never bring any arc or flame close to or directly into contact with a cylinder.

Never exceed the maximum safe withdrawal rate for acetylene cylinders (one seventh of the cylinder's current contents per hour). If acetylene is withdrawn from the cylinder at a greater rate, acetone will also be withdrawn from the cylinder, damaging the cutting equipment. If additional flow is needed, then manifold the required number of cylinders together.
List the Welding Variables and Describe Their Effects on Weld Quality

Answer the following questions and compare your answers to those listed below.

1. What are the precautions recommended to prevent accidents and protect the welder during oxyacetylene cutting?

2. What are the precautions for safely handling and storing acetylene and oxygen cylinders?

3. What are the precautions for minimizing the risk of regulatory burn out (R.B.O.)?

4. What are the steps in preparing to cut with oxyacetylene?

5. What are the steps in lighting the torch?

6. What are the steps in cutting metal with the torch?

7. What are the steps in extinguishing the torch?

8. What are the steps in closing down the welding station?

Answers:

1. Precautions recommended to prevent accidents and to protect the welder during oxyacetylene cutting:
   a. Use goggles or shield with a number five shade.
   b. Wear gloves, long sleeve shirts, pants of high cotton or wool content, leather boots and soft cotton caps.
   c. When lighting the torch, direct the torch away from yourself and other personnel.
   d. Never leave a lit torch unattended. When leaving your work station, always extinguish your torch.
   e. Never use matches or butane lighters for lighting a torch. Only use spark or friction lighters.
   f. Never cut on containers that have contained flammable or toxic substances.
   g. Either move work away from or protect wooden or other flammable materials which may be close to the work.
   h. When cutting, cover concrete floors with sheet metal where sparks and molten metal are being directed.
Before beginning to work, locate the nearest fire alarm and the nearest fire extinguisher.

Cut in a well ventilated area. If adequate ventilation is not possible, use a respirator.

Keep all petroleum products away from oxyacetylene equipment and operations. The combination of pure oxygen and oil is explosive.

2. Precautions for safely handling oxygen and acetylene cylinders:
   a. Keep acetylene operating pressures at or below 15 psi.
   b. Open the acetylene cylinder valve one-half to one full turn when using a portable rig to be sure that the cylinder can be quickly turned off in the event of burn-back or a fire at a leak in the hose or at a connection.
   c. Do not open an acetylene torch's valve where acetylene could flow into a bucket or other container and cause a fire.
   d. Never attempt to connect an acetylene hose to an oxygen torch connection. Damage to the torch or an explosion could result. Acetylene hoses are colored red and acetylene fittings are left hand threaded and usually notched.
   e. Never use oxygen or fuel gas from a cylinder except through an approved pressure-reducing regulator.
   f. Do not use pipe-fitting compounds or thread lubricants for making connections.
   g. Never use a cylinder that is leaking.
   h. Store and transport cylinders in the upright position.
   i. Secure all cylinders with chain when storing, transporting, or using, to prevent them from being turned over by accident.
   j. Never tamper with fusible plugs or other safety devices on cylinders.
   k. To open and close acetylene cylinder valves not provided with handwheels, always use the special wrench or key. When cutting, leave the key in place for rapid shutdown in case of fire.
   l. Never use any cylinder, full or empty, as a roller or support.
   m. Never use oxygen as though it were compressed air.
   n. Do not handle oxygen cylinders on the same platform with oil.
   o. Never use wire-rope slings or electromagnets for lifting cylinders. Do not lift cylinders by the protective cap alone.
   p. Store oxygen cylinders separately from fuel gas cylinders.
   q. Always keep empty cylinders separate from full cylinders.
   r. Mark all empty cylinders as such after use.
   s. Keep all cylinders stored inside buildings at least 20 feet away from combustible materials.
   t. Never bring any arc or flame close to or directly into contact with a cylinder.
   u. Never exceed the maximum safe withdrawal rate for acetylene cylinders (one seventh of the cylinder's current contents per hour). If acetylene is withdrawn from the cylinder at a greater rate, acetone will also be withdrawn from the cylinder, damaging the cutting equipment. If additional flow is needed, then manifold the required number of cylinders together.
3. Precautions for minimizing the risks of regulatory burn out (R.B.O).
   a. "Crack" the oxygen cylinder valve before attaching the regulator. Stand to one side or the rear of the cylinder outlet. Open the cylinder valve slightly for an instant and then close it to clean the valve of dust and dirt which may have accumulated during storage. Dirt can damage an oxygen regulator and may cause R.B.O.
   b. Use only oxygen regulators to control oxygen supply. A pressure reducing regulator must be connected to the oxygen cylinder valve. Make certain the regulator is clean, free of grease and oil, and has a clean filter installed in its inlet nipple. Oil, grease, coal dust, and other combustibles can cause regulator burnouts. Never use an oxygen regulator for other gases.
   c. Before opening an oxygen cylinder valve, make sure the oxygen regulator pressure-adjusting screw is released. This is done by rotating the screw counterclockwise until it turns, freely. This closes the regulator valve and prevents damage due to a sudden pressure surge.
   d. While opening the oxygen cylinder valve, stand to one side of the oxygen regulator. Do not stand in line with the front or the back of the pressure-adjusting screw. Open the cylinder valve as slowly as possible, until the high pressure gauge reaches cylinder pressure. Never open a cylinder valve suddenly. Sudden surges of high pressure can cause R.B.O.

4. Steps in preparing to cut with oxyacetylene:
   a. Obtain the proper size cutting tip.
      (1) Consult the equipment manufacturer's cutting tip data charts. The charts match up the thickness of the steel being cut with the cutting tip size and also give recommended pressure settings for oxygen and acetylene.
      (2) Be sure that the metal can be cut with an oxyacetylene torch. Oxy-fuel cutting is not used on metals like aluminum, copper, magnesium, and chromium, where the oxide of that metal melts at a higher temperature than the metal itself. Also, stainless steels cannot be easily cut with oxy-fuel because they contain relatively large amounts of chromium and/or nickel.
   b. Screw the cutting torch head in place, hand-tight only.
   c. Before attaching the regulators to the cylinder valves, crack the valves to blow out any dirt and debris.
   d. Attach the regulators, hoses, torch, and correct-sized torch tip.
   e. Make sure the pressure adjusting screws of the acetylene and oxygen regulators are backed out. (That is, that they have been turned counterclockwise until there is a little free play.)
   f. Make sure all cutting torch valves are initially closed.
   g. Open the oxygen cylinder valve all the way. Open the acetylene cylinder valve one full turn only.
   h. Open the acetylene torch valve. Turn the acetylene torch valve off.
i. Turn the acetylene regulator pressure-adjusting screw clockwise until the needle on the regulator dial indicates the proper pressure.

j. Turn the acetylene torch valve off.

k. Turn both oxygen torch valves on.

l. Turn the oxygen regulator pressure-adjusting screw clockwise until the needle on the regulator dial indicates the proper pressure.

m. Turn off the oxygen torch valve on the torch head only.

5. Steps in lighting the torch:
   a. Put on gloves.
   b. Put on welding goggles.
   c. Open the torch acetylene valve one-half turn.
   d. Immediately light the torch with a friction lighter only.
   e. Reduce the acetylene flow at the torch's acetylene valve until the flame just starts to produce black smoke around its edges. Then increase the acetylene flow just enough to get rid of the black smoke.
   f. Open the torch's oxygen valve slowly until the desired type flame is obtained.
      (1) The preheat flame needs to be of the neutral type, which means that equal parts of oxygen and acetylene are being burnt.
      (2) The preheat flame needs to be the right size. Set the pressure correctly, and then follow the directions in "Step e" again. If the preheat flame is too large, there will be or tend to be slag or dross hanging onto the bottom of the cut-assuming that travel speed, tip size, etc., are all correct.

6. Steps in cutting metal with the torch:
   a. Follow the steps in Operation 1 and Operation 2 for the following oxyacetylene cutting variables:
      (1) Cutting tip size.
      (2) Oxygen operating pressure.
      (3) Acetylene operating pressure.
      (4) Preheat flame type.
      (5) Size of preheat flame
   b. Clean the cutting tip. Be sure that the preheat and cutting orifices of the tip are clean. A dirty tip, especially a dirty cutting orifice, will adversely affect the quality of the cut. Dirty orifices can produce such defects as wide kerfs, adherent slag, and rough appearance.
   c. Select the correct flame-to-work distance. The bottom of the preheat flame should be 1/16" to 1/2" from the base metal. Right-handed people should progress from right to left and left-handed people should cut left to right.
   d. Select the correct torch angle.
      (1) For square cuts, the torch should be perpendicular (at 90°) to the base metal and tipped slightly in the direction of travel.
      (2) For beveled cuts, the torch should be held at the angle of the bevel throughout the cutting procedure.
(3) For holes, the torch must be held perpendicular to the base metal throughout the cut.

e. Cut at the proper travel speed. At the correct travel speed, the lines of the cut which project through the thickness of the base metal will be in a straight line. At too fast a travel speed, the lines of the cut will curve back from the progress of the cut and form clearly defined lines termed lag or drag lines. (The amount of drag is often expressed as a percent.)

f. Assure the oxygen level. Although it is possible to make a good weld with an oxygen purity level of only 95%, in order to make good oxy-fuel cut, an oxygen purity level of 99.5% is required. Where leaks in oxygen lines or hoses allow air to be mixed with the oxygen, the quality of the cut can be very seriously affected.

7. Steps in extinguishing the torch:
   a. Close the torch acetylene valve, thus extinguishing the flame.
   b. Close the torch oxygen valve.

8. Steps in closing down the welding station:
   a. Close the oxygen cylinder valve.
   b. Close the acetylene cylinder valve.
   c. Open the torch acetylene valve and bleed the acetylene from the line.
   d. Close the torch acetylene valve.
   e. Turn the acetylene regulator pressure adjusting screw counterclockwise until there is a little free play. Avoid backing out the pressure adjusting screws so much that they come totally out.
   f. Open the torch oxygen valve and bleed the oxygen from the line.
   g. Close the torch oxygen valve.
   h. Turn the oxygen regulator pressure adjusting screw counterclockwise until there is a little free play. Avoid backing out the pressure adjusting screws so much that they come totally out.
List the Welding Variables and Describe Their Effects on Weld Quality
Attachment 4: MASTER Laboratory Worksheet No. 2

1. Instructor will demonstrate how to:
   - Braze with bronze rod;
   - Run a bead with a bronze rod;
   - Square butt braze on light steel plate;
   - Braze lap joints;
   - Braze tee joints;
   - Braze beveled butt joints on heavy steel plate; Braze beveled joints on cast iron;
   - Silver soldering of nonferrous metals; and,
   - Silver soldering of ferrous and nonferrous metals.

2. Student will practice:
   - Brazing with bronze rod;
   - Running beads with bronze rod;
   - Square butt brazing on light steel plate;
   - Brazed lap joints;
   - Brazing tee joints;
   - Brazing beveled butt joints on heavy steel plate; Brazing beveled joints on cast iron;
   - Silver soldering nonferrous metals; and,
   - Silver soldering ferrous and nonferrous metals.

3. Instructor will grade students performance on: Brazing with bronze rod:
   - Running beads with bronze rod;
   - Square butt brazing on light steel plate;
   - Brazed lap joints;
   - Brazing tee joints;
   - Brazing beveled butt joints on heavy steel plate; Building-up on cast iron;
   - Brazing beveled joints on cast iron;
   - Silver soldering nonferrous metals; and,
   - Silver soldering ferrous and nonferrous metals.
WLD-K4
List the Welding Variables and Describe Their Effects on Weld Quality
Self-Assessment No. 1

Circle the best answer.

1. Which of the following can be used to ignite an oxyacetylene torch?
   a. Matches
   b. A cigarette lighter
   c. A spark or friction lighter
   d. Any of the above
   e. None of the above

2. Technician A says that they can cut into an old gasoline can with the torch. Technician B says that containers of flammable or toxic substances should never be cut with a torch. Who is correct?
   a. Technician A only
   b. Technician B only
   c. Both Technicians A and B
   d. Neither Technician A nor B

3. If adequate ventilation is unavailable, the technician should:
   a. Cut the metal anyway; ventilation is not important.
   b. Cut the metal while wearing a respirator.
   c. Cut the metal while wearing a heavy-duty dust mask.
   d. Refuse to make the cut.

4. Acetylene operating pressures must be kept at or below:
   a. 5 psi.
   b. 15 psi.
   c. 25 psi.
   d. Acetylene operating pressures are immaterial.

5. Acetylene hoses are __________; acetylene fittings are __________.
   a. Red - left-handed
   b. Blue - left-handed
   c. Red - right-handed
   d. Blue - left-handed
   e. None of the above
6. All cylinders should be secured except when:
   a. Transporting them.
   b. Storing them.
   c. Using them.
   d. Always secure cylinders with chains or in permanent racks.
   e. Securing cylinders is unnecessary.

7. Technician A says that oxygen cylinders should be stored well away from fuel gas cylinders. Technician B says that separate storage is unnecessary. Who is correct?
   a. Technician A only
   b. Technician B only
   c. Both Technicians A and B
   d. Neither Technician A nor B

8. The maximum safe withdrawal rate for acetylene cylinders is:
   a. One fourth of current content per hour.
   b. One fifth of current content per hour.
   c. One seventh of current content per hour.
   d. One tenth of current content per hour.
   e. None of the above

9. Technician A says that only oxygen-specific regulators can be used on oxygen cylinders. Technician B says that it is acceptable to use oxygen regulators on other gas cylinders. Who is correct?
   a. Technician A only
   b. Technician B only
   c. Both Technicians A and B
   d. Neither Technician A nor B

10. Which of the following can be cut with an oxyacetylene torch?
    a. Aluminum
    b. Copper
    c. Chromium
    d. All of the above
    e. None of the above

11. Technician A says that the acetylene cylinder's valve should be opened all the way. Technician B says that the oxygen cylinder's valve should be opened no more than one full turn. Who is correct?
    a. Technician A only
    b. Technician B only
    c. Both Technicians A and B
    d. Neither Technician A nor B
12. Before attaching the regulators to the cylinder valves:
   a. Clean the nipples with acetone.
   b. Crack the valves to blow out any dirt.
   c. Lubricate the threads with oil.
   d. All of the above
   e. None of the above

13. Technician A says that they must reduce the acetylene flow until the flame just starts to produce black smoke around its edges. Technician B says that the acetylene flow must then be increased until the smoke disappears. Who is correct?
   a. Technician A only
   b. Technician B only
   c. Both Technicians A and B
   d. Neither Technician A nor B

14. Dirty orifices on the cutting tip can produce:
   a. Wide kerfs.
   b. Adherent slag.
   c. Rough cut appearance.
   d. All of the above.
   e. None of the above

15. Technician A says that, for cutting holes, the torch must be held parallel to the base metal throughout the cut. Technician B says that square cuts require the torch to be held at 45° to the base metal. Who is correct?
   a. Technician A only
   b. Technician B only
   c. Both Technicians A and B
   d. Neither Technician A nor B

16. Lag lines are the result of
   a. Correct travel speed.
   b. Too great a travel speed.
   c. Too slow a travel speed.
   d. Incorrect torch angle.
   e. None of the above

17. When extinguishing the torch, Technician A says that the acetylene torch valve should be closed first. Technician B says that the oxygen torch valve should be closed first. Who is correct?
   a. Technician A only
   b. Technician B only
   c. Both Technicians A and B
   d. Neither Technician A nor B
18. Good oxy-fuel cuts require an oxygen purity of at least:
   a. 99.5%.
   b. 95.9%.
   c. 59.9%.
   d. None of the above.

19. Both acetylene and oxygen lines should be _________ when closing down the work station.
   a. Removed
   b. Cleaned with acetone
   c. Bled free of gas or fuel
   d. All of the above
   e. None of the above

20. Technician A says that since B is left-handed, B should cut from left to right. Technician B says that the pre-heat flame should still be from 1/6" to 1/2" from the base metal, regardless of the direction of travel. Who is correct?
   a. Technician A only
   b. Technician B only
   c. Both Technicians A and B
   d. Neither Technician A nor B

WLD-K4
List the Welding Variables and Describe Their Effects on Weld Quality
Self-Assessment No. 2

1. What is the major difference between a brazed joint and a welded joint?

2. What two conditions determines whether the joint is brazed or welded?

3. How does flux act as a guide to the temperature of the joint?

4. What is the color of the plate when it is at the proper temperature for welding?

5. Is brazing stronger than fusion welding?

6. For silver soldering: what is a 3x flame?

7. What alloys are contained in typical silver soldering?

8. How can material be prepared for silver soldering?
9. Is it possible to make fillets when using silver soldering alloys?
SUBJECT:   WELDING TECHNICIAN  TIME:  4 HOURS

- DUTY:  OXYACETYLENE CUTTING AND WELDING
- TASK:  Describe the AWS Oxyfuel Gas Welding Rod Classification System

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Classify filler metal for oxy-fuel gas welding;
B. Identify parent metal compatibility with filler metal; and,
C. Select welding tips required for the process.

INSTRUCTIONAL MATERIALS:

Student Workbook
Written tests on metal alloy charts, AWS welding rod classification, and selection of welding tips
Transparencies will be used to emphasize each subject
Hobart Institute Video Material
Miller Module Method Video Material
Classroom handouts consisting of student worksheets, metal compatibility, filler metal, and alloy charts
Hobart OAW wall chart
Personal protective equipment
Oxyfuel welding equipment
Oxygen and fuel gas cylinders
Oxygen and fuel gas regulators
Torch handles
Welding and cutting tips
Cutting torch assemblies
Lighters
Selection of filler metals and oxyfuel welding rod
Selection of base metals for welding and cutting
Welding shop tools
MASTER Handout (WLD-K5-HO)
MASTER Laboratory Aid (WLD-K5-LA)
MASTER Laboratory Worksheet No. 1 (WLD-K5-LW1)
MASTER Laboratory Worksheet No. 2 (WLD-K5-LW2)
REFERENCES:

TEXT:

OTHER:

*Competency Standards*, American Welding Society, Latest Edition

*Specification for Qualification and Certification for Entry Level Welders*, AWS QC10, Latest Edition

STUDENT PREPARATION:

Student must demonstrate appropriate communication skills and understand principles of basic physical science and mathematics as verified by placement test or completion of required prerequisite courses.

WLD-K1  “Identify and Describe the Function of Each Piece of Equipment”

WLD-K2  “Identify the Safety Hazards”

WLD-K3  “Describe Preventive and/or Protective Measures”

WLD-K4  “List the Welding Variables and Describe Their Effects on Weld Quality”

INTRODUCTION:

The Course Introduction will Include:
• An overview of the metallurgy, metal alloys and the purpose of filler metal.
• A class demonstration of the AWS Oxyacetylene Rod Classification System
• A discussion on methods of study resulting in an increase of skill and knowledge in metallurgy applications, use of filler metals, and AWS welding rod classifications

PRESENTATION OUTLINE:

Instruction Topics:
A. Welding Rod defined as: “a filler metal used for welding or brazing which does not conduct the electric current.”
B. Welding rod types, lengths and diameters
C. Common welding rods: mild steel, cast iron, stainless steel, braze welding alloys, aluminum (drawn, extended, cast)
D. Mil-Specifications and AWS Specification numbers
E. Illustrate AWS Oxyacetylene Rod Classification System
F. Factors in selecting welding tips for varied work and thickness of metal

Student Activities:
A. Selection of filler metal based upon compatibility charts and alloy charts
B. Selection of welding tips to perform the work
C. Perform welds using selected filler metals
D. Testing of weld for discontinuities and strength

PRACTICAL APPLICATION:

When welding various metals, the student will select the compatible filler metal used for metals to be welded in the selected process. The student will learn to use the AWS Welding Rod Classification System, and select appropriate welding tips to perform the work.

EVALUATION AND/OR VERIFICATION:

Written examinations will be given during this module to determine student progress. Welding exercises will be performed using selected filler metals and welding tips. Welds will be inspected and tested by students and instructor.

SUMMARY:

Emphasis will be on the selection of filler metal, welding (filler) rod and welding tips for quality welds and strength of materials. In oxyfuel welding, welding (filler) rod is applied to help build up and strengthen the weld.
NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-K6) dealing with describing techniques for preventing or reducing welding related distortion.
OBJECTIVE(S):  

Upon completion of this unit the student will be able to:
A. Classify filler metal for oxy-fuel gas welding;
B. Identify parent metal compatibility with filler metal; and,
C. Select welding tips required for the process.

PRESENTATION OUTLINE:

Instruction Topics:
A. Welding Rod defined as: "a filler metal used for welding or brazing which does not conduct the electric current."
B. Welding rod types, lengths and diameters
C. Common welding rods: mild steel, cast iron, stainless steel, braze welding alloys, aluminum (drawn, extended, cast)
D. Mil-Specifications and AWS Specification numbers
E. Illustrate AWS Oxyacetylene Rod Classification System
F. Factors in selecting welding tips for varied work and thickness of metal

Student Activities:
A. Selection of filler metal based upon compatibility charts and alloy charts
B. Selection of welding tips to perform the work
C. Perform welds using selected filler metals
D. Testing of weld for discontinuities and strength
Caution: Specific preventive and protective safety measures must be followed when using oxyacetylene equipment.

a. Use goggles or shield with a number five shade.
b. Wear gloves, long sleeve shirts, pants of high cotton or wool content, leather boots, and soft cotton caps.
c. When lighting the torch, direct the torch away from yourself and other personnel.
d. Never leave a lit torch unattended. When leaving your work station, always extinguish your torch.
e. Never use matches or butane lighters for lighting a torch. Only use spark or friction lighters.
f. Never cut on containers that have contained flammable or toxic substances.
g. Either move work away from or protect wooden or other flammable materials which may be close to the work.
h. When cutting, cover, concrete floors with sheet metal where sparks and molten metal are being directed.
i. Before beginning to work, locate the nearest fire alarm and the nearest fire extinguisher.
j. Cut in a well-ventilated area. If adequate ventilation is not possible, use a respirator.
k. Keep all petroleum products away from oxyacetylene equipment and operations. The combination of pure oxygen and oil is explosive.

Caution: Handle acetylene and oxygen cylinders carefully:

a. Keep acetylene operating pressures at or below 15 psi.
b. Open the acetylene cylinder valve one-half to one full turn when using a portable rig to be sure that the cylinder can be quickly turned off in the event of burnback or a fire at a leak in the hose or at a connection.
c. Do not open the acetylene torch valve where acetylene could flow into a bucket or other container and cause a fire.
d. Never attempt to connect an acetylene hose to an oxygen torch connection. Damage to the torch or an explosion could result. Acetylene hoses are colored red and acetylene fittings are left-hand threaded and usually notched.
e. Never use oxygen or fuel gas from a cylinder except through an approved pressure-reducing regulator.
f. Do not use pipe-fitting compounds or thread lubricants for making connections.
g. Never use a cylinder that is leaking.
h. Store and transport cylinders in the upright position.
i. Secure all cylinders with chain when storing, transporting, or using, to prevent them from being turned over by accident.
j. Never tamper with fusible plugs or other safety devices on cylinders.
To open and close acetylene cylinder valves not provided with handwheels always use the special wrench or key. When cutting leave the key in place for rapid shutdown in case of fire.

Never use any cylinder, full or empty, as a roller or support.

Never use oxygen as though it were compressed air.

Do not handle oxygen cylinders on the same platform with oil.

Never use wire-rope slings or electromagnets for lifting cylinders. Do not lift cylinders by the protective cap alone.

Store oxygen cylinders separately from fuel gas cylinders.

Always keep empty cylinders separate from full cylinders.

Mark all empty cylinders as such after use.

Keep all cylinders stored inside buildings at least 20 feet away from combustible materials.

Never bring any arc or flame close to or directly into contact with a cylinder.

Never exceed the maximum safe withdrawal rate for acetylene cylinders (one seventh of the cylinder's current contents per hour). If acetylene is withdrawn from the cylinder at a greater rate, acetone will also be withdrawn from the cylinder, damaging the cutting equipment. If additional flow is needed, then manifold the required number of cylinders together.
Answer the following questions and compare your answers to those listed below.

1. What are the precautions recommended to prevent accidents and protect the welder during oxyacetylene cutting?

2. What are the precautions for safely handling and storing acetylene and oxygen cylinders?

3. What are the precautions for minimizing the risk of regulatory burn out (R.B.O.)?

4. What are the steps in preparing to cut with oxyacetylene?

5. What are the steps in lighting the torch?

6. What are the steps in cutting metal with the torch?

7. What are the steps in extinguishing the torch?

8. What are the steps in closing down the welding station?

Answers:

1. Precautions recommended to prevent accidents and to protect the welder during oxyacetylene cutting:
   a. Use goggles or shield with a number five shade.
   b. Wear gloves, long sleeve shirts, pants of high cotton or wool content, leather boots and soft cotton caps.
   c. When lighting the torch, direct the torch away from yourself and other personnel.
   d. Never leave a lit torch unattended. When leaving your work station, always extinguish your torch.
   e. Never use matches or butane lighters for lighting a torch. Only use spark or friction lighters.
   f. Never cut on containers that have contained flammable or toxic substances.
   g. Either move work away from or protect wooden or other flammable materials which may be close to the work.
   h. When cutting, cover concrete floors with sheet metal where sparks and molten metal are being directed.
Before beginning to work, locate the nearest fire alarm and the nearest fire extinguisher.

Cut in a well ventilated area. If adequate ventilation is not possible, use a respirator.

Keep all petroleum products away from oxyacetylene equipment and operations. The combination of pure oxygen and oil is explosive.

2. Precautions for safely handling oxygen and acetylene cylinders:
   a. Keep acetylene operating pressures at or below 15 psi.
   b. Open the acetylene cylinder valve one-half to one full turn when using a portable rig to be sure that the cylinder can be quickly turned off in the event of burn-back or a fire at a leak in the hose or at a connection.
   c. Do not open an acetylene torch's valve where acetylene could flow into a bucket or other container and cause a fire.
   d. Never attempt to connect an acetylene hose to an oxygen torch connection. Damage to the torch or an explosion could result. Acetylene hoses are colored red and acetylene fittings are left hand threaded and usually notched.
   e. Never use oxygen or fuel gas from a cylinder except through an approved pressure-reducing regulator.
   f. Do not use pipe-fitting compounds or thread lubricants for making connections.
   g. Never use a cylinder that is leaking.
   h. Store and transport cylinders in the upright position.
   i. Secure all cylinders with chain when storing, transporting, or using, to prevent them from being turned over by accident.
   j. Never tamper with fusible plugs or other safety devices on cylinders.
   k. To open and close acetylene cylinder valves not provided with handwheels, always use the special wrench or key. When cutting, leave the key in place for rapid shutdown in case of fire.
   l. Never use any cylinder, full or empty, as a roller or support.
   m. Never use oxygen as though it were compressed air.
   n. Do not handle oxygen cylinders on the same platform with oil.
   o. Never use wire-rope slings or electromagnets for lifting cylinders. Do not lift cylinders by the protective cap alone.
   p. Store oxygen cylinders separately from fuel gas cylinders.
   q. Always keep empty cylinders separate from full cylinders.
   r. Mark all empty cylinders as such after use.
   s. Keep all cylinders stored inside buildings at least 20 feet away from combustible materials.
   t. Never bring any arc or flame close to or directly into contact with a cylinder.
   u. Never exceed the maximum safe withdrawal rate for acetylene cylinders (one seventh of the cylinder's current contents per hour). If acetylene is withdrawn from the cylinder at a greater rate, acetone will also be withdrawn from the cylinder, damaging the cutting equipment. If additional flow is needed, then manifold the required number of cylinders together.
3. Precautions for minimizing the risks of regulatory burn out (R.B.O).
   a. "Crack" the oxygen cylinder valve before attaching the regulator. Stand to one side or the rear of the cylinder outlet. Open the cylinder valve slightly for an instant and then close it to clean the valve of dust and dirt which may have accumulated during storage. Dirt can damage an oxygen regulator and may cause R.B.O.
   b. Use only oxygen regulators to control oxygen supply. A pressure reducing regulator must be connected to the oxygen cylinder valve. Make certain the regulator is clean, free of grease and oil, and has a clean filter installed in its inlet nipple. Oil, grease, coal dust, and other combustibles can cause regulator burnouts. Never use an oxygen regulator for other gases.
   c. Before opening an oxygen cylinder valve, make sure the oxygen regulator pressure-adjusting screw is released. This is done by rotating the screw counterclockwise until it turns, freely. This closes the regulator valve and prevents damage due to a sudden pressure surge.
   d. While opening the oxygen cylinder valve, stand to one side of the oxygen regulator. Do not stand in line with the front or the back of the pressure-adjusting screw. Open the cylinder valve as slowly as possible, until the high pressure gauge reaches cylinder pressure. Never open a cylinder valve suddenly. Sudden surges of high pressure can cause R.B.O.

4. Steps in preparing to cut with oxyacetylene:
   a. Obtain the proper size cutting tip.
      (1) Consult the equipment manufacturer's cutting tip data charts. The charts match up the thickness of the steel being cut with the cutting tip size and also give recommended pressure settings for oxygen and acetylene.
      (2) Be sure that the metal can be cut with an oxyacetylene torch. Oxy-fuel cutting is not used on metals like aluminum, copper, magnesium, and chromium, where the oxide of that metal melts at a higher temperature than the metal itself. Also, stainless steels cannot be easily cut with oxy-fuel because they contain relatively large amounts of chromium and/or nickel.
   b. Screw the cutting torch head in place, hand-tight only.
   c. Before attaching the regulators to the cylinder valves, crack the valves to blow out any dirt and debris.
   d. Attach the regulators, hoses, torch, and correct-sized torch tip.
   e. Make sure the pressure adjusting screws of the acetylene and oxygen regulators are backed out. (That is, that they have been turned counterclockwise until there is a little free play.)
   f. Make sure all cutting torch valves are initially closed.
   g. Open the oxygen cylinder valve all the way. Open the acetylene cylinder valve one full turn only.
   h. Open the acetylene torch valve. Turn the acetylene torch valve off.
i. Turn the acetylene regulator pressure-adjusting screw clockwise until the needle on the regulator dial indicates the proper pressure.

j. Turn the acetylene torch valve off.

k. Turn both oxygen torch valves on.

l. Turn the oxygen regulator pressure-adjusting screw clockwise until the needle on the regulator dial indicates the proper pressure.

m. Turn off the oxygen torch valve on the torch head only.

5. Steps in lighting the torch:
   a. Put on gloves.
   b. Put on welding goggles.
   c. Open the torch acetylene valve one-half turn.
   d. Immediately light the torch with a friction lighter only.
   e. Reduce the acetylene flow at the torch's acetylene valve until the flame just starts to produce black smoke around its edges. Then increase the acetylene flow just enough to get rid of the black smoke.
   f. Open the torch's oxygen valve slowly until the desired type flame is obtained.
      (1) The preheat flame needs to be of the neutral type, which means that equal parts of oxygen and acetylene are being burnt.
      (2) The preheat flame needs to be the right size. Set the pressure correctly, and then follow the directions in "Step e" again. If the preheat flame is too large, there will be or tend to be slag or dross hanging onto the bottom of the cut-assuming that travel speed, tip size, etc., are all correct.

6. Steps in cutting metal with the torch:
   a. Follow the steps in Operation 1 and Operation 2 for the following oxyacetylene cutting variables:
      (1) Cutting tip size.
      (2) Oxygen operating pressure.
      (3) Acetylene operating pressure.
      (4) Preheat flame type.
      (5) Size of preheat flame
   b. Clean the cutting tip. Be sure that the preheat and cutting orifices of the tip are clean. A dirty tip, especially a dirty cutting orifice, will adversely affect the quality of the cut. Dirty orifices can produce such defects as wide kerfs, adherent slag, and rough appearance.
   c. Select the correct flame-to-work distance. The bottom of the preheat flame should be 1/16" to 1/2" from the base metal. Right-handed people should progress from right to left and left-handed people should cut left to right.
   d. Select the correct torch angle.
      (1) For square cuts, the torch should be perpendicular (at 90°) to the base metal and tipped slightly in the direction of travel.
      (2) For beveled cuts, the torch should be held at the angle of the bevel throughout the cutting procedure.
(3) For holes, the torch must be held perpendicular to the base metal throughout the cut.

e. Cut at the proper travel speed. At the correct travel speed, the lines of the cut which project through the thickness of the base metal will be in a straight line. At too fast a travel speed, the lines of the cut will curve back from the progress of the cut and form clearly defined lines termed lag or drag lines. (The amount of drag is often expressed as a percent.)

f. Assure the oxygen level. Although it is possible to make a good weld with an oxygen purity level of only 95%, in order to make good oxy-fuel cut, an oxygen purity level of 99.5% is required. Where leaks in oxygen lines or hoses allow air to be mixed with the oxygen, the quality of the cut can be very seriously affected.

7. Steps in extinguishing the torch:
   a. Close the torch acetylene valve, thus extinguishing the flame.
   b. Close the torch oxygen valve.

8. Steps in closing down the welding station:
   a. Close the oxygen cylinder valve.
   b. Close the acetylene cylinder valve.
   c. Open the torch acetylene valve and bleed the acetylene from the line.
   d. Close the torch acetylene valve.
   e. Turn the acetylene regulator pressure adjusting screw counterclockwise until there is a little free play. Avoid backing out the pressure adjusting screws so much that they come totally out.
   f. Open the torch oxygen valve and bleed the oxygen from the line.
   g. Close the torch oxygen valve.
   h. Turn the oxygen regulator pressure adjusting screw counterclockwise until there is a little free play. Avoid backing out the pressure adjusting screws so much that they come totally out.
1. Instructor will demonstrate how to:
   Braze with bronze rod;
   Run a bead with a bronze rod;
   Square butt braze on light steel plate;
   Braze lap joints;
   Braze tee joints;
   Braze beveled butt joints on heavy steel plate; Braze beveled joints on cast iron;
   Silver soldering of nonferrous metals; and,
   Silver soldering of ferrous and nonferrous metals.

2. Student will practice:
   Brazing with bronze rod;
   Running beads with bronze rod;
   Square butt brazing on light steel plate;
   Brazed lap joints;
   Brazing tee joints;
   Brazing beveled butt joints on heavy steel plate; Brazing beveled joints on cast iron;
   Silver soldering nonferrous metals; and,
   Silver soldering ferrous and nonferrous metals.

3. Instructor will grade students performance on: Brazing with bronze rod:
   Running beads with bronze rod;
   Square butt brazing on light steel plate;
   Brazed lap joints;
   Brazing tee joints;
   Brazing beveled butt joints on heavy steel plate; Building-up on cast iron;
   Brazing beveled joints on cast iron;
   Silver soldering nonferrous metals; and,
   Silver soldering ferrous and nonferrous metals.
Describe the AWS Oxyfuel Gas Welding Rod Classification System
Self-Assessment No. 1

Circle the best answer.

1. Which of the following can be used to ignite an oxyacetylene torch?
   a. Matches
   b. A cigarette lighter
   c. A spark or friction lighter
   d. Any of the above
   e. None of the above

2. Technician A says that they can cut into an old gasoline can with the torch.
   Technician B says that containers of flammable or toxic substances should never be cut with a torch. Who is correct?
   a. Technician A only
   b. Technician B only
   c. Both Technicians A and B
   d. Neither Technician A nor B

3. If adequate ventilation is unavailable, the technician should:
   a. Cut the metal anyway; ventilation is not important.
   b. Cut the metal while wearing a respirator.
   c. Cut the metal while wearing a heavy-duty dust mask.
   d. Refuse to make the cut.

4. Acetylene operating pressures must be kept at or below:
   a. 5 psi.
   b. 15 psi.
   c. 25 psi.
   d. Acetylene operating pressures are immaterial.

5. Acetylene hoses are _______; acetylene fittings are _______.
   a. Red - left-handed
   b. Blue - left-handed
   c. Red - right-handed
   d. Blue - left-handed
   e. None of the above
6. All cylinders should be secured except when:
   a. Transporting them.
   b. Storing them.
   c. Using them.
   d. Always secure cylinders with chains or in permanent racks.
   e. Securing cylinders is unnecessary.

7. Technician A says that oxygen cylinders should be stored well away from fuel gas cylinders. Technician B says that separate storage is unnecessary. Who is correct?
   a. Technician A only
   b. Technician B only
   c. Both Technicians A and B
   d. Neither Technician A nor B

8. The maximum safe withdrawal rate for acetylene cylinders is:
   a. One fourth of current content per hour.
   b. One fifth of current content per hour.
   c. One seventh of current content per hour.
   d. One tenth of current content per hour.
   e. None of the above

9. Technician A says that only oxygen-specific regulators can be used on oxygen cylinders. Technician B says that it is acceptable to use oxygen regulators on other gas cylinders. Who is correct?
   a. Technician A only
   b. Technician B only
   c. Both Technicians A and B
   d. Neither Technician A nor B

10. Which of the following can be cut with an oxyacetylene torch?
   a. Aluminum
   b. Copper
   c. Chromium
   d. All of the above
   e. None of the above

11. Technician A says that the acetylene cylinder's valve should be opened all the way. Technician B says that the oxygen cylinder's valve should be opened no more than one full turn. Who is correct?
   a. Technician A only
   b. Technician B only
   c. Both Technicians A and B
   d. Neither Technician A nor B
12. Before attaching the regulators to the cylinder valves:
   a. Clean the nipples with acetone.
   b. Crack the valves to blow out any dirt.
   c. Lubricate the threads with oil.
   d. All of the above
   e. None of the above

13. Technician A says that they must reduce the acetylene flow until the flame just starts to produce black smoke around its edges. Technician B says that the acetylene flow must then be increased until the smoke disappears. Who is correct?
   a. Technician A only
   b. Technician B only
   c. Both Technicians A and B
   d. Neither Technician A nor B

14. Dirty orifices on the cutting tip can produce:
   a. Wide kerfs.
   b. Adherent slag.
   c. Rough cut appearance.
   d. All of the above.
   e. None of the above

15. Technician A says that, for cutting holes, the torch must be held parallel to the base metal throughout the cut. Technician B says that square cuts require the torch to be held at 45° to the base metal. Who is correct?
   a. Technician A only
   b. Technician B only
   c. Both Technicians A and B
   d. Neither Technician A nor B

16. Lag lines are the result of
   a. Correct travel speed.
   b. Too great a travel speed.
   c. Too slow a travel speed.
   d. Incorrect torch angle.
   e. None of the above

17. When extinguishing the torch, Technician A says that the acetylene torch valve should be closed first. Technician B says that the oxygen torch valve should be closed first. Who is correct?
   a. Technician A only
   b. Technician B only
   c. Both Technicians A and B
   d. Neither Technician A nor B
18. Good oxy-fuel cuts require an oxygen purity of at least:
   a. 99.5%.
   b. 95.9%.
   c. 59.9%.
   d. None of the above.

19. Both acetylene and oxygen lines should be _________ when closing down the work station.
   a. Removed
   b. Cleaned with acetone
   c. Bled free of gas or fuel
   d. All of the above
   e. None of the above

20. Technician A says that since B is left-handed, B should cut from left to right. Technician B says that the pre-heat flame should still be from 1/6" to 1/2" from the base metal, regardless of the direction of travel. Who is correct?
   a. Technician A only
   b. Technician B only
   c. Both Technicians A and B
   d. Neither Technician A nor B

WELDER SERIES
MASTER Technical Module No. WLD-K06

SUBJECT: WELDING TECHNICIAN
TIME: 8 HOURS

• DUTY: OXYACETYLENE CUTTING AND WELDING
• TASK: Describe Techniques for Preventing or Reducing Welding Related Distortion

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Understand stresses caused by welding processes;
B. Use fixtures and clamps to minimize distortion;
C. Understand metal properties exhibited by heating and cooling;
D. Relieve internal stresses by heat treatment; and,

INSTRUCTIONAL MATERIALS:

Student Workbook
Written tests on methods to reduce distortion caused by welding heat and stress
Transparencies will be used to emphasize each subject
Hobart Institute Video Material
Miller Module Method Video Material
Classroom handouts consisting of student worksheets and alloy charts
Hobart OAW wall chart
Personal protective equipment
Oxyfuel welding equipment
Oxygen and fuel gas cylinders
Oxygen and fuel gas regulators
Torch handles
Welding and cutting tips
Cutting torch assemblies
Lighters
Selection of filler metals and oxyfuel welding rod
Selection of base metals for welding and cutting
Welding shop tools
MASTER Handout (WLD-K6-HO)
MASTER Laboratory Aid (WLD-K6-LA)

TEXT:

OTHER:
Competency Standards, American Welding Society, Latest Edition
Welding Handbook, Volume One, Welding Technology WHB-1.8, Latest Edition
Specification for Qualification and Certification for Entry Level Welders, AWS QC10, Latest Edition

STUDENT PREPARATION:

Student must demonstrate appropriate communication skills and understand principles of basic physical science and mathematics as verified by placement test or completion of required prerequisite courses.

WLD-K1 "Identify and Describe the Function of Each Piece of Equipment"
WLD-K2 "Identify the Safety Hazards"
WLD-K3 "Describe Preventive and/or Protective Measures"
WLD-K4 "List the Welding Variables and Describe Their Effects on Weld Quality"
WLD-K5 "Describe the AWS Oxyfuel Gas Welding Rod Classification System"
INTRODUCTION:

The Course Introduction will Include:
- An overview of stresses caused by welding processes
- Methods used to minimize distortion
- A discussion of metal properties exhibited by heating and cooling

PRESENTATION OUTLINE:

Instruction Topics:
A. Describe stresses caused by welding and the expansion rate of metal
B. Describe heat created by the welding process causing expansion
C. Describe contraction or shrinking caused by cooling
D. If metal does not return to original shape, explain how distortion has occurred
E. Reduce distortion by clamping parts into a fixture while welding
F. Discuss metal properties changed by heat and expansion factors
G. Demonstrate residual stresses relieved by heat treatment
H. Judge temperature by color of materials

Student Activities:
A. Perform welding experiments in heating and contraction of specific metals
B. Practice welding exercises using fixtures and clamping
C. Practice stress relief by heat treatment

PRACTICAL APPLICATION:

When welding various metals, the student will minimize distortion by using clamps and fixtures and practicing stress relief.

EVALUATION AND/OR VERIFICATION:

Written examinations will be given in this module to determine student progress. Practical exercises will be conducted with heating and contraction of metals secured by fixtures and clamps and stress relief will be performed by heat treatment.

SUMMARY:

Emphasis will be on preventing or reducing weld related distortion while maintaining weld quality.
NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-K7) dealing with welding mild steel sheet metal using techniques that will minimize the effects of distortion.
OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Understand stresses caused by welding processes;
B. Use fixtures and clamps to minimize distortion;
C. Understand metal properties exhibited by heating and cooling;
D. Relieve internal stresses by heat treatment; and,

MODULE OUTLINE:

Instruction Topics:
A. Describe stresses caused by welding and the expansion rate of metal
B. Describe heat created by the welding process causing expansion
C. Describe contraction or shrinking caused by cooling
D. If metal does not return to original shape, explain how distortion has occurred
E. Reduce distortion by clamping parts into a fixture while welding
F. Discuss metal properties changed by heat and expansion factors
G. Demonstrate residual stresses relieved by heat treatment
H. Judge temperature by color of materials

Student Activities:
A. Perform welding experiments in heating and contraction of specific metals
B. Practice welding exercises using fixtures and clamping
C. Practice stress relief by heat treatment
Caution: Specific preventive and protective safety measures must be followed when using oxyacetylene equipment.

a. Use goggles or shield with a number five shade.
b. Wear gloves, long sleeve shirts, pants of high cotton or wool content, leather boots, and soft cotton caps.
c. When lighting the torch, direct the torch away from yourself and other personnel.
d. Never leave a lit torch unattended. When leaving your work station, always extinguish your torch.
e. Never use matches or butane lighters for lighting a torch. Only use spark or friction lighters.
f. Never cut on containers that have contained flammable or toxic substances.
g. Either move work away from or protect wooden or other flammable materials which may be close to the work.
h. When cutting, cover, concrete floors with sheet metal where sparks and molten metal are being directed.
i. Before beginning to work, locate the nearest fire alarm and the nearest fire extinguisher.
j. Cut in a well-ventilated area. If adequate ventilation is not possible, use a respirator.
k. Keep all petroleum products away from oxyacetylene equipment and operations. The combination of pure oxygen and oil is explosive.

Caution: Handle acetylene and oxygen cylinders carefully:

a. Keep acetylene operating pressures at or below 15 psi.
b. Open the acetylene cylinder valve one-half to one full turn when using a portable rig to be sure that the cylinder can be quickly turned off in the event of burnback or a fire at a leak in the hose or at a connection.
c. Do not open the acetylene torch valve where acetylene could flow into a bucket or other container and cause a fire.
d. Never attempt to connect an acetylene hose to an oxygen torch connection. Damage to the torch or an explosion could result. Acetylene hoses are colored red and acetylene fittings are left-hand threaded and usually notched.
e. Never use oxygen or fuel gas from a cylinder except through an approved pressure-reducing regulator.
f. Do not use pipe-fitting compounds or thread lubricants for making connections.
g. Never use a cylinder that is leaking.
h. Store and transport cylinders in the upright position.
i. Secure all cylinders with chain when storing, transporting, or using, to prevent them from being turned over by accident.
j. Never tamper with fusible plugs or other safety devices on cylinders.
To open and close acetylene cylinder valves not provided with handwheels always use the special wrench or key. When cutting leave the key in place for rapid shutdown in case of fire.

Never use any cylinder, full or empty, as a roller or support.

Never use oxygen as though it were compressed air.

Do not handle oxygen cylinders on the same platform with oil.

Never use wire-rope slings or electromagnets for lifting cylinders. Do not lift cylinders by the protective cap alone.

Store oxygen cylinders separately from fuel gas cylinders.

Always keep empty cylinders separate from full cylinders.

Mark all empty cylinders as such after use.

Keep all cylinders stored inside buildings at least 20 feet away from combustible materials.

Never bring any arc or flame close to or directly into contact with a cylinder.

Never exceed the maximum safe withdrawal rate for acetylene cylinders (one seventh of the cylinder's current contents per hour). If acetylene is withdrawn from the cylinder at a greater rate, acetone will also be withdrawn from the cylinder, damaging the cutting equipment. If additional flow is needed, then manifold the required number of cylinders together.
Describe Techniques for Preventing or Reducing Welding Related Distortion
Attachment 3  MASTER Laboratory Worksheet No. 1

Answer the following questions and compare your answers to those listed below.

1. What are the precautions recommended to prevent accidents and protect the welder during oxyacetylene cutting?

2. What are the precautions for safely handling and storing acetylene and oxygen cylinders?

3. What are the precautions for minimizing the risk of regulatory burn out (R.B.O.)?

4. What are the steps in preparing to cut with oxyacetylene?

5. What are the steps in lighting the torch?

6. What are the steps in cutting metal with the torch?

7. What are the steps in extinguishing the torch?

8. What are the steps in closing down the welding station?

Answers:

1. Precautions recommended to prevent accidents and to protect the welder during oxyacetylene cutting:
   a. Use goggles or shield with a number five shade.
   b. Wear gloves, long sleeve shirts, pants of high cotton or wool content, leather boots and soft cotton caps.
   c. When lighting the torch, direct the torch away from yourself and other personnel.
   d. Never leave a lit torch unattended. When leaving your work station, always extinguish your torch.
   e. Never use matches or butane lighters for lighting a torch. Only use spark or friction lighters.
   f. Never cut on containers that have contained flammable or toxic substances.
   g. Either move work away from or protect wooden or other flammable materials which may be close to the work.
   h. When cutting, cover concrete floors with sheet metal where sparks and molten metal are being directed.
Before beginning to work, locate the nearest fire alarm and the nearest fire extinguisher.

Cut in a well ventilated area. If adequate ventilation is not possible, use a respirator.

Keep all petroleum products away from oxyacetylene equipment and operations. The combination of pure oxygen and oil is explosive.

2. Precautions for safely handling oxygen and acetylene cylinders:
   a. Keep acetylene operating pressures at or below 15 psi.
   b. Open the acetylene cylinder valve one-half to one full turn when using a portable rig to be sure that the cylinder can be quickly turned off in the event of burn-back or a fire at a leak in the hose or at a connection.
   c. Do not open an acetylene torch's valve where acetylene could flow into a bucket or other container and cause a fire.
   d. Never attempt to connect an acetylene hose to an oxygen torch connection. Damage to the torch or an explosion could result. Acetylene hoses are colored red and acetylene fittings are left hand threaded and usually notched.
   e. Never use oxygen or fuel gas from a cylinder except through an approved pressure-reducing regulator.
   f. Do not use pipe-fitting compounds or thread lubricants for making connections.
   g. Never use a cylinder that is leaking.
   h. Store and transport cylinders in the upright position.
   i. Secure all cylinders with chain when storing, transporting, or using, to prevent them from being turned over by accident.
   j. Never tamper with fusible plugs or other safety devices on cylinders.
   k. To open and close acetylene cylinder valves not provided with handwheels, always use the special wrench or key. When cutting, leave the key in place for rapid shutdown in case of fire.
   l. Never use any cylinder, full or empty, as a roller or support.
   m. Never use oxygen as though it were compressed air.
   n. Do not handle oxygen cylinders on the same platform with oil.
   o. Never use wire-rope slings or electromagnets for lifting cylinders. Do not lift cylinders by the protective cap alone.
   p. Store oxygen cylinders separately from fuel gas cylinders.
   q. Always keep empty cylinders separate from full cylinders.
   r. Mark all empty cylinders as such after use.
   s. Keep all cylinders stored inside buildings at least 20 feet away from combustible materials.
   t. Never bring any arc or flame close to or directly into contact with a cylinder.
   u. Never exceed the maximum safe withdrawal rate for acetylene cylinders (one seventh of the cylinder's current contents per hour). If acetylene is withdrawn from the cylinder at a greater rate, acetone will also be withdrawn from the cylinder, damaging the cutting equipment. If additional flow is needed, then manifold the required number of cylinders together.
3. Precautions for minimizing the risks of regulatory burn out (R.B.O).
   a. "Crack" the oxygen cylinder valve before attaching the regulator. Stand to one side or the rear of the cylinder outlet. Open the cylinder valve slightly for an instant and then close it to clean the valve of dust and dirt which may have accumulated during storage. Dirt can damage an oxygen regulator and may cause R.B.O.
   b. Use only oxygen regulators to control oxygen supply. A pressure reducing regulator must be connected to the oxygen cylinder valve. Make certain the regulator is clean, free of grease and oil, and has a clean filter installed in its inlet nipple. Oil, grease, coal dust, and other combustibles can cause regulator burnouts. Never use an oxygen regulator for other gases.
   c. Before opening an oxygen cylinder valve, make sure the oxygen regulator pressure-adjusting screw is released. This is done by rotating the screw counterclockwise until it turns, freely. This closes the regulator valve and prevents damage due to a sudden pressure surge.
   d. While opening the oxygen cylinder valve, stand to one side of the oxygen regulator. Do not stand in line with the front or the back of the pressure-adjusting screw. Open the cylinder valve as slowly as possible, until the high pressure gauge reaches cylinder pressure. Never open a cylinder valve suddenly. Sudden surges of high pressure can cause R.B.O.

4. Steps in preparing to cut with oxyacetylene:
   a. Obtain the proper size cutting tip.
      (1) Consult the equipment manufacturer's cutting tip data charts. The charts match up the thickness of the steel being cut with the cutting tip size and also give recommended pressure settings for oxygen and acetylene.
      (2) Be sure that the metal can be cut with an oxyacetylene torch. Oxy-fuel cutting is not used on metals like aluminum, copper, magnesium, and chromium, where the oxide of that metal melts at a higher temperature than the metal itself. Also, stainless steels cannot be easily cut with oxy-fuel because they contain relatively large amounts of chromium and/or nickel.
   b. Screw the cutting torch head in place, hand-tight only.
   c. Before attaching the regulators to the cylinder valves, crack the valves to blow out any dirt and debris.
   d. Attach the regulators, hoses, torch, and correct-sized torch tip.
   e. Make sure the pressure adjusting screws of the acetylene and oxygen regulators are backed out. (That is, that they have been turned counterclockwise until there is a little free play.)
   f. Make sure all cutting torch valves are initially closed.
   g. Open the oxygen cylinder valve all the way. Open the acetylene cylinder valve one full turn only.
   h. Open the acetylene torch valve. Turn the acetylene torch valve off.
i. Turn the acetylene regulator pressure-adjusting screw clockwise until the needle on the regulator dial indicates the proper pressure.

j. Turn the acetylene torch valve off.

k. Turn both oxygen torch valves on.

l. Turn the oxygen regulator pressure-adjusting screw clockwise until the needle on the regulator dial indicates the proper pressure.

m. Turn off the oxygen torch valve on the torch head only.

5. Steps in lighting the torch:
   a. Put on gloves.
   b. Put on welding goggles.
   c. Open the torch acetylene valve one-half turn.
   d. Immediately light the torch with a friction lighter only.
   e. Reduce the acetylene flow at the torch's acetylene valve until the flame just starts to produce black smoke around its edges. Then increase the acetylene flow just enough to get rid of the black smoke.
   f. Open the torch's oxygen valve slowly until the desired type flame is obtained.
      (1) The preheat flame needs to be of the neutral type, which means that equal parts of oxygen and acetylene are being burnt.
      (2) The preheat flame needs to be the right size. Set the pressure correctly, and then follow the directions in "Step e" again. If the preheat flame is too large, there will be or tend to be slag or dross hanging onto the bottom of the cut-assuming that travel speed, tip size, etc., are all correct.

6. Steps in cutting metal with the torch:
   a. Follow the steps in Operation 1 and Operation 2 for the following oxyacetylene cutting variables:
      (1) Cutting tip size.
      (2) Oxygen operating pressure.
      (3) Acetylene operating pressure.
      (4) Preheat flame type.
      (5) Size of preheat flame
   b. Clean the cutting tip. Be sure that the preheat and cutting orifices of the tip are clean. A dirty tip, especially a dirty cutting orifice, will adversely affect the quality of the cut. Dirty orifices can produce such defects as wide kerfs, adherent slag, and rough appearance.
   c. Select the correct flame-to-work distance. The bottom of the preheat flame should be 1/16" to 1/2" from the base metal. Right-handed people should progress from right to left and left-handed people should cut left to right.
   d. Select the correct torch angle.
      (1) For square cuts, the torch should be perpendicular (at 90°) to the base metal and tipped slightly in the direction of travel.
      (2) For beveled cuts, the torch should be held at the angle of the bevel throughout the cutting procedure.
(3) For holes, the torch must be held perpendicular to the base metal throughout the cut.

e. Cut at the proper travel speed. At the correct travel speed, the lines of the cut which project through the thickness of the base metal will be in a straight line. At too fast a travel speed, the lines of the cut will curve back from the progress of the cut and form clearly defined lines termed lag or drag lines. (The amount of drag is often expressed as a percent.)

f. Assure the oxygen level. Although it is possible to make a good weld with an oxygen purity level of only 95%, in order to make good oxy-fuel cut, an oxygen purity level of 99.5% is required. Where leaks in oxygen lines or hoses allow air to be mixed with the oxygen, the quality of the cut can be very seriously affected.

7. Steps in extinguishing the torch:
   a. Close the torch acetylene valve, thus extinguishing the flame.
   b. Close the torch oxygen valve.

8. Steps in closing down the welding station:
   a. Close the oxygen cylinder valve.
   b. Close the acetylene cylinder valve.
   c. Open the torch acetylene valve and bleed the acetylene from the line.
   d. Close the torch acetylene valve.
   e. Turn the acetylene regulator pressure adjusting screw counterclockwise until there is a little free play. Avoid backing out the pressure adjusting screws so much that they come totally out.
   f. Open the torch oxygen valve and bleed the oxygen from the line.
   g. Close the torch oxygen valve.
   h. Turn the oxygen regulator pressure adjusting screw counterclockwise until there is a little free play. Avoid backing out the pressure adjusting screws so much that they come totally out.
Describe Techniques for Preventing or Reducing Welding Related Distortion
Attachment 4: MASTER Laboratory Worksheet No. 2

1. Instructor will demonstrate how to:
   - Braze with bronze rod;
   - Run a bead with a bronze rod;
   - Square butt braze on light steel plate;
   - Braze lap joints;
   - Braze tee joints;
   - Braze beveled butt joints on heavy steel plate; Braze beveled joints on cast iron;
   - Silver soldering of nonferrous metals; and,
   - Silver soldering of ferrous and nonferrous metals.

2. Student will practice:
   - Brazing with bronze rod;
   - Running beads with bronze rod;
   - Square butt brazing on light steel plate;
   - Brazed lap joints;
   - Brazing tee joints;
   - Brazing beveled butt joints on heavy steel plate; Brazing beveled joints on cast iron;
   - Silver soldering nonferrous metals; and,
   - Silver soldering ferrous and nonferrous metals.

3. Instructor will grade students performance on: Brazing with bronze rod:
   - Running beads with bronze rod;
   - Square butt brazing on light steel plate;
   - Brazed lap joints;
   - Brazing tee joints;
   - Brazing beveled butt joints on heavy steel plate; Building-up on cast iron;
   - Brazing beveled joints on cast iron;
   - Silver soldering nonferrous metals; and,
   - Silver soldering ferrous and nonferrous metals.
Describe Techniques for Preventing or Reducing Welding Related Distortion
Self-Assessment No. 1

Circle the best answer.

1. Which of the following can be used to ignite an oxyacetylene torch?
   a. Matches
   b. A cigarette lighter
   c. A spark or friction lighter
   d. Any of the above
   e. None of the above

2. Technician A says that they can cut into an old gasoline can with the torch. Technician B says that containers of flammable or toxic substances should never be cut with a torch. Who is correct?
   a. Technician A only
   b. Technician B only
   c. Both Technicians A and B
   d. Neither Technician A nor B

3. If adequate ventilation is unavailable, the technician should:
   a. Cut the metal anyway; ventilation is not important.
   b. Cut the metal while wearing a respirator.
   c. Cut the metal while wearing a heavy-duty dust mask.
   d. Refuse to make the cut.

4. Acetylene operating pressures must be kept at or below:
   a. 5 psi.
   b. 15 psi.
   c. 25 psi.
   d. Acetylene operating pressures are immaterial.

5. Acetylene hoses are _________; acetylene fittings are _________.
   a. Red - left-handed
   b. Blue - left-handed
   c. Red - right-handed
   d. Blue - left-handed
   e. None of the above
6. All cylinders should be secured except when:
   a. Transporting them.
   b. Storing them.
   c. Using them.
   d. Always secure cylinders with chains or in permanent racks.
   e. Securing cylinders is unnecessary.

7. Technician A says that oxygen cylinders should be stored well away from fuel gas cylinders. Technician B says that separate storage is unnecessary. Who is correct?
   a. Technician A only
   b. Technician B only
   c. Both Technicians A and B
   d. Neither Technician A nor B

8. The maximum safe withdrawal rate for acetylene cylinders is:
   a. One fourth of current content per hour.
   b. One fifth of current content per hour.
   c. One seventh of current content per hour.
   d. One tenth of current content per hour.
   e. None of the above

9. Technician A says that only oxygen-specific regulators can be used on oxygen cylinders. Technician B says that it is acceptable to use oxygen regulators on other gas cylinders. Who is correct?
   a. Technician A only
   b. Technician B only
   c. Both Technicians A and B
   d. Neither Technician A nor B

10. Which of the following can be cut with an oxyacetylene torch?
    a. Aluminum
    b. Copper
    c. Chromium
    d. All of the above
    e. None of the above

11. Technician A says that the acetylene cylinder's valve should be opened all the way. Technician B says that the oxygen cylinder's valve should be opened no more than one full turn. Who is correct?
    a. Technician A only
    b. Technician B only
    c. Both Technicians A and B
    d. Neither Technician A nor B
12. Before attaching the regulators to the cylinder valves:
   a. Clean the nipples with acetone.
   b. Crack the valves to blow out any dirt.
   c. Lubricate the threads with oil.
   d. All of the above
   e. None of the above

13. Technician A says that they must reduce the acetylene flow until the flame just starts to produce black smoke around its edges. Technician B says that the acetylene flow must then be increased until the smoke disappears. Who is correct?
   a. Technician A only
   b. Technician B only
   c. Both Technicians A and B
   d. Neither Technician A nor B

14. Dirty orifices on the cutting tip can produce:
   a. Wide kerfs.
   b. Adherent slag.
   c. Rough cut appearance.
   d. All of the above.
   e. None of the above

15. Technician A says that, for cutting holes, the torch must be held parallel to the base metal throughout the cut. Technician B says that square cuts require the torch to be held at 45° to the base metal. Who is correct?
   a. Technician A only
   b. Technician B only
   c. Both Technicians A and B
   d. Neither Technician A nor B

16. Lag lines are the result of
   a. Correct travel speed.
   b. Too great a travel speed.
   c. Too slow a travel speed.
   d. Incorrect torch angle.
   e. None of the above

17. When extinguishing the torch, Technician A says that the acetylene torch valve should be closed first. Technician B says that the oxygen torch valve should be closed first. Who is correct?
   a. Technician A only
   b. Technician B only
   c. Both Technicians A and B
   d. Neither Technician A nor B
18. Good oxy-fuel cuts require an oxygen purity of at least:
   a. 99.5%.
   b. 95.9%.
   c. 59.9%.
   d. None of the above.

19. Both acetylene and oxygen lines should be __________ when closing down the work station.
   a. Removed
   b. Cleaned with acetone
   c. Bled free of gas or fuel
   d. All of the above
   e. None of the above

20. Technician A says that since B is left-handed, B should cut from left to right. Technician B says that the pre-heat flame should still be from 1/6" to 1/2" from the base metal, regardless of the direction of travel. Who is correct?
   a. Technician A only
   b. Technician B only
   c. Both Technicians A and B
   d. Neither Technician A nor B

Describe Techniques for Preventing or Reducing Welding Related Distortion
Self-Assessment No. 2

1. What is the major difference between a brazed joint and a welded joint?

2. What two conditions determines whether the joint is brazed or welded?

3. How does flux act as a guide to the temperature of the joint?

4. What is the color of the plate when it is at the proper temperature for welding?

5. Is brazing stronger than fusion welding?

6. For silver soldering: what is a 3x flame?

7. What alloys are contained in typical silver soldering?

8. How can material be prepared for silver soldering?
9. Is it possible to make fillets when using silver soldering alloys?
WELDER SERIES
MASTER Technical Module No. WLD-K07

SUBJECT: WELDING TECHNICIAN

DUTY: OXYACETYLENE CUTTING AND WELDING

TASK: Weld Mild Steel Sheet Metal Using Techniques That Will Minimize the Effects of Distortion

TIME: 8 HOURS

OBJECTIVE(S):

Upon completion of this unit the student will be able to:

A. Perform welding with mild steel and carbon steel using variety of joints and types of leads and welds;
B. Weld intermittent blocks to decrease distortion;
C. Learn other techniques to prevent warpage and distortion; and,
D. Remove distortion using gas equipment.

INSTRUCTIONAL MATERIALS:

Student Workbook
Four written tests on oxyacetylene safety, and procedures
Transparencies will be used to emphasize each subject
Hobart Institute Video Material
Miller Module Method Video Material
Classroom handouts consisting of student worksheets and alloy charts
Hobart OAW wall chart
Personal protective equipment
Oxyfuel welding equipment
Oxygen and fuel gas cylinders
Oxygen and fuel gas regulators
Torch handles
Welding and cutting tips
Cutting torch assemblies
Lighters
Selection of filler metals and oxyfuel welding rod
Selection of base metals for welding and cutting
Welding shop tools
MASTER Handout (WLD-K7-HO)
MASTER Laboratory Aid (WLD-K7-LA)
MASTER Laboratory Worksheet No. 1 (WLD-K7-LW1)
MASTER Laboratory Worksheet No. 2 (WLD-K7-LW2)

OTHER:

*Competency Standards*, American Welding Society, Latest Edition

*Specification for Qualification and Certification for Entry Level Welders*, AWS QC10, Latest Edition

STUDENT PREPARATION:

Student must demonstrate appropriate communication skills and understand principles of basic physical science and mathematics as verified by placement test or completion of required prerequisite courses.

- **WLD-K1** “Identify and Describe the Function of Each Piece of Equipment”
- **WLD-K2** “Identify the Safety Hazards”
- **WLD-K3** “Describe Preventive and/or Protective Measures”
- **WLD-K4** “List the Welding Variables and Describe Their Effects on Weld Quality”
- **WLD-K5** “Describe the AWS Oxyfuel Gas Welding Rod Classification System”
- **WLD-K6** “Describe Techniques for Preventing or Reducing Welding Related Distortion”
INTRODUCTION:

The Course Introduction will Include:
- An overview of methods to minimize the effects of distortion
- A class demonstration of effective welding techniques to prevent warpage and distortion.

PRESENTATION OUTLINE:

Instruction Topics:
A. Identify safety hazards
B. Describe preventive and protective measures
C. Illustrate the function of oxyacetylene equipment
D. Illustrate discontinuities and their effects on weld quality
E. Illustrate AWS Oxyacetylene Rod Classification System
F. Illustrate techniques for preventing or reducing weld related distortion, weld flat plate using stringer bead in flat and horizontal, vertical, and overhead positions; flat plate using weave bead in flat position; lap joint using filler weld in flat position, horizontal, vertical, and overhead positions.
G. Illustrate variables associated with cutting
H. Remove distortion using gas equipment

Student Activities:
A. Cut mild steel plates in a safe manner
B. Remove discontinuities from cut area using grinders and files
C. Remove oxidation prior to and after welding
D. Oxyacetylene weld practice pieces using multiple positions

PRACTICAL APPLICATION:

The student will set-up oxyacetylene equipment in a safe and cautious manner, wearing personal protective equipment, and demonstrating awareness of safe techniques in the horizontal, vertical, and overhead positions. When welding various metals the student will chart the compatible filler materials and alloys used in the process.

EVALUATION AND/OR VERIFICATION:

An examination will be given at the end of this section to determine the progress of the class. Student practical exercises will be evaluated by the instructor.

SUMMARY:

Continued emphasis will be on oxyacetylene safety and the dangers of using gas tanks and gas lines. The class will discuss alloy compatibility using the oxyacetylene welding process.
A discussion will be conducted on preventing or reducing weld related distortion and weld quality. Practical exercises are designed to help the student minimize the effects of distortion.

NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-K8) dealing with listing the variables associated with cutting.
OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Perform welding with mild steel and carbon steel using variety of joints and types of leads and welds;
B. Weld intermittent blocks to decrease distortion;
C. Learn other techniques to prevent warpage and distortion; and,
D. Remove distortion using gas equipment.

MODULE OUTLINE:

Instruction Topics:
A. Identify safety hazards
B. Describe preventive and protective measures
C. Illustrate the function of oxyacetylene equipment
D. Illustrate discontinuities and their effects on weld quality
E. Illustrate AWS Oxyacetylene Rod Classification System
F. Illustrate techniques for preventing or reducing weld related distortion, weld flat plate using stringer bead in flat and horizontal, vertical, and overhead positions; flat plate using weave bead in flat position; lap joint using filler weld in flat position, horizontal, vertical, and overhead positions.
G. Illustrate variables associated with cutting
H. Remove distortion using gas equipment

Student Activities:
A. Cut mild steel plates in a safe manner
B. Remove discontinuities from cut area using grinders and files
C. Remove oxidation prior to and after welding
D. Oxyacetylene weld practice pieces using multiple positions
Caution: Specific preventive and protective safety measures must be followed when using oxyacetylene equipment.

a. Use goggles or shield with a number five shade.
b. Wear gloves, long sleeve shirts, pants of high cotton or wool content, leather boots, and soft cotton caps.
c. When lighting the torch, direct the torch away from yourself and other personnel.
d. Never leave a lit torch unattended. When leaving your work station, always extinguish your torch.
e. Never use matches or butane lighters for lighting a torch. Only use spark or friction lighters.
f. Never cut on containers that have contained flammable or toxic substances.
g. Either move work away from or protect wooden or other flammable materials which may be close to the work.
h. When cutting, cover, concrete floors with sheet metal where sparks and molten metal are being directed.
i. Before beginning to work, locate the nearest fire alarm and the nearest fire extinguisher.
j. Cut in a well-ventilated area. If adequate ventilation is not possible, use a respirator.
k. Keep all petroleum products away from oxyacetylene equipment and operations. The combination of pure oxygen and oil is explosive.

Caution: Handle acetylene and oxygen cylinders carefully:

a. Keep acetylene operating pressures at or below 15 psi.
b. Open the acetylene cylinder valve one-half to one full turn when using a portable rig to be sure that the cylinder can be quickly turned off in the event of burnback or a fire at a leak in the hose or at a connection.
c. Do not open the acetylene torch valve where acetylene could flow into a bucket or other container and cause a fire.
d. Never attempt to connect an acetylene hose to an oxygen torch connection. Damage to the torch or an explosion could result. Acetylene hoses are colored red and acetylene fittings are left-hand threaded and usually notched.
e. Never use oxygen or fuel gas from a cylinder except through an approved pressure-reducing regulator.
f. Do not use pipe-fitting compounds or thread lubricants for making connections.
g. Never use a cylinder that is leaking.
h. Store and transport cylinders in the upright position.
i. Secure all cylinders with chain when storing, transporting, or using, to prevent them from being turned over by accident.
j. Never tamper with fusible plugs or other safety devices on cylinders.

k. To open and close acetylene cylinder valves not provided with handwheels always use the special wrench or key. When cutting leave the key in place for rapid shutdown in case of fire.

l. Never use any cylinder, full or empty, as a roller or support.

m. Never use oxygen as though it were compressed air.

n. Do not handle oxygen cylinders on the same platform with oil.

o. Never use wire-rope slings or electromagnets for lifting cylinders. Do not lift cylinders by the protective cap alone.

p. Store oxygen cylinders separately from fuel gas cylinders.

q. Always keep empty cylinders separate from full cylinders.

r. Mark all empty cylinders as such after use.

s. Keep all cylinders stored inside buildings at least 20 feet away from combustible materials.

t. Never bring any arc or flame close to or directly into contact with a cylinder.

u. Never exceed the maximum safe withdrawal rate for acetylene cylinders (one seventh of the cylinder's current contents per hour). If acetylene is withdrawn from the cylinder at a greater rate, acetone will also be withdrawn from the cylinder, damaging the cutting equipment. If additional flow is needed, then manifold the required number of cylinders together.
Answer the following questions and compare your answers to those listed below.

1. What are the precautions recommended to prevent accidents and protect the welder during oxyacetylene cutting?

2. What are the precautions for safely handling and storing acetylene and oxygen cylinders?

3. What are the precautions for minimizing the risk of regulatory burn out (R.B.O.)?

4. What are the steps in preparing to cut with oxyacetylene?

5. What are the steps in lighting the torch?

6. What are the steps in cutting metal with the torch?

7. What are the steps in extinguishing the torch?

8. What are the steps in closing down the welding station?

Answers:

1. Precautions recommended to prevent accidents and to protect the welder during oxyacetylene cutting:
   a. Use goggles or shield with a number five shade.
   b. Wear gloves, long sleeve shirts, pants of high cotton or wool content, leather boots and soft cotton caps.
   c. When lighting the torch, direct the torch away from yourself and other personnel.
   d. Never leave a lit torch unattended. When leaving your work station, always extinguish your torch.
   e. Never use matches or butane lighters for lighting a torch. Only use spark or friction lighters.
   f. Never cut on containers that have contained flammable or toxic substances.
   g. Either move work away from or protect wooden or other flammable materials which may be close to the work.
   h. When cutting, cover concrete floors with sheet metal where sparks and molten metal are being directed.
Before beginning to work, locate the nearest fire alarm and the nearest fire extinguisher.

Cut in a well ventilated area. If adequate ventilation is not possible, use a respirator.

Keep all petroleum products away from oxyacetylene equipment and operations. The combination of pure oxygen and oil is explosive.

Precautions for safely handling oxygen and acetylene cylinders:

- Keep acetylene operating pressures at or below 15 psi.
- Open the acetylene cylinder valve one-half to one full turn when using a portable rig to be sure that the cylinder can be quickly turned off in the event of burn-back or a fire at a leak in the hose or at a connection.
- Do not open an acetylene torch's valve where acetylene could flow into a bucket or other container and cause a fire.
- Never attempt to connect an acetylene hose to an oxygen torch connection. Damage to the torch or an explosion could result. Acetylene hoses are colored red and acetylene fittings are left hand threaded and usually notched.
- Never use oxygen or fuel gas from a cylinder except through an approved pressure-reducing regulator.
- Do not use pipe-fitting compounds or thread lubricants for making connections.
- Never use a cylinder that is leaking.
- Store and transport cylinders in the upright position.
- Secure all cylinders with chain when storing, transporting, or using, to prevent them from being turned over by accident.
- Never tamper with fusible plugs or other safety devices on cylinders.
- To open and close acetylene cylinder valves not provided with handwheels, always use the special wrench or key. When cutting, leave the key in place for rapid shutdown in case of fire.
- Never use any cylinder, full or empty, as a roller or support.
- Never use oxygen as though it were compressed air.
- Do not handle oxygen cylinders on the same platform with oil.
- Never use wire-rope slings or electromagnets for lifting cylinders. Do not lift cylinders by the protective cap alone.
- Store oxygen cylinders separately from fuel gas cylinders.
- Always keep empty cylinders separate from full cylinders.
- Mark all empty cylinders as such after use.
- Keep all cylinders stored inside buildings at least 20 feet away from combustible materials.
- Never bring any arc or flame close to or directly into contact with a cylinder.
- Never exceed the maximum safe withdrawal rate for acetylene cylinders (one seventh of the cylinder's current contents per hour). If acetylene is withdrawn from the cylinder at a greater rate, acetone will also be withdrawn from the cylinder, damaging the cutting equipment. If additional flow is needed, then manifold the required number of cylinders together.
3. Precautions for minimizing the risks of regulatory burn out (R.B.O).
   a. "Crack" the oxygen cylinder valve before attaching the regulator. Stand to one side or the rear of the cylinder outlet. Open the cylinder valve slightly for an instant and then close it to clean the valve of dust and dirt which may have accumulated during storage. Dirt can damage an oxygen regulator and may cause R.B.O.
   b. Use only oxygen regulators to control oxygen supply. A pressure reducing regulator must be connected to the oxygen cylinder valve. Make certain the regulator is clean, free of grease and oil, and has a clean filter installed in its inlet nipple. Oil, grease, coal dust, and other combustibles can cause regulator burnouts. Never use an oxygen regulator for other gases.
   c. Before opening an oxygen cylinder valve, make sure the oxygen regulator pressure-adjusting screw is released. This is done by rotating the screw counterclockwise until it turns, freely. This closes the regulator valve and prevents damage due to a sudden pressure surge.
   d. While opening the oxygen cylinder valve, stand to one side of the oxygen regulator. Do not stand in line with the front or the back of the pressure-adjusting screw. Open the cylinder valve as slowly as possible, until the high pressure gauge reaches cylinder pressure. Never open a cylinder valve suddenly. Sudden surges of high pressure can cause R.B.O.

4. Steps in preparing to cut with oxyacetylene:
   a. Obtain the proper size cutting tip.
      (1) Consult the equipment manufacturer's cutting tip data charts. The charts match up the thickness of the steel being cut with the cutting tip size and also give recommended pressure settings for oxygen and acetylene.
      (2) Be sure that the metal can be cut with an oxyacetylene torch. Oxy-fuel cutting is not used on metals like aluminum, copper, magnesium, and chromium, where the oxide of that metal melts at a higher temperature than the metal itself. Also, stainless steels cannot be easily cut with oxy-fuel because they contain relatively large amounts of chromium and/or nickel.
   b. Screw the cutting torch head in place, hand-tight only.
   c. Before attaching the regulators to the cylinder valves, crack the valves to blow out any dirt and debris.
   d. Attach the regulators, hoses, torch, and correct-sized torch tip.
   e. Make sure the pressure adjusting screws of the acetylene and oxygen regulators are backed out. (That is, that they have been turned counterclockwise until there is a little free play.)
   f. Make sure all cutting torch valves are initially closed.
   g. Open the oxygen cylinder valve all the way. Open the acetylene cylinder valve one full turn only.
   h. Open the acetylene torch valve. Turn the acetylene torch valve off.
i. Turn the acetylene regulator pressure-adjusting screw clockwise until the needle on the regulator dial indicates the proper pressure.

j. Turn the acetylene torch valve off.

k. Turn both oxygen torch valves on.

l. Turn the oxygen regulator pressure-adjusting screw clockwise until the needle on the regulator dial indicates the proper pressure.

m. Turn off the oxygen torch valve on the torch head only.

5. Steps in lighting the torch:
   a. Put on gloves.
   b. Put on welding goggles.
   c. Open the torch acetylene valve one-half turn.
   d. Immediately light the torch with a friction lighter only.
   e. Reduce the acetylene flow at the torch's acetylene valve until the flame just starts to produce black smoke around its edges. Then increase the acetylene flow just enough to get rid of the black smoke.
   f. Open the torch's oxygen valve slowly until the desired type flame is obtained.
      (1) The preheat flame needs to be of the neutral type, which means that equal parts of oxygen and acetylene are being burnt.
      (2) The preheat flame needs to be the right size. Set the pressure correctly, and then follow the directions in "Step e" again. If the preheat flame is too large, there will be or tend to be slag or dross hanging onto the bottom of the cut—assuming that travel speed, tip size, etc., are all correct.

6. Steps in cutting metal with the torch:
   a. Follow the steps in Operation 1 and Operation 2 for the following oxyacetylene cutting variables:
      (1) Cutting tip size.
      (2) Oxygen operating pressure.
      (3) Acetylene operating pressure.
      (4) Preheat flame type.
      (5) Size of preheat flame
   b. Clean the cutting tip. Be sure that the preheat and cutting orifices of the tip are clean. A dirty tip, especially a dirty cutting orifice, will adversely affect the quality of the cut. Dirty orifices can produce such defects as wide kerfs, adherent slag, and rough appearance.
   c. Select the correct flame-to-work distance. The bottom of the preheat flame should be 1/16" to 1/2" from the base metal. Right-handed people should progress from right to left and left-handed people should cut left to right.
   d. Select the correct torch angle.
      (1) For square cuts, the torch should be perpendicular (at 90°) to the base metal and tipped slightly in the direction of travel.
      (2) For beveled cuts, the torch should be held at the angle of the bevel throughout the cutting procedure.
For holes, the torch must be held perpendicular to the base metal throughout the cut.

e. Cut at the proper travel speed. At the correct travel speed, the lines of the cut which project through the thickness of the base metal will be in a straight line. At too fast a travel speed, the lines of the cut will curve back from the progress of the cut and form clearly defined lines termed lag or drag lines. (The amount of drag is often expressed as a percent.)

f. Assure the oxygen level. Although it is possible to make a good weld with an oxygen purity level of only 95%, in order to make good oxy-fuel cut, an oxygen purity level of 99.5% is required. Where leaks in oxygen lines or hoses allow air to be mixed with the oxygen, the quality of the cut can be very seriously affected.

7. Steps in extinguishing the torch:
   a. Close the torch acetylene valve, thus extinguishing the flame.
   b. Close the torch oxygen valve.

8. Steps in closing down the welding station:
   a. Close the oxygen cylinder valve.
   b. Close the acetylene cylinder valve.
   c. Open the torch acetylene valve and bleed the acetylene from the line.
   d. Close the torch acetylene valve.
   e. Turn the acetylene regulator pressure adjusting screw counterclockwise until there is a little free play. Avoid backing out the pressure adjusting screws so much that they come totally out.
   f. Open the torch oxygen valve and bleed the oxygen from the line.
   g. Close the torch oxygen valve.
   h. Turn the oxygen regulator pressure adjusting screw counterclockwise until there is a little free play. Avoid backing out the pressure adjusting screws so much that they come totally out.
1. Instructor will demonstrate how to:
   - Braze with bronze rod;
   - Run a bead with a bronze rod;
   - Square butt braze on light steel plate;
   - Braze lap joints;
   - Braze tee joints;
   - Braze beveled butt joints on heavy steel plate; Braze beveled joints on cast iron;
   - Silver soldering of nonferrous metals; and,
   - Silver soldering of ferrous and nonferrous metals.

2. Student will practice:
   - Brazing with bronze rod;
   - Running beads with bronze rod;
   - Square butt brazing on light steel plate;
   - Brazed lap joints;
   - Brazing tee joints;
   - Brazing beveled butt joints on heavy steel plate; Brazing beveled joints on cast iron;
   - Silver soldering nonferrous metals; and,
   - Silver soldering ferrous and nonferrous metals.

3. Instructor will grade students performance on:
   - Brazing with bronze rod:
   - Running beads with bronze rod;
   - Square butt brazing on light steel plate;
   - Brazed lap joints;
   - Brazing tee joints;
   - Brazing beveled butt joints on heavy steel plate; Building-up on cast iron;
   - Brazing beveled joints on cast iron;
   - Silver soldering nonferrous metals; and,
   - Silver soldering ferrous and nonferrous metals.
WLD-K7
Weld Mild Steel Sheet Metal Using Techniques That Will Minimize the Effects of Distortion
Self-Assessment No. 1

Circle the best answer.

1. Which of the following can be used to ignite an oxyacetylene torch?
   a. Matches
   b. A cigarette lighter
   c. A spark or friction lighter
   d. Any of the above
   e. None of the above

2. Technician A says that they can cut into an old gasoline can with the torch. Technician B says that containers of flammable or toxic substances should never be cut with a torch. Who is correct?
   a. Technician A only
   b. Technician B only
   c. Both Technicians A and B
   d. Neither Technician A nor B

3. If adequate ventilation is unavailable, the technician should:
   a. Cut the metal anyway; ventilation is not important.
   b. Cut the metal while wearing a respirator.
   c. Cut the metal while wearing a heavy-duty dust mask.
   d. Refuse to make the cut.

4. Acetylene operating pressures must be kept at or below:
   a. 5 psi.
   b. 15 psi.
   c. 25 psi.
   d. Acetylene operating pressures are immaterial.

5. Acetylene hoses are _________; acetylene fittings are _________.
   a. Red - left-handed
   b. Blue - left-handed
   c. Red - right-handed
   d. Blue - left-handed
   e. None of the above
6. All cylinders should be secured except when:
   a. Transporting them.
   b. Storing them.
   c. Using them.
   d. Always secure cylinders with chains or in permanent racks.
   e. Securing cylinders is unnecessary.

7. Technician A says that oxygen cylinders should be stored well away from fuel gas cylinders. Technician B says that separate storage is unnecessary. Who is correct?
   a. Technician A only
   b. Technician B only
   c. Both Technicians A and B
   d. Neither Technician A nor B

8. The maximum safe withdrawal rate for acetylene cylinders is:
   a. One fourth of current content per hour.
   b. One fifth of current content per hour.
   c. One seventh of current content per hour.
   d. One tenth of current content per hour.
   e. None of the above

9. Technician A says that only oxygen-specific regulators can be used on oxygen cylinders. Technician B says that it is acceptable to use oxygen regulators on other gas cylinders. Who is correct?
   a. Technician A only
   b. Technician B only
   c. Both Technicians A and B
   d. Neither Technician A nor B

10. Which of the following can be cut with an oxyacetylene torch?
    a. Aluminum
    b. Copper
    c. Chromium
    d. All of the above
    e. None of the above

11. Technician A says that the acetylene cylinder's valve should be opened all the way. Technician B says that the oxygen cylinder's valve should be opened no more than one full turn. Who is correct?
    a. Technician A only
    b. Technician B only
    c. Both Technicians A and B
    d. Neither Technician A nor B
12. Before attaching the regulators to the cylinder valves:
   a. Clean the nipples with acetone.
   b. Crack the valves to blow out any dirt.
   c. Lubricate the threads with oil.
   d. All of the above
   e. None of the above

13. Technician A says that they must reduce the acetylene flow until the flame just starts to produce black smoke around its edges. Technician B says that the acetylene flow must then be increased until the smoke disappears. Who is correct?
   a. Technician A only
   b. Technician B only
   c. Both Technicians A and B
   d. Neither Technician A nor B

14. Dirty orifices on the cutting tip can produce:
   a. Wide kerfs.
   b. Adherent slag.
   c. Rough cut appearance.
   d. All of the above.
   e. None of the above

15. Technician A says that, for cutting holes, the torch must be held parallel to the base metal throughout the cut. Technician B says that square cuts require the torch to be held at 45° to the base metal. Who is correct?
   a. Technician A only
   b. Technician B only
   c. Both Technicians A and B
   d. Neither Technician A nor B

16. Lag lines are the result of
   a. Correct travel speed.
   b. Too great a travel speed.
   c. Too slow a travel speed.
   d. Incorrect torch angle.
   e. None of the above

17. When extinguishing the torch, Technician A says that the acetylene torch valve should be closed first. Technician B says that the oxygen torch valve should be closed first. Who is correct?
   a. Technician A only
   b. Technician B only
   c. Both Technicians A and B
   d. Neither Technician A nor B
18. Good oxy-fuel cuts require an oxygen purity of at least:
   a. 99.5%.
   b. 95.9%.
   c. 59.9%.
   d. None of the above.

19. Both acetylene and oxygen lines should be _________ when closing down the work station.
   a. Removed
   b. Cleaned with acetone
   c. Bled free of gas or fuel
   d. All of the above
   e. None of the above

20. Technician A says that since B is left-handed, B should cut from left to right. Technician B says that the pre-heat flame should still be from 1/6" to 1/2" from the base metal, regardless of the direction of travel. Who is correct?
   a. Technician A only
   b. Technician B only
   c. Both Technicians A and B
   d. Neither Technician A nor B

WLD-K7
Weld Mild Steel Sheet Metal Using Techniques That Will Minimize the Effects of Distortion
Self-Assessment No. 2

1. What is the major difference between a brazed joint and a welded joint?

2. What two conditions determines whether the joint is brazed or welded?

3. How does flux act as a guide to the temperature of the joint?

4. What is the color of the plate when it is at the proper temperature for welding?

5. Is brazing stronger than fusion welding?

6. For silver soldering: what is a 3x flame?

7. What alloys are contained in typical silver soldering?
8. How can material be prepared for silver soldering?

9. Is it possible to make fillets when using silver soldering alloys?
SUBJECT: WELDING TECHNICIAN  
TIME: 15 HOURS

• DUTY: OXYACETYLENE CUTTING AND WELDING

• TASK: List the Variables Associated With Cutting

OBJECTIVE(S):

Upon completion of this unit the student will be able to:

A. Provide demonstrations related to shape cutting operations using manual oxyfuel gas cutting equipment;
B. Provide instruction related to visual examination of flame cut edges and surfaces;
C. Demonstrate straight cuts on mild steel of 1/8”, 1/4”, 1/2”, bevel cuts of 3/8”, cut holes and shapes on 1/4” and 1/2”;
D. Provide training exercises related to shape cutting operations on plain carbon steel, using manual oxyfuel gas cutting equipment;
E. Observe safe oxyfuel gas cutting practices;
F. Operate manual oxyfuel gas cutting and “track burner” equipment;
G. Visually inspect workmanship samples;
H. Understand various methods of cutting; and,
I. Understand different tip sizes for material thickness.

INSTRUCTIONAL MATERIALS:

Student Workbook
Two written tests on cutting techniques and procedures
Transparencies will be used to emphasize each subject
Hobart Institute Video Material
Classroom handouts consisting of student worksheets and alloy charts
Hobart OAW wall chart
Personal protective equipment
Oxyfuel welding equipment
Oxygen and fuel gas cylinders
Oxygen and fuel gas regulators
Torch handles
Welding and cutting tips
Cutting torch assemblies
Lighters
Selection of filler metals and oxyfuel welding rod
Selection of base metals for welding and cutting
Welding shop tools
MASTER Handout (WLD-K8-HO)
MASTER Laboratory Aid (WLD-K8-LA)
MASTER Laboratory Worksheet No. 1 (WLD-K8-LW1)
MASTER Laboratory Worksheet No. 2 (WLD-K8-LW2)
MASTER Self-Assessment No. 1
MASTER Self-Assessment No. 2

STUDENT PREPARATION:

Student must demonstrate appropriate communication skills and understand principles of
basic physical science and mathematics as verified by placement test or completion of
required prerequisite courses.

WLD-K1 “Identify and Describe the Function of Each Piece of Equipment”
WLD-K2 “Identify the Safety Hazards”
WLD-K3 “Describe Preventive and/or Protective Measures”
"List the Welding Variables and Describe Their Effects on Weld Quality"

"Describe the AWS Oxyfuel Gas Welding Rod Classification System"

"Describe Techniques for Preventing or Reducing Welding Related Distortion"

"Weld Mild Steel Sheet Metal Using Techniques That Will Minimize the Effects of Distortion"

INTRODUCTION:

The Course Introduction will Include:

- The many applications for metal cutting processes
- Advantages and disadvantages of the processes and methods in use

PRESENTATION OUTLINE:

Instruction Topics:

A. Identify safety hazards in oxyfuel gas cutting operations
B. Describe preventive and protective measures
C. Selection of tips for cutting
D. Demonstrate kerfing, gauging, scarfing, and washing
E. Demonstration on cutting steel: straight cuts, bevel cuts, holes and shapes
F. Demonstrate cutting methods in flat or horizontal, vertical, and overhead positions
G. Operation of manual oxyfuel gas cutting and track burner equipment
H. Importance of quality and safety in cutting methods
I. Review other methods of cutting (plasma, laser, water jet), with advantages and disadvantages
J. Evaluating quality of final workmanship

Student Activities:

A. Demonstrate safe techniques in use of oxyfuel gas cutting equipment
B. Perform straight cutting operations using manual oxyfuel gas cutting equipment
C. Perform straight cutting operations on plain carbon steel
D. Demonstrate straight cuts on mild steel of 1/8", 1/4", 1/2", bevel cuts of 3/8", cut holes and shapes on 1/4" and 1/2" with major emphasis on safety practice cutting from multiple positions under close supervision of instructor
E. Use "track burner" equipment
F. Perform shape cutting operations on plain carbon steel, using manual oxyfuel gas cutting equipment
G. Select and change tip size for material, appropriate size to each operation
H. Review different methods of cutting (i.e. plasma, laser, water jet, etc.)
PRACTICAL APPLICATION:

The student will set-up oxyacetylene equipment in a safe and cautious manner, wearing personal protective equipment, and being aware of safety variables in horizontal, vertical, and overhead positions. Tip selection and size, or selection of applicable cutting torch will be elements of the welding decisions for cutting methods.

EVALUATION AND/OR VERIFICATION:

Two written examinations and fifteen practical exercises will be featured in this module. Practical exercises will be critiqued by students and instructor.

SUMMARY:

Students must be knowledgeable of the variables associated with cutting of metals with varying thickness in the horizontal, vertical, and overhead positions. Oxygen cutting, also referred to as flame cutting or torch cutting, is frequently used for many purposes, including cutting metals to a desired size or shape; cutting bevels for weld joint edge preparation; gouging or cutting grooves in metal surfaces; piercing holes or cutting sections out of metal sheets; and removing rough areas or surface defects from metal ingots and bars. Oxygen cutting can also be used to cut away rivets or bolts or to break welds in dismantling metal assembly or structure.

NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-K9) dealing with cutting mild steel plate in a safe manner.
OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Provide demonstrations related to shape cutting operations using manual oxyfuel gas cutting equipment;
B. Provide instruction related to visual examination of flame cut edges and surfaces;
C. Demonstrate straight cuts on mild steel of 1/8", 1/4", 1/2", bevel cuts of 3/8", cut holes and shapes on 1/4" and 1/2";
D. Provide training exercises related to shape cutting operations on plain carbon steel, using manual oxyfuel gas cutting equipment;
E. Observe safe oxyfuel gas cutting practices;
F. Operate manual oxyfuel gas cutting and “track burner” equipment;
G. Visually inspect workmanship samples;
H. Understand various methods of cutting; and,
I. Understand different tip sizes for material thickness.

MODULE OUTLINE:

Instruction Topics:
A. Identify safety hazards in oxyfuel gas cutting operations
B. Describe preventive and protective measures
C. Selection of tips for cutting
D. Demonstrate kerfing, gauging, scarfing, and washing
E. Demonstration on cutting steel: straight cuts, bevel cuts, holes and shapes
F. Demonstrate cutting methods in flat or horizontal, vertical, and overhead positions
G. Operation of manual oxyfuel gas cutting and track burner equipment
H. Importance of quality and safety in cutting methods
I. Review other methods of cutting (plasma, laser, water jet), with advantages and disadvantages
J. Evaluating quality of final workmanship

Student Activities:
A. Demonstrate safe techniques in use of oxyfuel gas cutting equipment
B. Perform straight cutting operations using manual oxyfuel gas cutting equipment
C. Perform straight cutting operations on plain carbon steel
D. Demonstrate straight cuts on mild steel of 1/8", 1/4", 1/2", bevel cuts of 3/8", cut holes and shapes on 1/4" and 1/2" with major emphasis on safety practice cutting from multiple positions under close supervision of instructor
E. Use “track burner” equipment
F. Perform shape cutting operations on plain carbon steel, using manual oxyfuel gas cutting equipment
G. Select and change tip size for material, appropriate size to each operation
H. Review different methods of cutting (i.e. plasma, laser, water jet, etc.)
Caution: Specific preventive and protective safety measures must be followed when using oxyacetylene equipment.

a. Use goggles or shield with a number five shade.
b. Wear gloves, long sleeve shirts, pants of high cotton or wool content, leather boots, and soft cotton caps.
c. When lighting the torch, direct the torch away from yourself and other personnel.
d. Never leave a lit torch unattended. When leaving your work station, always extinguish your torch.
e. Never use matches or butane lighters for lighting a torch. Only use spark or friction lighters.
f. Never cut on containers that have contained flammable or toxic substances.
g. Either move work away from or protect wooden or other flammable materials which may be close to the work.
h. When cutting, cover, concrete floors with sheet metal where sparks and molten metal are being directed.
i. Before beginning to work, locate the nearest fire alarm and the nearest fire extinguisher.
j. Cut in a well-ventilated area. If adequate ventilation is not possible, use a respirator.
k. Keep all petroleum products away from oxyacetylene equipment and operations. The combination of pure oxygen and oil is explosive.

Caution: Handle acetylene and oxygen cylinders carefully:

a. Keep acetylene operating pressures at or below 15 psi.
b. Open the acetylene cylinder valve one-half to one full turn when using a portable rig to be sure that the cylinder can be quickly turned off in the event of burnback or a fire at a leak in the hose or at a connection.
c. Do not open the acetylene torch valve where acetylene could flow into a bucket or other container and cause a fire.
d. Never attempt to connect an acetylene hose to an oxygen torch connection. Damage to the torch or an explosion could result. Acetylene hoses are colored red and acetylene fittings are left-hand threaded and usually notched.
e. Never use oxygen or fuel gas from a cylinder except through an approved pressure-reducing regulator.
f. Do not use pipe-fitting compounds or thread lubricants for making connections.
g. Never use a cylinder that is leaking.
h. Store and transport cylinders in the upright position.
i. Secure all cylinders with chain when storing, transporting, or using, to prevent them from being turned over by accident.
j. Never tamper with fusible plugs or other safety devices on cylinders.
To open and close acetylene cylinder valves not provided with handwheels always use the special wrench or key. When cutting leave the key in place for rapid shutdown in case of fire.

Never use any cylinder, full or empty, as a roller or support.

Never use oxygen as though it were compressed air.

Do not handle oxygen cylinders on the same platform with oil.

Never use wire-rope slings or electromagnets for lifting cylinders. Do not lift cylinders by the protective cap alone.

Store oxygen cylinders separately from fuel gas cylinders.

Always keep empty cylinders separate from full cylinders.

Mark all empty cylinders as such after use.

Keep all cylinders stored inside buildings at least 20 feet away from combustible materials.

Never bring any arc or flame close to or directly into contact with a cylinder.

Never exceed the maximum safe withdrawal rate for acetylene cylinders (one seventh of the cylinder's current contents per hour). If acetylene is withdrawn from the cylinder at a greater rate, acetone will also be withdrawn from the cylinder, damaging the cutting equipment. If additional flow is needed, then manifold the required number of cylinders together.
List the Variables Associated with Cutting
Attachment 3 MASTER Laboratory Worksheet No. 1

Answer the following questions and compare your answers to those listed below.

1. What are the precautions recommended to prevent accidents and protect the welder during oxyacetylene cutting?

2. What are the precautions for safely handling and storing acetylene and oxygen cylinders?

3. What are the precautions for minimizing the risk of regulatory burn out (R.B.O.)?

4. What are the steps in preparing to cut with oxyacetylene?

5. What are the steps in lighting the torch?

6. What are the steps in cutting metal with the torch?

7. What are the steps in extinguishing the torch?

8. What are the steps in closing down the welding station?

Answers:

1. Precautions recommended to prevent accidents and to protect the welder during oxyacetylene cutting:
   a. Use goggles or shield with a number five shade.
   b. Wear gloves, long sleeve shirts, pants of high cotton or wool content, leather boots and soft cotton caps.
   c. When lighting the torch, direct the torch away from yourself and other personnel.
   d. Never leave a lit torch unattended. When leaving your work station, always extinguish your torch.
   e. Never use matches or butane lighters for lighting a torch. Only use spark or friction lighters.
   f. Never cut on containers that have contained flammable or toxic substances.
   g. Either move work away from or protect wooden or other flammable materials which may be close to the work.
   h. When cutting, cover concrete floors with sheet metal where sparks and molten metal are being directed.
Before beginning to work, locate the nearest fire alarm and the nearest fire extinguisher.

Cut in a well ventilated area. If adequate ventilation is not possible, use a respirator.

Keep all petroleum products away from oxyacetylene equipment and operations. The combination of pure oxygen and oil is explosive.

2. Precautions for safely handling oxygen and acetylene cylinders:
   a. Keep acetylene operating pressures at or below 15 psi.
   b. Open the acetylene cylinder valve one-half to one full turn when using a portable rig to be sure that the cylinder can be quickly turned off in the event of burn-back or a fire at a leak in the hose or at a connection.
   c. Do not open an acetylene torch's valve where acetylene could flow into a bucket or other container and cause a fire.
   d. Never attempt to connect an acetylene hose to an oxygen torch connection. Damage to the torch or an explosion could result. Acetylene hoses are colored red and acetylene fittings are left hand threaded and usually notched.
   e. Never use oxygen or fuel gas from a cylinder except through an approved pressure-reducing regulator.
   f. Do not use pipe-fitting compounds or thread lubricants for making connections.
   g. Never use a cylinder that is leaking.
   h. Store and transport cylinders in the upright position.
   i. Secure all cylinders with chain when storing, transporting, or using, to prevent them from being turned over by accident.
   j. Never tamper with fusible plugs or other safety devices on cylinders.
   k. To open and close acetylene cylinder valves not provided with handwheels, always use the special wrench or key. When cutting, leave the key in place for rapid shutdown in case of fire.
   l. Never use any cylinder, full or empty, as a roller or support.
   m. Never use oxygen as though it were compressed air.
   n. Do not handle oxygen cylinders on the same platform with oil.
   o. Never use wire-rope slings or electromagnets for lifting cylinders. Do not lift cylinders by the protective cap alone.
   p. Store oxygen cylinders separately from fuel gas cylinders.
   q. Always keep empty cylinders separate from full cylinders.
   r. Mark all empty cylinders as such after use.
   s. Keep all cylinders stored inside buildings at least 20 feet away from combustible materials.
   t. Never bring any arc or flame close to or directly into contact with a cylinder.
   u. Never exceed the maximum safe withdrawal rate for acetylene cylinders (one seventh of the cylinder's current contents per hour). If acetylene is withdrawn from the cylinder at a greater rate, acetone will also be withdrawn from the cylinder, damaging the cutting equipment. If additional flow is needed, then manifold the required number of cylinders together.
3. Precautions for minimizing the risks of regulatory burn out (R.B.O).
   a. "Crack" the oxygen cylinder valve before attaching the regulator. Stand to one side or the rear of the cylinder outlet. Open the cylinder valve slightly for an instant and then close it to clean the valve of dust and dirt which may have accumulated during storage. Dirt can damage an oxygen regulator and may cause R.B.O.
   b. Use only oxygen regulators to control oxygen supply. A pressure reducing regulator must be connected to the oxygen cylinder valve. Make certain the regulator is clean, free of grease and oil, and has a clean filter installed in its inlet nipple. Oil, grease, coal dust, and other combustibles can cause regulator burnouts. Never use an oxygen regulator for other gases.
   c. Before opening an oxygen cylinder valve, make sure the oxygen regulator pressure-adjusting screw is released. This is done by rotating the screw counterclockwise until it turns, freely. This closes the regulator valve and prevents damage due to a sudden pressure surge.
   d. While opening the oxygen cylinder valve, stand to one side of the oxygen regulator. Do not stand in line with the front or the back of the pressure-adjusting screw. Open the cylinder valve as slowly as possible, until the high pressure gauge reaches cylinder pressure. Never open a cylinder valve suddenly. Sudden surges of high pressure can cause R.B.O.

4. Steps in preparing to cut with oxyacetylene:
   a. Obtain the proper size cutting tip.
      (1) Consult the equipment manufacturer's cutting tip data charts. The charts match up the thickness of the steel being cut with the cutting tip size and also give recommended pressure settings for oxygen and acetylene.
      (2) Be sure that the metal can be cut with an oxyacetylene torch. Oxy-fuel cutting is not used on metals like aluminum, copper, magnesium, and chromium, where the oxide of that metal melts at a higher temperature than the metal itself. Also, stainless steels cannot be easily cut with oxy-fuel because they contain relatively large amounts of chromium and/or nickel.
   b. Screw the cutting torch head in place, hand-tight only.
   c. Before attaching the regulators to the cylinder valves, crack the valves to blow out any dirt and debris.
   d. Attach the regulators, hoses, torch, and correct-sized torch tip.
   e. Make sure the pressure adjusting screws of the acetylene and oxygen regulators are backed out. (That is, that they have been turned counterclockwise until there is a little free play.)
   f. Make sure all cutting torch valves are initially closed.
   g. Open the oxygen cylinder valve all the way. Open the acetylene cylinder valve one full turn only.
   h. Open the acetylene torch valve. Turn the acetylene torch valve off.
i. Turn the acetylene regulator pressure-adjusting screw clockwise until the needle on the regulator dial indicates the proper pressure.

j. Turn the acetylene torch valve off.

k. Turn both oxygen torch valves on.

l. Turn the oxygen regulator pressure-adjusting screw clockwise until the needle on the regulator dial indicates the proper pressure.

m. Turn off the oxygen torch valve on the torch head only.

5. Steps in lighting the torch:
   a. Put on gloves.
   b. Put on welding goggles.
   c. Open the torch acetylene valve one-half turn.
   d. Immediately light the torch with a friction lighter only.
   e. Reduce the acetylene flow at the torch's acetylene valve until the flame just starts to produce black smoke around its edges. Then increase the acetylene flow just enough to get rid of the black smoke.
   f. Open the torch's oxygen valve slowly until the desired type flame is obtained.
      (1) The preheat flame needs to be of the neutral type, which means that equal parts of oxygen and acetylene are being burnt.
      (2) The preheat flame needs to be the right size. Set the pressure correctly, and then follow the directions in "Step e" again. If the preheat flame is too large, there will be or tend to be slag or dross hanging onto the bottom of the cut-assuming that travel speed, tip size, etc., are all correct.

6. Steps in cutting metal with the torch:
   a. Follow the steps in Operation 1 and Operation 2 for the following oxyacetylene cutting variables:
      (1) Cutting tip size.
      (2) Oxygen operating pressure.
      (3) Acetylene operating pressure.
      (4) Preheat flame type.
      (5) Size of preheat flame
   b. Clean the cutting tip. Be sure that the preheat and cutting orifices of the tip are clean. A dirty tip, especially a dirty cutting orifice, will adversely affect the quality of the cut. Dirty orifices can produce such defects as wide kerfs, adherent slag, and rough appearance.
   c. Select the correct flame-to-work distance. The bottom of the preheat flame should be 1/16" to 1/2" from the base metal. Right-handed people should progress from right to left and left-handed people should cut left to right.
   d. Select the correct torch angle.
      (1) For square cuts, the torch should be perpendicular (at 90°) to the base metal and tipped slightly in the direction of travel.
      (2) For beveled cuts, the torch should be held at the angle of the bevel throughout the cutting procedure.
(3) For holes, the torch must be held perpendicular to the base metal throughout the cut.

e. Cut at the proper travel speed. At the correct travel speed, the lines of the cut which project through the thickness of the base metal will be in a straight line. At too fast a travel speed, the lines of the cut will curve back from the progress of the cut and form clearly defined lines termed lag or drag lines. (The amount of drag is often expressed as a percent.)

f. Assure the oxygen level. Although it is possible to make a good weld with an oxygen purity level of only 95%, in order to make good oxy-fuel cut, an oxygen purity level of 99.5% is required. Where leaks in oxygen lines or hoses allow air to be mixed with the oxygen, the quality of the cut can be very seriously affected.

7. Steps in extinguishing the torch:
a. Close the torch acetylene valve, thus extinguishing the flame.
b. Close the torch oxygen valve.

8. Steps in closing down the welding station:
a. Close the oxygen cylinder valve.
b. Close the acetylene cylinder valve.
c. Open the torch acetylene valve and bleed the acetylene from the line.
d. Close the torch acetylene valve.
e. Turn the acetylene regulator pressure adjusting screw counterclockwise until there is a little free play. Avoid backing out the pressure adjusting screws so much that they come totally out.
f. Open the torch oxygen valve and bleed the oxygen from the line.
g. Close the torch oxygen valve.
h. Turn the oxygen regulator pressure adjusting screw counterclockwise until there is a little free play. Avoid backing out the pressure adjusting screws so much that they come totally out.
1. Instructor will demonstrate how to:
   Braze with bronze rod;
   Run a bead with a bronze rod;
   Square butt braze on light steel plate;
   Braze lap joints;
   Braze tee joints;
   Braze beveled butt joints on heavy steel plate; Braze beveled joints on cast iron;
   Silver soldering of nonferrous metals; and,
   Silver soldering of ferrous and nonferrous metals.

2. Student will practice:
   Brazing with bronze rod;
   Running beads with bronze rod;
   Square butt brazing on light steel plate;
   Brazed lap joints;
   Brazing tee joints;
   Brazing beveled butt joints on heavy steel plate; Brazing beveled joints on cast iron;
   Silver soldering nonferrous metals; and,
   Silver soldering ferrous and nonferrous metals.

3. Instructor will grade students performance on: Brazing with bronze rod:
   Running beads with bronze rod;
   Square butt brazing on light steel plate;
   Brazed lap joints;
   Brazing tee joints;
   Brazing beveled butt joints on heavy steel plate; Building-up on cast iron;
   Brazing beveled joints on cast iron;
   Silver soldering nonferrous metals; and,
   Silver soldering ferrous and nonferrous metals.
List the Variables Associated with Cutting
Self-Assessment No. 1

Circle the best answer.

1. Which of the following can be used to ignite an oxyacetylene torch?
   a. Matches
   b. A cigarette lighter
   c. A spark or friction lighter
   d. Any of the above
   e. None of the above

2. Technician A says that they can cut into an old gasoline can with the torch. Technician B says that containers of flammable or toxic substances should never be cut with a torch. Who is correct?
   a. Technician A only
   b. Technician B only
   c. Both Technicians A and B
   d. Neither Technician A nor B

3. If adequate ventilation is unavailable, the technician should:
   a. Cut the metal anyway; ventilation is not important.
   b. Cut the metal while wearing a respirator.
   c. Cut the metal while wearing a heavy-duty dust mask.
   d. Refuse to make the cut.

4. Acetylene operating pressures must be kept at or below:
   a. 5 psi.
   b. 15 psi.
   c. 25 psi.
   d. Acetylene operating pressures are immaterial.

5. Acetylene hoses are ________; acetylene fittings are ________.
   a. Red - left-handed
   b. Blue - left-handed
   c. Red - right-handed
   d. Blue - left-handed
   e. None of the above
6. All cylinders should be secured except when:
   a. Transporting them.
   b. Storing them.
   c. Using them.
   d. Always secure cylinders with chains or in permanent racks.
   e. Securing cylinders is unnecessary.

7. Technician A says that oxygen cylinders should be stored well away from fuel gas cylinders. Technician B says that separate storage is unnecessary. Who is correct?
   a. Technician A only
   b. Technician B only
   c. Both Technicians A and B
   d. Neither Technician A nor B

8. The maximum safe withdrawal rate for acetylene cylinders is:
   a. One fourth of current content per hour.
   b. One fifth of current content per hour.
   c. One seventh of current content per hour.
   d. One tenth of current content per hour.
   e. None of the above

9. Technician A says that only oxygen-specific regulators can be used on oxygen cylinders. Technician B says that it is acceptable to use oxygen regulators on other gas cylinders. Who is correct?
   a. Technician A only
   b. Technician B only
   c. Both Technicians A and B
   d. Neither Technician A nor B

10. Which of the following can be cut with an oxyacetylene torch?
   a. Aluminum
   b. Copper
   c. Chromium
   d. All of the above
   e. None of the above

11. Technician A says that the acetylene cylinder's valve should be opened all the way. Technician B says that the oxygen cylinder's valve should be opened no more than one full turn. Who is correct?
   a. Technician A only
   b. Technician B only
   c. Both Technicians A and B
   d. Neither Technician A nor B
12. Before attaching the regulators to the cylinder valves:
   a. Clean the nipples with acetone.
   b. Crack the valves to blow out any dirt.
   c. Lubricate the threads with oil.
   d. All of the above
   e. None of the above

13. Technician A says that they must reduce the acetylene flow until the flame just starts to produce black smoke around its edges. Technician B says that the acetylene flow must then be increased until the smoke disappears. Who is correct?
   a. Technician A only
   b. Technician B only
   c. Both Technicians A and B
   d. Neither Technician A nor B

14. Dirty orifices on the cutting tip can produce:
   a. Wide kerfs.
   b. Adherent slag.
   c. Rough cut appearance.
   d. All of the above.
   e. None of the above

15. Technician A says that, for cutting holes, the torch must be held parallel to the base metal throughout the cut. Technician B says that square cuts require the torch to be held at 45° to the base metal. Who is correct?
   a. Technician A only
   b. Technician B only
   c. Both Technicians A and B
   d. Neither Technician A nor B

16. Lag lines are the result of
   a. Correct travel speed.
   b. Too great a travel speed.
   c. Too slow a travel speed.
   d. Incorrect torch angle.
   e. None of the above

17. When extinguishing the torch, Technician A says that the acetylene torch valve should be closed first. Technician B says that the oxygen torch valve should be closed first. Who is correct?
   a. Technician A only
   b. Technician B only
   c. Both Technicians A and B
   d. Neither Technician A nor B
18. Good oxy-fuel cuts require an oxygen purity of at least:
   a.  99.5%.
   b.  95.9%.
   c.  59.9%.
   d.  None of the above.

19. Both acetylene and oxygen lines should be _______ when closing down the work station.
   a.  Removed
   b.  Cleaned with acetone
   c.  Bled free of gas or fuel
   d.  All of the above
   e.  None of the above

20. Technician A says that since B is left-handed, B should cut from left to right. Technician B says that the pre-heat flame should still be from 1/6" to 1/2" from the base metal, regardless of the direction of travel. Who is correct?
   a.  Technician A only
   b.  Technician B only
   c.  Both Technicians A and B
   d.  Neither Technician A nor B

1. What is the major difference between a brazed joint and a welded joint?

2. What two conditions determines whether the joint is brazed or welded?

3. How does flux act as a guide to the temperature of the joint?

4. What is the color of the plate when it is at the proper temperature for welding?

5. Is brazing stronger than fusion welding?

6. For silver soldering: what is a 3x flame?

7. What alloys are contained in typical silver soldering?

8. How can material be prepared for silver soldering?
9. Is it possible to make fillets when using silver soldering alloys?
WELDER SERIES
MASTER Technical Module No. WLD-K09

SUBJECT: WELDING TECHNICIAN
TIME: 12 HOURS

• DUTY: OXYACETYLENE CUTTING AND WELDING
• TASK: Cut Mild Steel Plate in a Safe Manner

OBJECTIVE(S):

Upon completion of this unit, the student will be able to:
A. Perform quality multipass single vee groove welds;
B. Perform quality vee groove weld that will pass a guided bend test;
C. Produce quality single vee groove welds in the vertical position;
D. Produce quality single vee groove welds in the overhead position;
E. Produce quality single vee groove welds in the horizontal position;
F. Visually inspect workmanship samples; and,
G. Understand all welding procedures.

INSTRUCTIONAL MATERIALS:

Student Workbook
Written tests on welding techniques and destructive testing
Transparencies will be used to emphasize each subject
Hobart Institute Video Material
Classroom handouts consisting of student worksheets with characteristics of carbon steel and alloy charts
Hobart OAW wall chart
Personal protective equipment
Oxyfuel welding equipment
Oxygen and fuel gas cylinders
Oxygen and fuel gas regulators
Torch handles
Welding and cutting tips
Cutting torch assemblies
Lighters
Selection of filler metals and oxyfuel welding rod
Selection of base metals for welding and cutting
Welding shop tools
MASTER Handout (WLD-K9-HO)

OTHER:

*Competency Standards*, American Welding Society, Latest Edition

*Specification for Qualification and Certification for Entry Level Welders*, AWS QC10, Latest Edition

STUDENT PREPARATION:

Student must demonstrate appropriate communication skills and understand principles of basic physical science and mathematics as verified by placement test or completion of required prerequisite courses.

WLD-K1 “Identify and Describe the Function of Each Piece of Equipment”

WLD-K2 “Identify the Safety Hazards”

WLD-K3 “Describe Preventive and/or Protective Measures”

WLD-K4 “List the Welding Variables and Describe Their Effects on Weld Quality”

WLD-K5 “Describe the AWS Oxyfuel Gas Welding Rod Classification System”

WLD-K6 “Describe Techniques for Preventing or Reducing Welding Related
INTRODUCTION:

The Course Introduction will Include:

- An overview of a fast growing technical field with many opportunities and excellent pay
- A class demonstration of gas welding techniques with carbon steels
- A discussion on training activities resulting in an increase of skill and knowledge leading to certification in related program areas, becoming a more valuable employee.

PRESENTATION OUTLINE:

Instruction Topics:

A. Identify safety hazards.
B. Describe preventive and protective measures.
C. Demonstrate forcehand or backhand motions for gas welding
D. Adjust gas working pressures according to tip size, producing good fusion
E. Present and demonstrate welding techniques in the flat or horizontal, vertical, and overhead positions
F. Discuss types of welds and joints for carbon steel.
G. Discuss how to perform Single Groove Weld Guided Bend Test.

Student Activities:

Perform the following welding exercises:

A. Single Vee Groove Weld, Butt Joint, Flat Position
B. Single Vee Groove Weld, Guided Bend Test
C. Single Vee Groove Weld, Butt Joint, Vertical Position,
D. Single Vee Groove Weld, Butt Joint, Overhead Position
E. Single Vee Groove Weld, Butt Joint, Horizontal Position
F. Discuss advantages and disadvantages of typical gas working pressures

PRACTICAL APPLICATION:

The student will set-up oxyacetylene equipment in a safe and cautious manner, wearing personal protective equipment, and being aware of hazards of working in vertical and overhead position. When welding various metals the student will chart the compatible alloys used in the process. The student will also demonstrate welding techniques and adjust working pressures in a capable manner.
EVALUATION AND/OR VERIFICATION:

Two written examinations will be given during this to determine student progress. Five or more welding exercises will be conducted by the student and evaluated by the instructor.

SUMMARY:

Emphasis will be on practical work, using quality techniques to gas weld carbon steel. The class will discuss alloy compatibility using filler materials. Discussion will continue on preventing or reducing weld related distortion and improving weld quality. Students will apply quality weld techniques, and capably adjust working pressures.

NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-L1) dealing with preheating joint.
OBJECTIVE(S):

Upon completion of this unit, the student will be able to:

A. Perform quality multipass single vee groove welds;
B. Perform quality vee groove weld that will pass a guided bend test;
C. Produce quality single vee groove welds in the vertical position;
D. Produce quality single vee groove welds in the overhead position;
E. Produce quality single vee groove welds in the horizontal position;
F. Visually inspect workmanship samples; and,
G. Understand all welding procedures.

MODULE OUTLINE:

Instruction Topics:

A. Identify safety hazards.
B. Describe preventive and protective measures.
C. Demonstrate forcehand or backhand motions for gas welding
D. Adjust gas working pressures according to tip size, producing good fusion
E. Present and demonstrate welding techniques in the flat or horizontal, vertical, and overhead positions
F. Discuss types of welds and joints for carbon steel.
G. Discuss how to perform Single Groove Weld Guided Bend Test.

Student Activities:

Perform the following welding exercises:

A. Single Vee Groove Weld, Butt Joint, Flat Position
B. Single Vee Groove Weld, Guided Bend Test
C. Single Vee Groove Weld, Butt Joint, Vertical Position,
D. Single Vee Groove Weld, Butt Joint, Overhead Position
E. Single Vee Groove Weld, Butt Joint, Horizontal Position
F. Discuss advantages and disadvantages of typical gas working pressures
Caution: Specific preventive and protective safety measures must be followed when using oxyacetylene equipment.

a. Use goggles or shield with a number five shade.
b. Wear gloves, long sleeve shirts, pants of high cotton or wool content, leather boots, and soft cotton caps.
c. When lighting the torch, direct the torch away from yourself and other personnel.
d. Never leave a lit torch unattended. When leaving your work station, always extinguish your torch.
e. Never use matches or butane lighters for lighting a torch. Only use spark or friction lighters.
f. Never cut on containers that have contained flammable or toxic substances.
g. Either move work away from or protect wooden or other flammable materials which may be close to the work.
h. When cutting, cover concrete floors with sheet metal where sparks and molten metal are being directed.
i. Before beginning to work, locate the nearest fire alarm and the nearest fire extinguisher.
j. Cut in a well-ventilated area. If adequate ventilation is not possible, use a respirator.
k. Keep all petroleum products away from oxyacetylene equipment and operations. The combination of pure oxygen and oil is explosive.

Caution: Handle acetylene and oxygen cylinders carefully:

a. Keep acetylene operating pressures at or below 15 psi.
b. Open the acetylene cylinder valve one-half to one full turn when using a portable rig to be sure that the cylinder can be quickly turned off in the event of burnback or a fire at a leak in the hose or at a connection.
c. Do not open the acetylene torch valve where acetylene could flow into a bucket or other container and cause a fire.
d. Never attempt to connect an acetylene hose to an oxygen torch connection. Damage to the torch or an explosion could result. Acetylene hoses are colored red and acetylene fittings are left-hand threaded and usually notched.
e. Never use oxygen or fuel gas from a cylinder except through an approved pressure-reducing regulator.
f. Do not use pipe-fitting compounds or thread lubricants for making connections.
g. Never use a cylinder that is leaking.
h. Store and transport cylinders in the upright position.
i. Secure all cylinders with chain when storing, transporting, or using, to prevent them from being turned over by accident.
j. Never tamper with fusible plugs or other safety devices on cylinders.
k. To open and close acetylene cylinder valves not provided with handwheels always use the special wrench or key. When cutting leave the key in place for rapid shutdown in case of fire.
l. Never use any cylinder, full or empty, as a roller or support.
m. Never use oxygen as though it were compressed air.
n. Do not handle oxygen cylinders on the same platform with oil.
o. Never use wire-rope slings or electromagnets for lifting cylinders. Do not lift cylinders by the protective cap alone.
p. Store oxygen cylinders separately from fuel gas cylinders.
q. Always keep empty cylinders separate from full cylinders.
r. Mark all empty cylinders as such after use.
s. Keep all cylinders stored inside buildings at least 20 feet away from combustible materials.
t. Never bring any arc or flame close to or directly into contact with a cylinder.
u. Never exceed the maximum safe withdrawal rate for acetylene cylinders (one seventh of the cylinder's current contents per hour). If acetylene is withdrawn from the cylinder at a greater rate, acetone will also be withdrawn from the cylinder, damaging the cutting equipment. If additional flow is needed, then manifold the required number of cylinders together.
Answer the following questions and compare your answers to those listed below.

1. What are the precautions recommended to prevent accidents and protect the welder during oxyacetylene cutting?
2. What are the precautions for safely handling and storing acetylene and oxygen cylinders?
3. What are the precautions for minimizing the risk of regulatory burn out (R.B.O.)?
4. What are the steps in preparing to cut with oxyacetylene?
5. What are the steps in lighting the torch?
6. What are the steps in cutting metal with the torch?
7. What are the steps in extinguishing the torch?
8. What are the steps in closing down the welding station?

Answers:

1. Precautions recommended to prevent accidents and to protect the welder during oxyacetylene cutting:
   a. Use goggles or shield with a number five shade.
   b. Wear gloves, long sleeve shirts, pants of high cotton or wool content, leather boots and soft cotton caps.
   c. When lighting the torch, direct the torch away from yourself and other personnel.
   d. Never leave a lit torch unattended. When leaving your work station, always extinguish your torch.
   e. Never use matches or butane lighters for lighting a torch. Only use spark or friction lighters.
   f. Never cut on containers that have contained flammable or toxic substances.
   g. Either move work away from or protect wooden or other flammable materials which may be close to the work.
   h. When cutting, cover concrete floors with sheet metal where sparks and molten metal are being directed.
i. Before beginning to work, locate the nearest fire alarm and the nearest fire extinguisher.

j. Cut in a well ventilated area. If adequate ventilation is not possible, use a respirator.

k. Keep all petroleum products away from oxyacetylene equipment and operations. The combination of pure oxygen and oil is explosive.

2. Precautions for safely handling oxygen and acetylene cylinders:
   a. Keep acetylene operating pressures at or below 15 psi.
   b. Open the acetylene cylinder valve one-half to one full turn when using a portable rig to be sure that the cylinder can be quickly turned off in the event of burn-back or a fire at a leak in the hose or at a connection.
   c. Do not open an acetylene torch's valve where acetylene could flow into a bucket or other container and cause a fire.
   d. Never attempt to connect an acetylene hose to an oxygen torch connection. Damage to the torch or an explosion could result. Acetylene hoses are colored red and acetylene fittings are left hand threaded and usually notched.
   e. Never use oxygen or fuel gas from a cylinder except through an approved pressure-reducing regulator.
   f. Do not use pipe-fitting compounds or thread lubricants for making connections.
   g. Never use a cylinder that is leaking.
   h. Store and transport cylinders in the upright position.
   i. Secure all cylinders with chain when storing, transporting, or using, to prevent them from being turned over by accident.
   j. Never tamper with fusible plugs or other safety devices on cylinders.
   k. To open and close acetylene cylinder valves not provided with handwheels, always use the special wrench or key. When cutting, leave the key in place for rapid shutdown in case of fire.
   l. Never use any cylinder, full or empty, as a roller or support.
   m. Never use oxygen as though it were compressed air.
   n. Do not handle oxygen cylinders on the same platform with oil.
   o. Never use wire-rope slings or electromagnets for lifting cylinders. Do not lift cylinders by the protective cap alone.
   p. Store oxygen cylinders separately from fuel gas cylinders.
   q. Always keep empty cylinders separate from full cylinders.
   r. Mark all empty cylinders as such after use.
   s. Keep all cylinders stored inside buildings at least 20 feet away from combustible materials.
   t. Never bring any arc or flame close to or directly into contact with a cylinder.
   u. Never exceed the maximum safe withdrawal rate for acetylene cylinders (one seventh of the cylinder's current contents per hour). If acetylene is withdrawn from the cylinder at a greater rate, acetone will also be withdrawn from the cylinder, damaging the cutting equipment. If additional flow is needed, then manifold the required number of cylinders together.
3. Precautions for minimizing the risks of regulatory burn out (R.B.O).
   a. "Crack" the oxygen cylinder valve before attaching the regulator. Stand to one side or the rear of the cylinder outlet. Open the cylinder valve slightly for an instant and then close it to clean the valve of dust and dirt which may have accumulated during storage. Dirt can damage an oxygen regulator and may cause R.B.O.
   b. Use only oxygen regulators to control oxygen supply. A pressure reducing regulator must be connected to the oxygen cylinder valve. Make certain the regulator is clean, free of grease and oil, and has a clean filter installed in its inlet nipple. Oil, grease, coal dust, and other combustibles can cause regulator burnouts. Never use an oxygen regulator for other gases.
   c. Before opening an oxygen cylinder valve, make sure the oxygen regulator pressure-adjusting screw is released. This is done by rotating the screw counterclockwise until it turns freely. This closes the regulator valve and prevents damage due to a sudden pressure surge.
   d. While opening the oxygen cylinder valve, stand to one side of the oxygen regulator. Do not stand in line with the front or the back of the pressure-adjusting screw. Open the cylinder valve as slowly as possible, until the high pressure gauge reaches cylinder pressure. Never open a cylinder valve suddenly. Sudden surges of high pressure can cause R.B.O.

4. Steps in preparing to cut with oxyacetylene:
   a. Obtain the proper size cutting tip.
      (1) Consult the equipment manufacturer's cutting tip data charts. The charts match up the thickness of the steel being cut with the cutting tip size and also give recommended pressure settings for oxygen and acetylene.
      (2) Be sure that the metal can be cut with an oxyacetylene torch. Oxy-fuel cutting is not used on metals like aluminum, copper, magnesium, and chromium, where the oxide of that metal melts at a higher temperature than the metal itself. Also, stainless steels cannot be easily cut with oxy-fuel because they contain relatively large amounts of chromium and/or nickel.
   b. Screw the cutting torch head in place, hand-tight only.
   c. Before attaching the regulators to the cylinder valves, crack the valves to blow out any dirt and debris.
   d. Attach the regulators, hoses, torch, and correct-sized torch tip.
   e. Make sure the pressure adjusting screws of the acetylene and oxygen regulators are backed out. (That is, that they have been turned counterclockwise until there is a little free play.)
   f. Make sure all cutting torch valves are initially closed.
   g. Open the oxygen cylinder valve all the way. Open the acetylene cylinder valve one full turn only.
   h. Open the acetylene torch valve. Turn the acetylene torch valve off.
i. Turn the acetylene regulator pressure-adjusting screw clockwise until the needle on the regulator dial indicates the proper pressure.

j. Turn the acetylene torch valve off.

k. Turn both oxygen torch valves on.

l. Turn the oxygen regulator pressure-adjusting screw clockwise until the needle on the regulator dial indicates the proper pressure.

m. Turn off the oxygen torch valve on the torch head only.

5. Steps in lighting the torch:
   a. Put on gloves.
   b. Put on welding goggles.
   c. Open the torch acetylene valve one-half turn.
   d. Immediately light the torch with a friction lighter only.
   e. Reduce the acetylene flow at the torch's acetylene valve until the flame just starts to produce black smoke around its edges. Then increase the acetylene flow just enough to get rid of the black smoke.
   f. Open the torch's oxygen valve slowly until the desired type flame is obtained.
      (1) The preheat flame needs to be of the neutral type, which means that equal parts of oxygen and acetylene are being burnt.
      (2) The preheat flame needs to be the right size. Set the pressure correctly, and then follow the directions in "Step e" again. If the preheat flame is too large, there will be or tend to be slag or dross hanging onto the bottom of the cut—assuming that travel speed, tip size, etc., are all correct.

6. Steps in cutting metal with the torch:
   a. Follow the steps in Operation 1 and Operation 2 for the following oxyacetylene cutting variables:
      (1) Cutting tip size.
      (2) Oxygen operating pressure.
      (3) Acetylene operating pressure.
      (4) Preheat flame type.
      (5) Size of preheat flame
   b. Clean the cutting tip. Be sure that the preheat and cutting orifices of the tip are clean. A dirty tip, especially a dirty cutting orifice, will adversely affect the quality of the cut. Dirty orifices can produce such defects as wide kerfs, adherent slag, and rough appearance.
   c. Select the correct flame-to-work distance. The bottom of the preheat flame should be 1/16" to 1/2" from the base metal. Right-handed people should progress from right to left and left-handed people should cut left to right.
   d. Select the correct torch angle.
      (1) For square cuts, the torch should be perpendicular (at 90°) to the base metal and tipped slightly in the direction of travel.
      (2) For beveled cuts, the torch should be held at the angle of the bevel throughout the cutting procedure.
For holes, the torch must be held perpendicular to the base metal throughout the cut.

e. Cut at the proper travel speed. At the correct travel speed, the lines of the cut which project through the thickness of the base metal will be in a straight line. At too fast a travel speed, the lines of the cut will curve back from the progress of the cut and form clearly defined lines termed lag or drag lines. (The amount of drag is often expressed as a percent.)

f. Assure the oxygen level. Although it is possible to make a good weld with an oxygen purity level of only 95%, in order to make good oxy-fuel cut, an oxygen purity level of 99.5% is required. Where leaks in oxygen lines or hoses allow air to be mixed with the oxygen, the quality of the cut can be very seriously affected.

7. Steps in extinguishing the torch:
   a. Close the torch acetylene valve, thus extinguishing the flame.
   b. Close the torch oxygen valve.

8. Steps in closing down the welding station:
   a. Close the oxygen cylinder valve.
   b. Close the acetylene cylinder valve.
   c. Open the torch acetylene valve and bleed the acetylene from the line.
   d. Close the torch acetylene valve.
   e. Turn the acetylene regulator pressure adjusting screw counterclockwise until there is a little free play. Avoid backing out the pressure adjusting screws so much that they come totally out.
   f. Open the torch oxygen valve and bleed the oxygen from the line.
   g. Close the torch oxygen valve.
   h. Turn the oxygen regulator pressure adjusting screw counterclockwise until there is a little free play. Avoid backing out the pressure adjusting screws so much that they come totally out.
WLD-K9-LW2
Cut Mild Steel Plate in a Safe Manner
Attachment 4: MASTER Laboratory Worksheet No. 2

1. Instructor will demonstrate how to:
   Braze with bronze rod;
   Run a bead with a bronze rod;
   Square butt braze on light steel plate;
   Brazed lap joints;
   Brazing tee joints;
   Brazing beveled butt joints on heavy steel plate; Brazing beveled joints on cast iron;
   Silver soldering of nonferrous metals; and,
   Silver soldering of ferrous and nonferrous metals.

2. Student will practice:
   Brazing with bronze rod;
   Running beads with bronze rod;
   Square butt brazing on light steel plate;
   Brazed lap joints;
   Brazing tee joints;
   Brazing beveled butt joints on heavy steel plate; Brazing beveled joints on cast iron;
   Silver soldering nonferrous metals; and,
   Silver soldering ferrous and nonferrous metals.

3. Instructor will grade students performance on: Brazing with bronze rod:
   Running beads with bronze rod;
   Square butt brazing on light steel plate;
   Brazed lap joints;
   Brazing tee joints;
   Brazing beveled butt joints on heavy steel plate; Building-up on cast iron;
   Brazing beveled joints on cast iron;
   Silver soldering nonferrous metals; and,
   Silver soldering ferrous and nonferrous metals.
WLD-K9
Cut Mild Steel Plate in a Safe Manner
Self-Assessment No. 1

Circle the best answer.

1. Which of the following can be used to ignite an oxyacetylene torch?
   a. Matches
   b. A cigarette lighter
   c. A spark or friction lighter
   d. Any of the above
   e. None of the above

2. Technician A says that they can cut into an old gasoline can with the torch. Technician B says that containers of flammable or toxic substances should never be cut with a torch. Who is correct?
   a. Technician A only
   b. Technician B only
   c. Both Technicians A and B
   d. Neither Technician A nor B

3. If adequate ventilation is unavailable, the technician should:
   a. Cut the metal anyway; ventilation is not important.
   b. Cut the metal while wearing a respirator.
   c. Cut the metal while wearing a heavy-duty dust mask.
   d. Refuse to make the cut.

4. Acetylene operating pressures must be kept at or below:
   a. 5 psi.
   b. 15 psi.
   c. 25 psi.
   d. Acetylene operating pressures are immaterial.

5. Acetylene hoses are ________; acetylene fittings are ________.
   a. Red - left-handed
   b. Blue - left-handed
   c. Red - right-handed
   d. Blue - left-handed
   e. None of the above
6. All cylinders should be secured except when:
   a. Transporting them.
   b. Storing them.
   c. Using them.
   d. Always secure cylinders with chains or in permanent racks.
   e. Securing cylinders is unnecessary.

7. Technician A says that oxygen cylinders should be stored well away from fuel gas cylinders. Technician B says that separate storage is unnecessary. Who is correct?
   a. Technician A only
   b. Technician B only
   c. Both Technicians A and B
   d. Neither Technician A nor B

8. The maximum safe withdrawal rate for acetylene cylinders is:
   a. One fourth of current content per hour.
   b. One fifth of current content per hour.
   c. One seventh of current content per hour.
   d. One tenth of current content per hour.
   e. None of the above

9. Technician A says that only oxygen-specific regulators can be used on oxygen cylinders. Technician B says that it is acceptable to use oxygen regulators on other gas cylinders. Who is correct?
   a. Technician A only
   b. Technician B only
   c. Both Technicians A and B
   d. Neither Technician A nor B

10. Which of the following can be cut with an oxyacetylene torch?
    a. Aluminum
    b. Copper
    c. Chromium
    d. All of the above
    e. None of the above

11. Technician A says that the acetylene cylinder's valve should be opened all the way. Technician B says that the oxygen cylinder's valve should be opened no more than one full turn. Who is correct?
    a. Technician A only
    b. Technician B only
    c. Both Technicians A and B
    d. Neither Technician A nor B
12. Before attaching the regulators to the cylinder valves:
   a. Clean the nipples with acetone.
   b. Crack the valves to blow out any dirt.
   c. Lubricate the threads with oil.
   d. All of the above
   e. None of the above

13. Technician A says that they must reduce the acetylene flow until the flame just starts to produce black smoke around its edges. Technician B says that the acetylene flow must then be increased until the smoke disappears. Who is correct?
   a. Technician A only
   b. Technician B only
   c. Both Technicians A and B
   d. Neither Technician A nor B

14. Dirty orifices on the cutting tip can produce:
   a. Wide kerfs.
   b. Adherent slag.
   c. Rough cut appearance.
   d. All of the above.
   e. None of the above

15. Technician A says that, for cutting holes, the torch must be held parallel to the base metal throughout the cut. Technician B says that square cuts require the torch to be held at 45° to the base metal. Who is correct?
   a. Technician A only
   b. Technician B only
   c. Both Technicians A and B
   d. Neither Technician A nor B

16. Lag lines are the result of
   a. Correct travel speed.
   b. Too great a travel speed.
   c. Too slow a travel speed.
   d. Incorrect torch angle.
   e. None of the above

17. When extinguishing the torch, Technician A says that the acetylene torch valve should be closed first. Technician B says that the oxygen torch valve should be closed first. Who is correct?
   a. Technician A only
   b. Technician B only
   c. Both Technicians A and B
   d. Neither Technician A nor B
18. Good oxy-fuel cuts require an oxygen purity of at least:
   a. 99.5%.
   b. 95.9%.
   c. 59.9%.
   d. None of the above.

19. Both acetylene and oxygen lines should be _________ when closing down the work station.
   a. Removed
   b. Cleaned with acetone
   c. Bled free of gas or fuel
   d. All of the above
   e. None of the above

20. Technician A says that since B is left-handed, B should cut from left to right. Technician B says that the pre-heat flame should still be from 1/6" to 1/2" from the base metal, regardless of the direction of travel. Who is correct?
   a. Technician A only
   b. Technician B only
   c. Both Technicians A and B
   d. Neither Technician A nor B

Cut Mild Steel Plate in a Safe Manner
Self-Assessment No. 2

1. What is the major difference between a brazed joint and a welded joint?

2. What two conditions determine whether the joint is brazed or welded?

3. How does flux act as a guide to the temperature of the joint?

4. What is the color of the plate when it is at the proper temperature for welding?

5. Is brazing stronger than fusion welding?

6. For silver soldering: what is a 3x flame?

7. What alloys are contained in typical silver soldering?

8. How can material be prepared for silver soldering?
9. Is it possible to make fillets when using silver soldering alloys?
WELDER ... that person who is responsible for the planning, layout, fit up of materials, and operation of welding equipment to prepare the work and perform welding operations necessary to produce a work piece to prescribed engineering standards.

**Tasks**

- **A-1** Demonstrate understanding of basic arithmetic functions
- **A-2** Demonstrate the use of basic arithmetic functions
- **A-3** Demonstrate the use of basic mathematical concepts
- **A-4** Demonstrate the use of basic mathematical concepts
- **A-5** Demonstrate the use of basic mathematical concepts

- **M1** Gas metal arc welding (GMAW)

---

**Note:** The image contains a table with specific tasks and duties for a WELDER role. The tasks listed involve understanding and applying various mathematical functions, understanding welding processes, and preparing for welding tasks. The duties cover safety practices, quality control, work habits, communication, teamwork, and various welding processes. The image also contains references to standards and codes, such as AWS (American Welding Society), and emphasizes the importance of personal safety and equipment use in the workplace.
WELDER ... that person who is responsible for the planning, layout, fit up of materials, and operation of welding equipment to prepare the work and perform welding operations necessary to produce a work piece to prescribed engineering standards.

**Duties**

**Tasks**

- **M2** OMAW Short Circuit Transfer (Intermediate)
- **M3** OMAW Spray and Pulse Spray, Pipe Transfer (Advanced)
- **N** Flow Curve Arc Welding (PCAW)
- **O1** Gas Tungsten Arc Welding (GTAW)
- **O2** Gas Tungsten Arc Welding (GTAW) (Advanced)

SUBJECT: WELDING TECHNICIAN  TIME: 8 HOURS

DUTY: SHIELDED METAL ARC WELDING (SMAW) (BASIC)

TASK: Preheat Joint

OBJECTIVE(S):

Upon completion of this unit the student will be able to:

A. Outline safety rules for ARC Welding;
B. Properly adjust machine settings;
C. Understand basis of striking the arc electrode manipulation, and evaluating the puddle;
D. Apply the use of gas to preheat joint on mild steel plate;
E. Apply the pre-heating technique using Electrodes; and,
F. Discuss the use of other ways of preheating (Blankets, etc.).

INSTRUCTIONAL MATERIALS:

Student Workbook
Written tests on Shielded Metal Arc Welding procedures
Transparencies prepared to emphasize each subject
Hobart Institute Video Material
Miller Module Method Video materials
Hobart SMAW wall chart
The classroom handouts will consist of student worksheets and alloy charts
Personal protective equipment
Shielded Metal Arc Welding machine
Welding shop tools
Selection of base metals for welding and cutting
Selection of filler metals and electrode wire
MASTER Handout No. 1 (WLD-L1-HO1)
MASTER Handout No. 2 (WLD-L1-HO2)
MASTER Handout No. 3 (WLD-L1-HO3)
MASTER Handout No. 4 (WLD-L1-HO4)
MASTER Handout No. 5 (WLD-L1-HO5)
MASTER Handout No. 6 (WLD-L1-HO6)
MASTER Laboratory Aid (WLD-L1-LA)
MASTER Laboratory Worksheet (WLD-L1-LW)
MASTER Self-Assessment No. 1

OTHER:

Competency Standards, American Welding Society, Latest Edition

Welding Inspection, American Welding Society, Miami, FL, Latest Edition

STUDENT PREPARATION:

Student must demonstrate appropriate communication skills and understand principles of basic physical science and mathematics as verified by placement test or completion of required prerequisite courses. Students must complete all previous modules.

INTRODUCTION:

The Course Introduction will Include:

- An overview of Shielded Metal Arc Welding processes
- A description of how welds are made as the arc melts consumable metal or electrodes
A discussion on the need for preheating joints prior to welding

PRESENTATION OUTLINE:

Instructor Topics:
A. Discuss the principles and theories involved in SMAW operations
B. Emphasize safety rules for ARC Welding equipment
C. Demonstrate machine settings and basis of striking the Arc
D. Electrode manipulation and reading the puddle
E. Demonstrate knowledge of joint design and welding terms
F. Demonstrate ability to interpret drawings and blueprints, using weld symbols
G. Introduce welding variables and demonstrate their effects on weld quality
H. Demonstrate knowledge of adequate preparation of welding surfaces
I. Prepare butt joints, and tee joints, for welding
J. Increase knowledge of current industry standards and techniques
K. Identify polarity requirements using SMAW on various metals
L. Demonstrate preheat and how to maintain desired temperature
M. Identify welding variables and their effects on weld quality
N. Identify the AISI steel classification system
O. Match SMAW electrodes to an appropriate base metal

Student Activities:
A. Demonstrate knowledge of safety rules
B. Demonstrate equipment operation and setting adjustments
C. Preheat weld surface
D. Prepare and task weld coupons
E. Understand D.C. straight and reverse polarity

PRACTICAL APPLICATION:

Emphasis is placed upon ARC welding fundamentals, safety in operations, and rationale for preheating.

EVALUATION AND/OR VERIFICATION:

Two written examinations will be given during this module to determine student progress. Practical exercises will be supervised and evaluated by instructor.

SUMMARY:

Student will understand and apply Arc welding capabilities, while guarding against the hazards of using electric welding equipment. The instructor will emphasize surface preparation, preheating of material, and machine adjustments. The shielded metal arc welding (SMAW) process is probably better known to welders as the "stick electrode" process. This
is because there has been very little effort to communicate correct terminology to welding people working at the trade. The process name breaks down like this:

**Shielded**
This word comes from the dry flux covering on the metal electrode. The flux covering which decomposes under the heat of the arc creates both a shielding gas (basically CO₂) and a slag covering for the deposited weld metal. The weld is “shielded” by these effects.

**Metal Arc**
The electrode is consumed under the heat of the arc and flows into the weld joint as filler metal.

**Welding**
The fusion that takes place between the molten filler metal from the electrode and the molten base metal is called “fusion welding.”

The basic equipment required for shielded metal arc welding includes an electric arc welding power source with either AC or DC output, electrode and work welding cables, a suitable ground clamp device on the work lead, and an electrode holder with suitable amperage rating. The personal working equipment of the welder will include a welding helmet with properly shaded lens, leather gloves, a wire brush, a chipping hammer, hardened safety glasses and such other protective clothing as the job requires.

**NEXT LESSON ASSIGNMENT:**

**MASTER Technical Module (WLD-L2)** dealing with initiating welding process.
OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Outline safety rules for ARC Welding;
B. Properly adjust machine settings;
C. Understand basis of striking the arc electrode manipulation, and evaluating the puddle;
D. Apply the use of gas to preheat joint on mild steel plate;
E. Apply the pre-heating technique using Electrodes; and,
F. Discuss the use of other ways of preheating (Blankets, etc.).

MODULE OUTLINE:

Instructor Topics:
A. Discuss the principles and theories involved in SMAW operations
B. Emphasize safety rules for ARC Welding equipment
C. Demonstrate machine settings and basis of striking the Arc
D. Electrode manipulation and reading the puddle
E. Demonstrate knowledge of joint design and welding terms
F. Demonstrate ability to interpret drawings and blueprints, using weld symbols
G. Introduce welding variables and demonstrate their effects on weld quality
H. Demonstrate knowledge of adequate preparation of welding surfaces
I. Prepare butt joints, and tee joints, for welding
J. Increase knowledge of current industry standards and techniques
K. Identify polarity requirements using SMAW on various metals
L. Demonstrate preheat and how to maintain desired temperature
M. Identify welding variables and their effects on weld quality
N. Identify the AISI steel classification system
O. Match SMAW electrodes to an appropriate base metal

Student Activities:
A. Demonstrate knowledge of safety rules
B. Demonstrate equipment operation and setting adjustments
C. Preheat weld surface
D. Prepare and task weld coupons
E. Understand D.C. straight and reverse polarity
OBJECTIVE(S):

Upon completion of this unit the student will be able to:

a. Discuss the reasons for heat treating;
b. Discuss the time/temperature chart
c. List the different quenching media
d. Estimate metal heat temperature by color; and
e. List reasons for stress relieving workpieces.

MODULE OUTLINE:

I. Discuss the Reasons for Heat Treating
   A. Hardening for utility
   B. Tempering for toughness without brittleness

II. Discuss the Time/Temperature Chart

III. List the Different Quenching Media (In order of severity or speed of quenching)
   A. Brine (water and sodium chloride or sodium hydroxide)
   B. Water
   C. Fused (liquid) salts
   D. Molten lead
   E. Soluble oil and water
   F. Oil
   G. Air

IV. Estimate Metal Heat Temperature by Color
   A. Use of temper color chart for tempering
   B. Chicken Wire markings warn of overheating

OBJECTIVE(S):

Upon completion of this unit the student will be able to:

a. Perform file test to test for metal hardness;
b. Use other tests to identify metals; and,
c. Perform Rockwell hardness tests.

MODULE OUTLINE:

I. Perform File Test to Test for Metal Hardness
   A. Imprecise method, good for rough estimates only
   B. Requires more experienced machinist

II. Use Other Tests to Identify Metals
   A. High-carbon steels show more spark bursts than do low-carbon steels.
   B. Non-ferrous metals
      1. Aluminum
      2. Magnesium
      3. Brass
      4. Bronze
      5. Nickel
      6. Tin
      7. Others

III. Perform Rockwell Hardness Tests
    A. Ferrous metals
    B. Non-ferrous metals

IV. Perform Brinell Hardness Tests
    A. Ferrous metals
    B. Non-ferrous metals

V. Other Hardness Tests as Specified by the Instructor
    A. Ferrous metals
    B. Non-ferrous metals

Student laboratory exercises as assigned by Instructor.

**BASIC SHIELDED METAL ARC WELDING (SMAW) AND OXY-FUEL GAS CUTTING**

1. Define Selected Welding Terms Per AWS A3.0
   a. Define arc welding process terms
   b. Define standard joint terminology
   c. Define common weld discontinuities
   d. Name welding equipment, supply and consumables
   e. Define common shop terms including proper equipment names
   f. Define material terms
   g. Define common metallurgy terms

2. Describe AWS Code for Mild Steel Electrodes
   a. List, describe and define
   b. List low hydrogen electrodes
   c. List iron powder electrodes
   d. Describe electrode by welding position
   e. Describe electrode by current and polarity
   f. Describe electrode by penetration

3. Set Up Welding Machine to Required Polarity
   a. List polarities for commonly used electrodes
   b. Describe both polarities
   c. Describe advantages and disadvantages of alternating current

4. Use Correct Start and Stop Techniques for SMAW Electrodes
   a. Describe and demonstrate start for non-low hydrogen SMAW electrode
   b. Describe and demonstrate stop for non-low hydrogen SMAW electrodes with filled craters
   c. List reasons for the importance of low hydrogen in weld metal
   d. Explain the reason for low hydrogen starts and stops and how they work and why required specifically with E7018

5. Set Up Equipment for Shielded Metal Arc Welding
   a. Inspect area for safety
   b. Adjust current and polarity for specific job requirements
   c. Choose type and size of electrode
   d. Wear applicable personal safety equipment

6. Strike an Arc, Run Continuous Stringer Bead
   a. Stand and position oneself correctly
   b. Operate welding helmet
c. Verbally warn others of intent to arc weld
d. Strike an arc
e. Weld with stringer bead technique
f. Perform weld tie ins to make continuous bead

7. Weld Using Weave Technique
   a. Maintain required weld quality
   b. Maintain proper weld width uniformly
   c. Maintain proper travel speed
   d. Match correct oscillation for various electrodes
   e. Match applications to weave techniques, as they apply
   f. List the advantages and disadvantages of weave techniques
   g. List the advantages and disadvantages of stringer techniques
   h. Perform weld using weave technique
   i. Concentrate on dwell times at edges of weld pool

8. Weld Multi-Layer Buildup
   a. Weld a dam to outline area being welded for each layer
   b. Apply each layer neatly, straight and with good fusion throughout
   c. Chip slag after each pass
   d. Weld passes which overlap to crown of last weld bead
   e. Demonstrate control of bead height

9. Set Up and Shut Down Oxy-Fuel Equipment
   a. Follow manufacturer's recommended practice
   b. Inspect equipment and work area for safety
   c. Assemble oxy-fuel equipment
   d. Open fuel gas cylinder ½ turn
   e. Open oxygen as cylinder all the way
   f. Adjust fuel gas and oxygen working pressure per manufacturer's recommendation
   g. Purge lines one at a time. One second for each 10 feet of hose length

10. Cut Steel Plate Using Oxy-Fuel Equipment
   a. Make manual free hand straight line cuts
   b. Cut manually straight lines using cutting jib
   c. Bevel plate with manual oxy-fuel equipment
   d. Manually cut blind holes in thick material
   e. Manually cut sheet metal with minimal distortion
Student laboratory exercises as assigned by Instructor.

ADVANCED SHIELDED METAL ARC WELDING (SMAW) AND CUTTING

1. Weld Single V Groove Welds With Open Roots From One Side
   a. Bevel 3/8" steel plate to 37 1/2° using oxy-fuel gas cutting e.g.
   b. Use grinder to remove oxide larger and smooth plate
   c. Use grinder to create root face of 3/32" to 1/8"
   d. Tack single V groove joint with 3/32" root opening
   e. Place joint in the 1G position
   f. Place joint in 2G position once task is mastered
   g. Place joint in 3G position once task is mastered
   h. Place joint in 4G position once task is mastered
   i. Weld the root with Direct Current Electrode Positive using 1/8" E6010. Use tight arc length and keyhole technique to produce a well fused root bead extending 1/16" above the plate.
   j. Weld chipped side slag and the root bead is wire brushed
   k. Fill the balance of the groove with 3/32", 1/8" and/or 5/32" E7018 using the stringer bead technique
   l. Visual test finished weld and root face bends evaluated to AWS D1.1 criteria

2. Weld Various Diameters of Pipe to Plate
   a. Inspect area for safety
   b. Place plate flat on welding table
   c. Place 3" pipe vertically on top of plate and tacked in place
   d. Leave weld coupon in the 2F fixed position
   e. Apply a 3/8" fillet weld using 1/8" E7018 and a stringer bead technique
   f. Visually inspect weld to AWS D1.1
   g. Fill pipe with water for 24 hours
   h. Check for leak

3. Produce SMAW Pipe - 5G Position
   a. Measure the pipe
   b. Mark the cut line with a wrap around and soapstone
   c. Cut the bevel using oxy-fuel gas equipment
   d. Clean the bevel face with a grinder, remove all oxide and smooth bevel face
   e. Use the grinder to add a root face of from 3/32" to 1/8"
   f. Tack the single V groove pipe joint with a 3/32" root opening
g. Place the joint in the 5G fixed position, using an 1/8" E6010 and a keyhole technique. Weld the root pass upward producing a root weld which is well fused and has a 1/16" weld reinforcement above the plate

h. Chip slag and wire brush weld

i. Grind any lack of fusion and/or high spots

j. Weld the balance of the groove upward with 3/32" or 1/8" E7018 using the stringer bead technique

k. Visually inspect weld on the root and face sides to ASME Section 9

l. Remove four guided bend specimens from 2:00, 4:00, 8:00 and 10:00 positions prepared and two & eight are root bend specimens. Four & ten are face bend specimens. Guided bend tests are evaluated to ASME Section 9 criteria

4. Produce SMAW - 2G Position Groove Welds

a. Measure the pipe

b. Mark the cut line with a wrap around and soapstone

c. Cut the bevel using oxy-fuel gas equipment

d. Clean the bevel face with a grinder, remove all oxide and smooth bevel face

e. Use the grinder to add a root face of from 3/32" to 1/8"

f. Tack the single V groove pipe joint with a 3/32" root opening

g. Weld pipe joint

h. Place the joint in the 2G fixed position, using an 1/8" E6010 and a keyhole technique. Weld the root pass upward producing a root weld which is well fused and has a 1/16" weld reinforcement above the plate

i. Chip slag and wire brush. Grind any lack of fusion and/or high spots

j. Weld balance of the groove upward with 3/32"or 1/8" E7018 using the stringer bead technique

k. Visually inspect weld on the root and face sides to ASME Section 9

l. Remove four guided bend specimens from 2:00, 4:00, 8:00 and 10:00 positions prepared and two & eight are root bend specimens. Four & ten are face bend specimens. Guided bend tests are evaluated to ASME Section 9 criteria

5. Roll Weld Pipe - SMAW

a. Measure the pipe

b. Mark the cut line with a wrap around and soapstone

c. Cut the bevel using oxy-fuel gas equipment

d. Clean the bevel face with a grinder, remove all oxide and smooth bevel face

e. Use the grinder to add a root face of from 3/32" to 1/8"

f. Tack the single V groove pipe joint with a 3/32" root opening

g. Roll weld pipe

h. Place pipe coupon on workbench in the 1G roll welding position.

i. Weld the root bead using 1/8" E6010 and the keyhole technique. The weld is performed in the 2.00 to 12:30 position

j. Chip slag and wire brush. Grind any lack of fusion and/or high spots
k. Weld balance of groove upward with 3/32" or 1/8" E7018 using the weave technique
l. Visually inspect weld on the root and face sides to ASME Section 9
m. Remove four guided bend specimens from 2:00, 4:00, 8:00 and 10:00 positions prepared and two & eight are root bend specimens. Four & ten are face bend specimens. Guided bend tests are evaluated to ASME Section 9 criteria

6. Produce SMAW Pipe - 5G Position
a. Measure the pipe and
b. Mark the cut line with a wrap around and soapstone
c. Cut the bevel using oxy-fuel gas equipment
d. Clean the bevel face with a grinder, remove all oxide and smooth bevel face
e. Use the grinder to add a root face of from 3/32" to 1/8"
f. Weld pipe
g. Tack the single V groove pipe joint with a 3/32" root opening
h. Place the joint in the 5G fixed position, using an 1/8" E6010 and a keyhole technique
i. Weld the root pass upward producing a root weld which is well fused and has a 1/16" weld reinforcement above the plate
j. Chip slag and wire brush. Grind any lack of fusion and/or high spots
k. Weld balance of groove upward with 3/32" or 1/8" E7018 using the weave technique
l. Visually inspect weld on the root and face sides to ASME Section 9
m. Remove four guided bend specimens from 2:00, 4:00, 8:00 and 10:00 positions prepared and two & eight are root bend specimens. Four & ten are face bend specimens. Guided bend tests are evaluated to ASME Section 9 criteria

7. Produce SMAW Pipe - 6G Position
a. Measure the pipe
b. Mark the cut line with a wrap around and soapstone
c. Cut the bevel using oxy-fuel gas equipment
d. Clean the bevel face with a grinder, remove all oxide and smooth bevel face
e. Use the grinder to add a root face of from 3/32" to 1/8"
f. Tack the single V groove pipe joint with a 3/32" root opening
g. Place the joint in the 6G fixed position, using an 1/8" E6010 and a keyhole technique
h. Weld the root pass upward producing a root weld which is well fused and has a 1/16" weld reinforcement above the plate
i. Chip slag and wire brush. Grind any lack of fusion and/or high spots
j. Weld balance of groove upward with 3/32" or 1/8" E7018 using the stringer bead technique
k. Visually inspect weld on the root and face sides to ASME Section 9
1. Remove four guided bend specimens from 2:00, 4:00, 8:00 and 10:00 positions prepared and two & eight are root bend specimens. Four & ten are face bend specimens. Guided bend tests are evaluated to ASME Section 9 criteria

8. Create SMAW Pipe to ASME Section 9
   a. Bevel two pieces of pipe to 30° bevel angle using oxy-fuel gas cutting equipment
   b. Clean bevel face and a 3/32" root face is applied using a hand held grinder
   c. Set welding condition to weld open roots
   d. Tack pipe nipples together to form a V groove with a 1/8" root opening
   e. Place pipe in the 5G fixed position. The root pass is welded and cleaned by wire brushing
   f. Weld balance of the V groove with this procedure
   g. Visual inspection is made and evaluated by ASME Section 9
   h. Make four bend samples and evaluate by ASME Section 9

9. Interpret Welding Procedures
   a. Identify process
   b. Name joint design
   c. List base material
   d. Give dimensions for root treatment
   e. Name electrode size and type being used
   f. List filler material (if required), classification and specification
   g. Identify shielding gas - type and mixture
   h. List pre and post heat and interpass temperature
   i. Describe initial and interpass cleaning
   j. Describe technique which is used
   k. Produce single or multiple pass weld
   l. Choose current type
   m. Set current amperage
   n. Set current polarity
   o. Set voltage
Preheat Joint
Attachment 6: MASTER Handout No. 6

Student laboratory exercises as assigned by Instructor.

PIPE WELDING - SMAW

1. Produce End Preparations
   a. Produce end preparations with oxy-fuel cutting
   b. Produce end preparations with plasma cutting
   c. Produce end preparations with mechanical cutting
   d. Produce end preparations with grinding

2. Fit and Tack Weld Pipe
   a. Cut and single bevel pipe to 37 1/2°
   b. Ground bevel face and touch up to within tolerances
   c. Check that pipe ends are square within given tolerances
   d. Prepare root face within given tolerances
   e. Align pipe to within given tolerances
   f. Set root opening to within given tolerances
   g. Tack pipe according to welding procedure specification - maintaining root opening

3. Roll Weld Open Root Pass on Pipe - 1G Position
   a. Fit up and tack pipe joint using 1/8" E6010 electrode, weld the root pass on pipe in the 1 o'clock to (2:00 o'clock position) according to procedure using the roll welding technique
   b. Weld remainder of pipe in the 1G roll welding position with E6010
   c. Weld the remaining portion of the groove using the weave technique using 5/32" E6010 electrode roll

4. Weld Open Root Pipe Joint - 2G Position
   a. Weld using 1/8" E6010
   b. Cut and grind pipe ends will be to single bevel edge preparations of 37 1/2°
   c. Fit together the two pipe ends to a single V edge preparation with given tolerances
   d. Weld root pass to ASME Section 9 requirements
   e. Fill balance of the groove with E6010 using the stringer technique to ASME Section 9 requirements

5. Weld Open Root Pipe - 5G Position
   a. Fit and tack weld pipe to within tolerances
   b. Place pipe in the 5G position
   c. Weld the rootpass using 1/8" E6010 to ASME Section 9 requirements
   d. Grind the finished root pass to remove high spots and any slag at weld toes
Weld the remainder of the groove using 3/32" and/or 1/8" E7018 using the stringer bead technique to ASME Section 9 requirements

6. Pass Guided Bond Tests Per ASME Section 9
   a. Remove bend samples from pipe at the 10, 2, 8 & 4 o'clock positions
   b. If the material is 3/8" or thinner 10 o'clock and 8 o'clock receive root bends and 2 o'clock and 4 o'clock receive face bends. If the pipe wall thickness is over 3/8" side bends shall be performed on all samples.
   c. Weld remainder of pipe in 1G position using E7018
   d. Perform low hydrogen starts and stops
   e. Weld using stringer bead technique
   f. Weld using weave technique
   g. Chip slag wire brush and grind as necessary to assure clean weld deposits

7. Weld Open Root Pipe - 2G Position
   a. Use 1/8" E6010
   b. Cut and ground pipe ends to single bevel edge preparations of 37 1/2°
   c. Fit together two pipe ends to a single V edge preparation within given tolerances
   c. Weld root pass to ASME Section 9 requirements
   d. Clean weld pass by chipping slag, wire brushing and grinding where necessary to assure a clean, well fused weld deposit
   e. Weld remainder of the groove using E7018 with the stringer bead technique

8. Weld Pipe Open Root Passes All Positions Using GMAW
   a. Set up GMAW equipment
   b. Adjust wire feeder drive system
   c. Adjust shielding gas system and flow rate
   d. Adjust GMAW gun to allow proper tip to work distance and gas coverage
   e. Set welding condition for short circuit transfer - Wire Feed Speed
   f. Set welding condition for short circuit transfer - Voltage
   g. Set welding condition for short circuit transfer - Tip to work Distance
   h. Weld root using a string bead technique

9. Weld Pipe With Backing Using FCAW-G
   a. Bevel pipe ends
   b. Touch up bevel face with grinder
   c. Fit and tack backing ring to one pipe end
   d. Fit other pipe over backing ring
   e. Adjust gap and tack in place
   f. Adjust shielding gas flow
   g. Adjust wire feed system
   h. Adjust power source to procedure specification
   i. Set wire feed speed to procedure specification
   j. Adjust voltage to procedure specification
   k. Adjust inductance to procedure specification
l. Adjust GMAW gun for tip to work distance and shielding gas
m. Weld according to procedure specification
The shielded metal arc welding (SMAW) process has a number of serious safety hazards associated with it:

**CAUTION:** Specific safety precautions must be taken to ensure a proper breathing atmosphere in all welding areas.

A. Weld only in ventilated areas. Welding shielding gases can displace the air needed for breathing. These gases are odorless and colorless, and most are heavier than air.
B. Weld in a position that will allow your head to be out of the welding plume, but will still give a good view of the welding arc. The welding plume could contain harmful fumes and gases.
C. Provide enough ventilation wherever welding and cutting are performed. Welding in confined spaces may require special procedures, such as the use of an air-supplied hood or hose mask.
D. Do not weld on dirty plate or plate contaminated with an unknown material. The fumes and gases which are formed could be hazardous to health.

**CAUTION:** Electrical shock can be avoided by following specific safety precautions.

A. Do not touch live electrical parts.
B. Ground all electrical equipment and the work-piece to prevent accidental electrical shocks.
C. Use the correct welding cable size for both the ground lead and the welding lead. Sustained overloading will cause cable failure and result in possible electrical shock or fire hazard.
D. Be sure all electrical connections are tight, clean, and dry. Poor electrical connections can heat up and even melt, causing dangerous arcs and sparks.
E. Keep dry. Moisture and water can conduct electricity. Fix water leaks immediately.
F. Keep welding cables and connectors in good condition. Improper or worn electrical connections can cause short circuits and can increase the chance of an electrical shock.
G. Avoid open-circuit voltage. Open-circuit voltage is much higher than welding voltage.
H. Shut off electrical power when working on welding equipment.

**CAUTION:** Ultraviolet and infrared rays emitted by the welding arc, as well as the spatter from the welding arc, can injure eyes and burn skin. Specific safety precautions must be followed to ensure adequate protection.
A. Wear 100% cotton clothing. It will not catch fire easily, it offers good protection from light welding spatter, and it is cooler in the summer and warmer in the winter.

B. Cover all skin surfaces. Keep shirt sleeves rolled down.

C. Wear cuffed pants to eliminate spatter traps.

D. Wear leather boots. Pant legs should cover boot tops.

E. Wear clean clothing. Oil and grease stained clothes will tend to ignite from welding spatter.

F. For more severe welding conditions, wear protective clothing such as heat resistant jackets, aprons, and leggings.

G. Wear safety glasses to protect from arc flashes, mechanical injury, or other mishaps.

H. Wear ear protection, not only where there is noise but where there is a chance that spatter or sparks could get into the ears.

I. Wear a 100% cotton cap to protect the head from sparks or spatter.

J. Wear long gauntlet leather gloves.

K. Do not touch hot metal with bare hands. Use pliers and wear leather gloves.

L. Protect nearby workers from exposure to the welding arc by putting up shields.

M. Wear a welding helmet with the correct shade of welding lens. Choose the correct lens from a filter recommendations table (see Figure 2).

<table>
<thead>
<tr>
<th>Application</th>
<th>Minimum Shade No.</th>
<th>Suggested Shade*</th>
</tr>
</thead>
<tbody>
<tr>
<td>Less than 60 amps</td>
<td>7</td>
<td>9</td>
</tr>
<tr>
<td>60 to 160 amps</td>

<td>10</td>
<td>12</td>
</tr>
<tr>
<td>250 to 500 amps</td>
<td>11</td>
<td>14</td>
</tr>
</tbody>
</table>

* As a general rule, start with a shade that is too dark to see the arc zone. Then go to a lighter shade which gives sufficient view of the arc zone without exerting a strain on your eyes.

**Figure 2** Filter Recommendations

**CAUTION:** Specific precautions must be taken to ensure that there is no loss of property due to welding sparks, spatter, and heat.

A. If possible, weld in specially designated areas or enclosures of noncombustible construction.

B. Remove combustibles from the work area by at least 35 feet if possible.
C. Cover combustibles that can not be removed from the welding area with tight-fitting flame-resistant material. Items that should be covered include combustible walls, floors, ceilings, and any cracks or other openings that might let a spark pass through it.

D. If welding is to be performed on or adjacent to a metal wall, ceiling, or partition, move combustibles on the other side to a safe location.

E. If combustibles can not be adequately sealed off or removed, station a fire watcher at that location. The fire watcher must have adequate fire extinguishing capabilities.

F. Do not weld on materials having either a coating or internal structure that is combustible.

G. Place hot scrap and slag in non-combustible containers.

H. Ensure that fire extinguishers are available nearby.

I. Conduct a thorough examination for evidence of a fire before leaving the work area, and continue a fire check for at least 30 minutes after the welding operation has been completed.

J. Follow all company safety procedures regarding welding in hazardous areas.

CAUTION: NEVER carry a butane lighter into a welding area. These are considered to be mini-Molotov cocktails. DON'T CARRY A BOMB IN YOUR POCKET.
Worksheet:

1. **Choose Proper Power Source**
   
   **Step 1.** With the procedures and electrodes used at maintenance and fabrication facilities, choose a constant current (CC) power source for the Shielded Metal Arc Welding process. Some units are a combination of constant current (CC) and constant voltage (CV). This type of power source will have one or two switches to change from constant current to constant voltage.

   **Step 2.** An alternating current (AC) welding power source could be used with the low-hydrogen family of electrodes, but choose a constant current (CC) power source if possible.

2. **Choose a Proper Electrode**
   
   **Step 1.** Choose the proper electrode for the job.

   **NOTE:** The maintenance technician uses E6010 and E7018 electrodes for most SMAW applications. The E6010 belongs to the *fast-freeze* family of electrodes and the E7018 belongs to the *low-hydrogen* family of electrodes. The E6010 provides a deep digging, deep penetrating type of weld and may be used for non-critical fabrication.

   The E7018 low-hydrogen is used as the primary electrode for fabrication and other code-quality welds. The low-hydrogen family also includes E7015, E7016, and E7048. Hydrogen in the weld deposit causes brittleness called hydrogen embrittlement, which leads to cracking and potential weld failure.

   **Step 2.** Store the electrodes properly.

   **a. Low-hydrogen electrodes:**

   (1) These electrodes are packaged in hermetically sealed (watertight) cans. Be careful not to damage the cans which would allow air and moisture to attack the electrodes in the cans.

   (2) Once the cans are opened, store the electrodes in a rod oven at 150°F to 300°F.

   (3) Re-dry electrodes that have been outside a sealed container or a properly heated rod oven for several hours by baking them one hour at 700°F to 800°F and storing them in a rod oven.

   **NOTE:** Some welding procedures also set a time limit on the number of hours that low-hydrogen electrodes can be
kept out of a rod oven prior to use. Times vary from two to four hours, depending on the type of base metal to be welded and the humidity levels of the environment.

b. Do not store the E6010 fast-freeze electrodes in rod ovens. Fast-freeze electrodes require the presence of small amounts of moisture in order to run smoothly.

Step 3. Match the low-hydrogen family members with the polarities that are used with them (see Figure 5).

Figure 6 Typical Current Ranges for Electrodes

3. Prepare Weldment for Welding

Step 1. Oxyacetylene cut, carbon air arc gouge/cut, or machine cut/mill material to the desired shape/contour for each type of weld joint configuration needed for each welding task at hand.

a. Weld joint configuration will depend upon:
(1) Product design
(2) Material thickness
(3) Design strength requirements
(4) Welding process employed

b. SMAW weld joint configuration may be a:
   (1) Lap joint
   (2) Tee joint
   (3) Corner joint
   (4) Edge joint
   (5) Butt joint with backing
   (6) Butt joint without backing

Step 2. Clean the areas to be welded prior to fit-up
   a. Remove rust, paint, and any other coatings by wire brushing, grinding, sanding, or filing
   b. Remove oils and greases with a safe, suitable solvent

Step 3. Turn on the power source and set the current range (amps) on the machine at the lower end of the setting as suggested for the electrode size.

Step 4. Obtain a piece of scrap metal of the approximate type and thickness for the weld joint to be made.

Step 5. Practice welding on the scrap metal and adjust the current setting as needed to produce a good weld.

4. Complete Welding Operation

Step 1. Tack weld a joint that is defect free and can be incorporated into the finished product.

Step 2. Use any preheat that may be required by welding codes or company procedures.

Step 3. Make the required weld to be defect free and pleasing in appearance.

Step 4. Use proper weld bead placement according to the weld joint design.
   a. When making seam welds, produce the weld beads by using very little oscillation or some oscillation.
   b. When making fillet welds, produce the weld beads by using some oscillation. Fillet welds in the vertical position can also be run using a weaving technique.
   c. When making groove welds, produce the weld beads by using some oscillation and/or by weaving. When making groove welds on butt joints, the amount of weaving will depend on the welding position and the weld joints. It may also be limited by applicable welding codes and/or company standards.

Step 5. Maintain the correct welding travel speed. Weld bead size can be changed by varying the arc travel speed. Bead size and travel speed are inversely related: a decrease in travel speed will result in an increase in the weld bead height and width, and an increase in travel speed will result in a decrease in the weld bead height and width.
a. As the material thickness increases, the travel speed must slow down.

b. For a given material thickness and joint design, as the welding amperage is increased so is the arc travel speed. Conversely, as the amperage is decreased, the arc travel is slowed.

c. Higher welding speeds are attainable by using the forehand (pushing) technique.

5. Troubleshoot Welding Problems

Step 1. Be aware of the welding variables and how they can affect the weld. Below is a list of eleven welding variables for the SMAW process:

- a. Type of electrode
- b. Diameter of electrode
- c. Type of current (AC or DC)
- d. Current polarity (DC+ or DC-)
- e. Current setting
- f. Arc length
- g. Travel speed
- h. Electrode angle
- i. Electromagnetic arc blow
- j. Electrode manipulation technique (drag, whip)
- k. Thoroughness of slag removal prior to restarts and new bead placement

Step 2. Be aware of general welding variables and how they can affect the weld:

- a. Type of base metal
- b. Thickness of base metal
- c. Surface condition of base metal (clean, rusty, or painted)
- d. Atmospheric conditions

Step 3. Be aware of any weld discontinuity and the relevant welding variables that may have caused it.
Circle the best answer.

1. What is the approximate temperature required for stress relief annealing of low-carbon steels?
   A. 950°
   B. 1000°
   C. 1950°
   D. 1700°
   E. None of the above

2. What crystalline processes result from stress relief annealing?
   A. All grains reform into softer grains
   B. Distorted grains reform into softer grains
   C. Ferrite grains reform into softer grains while pearlite grains are basically unaffected
   D. Pearlite grains reform into softer grains while ferrite grains are basically unaffected
   E. None of the above

3. Which of the following is NOT a cause of quenching cracks?
   A. Improper quenching medium
   B. Overheating during the austenitizing cycle
   C. Improper quenching angle
   D. All of the above are causes of quenching cracks
   E. None of the above answers is correct

4. Which of the following is NOT a characteristic of typical quench cracks?
   A. The fracture tends to run from the surface toward the center in a smooth curve
   B. Untempered quench cracks will not show any decarburization
   C. Tempered fracture surfaces will show a fine crystalline structure
   D. All of the above are characteristic of quench cracks
   E. None of the above
5. During tempering by color, which of the following colors represents the highest temperature?
   A. Gold
   B. Purple
   C. Dark Straw
   D. Pale Blue
   E. Violet

6. During tempering by color, which of the following colors represents the lowest temperature?
   A. Gold
   B. Purple
   C. Dark Straw
   D. Pale Blue
   E. Violet

7. What is meant by step quenching?
   A. The workpiece is first quenched in a slow medium (e.g., air) then in a fast medium (e.g., water)
   B. The workpiece is first quenched in a fast medium (e.g., water) then in a slow medium (e.g., air)
   C. The weaker parts of the workpiece are quenched separately from the main body of the workpiece
   D. The workpiece is lowered into the quenching medium in steps so that different parts of the workpiece attain different hardnesses
   E. None of the above

8. What is the simplest thing that the technician can do to minimize the vapor-blanket stage of liquid quenching?
   A. Agitate the workpiece or the medium
   B. Heat the quenching medium to just below its boiling point
   C. Quickly insert the workpiece into the medium
   D. Slowly insert the workpiece into the medium
   E. None of the above

9. Liquid carburizing, as used in case hardening, utilizes ________ and is therefore extremely dangerous.
   A. Sodium chloride
   B. Calcium carbonate
   C. Cyanide salts
   D. Ammonia
   E. None of the above
10. Workpieces which have been cut with an oxyacetylene torch often display edge hardness because
A. The torch was starved for oxygen
B. The workpiece was cut at too low a temperature
C. The wrong type of cutting torch was used
D. Oxyacetylene torches always leave hardened edges
E. None of the above
1. a
2. c
3. d
4. a
5. c
6. d
7. b

Circle the best answer.

1. The **hardness** of a metal is its ability to resist:
   A. Permanent deformation.
   B. Oxidation.
   C. Chemical reaction.
   D. All of the above answers are forms of hardness.
   E. None of the above.

2. Rockwell testing machines test the sample metal’s resistance to:
   A. Abrasion.
   B. Penetration.
   C. Elastic deformation.
   D. Electricity.
   E. None of the above.

3. Materials such as nitrided steel and hard cast irons generally have Rockwell hardness numbers in excess of
   A. B-50.
   B. B-75.
   C. B-100.
   D. B-150.
   E. None of the above.

4. During the file test, if the file will mark the metal but not cut into it, then the metal should be treated as:
   A. High-alloy steel.
   B. Mild steel.
   C. Hardened tool steel.
   D. Medium-carbon steel.
   E. None of the above.

5. Probably the best use of the spark test is to:
   A. Determine the alloy content of the sample.
   B. Identify cast iron.
   C. Compare the sample to a known piece.
   D. All of the above answers are valid.
   E. None of the above.
6. Tool steel has a Rockwell hardness of ________, while hardened tool steel has hardness number of ________.
   A. C-42 - C-64
   B. C-42 - B-65
   C. C-64 - C-42
   D. B-65 - C-42
   E. None of the above.

7. Which of the following surfaces should be avoided when hardness testing?
   A. Curved
   B. Rough
   C. Decarburized
   D. All of the above surfaces should be modified before testing the sample's hardness.
   E. None of the above.

8. For hardness testing, the minimum recommended clearance from the edge is:
   A. 1/2"
   B. 1/4"
   C. 1/8"
   D. 1/16"
   E. None of the above.

9. If a Rockwell tester is in daily use, it should be calibrated:
   A. Annually.
   B. Monthly.
   C. Weekly.
   D. Daily.
   E. Never.

10. Technician A says that, for large samples, multiple hardness test should be made and their results averaged. Technician B says that many materials vary in hardness over the length of the sample. Who is correct?
    A. Technician A only
    B. Technician B only
    C. Both technicians are correct.
    D. Neither technician is correct.

Choose the best answer.

1. The size of the bead is ________ proportional to the speed of travel.
   A. Directly
   B. Inversely
   C. Not
   D. None of the above

2. The eye shield of the welding helmet should be:
   A. Just light enough to clearly see the arc.
   B. Too dark to clearly see the arc.
   C. A minimum of #5.
   D. None of the above.

3. Welding in confined spaces may require:
   A. Air supplied hoods or hose masks.
   B. Frequent breaks.
   C. Large, high-displacement fans.
   D. All of the above.
   E. None of the above.

4. Long sleeves protect the arms against:
   A. Ultraviolet radiation.
   B. Infrared radiation.
   C. Welding splatter.
   D. All of the above.
   E. None of the above.

5. Which of the following is NOT a variable in the SMAW process?
   A. Current polarity
   B. Arc length
   C. Length of the electrode
   D. All of the above are variables in the process.
   E. None of the above.
6. Acceptable welding footwear includes:
   A. Roman sandals.
   B. Tennis shoes.
   C. Canvas boots.
   D. All of the above.
   E. None of the above.

7. A welder whose travel speed is too fast may have problems with:
   A. Excess convexity.
   B. Overlap.
   C. Porosity.
   D. All of the above.
   E. None of the above.

8. Technician A says that low-hydrogen electrodes can only be in the open air for two to four hours. Technician B says that the humidity and the base metal determine the amount of time that low-hydrogen electrodes can be exposed. Who is correct?
   A. Technician A only.
   B. Technician B only.
   C. Both Technicians A and B.
   D. Neither Technician A nor B.

9. E6010 electrodes should only be used with:
   A. DC⁻.
   B. DC⁺.
   C. AC.
   D. There is no such electrode.

10. Technician A says that they should weld only in well ventilated areas. Technician B says that welding produces gases that are odorless, colorless, and heavier than air. Who is correct?
    A. Technician A only.
    B. Technician B only.
    C. Both Technicians A and B.
    D. Neither Technician A nor B.

11. Technician A says that they should never carry butane lighters into the welding area because they may explode. Technician B says that gasoline should never be taken into the welding area, either. Who is correct?
    A. Technician A only.
    B. Technician B only.
    C. Both Technicians A and B.
    D. Neither Technician A nor B.
12. When repairing welding equipment, its electrical power should be:
   A. On.
   B. Off.
   C. On or off, depending on the repair.
   D. The SMAW machine is not electrical.

13. To prevent electrical shocks, all electrical equipment and the work piece should be:
   A. On rubber work mats.
   B. Elevated off the floor.
   C. Grounded.
   D. All of the above.
   E. None of the above.

14. Which of the following electrodes is NOT in the low-hydrogen family?
   A. E7015
   B. E7016
   C. E7018
   D. All of the above are low-hydrogen electrodes.
   E. All of the above are fast-freeze electrodes.

15. Technician A says that undercutting is caused by too much current. Technician B says that wet electrodes can also cause undercutting. Who is correct?
   A. Technician A only.
   B. Technician B only.
   C. Both Technicians A and B.
   D. Neither Technician A nor B.

16. Fire inspections should be continued for at least ________ after completion of the welding.
   A. Fifteen minutes
   B. Thirty minutes
   C. One hour
   D. Two hours

17. The welding area should be:
   A. Isolated from other workers by shields.
   B. At least 35 feet from combustible materials.
   C. Dry.
   D. All of the above.
   E. None of the above.
18. Seam welds generally require _______ oscillation.
   A. No
   B. Very little
   C. Moderate
   D. Great

19. Technician A says that all electrical connections must be tight, clean, and dry. Technician B says that poor electrical connections can heat up and even melt. Who is correct?
   A. Technician A only.
   B. Technician B only
   C. Both Technicians A and B
   D. Neither Technician A nor B

20. If it is impractical to properly remove combustible materials from the vicinity of the welding, then:
   A. Do not weld
   B. Take frequent breaks to inspect the area for fires
   C. Station a fire watcher near the combustible materials
   D. Any of the above is acceptable
   E. None of the above

21. E7018 electrodes should never be used with
   A. DC-
   B. DC+
   C. AC
   D. There is no such electrode

22. Areas to be welded should be thoroughly cleaned
   A. Prior to fit-up
   B. By brushing, sanding, or grinding
   C. With safe solvents
   D. All of the above, as necessary
   E. None of the above

23. Technician A says that porosity can be caused by a current setting that is too low. Technician B says that porosity can be caused by too long an arc. Who is correct?
   A. Technician A only
   B. Technician B only
   C. Both Technicians A and B
   D. Neither Technician A nor B
24. Low-hydrogen electrodes may be stored
   A. In sealed cans or heated rod ovens
   B. Under water
   C. In petroleum jelly
   D. Any of the above
   E. None of the above

25. As the material being welded increases in thickness, the travel speed of the weld must
   A. Increase
   B. Decrease
   C. Either A or B, depending on the desired effect
   D. Stay the same
   E. None of the above

**WELDER SERIES**  
**MASTER Technical Module No. WLD-L02**

**SUBJECT:** WELDING TECHNICIAN  
**TIME:** 20 HOURS

- **DUTY:** SHIELDED METAL ARC WELDING (SMAW) (BASIC)
- **TASK:** Initiate Welding Process

**OBJECTIVE(S):**

Upon completion of this unit the student will be able to:

A. Apply the use of gas to preheat joint on mild steel plate;
B. Weld Pad of Beads, flat position with 6010 Electrodes, (Weave and Stringer);
C. Weld Pad of Beads (stringer), plate in vertical position, horizontal travel using 6010 Electrodes;
D. Weld Pad of Beads (stringer), plate in vertical position, vertical travel using 6010 Electrodes;
E. Weld Pad of Beads (stringer) overhead position using 6010 Electrodes;
F. Fillet weld Multi-Stringer, horizontal travel using 6010 Electrodes;
G. Fillet weld Multi-Stringer, vertical travel using 6010 Electrodes;
H. Fillet weld Multi-Stringer, overhead using 6010 Electrodes;
I. Weld Open groove, Multi-Stringer, horizontal position using 6010 Electrodes;
J. Weld Open groove, Multi-Stringer, vertical position using 6010 Electrodes;
K. Weld Open groove, overhead position using 6010 Electrodes;
L. Weld Open groove, vertical position, 6010 root pass 7018 fill & cap;
M. Weld Open groove, overhead position 6010 root pass 7018 fill & cap; and,
N. Perform destructive testing on weld samples to determine discontinuities and proficiency.

**INSTRUCTIONAL MATERIALS:**

- Student Workbook
- Two written tests on Shielded Metal Arc Welding
- Transparencies prepared to emphasize each subject
- Hobart Institute Video Material
- Miller Module Method Video materials
- Hobart SMAW wall chart
- The classroom handouts will consist of student worksheets and alloy charts
- Personal protective equipment
- Shielded Metal Arc Welding machine
- Welding shop tools
- Selection of base metals for welding and cutting
Selection of filler metals and electrode wire

TEXT:

OTHER:

*Competency Standards*, American Welding Society, Latest Edition
STUDENT PREPARATION:

Student must demonstrate appropriate communication skills and understand principles of basic physical science and mathematics as verified by placement test or completion of required prerequisite courses. Student must complete the following module:

**WLD-L1**  “Preheat Joint”

INTRODUCTION:

The Course Introduction will Include:
- An overview of SMAW welding methods and techniques
- A class demonstration of effective welding applications for SMAW
- A discussion on continued training activities resulting in an increase of skill and knowledge leading to certification in specific program areas.

PRESENTATION OUTLINE:

Instructor Topics:

A. Emphasize the principles involved in operating of SMAW equipment
B. Discuss fundamentals of joint design and relevance of welding terms
C. How to interpret drawings and blueprints, using SMAW
D. Demonstration of the proper application of welding skills
E. Demonstration of adequate preparation of welding surfaces
F. Prepare butt joints, and tee joints, for welding
G. Identify polarity requirements using SMAW on various metals
H. Demonstrate preheat and how to maintain desired temperature
I. Match SMAW electrodes to an appropriate base metal
J. Demonstrate SMAW in the flat horizontal, vertical, and overhead positions
K. Identify welding variables and their effects on weld quality
L. Increase knowledge of current industry standards and techniques
M. Increase skill level to pass certification tests
N. Identify the AISI steel classification system

Student Activities:

A. Preheat weld surface
B. Perform welds in multiple positions
C. Use oscillating and non-oscillating welding technique
D. Perform single pass and multi-pass welds
E. Make adjustments to improve weld quality
F. Perform destruction testing on weld samples

PRACTICAL APPLICATION:

The student will gain knowledge and experience with as much practice as possible.
EVALUATION AND/OR VERIFICATION:

Two examinations will be given at the end of this section to determine the progress of the class. Practical work and welds will be evaluated by the student and the instructor.

SUMMARY:

Arc welding may be done with direct current (DC) with the electrode either positive or negative, or alternating current (AC). The choice of current and polarity depends on the process, the type of electrode, the arc atmosphere, and the metal being welded. The current must be controlled to satisfy the variables (amperage and voltage) which are specified by the welding procedures.

NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-L3) dealing with performing weld sequence.
WLD-L2-H01
Initiate Welding Process
Attachment 1: MASTER Handout No. 1

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Apply the use of gas to preheat joint on mild steel plate;
B. Weld Pad of Beads, flat position with 6010 Electrodes, (Weave and Stringer);
C. Weld Pad of Beads (stringer), plate in vertical position, horizontal travel using 6010 Electrodes;
D. Weld Pad of Beads (stringer), plate in vertical position, vertical travel using 6010 Electrodes;
E. Weld Pad of Beads (stringer) overhead position using 6010 Electrodes;
F. Fillet weld Multi-Stringer, horizontal travel using 6010 Electrodes;
G. Fillet weld Multi-Stringer, vertical travel using 6010 Electrodes;
H. Fillet weld Multi-Stringer, overhead using 6010 Electrodes;
I. Weld Open groove, Multi-Stringer, horizontal position using 6010 Electrodes;
J. Weld Open groove, Multi-Stringer, vertical position using 6010 Electrodes;
K. Weld Open groove, overhead position using 6010 Electrodes;
L. Weld Open groove, overhead position, 6010 root pass 7018 fill & cap;
M. Weld Open groove, overhead position 6010 root pass 7018 fill & cap; and,
N. Perform destructive testing on weld samples to determine discontinuities and proficiency.

MODULE OUTLINE:

Instructor Topics:
A. Emphasize the principles involved in the operating of SMAW equipment
B. Discuss fundamentals of joint design and relevance of welding terms
C. How to interpret drawings and blueprints, using SMAW
D. Demonstration of the proper application of welding skills
E. Demonstration of adequate preparation of welding surfaces
F. Prepare butt joints, and tee joints, for welding
G. Identify polarity requirements using SMAW on various metals
H. Demonstrate preheat and how to maintain desired temperature
I. Match SMAW electrodes to an appropriate base metal
J. Demonstrate SMAW in the flat horizontal, vertical, and overhead positions
K. Identify welding variables and their effects on weld quality
L. Increase knowledge of current industry standards and techniques
M. Increase skill level to pass certification tests
N. Identify the AISI steel classification system

Student Activities:
A. Preheat weld surface
B. Perform welds in multiple positions
C. Use oscillating and non-oscillating welding technique
D. Perform single pass and multi-pass welds
E. Make adjustments to improve weld quality
F. Perform destruction testing on weld samples
OBJECTIVE(S):

Upon completion of this unit the student will be able to:

a. Discuss the reasons for heat treating;
b. Discuss the time/temperature chart
c. List the different quenching media
d. Estimate metal heat temperature by color; and
e. List reasons for stress relieving workpieces.

MODULE OUTLINE:

I. Discuss the Reasons for Heat Treating
   A. Hardening for utility
   B. Tempering for toughness without brittleness

II. Discuss the Time/Temperature Chart

III. List the Different Quenching Media (In order of severity or speed of quenching)
   A. Brine (water and sodium chloride or sodium hydroxide)
   B. Water
   C. Fused (liquid) salts
   D. Molten lead
   E. Soluble oil and water
   F. Oil
   G. Air

IV. Estimate Metal Heat Temperature by Color
   A. Use of temper color chart for tempering
   B. *Chicken Wire* markings warn of overheating

V. List Reasons for Stress Relieving Workpieces
   A. Increased machinability
   B. Increased workability in cold processes

VI. Special Safety Concerns of Heat Treating
   A. Protective Gear against...
      1. Heat
      2. Fumes
      3. Concussion
   B. Toxicity of Certain Media

VII. Special Problems in Heat Treating
   A. Britteness
   B. Distortion
   C. Discoloration (sometimes unimportant)
   D. Inadvertent heat treating
OBJECTIVE(S):

Upon completion of this unit the student will be able to:

a. Perform file test to test for metal hardness;
b. Use other tests to identify metals; and,
c. Perform Rockwell hardness tests.

MODULE OUTLINE:

I. Perform File Test to Test for Metal Hardness
   A. Imprecise method, good for rough estimates only
   B. Requires more experienced machinist

II. Use Other Tests to Identify Metals
   A. High-carbon steels show more spark bursts than do low-carbon steels.
   B. Non-ferrous metals
      1. Aluminum
      2. Magnesium
      3. Brass
      4. Bronze
      5. Nickel
      6. Tin
      7. Others

III. Perform Rockwell Hardness Tests
    A. Ferrous metals
    B. Non-ferrous metals

IV. Perform Brinell Hardness Tests
    A. Ferrous metals
    B. Non-ferrous metals

V. Other Hardness Tests as Specified by the Instructor
   A. Ferrous metals
   B. Non-ferrous metals

Student laboratory exercises as assigned by Instructor.

BASIC SHIELDED METAL ARC WELDING (SMAW) AND OXY-FUEL GAS CUTTING

1. Define Selected Welding Terms Per AWS A3.0
   a. Define arc welding process terms
   b. Define standard joint terminology
   c. Define common weld discontinuities
   d. Name welding equipment, supply and consumables
   e. Define common shop terms including proper equipment names
   f. Define material terms
   g. Define common metallurgy terms

2. Describe AWS Code for Mild Steel Electrodes
   a. List, describe and define
   b. List low hydrogen electrodes
   c. List iron powder electrodes
   d. Describe electrode by welding position
   e. Describe electrode by current and polarity
   f. Describe electrode by penetration

3. Set Up Welding Machine to Required Polarity
   a. List polarities for commonly used electrodes
   b. Describe both polarities
   c. Describe advantages and disadvantages of alternating current

4. Use Correct Start and Stop Techniques for SMAW Electrodes
   a. Describe and demonstrate start for non-low hydrogen SMAW electrode
   b. Describe and demonstrate stop for non-low hydrogen SMAW electrodes with filled craters
   c. List reasons for the importance of low hydrogen in weld metal
   d. Explain the reason for low hydrogen starts and stops and how they work and why required specifically with E7018

5. Set Up Equipment for Shielded Metal Arc Welding
   a. Inspect area for safety
   b. Adjust current and polarity for specific job requirements
   c. Choose type and size of electrode
   d. Wear applicable personal safety equipment

6. Strike an Arc, Run Continuous Stringer Bead
   a. Stand and position oneself correctly
   b. Operate welding helmet
c. Verbally warn others of intent to arc weld
d. Strike an arc
e. Weld with stringer bead technique
f. Perform weld tie ins to make continuous bead

7. Weld Using Weave Technique
a. Maintain required weld quality
b. Maintain proper weld width uniformly
c. Maintain proper travel speed
d. Match correct oscillation for various electrodes
e. Match applications to weave techniques, as they apply
f. List the advantages and disadvantages of weave techniques
g. List the advantages and disadvantages of stringer techniques
h. Perform weld using weave technique
i. Concentrate on dwell times at edges of weld pool

8. Weld Multi-Layer Buildup
a. Weld a dam to outline area being welded for each layer
b. Apply each layer neatly, straight and with good fusion throughout
c. Chip slag after each pass
d. Weld passes which overlap to crown of last weld bead
e. Demonstrate control of bead height

9. Set Up and Shut Down Oxy-Fuel Equipment
a. Follow manufacturer's recommended practice
b. Inspect equipment and work area for safety
c. Assemble oxy-fuel equipment
d. Open fuel gas cylinder $\frac{1}{2}$ turn
e. Open oxygen as cylinder all the way
f. Adjust fuel gas and oxygen working pressure per manufacturer's recommendation
g. Purge lines one at a time. One second for each 10 feet of hose length

10. Cut Steel Plate Using Oxy-Fuel Equipment
a. Make manual free hand straight line cuts
b. Cut manually straight lines using cutting jib
c. Bevel plate with manual oxy-fuel equipment
d. Manually cut blind holes in thick material
e. Manually cut sheet metal with minimal distortion
WLD-L2-H05
Initiate Welding Process
Attachment 5: MASTER Handout No. 5

Student laboratory exercises as assigned by Instructor.

ADVANCED SHIELDED METAL ARC WELDING (SMAW) AND CUTTING

1. Weld Single V Groove Welds With Open Roots From One Side
   a. Bevel 3/8" steel plate to 37 1/2° using oxy-fuel gas cutting e.g.
   b. Use grinder to remove oxide larger and smooth plate
   c. Use grinder to create root face of 3/32" to 1/8"
   d. Tack single V groove joint with 3/32" root opening
   e. Place joint in the 1G position
   f. Place joint in 2G position once task is mastered
   g. Place joint in 3G position once task is mastered
   h. Place joint in 4G position once task is mastered
   i. Weld the root with Direct Current Electrode Positive using 1/8" E6010. Use tight arc length and keyhole technique to produce a well fused root bead extending 1/16" above the plate.
   j. Weld chipped side slag and the root bead is wire brushed
   k. Fill the balance of the groove with 3/32", 1/8" and/or 5/32" E7018 using the stringer bead technique
   l. Visual test finished weld and root face bends evaluated to AWS D1.1 criteria

2. Weld Various Diameters of Pipe to Plate
   a. Inspect area for safety
   b. Place plate flat on welding table
   c. Place 3" pipe vertically on top of plate and tacked in place
   d. Leave weld coupon in the 2F fixed position
   e. Apply a 3/8" fillet weld using 1/8" E7018 and a stringer bead technique
   f. Visually inspect weld to AWS D1.1
   g. Fill pipe with water for 24 hours
   h. Check for leak

3. Produce SMAW Pipe - 5G Position
   a. Measure the pipe
   b. Mark the cut line with a wrap around and soapstone
   c. Cut the bevel using oxy-fuel gas equipment
   d. Clean the bevel face with a grinder, remove all oxide and smooth bevel face
   e. Use the grinder to add a root face of from 3/32" to 1/8"
   f. Tack the single V groove pipe joint with a 3/32" root opening
g. Place the joint in the 5G fixed position, using an 1/8" E6010 and a keyhole technique. Weld the root pass upward producing a root weld which is well fused and has a 1/16" weld reinforcement above the plate.

h. Chip slag and wire brush weld

i. Grind any lack of fusion and/or high spots

j. Weld the balance of the groove upward with 3/32" or 1/8" E7018 using the stringer bead technique

k. Visually inspect weld on the root and face sides to ASME Section 9

l. Remove four guided bend specimens from 2:00, 4:00, 8:00 and 10:00 positions prepared and two & eight are root bend specimens. Four & ten are face bend specimens. Guided bend tests are evaluated to ASME Section 9 criteria

4. Produce SMAW - 2G Position Groove Welds
   a. Measure the pipe
   b. Mark the cut line with a wrap around and soapstone
   c. Cut the bevel using oxy-fuel gas equipment
   d. Clean the bevel face with a grinder, remove all oxide and smooth bevel face
   e. Use the grinder to add a root face of from 3/32" to 1/8"
   f. Tack the single V groove pipe joint with a 3/32" root opening
   g. Weld pipe joint
   h. Place the joint in the 2G fixed position, using an 1/8" E6010 and a keyhole technique. Weld the root pass upward producing a root weld which is well fused and has a 1/16" weld reinforcement above the plate.
   i. Chip slag and wire brush. Grind any lack of fusion and/or high spots
   j. Weld balance of the groove upward with 3/32" or 1/8" E7018 using the stringer bead technique
   k. Visually inspect weld on the root and face sides to ASME Section 9
   l. Remove four guided bend specimens from 2:00, 4:00, 8:00 and 10:00 positions prepared and two & eight are root bend specimens. Four & ten are face bend specimens. Guided bend tests are evaluated to ASME Section 9 criteria

5. Roll Weld Pipe - SMAW
   a. Measure the pipe
   b. Mark the cut line with a wrap around and soapstone
   c. Cut the bevel using oxy-fuel gas equipment
   d. Clean the bevel face with a grinder, remove all oxide and smooth bevel face
   e. Use the grinder to add a root face of from 3/32" to 1/8"
   f. Tack the single V groove pipe joint with a 3/32" root opening
   g. Roll weld pipe
   h. Place pipe coupon on workbench in the 1G roll welding position.
   i. Weld the root bead using 1/8" E6010 and the keyhole technique. The weld is performed in the 2:00 to 12:30 position
   j. Chip slag and wire brush. Grind any lack of fusion and/or high spots
k. Weld balance of groove upward with 3/32" or 1/8" E7018 using the weave technique
l. Visually inspect weld on the root and face sides to ASME Section 9
m. Remove four guided bend specimens from 2:00, 4:00, 8:00 and 10:00 positions prepared and two & eight are root bend specimens. Four & ten are face bend specimens. Guided bend tests are evaluated to ASME Section 9 criteria

6. Produce SMAW Pipe - 5G Position
   a. Measure the pipe and
   b. Mark the cut line with a wrap around and soapstone
   c. Cut the bevel using oxy-fuel gas equipment
   d. Clean the bevel face with a grinder, remove all oxide and smooth bevel face
   e. Use the grinder to add a root face of from 3/32" to 1/8"
   f. Weld pipe
   g. Tack the single V groove pipe joint with a 3/32" root opening
   h. Place the joint in the 5G fixed position, using an 1/8" E6010 and a keyhole technique
   i. Weld the root pass upward producing a root weld which is well fused and has a 1/16" weld reinforcement above the plate
   j. Chip slag and wire brush. Grind any lack of fusion and/or high spots
   k. Weld balance of groove upward with 3/32" or 1/8" E7018 using the weave technique
   l. Visually inspect weld on the root and face sides to ASME Section 9

7. Produce SMAW Pipe - 6G Position
   a. Measure the pipe
   b. Mark the cut line with a wrap around and soapstone
   c. Cut the bevel using oxy-fuel gas equipment
   d. Clean the bevel face with a grinder, remove all oxide and smooth bevel face
   e. Use the grinder to add a root face of from 3/32" to 1/8"
   f. Tack the single V groove pipe joint with a 3/32" root opening
   g. Place the joint in the 6G fixed position, using an 1/8" E6010 and a keyhole technique
   h. Weld the root pass upward producing a root weld which is well fused and has a 1/16" weld reinforcement above the plate
   i. Chip slag and wire brush. Grind any lack of fusion and/or high spots
   j. Weld balance of groove upward with 3/32" or 1/8" E7018 using the stringer bead technique
   k. Visually inspect weld on the root and face sides to ASME Section 9
l. Remove four guided bend specimens from 2:00, 4:00, 8:00 and 10:00 positions prepared and two & eight are root bend specimens. Four & ten are face bend specimens. Guided bend tests are evaluated to ASME Section 9 criteria.

8. Create SMAW Pipe to ASME Section 9
   a. Bevel two pieces of pipe to 30° bevel angle using oxy-fuel gas cutting equipment
   b. Clean bevel face and a 3/32" root face is applied using a hand held grinder
   c. Set welding condition to weld open roots
   d. Tack pipe nipples together to form a V groove with a 1/8" root opening
   e. Place pipe in the 5G fixed position. The root pass is welded and cleaned by wire brushing
   f. Weld balance of the V groove with this procedure
   g. Visual inspection is made and evaluated by ASME Section 9
   h. Make four bend samples and evaluate by ASME Section 9

9. Interpret Welding Procedures
   a. Identify process
   b. Name joint design
   c. List base material
   d. Give dimensions for root treatment
   e. Name electrode size and type being used
   f. List filler material (if required), classification and specification
   g. Identify shielding gas - type and mixture
   h. List pre and post heat and interpass temperature
   i. Describe initial and interpass cleaning
   j. Describe technique which is used
   k. Produce single or multiple pass weld
   l. Choose current type
   m. Set current amperage
   n. Set current polarity
   o. Set voltage
Initiate Welding Process
Attachment 6: MASTER Handout No. 6

Student laboratory exercises as assigned by Instructor.

PIPE WELDING - SMAW

1. Produce End Preparations
   a. Produce end preparations with oxy-fuel cutting
   b. Produce end preparations with plasma cutting
   c. Produce end preparations with mechanical cutting
   d. Produce end preparations with grinding

2. Fit and Tack Weld Pipe
   a. Cut and single bevel pipe to 37 1/2°
   b. Ground bevel face and touch up to within tolerances
   c. Check that pipe ends are square within given tolerances
   d. Prepare root face within given tolerances
   e. Align pipe to within given tolerances
   f. Set root opening to within given tolerances
   g. Tack pipe according to welding procedure specification - maintaining root opening

3. Roll Weld Open Root Pass on Pipe - 1G Position
   a. Fit up and tack pipe joint using 1/8" E6010 electrode, weld the root pass on pipe in the 1 o'clock to (2:00 o'clock position) according to procedure using the roll welding technique
   b. Weld remainder of pipe in the 1G roll welding position with E6010
   c. Weld the remaining portion of the groove using the weave technique using 5/32" E6010 electrode roll

4. Weld Open Root Pipe Joint - 2G Position
   a. Weld using 1/8" E6010
   b. Cut and grind pipe ends will be to single bevel edge preparations of 37 1/2°
   c. Fit together the two pipe ends to a single V edge preparation with given tolerances
   d. Weld root pass to ASME Section 9 requirements
   e. Fill balance of the groove with E6010 using the stringer technique to ASME Section 9 requirements

5. Weld Open Root Pipe - 5G Position
   a. Fit and tack weld pipe to within tolerances
   b. Place pipe in the 5G position
   c. Weld the rootpass using 1/8" E6010 to ASME Section 9 requirements
   d. Grind the finished root pass to remove high spots and any slag at weld toes
6. Pass Guided Bond Tests Per ASME Section 9
   a. Remove bend samples from pipe at the 10, 2, 8 & 4 o'clock positions
   b. If the material is 3/8" or thinner 10 o'clock and 8 o'clock receive root bends and 2 o'clock and 4 o'clock receive face bends. If the pipe wall thickness is over 3/8" side bends shall be performed on all samples.
   c. Weld remainder of pipe in 1G position using E7018
   d. Perform low hydrogen starts and stops
   e. Weld using stringer bead technique
   f. Weld using weave technique
   g. Chip slag wire brush and grind as necessary to assure clean weld deposits

7. Weld Open Root Pipe - 2G Position
   a. Use 1/8" E6010
   b. Cut and ground pipe ends to single bevel edge preparations of 37 1/2°
   c. Fit together two pipe ends to a single V edge preparation within given tolerances
   d. Weld root pass to ASME Section 9 requirements
   e. Clean weld pass by chipping slag, wire brushing and grinding where necessary to assure a clean, well fused weld deposit
   f. Weld remainder of the groove using E7018 with the stringer bead technique

8. Weld Pipe Open Root Passes All Positions Using GMAW
   a. Set up GMAW equipment
   b. Adjust wire feeder drive system
   c. Adjust shielding gas system and flow rate
   d. Adjust GMAW gun to allow proper tip to work distance and gas coverage
   e. Set welding condition for short circuit transfer - Wire Feed Speed
   f. Set welding condition for short circuit transfer - Voltage
   g. Set welding condition for short circuit transfer - Tip to work Distance
   h. Weld root using a string bead technique

9. Weld Pipe With Backing Using FCAW-G
   a. Bevel pipe ends
   b. Touch up bevel face with grinder
   c. Fit and tack backing ring to one pipe end
   d. Fit other pipe over backing ring
   e. Adjust gap and tack in place
   f. Adjust shielding gas flow
   g. Adjust wire feed system
   h. Adjust power source to procedure specification
   i. Set wire feed speed to procedure specification
   j. Adjust voltage to procedure specification
   k. Adjust inductance to procedure specification
1. Adjust GMAW gun for tip to work distance and shielding gas
   m. Weld according to procedure specification
The shielded metal arc welding (SMAW) process has a number of serious safety hazards associated with it:

**CAUTION:** Specific safety precautions must be taken to ensure a proper breathing atmosphere in all welding areas.

A. Weld only in ventilated areas. Welding shielding gases can displace the air needed for breathing. These gases are odorless and colorless, and most are heavier than air.
B. Weld in a position that will allow your head to be out of the welding plume, but will still give a good view of the welding arc. The welding plume could contain harmful fumes and gases.
C. Provide enough ventilation wherever welding and cutting are performed. Welding in confined spaces may require special procedures, such as the use of an air-supplied hood or hose mask.
D. Do not weld on dirty plate or plate contaminated with an unknown material. The fumes and gases which are formed could be hazardous to health.

**CAUTION:** Electrical shock can be avoided by following specific safety precautions.

A. Do not touch live electrical parts.
B. Ground all electrical equipment and the work-piece to prevent accidental electrical shocks.
C. Use the correct welding cable size for both the ground lead and the welding lead. Sustained overloading will cause cable failure and result in possible electrical shock or fire hazard.
D. Be sure all electrical connections are tight, clean, and dry. Poor electrical connections can heat up and even melt, causing dangerous arcs and sparks.
E. Keep dry. Moisture and water can conduct electricity. Fix water leaks immediately.
F. Keep welding cables and connectors in good condition. Improper or worn electrical connections can cause short circuits and can increase the chance of an electrical shock.
G. Avoid open-circuit voltage. Open-circuit voltage is much higher than welding voltage.
H. Shut off electrical power when working on welding equipment.

**CAUTION:** Ultraviolet and infrared rays emitted by the welding arc, as well as the spatter from the welding arc, can injure eyes and burn skin. Specific safety precautions must be followed to ensure adequate protection.
A. Wear 100% cotton clothing. It will not catch fire easily, it offers good protection from light welding spatter, and it is cooler in the summer and warmer in the winter.
B. Cover all skin surfaces. Keep shirt sleeves rolled down.
C. Wear cuffless pants to eliminate spatter traps.
D. Wear leather boots. Pant legs should cover boot tops.
E. Wear clean clothing. Oil and grease stained clothes will tend to ignite from welding spatter.
F. For more severe welding conditions, wear protective clothing such as heat resistant jackets, aprons, and leggings.
G. Wear safety glasses to protect from arc flashes, mechanical injury, or other mishaps.
H. Wear ear protection, not only where there is noise but where there is a chance that spatter or sparks could get into the ears.
I. Wear a 100% cotton cap to protect the head from sparks or spatter.
J. Wear long gauntlet leather gloves.
K. Do not touch hot metal with bare hands. Use pliers and wear leather gloves.
L. Protect nearby workers from exposure to the welding arc by putting up shields.
M. Wear a welding helmet with the correct shade of welding lens. Choose the correct lens from a filter recommendations table (see Figure 2).

FILTER RECOMMENDATIONS
(adapted from ANSI Safety Standard Z49.1-88)
SMAW

<table>

</table>

* As a general rule, start with a shade that is too dark to see the arc zone. Then go to a lighter shade which gives sufficient view of the arc zone without exerting a strain on your eyes.

Figure 2 Filter Recommendations

CAUTION: Specific precautions must be taken to ensure that there is no loss of property due to welding sparks, spatter, and heat.

A. If possible, weld in specially designated areas or enclosures of noncombustible construction.
B. Remove combustibles from the work area by at least 35 feet if possible.
C. Cover combustibles that can not be removed from the welding area with tight-fitting flame-resistant material. Items that should be covered include combustible walls, floors, ceilings, and any cracks or other openings that might let a spark pass through it.

D. If welding is to be performed on or adjacent to a metal wall, ceiling, or partition, move combustibles on the other side to a safe location.

E. If combustibles can not be adequately sealed off or removed, station a fire watcher at that location. The fire watcher must have adequate fire extinguishing capabilities.

F. Do not weld on materials having either a coating or internal structure that is combustible.

G. Place hot scrap and slag in non-combustible containers.

H. Ensure that fire extinguishers are available nearby.

I. Conduct a thorough examination for evidence of a fire before leaving the work area, and continue a fire check for at least 30 minutes after the welding operation has been completed.

J. Follow all company safety procedures regarding welding in hazardous areas.

CAUTION: NEVER carry a butane lighter into a welding area. These are considered to be mini-Molotov cocktails. DON'T CARRY A BOMB IN YOUR POCKET.
Worksheet:

1. **Choose Proper Power Source**
   
   **Step 1.** With the procedures and electrodes used at maintenance and fabrication facilities, choose a constant current (CC) power source for the Shielded Metal Arc Welding process. Some units are a combination of constant current (CC) and constant voltage (CV). This type of power source will have one or two switches to change from constant current to constant voltage.

   **Step 2.** An alternating current (AC) welding power source could be used with the low-hydrogen family of electrodes, but choose a constant current (CC) power source if possible.

2. **Choose a Proper Electrode**
   
   **Step 1.** Choose the proper electrode for the job.

   **NOTE:** The maintenance technician uses E6010 and E7018 electrodes for most SMAW applications. The E6010 belongs to the fast-freeze family of electrodes and the E7018 belongs to the low-hydrogen family of electrodes. The E6010 provides a deep digging, deep penetrating type of weld and may be used for non-critical fabrication.

   The E7018 low-hydrogen is used as the primary electrode for fabrication and other code-quality welds. The low-hydrogen family also includes E7015, E7016, and E7048. Hydrogen in the weld deposit causes brittleness called hydrogen embrittlement, which leads to cracking and potential weld failure.

   **Step 2.** Store the electrodes properly.
   
   a) **Low-hydrogen electrodes:**
   
   (1) These electrodes are packaged in hermetically sealed (watertight) cans. Be careful not to damage the cans which would allow air and moisture to attack the electrodes in the cans.

   (2) Once the cans are opened, store the electrodes in a rod oven at 150°F to 300°F.

   (3) Re-dry electrodes that have been outside a sealed container or a properly heated rod oven for several hours by baking them one hour at 700°F to 800°F and storing them in a rod oven.

   **NOTE:** Some welding procedures also set a time limit on the number of hours that low-hydrogen electrodes can be...
kept out of a rod oven prior to use. Times vary from two to four hours, depending on the type of base metal to be welded and the humidity levels of the environment.

b. Do not store the E6010 fast-freeze electrodes in rod ovens. Fast-freeze electrodes require the presence of small amounts of moisture in order to run smoothly.

Step 3. Match the low-hydrogen family members with the polarities that are used with them (see Figure 5).

Figure 5 Welding Rod Polarities

Definitions:
AC Alternating Current
DC+(DCRP) Direct Current Reverse Polarity
DC-(DCSP) Direct Current Straight Polarity

![Figure 6 Typical Current Ranges for Electrodes](image)

3. Prepare Weldment for Welding

Step 1. Oxyacetylene cut, carbon air arc gouge/cut, or machine cut/mill material to the desired shape/contour for each type of weld joint configuration needed for each welding task at hand.

a. Weld joint configuration will depend upon:
(1) Product design
(2) Material thickness
(3) Design strength requirements
(4) Welding process employed

b. SMAW weld joint configuration may be a:
   (1) Lap joint
   (2) Tee joint
   (3) Corner joint
   (4) Edge joint
   (5) Butt joint with backing
   (6) Butt joint without backing

Step 2. Clean the areas to be welded prior to fit-up
   a. Remove rust, paint, and any other coatings by wire brushing,
      grinding, sanding, or filing
   b. Remove oils and greases with a safe, suitable solvent

Step 3. Turn on the power source and set the current range (amps) on the machine
   at the lower end of the setting as suggested for the electrode size.

Step 4. Obtain a piece of scrap metal of the approximate type and thickness for
   the weld joint to be made.

Step 5. Practice welding on the scrap metal and adjust the current setting as
   needed to produce a good weld.

4. Complete Welding Operation

Step 1. Tack weld a joint that is defect free and can be incorporated into the
   finished product.

Step 2. Use any preheat that may be required by welding codes or company
   procedures.

Step 3. Make the required weld to be defect free and pleasing in appearance.

Step 4. Use proper weld bead placement according to the weld joint design.
   a. When making seam welds, produce the weld beads by using very
      little oscillation or some oscillation.
   b. When making fillet welds, produce the weld beads by using some
      oscillation. Fillet welds in the vertical position can also be run
      using a weaving technique.
   c. When making groove welds, produce the weld beads by using
      some oscillation and/or by weaving. When making groove welds
      on butt joints, the amount of weaving will depend on the welding
      position and the weld joints. It may also be limited by applicable
      welding codes and/or company standards.

Step 5. Maintain the correct welding travel speed. Weld bead size can be changed
   by varying the arc travel speed. Bead size and travel speed are inversely
   related: a decrease in travel speed will result in an increase in the weld
   bead height and width, and an increase in travel speed will result in a
   decrease in the weld bead height and width.
a. As the material thickness increases, the travel speed must slow down.

b. For a given material thickness and joint design, as the welding amperage is increased so is the arc travel speed. Conversely, as the amperage is decreased, the arc travel is slowed.

c. Higher welding speeds are attainable by using the forehand (pushing) technique.

5. Troubleshoot Welding Problems

Step 1. Be aware of the welding variables and how they can affect the weld. Below is a list of eleven welding variables for the SMAW process:

a. Type of electrode
b. Diameter of electrode
c. Type of current (AC or DC)
d. Current polarity (DC+ or DC-)
e. Current setting
f. Arc length
g. Travel speed
h. Electrode angle
i. Electromagnetic arc blow
j. Electrode manipulation technique (drag, whip)
k. Thoroughness of slag removal prior to restarts and new bead placement

Step 2. Be aware of general welding variables and how they can affect the weld:

a. Type of base metal
b. Thickness of base metal
c. Surface condition of base metal (clean, rusty, or painted)
d. Atmospheric conditions

Step 3. Be aware of any weld discontinuity and the relevant welding variables that may have caused it.

Initiate Welding Process
Self-Assessment No. 1

Circle the best answer.

1. What is the approximate temperature required for stress relief annealing of low-carbon steels?
   A. 950°
   B. 1000°
   C. 1950°
   D. 1700°
   E. None of the above

2. What crystalline processes result from stress relief annealing?
   A. All grains reform into softer grains
   B. Distorted grains reform into softer grains
   C. Ferrite grains reform into softer grains while pearlite grains are basically unaffected
   D. Pearlite grains reform into softer grains while ferrite grains are basically unaffected
   E. None of the above

3. Which of the following is NOT a cause of quenching cracks?
   A. Improper quenching medium
   B. Overheating during the austenitizing cycle
   C. Improper quenching angle
   D. All of the above are causes of quenching cracks
   E. None of the above answers is correct

4. Which of the following is NOT a characteristic of typical quench cracks?
   A. The fracture tends to run from the surface toward the center in a smooth curve
   B. Untempered quench cracks will not show any decarburization
   C. Tempered fracture surfaces will show a fine crystalline structure
   D. All of the above are characteristic of quench cracks
   E. None of the above
5. During tempering by color, which of the following colors represents the highest temperature?
   A. Gold
   B. Purple
   C. Dark Straw
   D. Pale Blue
   E. Violet

6. During tempering by color, which of the following colors represents the lowest temperature?
   A. Gold
   B. Purple
   C. Dark Straw
   D. Pale Blue
   E. Violet

7. What is meant by *step quenching*?
   A. The workpiece is first quenched in a slow medium (e.g., air) then in a fast medium (e.g., water)
   B. The workpiece is first quenched in a fast medium (e.g., water) then in a slow medium (e.g., air)
   C. The weaker parts of the workpiece are quenched separately from the main body of the workpiece
   D. The workpiece is lowered into the quenching medium in steps so that different parts of the workpiece attain different hardn esses
   E. None of the above

8. What is the simplest thing that the technician can do to minimize the vapor-blanket stage of liquid quenching?
   A. Agitate the workpiece or the medium
   B. Heat the quenching medium to just below its boiling point
   C. Quickly insert the workpiece into the medium
   D. Slowly insert the workpiece into the medium
   E. None of the above

9. Liquid carburizing, as used in case hardening, utilizes _________ and is therefore extremely dangerous.
   A. Sodium chloride
   B. Calcium carbonate
   C. Cyanide salts
   D. Ammonia
   E. None of the above
10. Workpieces which have been cut with an oxyacetylene torch often display edge hardness because
   A. The torch was starved for oxygen
   B. The workpiece was cut at too low a temperature
   C. The wrong type of cutting torch was used
   D. Oxyacetylene torches always leave hardened edges
   E. None of the above

Circle the best answer.

1. The **hardness** of a metal is its ability to resist:
   A. Permanent deformation.
   B. Oxidation.
   C. Chemical reaction.
   D. All of the above answers are forms of hardness.
   E. None of the above.

2. Rockwell testing machines test the sample metal's resistance to:
   A. Abrasion.
   B. Penetration.
   C. Elastic deformation.
   D. Electricity.
   E. None of the above.

3. Materials such as nitrided steel and hard cast irons generally have Rockwell hardness numbers in excess of
   A. B-50.
   B. B-75.
   C. B-100.
   D. B-150.
   E. None of the above.

4. During the file test, if the file will mark the metal but not cut into it, then the metal should be treated as:
   A. High-alloy steel.
   B. Mild steel.
   C. Hardened tool steel.
   D. Medium-carbon steel.
   E. None of the above.

5. Probably the best use of the spark test is to:
   A. Determine the alloy content of the sample.
   B. Identify cast iron.
   C. Compare the sample to a known piece.
   D. All of the above answers are valid.
   E. None of the above.
6. Tool steel has a Rockwell hardness of __________, while hardened tool steel has hardness number of __________.
   A. C-42 - C-64
   B. C-42 - B-65
   C. C-64 - C-42
   D. B-65 - C-42
   E. None of the above.

7. Which of the following surfaces should be avoided when hardness testing?
   A. Curved
   B. Rough
   C. Decarburized
   D. All of the above surfaces should be modified before testing the sample's hardness.
   E. None of the above.

8. For hardness testing, the minimum recommended clearance from the edge is:
   A. 1/2"
   B. 1/4"
   C. 1/8"
   D. 1/16"
   E. None of the above.

9. If a Rockwell tester is in daily use, it should be calibrated:
   A. Annually.
   B. Monthly.
   C. Weekly.
   D. Daily.
   E. Never.

10. Technician A says that, for large samples, multiple hardness test should be made and their results averaged. Technician B says that many materials vary in hardness over the length of the sample. Who is correct?
    A. Technician A only
    B. Technician B only
    C. Both technicians are correct.
    D. Neither technician is correct.

Choose the best answer.

1. The size of the bead is ________ proportional to the speed of travel.
   A. Directly
   B. Inversely
   C. Not
   D. None of the above

2. The eye shield of the welding helmet should be:
   A. Just light enough to clearly see the arc.
   B. Too dark to clearly see the arc.
   C. A minimum of #5.
   D. None of the above.

3. Welding in confined spaces may require:
   A. Air supplied hoods or hose masks.
   B. Frequent breaks.
   C. Large, high-displacement fans.
   D. All of the above.
   E. None of the above.

4. Long sleeves protect the arms against:
   A. Ultraviolet radiation.
   B. Infrared radiation.
   C. Welding splatter.
   D. All of the above.
   E. None of the above.

5. Which of the following is NOT a variable in the SMAW process?
   A. Current polarity
   B. Arc length
   C. Length of the electrode
   D. All of the above are variables in the process.
   E. None of the above.
6. Acceptable welding footwear includes:
   A. Roman sandals.
   B. Tennis shoes.
   C. Canvas boots.
   D. All of the above.
   E. None of the above.

7. A welder whose travel speed is too fast may have problems with:
   A. Excess convexity.
   B. Overlap.
   C. Porosity.
   D. All of the above.
   E. None of the above.

8. Technician A says that low-hydrogen electrodes can only be in the open air for two to four hours. Technician B says that the humidity and the base metal determine the amount of time that low-hydrogen electrodes can be exposed. Who is correct?
   A. Technician A only.
   B. Technician B only.
   C. Both Technicians A and B.
   D. Neither Technician A nor B.

9. E6010 electrodes should only be used with:
   A. DC-.
   B. DC+.
   C. AC.
   D. There is no such electrode.

10. Technician A says that they should weld only in well ventilated areas. Technician B says that welding produces gases that are odorless, colorless, and heavier than air. Who is correct?
    A. Technician A only.
    B. Technician B only.
    C. Both Technicians A and B.
    D. Neither Technician A nor B.

11. Technician A says that they should never carry butane lighters into the welding area because they may explode. Technician B says that gasoline should never be taken into the welding area, either. Who is correct?
    A. Technician A only.
    B. Technician B only.
    C. Both Technicians A and B.
    D. Neither Technician A nor B.
12. When repairing welding equipment, its electrical power should be:
   A. On.
   B. Off.
   C. On or off, depending on the repair.
   D. The SMAW machine is not electrical.

13. To prevent electrical shocks, all electrical equipment and the work piece should be:
   A. On rubber work mats.
   B. Elevated off the floor.
   C. Grounded.
   D. All of the above.
   E. None of the above.

14. Which of the following electrodes is NOT in the low-hydrogen family?
   A. E7015
   B. E7016
   C. E7018
   D. All of the above are low-hydrogen electrodes.
   E. All of the above are fast-freeze electrodes.

15. Technician A says that undercutting is caused by too much current. Technician B says that wet electrodes can also cause undercutting. Who is correct?
   A. Technician A only.
   B. Technician B only.
   C. Both Technicians A and B.
   D. Neither Technician A nor B.

16. Fire inspections should be continued for at least _________ after completion of the welding.
   A. Fifteen minutes
   B. Thirty minutes
   C. One hour
   D. Two hours

17. The welding area should be:
   A. Isolated from other workers by shields.
   B. At least 35 feet from combustible materials.
   C. Dry.
   D. All of the above.
   E. None of the above.
18. Seam welds generally require ___________ oscillation.
   A. No
   B. Very little
   C. Moderate
   D. Great

19. Technician A says that all electrical connections must be tight, clean, and dry.
    Technician B says that poor electrical connections can heat up and even melt. Who is correct?
   A. Technician A only.
   B. Technician B only
   C. Both Technicians A and B
   D. Neither Technician A nor B

20. If it is impractical to properly remove combustible materials from the vicinity of the welding, then:
    A. Do not weld
    B. Take frequent breaks to inspect the area for fires
    C. Station a fire watcher near the combustible materials
    D. Any of the above is acceptable
    E. None of the above

21. E7018 electrodes should never be used with
    A. DC-
    B. DC+
    C. AC
    D. There is no such electrode

22. Areas to be welded should be thoroughly cleaned
    A. Prior to fit-up
    B. By brushing, sanding, or grinding
    C. With safe solvents
    D. All of the above, as necessary
    E. None of the above

23. Technician A says that porosity can be caused by a current setting that is too low.
    Technician B says that porosity can be caused by too long an arc. Who is correct?
    A. Technician A only
    B. Technician B only
    C. Both Technicians A and B
    D. Neither Technician A nor B
24. Low-hydrogen electrodes may be stored
   A. In sealed cans or heated rod ovens
   B. Under water
   C. In petroleum jelly
   D. Any of the above
   E. None of the above

25. As the material being welded increases in thickness, the travel speed of the weld must
   A. Increase
   B. Decrease
   C. Either A or B, depending on the desired effect
   D. Stay the same
   E. None of the above

SUBJECT: WELDING TECHNICIAN  TIME: 20 HOURS

- DUTY: SHIELDED METAL ARC WELDING (SMAW) (BASIC)
- TASK: Perform Weld Sequence

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Weld Multi-Stringer beads on steel plate using E6010 & E7018;
B. Weld steel plate using weave technique with E6010 & E7018; and,
C. Weld steel plate with E6010 for a root pass and E7018 fill & cap.

INSTRUCTIONAL MATERIALS:

Student Workbook
Four written tests on operational procedures and welding techniques
Transparencies prepared to emphasize each subject
Hobart Institute Video Material
Miller Module Method Video materials
Hobart SMAW wall chart
The classroom handouts will consist of student worksheets and alloy charts
Personal protective equipment
Shielded Metal Arc Welding machine
Welding shop tools
Selection of base metals for welding and cutting
Selection of filler metals and electrode wire

TEXT:

OTHER:

*Competency Standards*, American Welding Society, Latest Edition

STUDENT PREPARATION:

Student must demonstrate appropriate communication skills and understand principles of basic physical science and mathematics as verified by placement test or completion of required prerequisite courses. Student must complete the following modules:

- **WLD-L1** “Preheat Joint”
- **WLD-L2** “Initiate Welding Process”

INTRODUCTION:

The Course Introduction will Include:

- An overview of SMAW weld sequence and techniques
- A class demonstration of effective SMAW techniques
- A discussion on training activities resulting in an increase of skill and knowledge
leading to certification in related program areas, becoming a more valuable employee

PRESENTATION OUTLINE:

Instructor Topics:
A. Emphasizes the principles involved in the operating of SMAW equipment
B. Demonstrate knowledge of the proper application of welding skills and techniques
C. Illustrate welding techniques for the five basic welding joints
D. Demonstrate knowledge of adequate preparation of welding surfaces
E. Demonstrate preheat and how to maintain desired temperature
F. Identify welding variables and their effects on weld quality
G. Identify the AISI steel classification system
H. Match SMAW electrodes to an appropriate base metal
I. Illustrate quality weld techniques for SMAW in student exercises

Student Activities:
A. Preheat weld surface
B. Weld multiple stringer beads
C. Use weave technique
D. Use oscillating and non-oscillating welding technique
E. Perform single pass and multi-pass welds;
   1. Flat plate, stringer bead, flat position;
   2. Lap joint, Fillet weld, flat position;
   3. Edge, Stringer bead, flat position;
   4. Flat plate, Pad stinger bead, Horizontal position;
   5. Lap, Fillet weld, Vertical down position;
   6. Lap, Fillet weld, Horizontal position;
   7. "T", Multipass weave beads, Flat position;
   8. Single "Y" butt, Multipass Groove weld, horizontal position;
   9. Coupling, Fillet weld, Horizontal position;
   10. Single "V" butt, Multipass filler weld, Overhead position;
   11. Square butt, Bead groove weld, Overhead position;
   12. Single "V" butt, Multipass groove weld, Horizontal position;

PRACTICAL APPLICATION:

The student will gain knowledge and experience with as much practice as possible and will continue until satisfactory welds are completed.
EVALUATION AND/OR VERIFICATION:

Written examinations will be given in this module to determine student progress. Each weld exercise will be evaluated by student and instructor. Students will match SMAW electrodes to the base metal.

SUMMARY:

Emphasis is on welding multi-stringer beads on steel plate, use of weave technique, and making weld adjustment to improve weld quality. The AISI steel classification system will assist students in selection of appropriate SMAW electrodes. For welding on steel plate, welders may use DCEN for best performance on all applications except when arc blow is a problem. To control arc blow, use AC. For flat and downhill use stringer beads for the first pass except when poor fitup requires a slight weave. For vertical-down, use stringer beads or a slight weave. A drag technique must be used with some E6012 electrodes. Make small beads. Point the electrode upward so that arc force pushes molten metal back up the joint. For vertical-up, use a triangular weave. Weld a shelf at the bottom of the joint and add layer upon layer. For overhead, make stringer beads using a whipping technique with a slight circular motion in the crater. Do not weave.

NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-L4) dealing with controlling weld technique.
Perform Weld Sequence
Attachment 1: MASTER Handout No. 1

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Weld Multi-Stringer beads on steel plate using E6010 & E7018;
B. Weld steel plate using weave technique with E6010 & E7018; and,
C. Weld steel plate with E6010 for a root pass and E7018 fill & cap.

PRESENTATION OUTLINE:

Instructor Topics:
A. Emphasizes the principles involved in the operating of SMAW equipment
B. Demonstrate knowledge of the proper application of welding skills and techniques
C. Illustrate welding techniques for the five basic welding joints
D. Demonstrate knowledge of adequate preparation of welding surfaces
E. Demonstrate preheat and how to maintain desired temperature
F. Identify welding variables and their effects on weld quality
G. Identify the AISI steel classification system
H. Match SMAW electrodes to an appropriate base metal
I. Illustrate quality weld techniques for SMAW in student exercises

Student Activities:
A. Preheat weld surface
B. Weld multiple stringer beads
C. Use weave technique
D. Use oscillating and non-oscillating welding technique
E. Perform single pass and multi-pass welds;
   1. Flat plate, stringer bead, flat position;
   2. Lap joint, Fillet weld, flat position;
   3. Edge, Stringer bead, flat position;
   4. Flat plate, Pad stinger bead, Horizontal position;
   5. Lap, Fillet weld, Vertical down position;
   6. Lap, Fillet weld, Horizontal position;
   7. “T”, Multipass weave beads, Flat position;
   8. Single “Y” butt, Multipass Groove weld, horizontal position;
   9. Coupling, Fillet weld, Horizontal position;
  10. Single “V” butt, Multipass filler weld, Overhead position;
  11. Square butt, Bead groove weld, Overhead position;
  12. Single “V” butt, Multipass groove weld, Horizontal position;
OBJECTIVE(S):

Upon completion of this unit the student will be able to:

a. Discuss the reasons for heat treating;
b. Discuss the time/temperature chart
c. List the different quenching media
d. Estimate metal heat temperature by color; and
e. List reasons for stress relieving workpieces.

MODULE OUTLINE:

I. Discuss the Reasons for Heat Treating
   A. Hardening for utility
   B. Tempering for toughness without brittleness

II. Discuss the Time/Temperature Chart

III. List the Different Quenching Media (In order of severity or speed of quenching)
   A. Brine (water and sodium chloride or sodium hydroxide)
   B. Water
   C. Fused (liquid) salts
   D. Molten lead
   E. Soluble oil and water
   F. Oil
   G. Air

IV. Estimate Metal Heat Temperature by Color
   A. Use of temper color chart for tempering
   B. *Chicken Wire* markings warn of overheating

V. List Reasons for Stress Relieving Workpieces
   A. Increased machinability
   B. Increased workability in cold processes

VI. Special Safety Concerns of Heat Treating
    A. Protective Gear against...
       1. Heat
       2. Fumes
       3. Concussion
    B. Toxicity of Certain Media

VII. Special Problems in Heat Treating
     A. Britteness
     B. Distortion
     C. Discoloration (sometimes unimportant)
     D. Inadvertent heat treating
OBJECTIVE(S):

Upon completion of this unit the student will be able to:

a. Perform file test to test for metal hardness;
b. Use other tests to identify metals; and,
c. Perform Rockwell hardness tests.

MODULE OUTLINE:

I. Perform File Test to Test for Metal Hardness
   A. Imprecise method, good for rough estimates only
   B. Requires more experienced machinist

II. Use Other Tests to Identify Metals
   A. High-carbon steels show more spark bursts than do low-carbon steels.
   B. Non-ferrous metals
      1. Aluminum
      2. Magnesium
      3. Brass
      4. Bronze
      5. Nickel
      6. Tin
      7. Others

III. Perform Rockwell Hardness Tests
   A. Ferrous metals
   B. Non-ferrous metals

IV. Perform Brinell Hardness Tests
   A. Ferrous metals
   B. Non-ferrous metals

V. Other Hardness Tests as Specified by the Instructor
   A. Ferrous metals
   B. Non-ferrous metals

Perform Weld Sequence
Attachment 4: MASTER Handout No. 4

Student laboratory exercises as assigned by Instructor.

BASIC SHIELDED METAL ARC WELDING (SMAW) AND OXY-FUEL GAS CUTTING

1. Define Selected Welding Terms Per AWS A3.0
   a. Define arc welding process terms
   b. Define standard joint terminology
   c. Define common weld discontinuities
   d. Name welding equipment, supply and consumables
   e. Define common shop terms including proper equipment names
   f. Define material terms
   g. Define common metallurgy terms

2. Describe AWS Code for Mild Steel Electrodes
   a. List, describe and define
   b. List low hydrogen electrodes
   c. List iron powder electrodes
   d. Describe electrode by welding position
   e. Describe electrode by current and polarity
   f. Describe electrode by penetration

3. Set Up Welding Machine to Required Polarity
   a. List polarities for commonly used electrodes
   b. Describe both polarities
   c. Describe advantages and disadvantages of alternating current

4. Use Correct Start and Stop Techniques for SMAW Electrodes
   a. Describe and demonstrate start for non-low hydrogen SMAW electrode
   b. Describe and demonstrate stop for non-low hydrogen SMAW electrodes with filled craters
   c. List reasons for the importance of low hydrogen in weld metal
   d. Explain the reason for low hydrogen starts and stops and how they work and why required specifically with E7018

5. Set Up Equipment for Shielded Metal Arc Welding
   a. Inspect area for safety
   b. Adjust current and polarity for specific job requirements
   c. Choose type and size of electrode
   d. Wear applicable personal safety equipment

6. Strike an Arc, Run Continuous Stringer Bead
   a. Stand and position oneself correctly
   b. Operate welding helmet
c. Verbally warn others of intent to arc weld  
d. Strike an arc  
e. Weld with stringer bead technique  
f. Perform weld tie ins to make continuous bead  
7. Weld Using Weave Technique  
a. Maintain required weld quality  
b. Maintain proper weld width uniformly  
c. Maintain proper travel speed  
d. Match correct oscillation for various electrodes  
e. Match applications to weave techniques, as they apply  
f. List the advantages and disadvantages of weave techniques  
g. List the advantages and disadvantages of stringer techniques  
h. Perform weld using weave technique  
i. Concentrate on dwell times at edges of weld pool  
8. Weld Multi-Layer Buildup  
a. Weld a dam to outline area being welded for each layer  
b. Apply each layer neatly, straight and with good fusion throughout  
c. Chip slag after each pass  
d. Weld passes which over lap to crown of last weld bead  
e. Demonstrate control of bead height  
9. Set Up and Shut Down Oxy-Fuel Equipment  
a. Follow manufacturer’s recommended practice  
b. Inspect equipment and work area for safety  
c. Assemble oxy-fuel equipment  
d. Open fuel gas cylinder ½ turn  
e. Open oxygen as cylinder all the way  
f. Adjust fuel gas and oxygen working pressure per manufacturer’s recommendation  
g. Purge lines one at a time. One second for each 10 feet of hose length  
10. Cut Steel Plate Using Oxy-Fuel Equipment  
a. Make manual free hand straight line cuts  
b. Cut manually straight lines using cutting jib  
c. Bevel plate with manual oxy-fuel equipment  
d. Manually cut blind holes in thick material  
e. Manually cut sheet metal with minimal distortion
Student laboratory exercises as assigned by Instructor.

ADVANCED SHIELDED METAL ARC WELDING (SMAW) AND CUTTING

1. Weld Single V Groove Welds With Open Roots From One Side
   a. Bevel 3/8" steel plate to 37 1/2° using oxy-fuel gas cutting e.g.
   b. Use grinder to remove oxide larger and smooth plate
   c. Use grinder to create root face of 3/32" to 1/8"
   d. Tack single V groove joint with 3/32" root opening
   e. Place joint in the 1G position
   f. Place joint in 2G position once task is mastered
   g. Place joint in 3G position once task is mastered
   h. Place joint in 4G position once task is mastered
   i. Weld the root with Direct Current Electrode Positive using 1/8" E6010. Use tight arc length and keyhole technique to produce a well fused root bead extending 1/16" above the plate.
   j. Weld chipped side slag and the root bead is wire brushed
   k. Fill the balance of the groove with 3/32", 1/8" and/or 5/32" E7018 using the stringer bead technique
   l. Visual test finished weld and root face bends evaluated to AWS D1.1 criteria

2. Weld Various Diameters of Pipe to Plate
   a. Inspect area for safety
   b. Place plate flat on welding table
   c. Place 3" pipe vertically on top of plate and tacked in place
   d. Leave weld coupon in the 2F fixed position
   e. Apply a 3/8" fillet weld using 1/8" E7018 and a stringer bead technique
   f. Visually inspect weld to AWS D1.1
   g. Fill pipe with water for 24 hours
   h. Check for leak

3. Produce SMAW Pipe - 5G Position
   a. Measure the pipe
   b. Mark the cut line with a wrap around and soapstone
   c. Cut the bevel using oxy-fuel gas equipment
   d. Clean the bevel face with a grinder, remove all oxide and smooth bevel face
   e. Use the grinder to add a root face of from 3/32" to 1/8"
   f. Tack the single V groove pipe joint with a 3/32" root opening
g. Place the joint in the 5G fixed position, using an 1/8" E6010 and a keyhole technique. Weld the root pass upward producing a root weld which is well fused and has a 1/16" weld reinforcement above the plate.

h. Chip slag and wire brush weld.

i. Grind any lack of fusion and/or high spots.

j. Weld the balance of the groove upward with 3/32" or 1/8" E7018 using the stringer bead technique.

k. Visually inspect weld on the root and face sides to ASME Section 9.

l. Remove four guided bend specimens from 2:00, 4:00, 8:00 and 10:00 positions prepared and two & eight are root bend specimens. Four & ten are face bend specimens. Guided bend tests are evaluated to ASME Section 9 criteria.

4. Produce SMAW - 2G Position Groove Welds

a. Measure the pipe.

b. Mark the cut line with a wrap around and soapstone.

c. Cut the bevel using oxy-fuel gas equipment.

d. Clean the bevel face with a grinder, remove all oxide and smooth bevel face.

e. Use the grinder to add a root face of from 3/32" to 1/8".

f. Tack the single V groove pipe joint with a 3/32" root opening.

g. Weld pipe joint.

h. Place the joint in the 2G fixed position, using an 1/8" E6010 and a keyhole technique. Weld the root pass upward producing a root weld which is well fused and has a 1/16" weld reinforcement above the plate.

i. Chip slag and wire brush. Grind any lack of fusion and/or high spots.

j. Weld balance of the groove upward with 3/32" or 1/8" E7018 using the stringer bead technique.

k. Visually inspect weld on the root and face sides to ASME Section 9.

l. Remove four guided bend specimens from 2:00, 4:00, 8:00 and 10:00 positions prepared and two & eight are root bend specimens. Four & ten are face bend specimens. Guided bend tests are evaluated to ASME Section 9 criteria.

5. Roll Weld Pipe - SMAW

a. Measure the pipe.

b. Mark the cut line with a wrap around and soapstone.

c. Cut the bevel using oxy-fuel gas equipment.

d. Clean the bevel face with a grinder, remove all oxide and smooth bevel face.

e. Use the grinder to add a root face of from 3/32" to 1/8".

f. Tack the single V groove pipe joint with a 3/32" root opening.

g. Roll weld pipe.

h. Place pipe coupon on workbench in the 1G roll welding position.

i. Weld the root bead using 1/8" E6010 and the keyhole technique. The weld is performed in the 2:00 to 12:30 position.

j. Chip slag and wire brush. Grind any lack of fusion and/or high spots.

1157
k. Weld balance of groove upward with 3/32" or 1/8" E7018 using the weave technique
l. Visually inspect weld on the root and face sides to ASME Section 9
m. Remove four guided bend specimens from 2:00, 4:00, 8:00 and 10:00 positions prepared and two & eight are root bend specimens. Four & ten are face bend specimens. Guided bend tests are evaluated to ASME Section 9 criteria

6. Produce SMAW Pipe - 5G Position
   a. Measure the pipe and
   b. Mark the cut line with a wrap around and soapstone
   c. Cut the bevel using oxy-fuel gas equipment
   d. Clean the bevel face with a grinder, remove all oxide and smooth bevel face
   e. Use the grinder to add a root face of from 3/32" to 1/8"
   f. Weld pipe
g. Tack the single V groove pipe joint with a 3/32" root opening
h. Place the joint in the 5G fixed position, using an 1/8" E6010 and a keyhole technique
   i. Weld the root pass upward producing a root weld which is well fused and has a 1/16" weld reinforcement above the plate
   j. Chip slag and wire brush. Grind any lack of fusion and/or high spots
   k. Weld balance of groove upward with 3/32" or 1/8" E7018 using the weave technique
   l. Visually inspect weld on the root and face sides to ASME Section 9
   m. Remove four guided bend specimens from 2:00, 4:00, 8:00 and 10:00 positions prepared and two & eight are root bend specimens. Four & ten are face bend specimens. Guided bend tests are evaluated to ASME Section 9 criteria

7. Produce SMAW Pipe - 6G Position
   a. Measure the pipe
   b. Mark the cut line with a wrap around and soapstone
c. Cut the bevel using oxy-fuel gas equipment
d. Clean the bevel face with a grinder, remove all oxide and smooth bevel face
e. Use the grinder to add a root face of from 3/32" to 1/8"
f. Tack the single V groove pipe joint with a 3/32" root opening
g. Place the joint in the 6G fixed position, using an 1/8" E6010 and a keyhole technique
   h. Weld the root pass upward producing a root weld which is well fused and has a 1/16" weld reinforcement above the plate
   i. Chip slag and wire brush. Grind any lack of fusion and/or high spots
   j. Weld balance of groove upward with 3/32" or 1/8" E7018 using the stringer bead technique
   k. Visually inspect weld on the root and face sides to ASME Section 9
I. Remove four guided bend specimens from 2:00, 4:00, 8:00 and 10:00 positions prepared and two & eight are root bend specimens. Four & ten are face bend specimens. Guided bend tests are evaluated to ASME Section 9 criteria.

8. Create SMAW Pipe to ASME Section 9
   a. Bevel two pieces of pipe to 30° bevel angle using oxy-fuel gas cutting equipment
   b. Clean bevel face and a 3/32" root face is applied using a hand held grinder
   c. Set welding condition to weld open roots
   d. Tack pipe nipples together to form a V groove with a 1/8" root opening
   e. Place pipe in the 5G fixed position. The root pass is welded and cleaned by wire brushing
   f. Weld balance of the V groove with this procedure
   g. Visual inspection is made and evaluated by ASME Section 9
   h. Make four bend samples and evaluate by ASME Section 9

9. Interpret Welding Procedures
   a. Identify process
   b. Name joint design
   c. List base material
   d. Give dimensions for root treatment
   e. Name electrode size and type being used
   f. List filler material (if required), classification and specification
   g. Identify shielding gas - type and mixture
   h. List pre and post heat and interpass temperature
   i. Describe initial and interpass cleaning
   j. Describe technique which is used
   k. Produce single or multiple pass weld
   l. Choose current type
   m. Set current amperage
   n. Set current polarity
   o. Set voltage
Perform Weld Sequence
Attachment 6: MASTER Handout No. 6

Student laboratory exercises as assigned by Instructor.

PIPE WELDING - SMAW

1. Produce End Preparations
   a. Produce end preparations with oxy-fuel cutting
   b. Produce end preparations with plasma cutting
   c. Produce end preparations with mechanical cutting
   d. Produce end preparations with grinding

2. Fit and Tack Weld Pipe
   a. Cut and single bevel pipe to 37 1/2°
   b. Ground bevel face and touch up to within tolerances
   c. Check that pipe ends are square within given tolerances
   d. Prepare root face within given tolerances
   e. Align pipe to within given tolerances
   f. Set root opening to within given tolerances
   g. Tack pipe according to welding procedure specification - maintaining root opening

3. Roll Weld Open Root Pass on Pipe - 1G Position
   a. Fit up and tack pipe joint using 1/8" E6010 electrode, weld the root pass on pipe in the 1 o'clock to (2:00 o'clock position) according to procedure using the roll welding technique
   b. Weld remainder of pipe in the 1G roll welding position with E6010
   c. Weld the remaining portion of the groove using the weave technique using 5/32" E6010 electrode roll

4. Weld Open Root Pipe Joint - 2G Position
   a. Weld using 1/8" E6010
   b. Cut and grind pipe ends will be to single bevel edge preparations of 37 1/2°
   c. Fit together the two pipe ends to a single V edge preparation with given tolerances
   d. Weld root pass to ASME Section 9 requirements
   e. Fill balance of the groove with E6010 using the stringer technique to ASME Section 9 requirements

5. Weld Open Root Pipe - 5G Position
   a. Fit and tack weld pipe to within tolerances
   b. Place pipe in the 5G position
   c. Weld the rootpass using 1/8" E6010 to ASME Section 9 requirements
   d. Grind the finished root pass to remove high spots and any slag at weld toes
6. Pass Guided Bond Tests Per ASME Section 9
   a. Remove bend samples from pipe at the 10, 2, 8 & 4 o'clock positions
   b. If the material is 3/8" or thinner 10 o'clock and 8 o'clock receive root bends and 2 o'clock and 4 o'clock receive face bends. If the pipe wall thickness is over 3/8" side bends shall be performed on all samples.
   c. Weld remainder of pipe in 1G position using E7018
   d. Perform low hydrogen starts and stops
   e. Weld using stringer bead technique
   f. Weld using weave technique
   g. Chip slag wire brush and grind as necessary to assure clean weld deposits

7. Weld Open Root Pipe - 2G Position
   a. Use 1/8" E6010
   b. Cut and ground pipe ends to single bevel edge preparations of 37 1/2°
   c. Fit together two pipe ends to a single V edge preparation within given tolerances
   d. Weld root pass to ASME Section 9 requirements
   e. Clean weld pass by chipping slag, wire brushing and grinding where necessary to assure a clean, well fused weld deposit
   f. Weld remainder of the groove using E7018 with the stringer bead technique

8. Weld Pipe Open Root Passes All Positions Using GMAW
   a. Set up GMAW equipment
   b. Adjust wire feeder drive system
   c. Adjust shielding gas system and flow rate
   d. Adjust GMAW gun to allow proper tip to work distance and gas coverage
   e. Set welding condition for short circuit transfer - Wire Feed Speed
   f. Set welding condition for short circuit transfer - Voltage
   g. Set welding condition for short circuit transfer - Tip to work Distance
   h. Weld root using a string bead technique

9. Weld Pipe With Backing Using FCAW-G
   a. Bevel pipe ends
   b. Touch up bevel face with grinder
   c. Fit and tack backing ring to one pipe end
   d. Fit other pipe over backing ring
   e. Adjust gap and tack in place
   f. Adjust shielding gas flow
   g. Adjust wire feed system
   h. Adjust power source to procedure specification
   i. Set wire feed speed to procedure specification
   j. Adjust voltage to procedure specification
   k. Adjust inductance to procedure specification
l. Adjust GMAW gun for tip to work distance and shielding gas
m. Weld according to procedure specification
The shielded metal arc welding (SMAW) process has a number of serious safety hazards associated with it:

**CAUTION:** Specific safety precautions must be taken to ensure a proper breathing atmosphere in all welding areas.

A. Weld only in ventilated areas. Welding shielding gases can displace the air needed for breathing. These gases are odorless and colorless, and most are heavier than air.

B. Weld in a position that will allow your head to be out of the welding plume, but will still give a good view of the welding arc. The welding plume could contain harmful fumes and gases.

C. Provide enough ventilation wherever welding and cutting are performed. Welding in confined spaces may require special procedures, such as the use of an air-supplied hood or hose mask.

D. Do not weld on dirty plate or plate contaminated with an unknown material. The fumes and gases which are formed could be hazardous to health.

**CAUTION:** Electrical shock can be avoided by following specific safety precautions.

A. Do not touch live electrical parts.

B. Ground all electrical equipment and the work-piece to prevent accidental electrical shocks.

C. Use the correct welding cable size for both the ground lead and the welding lead. Sustained overloading will cause cable failure and result in possible electrical shock or fire hazard.

D. Be sure all electrical connections are tight, clean, and dry. Poor electrical connections can heat up and even melt, causing dangerous arcs and sparks.

E. Keep dry. Moisture and water can conduct electricity. Fix water leaks immediately.

F. Keep welding cables and connectors in good condition. Improper or worn electrical connections can cause short circuits and can increase the chance of an electrical shock.

G. Avoid open-circuit voltage. Open-circuit voltage is much higher than welding voltage.

H. Shut off electrical power when working on welding equipment.

**CAUTION:** Ultraviolet and infrared rays emitted by the welding arc, as well as the spatter from the welding arc, can injure eyes and burn skin. Specific safety precautions must be followed to ensure adequate protection.
A. Wear 100% cotton clothing. It will not catch fire easily, it offers good protection from light welding spatter, and it is cooler in the summer and warmer in the winter.

B. Cover all skin surfaces. Keep shirt sleeves rolled down.

C. Wear cuffedless pants to eliminate spatter traps.

D. Wear leather boots. Pant legs should cover boot tops.

E. Wear clean clothing. Oil and grease stained clothes will tend to ignite from welding spatter.

F. For more severe welding conditions, wear protective clothing such as heat resistant jackets, aprons, and leggings.

G. Wear safety glasses to protect from arc flashes, mechanical injury, or other mishaps.

H. Wear ear protection, not only where there is noise but where there is a chance that spatter or sparks could get into the ears.

I. Wear a 100% cotton cap to protect the head from sparks or spatter.

J. Wear long gauntlet leather gloves.

K. Do not touch hot metal with bare hands. Use pliers and wear leather gloves.

L. Protect nearby workers from exposure to the welding arc by putting up shields.

M. Wear a welding helmet with the correct shade of welding lens. Choose the correct lens from a filter recommendations table (see Figure 2).

FILTER RECOMMENDATIONS
(adapted from ANSI Safety Standard Z49.1-88)

<table>
<thead>
<tr>
<th>Application</th>
<th>Minimum Shade No.</th>
<th>Suggested Shade*</th>
</tr>
</thead>
<tbody>
<tr>
<td>Less than 60 amps</td>
<td>7</td>
<td>9</td>
</tr>
<tr>
<td>60 to 160 amps</td>
<td>8</td>
<td>10</td>
</tr>
<tr>
<td>160 to 250 amps</td>
<td>10</td>
<td>12</td>
</tr>
<tr>
<td>250 to 500 amps</td>
<td>11</td>
<td>14</td>
</tr>
</tbody>
</table>

* As a general rule, start with a shade that is too dark to see the arc zone. Then go to a lighter shade which gives sufficient view of the arc zone without exerting a strain on your eyes.

Figure 2 Filter Recommendations

CAUTION: Specific precautions must be taken to ensure that there is no loss of property due to welding sparks, spatter, and heat.

A. If possible, weld in specially designated areas or enclosures of noncombustible construction.

B. Remove combustibles from the work area by at least 35 feet if possible.
C. Cover combustibles that cannot be removed from the welding area with tight-fitting flame-resistant material. Items that should be covered include combustible walls, floors, ceilings, and any cracks or other openings that might let a spark pass through it.

D. If welding is to be performed on or adjacent to a metal wall, ceiling, or partition, move combustibles on the other side to a safe location.

E. If combustibles cannot be adequately sealed off or removed, station a fire watcher at that location. The fire watcher must have adequate fire extinguishing capabilities.

F. Do not weld on materials having either a coating or internal structure that is combustible.

G. Place hot scrap and slag in non-combustible containers.

H. Ensure that fire extinguishers are available nearby.

I. Conduct a thorough examination for evidence of a fire before leaving the work area, and continue a fire check for at least 30 minutes after the welding operation has been completed.

J. Follow all company safety procedures regarding welding in hazardous areas.

CAUTION: NEVER carry a butane lighter into a welding area. These are considered to be mini-Molotov cocktails.

DON'T CARRY A BOMB IN YOUR POCKET.
Perform Weld Sequence
Attachment 8: MASTER Laboratory Worksheet

Worksheet:

1. Choose Proper Power Source
   Step 1. With the procedures and electrodes used at maintenance and fabrication facilities, choose a constant current (CC) power source for the Shielded Metal Arc Welding process. Some units are a combination of constant current (CC) and constant voltage (CV). This type of power source will have one or two switches to change from constant current to constant voltage.
   Step 2. An alternating current (AC) welding power source could be used with the low-hydrogen family of electrodes, but choose a constant current (CC) power source if possible.

2. Choose a Proper Electrode
   Step 1. Choose the proper electrode for the job.
   NOTE: The maintenance technician uses E6010 and E7018 electrodes for most SMAW applications. The E6010 belongs to the fast-freeze family of electrodes and the E7018 belongs to the low-hydrogen family of electrodes. The E6010 provides a deep digging, deep penetrating type of weld and may be used for non-critical fabrication.

   The E7018 low-hydrogen is used as the primary electrode for fabrication and other code-quality welds. The low-hydrogen family also includes E7015, E7016, and E7048. Hydrogen in the weld deposit causes brittleness called hydrogen embrittlement, which leads to cracking and potential weld failure.

   Step 2. Store the electrodes properly.
   a. Low-hydrogen electrodes:
      (1) These electrodes are packaged in hermetically sealed (watertight) cans. Be careful not to damage the cans which would allow air and moisture to attack the electrodes in the cans.
      (2) Once the cans are opened, store the electrodes in a rod oven at 150°F to 300°F.
      (3) Re-dry electrodes that have been outside a sealed container or a properly heated rod oven for several hours by baking them one hour at 700°F to 800°F and storing them in a rod oven.
   NOTE: Some welding procedures also set a time limit on the number of hours that low-hydrogen electrodes can be
kept out of a rod oven prior to use. Times vary from two to four hours, depending on the type of base metal to be welded and the humidity levels of the environment.

b. Do not store the E6010 fast-freeze electrodes in rod ovens. Fast-freeze electrodes require the presence of small amounts of moisture in order to run smoothly.

Step 3. Match the low-hydrogen family members with the polarities that are used with them (see Figure 5).

Figure 5 Welding Rod Polarities

Definitions:
AC Alternating Current
DC+(DCRP) Direct Current Reverse Polarity
DC-(DCSP) Direct Current Straight Polarity

3. Prepare Weldment for Welding
Step 1. Oxyacetylene cut, carbon air arc gouge/cut, or machine cut/mill material to the desired shape/contour for each type of weld joint configuration needed for each welding task at hand.

a. Weld joint configuration will depend upon:
Product design
Material thickness
Design strength requirements
Welding process employed

b. SMAW weld joint configuration may be a:
   (1) Lap joint
   (2) Tee joint
   (3) Corner joint
   (4) Edge joint
   (5) Butt joint with backing
   (6) Butt joint without backing

Step 2. Clean the areas to be welded prior to fit-up
   a. Remove rust, paint, and any other coatings by wire brushing, grinding, sanding, or filing
   b. Remove oils and greases with a safe, suitable solvent

Step 3. Turn on the power source and set the current range (amps) on the machine at the lower end of the setting as suggested for the electrode size.

Step 4. Obtain a piece of scrap metal of the approximate type and thickness for the weld joint to be made.

Step 5. Practice welding on the scrap metal and adjust the current setting as needed to produce a good weld.

4. Complete Welding Operation

Step 1. Tack weld a joint that is defect free and can be incorporated into the finished product.

Step 2. Use any preheat that may be required by welding codes or company procedures.

Step 3. Make the required weld to be defect free and pleasing in appearance.

Step 4. Use proper weld bead placement according to the weld joint design.
   a. When making seam welds, produce the weld beads by using very little oscillation or some oscillation.
   b. When making fillet welds, produce the weld beads by using some oscillation. Fillet welds in the vertical position can also be run using a weaving technique.
   c. When making groove welds, produce the weld beads by using some oscillation and/or by weaving. When making groove welds on butt joints, the amount of weaving will depend on the welding position and the weld joints. It may also be limited by applicable welding codes and/or company standards.

Step 5. Maintain the correct welding travel speed. Weld bead size can be changed by varying the arc travel speed. Bead size and travel speed are inversely related: a decrease in travel speed will result in an increase in the weld bead height and width, and an increase in travel speed will result in a decrease in the weld bead height and width.
a. As the material thickness increases, the travel speed must slow down.
b. For a given material thickness and joint design, as the welding amperage is increased so is the arc travel speed. Conversely, as the amperage is decreased, the arc travel is slowed.
c. Higher welding speeds are attainable by using the forehand (pushing) technique.

5. Troubleshoot Welding Problems
Step 1. Be aware of the welding variables and how they can affect the weld. Below is a list of eleven welding variables for the SMAW process:
   a. Type of electrode
   b. Diameter of electrode
   c. Type of current (AC or DC)
   d. Current polarity (DC+ or DC-)
   e. Current setting
   f. Arc length
   g. Travel speed
   h. Electrode angle
   i. Electromagnetic arc blow
   j. Electrode manipulation technique (drag, whip)
   k. Thoroughness of slag removal prior to restarts and new bead placement

Step 2. Be aware of general welding variables and how they can affect the weld:
   a. Type of base metal
   b. Thickness of base metal
   c. Surface condition of base metal (clean, rusty, or painted)
   d. Atmospheric conditions

Step 3. Be aware of any weld discontinuity and the relevant welding variables that may have caused it.

Perform Weld Sequence
Self-Assessment No. 1

Circle the best answer.

1. What is the approximate temperature required for stress relief annealing of low-carbon steels?
   A. 950°
   B. 1000°
   C. 1950°
   D. 1700°
   E. None of the above

2. What crystalline processes result from stress relief annealing?
   A. All grains reform into softer grains
   B. Distorted grains reform into softer grains
   C. Ferrite grains reform into softer grains while pearlite grains are basically unaffected
   D. Pearlite grains reform into softer grains while ferrite grains are basically unaffected
   E. None of the above

3. Which of the following is NOT a cause of quenching cracks?
   A. Improper quenching medium
   B. Overheating during the austenitizing cycle
   C. Improper quenching angle
   D. All of the above are causes of quenching cracks
   E. None of the above answers is correct

4. Which of the following is NOT a characteristic of typical quench cracks?
   A. The fracture tends to run from the surface toward the center in a smooth curve
   B. Untempered quench cracks will not show any decarburization
   C. Tempered fracture surfaces will show a fine crystalline structure
   D. All of the above are characteristic of quench cracks
   E. None of the above
5. During tempering by color, which of the following colors represents the highest temperature?
   A. Gold
   B. Purple
   C. Dark Straw
   D. Pale Blue
   E. Violet

6. During tempering by color, which of the following colors represents the lowest temperature?
   A. Gold
   B. Purple
   C. Dark Straw
   D. Pale Blue
   E. Violet

7. What is meant by step quenching?
   A. The workpiece is first quenched in a slow medium (e.g., air) then in a fast medium (e.g., water)
   B. The workpiece is first quenched in a fast medium (e.g., water) then in a slow medium (e.g., air)
   C. The weaker parts of the workpiece are quenched separately from the main body of the workpiece
   D. The workpiece is lowered into the quenching medium in steps so that different parts of the workpiece attain different hardesses
   E. None of the above

8. What is the simplest thing that the technician can do to minimize the vapor-blanket stage of liquid quenching?
   A. Agitate the workpiece or the medium
   B. Heat the quenching medium to just below its boiling point
   C. Quickly insert the workpiece into the medium
   D. Slowly insert the workpiece into the medium
   E. None of the above

9. Liquid carburizing, as used in case hardening, utilizes _______ and is therefore extremely dangerous.
   A. Sodium chloride
   B. Calcium carbonate
   C. Cyanide salts
   D. Ammonia
   E. None of the above
10. Workpieces which have been cut with an oxyacetylene torch often display edge hardness because
A. The torch was starved for oxygen
B. The workpiece was cut at too low a temperature
C. The wrong type of cutting torch was used
D. Oxyacetylene torches always leave hardened edges
E. None of the above
1. a
2. c
3. d
4. a
5. c
6. d
7. b
8. a
9. c
10. a
Circle the best answer.

1. The hardness of a metal is its ability to resist:
   A. Permanent deformation.
   B. Oxidation.
   C. Chemical reaction.
   D. All of the above answers are forms of hardness.
   E. None of the above.

2. Rockwell testing machines test the sample metal's resistance to:
   A. Abrasion.
   B. Penetration.
   C. Elastic deformation.
   D. Electricity.
   E. None of the above.

3. Materials such as nitrided steel and hard cast irons generally have Rockwell hardness numbers in excess of
   A. B-50.
   B. B-75.
   C. B-100.
   D. B-150.
   E. None of the above.

4. During the file test, if the file will mark the metal but not cut into it, then the metal should be treated as:
   A. High-alloy steel.
   B. Mild steel.
   C. Hardened tool steel.
   D. Medium-carbon steel.
   E. None of the above.

5. Probably the best use of the spark test is to:
   A. Determine the alloy content of the sample.
   B. Identify cast iron.
   C. Compare the sample to a known piece.
   D. All of the above answers are valid.
   E. None of the above.
6. Tool steel has a Rockwell hardness of ________, while hardened tool steel has hardness number of _________.
   A. C-42 - C-64
   B. C-42 - B-65
   C. C-64 - C-42
   D. B-65 - C-42
   E. None of the above.

7. Which of the following surfaces should be avoided when hardness testing?
   A. Curved
   B. Rough
   C. Decarburized
   D. All of the above surfaces should be modified before testing the sample's hardness.
   E. None of the above.

8. For hardness testing, the minimum recommended clearance from the edge is:
   A. 1/2”
   B. 1/4”
   C. 1/8”
   D. 1/16”
   E. None of the above.

9. If a Rockwell tester is in daily use, it should be calibrated:
   A. Annually.
   B. Monthly.
   C. Weekly.
   D. Daily.
   E. Never.

10. Technician A says that, for large samples, multiple hardness test should be made and their results averaged. Technician B says that many materials vary in hardness over the length of the sample. Who is correct?
    A. Technician A only
    B. Technician B only
    C. Both technicians are correct.
    D. Neither technician is correct.

Choose the best answer.

1. The size of the bead is ________ proportional to the speed of travel.
   A. Directly
   B. Inversely
   C. Not
   D. None of the above

2. The eye shield of the welding helmet should be:
   A. Just light enough to clearly see the arc.
   B. Too dark to clearly see the arc.
   C. A minimum of #5.
   D. None of the above.

3. Welding in confined spaces may require:
   A. Air supplied hoods or hose masks.
   B. Frequent breaks.
   C. Large, high-displacement fans.
   D. All of the above.
   E. None of the above.

4. Long sleeves protect the arms against:
   A. Ultraviolet radiation.
   B. Infrared radiation.
   C. Welding splatter.
   D. All of the above.
   E. None of the above.

5. Which of the following is NOT a variable in the SMAW process?
   A. Current polarity
   B. Arc length
   C. Length of the electrode
   D. All of the above are variables in the process.
   E. None of the above.
6. Acceptable welding footwear includes:
   A. Roman sandals.
   B. Tennis shoes.
   C. Canvas boots.
   D. All of the above.
   E. None of the above.

7. A welder whose travel speed is too fast may have problems with:
   A. Excess convexity.
   B. Overlap.
   C. Porosity.
   D. All of the above.
   E. None of the above.

8. Technician A says that low-hydrogen electrodes can only be in the open air for two to four hours. Technician B says that the humidity and the base metal determine the amount of time that low-hydrogen electrodes can be exposed. Who is correct?
   A. Technician A only.
   B. Technician B only.
   C. Both Technicians A and B.
   D. Neither Technician A nor B.

9. E6010 electrodes should only be used with:
   A. DC-.
   B. DC+.
   C. AC.
   D. There is no such electrode.

10. Technician A says that they should weld only in well ventilated areas. Technician B says that welding produces gases that are odorless, colorless, and heavier than air. Who is correct?
    A. Technician A only.
    B. Technician B only.
    C. Both Technicians A and B.
    D. Neither Technician A nor B.

11. Technician A says that they should never carry butane lighters into the welding area because they may explode. Technician B says that gasoline should never be taken into the welding area, either. Who is correct?
    A. Technician A only.
    B. Technician B only.
    C. Both Technicians A and B.
    D. Neither Technician A nor B.
12. When repairing welding equipment, its electrical power should be:
   A. On.
   B. Off.
   C. On or off, depending on the repair.
   D. The SMAW machine is not electrical.

13. To prevent electrical shocks, all electrical equipment and the work piece should be:
   A. On rubber work mats.
   B. Elevated off the floor.
   C. Grounded.
   D. All of the above.
   E. None of the above.

14. Which of the following electrodes is NOT in the low-hydrogen family?
   A. E7015
   B. E7016
   C. E7018
   D. All of the above are low-hydrogen electrodes.
   E. All of the above are fast-freeze electrodes.

15. Technician A says that undercutting is caused by too much current. Technician B says that wet electrodes can also cause undercutting. Who is correct?
   A. Technician A only.
   B. Technician B only.
   C. Both Technicians A and B.
   D. Neither Technician A nor B.

16. Fire inspections should be continued for at least __________ after completion of the welding.
   A. Fifteen minutes
   B. Thirty minutes
   C. One hour
   D. Two hours

17. The welding area should be:
   A. Isolated from other workers by shields.
   B. At least 35 feet from combustible materials.
   C. Dry.
   D. All of the above.
   E. None of the above.
18. Seam welds generally require __________ oscillation.
   A. No
   B. Very little
   C. Moderate
   D. Great

19. Technician A says that all electrical connections must be tight, clean, and dry. Technician B says that poor electrical connections can heat up and even melt. Who is correct?
   A. Technician A only.
   B. Technician B only
   C. Both Technicians A and B
   D. Neither Technician A nor B

20. If it is impractical to properly remove combustible materials from the vicinity of the welding, then:
   A. Do not weld
   B. Take frequent breaks to inspect the area for fires
   C. Station a fire watcher near the combustible materials
   D. Any of the above is acceptable
   E. None of the above

21. E7018 electrodes should never be used with
   A. DC-
   B. DC+
   C. AC
   D. There is no such electrode

22. Areas to be welded should be thoroughly cleaned
   A. Prior to fit-up
   B. By brushing, sanding, or grinding
   C. With safe solvents
   D. All of the above, as necessary
   E. None of the above

23. Technician A says that porosity can be caused by a current setting that is too low. Technician B says that porosity can be caused by too long an arc. Who is correct?
   A. Technician A only
   B. Technician B only
   C. Both Technicians A and B
   D. Neither Technician A nor B
24. Low-hydrogen electrodes may be stored
   A. In sealed cans or heated rod ovens
   B. Under water
   C. In petroleum jelly
   D. Any of the above
   E. None of the above

25. As the material being welded increases in thickness, the travel speed of the weld must
   A. Increase
   B. Decrease
   C. Either A or B, depending on the desired effect
   D. Stay the same
   E. None of the above

WELDER SERIES
MASTER Technical Module No. WLD-L04

SUBJECT: WELDING TECHNICIAN
TIME: 12 HOURS

- DUTY: SHIELDED METAL ARC WELDING (SMAW) (BASIC)
- TASK: Control Weld Technique

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Use proper welding techniques for light gage metals;
B. Demonstrate proper methods of welding materials of different thickness into a lap joint;
C. Use iron powder or heavy coated electrodes, understand the use and advantage of low hydrogen electrodes; and,
D. Control movement pattern and width of each bead on the overhead position Tee joint using low hydrogen electrodes.

INSTRUCTIONAL MATERIALS:

Student Workbook
Two written tests on SMAW welding techniques in this module
Transparencies prepared to emphasize each subject
Hobart Institute Video Material
Miller Module Method Video materials
Hobart SMAW wall chart
The classroom handouts will consist of student worksheets and alloy charts
Personal protective equipment
Shielded Metal Arc Welding machine
Welding shop tools
Selection of base metals for welding and cutting
Selection of filler metals and electrode wire
MASTER Handout No. 1 (WLD-L4-H01)
MASTER Handout No. 2 (WLD-L4-H02)
MASTER Handout No. 3 (WLD-L4-H03)
MASTER Handout No. 4 (WLD-L4-H04)
MASTER Handout No. 5 (WLD-L4-H05)
MASTER Handout No. 6 (WLD-L4-H06)
MASTER Laboratory Aid (WLD-L4-LA)
MASTER Laboratory Worksheet (WLD-L4-LW)
MASTER Self-Assessment No. 1
REFERENCES:

TEXT:

OTHER:

*Competency Standards*, American Welding Society, Latest Edition

STUDENT PREPARATION:

Student must demonstrate appropriate communication skills and understand principles of basic physical science and mathematics as verified by placement test or completion of required prerequisite courses. Student must complete the following modules:

- **WLD-L1** “Preheat Joint”
- **WLD-L2** “Initiate Welding Process”
- **WLD-L3** “Perform Weld Sequence”

INTRODUCTION:

The Course Introduction will Include:
An overview of welding techniques for light gage metals
A class demonstration of the use of special purpose electrodes
A discussion on training activities leading to an increase of skill and knowledge leading to certification in related program areas.

PRESENTATION OUTLINE:

Instructor Topics:
A. Welding technique for light gage metals
B. Proper methods of welding metals of different thickness into a lap joint
C. Use of iron powder or heavy coated electrodes
D. The advantages of low hydrogen electrodes and its applications
E. Proper manipulation of the low hydrogen electrode to make a sound multipass filler in the vertical position
F. To teach control of the movement pattern and width of each bead on the overhead position tee joint, using low hydrogen electrodes
G. To teach the ability to adjust current while welding sheet steel

Student Activities:
Perform the following:
A. Fillet Weld, Lap and Tee Joints Flat and Vertical
B. Fillet Weld, Lap Joint, Vertical Down Position
C. Fillet Weld, Lap Joint, Horizontal Position
D. Fillet Weld, Tee Joint, Vertical Up Position
E. Fillet Weld, Tee Joint, Overhead Position
F. Adjust current while welding sheet steel

PRACTICAL APPLICATION:
The student will gain knowledge and experience with steel plate and sheet steel.

EVALUATION AND/OR VERIFICATION:
Written examinations will be given in this module to determine student progress. Welding exercises will be evaluated by student and instructor. Student will continue practice until found proficient.

SUMMARY:
Student understanding, practice, and proper adjustments lead to proficiency with SMAW techniques. The ability to adjust current while welding sheet steel is helpful, particularly when fitup or material thickness varies. Motor generator welders equipped with foot operated remote current controls are useful for this purpose.
Generally welders may use the highest current that does not cause melt-through, does not undercut, or does not melt the edges of lap, corner or edge welds. For fast welding, the operator must stay precisely on the joint and must travel at uniform speed. Welding on sheet metal requires skill and a new welder may require considerable practice to become proficient.

Conventional welding electrodes may not be suitable where the base metal has a tendency to crack, where thick sections are to be welded, or where the base metal has an alloy content higher than mild steel. For these applications a low hydrogen electrode may be required. These reduce the danger of underbeads and microcracking on thick weldments.

NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-L5) dealing with maintaining preheat.
OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Use proper welding techniques for light gage metals;
B. Demonstrate proper methods of welding materials of different thickness into a lap joint;
C. Use iron powder or heavy coated electrodes, understand the use and advantage of low hydrogen electrodes; and,
D. Control movement pattern and width of each bead on the overhead position tee joint using low hydrogen electrodes.

MODULE OUTLINE:

Instructor Topics:
A. Welding technique for light gage metals
B. Proper methods of welding metals of different thickness into a lap joint
C. Use of iron powder or heavy coated electrodes
D. The advantages of low hydrogen electrodes and its applications
E. Proper manipulation of the low hydrogen electrode to make a sound multipass filler in the vertical position
F. To teach control of the movement pattern and width of each bead on the overhead position tee joint, using low hydrogen electrodes
G. To teach the ability to adjust current while welding sheet steel

Student Activities:
Perform the following:
A. Fillet Weld, Lap and Tee Joints Flat and Vertical
B. Fillet Weld, Lap Joint, Vertical Down Position
C. Fillet Weld, Lap Joint, Horizontal Position
D. Fillet Weld, Tee Joint, Vertical Up Position
E. Fillet Weld, Tee Joint, Overhead Position
F. Adjust current while welding sheet steel
OBJECTIVE(S):

Upon completion of this unit the student will be able to:

a. Discuss the reasons for heat treating;
b. Discuss the time/temperature chart
c. List the different quenching media
d. Estimate metal heat temperature by color; and
e. List reasons for stress relieving workpieces.

MODULE OUTLINE:

I. Discuss the Reasons for Heat Treating
   A. Hardening for utility
   B. Tempering for toughness without brittleness

II. Discuss the Time/Temperature Chart

III. List the Different Quenching Media (In order of severity or speed of quenching)
   A. Brine (water and sodium chloride or sodium hydroxide)
   B. Water
   C. Fused (liquid) salts
   D. Molten lead
   E. Soluble oil and water
   F. Oil
   G. Air

IV. Estimate Metal Heat Temperature by Color
   A. Use of temper color chart for tempering
   B. Chicken Wire markings warn of overheating

V. List Reasons for Stress Relieving Workpieces
   A. Increased machinability
   B. Increased workability in cold processes

VI. Special Safety Concerns of Heat Treating
   A. Protective Gear against...
      1. Heat
      2. Fumes
      3. Concussion
   B. Toxicity of Certain Media

VII. Special Problems in Heat Treating
   A. Britteness
   B. Distortion
   C. Discoloration (sometimes unimportant)
   D. Inadvertent heat treating
OBJECTIVE(S):

Upon completion of this unit the student will be able to:

a. Perform file test to test for metal hardness;
b. Use other tests to identify metals; and,
c. Perform Rockwell hardness tests.

MODULE OUTLINE:

I. Perform File Test to Test for Metal Hardness
   A. Imprecise method, good for rough estimates only
   B. Requires more experienced machinist

II. Use Other Tests to Identify Metals
   A. High-carbon steels show more spark bursts than do low-carbon steels.
   B. Non-ferrous metals
      1. Aluminum
      2. Magnesium
      3. Brass
      4. Bronze
      5. Nickel
      6. Tin
      7. Others

III. Perform Rockwell Hardness Tests
    A. Ferrous metals
    B. Non-ferrous metals

IV. Perform Brinell Hardness Tests
    A. Ferrous metals
    B. Non-ferrous metals

V. Other Hardness Tests as Specified by the Instructor
   A. Ferrous metals
   B. Non-ferrous metals

Student laboratory exercises as assigned by Instructor.

BASIC SHIELDED METAL ARC WELDING (SMAW) AND OXY-FUEL GAS CUTTING

1. Define Selected Welding Terms Per AWS A3.0
   a. Define arc welding process terms
   b. Define standard joint terminology
   c. Define common weld discontinuities
   d. Name welding equipment, supply and consumables
   e. Define common shop terms including proper equipment names
   f. Define material terms
   g. Define common metallurgy terms

2. Describe AWS Code for Mild Steel Electrodes
   a. List, describe and define
   b. List low hydrogen electrodes
   c. List iron powder electrodes
   d. Describe electrode by welding position
   e. Describe electrode by current and polarity
   f. Describe electrode by penetration

3. Set Up Welding Machine to Required Polarity
   a. List polarities for commonly used electrodes
   b. Describe both polarities
   c. Describe advantages and disadvantages of alternating current

4. Use Correct Start and Stop Techniques for SMAW Electrodes
   a. Describe and demonstrate start for non-low hydrogen SMAW electrode
   b. Describe and demonstrate stop for non-low hydrogen SMAW electrodes with filled craters
   c. List reasons for the importance of low hydrogen in weld metal
   d. Explain the reason for low hydrogen starts and stops and how they work and why required specifically with E7018

5. Set Up Equipment for Shielded Metal Arc Welding
   a. Inspect area for safety
   b. Adjust current and polarity for specific job requirements
   c. Choose type and size of electrode
   d. Wear applicable personal safety equipment

6. Strike an Arc, Run Continuous Stringer Bead
   a. Stand and position oneself correctly
   b. Operate welding helmet
7. Weld Using Weave Technique
   a. Maintain required weld quality
   b. Maintain proper weld width uniformly
   c. Maintain proper travel speed
   d. Match correct oscillation for various electrodes
   e. Match applications to weave techniques, as they apply
   f. List the advantages and disadvantages of weave techniques
   g. List the advantages and disadvantages of stringer techniques
   h. Perform weld using weave technique
   i. Concentrate on dwell times at edges of weld pool

8. Weld Multi-Layer Buildup
   a. Weld a dam to outline area being welded for each layer
   b. Apply each layer neatly, straight and with good fusion throughout
   c. Chip slag after each pass
   d. Weld passes which over lap to crown of last weld bead
   e. Demonstrate control of bead height

9. Set Up and Shut Down Oxy-Fuel Equipment
   a. Follow manufacturer's recommended practice
   b. Inspect equipment and work area for safety
   c. Assemble oxy-fuel equipment
   d. Open fuel gas cylinder ½ turn
   e. Open oxygen as cylinder all the way
   f. Adjust fuel gas and oxygen working pressure per manufacturer's recommendation
   g. Purge lines one at a time. One second for each 10 feet of hose length

10. Cut Steel Plate Using Oxy-Fuel Equipment
    a. Make manual free hand straight line cuts
    b. Cut manually straight lines using cutting jib
    c. Bevel plate with manual oxy-fuel equipment
    d. Manually cut blind holes in thick material
    e. Manually cut sheet metal with minimal distortion
ADVANCED SHIELDED METAL ARC WELDING (SMAW) AND CUTTING

1. Weld Single V Groove Welds With Open Roots From One Side
   a. Bevel 3/8" steel plate to 37 1/2° using oxy-fuel gas cutting e.g.
   b. Use grinder to remove oxide larger and smooth plate
   c. Use grinder to create root face of 3/32" to 1/8"
   d. Tack single V groove joint with 3/32" root opening
   e. Place joint in the 1G position
   f. Place joint in 2G position once task is mastered
   g. Place joint in 3G position once task is mastered
   h. Place joint in 4G position once task is mastered
   i. Weld the root with Direct Current Electrode Positive using 1/8" E6010. Use tight arc length and keyhole technique to produce a well fused root bead extending 1/16" above the plate.
   j. Weld chipped side slag and the root bead is wire brushed
   k. Fill the balance of the groove with 3/32", 1/8" and/or 5/32" E7018 using the stringer bead technique
   l. Visual test finished weld and root face bends evaluated to AWS D1.1 criteria

2. Weld Various Diameters of Pipe to Plate
   a. Inspect area for safety
   b. Place plate flat on welding table
   c. Place 3" pipe vertically on top of plate and tacked in place
   d. Leave weld coupon in the 2F fixed position
   e. Apply a 3/8" fillet weld using 1/8" E7018 and a stringer bead technique
   f. Visually inspect weld to AWS D1.1
   g. Fill pipe with water for 24 hours
   h. Check for leak

3. Produce SMAW Pipe - 5G Position
   a. Measure the pipe
   b. Mark the cut line with a wrap around and soapstone
   c. Cut the bevel using oxy-fuel gas equipment
   d. Clean the bevel face with a grinder, remove all oxide and smooth bevel face
   e. Use the grinder to add a root face of from 3/32" to 1/8"
   f. Tack the single V groove pipe joint with a 3/32" root opening
g. Place the joint in the 5G fixed position, using an 1/8" E6010 and a keyhole technique. Weld the root pass upward producing a root weld which is well fused and has a 1/16" weld reinforcement above the plate.

h. Chip slag and wire brush weld.

i. Grind any lack of fusion and/or high spots.

j. Weld the balance of the groove upward with 3/32" or 1/8" E7018 using the stringer bead technique.

k. Visually inspect weld on the root and face sides to ASME Section 9.

l. Remove four guided bend specimens from 2:00, 4:00, 8:00 and 10:00 positions prepared and two & eight are root bend specimens. Four & ten are face bend specimens. Guided bend tests are evaluated to ASME Section 9 criteria.

4. Produce SMAW - 2G Position Groove Welds

a. Measure the pipe.

b. Mark the cut line with a wrap around and soapstone.

c. Cut the bevel using oxy-fuel gas equipment.

d. Clean the bevel face with a grinder, remove all oxide and smooth bevel face.

e. Use the grinder to add a root face of from 3/32" to 1/8".

f. Tack the single V groove pipe joint with a 3/32" root opening.

g. Weld pipe joint.

h. Place the joint in the 2G fixed position, using an 1/8" E6010 and a keyhole technique. Weld the root pass upward producing a root weld which is well fused and has a 1/16" weld reinforcement above the plate.

i. Chip slag and wire brush. Grind any lack of fusion and/or high spots.

j. Weld balance of the groove upward with 3/32" or 1/8" E7018 using the stringer bead technique.

k. Visually inspect weld on the root and face sides to ASME Section 9.

l. Remove four guided bend specimens from 2:00, 4:00, 8:00 and 10:00 positions prepared and two & eight are root bend specimens. Four & ten are face bend specimens. Guided bend tests are evaluated to ASME Section 9 criteria.

5. Roll Weld Pipe - SMAW

a. Measure the pipe.

b. Mark the cut line with a wrap around and soapstone.

c. Cut the bevel using oxy-fuel gas equipment.

d. Clean the bevel face with a grinder, remove all oxide and smooth bevel face.

e. Use the grinder to add a root face of from 3/32" to 1/8".

f. Tack the single V groove pipe joint with a 3/32" root opening.

g. Roll weld pipe.

h. Place pipe coupon on workbench in the 1G roll welding position.

i. Weld the root bead using 1/8" E6010 and the keyhole technique. The weld is performed in the 2:00 to 12:30 position.

j. Chip slag and wire brush. Grind any lack of fusion and/or high spots.
k. Weld balance of groove upward with 3/32" or 1/8" E7018 using the weave technique

l. Visually inspect weld on the root and face sides to ASME Section 9

m. Remove four guided bend specimens from 2:00, 4:00, 8:00 and 10:00 positions prepared and two & eight are root bend specimens. Four & ten are face bend specimens. Guided bend tests are evaluated to ASME Section 9 criteria

6. Produce SMAW Pipe - 5G Position

a. Measure the pipe and

b. Mark the cut line with a wrap around and soapstone

c. Cut the bevel using oxy-fuel gas equipment

d. Clean the bevel face with a grinder, remove all oxide and smooth bevel face

e. Use the grinder to add a root face of from 3/32" to 1/8"

f. Weld pipe

g. Tack the single V groove pipe joint with a 3/32" root opening

h. Place the joint in the 5G fixed position, using an 1/8" E6010 and a keyhole technique

i. Weld the root pass upward producing a root weld which is well fused and has a 1/16" weld reinforcement above the plate

j. Chip slag and wire brush. Grind any lack of fusion and/or high spots

k. Weld balance of groove upward with 3/32" or 1/8" E7018 using the weave technique

l. Visually inspect weld on the root and face sides to ASME Section 9

m. Remove four guided bend specimens from 2:00, 4:00, 8:00 and 10:00 positions prepared and two & eight are root bend specimens. Four & ten are face bend specimens. Guided bend tests are evaluated to ASME Section 9 criteria

7. Produce SMAW Pipe - 6G Position

a. Measure the pipe

b. Mark the cut line with a wrap around and soapstone

c. Cut the bevel using oxy-fuel gas equipment

d. Clean the bevel face with a grinder, remove all oxide and smooth bevel face

e. Use the grinder to add a root face of from 3/32" to 1/8"

f. Tack the single V groove pipe joint with a 3/32" root opening

g. Place the joint in the 6G fixed position, using an 1/8" E6010 and a keyhole technique

h. Weld the root pass upward producing a root weld which is well fused and has a 1/16" weld reinforcement above the plate

i. Chip slag and wire brush. Grind any lack of fusion and/or high spots

j. Weld balance of groove upward with 3/32" or 1/8" E7018 using the stringer bead technique

k. Visually inspect weld on the root and face sides to ASME Section 9
1. Remove four guided bend specimens from 2:00, 4:00, 8:00 and 10:00 positions prepared and two & eight are root bend specimens. Four & ten are face bend specimens. Guided bend tests are evaluated to ASME Section 9 criteria

8. Create SMAW Pipe to ASME Section 9
   a. Bevel two pieces of pipe to 30° bevel angle using oxy-fuel gas cutting equipment
   b. Clean bevel face and a 3/32" root face is applied using a hand held grinder
   c. Set welding condition to weld open roots
   d. Tack pipe nipples together to form a V groove with a 1/8" root opening
   e. Place pipe in the 5G fixed position. The root pass is welded and cleaned by wire brushing
   f. Weld balance of the V groove with this procedure
   g. Visual inspection is made and evaluated by ASME Section 9
   h. Make four bend samples and evaluate by ASME Section 9

9. Interpret Welding Procedures
   a. Identify process
   b. Name joint design
   c. List base material
   d. Give dimensions for root treatment
   e. Name electrode size and type being used
   f. List filler material (if required), classification and specification
   g. Identify shielding gas - type and mixture
   h. List pre and post heat and interpass temperature
   i. Describe initial and interpass cleaning
   j. Describe technique which is used
   k. Produce single or multiple pass weld
   l. Choose current type
   m. Set current amperage
   n. Set current polarity
   o. Set voltage
Student laboratory exercises as assigned by Instructor.

PIPE WELDING - SMAW

1. Produce End Preparations
   a. Produce end preparations with oxy-fuel cutting
   b. Produce end preparations with plasma cutting
   c. Produce end preparations with mechanical cutting
   d. Produce end preparations with grinding

2. Fit and Tack Weld Pipe
   a. Cut and single bevel pipe to 37 1/2°
   b. Ground bevel face and touch up to within tolerances
   c. Check that pipe ends are square within given tolerances
   d. Prepare root face within given tolerances
   e. Align pipe to within given tolerances
   f. Set root opening to within given tolerances
   g. Tack pipe according to welding procedure specification - maintaining root opening

3. Roll Weld Open Root Pass on Pipe - 1G Position
   a. Fit up and tack pipe joint using 1/8" E6010 electrode, weld the root pass on pipe in the 1 o'clock to (2:00 o'clock position) according to procedure using the roll welding technique
   b. Weld remainder of pipe in the 1G roll welding position with E6010
   c. Weld the remaining portion of the groove using the weave technique using 5/32" E6010 electrode roll

4. Weld Open Root Pipe Joint - 2G Position
   a. Weld using 1/8" E6010
   b. Cut and grind pipe ends will be to single bevel edge preparations of 37 1/2°
   c. Fit together the two pipe ends to a single V edge preparation with given tolerances
   d. Weld root pass to ASME Section 9 requirements
   e. Fill balance of the groove with E6010 using the stringer technique to ASME Section 9 requirements

5. Weld Open Root Pipe - 5G Position
   a. Fit and tack weld pipe to within tolerances
   b. Place pipe in the 5G position
   c. Weld the rootpass using 1/8" E6010 to ASME Section 9 requirements
   d. Grind the finished root pass to remove high spots and any slag at weld toes
e. Weld the remainder of the groove using 3/32" and/or 1/8" E7018 using the stringer bead technique to ASME Section 9 requirements

6. Pass Guided Bond Tests Per ASME Section 9
   a. Remove bend samples from pipe at the 10, 2, 8 & 4 o'clock positions
   b. If the material is 3/8" or thinner 10 o'clock and 8 o'clock receive root bends and 2 o'clock and 4 o'clock receive face bends. If the pipe wall thickness is over 3/8" side bends shall be performed on all samples.
   c. Weld remainder of pipe in 1G position using E7018
   d. Perform low hydrogen starts and stops
   e. Weld using stringer bead technique
   f. Weld using weave technique
   g. Chip slag wire brush and grind as necessary to assure clean weld deposits

7. Weld Open Root Pipe - 2G Position
   a. Use 1/8" E6010
   b. Cut and ground pipe ends to single bevel edge preparations of 37 1/2°
   c. Fit together two pipe ends to a single V edge preparation within given tolerances
   c. Weld root pass to ASME Section 9 requirements
   d. Clean weld pass by chipping slag, wire brushing and grinding where necessary to assure a clean, well fused weld deposit
   e. Weld remainder of the groove using E7018 with the stringer bead technique

8. Weld Pipe Open Root Passes All Positions Using GMAW
   a. Set up GMAW equipment
   b. Adjust wire feeder drive system
   c. Adjust shielding gas system and flow rate
   d. Adjust GMAW gun to allow proper tip to work distance and gas coverage
   e. Set welding condition for short circuit transfer - Wire Feed Speed
   f. Set welding condition for short circuit transfer - Voltage
   g. Set welding condition for short circuit transfer - Tip to work Distance
   h. Weld root using a string bead technique

9. Weld Pipe With Backing Using FCAW-G
   a. Bevel pipe ends
   b. Touch up bevel face with grinder
   c. Fit and tack backing ring to one pipe end
   d. Fit other pipe over backing ring
   e. Adjust gap and tack in place
   f. Adjust shielding gas flow
   g. Adjust wire feed system
   h. Adjust power source to procedure specification
   i. Set wire feed speed to procedure specification
   j. Adjust voltage to procedure specification
   k. Adjust inductance to procedure specification
1. Adjust GMAW gun for tip to work distance and shielding gas
m. Weld according to procedure specification
The shielded metal arc welding (SMAW) process has a number of serious safety hazards associated with it:

CAUTION: Specific safety precautions must be taken to ensure a proper breathing atmosphere in all welding areas.

A. Weld only in ventilated areas. Welding shielding gases can displace the air needed for breathing. These gases are odorless and colorless, and most are heavier than air.
B. Weld in a position that will allow your head to be out of the welding plume, but will still give a good view of the welding arc. The welding plume could contain harmful fumes and gases.
C. Provide enough ventilation wherever welding and cutting are performed. Welding in confined spaces may require special procedures, such as the use of an air-supplied hood or hose mask.
D. Do not weld on dirty plate or plate contaminated with an unknown material. The fumes and gases which are formed could be hazardous to health.

CAUTION: Electrical shock can be avoided by following specific safety precautions.

A. Do not touch live electrical parts.
B. Ground all electrical equipment and the work-piece to prevent accidental electrical shocks.
C. Use the correct welding cable size for both the ground lead and the welding lead. Sustained overloading will cause cable failure and result in possible electrical shock or fire hazard.
D. Be sure all electrical connections are tight, clean, and dry. Poor electrical connections can heat up and even melt, causing dangerous arcs and sparks.
E. Keep dry. Moisture and water can conduct electricity. Fix water leaks immediately.
F. Keep welding cables and connectors in good condition. Improper or worn electrical connections can cause short circuits and can increase the chance of an electrical shock.
G. Avoid open-circuit voltage. Open-circuit voltage is much higher than welding voltage.
H. Shut off electrical power when working on welding equipment.

CAUTION: Ultraviolet and infrared rays emitted by the welding arc, as well as the spatter from the welding arc, can injure eyes and burn skin. Specific safety precautions must be followed to ensure adequate protection.
A. Wear 100% cotton clothing. It will not catch fire easily, it offers good protection from light welding spatter, and it is cooler in the summer and warmer in the winter.

B. Cover all skin surfaces. Keep shirt sleeves rolled down.

C. Wear cuffless pants to eliminate spatter traps.

D. Wear leather boots. Pant legs should cover boot tops.

E. Wear clean clothing. Oil and grease stained clothes will tend to ignite from welding spatter.

F. For more severe welding conditions, wear protective clothing such as heat resistant jackets, aprons, and leggings.

G. Wear safety glasses to protect from arc flashes, mechanical injury, or other mishaps.

H. Wear ear protection, not only where there is noise but where there is a chance that spatter or sparks could get into the ears.

I. Wear a 100% cotton cap to protect the head from sparks or spatter.

J. Wear long gauntlet leather gloves.

K. Do not touch hot metal with bare hands. Use pliers and wear leather gloves.

L. Protect nearby workers from exposure to the welding arc by putting up shields.

M. Wear a welding helmet with the correct shade of welding lens. Choose the correct lens from a filter recommendations table (see Figure 2).

<table>
<thead>
<tr>
<th>Application</th>
<th>Minimum Shade No.</th>
<th>Suggested Shade*</th>
</tr>
</thead>
<tbody>
<tr>
<td>Less than 60 amps</td>
<td>7</td>
<td>9</td>
</tr>
<tr>
<td>60 to 160 amps</td>
<td>8</td>
<td>10</td>
</tr>
<tr>
<td>160 to 250 amps</td>
<td>10</td>
<td>12</td>
</tr>
<tr>
<td>250 to 500 amps</td>
<td>11</td>
<td>14</td>
</tr>
</tbody>
</table>

* As a general rule, start with a shade that is too dark to see the arc zone. Then go to a lighter shade which gives sufficient view of the arc zone without exerting a strain on your eyes.

**FILTER RECOMMENDATIONS**
(adapted from ANSI Safety Standard Z49.1-88)

**SMAW**

**CAUTION:** Specific precautions must be taken to ensure that there is no loss of property due to welding sparks, spatter, and heat.

A. If possible, weld in specially designated areas or enclosures of noncombustible construction.

B. Remove combustibles from the work area by at least 35 feet if possible.
C. Cover combustible materials that cannot be removed from the welding area with tight-fitting flame-resistant material. Items that should be covered include combustible walls, floors, ceilings, and any cracks or other openings that might let a spark pass through.

D. If welding is to be performed on or adjacent to a metal wall, ceiling, or partition, move combustibles on the other side to a safe location.

E. If combustibles cannot be adequately sealed off or removed, station a fire watcher at that location. The fire watcher must have adequate fire extinguishing capabilities.

F. Do not weld on materials having either a coating or internal structure that is combustible.

G. Place hot scrap and slag in non-combustible containers.

H. Ensure that fire extinguishers are available nearby.

I. Conduct a thorough examination for evidence of a fire before leaving the work area, and continue a fire check for at least 30 minutes after the welding operation has been completed.

J. Follow all company safety procedures regarding welding in hazardous areas.

CAUTION: NEVER carry a butane lighter into a welding area. These are considered to be mini-Molotov cocktails.

DON'T CARRY A BOMB IN YOUR POCKET.
Worksheet:

1. Choose Proper Power Source

   Step 1. With the procedures and electrodes used at maintenance and fabrication facilities, choose a constant current (CC) power source for the Shielded Metal Arc Welding process. Some units are a combination of constant current (CC) and constant voltage (CV). This type of power source will have one or two switches to change from constant current to constant voltage.

   Step 2. An alternating current (AC) welding power source could be used with the low-hydrogen family of electrodes, but choose a constant current (CC) power source if possible.

2. Choose a Proper Electrode

   Step 1. Choose the proper electrode for the job.

   NOTE: The maintenance technician uses E6010 and E7018 electrodes for most SMAW applications. The E6010 belongs to the fast-freeze family of electrodes and the E7018 belongs to the low-hydrogen family of electrodes. The E6010 provides a deep digging, deep penetrating type of weld and may be used for non-critical fabrication.

   The E7018 low-hydrogen is used as the primary electrode for fabrication and other code-quality welds. The low-hydrogen family also includes E7015, E7016, and E7048. Hydrogen in the weld deposit causes brittleness called hydrogen embrittlement, which leads to cracking and potential weld failure.

   Step 2. Store the electrodes properly.

      a. Low-hydrogen electrodes:

         (1) These electrodes are packaged in hermetically sealed (watertight) cans. Be careful not to damage the cans which would allow air and moisture to attack the electrodes in the cans.

         (2) Once the cans are opened, store the electrodes in a rod oven at 150°F to 300°F.

         (3) Re-dry electrodes that have been outside a sealed container or a properly heated rod oven for several hours by baking them one hour at 700°F to 800°F and storing them in a rod oven.

   NOTE: Some welding procedures also set a time limit on the number of hours that low-hydrogen electrodes can be
kept out of a rod oven prior to use. Times vary from two to four hours, depending on the type of base metal to be welded and the humidity levels of the environment.

b. Do not store the E6010 fast-freeze electrodes in rod ovens. Fast-freeze electrodes require the presence of small amounts of moisture in order to run smoothly.

Step 3. Match the low-hydrogen family members with the polarities that are used with them (see Figure 5).

Figure 6 Typical Current Ranges for Electrodes

3. **Prepare Weldment for Welding**

Step 1. Oxyacetylene cut, carbon air arc gouge/cut, or machine cut/mill material to the desired shape/contour for each type of weld joint configuration needed for each welding task at hand.

a. Weld joint configuration will depend upon:

- [ ] 1205
(1) Product design  
(2) Material thickness  
(3) Design strength requirements  
(4) Welding process employed  
b. SMAW weld joint configuration may be a:  
(1) Lap joint  
(2) Tee joint  
(3) Corner joint  
(4) Edge joint  
(5) Butt joint with backing  
(6) Butt joint without backing  

Step 2. Clean the areas to be welded prior to fit-up  
a. Remove rust, paint, and any other coatings by wire brushing, grinding, sanding, or filing  
b. Remove oils and greases with a safe, suitable solvent  
Step 3. Turn on the power source and set the current range (amps) on the machine at the lower end of the setting as suggested for the electrode size.  
Step 4. Obtain a piece of scrap metal of the approximate type and thickness for the weld joint to be made.  
Step 5. Practice welding on the scrap metal and adjust the current setting as needed to produce a good weld.  

4. Complete Welding Operation  
Step 1. Tack weld a joint that is defect free and can be incorporated into the finished product.  
Step 2. Use any preheat that may be required by welding codes or company procedures.  
Step 3. Make the required weld to be defect free and pleasing in appearance.  
Step 4. Use proper weld bead placement according to the weld joint design.  
a. When making seam welds, produce the weld beads by using very little oscillation or some oscillation.  
b. When making fillet welds, produce the weld beads by using some oscillation. Fillet welds in the vertical position can also be run using a weaving technique.  
c. When making groove welds, produce the weld beads by using some oscillation and/or by weaving. When making groove welds on butt joints, the amount of weaving will depend on the welding position and the weld joints. It may also be limited by applicable welding codes and/or company standards.  
Step 5. Maintain the correct welding travel speed. Weld bead size can be changed by varying the arc travel speed. Bead size and travel speed are inversely related: a decrease in travel speed will result in an increase in the weld bead height and width, and an increase in travel speed will result in a decrease in the weld bead height and width.
a. As the material thickness increases, the travel speed must slow down.
b. For a given material thickness and joint design, as the welding amperage is increased so is the arc travel speed. Conversely, as the amperage is decreased, the arc travel is slowed.
c. Higher welding speeds are attainable by using the forehand (pushing) technique.

5. **Troubleshoot Welding Problems**

**Step 1.** Be aware of the welding variables and how they can affect the weld. Below is a list of eleven welding variables for the SMAW process:

- a. Type of electrode
- b. Diameter of electrode
- c. Type of current (AC or DC)
- d. Current polarity (DC+ or DC-)
- e. Current setting
- f. Arc length
- g. Travel speed
- h. Electrode angle
- i. Electromagnetic arc blow
- j. Electrode manipulation technique (drag, whip)
- k. Thoroughness of slag removal prior to restarts and new bead placement

**Step 2.** Be aware of general welding variables and how they can affect the weld:

- a. Type of base metal
- b. Thickness of base metal
- c. Surface condition of base metal (clean, rusty, or painted)
- d. Atmospheric conditions

**Step 3.** Be aware of any weld discontinuity and the relevant welding variables that may have caused it.
Circle the best answer.

1. What is the approximate temperature required for stress relief annealing of low-carbon steels?
   A. 950°
   B. 1000°
   C. 1950°
   D. 1700°
   E. None of the above

2. What crystalline processes result from stress relief annealing?
   A. All grains reform into softer grains
   B. Distorted grains reform into softer grains
   C. Ferrite grains reform into softer grains while pearlite grains are basically unaffected
   D. Pearlite grains reform into softer grains while ferrite grains are basically unaffected
   E. None of the above

3. Which of the following is NOT a cause of quenching cracks?
   A. Improper quenching medium
   B. Overheating during the austenitizing cycle
   C. Improper quenching angle
   D. All of the above are causes of quenching cracks
   E. None of the above answers is correct

4. Which of the following is NOT a characteristic of typical quench cracks?
   A. The fracture tends to run from the surface toward the center in a smooth curve
   B. Untempered quench cracks will not show any decarburization
   C. Tempered fracture surfaces will show a fine crystalline structure
   D. All of the above are characteristic of quench cracks
   E. None of the above
5. During tempering by color, which of the following colors represents the highest temperature?
   A. Gold
   B. Purple
   C. Dark Straw
   D. Pale Blue
   E. Violet

6. During tempering by color, which of the following colors represents the lowest temperature?
   A. Gold
   B. Purple
   C. Dark Straw
   D. Pale Blue
   E. Violet

7. What is meant by step quenching?
   A. The workpiece is first quenched in a slow medium (e.g., air) then in a fast medium (e.g., water)
   B. The workpiece is first quenched in a fast medium (e.g., water) then in a slow medium (e.g., air)
   C. The weaker parts of the workpiece are quenched separately from the main body of the workpiece
   D. The workpiece is lowered into the quenching medium in steps so that different parts of the workpiece attain different hardnesses
   E. None of the above

8. What is the simplest thing that the technician can do to minimize the vapor-blanket stage of liquid quenching?
   A. Agitate the workpiece or the medium
   B. Heat the quenching medium to just below its boiling point
   C. Quickly insert the workpiece into the medium
   D. Slowly insert the workpiece into the medium
   E. None of the above

9. Liquid carburizing, as used in case hardening, utilizes ________ and is therefore extremely dangerous.
   A. Sodium chloride
   B. Calcium carbonate
   C. Cyanide salts
   D. Ammonia
   E. None of the above
10. Workpieces which have been cut with an oxyacetylene torch often display edge hardness because

A. The torch was starved for oxygen
B. The workpiece was cut at too low a temperature
C. The wrong type of cutting torch was used
D. Oxyacetylene torches always leave hardened edges
E. None of the above

Circle the best answer.

1. The hardness of a metal is its ability to resist:
   A. Permanent deformation.
   B. Oxidation.
   C. Chemical reaction.
   D. All of the above answers are forms of hardness.
   E. None of the above.

2. Rockwell testing machines test the sample metal's resistance to:
   A. Abrasion.
   B. Penetration.
   C. Elastic deformation.
   D. Electricity.
   E. None of the above.

3. Materials such as nitrided steel and hard cast irons generally have Rockwell hardness numbers in excess of
   A. B-50.
   B. B-75.
   C. B-100.
   D. B-150.
   E. None of the above.

4. During the file test, if the file will mark the metal but not cut into it, then the metal should be treated as:
   A. High-alloy steel.
   B. Mild steel.
   C. Hardened tool steel.
   D. Medium-carbon steel.
   E. None of the above.

5. Probably the best use of the spark test is to:
   A. Determine the alloy content of the sample.
   B. Identify cast iron.
   C. Compare the sample to a known piece.
   D. All of the above answers are valid.
   E. None of the above.
6. Tool steel has a Rockwell hardness of _________, while hardened tool steel has hardness number of _________.
   A. C-42 - C-64
   B. C-42 - B-65
   C. C-64 - C-42
   D. B-65 - C-42
   E. None of the above.

7. Which of the following surfaces should be avoided when hardness testing?
   A. Curved
   B. Rough
   C. Decarburized
   D. All of the above surfaces should be modified before testing the sample's hardness.
   E. None of the above.

8. For hardness testing, the minimum recommended clearance from the edge is:
   A. 1/2"
   B. 1/4"
   C. 1/8"
   D. 1/16"
   E. None of the above.

9. If a Rockwell tester is in daily use, it should be calibrated:
   A. Annually.
   B. Monthly.
   C. Weekly.
   D. Daily.
   E. Never.

10. Technician A says that, for large samples, multiple hardness test should be made and their results averaged. Technician B says that many materials vary in hardness over the length of the sample. Who is correct?
    A. Technician A only
    B. Technician B only
    C. Both technicians are correct.
    D. Neither technician is correct.
1. a
2. b
3. c
4. c
5. c
6. e
7. d
8. c
9. d
10. d
Choose the best answer.

1. The size of the bead is _________ proportional to the speed of travel.
   A. Directly
   B. Inversely
   C. Not
   D. None of the above

2. The eye shield of the welding helmet should be:
   A. Just light enough to clearly see the arc.
   B. Too dark to clearly see the arc.
   C. A minimum of #5.
   D. None of the above.

3. Welding in confined spaces may require:
   A. Air supplied hoods or hose masks.
   B. Frequent breaks.
   C. Large, high-displacement fans.
   D. All of the above.
   E. None of the above.

4. Long sleeves protect the arms against:
   A. Ultraviolet radiation.
   B. Infrared radiation.
   C. Welding splatter.
   D. All of the above.
   E. None of the above.

5. Which of the following is NOT a variable in the SMAW process?
   A. Current polarity
   B. Arc length
   C. Length of the electrode
   D. All of the above are variables in the process.
   E. None of the above.
6. Acceptable welding footwear includes:
   A. Roman sandals.
   B. Tennis shoes.
   C. Canvas boots.
   D. All of the above.
   E. None of the above.

7. A welder whose travel speed is too fast may have problems with:
   A. Excess convexity.
   B. Overlap.
   C. Porosity.
   D. All of the above.
   E. None of the above.

8. Technician A says that low-hydrogen electrodes can only be in the open air for two to four hours. Technician B says that the humidity and the base metal determine the amount of time that low-hydrogen electrodes can be exposed. Who is correct?
   A. Technician A only.
   B. Technician B only.
   C. Both Technicians A and B.
   D. Neither Technician A nor B.

9. E6010 electrodes should only be used with:
   A. DC-.
   B. DC+.
   C. AC.
   D. There is no such electrode.

10. Technician A says that they should weld only in well ventilated areas. Technician B says that welding produces gases that are odorless, colorless, and heavier than air. Who is correct?
    A. Technician A only.
    B. Technician B only.
    C. Both Technicians A and B.
    D. Neither Technician A nor B.

11. Technician A says that they should never carry butane lighters into the welding area because they may explode. Technician B says that gasoline should never be taken into the welding area, either. Who is correct?
    A. Technician A only.
    B. Technician B only.
    C. Both Technicians A and B.
    D. Neither Technician A nor B.
12. When repairing welding equipment, its electrical power should be:
   A. On.
   B. Off.
   C. On or off, depending on the repair.
   D. The SMAW machine is not electrical.

13. To prevent electrical shocks, all electrical equipment and the work piece should be:
   A. On rubber work mats.
   B. Elevated off the floor.
   C. Grounded.
   D. All of the above.
   E. None of the above.

14. Which of the following electrodes is NOT in the low-hydrogen family?
   A. E7015
   B. E7016
   C. E7018
   D. All of the above are low-hydrogen electrodes.
   E. All of the above are fast-freeze electrodes.

15. Technician A says that undercutting is caused by too much current. Technician B says that wet electrodes can also cause undercutting. Who is correct?
   A. Technician A only.
   B. Technician B only.
   C. Both Technicians A and B.
   D. Neither Technician A nor B.

16. Fire inspections should be continued for at least __________ after completion of the welding.
   A. Fifteen minutes
   B. Thirty minutes
   C. One hour
   D. Two hours

17. The welding area should be:
   A. Isolated from other workers by shields.
   B. At least 35 feet from combustible materials.
   C. Dry.
   D. All of the above.
   E. None of the above.
18. Seam welds generally require ___________ oscillation.
   A. No
   B. Very little
   C. Moderate
   D. Great

19. Technician A says that all electrical connections must be tight, clean, and dry. Technician B says that poor electrical connections can heat up and even melt. Who is correct?
   A. Technician A only.
   B. Technician B only
   C. Both Technicians A and B
   D. Neither Technician A nor B

20. If it is impractical to properly remove combustible materials from the vicinity of the welding, then:
   A. Do not weld
   B. Take frequent breaks to inspect the area for fires
   C. Station a fire watcher near the combustible materials
   D. Any of the above is acceptable
   E. None of the above

21. E7018 electrodes should never be used with
   A. DC-
   B. DC+
   C. AC
   D. There is no such electrode

22. Areas to be welded should be thoroughly cleaned
   A. Prior to fit-up
   B. By brushing, sanding, or grinding
   C. With safe solvents
   D. All of the above, as necessary
   E. None of the above

23. Technician A says that porosity can be caused by a current setting that is too low. Technician B says that porosity can be caused by too long an arc. Who is correct?
   A. Technician A only
   B. Technician B only
   C. Both Technicians A and B
   D. Neither Technician A nor B
24. Low-hydrogen electrodes may be stored  
   A. In sealed cans or heated rod ovens  
   B. Under water  
   C. In petroleum jelly  
   D. Any of the above  
   E. None of the above  

25. As the material being welded increases in thickness, the travel speed of the weld must  
   A. Increase  
   B. Decrease  
   C. Either A or B, depending on the desired effect  
   D. Stay the same  
   E. None of the above
|   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |
| 1 | b |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |
| 2 | a |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |
| 3 | a |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |
| 4 | d |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |
| 5 | c |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |
| 6 | e |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |
| 7 | e |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |
| 8 | c |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |

WELDER SERIES
MASTER Technical Module No. WLD-L05

SUBJECT: WELDING TECHNICIAN

TIME: 12 HOURS

- DUTY: SHIELDED METAL ARC WELDING (SMAW) (BASIC)
- TASK: Maintain Preheat and Perform Interpass

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Weld carbon steels using the SMAW process;
B. Apply large fillet welds in multiple position on thick material;
C. Perform weave bead techniques for making large welds; and,
D. Understand and practice the methods of destructive testing.

INSTRUCTIONAL MATERIALS:

Student Workbook
Four written tests on welding processes in this module
Transparencies prepared to emphasize each subject
Hobart Institute Video Material
Miller Module Method Video materials
Hobart SMAW wall chart
The classroom handouts will consist of student worksheets and alloy charts
Personal protective equipment
Shielded Metal Arc Welding machine
Welding shop tools
Selection of base metals for welding and cutting
Selection of filler metals and electrode wire
MASTER Handout No. 1 (WLD-L5-HO1)
MASTER Handout No. 2 (WLD-L5-HO2)
MASTER Handout No. 3 (WLD-L5-HO3)
MASTER Handout No. 4 (WLD-L5-HO4)
MASTER Handout No. 5 (WLD-L5-HO5)
MASTER Handout No. 6 (WLD-L5-HO6)
MASTER Laboratory Aid (WLD-L5-LA)
MASTER Laboratory Worksheet (WLD-L5-LW)
MASTER Self-Assessment No. 1
MASTER Self-Assessment No. 2
MASTER Self-Assessment No. 3
REFERENCES:

TEXT:

OTHER:

*Competency Standards*, American Welding Society, Latest Edition

STUDENT PREPARATION:

Student must demonstrate appropriate communication skills and understand principles of basic physical science and mathematics as verified by placement test or completion of required prerequisite courses. Student will complete the following modules:

- WLD-L1 "Preheat Joint"
- WLD-L2 "Initiate Welding Process"
- WLD-L3 "Perform Weld Sequence"
- WLD-L4 "Control Weld Technique"

INTRODUCTION:

The Course Introduction will Include:

- An overview of SMAW applications with heavy workpieces
- A class demonstration of multiple pass welding techniques
A discussion on practical exercises leading to certification in related program areas.

PRESENTATION OUTLINE:

Instructor Topics:
A. Develop skill in repositioning large fillet welds in the horizontal position on thick material
B. Provide practice in multiple pass welding on heavy workpieces
C. Provide an orientation to the requirements of welding codes as they apply to the qualification of welders and procedures
D. Provide practice in weave bead technique for making large welds
E. Define destructive testing and present a brief description of the different methods of destructive testing

Student Activities:
A. Perform multiple pass welding on heavy workpieces; Fillet Weld, Lap Joint, Horizontal Position (21 Bead)
B. Perform welds using 6 bead and 3-45° weaves: Fillet Weld, Lap Joint, Overhead Position
C. Practice weave bead technique for making large welds, Fillet Weld, Lap Joint, Vertical Position (Uphill)
D. Make adjustments to improve weld quality
E. Perform destructive testing

PRACTICAL APPLICATION:
The student will gain knowledge and experience with practice in making large fillet welds on thick material in multiple positions and performing destructive testing.

EVALUATION AND/OR VERIFICATION:
Written examinations will be given in this module to determine student progress. Practice on destructive testing is also provided to emphasize the need for weld quality on thick material.

SUMMARY:
This module emphasizes weld quality on thick material and the performance of weld testing. In metals thicker than 1/4 inch, it is frequently necessary to make multipass welds, meaning two or more welds on top of each other in a single joint. The first weld made in such a joint is called the root pass weld. Later weld passes are then made to fill the joint. Each pass of a multipass weld must be thoroughly chipped and cleaned to remove slag deposits which prevent food adhesion between welds. Slag removal is also recommended when stopping and restarting a weld. When stopping to insert a new electrode, the end of the weld should be cleaned before restarting the arc.
Usually a steel that requires preheating to a specified temperature also must be kept at this temperature between weld passed. With many weldments, the heat input during welding is adequate to maintain the interpass temperature. On a massive weldment, it is not likely that the heat input of the welding process will be sufficient to maintain required interpass temperature. If this is the case, torch heating between passes may be required. Once an assembly has been preheated and the welding begun, it is desirable to finish the welding as soon as possible so as to avoid the need for interpass heating.

NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-L6) dealing with using the carbon arc process to cut and gouge base weld materials.
OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Weld carbon steels using the SMAW process;
B. Apply large fillet welds in multiple position on thick material;
C. Perform weave bead techniques for making large welds; and,
D. Understand and practice the methods of destructive testing.

MODULE OUTLINE:

Instructor Topics:
A. Develop skill in repositioning large fillet welds in the horizontal position on thick material
B. Provide practice in multiple pass welding on heavy workpieces
C. Provide an orientation to the requirements of welding codes as they apply to the qualification of welders and procedures
D. Provide practice in weave bead technique for making large welds
E. Define destructive testing and present a brief description of the different methods of destructive testing

Student Activities:
A. Perform multiple pass welding on heavy workpieces; Fillet Weld, Lap Joint, Horizontal Position (21 Bead)
B. Perform welds using 6 bead and 3-45° weaves: Fillet Weld, Lap Joint, Overhead Position
C. Practice weave bead technique for making large welds, Fillet Weld, Lap Joint, Vertical Position (Uphill)
D. Make adjustments to improve weld quality
E. Perform destructive testing
OBJECTIVE(S):

Upon completion of this unit the student will be able to:

a. Discuss the reasons for heat treating;
b. Discuss the time/temperature chart
c. List the different quenching media
d. Estimate metal heat temperature by color; and
e. List reasons for stress relieving workpieces.

MODULE OUTLINE:

I. Discuss the Reasons for Heat Treating
   A. Hardening for utility
   B. Tempering for toughness without brittleness

II. Discuss the Time/Temperature Chart

III. List the Different Quenching Media (In order of severity or speed of quenching)
   A. Brine (water and sodium chloride or sodium hydroxide)
   B. Water
   C. Fused (liquid) salts
   D. Molten lead
   E. Soluble oil and water
   F. Oil
   G. Air

IV. Estimate Metal Heat Temperature by Color
   A. Use of temper color chart for tempering
   B. *Chicken Wire* markings warn of overheating

      1. Heat
      2. Fumes
      3. Concussion
   B. Toxicity of Certain Media

VII. Special Problems in Heat Treating
   A. Britteness
   B. Distortion
   C. Discoloration (sometimes unimportant)
   D. Inadvertent heat treating
OBJECTIVE(S):

Upon completion of this unit the student will be able to:

a. Perform file test to test for metal hardness;
b. Use other tests to identify metals; and,
c. Perform Rockwell hardness tests.

MODULE OUTLINE:

I. Perform File Test to Test for Metal Hardness
   A. Imprecise method, good for rough estimates only
   B. Requires more experienced machinist

II. Use Other Tests to Identify Metals
    A. High-carbon steels show more spark bursts than do low-carbon steels.
    B. Non-ferrous metals
       1. Aluminum
       2. Magnesium
       3. Brass

Student laboratory exercises as assigned by Instructor.

**BASIC SHIELDED METAL ARC WELDING (SMAW) AND OXY-FUEL GAS CUTTING**

1. Define Selected Welding Terms Per AWS A3.0
   a. Define arc welding process terms
   b. Define standard joint terminology
   c. Define common weld discontinuities
   d. Name welding equipment, supply and consumables
   e. Define common shop terms including proper equipment names
   f. Define material terms
   g. Define common metallurgy terms

2. Describe AWS Code for Mild Steel Electrodes
   a. List, describe and define
   b. List low hydrogen electrodes
   c. List iron powder electrodes
   d. Describe electrode by welding position
   e. Describe electrode by current and polarity
   f. Describe electrode by penetration

3. Set Up Welding Machine to Required Polarity
   a. List polarities for commonly used electrodes
   b. Describe both polarities
   c. Describe advantages and disadvantages of alternating current

4. Use Correct Start and Stop Techniques for SMAW Electrodes
   a. Describe and demonstrate start for non-low hydrogen SMAW electrode
   b. Describe and demonstrate stop for non-low hydrogen SMAW electrodes with filled craters
   c. List reasons for the importance of low hydrogen in weld metal
   d. Explain the reason for low hydrogen starts and stops and how they work and why required specifically with E7018

5. Set Up Equipment for Shielded Metal Arc Welding
   a. Inspect area for safety
   b. Adjust current and polarity for specific job requirements
   c. Choose type and size of electrode
   d. Wear applicable personal safety equipment

6. Strike an Arc, Run Continuous Stringer Bead
   a. Stand and position oneself correctly
   b. Operate welding helmet
c. Verbally warn others of intent to arc weld
d. Strike an arc
e. Weld with stringer bead technique
f. Perform weld tie ins to make continuous bead

7. Weld Using Weave Technique
a. Maintain required weld quality
b. Maintain proper weld width uniformly
c. Maintain proper travel speed
d. Match correct oscillation for various electrodes
e. Match applications to weave techniques, as they apply
f. List the advantages and disadvantages of weave techniques
g. List the advantages and disadvantages of stringer techniques
h. Perform weld using weave technique
i. Concentrate on dwell times at edges of weld pool

8. Weld Multi-Layer Buildup
a. Weld a dam to outline area being welded for each layer
b. Apply each layer neatly, straight and with good fusion throughout
c. Chip slag after each pass
d. Weld passes which overlap to crown of last weld bead
e. Demonstrate control of bead height

9. Set Up and Shut Down Oxy-Fuel Equipment
a. Follow manufacturer’s recommended practice
b. Inspect equipment and work area for safety
c. Assemble oxy-fuel equipment
d. Open fuel gas cylinder ½ turn
e. Open oxygen as cylinder all the way
f. Adjust fuel gas and oxygen working pressure per manufacturer’s recommendation
g. Purge lines one at a time. One second for each 10 feet of hose length

10. Cut Steel Plate Using Oxy-Fuel Equipment
a. Make manual free hand straight line cuts
b. Cut manually straight lines using cutting jib
c. Bevel plate with manual oxy-fuel equipment
d. Manually cut blind holes in thick material
e. Manually cut sheet metal with minimal distortion
ADVANCED SHIELDED METAL ARC WELDING (SMAW) AND CUTTING

1. Weld Single V Groove Welds With Open Roots From One Side
   a. Bevel 3/8" steel plate to 37 1/2° using oxy-fuel gas cutting e.g.
   b. Use grinder to remove oxide larger and smooth plate
   c. Use grinder to create root face of 3/32" to 1/8"
   d. Tack single V groove joint with 3/32" root opening
   e. Place joint in the 1G position
   f. Place joint in 2G position once task is mastered
   g. Place joint in 3G position once task is mastered
   h. Place joint in 4G position once task is mastered
   i. Weld the root with Direct Current Electrode Positive using 1/8" E6010. Use tight arc length and keyhole technique to produce a well fused root bead extending 1/16" above the plate.
   j. Weld chipped side slag and the root bead is wire brushed
   k. Fill the balance of the groove with 3/32", 1/8" and/or 5/32" E7018 using the stringer bead technique
   l. Visual test finished weld and root face bends evaluated to AWS D1.1 criteria

2. Weld Various Diameters of Pipe to Plate
   a. Inspect area for safety
   b. Place plate flat on welding table
   c. Place 3" pipe vertically on top of plate and tacked in place
   d. Leave weld coupon in the 2F fixed position
   e. Apply a 3/8" fillet weld using 1/8" E7018 and a stringer bead technique
   f. Visually inspect weld to AWS D1.1
   g. Fill pipe with water for 24 hours
   h. Check for leak

3. Produce SMAW Pipe - 5G Position
   a. Measure the pipe
   b. Mark the cut line with a wrap around and soapstone
   c. Cut the bevel using oxy-fuel gas equipment
   d. Clean the bevel face with a grinder, remove all oxide and smooth bevel face
   e. Use the grinder to add a root face of from 3/32" to 1/8"
   f. Tack the single V groove pipe joint with a 3/32" root opening
g. Place the joint in the 5G fixed position, using an 1/8" E6010 and a keyhole technique. Weld the root pass upward producing a root weld which is well fused and has a 1/16" weld reinforcement above the plate.

h. Chip slag and wire brush weld.

i. Grind any lack of fusion and/or high spots.

j. Weld the balance of the groove upward with 3/32" or 1/8" E7018 using the stringer bead technique.

k. Visually inspect weld on the root and face sides to ASME Section 9.

l. Remove four guided bend specimens from 2:00, 4:00, 8:00 and 10:00 positions prepared and two & eight are root bend specimens. Four & ten are face bend specimens. Guided bend tests are evaluated to ASME Section 9 criteria.

4. Produce SMAW - 2G Position Groove Welds

a. Measure the pipe.

b. Mark the cut line with a wrap around and soapstone.

c. Cut the bevel using oxy-fuel gas equipment.

d. Clean the bevel face with a grinder, remove all oxide and smooth bevel face.

e. Use the grinder to add a root face of from 3/32" to 1/8".

f. Tack the single V groove pipe joint with a 3/32" root opening.

g. Weld pipe joint.

h. Place the joint in the 2G fixed position, using an 1/8" E6010 and a keyhole technique. Weld the root pass upward producing a root weld which is well fused and has a 1/16" weld reinforcement above the plate.

i. Chip slag and wire brush. Grind any lack of fusion and/or high spots.

j. Weld balance of the groove upward with 3/32" or 1/8" E7018 using the stringer bead technique.

k. Visually inspect weld on the root and face sides to ASME Section 9.

l. Remove four guided bend specimens from 2:00, 4:00, 8:00 and 10:00 positions prepared and two & eight are root bend specimens. Four & ten are face bend specimens. Guided bend tests are evaluated to ASME Section 9 criteria.

5. Roll Weld Pipe - SMAW

a. Measure the pipe.

b. Mark the cut line with a wrap around and soapstone.

c. Cut the bevel using oxy-fuel gas equipment.

d. Clean the bevel face with a grinder, remove all oxide and smooth bevel face.

e. Use the grinder to add a root face of from 3/32" to 1/8".

f. Tack the single V groove pipe joint with a 3/32" root opening.

g. Roll weld pipe.

h. Place pipe coupon on workbench in the 1G roll welding position.

i. Weld the root bead using 1/8" E6010 and the keyhole technique. The weld is performed in the 2:00 to 12:30 position.

j. Chip slag and wire brush. Grind any lack of fusion and/or high spots.
Weld balance of groove upward with 3/32" or 1/8" E7018 using the weave technique

Visually inspect weld on the root and face sides to ASME Section 9

Remove four guided bend specimens from 2:00, 4:00, 8:00 and 10:00 positions prepared and two & eight are root bend specimens. Four & ten are face bend specimens. Guided bend tests are evaluated to ASME Section 9 criteria

Produce SMAW Pipe - 5G Position

Measure the pipe and
Mark the cut line with a wrap around and soapstone
Cut the bevel using oxy-fuel gas equipment
Clean the bevel face with a grinder, remove all oxide and smooth bevel face
Use the grinder to add a root face of from 3/32" to 1/8"
Weld pipe
Tack the single V groove pipe joint with a 3/32" root opening
Place the joint in the 5G fixed position, using an 1/8" E6010 and a keyhole technique
Weld the root pass upward producing a root weld which is well fused and has a 1/16" weld reinforcement above the plate
Chip slag and wire brush. Grind any lack of fusion and/or high spots
Weld balance of groove upward with 3/32" or 1/8" E7018 using the weave technique
Visually inspect weld on the root and face sides to ASME Section 9

Remove four guided bend specimens from 2:00, 4:00, 8:00 and 10:00 positions prepared and two & eight are root bend specimens. Four & ten are face bend specimens. Guided bend tests are evaluated to ASME Section 9 criteria

Produce SMAW Pipe - 6G Position

Measure the pipe
Mark the cut line with a wrap around and soapstone
Cut the bevel using oxy-fuel gas equipment
Clean the bevel face with a grinder, remove all oxide and smooth bevel face
Use the grinder to add a root face of from 3/32" to 1/8"
Tack the single V groove pipe joint with a 3/32" root opening
Place the joint in the 6G fixed position, using an 1/8" E6010 and a keyhole technique
Weld the root pass upward producing a root weld which is well fused and has a 1/16" weld reinforcement above the plate
Chip slag and wire brush. Grind any lack of fusion and/or high spots
Weld balance of groove upward with 3/32" or 1/8" E7018 using the stringer bead technique
Visually inspect weld on the root and face sides to ASME Section 9
1. Remove four guided bend specimens from 2:00, 4:00, 8:00 and 10:00 positions prepared and two & eight are root bend specimens. Four & ten are face bend specimens. Guided bend tests are evaluated to ASME Section 9 criteria

8. Create SMAW Pipe to ASME Section 9
   a. Bevel two pieces of pipe to 30° bevel angle using oxy-fuel gas cutting equipment
   b. Clean bevel face and a 3/32" root face is applied using a hand held grinder
   c. Set welding condition to weld open roots
   d. Tack pipe nipples together to form a V groove with a 1/8" root opening
   e. Place pipe in the 5G fixed position. The root pass is welded and cleaned by wire brushing
   f. Weld balance of the V groove with this procedure
   g. Visual inspection is made and evaluated by ASME Section 9
   h. Make four bend samples and evaluate by ASME Section 9

9. Interpret Welding Procedures
   a. Identify process
   b. Name joint design
   c. List base material
   d. Give dimensions for root treatment
   e. Name electrode size and type being used
   f. List filler material (if required), classification and specification
   g. Identify shielding gas - type and mixture
   h. List pre and post heat and interpass temperature
   i. Describe initial and interpass cleaning
   j. Describe technique which is used
   k. Produce single or multiple pass weld
   l. Choose current type
   m. Set current amperage
   n. Set current polarity
   o. Set voltage
Student laboratory exercises as assigned by Instructor.

PIPE WELDING - SMAW

1. Produce End Preparations
   a. Produce end preparations with oxy-fuel cutting
   b. Produce end preparations with plasma cutting
   c. Produce end preparations with mechanical cutting
   d. Produce end preparations with grinding

2. Fit and Tack Weld Pipe
   a. Cut and single bevel pipe to 37 1/2°
   b. Ground bevel face and touch up to within tolerances
   c. Check that pipe ends are square within given tolerances
   d. Prepare root face within given tolerances
   e. Align pipe to within given tolerances
   f. Set root opening to within given tolerances
   g. Tack pipe according to welding procedure specification - maintaining root opening

3. Roll Weld Open Root Pass on Pipe - 1G Position
   a. Fit up and tack pipe joint using 1/8" E6010 electrode, weld the root pass on pipe in the 1 o'clock to (2:00 o'clock position) according to procedure using the roll welding technique
   b. Weld remainder of pipe in the 1G roll welding position with E6010
   c. Weld the remaining portion of the groove using the weave technique using 5/32" E6010 electrode roll

4. Weld Open Root Pipe Joint - 2G Position
   a. Weld using 1/8" E6010
   b. Cut and grind pipe ends will be to single bevel edge preparations of 37 1/2°
   c. Fit together the two pipe ends to a single V edge preparation with given tolerances
   d. Weld root pass to ASME Section 9 requirements
   e. Fill balance of the groove with E6010 using the stringer technique to ASME Section 9 requirements

5. Weld Open Root Pipe - 5G Position
   a. Fit and tack weld pipe to within tolerances
   b. Place pipe in the 5G position
   c. Weld the root pass using 1/8" E6010 to ASME Section 9 requirements
   d. Grind the finished root pass to remove high spots and any slag at weld toes
e. Weld the remainder of the groove using 3/32" and/or 1/8" E7018 using the stringer bead technique to ASME Section 9 requirements

6. Pass Guided Bond Tests Per ASME Section 9
   a. Remove bend samples from pipe at the 10, 2, 8 & 4 o'clock positions
   b. If the material is 3/8" or thinner 10 o'clock and 8 o'clock receive root bends and 2 o'clock and 4 o'clock receive face bends. If the pipe wall thickness is over 3/8" side bends shall be performed on all samples.
   c. Weld remainder of pipe in 1G position using E7018
   d. Perform low hydrogen starts and stops
   e. Weld using stringer bead technique
   f. Weld using weave technique
   g. Chip slag, wire brush and grind as necessary to assure clean weld deposits

7. Weld Open Root Pipe - 2G Position
   a. Use 1/8" E6010
   b. Cut and ground pipe ends to single bevel edge preparations of 37 1/2°
   c. Fit together two pipe ends to a single V edge preparation within given tolerances
   c. Weld root pass to ASME Section 9 requirements
   d. Clean weld pass by chipping slag, wire brushing and grinding where necessary to assure a clean, well fused weld deposit
   e. Weld remainder of the groove using E7018 with the stringer bead technique

8. Weld Pipe Open Root Passes All Positions Using GMAW
   a. Set up GMAW equipment
   b. Adjust wire feeder drive system
   c. Adjust shielding gas system and flow rate
   d. Adjust GMAW gun to allow proper tip to work distance and gas coverage
   e. Set welding condition for short circuit transfer - Wire Feed Speed
   f. Set welding condition for short circuit transfer - Voltage
   g. Set welding condition for short circuit transfer - Tip to work Distance
   h. Weld root using a string bead technique

9. Weld Pipe With Backing Using FCAW-G
   a. Bevel pipe ends
   b. Touch up bevel face with grinder
   c. Fit and tack backing ring to one pipe end
   d. Fit other pipe over backing ring
   e. Adjust gap and tack in place
   f. Adjust shielding gas flow
   g. Adjust wire feed system
   h. Adjust power source to procedure specification
   i. Set wire feed speed to procedure specification
   j. Adjust voltage to procedure specification
   k. Adjust inductance to procedure specification
1. Adjust GMAW gun for tip to work distance and shielding gas
m. Weld according to procedure specification
The shielded metal arc welding (SMAW) process has a number of serious safety hazards associated with it:

CAUTION: Specific safety precautions must be taken to ensure a proper breathing atmosphere in all welding areas.

A. Weld only in ventilated areas. Welding shielding gases can displace the air needed for breathing. These gases are odorless and colorless, and most are heavier than air.
B. Weld in a position that will allow your head to be out of the welding plume, but will still give a good view of the welding arc. The welding plume could contain harmful fumes and gases.
C. Provide enough ventilation wherever welding and cutting are performed. Welding in confined spaces may require special procedures, such as the use of an air-supplied hood or hose mask.
D. Do not weld on dirty plate or plate contaminated with an unknown material. The fumes and gases which are formed could be hazardous to health.

CAUTION: Electrical shock can be avoided by following specific safety precautions.

A. Do not touch live electrical parts.
B. Ground all electrical equipment and the work-piece to prevent accidental electrical shocks.
C. Use the correct welding cable size for both the ground lead and the welding lead. Sustained overloading will cause cable failure and result in possible electrical shock or fire hazard.
D. Be sure all electrical connections are tight, clean, and dry. Poor electrical connections can heat up and even melt, causing dangerous arcs and sparks.
E. Keep dry. Moisture and water can conduct electricity. Fix water leaks immediately.
F. Keep welding cables and connectors in good condition. Improper or worn electrical connections can cause short circuits and can increase the chance of an electrical shock.
G. Avoid open-circuit voltage. Open-circuit voltage is much higher than welding voltage.
H. Shut off electrical power when working on welding equipment.

CAUTION: Ultraviolet and infrared rays emitted by the welding arc, as well as the spatter from the welding arc, can injure eyes and burn skin. Specific safety precautions must be followed to ensure adequate protection.
A. Wear 100% cotton clothing. It will not catch fire easily, it offers good protection from light welding spatter, and it is cooler in the summer and warmer in the winter.
B. Cover all skin surfaces. Keep shirt sleeves rolled down.
C. Wear cuffless pants to eliminate spatter traps.
D. Wear leather boots. Pant legs should cover boot tops.
E. Wear clean clothing. Oil and grease stained clothes will tend to ignite from welding spatter.
F. For more severe welding conditions, wear protective clothing such as heat resistant jackets, aprons, and leggings.
G. Wear safety glasses to protect from arc flashes, mechanical injury, or other mishaps.
H. Wear ear protection, not only where there is noise but where there is a chance that spatter or sparks could get into the ears.
I. Wear a 100% cotton cap to protect the head from sparks or spatter.
J. Wear long gauntlet leather gloves.
K. Do not touch hot metal with bare hands. Use pliers and wear leather gloves.
L. Protect nearby workers from exposure to the welding arc by putting up shields.
M. Wear a welding helmet with the correct shade of welding lens. Choose the correct lens from a filter recommendations table (see Figure 2).

<table>
<thead>
<tr>
<th>Application</th>
<th>Minimum Shade No.</th>
<th>Suggested Shade*</th>
</tr>
</thead>
<tbody>
<tr>
<td>Less than 60 amps</td>
<td>7</td>
<td>9</td>
</tr>
<tr>
<td>60 to 160 amps</td>
<td>8</td>
<td>10</td>
</tr>
<tr>
<td>160 to 250 amps</td>
<td>10</td>
<td>12</td>
</tr>
<tr>
<td>250 to 500 amps</td>
<td>11</td>
<td>14</td>
</tr>
</tbody>
</table>

* As a general rule, start with a shade that is too dark to see the arc zone. Then go to a lighter shade which gives sufficient view of the arc zone without exerting a strain on your eyes.

Figure 2 Filter Recommendations

CAUTION: Specific precautions must be taken to ensure that there is no loss of property due to welding sparks, spatter, and heat.

A. If possible, weld in specially designated areas or enclosures of noncombustible construction.
B. Remove combustibles from the work area by at least 35 feet if possible.
C. Cover combustibles that can not be removed from the welding area with tight-fitting flame-resistant material. Items that should be covered include combustible walls, floors, ceilings, and any cracks or other openings that might let a spark pass through it.

D. If welding is to be performed on or adjacent to a metal wall, ceiling, or partition, move combustibles on the other side to a safe location.

E. If combustibles can not be adequately sealed off or removed, station a fire watcher at that location. The fire watcher must have adequate fire extinguishing capabilities.

F. Do not weld on materials having either a coating or internal structure that is combustible.

G. Place hot scrap and slag in non-combustible containers.

H. Ensure that fire extinguishers are available nearby.

I. Conduct a thorough examination for evidence of a fire before leaving the work area, and continue a fire check for at least 30 minutes after the welding operation has been completed.

J. Follow all company safety procedures regarding welding in hazardous areas.

CAUTION: NEVER carry a butane lighter into a welding area. These are considered to be mini-Molotov cocktails.

DON'T CARRY A BOMB IN YOUR POCKET.
Worksheet:

1. **Choose Proper Power Source**
   
   **Step 1.** With the procedures and electrodes used at maintenance and fabrication facilities, choose a constant current (CC) power source for the Shielded Metal Arc Welding process. Some units are a combination of constant current (CC) and constant voltage (CV). This type of power source will have one or two switches to change from constant current to constant voltage.

   **Step 2.** An alternating current (AC) welding powersource could be used with the low-hydrogen family of electrodes, but choose a constant current (CC) power source if possible.

2. **Choose a Proper Electrode**
   
   **Step 1.** Choose the proper electrode for the job.

   **NOTE:** The maintenance technician uses E6010 and E7018 electrodes for most SMAW applications. The E6010 belongs to the fast-freeze family of electrodes and the E7018 belongs to the low-hydrogen family of electrodes. The E6010 provides a deep digging, deep penetrating type of weld and may be used for non-critical fabrication.

   The E7018 low-hydrogen is used as the primary electrode for fabrication and other code-quality welds. The low-hydrogen family also includes E7015, E7016, and E7048. Hydrogen in the weld deposit causesbrittleness called hydrogen embrittlement, which leads to cracking and potential weld failure.

   **Step 2.** Store the electrodes properly.

   a. **Low-hydrogen electrodes:**

      (1) These electrodes are packaged in hermetically sealed (watertight) cans. Be careful not to damage the cans which would allow air and moisture to attack the electrodes in the cans.

      (2) Once the cans are opened, store the electrodes in a rod oven at 150°F to 300°F.

      (3) Re-dry electrodes that have been outside a sealed container or a properly heated rod oven for several hours by baking them one hour at 700°F to 800°F and storing them in a rod oven.

   **NOTE:** Some welding procedures also set a time limit on the number of hours that low-hydrogen electrodes can be
kept out of a rod oven prior to use. Times vary from two to four hours, depending on the type of base metal to be welded and the humidity levels of the environment.

b. Do not store the E6010 fast-freeze electrodes in rod ovens. Fast-freeze electrodes require the presence of small amounts of moisture in order to run smoothly.

Step 3. Match the low-hydrogen family members with the polarities that are used with them (see Figure 5).

Figure 6 Typical Current Ranges for Electrodes

3. Prepare Weldment for Welding
Step 1. Oxyacetylene cut, carbon air arc gouge/cut, or machine cut/mill material to the desired shape/contour for each type of weld joint configuration needed for each welding task at hand.

a. Weld joint configuration will depend upon:
(1) Product design  
(2) Material thickness  
(3) Design strength requirements  
(4) Welding process employed  
b. SMAW weld joint configuration may be a:  
(1) Lap joint  
(2) Tee joint  
(3) Corner joint  
(4) Edge joint  
(5) Butt joint with backing  
(6) Butt joint without backing  

Step 2. Clean the areas to be welded prior to fit-up  
a. Remove rust, paint, and any other coatings by wire brushing, grinding, sanding, or filing  
b. Remove oils and greases with a safe, suitable solvent  

Step 3. Turn on the power source and set the current range (amps) on the machine at the lower end of the setting as suggested for the electrode size.  

Step 4. Obtain a piece of scrap metal of the approximate type and thickness for the weld joint to be made.  

Step 5. Practice welding on the scrap metal and adjust the current setting as needed to produce a good weld.  

4. Complete Welding Operation  
Step 1. Tack weld a joint that is defect free and can be incorporated into the finished product.  
Step 2. Use any preheat that may be required by welding codes or company procedures.  
Step 3. Make the required weld to be defect free and pleasing in appearance.  
Step 4. Use proper weld bead placement according to the weld joint design.  
a. When making seam welds, produce the weld beads by using very little oscillation or some oscillation.  
b. When making fillet welds, produce the weld beads by using some oscillation. Fillet welds in the vertical position can also be run using a weaving technique.  
c. When making groove welds, produce the weld beads by using some oscillation and/or by weaving. When making groove welds on butt joints, the amount of weaving will depend on the welding position and the weld joints. It may also be limited by applicable welding codes and/or company standards.  
Step 5. Maintain the correct welding travel speed. Weld bead size can be changed by varying the arc travel speed. Bead size and travel speed are inversely related: a decrease in travel speed will result in an increase in the weld bead height and width, and an increase in travel speed will result in a decrease in the weld bead height and width.
a. As the material thickness increases, the travel speed must slow down.

b. For a given material thickness and joint design, as the welding amperage is increased so is the arc travel speed. Conversely, as the amperage is decreased, the arc travel is slowed.

c. Higher welding speeds are attainable by using the forehand (pushing) technique.

5. Troubleshoot Welding Problems

Step 1. Be aware of the welding variables and how they can affect the weld. Below is a list of eleven welding variables for the SMAW process:

a. Type of electrode
b. Diameter of electrode
c. Type of current (AC or DC)
d. Current polarity (DC+ or DC-)
e. Current setting
f. Arc length
g. Travel speed
h. Electrode angle
i. Electromagnetic arc blow
j. Electrode manipulation technique (drag, whip)
k. Thoroughness of slag removal prior to restarts and new bead placement

Step 2. Be aware of general welding variables and how they can affect the weld:

a. Type of base metal
b. Thickness of base metal
c. Surface condition of base metal (clean, rusty, or painted)
d. Atmospheric conditions

Step 3. Be aware of any weld discontinuity and the relevant welding variables that may have caused it.
WLD-L5
Maintain Preheat and Perform Interpass
Self-Assessment No. 1

Circle the best answer.

1. What is the approximate temperature required for stress relief annealing of low-carbon steels?
   A. 950°
   B. 1000°
   C. 1950°
   D. 1700°
   E. None of the above

2. What crystalline processes result from stress relief annealing?
   A. All grains reform into softer grains
   B. Distorted grains reform into softer grains
   C. Ferrite grains reform into softer grains while pearlite grains are basically unaffected
   D. Pearlite grains reform into softer grains while ferrite grains are basically unaffected
   E. None of the above

3. Which of the following is NOT a cause of quenching cracks?
   A. Improper quenching medium
   B. Overheating during the austenitizing cycle
   C. Improper quenching angle
   D. All of the above are causes of quenching cracks
   E. None of the above answers is correct

4. Which of the following is NOT a characteristic of typical quench cracks?
   A. The fracture tends to run from the surface toward the center in a smooth curve
   B. Untempered quench cracks will not show any decarburization
   C. Tempered fracture surfaces will show a fine crystalline structure
   D. All of the above are characteristic of quench cracks
   E. None of the above
5. During tempering by color, which of the following colors represents the highest temperature?
   A. Gold
   B. Purple
   C. Dark Straw
   D. Pale Blue
   E. Violet

6. During tempering by color, which of the following colors represents the lowest temperature?
   A. Gold
   B. Purple
   C. Dark Straw
   D. Pale Blue
   E. Violet

7. What is meant by step quenching?
   A. The workpiece is first quenched in a slow medium (e.g., air) then in a fast medium (e.g., water)
   B. The workpiece is first quenched in a fast medium (e.g., water) then in a slow medium (e.g., air)
   C. The weaker parts of the workpiece are quenched separately from the main body of the workpiece
   D. The workpiece is lowered into the quenching medium in steps so that different parts of the workpiece attain different hardnnesses
   E. None of the above

8. What is the simplest thing that the technician can do to minimize the vapor-blanket stage of liquid quenching?
   A. Agitate the workpiece or the medium
   B. Heat the quenching medium to just below its boiling point
   C. Quickly insert the workpiece into the medium
   D. Slowly insert the workpiece into the medium
   E. None of the above

9. Liquid carburizing, as used in case hardening, utilizes ______ and is therefore extremely dangerous.
   A. Sodium chloride
   B. Calcium carbonate
   C. Cyanide salts
   D. Ammonia
   E. None of the above
10. Workpieces which have been cut with an oxyacetylene torch often display edge hardness because
   A. The torch was starved for oxygen
   B. The workpiece was cut at too low a temperature
   C. The wrong type of cutting torch was used
   D. Oxyacetylene torches always leave hardened edges
   E. None of the above

Maintain Preheat and Perform Interpass
Self-Assessment No. 2

Circle the best answer.

1. The hardness of a metal is its ability to resist:
   A. Permanent deformation.
   B. Oxidation.
   C. Chemical reaction.
   D. All of the above answers are forms of hardness.
   E. None of the above.

2. Rockwell testing machines test the sample metal's resistance to:
   A. Abrasion.
   B. Penetration.
   C. Elastic deformation.
   D. Electricity.
   E. None of the above.

3. Materials such as nitrided steel and hard cast irons generally have Rockwell hardness numbers in excess of
   A. B-50.
   B. B-75.
   C. B-100.
   D. B-150.
   E. None of the above.

4. During the file test, if the file will mark the metal but not cut into it, then the metal should be treated as:
   A. High-alloy steel.
   B. Mild steel.
   C. Hardened tool steel.
   D. Medium-carbon steel.
   E. None of the above.

5. Probably the best use of the spark test is to:
   A. Determine the alloy content of the sample.
   B. Identify cast iron.
   C. Compare the sample to a known piece.
   D. All of the above answers are valid.
   E. None of the above.
6. Tool steel has a Rockwell hardness of __________, while hardened tool steel has hardness number of __________.
   A. C-42 - C-64
   B. C-42 - B-65
   C. C-64 - C-42
   D. B-65 - C-42
   E. None of the above.

7. Which of the following surfaces should be avoided when hardness testing?
   A. Curved
   B. Rough
   C. Decarburized
   D. All of the above surfaces should be modified before testing the sample's hardness.
   E. None of the above.

8. For hardness testing, the minimum recommended clearance from the edge is:
   A. 1/2”
   B. 1/4”
   C. 1/8”
   D. 1/16”
   E. None of the above.

9. If a Rockwell tester is in daily use, it should be calibrated:
   A. Annually.
   B. Monthly.
   C. Weekly.
   D. Daily.
   E. Never.

10. Technician A says that, for large samples, multiple hardness test should be made and their results averaged. Technician B says that many materials vary in hardness over the length of the sample. Who is correct?
    A. Technician A only
    B. Technician B only
    C. Both technicians are correct.
    D. Neither technician is correct.

Choose the best answer.

1. The size of the bead is ________ proportional to the speed of travel.
   A. Directly
   B. Inversely
   C. Not
   D. None of the above

2. The eye shield of the welding helmet should be:
   A. Just light enough to clearly see the arc.
   B. Too dark to clearly see the arc.
   C. A minimum of #5.
   D. None of the above.

3. Welding in confined spaces may require:
   A. Air supplied hoods or hose masks.
   B. Frequent breaks.
   C. Large, high-displacement fans.
   D. All of the above.
   E. None of the above.

4. Long sleeves protect the arms against:
   A. Ultraviolet radiation.
   B. Infrared radiation.
   C. Welding splatter.
   D. All of the above.
   E. None of the above.

5. Which of the following is NOT a variable in the SMAW process?
   A. Current polarity
   B. Arc length
   C. Length of the electrode
   D. All of the above are variables in the process.
   E. None of the above.
6. Acceptable welding footwear includes:
   A. Roman sandals.
   B. Tennis shoes.
   C. Canvas boots.
   D. All of the above.
   E. None of the above.

7. A welder whose travel speed is too fast may have problems with:
   A. Excess convexity.
   B. Overlap.
   C. Porosity.
   D. All of the above.
   E. None of the above.

8. Technician A says that low-hydrogen electrodes can only be in the open air for two to four hours. Technician B says that the humidity and the base metal determine the amount of time that low-hydrogen electrodes can be exposed. Who is correct?
   A. Technician A only.
   B. Technician B only.
   C. Both Technicians A and B.
   D. Neither Technician A nor B.

9. E6010 electrodes should only be used with:
   A. DC-.
   B. DC+.
   C. AC.
   D. There is no such electrode.

10. Technician A says that they should weld only in well ventilated areas. Technician B says that welding produces gases that are odorless, colorless, and heavier than air. Who is correct?
    A. Technician A only.
    B. Technician B only.
    C. Both Technicians A and B.
    D. Neither Technician A nor B.

11. Technician A says that they should never carry butane lighters into the welding area because they may explode. Technician B says that gasoline should never be taken into the welding area, either. Who is correct?
    A. Technician A only.
    B. Technician B only.
    C. Both Technicians A and B.
    D. Neither Technician A nor B.
12. When repairing welding equipment, its electrical power should be:
   A. On.
   B. Off.
   C. On or off, depending on the repair.
   D. The SMAW machine is not electrical.

13. To prevent electrical shocks, all electrical equipment and the work piece should be:
   A. On rubber work mats.
   B. Elevated off the floor.
   C. Grounded.
   D. All of the above.
   E. None of the above.

14. Which of the following electrodes is NOT in the low-hydrogen family?
   A. E7015
   B. E7016
   C. E7018
   D. All of the above are low-hydrogen electrodes.
   E. All of the above are fast-freeze electrodes.

15. Technician A says that undercutting is caused by too much current. Technician B says that wet electrodes can also cause undercutting. Who is correct?
   A. Technician A only.
   B. Technician B only.
   C. Both Technicians A and B.
   D. Neither Technician A nor B.

16. Fire inspections should be continued for at least _________ after completion of the welding.
   A. Fifteen minutes
   B. Thirty minutes
   C. One hour
   D. Two hours

17. The welding area should be:
   A. Isolated from other workers by shields.
   B. At least 35 feet from combustible materials.
   C. Dry.
   D. All of the above.
   E. None of the above.
18. Seam welds generally require __________ oscillation.
   A. No
   B. Very little
   C. Moderate
   D. Great

19. Technician A says that all electrical connections must be tight, clean, and dry. Technician B says that poor electrical connections can heat up and even melt. Who is correct?
   A. Technician A only.
   B. Technician B only
   C. Both Technicians A and B
   D. Neither Technician A nor B

20. If it is impractical to properly remove combustible materials from the vicinity of the welding, then:
   A. Do not weld
   B. Take frequent breaks to inspect the area for fires
   C. Station a fire watcher near the combustible materials
   D. Any of the above is acceptable
   E. None of the above

21. E7018 electrodes should never be used with
   A. DC-
   B. DC+
   C. AC
   D. There is no such electrode

22. Areas to be welded should be thoroughly cleaned
   A. Prior to fit-up
   B. By brushing, sanding, or grinding
   C. With safe solvents
   D. All of the above, as necessary
   E. None of the above

23. Technician A says that porosity can be caused by a current setting that is too low. Technician B says that porosity can be caused by too long an arc. Who is correct?
   A. Technician A only
   B. Technician B only
   C. Both Technicians A and B
   D. Neither Technician A nor B
24. Low-hydrogen electrodes may be stored
   A. In sealed cans or heated rod ovens
   B. Under water
   C. In petroleum jelly
   D. Any of the above
   E. None of the above

25. As the material being welded increases in thickness, the travel speed of the weld must
   A. Increase
   B. Decrease
   C. Either A or B, depending on the desired effect
   D. Stay the same
   E. None of the above

WELDER SERIES
MASTER Technical Module No. WLD-L06

SUBJECT: WELDING TECHNICIAN
TIME: 8 HOURS

- DUTY: SHIELDED METAL ARC WELDING (SMAW) (BASIC)
- TASK: Use the Carbon Arc Process to Cut and Gouge Base Weld Materials

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Cut cast iron with air carbon arc process;
B. Cut carbon steels using shielded metal arc cutting process; and,
C. Gouge carbon steels with air carbon arc process.

INSTRUCTIONAL MATERIALS:

Student Workbook
Two written exams on air carbon arc cutting processes
Transparencies prepared to emphasize each subject
Hobart Institute Video Material
Miller Module Method Video materials
The classroom handouts will consist of student worksheets and alloy charts
Personal protective equipment
Shielded Metal Arc Welding machine
Welding shop tools
Selection of base metals for welding and cutting
Selection of filler metals and electrode wire
MASTER Handout No. 1 (WLD-L6-H01)
MASTER Handout No. 2 (WLD-L6-HO2)
MASTER Handout No. 3 (WLD-L6-HO3)
MASTER Handout No. 4 (WLD-L6-HO4)
MASTER Handout No. 5 (WLD-L6-HO5)
MASTER Handout No. 6 (WLD-L6-HO6)
MASTER Laboratory Aid (WLD-L6-LA)
MASTER Laboratory Worksheet (WLD-L6-LW)
MASTER Self-Assessment No. 1
MASTER Self-Assessment No. 2
MASTER Self-Assessment No. 3

TEXT:

OTHER:

*Competency Standards*, American Welding Society, Latest Edition

STUDENT PREPARATION:

Student must demonstrate appropriate communication skills and understand principles of basic physical science and mathematics as verified by placement test or completion of required prerequisite courses. Students should complete the following modules:

- **WLD-L1** “Preheat Joint”
- **WLD-L2** “Initiate Welding Process”
- **WLD-L3** “Perform Weld Sequence”
- **WLD-L4** “Control Weld Technique”
- **WLD-L5** “Maintain Preheat and Perform Interpass”

INTRODUCTION:

The Course Introduction will Include:
An overview of air carbon arc techniques for cutting and gouging
A discussion of training activities resulting in an increase of skill and knowledge in related program areas.

PRESENTATION OUTLINE:

Instructor Topics:
A. Cutting cast iron, etc. with air carbon arc process
B. Cutting carbon steels using air carbon arc process
C. Gouging carbon steels with air carbon process
D. Perform interpass preparation

Student Activities:
A. Understand cutting processes for cast iron, and carbon steels
B. Use air carbon arc in cutting and gouging
C. Perform multiple cutting operations
D. Select materials for optimum performance
E. Adjust equipment for performance and quality
F. Practice interpass preparation

PRACTICAL APPLICATION:

The student will gain knowledge and experience with cutting and gouging methods for air carbon arc welding. All work will be supervised by instructor and followed by a critique of methods, techniques and outcomes.

EVALUATION AND/OR VERIFICATION:

Written examinations will be given in this module to determine student progress. Practical exercises will be supervised and evaluated by instructor.

SUMMARY:

Cutting methods must be mastered by the multi-skilled welder who wishes to be considered as a professional. Air carbon arc cutting (CAC-A) is a physical means of removing base metal or weld metal by using a carbon electrode, an electric arc and compressed air. In the air carbon arc process the intense heat of the arc between the carbon electrode and the workpiece melts a portion of the base metal, or weld. Simultaneously a jet of air is passed through the arc, of sufficient volume and velocity to blow away the molten material. This sequence can be repeated until the required groove or cut has been obtained.

Since the CAC-A process does not depend on oxidation to maintain the cut, it is capable of cutting stainless steel, many copper alloys and cast iron. Material can be removed approximately five times faster by arc gouging than by chipping. The cost of operating gouging equipment is generally less than for chipping hammers or gas-cutting torches, and
the arc-gouging equipment also requires less space. An arc-gouged surface is clean and smooth and can usually be welded without further preparation. The process has several drawbacks, however. It is not as good as other processes for through-cutting, and large volumes of compressed air are required. Increased hardness produced on cast iron and air-hardenable materials may be objectionable.

NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-L7) dealing with applying welders identification.
WLD-L6-HO1
Use the Carbon Arc Process to Cut and Gouge Base Weld Materials
Attachment 1: MASTER Handout No. 1

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Cut cast iron with air carbon arc process;
B. Cut carbon steels using shielded metal arc cutting process; and,
C. Gouge carbon steels with air carbon arc process.

MODULE OUTLINE:

Instructor Topics:
A. Cutting cast iron, etc. with air carbon arc process
B. Cutting carbon steels using air carbon arc process
C. Gouging carbon steels with air carbon arc process
D. Perform interpass preparation

Student Activities:
A. Understand cutting processes for cast iron, and carbon steels
B. Use air carbon arc in cutting and gouging
C. Perform multiple cutting operations
D. Select materials for optimum performance
E. Adjust equipment for performance and quality
F. Practice interpass preparation
OBJECTIVE(S):

Upon completion of this unit the student will be able to:

a. Discuss the reasons for heat treating;
b. Discuss the time/temperature chart
c. List the different quenching media
d. Estimate metal heat temperature by color; and
e. List reasons for stress relieving workpieces.

MODULE OUTLINE:

I. Discuss the Reasons for Heat Treating
   A. Hardening for utility
   B. Tempering for toughness without brittleness

II. Discuss the Time/Temperature Chart

III. List the Different Quenching Media (In order of severity or speed of quenching)
   A. Brine (water and sodium chloride or sodium hydroxide)
   B. Water
   C. Fused (liquid) salts
   D. Molten lead
   E. Soluble oil and water
   F. Oil
   G. Air

IV. Estimate Metal Heat Temperature by Color
   A. Use of temper color chart for tempering
   B. *Chicken Wire* markings warn of overheating

V. List Reasons for Stress Relieving Workpieces
   A. Increased machinability
   B. Increased workability in cold processes

VI. Special Safety Concerns of Heat Treating
   A. Protective Gear against...
      1. Heat
      2. Fumes
      3. Concussion
   B. Toxicity of Certain Media

VII. Special Problems in Heat Treating
   A. Britteness
   B. Distortion
   C. Discoloration (sometimes unimportant)
   D. Inadvertent heat treating
OBJECTIVE(S):

Upon completion of this unit the student will be able to:

a. Perform file test to test for metal hardness;
b. Use other tests to identify metals; and,
c. Perform Rockwell hardness tests.

MODULE OUTLINE:

I. Perform File Test to Test for Metal Hardness
   A. Imprecise method, good for rough estimates only
   B. Requires more experienced machinist

II. Use Other Tests to Identify Metals
   A. High-carbon steels show more spark bursts than do low-carbon steels.
   B. Non-ferrous metals
      1. Aluminum
      2. Magnesium
      3. Brass
      4. Bronze
      5. Nickel
      6. Tin
      7. Others

III. Perform Rockwell Hardness Tests
    A. Ferrous metals
    B. Non-ferrous metals

IV. Perform Brinell Hardness Tests
    A. Ferrous metals
    B. Non-ferrous metals

V. Other Hardness Tests as Specified by the Instructor
   A. Ferrous metals
   B. Non-ferrous metals

Student laboratory exercises as assigned by Instructor.

**BASIC SHIELDED METAL ARC WELDING (SMAW) AND OXY-FUEL GAS CUTTING**

1. Define Selected Welding Terms Per AWS A3.0
   a. Define arc welding process terms
   b. Define standard joint terminology
   c. Define common weld discontinuities
   d. Name welding equipment, supply and consumables
   e. Define common shop terms including proper equipment names
   f. Define material terms
   g. Define common metallurgy terms

2. Describe AWS Code for Mild Steel Electrodes
   a. List, describe and define
   b. List low hydrogen electrodes
   c. List iron powder electrodes
   d. Describe electrode by welding position
   e. Describe electrode by current and polarity
   f. Describe electrode by penetration

3. Set Up Welding Machine to Required Polarity
   a. List polarities for commonly used electrodes
   b. Describe both polarities
   c. Describe advantages and disadvantages of alternating current

4. Use Correct Start and Stop Techniques for SMAW Electrodes
   a. Describe and demonstrate start for non-low hydrogen SMAW electrode
   b. Describe and demonstrate stop for non-low hydrogen SMAW electrodes with filled craters
   c. List reasons for the importance of low hydrogen in weld metal
   d. Explain the reason for low hydrogen starts and stops and how they work and why required specifically with E7018

5. Set Up Equipment for Shielded Metal Arc Welding
   a. Inspect area for safety
   b. Adjust current and polarity for specific job requirements
   c. Choose type and size of electrode
   d. Wear applicable personal safety equipment

6. Strike an Arc, Run Continuous Stringer Bead
   a. Stand and position oneself correctly
   b. Operate welding helmet
7. **Weld Using Weave Technique**
   a. Maintain required weld quality
   b. Maintain proper weld width uniformly
   c. Maintain proper travel speed
   d. Match correct oscillation for various electrodes
   e. Match applications to weave techniques, as they apply
   f. List the advantages and disadvantages of weave techniques
   g. List the advantages and disadvantages of stringer techniques
   h. Perform weld using weave technique
   i. Concentrate on dwell times at edges of weld pool

8. **Weld Multi-Layer Buildup**
   a. Weld a dam to outline area being welded for each layer
   b. Apply each layer neatly, straight and with good fusion throughout
   c. Chip slag after each pass
   d. Weld passes which over lap to crown of last weld bead
   e. Demonstrate control of bead height

9. **Set Up and Shut Down Oxy-Fuel Equipment**
   a. Follow manufacturer's recommended practice
   b. Inspect equipment and work area for safety
   c. Assemble oxy-fuel equipment
   d. Open fuel gas cylinder ½ turn
   e. Open oxygen as cylinder all the way
   f. Adjust fuel gas and oxygen working pressure per manufacturer's recommendation
   g. Purge lines one at a time. One second for each 10 feet of hose length

10. **Cut Steel Plate Using Oxy-Fuel Equipment**
    a. Make manual free hand straight line cuts
    b. Cut manually straight lines using cutting jib
    c. Bevel plate with manual oxy-fuel equipment
    d. Manually cut blind holes in thick material
    e. Manually cut sheet metal with minimal distortion
Use the Carbon Arc Process to Cut and Gouge Base Weld Materials
Attachment 5: MASTER Handout No. 5

Student laboratory exercises as assigned by Instructor.

ADVANCED SHIELDED METAL ARC WELDING (SMAW) AND CUTTING

1. Weld Single V Groove Welds With Open Roots From One Side
   a. Bevel 3/8" steel plate to 37 1/2° using oxy-fuel gas cutting e.g.
   b. Use grinder to remove oxide larger and smooth plate
   c. Use grinder to create root face of 3/32" to 1/8"
   d. Tack single V groove joint with 3/32" root opening
   e. Place joint in the 1G position
   f. Place joint in 2G position once task is mastered
   g. Place joint in 3G position once task is mastered
   h. Place joint in 4G position once task is mastered
   i. Weld the root with Direct Current Electrode Positive using 1/8" E6010. Use tight arc length and keyhole technique to produce a well fused root bead extending 1/16" above the plate.
   j. Weld chipped side slag and the root bead is wire brushed
   k. Fill the balance of the groove with 3/32", 1/8" and/or 5/32" E7018 using the stringer bead technique
   l. Visual test finished weld and root face bends evaluated to AWS D1.1 criteria

2. Weld Various Diameters of Pipe to Plate
   a. Inspect area for safety
   b. Place plate flat on welding table
   c. Place 3" pipe vertically on top of plate and tacked in place
   d. Leave weld coupon in the 2F fixed position
   e. Apply a 3/8" fillet weld using 1/8" E7018 and a stringer bead technique
   f. Visually inspect weld to AWS D1.1
   g. Fill pipe with water for 24 hours
   h. Check for leak

3. Produce SMAW Pipe - 5G Position
   a. Measure the pipe
   b. Mark the cut line with a wrap around and soapstone
   c. Cut the bevel using oxy-fuel gas equipment
   d. Clean the bevel face with a grinder, remove all oxide and smooth bevel face
   e. Use the grinder to add a root face of from 3/32" to 1/8"
   f. Tack the single V groove pipe joint with a 3/32" root opening
g. Place the joint in the 5G fixed position, using an 1/8" E6010 and a keyhole technique. Weld the root pass upward producing a root weld which is well fused and has a 1/16" weld reinforcement above the plate.

h. Chip slag and wire brush.

i. Grind any lack of fusion and/or high spots.

j. Weld the balance of the groove upward with 3/32" or 1/8" E7018 using the stringer bead technique.

k. Visually inspect weld on the root and face sides to ASME Section 9.

l. Remove four guided bend specimens from 2:00, 4:00, 8:00 and 10:00 positions prepared and two & eight are root bend specimens. Four & ten are face bend specimens. Guided bend tests are evaluated to ASME Section 9 criteria.

4. Produce SMAW - 2G Position Groove Welds

   a. Measure the pipe.

   b. Mark the cut line with a wrap around and soapstone.

   c. Cut the bevel using oxy-fuel gas equipment.

   d. Clean the bevel face with a grinder, remove all oxide and smooth bevel face.

   e. Use the grinder to add a root face of from 3/32" to 1/8".

   f. Tack the single V groove pipe joint with a 3/32" root opening.

   g. Weld pipe joint.

   h. Place the joint in the 2G fixed position, using an 1/8" E6010 and a keyhole technique. Weld the root pass upward producing a root weld which is well fused and has a 1/16" weld reinforcement above the plate.

   i. Chip slag and wire brush. Grind any lack of fusion and/or high spots.

   j. Weld balance of the groove upward with 3/32" or 1/8" E7018 using the stringer bead technique.

   k. Visually inspect weld on the root and face sides to ASME Section 9.

   l. Remove four guided bend specimens from 2:00, 4:00, 8:00 and 10:00 positions prepared and two & eight are root bend specimens. Four & ten are face bend specimens. Guided bend tests are evaluated to ASME Section 9 criteria.

5. Roll Weld Pipe - SMAW

   a. Measure the pipe.

   b. Mark the cut line with a wrap around and soapstone.

   c. Cut the bevel using oxy-fuel gas equipment.

   d. Clean the bevel face with a grinder, remove all oxide and smooth bevel face.

   e. Use the grinder to add a root face of from 3/32" to 1/8".

   f. Tack the single V groove pipe joint with a 3/32" root opening.

   g. Roll weld pipe.

   h. Place pipe coupon on workbench in the 1G roll welding position.

   i. Weld the root bead using 1/8" E6010 and the keyhole technique. The weld is performed in the 2:00 to 12:30 position.

   j. Chip slag and wire brush. Grind any lack of fusion and/or high spots.
k. Weld balance of groove upward with 3/32" or 1/8" E7018 using the weave technique
l. Visually inspect weld on the root and face sides to ASME Section 9
m. Remove four guided bend specimens from 2:00, 4:00, 8:00 and 10:00 positions prepared and two & eight are root bend specimens. Four & ten are face bend specimens. Guided bend tests are evaluated to ASME Section 9 criteria

6. Produce SMAW Pipe - 5G Position
   a. Measure the pipe and
   b. Mark the cut line with a wrap around and soapstone
   c. Cut the bevel using oxy-fuel gas equipment
   d. Clean the bevel face with a grinder, remove all oxide and smooth bevel face
   e. Use the grinder to add a root face of from 3/32" to 1/8"
   f. Weld pipe
   g. Tack the single V groove pipe joint with a 3/32" root opening
   h. Place the joint in the 5G fixed position, using an 1/8" E6010 and a keyhole technique
   i. Weld the root pass upward producing a root weld which is well fused and has a 1/16" weld reinforcement above the plate
   j. Chip slag and wire brush. Grind any lack of fusion and/or high spots
   k. Weld balance of groove upward with 3/32" or 1/8" E7018 using the weave technique
   l. Visually inspect weld on the root and face sides to ASME Section 9
   m. Remove four guided bend specimens from 2:00, 4:00, 8:00 and 10:00 positions prepared and two & eight are root bend specimens. Four & ten are face bend specimens. Guided bend tests are evaluated to ASME Section 9 criteria

7. Produce SMAW Pipe - 6G Position
   a. Measure the pipe
   b. Mark the cut line with a wrap around and soapstone
   c. Cut the bevel using oxy-fuel gas equipment
   d. Clean the bevel face with a grinder, remove all oxide and smooth bevel face
   e. Use the grinder to add a root face of from 3/32" to 1/8"
   f. Tack the single V groove pipe joint with a 3/32" root opening
   g. Place the joint in the 6G fixed position, using an 1/8" E6010 and a keyhole technique
   h. Weld the root pass upward producing a root weld which is well fused and has a 1/16" weld reinforcement above the plate
   i. Chip slag and wire brush. Grind any lack of fusion and/or high spots
   j. Weld balance of groove upward with 3/32" or 1/8" E7018 using the stringer bead technique
   k. Visually inspect weld on the root and face sides to ASME Section 9
1. Remove four guided bend specimens from 2:00, 4:00, 8:00 and 10:00 positions prepared and two & eight are root bend specimens. Four & ten are face bend specimens. Guided bend tests are evaluated to ASME Section 9 criteria.

8. Create SMAW Pipe to ASME Section 9
   a. Bevel two pieces of pipe to 30° bevel angle using oxy-fuel gas cutting equipment
   b. Clean bevel face and a 3/32" root face is applied using a hand held grinder
   c. Set welding condition to weld open roots
   d. Tack pipe nipples together to form a V groove with a 1/8" root opening
   e. Place pipe in the 5G fixed position. The root pass is welded and cleaned by wire brushing
   f. Weld balance of the V groove with this procedure
   g. Visual inspection is made and evaluated by ASME Section 9
   h. Make four bend samples and evaluate by ASME Section 9

9. Interpret Welding Procedures
   a. Identify process
   b. Name joint design
   c. List base material
   d. Give dimensions for root treatment
   e. Name electrode size and type being used
   f. List filler material (if required), classification and specification
   g. Identify shielding gas - type and mixture
   h. List pre and post heat and interpass temperature
   i. Describe initial and interpass cleaning
   j. Describe technique which is used
   k. Produce single or multiple pass weld
   l. Choose current type
   m. Set current amperage
   n. Set current polarity
   o. Set voltage
Student laboratory exercises as assigned by Instructor.

PIPE WELDING - SMAW

1. Produce End Preparations
   a. Produce end preparations with oxy-fuel cutting
   b. Produce end preparations with plasma cutting
   c. Produce end preparations with mechanical cutting
   d. Produce end preparations with grinding

2. Fit and Tack Weld Pipe
   a. Cut and single bevel pipe to 37 1/2°
   b. Ground bevel face and touch up to within tolerances
   c. Check that pipe ends are square within given tolerances
   d. Prepare root face within given tolerances
   e. Align pipe to within given tolerances
   f. Set root opening to within given tolerances
   g. Tack pipe according to welding procedure specification - maintaining root opening

3. Roll Weld Open Root Pass on Pipe - 1G Position
   a. Fit up and tack pipe joint using 1/8" E6010 electrode, weld the root pass on pipe in the 1 o'clock to (2:00 o'clock position) according to procedure using the roll welding technique
   b. Weld remainder of pipe in the 1G roll welding position with E6010
   c. Weld the remaining portion of the groove using the weave technique using 5/32" E6010 electrode roll

4. Weld Open Root Pipe Joint - 2G Position
   a. Weld using 1/8" E6010
   b. Cut and grind pipe ends will be to single bevel edge preparations of 37 1/2°
   c. Fit together the two pipe ends to a single V edge preparation with given tolerances
   d. Weld root pass to ASME Section 9 requirements
   e. Fill balance of the groove with E6010 using the stringer technique to ASME Section 9 requirements

5. Weld Open Root Pipe - 5G Position
   a. Fit and tack weld pipe to within tolerances
   b. Place pipe in the 5G position
   c. Weld the rootpass using 1/8" E6010 to ASME Section 9 requirements
   d. Grind the finished root pass to remove high spots and any slag at weld toes
e. Weld the remainder of the groove using 3/32" and/or 1/8" E7018 using the stringer bead technique to ASME Section 9 requirements

6. Pass Guided Bond Tests Per ASME Section 9
   a. Remove bend samples from pipe at the 10, 2, 8 & 4 o'clock positions
   b. If the material is 3/8" or thinner 10 o'clock and 8 o'clock receive root bends and 2 o'clock and 4 o'clock receive face bends. If the pipe wall thickness is over 3/8" side bends shall be performed on all samples.
   c. Weld remainder of pipe in 1G position using E7018
   d. Perform low hydrogen starts and stops
   e. Weld using stringer bead technique
   f. Weld using weave technique
   g. Chip slag wire brush and grind as necessary to assure clean weld deposits

7. Weld Open Root Pipe - 2G Position
   a. Use 1/8" E6010
   b. Cut and ground pipe ends to single bevel edge preparations of 37 1/2°
   c. Fit together two pipe ends to a single V edge preparation within given tolerances
   c. Weld root pass to ASME Section 9 requirements
   d. Clean weld pass by chipping slag, wire brushing and grinding where necessary to assure a clean, well fused weld deposit
   e. Weld remainder of the groove using E7018 with the stringer bead technique

8. Weld Pipe Open Root Passes All Positions Using GMAW
   a. Set up GMAW equipment
   b. Adjust wire feeder drive system
   c. Adjust shielding gas system and flow rate
   d. Adjust GMAW gun to allow proper tip to work distance and gas coverage
   e. Set welding condition for short circuit transfer - Wire Feed Speed
   f. Set welding condition for short circuit transfer - Voltage
   g. Set welding condition for short circuit transfer - Tip to work Distance
   h. Weld root using a string bead technique

9. Weld Pipe With Backing Using FCAW-G
   a. Bevel pipe ends
   b. Touch up bevel face with grinder
   c. Fit and tack backing ring to one pipe end
   d. Fit other pipe over backing ring
   e. Adjust gap and tack in place
   f. Adjust shielding gas flow
   g. Adjust wire feed system
   h. Adjust power source to procedure specification
   i. Set wire feed speed to procedure specification
   j. Adjust voltage to procedure specification
   k. Adjust inductance to procedure specification
1. Adjust GMAW gun for tip to work distance and shielding gas
m. Weld according to procedure specification
The shielded metal arc welding (SMAW) process has a number of serious safety hazards associated with it:

**CAUTION:** Specific safety precautions must be taken to ensure a proper breathing atmosphere in all welding areas.

A. Weld only in ventilated areas. Welding shielding gases can displace the air needed for breathing. These gases are odorless and colorless, and most are heavier than air.
B. Weld in a position that will allow your head to be out of the welding plume, but will still give a good view of the welding arc. The welding plume could contain harmful fumes and gases.
C. Provide enough ventilation wherever welding and cutting are performed. Welding in confined spaces may require special procedures, such as the use of an air-supplied hood or hose mask.
D. Do not weld on dirty plate or plate contaminated with an unknown material. The fumes and gases which are formed could be hazardous to health.

**CAUTION:** Electrical shock can be avoided by following specific safety precautions.

A. Do not touch live electrical parts.
B. Ground all electrical equipment and the work-piece to prevent accidental electrical shocks.
C. Use the correct welding cable size for both the ground lead and the welding lead. Sustained overloading will cause cable failure and result in possible electrical shock or fire hazard.
D. Be sure all electrical connections are tight, clean, and dry. Poor electrical connections can heat up and even melt, causing dangerous arcs and sparks.
E. Keep dry. Moisture and water can conduct electricity. Fix water leaks immediately.
F. Keep welding cables and connectors in good condition. Improper or worn electrical connections can cause short circuits and can increase the chance of an electrical shock.
G. Avoid open-circuit voltage. Open-circuit voltage is much higher than welding voltage.
H. Shut off electrical power when working on welding equipment.

**CAUTION:** Ultraviolet and infrared rays emitted by the welding arc, as well as the spatter from the welding arc, can injure eyes and burn skin. Specific safety precautions must be followed to ensure adequate protection.
A. Wear 100% cotton clothing. It will not catch fire easily, it offers good protection from light welding spatter, and it is cooler in the summer and warmer in the winter.

B. Cover all skin surfaces. Keep shirt sleeves rolled down.

C. Wear cuffless pants to eliminate spatter traps.

D. Wear leather boots. Pant legs should cover boot tops.

E. Wear clean clothing. Oil and grease stained clothes will tend to ignite from welding spatter.

F. For more severe welding conditions, wear protective clothing such as heat resistant jackets, aprons, and leggings.

G. Wear safety glasses to protect from arc flashes, mechanical injury, or other mishaps.

H. Wear ear protection, not only where there is noise but where there is a chance that spatter or sparks could get into the ears.

I. Wear a 100% cotton cap to protect the head from sparks or spatter.

J. Wear long gauntlet leather gloves.

K. Do not touch hot metal with bare hands. Use pliers and wear leather gloves.

L. Protect nearby workers from exposure to the welding arc by putting up shields.

M. Wear a welding helmet with the correct shade of welding lens. Choose the correct lens from a filter recommendations table (see Figure 2).

---

**FILTER RECOMMENDATIONS**
(adapted from ANSI Safety Standard Z49.1-88)

<table>
<thead>
<tr>
<th>SMAW Application</th>
<th>Minimum Shade No.</th>
<th>Suggested Shade*</th>
</tr>
</thead>
<tbody>
<tr>
<td>Less than 60 amps</td>
<td>7</td>
<td>9</td>
</tr>
<tr>
<td>60 to 160 amps</td>

<td>14</td>
</tr>
</tbody>
</table>

* As a general rule, start with a shade that is too dark to see the arc zone. Then go to a lighter shade which gives sufficient view of the arc zone without exerting a strain on your eyes.

---

**Figure 2** Filter Recommendations

---

**CAUTION:** Specific precautions must be taken to ensure that there is no loss of property due to welding sparks, spatter, and heat.

A. If possible, weld in specially designated areas or enclosures of noncombustible construction.

B. Remove combustibles from the work area by at least 35 feet if possible.
C. Cover combustibles that can not be removed from the welding area with tight-fitting flame-resistant material. Items that should be covered include combustible walls, floors, ceilings, and any cracks or other openings that might let a spark pass through it.

D. If welding is to be performed on or adjacent to a metal wall, ceiling, or partition, move combustibles on the other side to a safe location.

E. If combustibles can not be adequately sealed off or removed, station a fire watcher at that location. The fire watcher must have adequate fire extinguishing capabilities.

F. Do not weld on materials having either a coating or internal structure that is combustible.

G. Place hot scrap and slag in non-combustible containers.

H. Ensure that fire extinguishers are available nearby.

I. Conduct a thorough examination for evidence of a fire before leaving the work area, and continue a fire check for at least 30 minutes after the welding operation has been completed.

J. Follow all company safety procedures regarding welding in hazardous areas.

CAUTION: NEVER carry a butane lighter into a welding area. These are considered to be mini-Molotov cocktails.

DON'T CARRY A BOMB IN YOUR POCKET.
Worksheet:

1. **Choose Proper Power Source**
   
   **Step 1.** With the procedures and electrodes used at maintenance and fabrication facilities, choose a constant current (CC) power source for the Shielded Metal Arc Welding process. Some units are a combination of constant current (CC) and constant voltage (CV). This type of power source will have one or two switches to change from constant current to constant voltage.

   **Step 2.** An alternating current (AC) welding power source could be used with the low-hydrogen family of electrodes, but choose a constant current (CC) power source if possible.

2. **Choose a Proper Electrode**

   **Step 1.** Choose the proper electrode for the job.

   **NOTE:** The maintenance technician uses E6010 and E7018 electrodes for most SMAW applications. The E6010 belongs to the fast-freeze family of electrodes and the E7018 belongs to the low-hydrogen family of electrodes. The E6010 provides a deep digging, deep penetrating type of weld and may be used for non-critical fabrication.

   The E7018 low-hydrogen is used as the primary electrode for fabrication and other code-quality welds. The low-hydrogen family also includes E7015, E7016, and E7048. Hydrogen in the weld deposit causes brittleness called hydrogen embrittlement, which leads to cracking and potential weld failure.

   **Step 2.** Store the electrodes properly.

   **a. Low-hydrogen electrodes:**

   (1) These electrodes are packaged in hermetically sealed (watertight) cans. Be careful not to damage the cans which would allow air and moisture to attack the electrodes in the cans.

   (2) Once the cans are opened, store the electrodes in a rod oven at 150°F to 300°F.

   (3) Re-dry electrodes that have been outside a sealed container or a properly heated rod oven for several hours by baking them one hour at 700°F to 800°F and storing them in a rod oven.

   **NOTE:** Some welding procedures also set a time limit on the number of hours that low-hydrogen electrodes can be
kept out of a rod oven prior to use. Times vary from two to four hours, depending on the type of base metal to be welded and the humidity levels of the environment.

b. Do not store the E6010 fast-freeze electrodes in rod ovens. Fast-freeze electrodes require the presence of small amounts of moisture in order to run smoothly.

Step 3. Match the low-hydrogen family members with the polarities that are used with them (see Figure 5).

Figure 6 Typical Current Ranges for Electrodes

3. **Prepare Weldment for Welding**

Step 1. Oxyacetylene cut, carbon air arc gouge/cut, or machine cut/mill material to the desired shape/contour for each type of weld joint configuration needed for each welding task at hand.

a. Weld joint configuration will depend upon:
(1) Product design
(2) Material thickness
(3) Design strength requirements
(4) Welding process employed

b. SMAW weld joint configuration may be a:
(1) Lap joint
(2) Tee joint
(3) Corner joint
(4) Edge joint
(5) Butt joint with backing
(6) Butt joint without backing

Step 2. Clean the areas to be welded prior to fit-up
   a. Remove rust, paint, and any other coatings by wire brushing, grinding, sanding, or filing
   b. Remove oils and greases with a safe, suitable solvent

Step 3. Turn on the power source and set the current range (amps) on the machine at the lower end of the setting as suggested for the electrode size.

Step 4. Obtain a piece of scrap metal of the approximate type and thickness for the weld joint to be made.

Step 5. Practice welding on the scrap metal and adjust the current setting as needed to produce a good weld.

4. Complete Welding Operation
   Step 1. Tack weld a joint that is defect free and can be incorporated into the finished product.
   Step 2. Use any preheat that may be required by welding codes or company procedures.
   Step 3. Make the required weld to be defect free and pleasing in appearance.
   Step 4. Use proper weld bead placement according to the weld joint design.
      a. When making seam welds, produce the weld beads by using very little oscillation or some oscillation.
      b. When making fillet welds, produce the weld beads by using some oscillation. Fillet welds in the vertical position can also be run using a weaving technique.
      c. When making groove welds, produce the weld beads by using some oscillation and/or by weaving. When making groove welds on butt joints, the amount of weaving will depend on the welding position and the weld joints. It may also be limited by applicable welding codes and/or company standards.
   Step 5. Maintain the correct welding travel speed. Weld bead size can be changed by varying the arc travel speed. Bead size and travel speed are inversely related: a decrease in travel speed will result in an increase in the weld bead height and width, and an increase in travel speed will result in a decrease in the weld bead height and width.
a. As the material thickness increases, the travel speed must slow down.
b. For a given material thickness and joint design, as the welding amperage is increased so is the arc travel speed. Conversely, as the amperage is decreased, the arc travel is slowed.
c. Higher welding speeds are attainable by using the forehand (pushing) technique.

5. Troubleshoot Welding Problems

Step 1. Be aware of the welding variables and how they can affect the weld. Below is a list of eleven welding variables for the SMAW process:

a. Type of electrode
b. Diameter of electrode
c. Type of current (AC or DC)
d. Current polarity (DC+ or DC-)
e. Current setting
f. Arc length
g. Travel speed
h. Electrode angle
i. Electromagnetic arc blow
j. Electrode manipulation technique (drag, whip)
k. Thoroughness of slag removal prior to restarts and new bead placement

Step 2. Be aware of general welding variables and how they can affect the weld:

a. Type of base metal
b. Thickness of base metal
c. Surface condition of base metal (clean, rusty, or painted)
d. Atmospheric conditions

Step 3. Be aware of any weld discontinuity and the relevant welding variables that may have caused it.
Use the Carbon Arc Process to Cut and Gouge Base Weld Materials
Self-Assessment No. 1

Circle the best answer.

1. What is the approximate temperature required for stress relief annealing of low-carbon steels?
   A. 950°
   B. 1000°
   C. 1950°
   D. 1700°
   E. None of the above

2. What crystalline processes result from stress relief annealing?
   A. All grains reform into softer grains
   B. Distorted grains reform into softer grains
   C. Ferrite grains reform into softer grains while pearlite grains are basically unaffected
   D. Pearlite grains reform into softer grains while ferrite grains are basically unaffected
   E. None of the above

3. Which of the following is NOT a cause of quenching cracks?
   A. Improper quenching medium
   B. Overheating during the austenitizing cycle
   C. Improper quenching angle
   D. All of the above are causes of quenching cracks
   E. None of the above answers is correct

4. Which of the following is NOT a characteristic of typical quench cracks?
   A. The fracture tends to run from the surface toward the center in a smooth curve
   B. Untempered quench cracks will not show any decarburization
   C. Tempered fracture surfaces will show a fine crystalline structure
   D. All of the above are characteristic of quench cracks
   E. None of the above
5. During tempering by color, which of the following colors represents the highest temperature?
   A. Gold
   B. Purple
   C. Dark Straw
   D. Pale Blue
   E. Violet

6. During tempering by color, which of the following colors represents the lowest temperature?
   A. Gold
   B. Purple
   C. Dark Straw
   D. Pale Blue
   E. Violet

7. What is meant by step quenching?
   A. The workpiece is first quenched in a slow medium (e.g., air) then in a fast medium (e.g., water)
   B. The workpiece is first quenched in a fast medium (e.g., water) then in a slow medium (e.g., air)
   C. The weaker parts of the workpiece are quenched separately from the main body of the workpiece
   D. The workpiece is lowered into the quenching medium in steps so that different parts of the workpiece attain different hardnesses
   E. None of the above

8. What is the simplest thing that the technician can do to minimize the vapor-blanket stage of liquid quenching?
   A. Agitate the workpiece or the medium
   B. Heat the quenching medium to just below its boiling point
   C. Quickly insert the workpiece into the medium
   D. Slowly insert the workpiece into the medium
   E. None of the above

9. Liquid carburizing, as used in case hardening, utilizes ________ and is therefore extremely dangerous.
   A. Sodium chloride
   B. Calcium carbonate
   C. Cyanide salts
   D. Ammonia
   E. None of the above
10. Workpieces which have been cut with an oxyacetylene torch often display edge hardness because
A. The torch was starved for oxygen
B. The workpiece was cut at too low a temperature
C. The wrong type of cutting torch was used
D. Oxyacetylene torches always leave hardened edges
E. None of the above

Use the Carbon Arc Process to Cut and Gouge Base Weld Materials
Self-Assessment No. 2

Circle the best answer.

1. The **hardness** of a metal is its ability to resist:
   A. Permanent deformation.
   B. Oxidation.
   C. Chemical reaction.
   D. All of the above answers are forms of hardness.
   E. None of the above.

2. Rockwell testing machines test the sample metal's resistance to:
   A. Abrasion.
   B. Penetration.
   C. Elastic deformation.
   D. Electricity.
   E. None of the above.

3. Materials such as nitrided steel and hard cast irons generally have Rockwell hardness numbers in excess of
   A. B-50.
   B. B-75.
   C. B-100.
   D. B-150.
   E. None of the above.

4. During the file test, if the file will mark the metal but not cut into it, then the metal should be treated as:
   A. High-alloy steel.
   B. Mild steel.
   C. Hardened tool steel.
   D. Medium-carbon steel.
   E. None of the above.

5. Probably the best use of the spark test is to:
   A. Determine the alloy content of the sample.
   B. Identify cast iron.
   C. Compare the sample to a known piece.
   D. All of the above answers are valid.
   E. None of the above.
6. Tool steel has a Rockwell hardness of ________, while hardened tool steel has hardness number of ________.
   A. C-42 - C-64
   B. C-42 - B-65
   C. C-64 - C-42
   D. B-65 - C-42
   E. None of the above.

7. Which of the following surfaces should be avoided when hardness testing?
   A. Curved
   B. Rough
   C. Decarburized
   D. All of the above surfaces should be modified before testing the sample's hardness.
   E. None of the above.

8. For hardness testing, the minimum recommended clearance from the edge is:
   A. 1/2”
   B. 1/4”
   C. 1/8”
   D. 1/16”
   E. None of the above.

9. If a Rockwell tester is in daily use, it should be calibrated:
   A. Annually.
   B. Monthly.
   C. Weekly.
   D. Daily.
   E. Never.

10. Technician A says that, for large samples, multiple hardness test should be made and their results averaged. Technician B says that many materials vary in hardness over the length of the sample. Who is correct?
    A. Technician A only
    B. Technician B only
    C. Both technicians are correct.
    D. Neither technician is correct.
Use the Carbon Arc Process to Cut and Gouge Base Weld Materials

Self-Assessment No. 2 Answer Key

1. a
2. b
3. c
4. c
5. c
6. e
7. d
8. c
9. d
10. d
Choose the best answer.

1. The size of the bead is ________ proportional to the speed of travel.
   A. Directly
   B. Inversely
   C. Not
   D. None of the above

2. The eye shield of the welding helmet should be:
   A. Just light enough to clearly see the arc.
   B. Too dark to clearly see the arc.
   C. A minimum of #5.
   D. None of the above.

3. Welding in confined spaces may require:
   A. Air supplied hoods or hose masks.
   B. Frequent breaks.
   C. Large, high-displacement fans.
   D. All of the above.
   E. None of the above.

4. Long sleeves protect the arms against:
   A. Ultraviolet radiation.
   B. Infrared radiation.
   C. Welding splatter.
   D. All of the above.
   E. None of the above.

5. Which of the following is NOT a variable in the SMAW process?
   A. Current polarity
   B. Arc length
   C. Length of the electrode
   D. All of the above are variables in the process.
   E. None of the above.
6. Acceptable welding footwear includes:
   A. Roman sandals.
   B. Tennis shoes.
   C. Canvas boots.
   D. All of the above.
   E. None of the above.

7. A welder whose travel speed is too fast may have problems with:
   A. Excess convexity.
   B. Overlap.
   C. Porosity.
   D. All of the above.
   E. None of the above.

8. Technician A says that low-hydrogen electrodes can only be in the open air for two to four hours. Technician B says that the humidity and the base metal determine the amount of time that low-hydrogen electrodes can be exposed. Who is correct?
   A. Technician A only.
   B. Technician B only.
   C. Both Technicians A and B.
   D. Neither Technician A nor B.

9. E6010 electrodes should only be used with:
   A. DC-.
   B. DC+.
   C. AC.
   D. There is no such electrode.

10. Technician A says that they should weld only in well ventilated areas. Technician B says that welding produces gases that are odorless, colorless, and heavier than air. Who is correct?
    A. Technician A only.
    B. Technician B only.
    C. Both Technicians A and B.
    D. Neither Technician A nor B.

11. Technician A says that they should never carry butane lighters into the welding area because they may explode. Technician B says that gasoline should never be taken into the welding area, either. Who is correct?
    A. Technician A only.
    B. Technician B only.
    C. Both Technicians A and B.
    D. Neither Technician A nor B.
12. When repairing welding equipment, its electrical power should be:
   A. On.
   B. Off.
   C. On or off, depending on the repair.
   D. The SMAW machine is not electrical.

13. To prevent electrical shocks, all electrical equipment and the work piece should be:
   A. On rubber work mats.
   B. Elevated off the floor.
   C. Grounded.
   D. All of the above.
   E. None of the above.

14. Which of the following electrodes is NOT in the low-hydrogen family?
   A. E7015
   B. E7016
   C. E7018
   D. All of the above are low-hydrogen electrodes.
   E. All of the above are fast-freeze electrodes.

15. Technician A says that undercutting is caused by too much current. Technician B says that wet electrodes can also cause undercutting. Who is correct?
   A. Technician A only.
   B. Technician B only.
   C. Both Technicians A and B.
   D. Neither Technician A nor B.

16. Fire inspections should be continued for at least _______ after completion of the welding.
   A. Fifteen minutes
   B. Thirty minutes
   C. One hour
   D. Two hours

17. The welding area should be:
   A. Isolated from other workers by shields.
   B. At least 35 feet from combustible materials.
   C. Dry.
   D. All of the above.
   E. None of the above.
18. Seam welds generally require __________ oscillation.
A. No
B. Very little
C. Moderate
D. Great

19. Technician A says that all electrical connections must be tight, clean, and dry. Technician B says that poor electrical connections can heat up and even melt. Who is correct?
A. Technician A only.
B. Technician B only
C. Both Technicians A and B
D. Neither Technician A nor B

20. If it is impractical to properly remove combustible materials from the vicinity of the welding, then:
A. Do not weld
B. Take frequent breaks to inspect the area for fires
C. Station a fire watcher near the combustible materials
D. Any of the above is acceptable
E. None of the above

21. E7018 electrodes should never be used with
A. DC-
B. DC+
C. AC
D. There is no such electrode

22. Areas to be welded should be thoroughly cleaned
A. Prior to fit-up
B. By brushing, sanding, or grinding
C. With safe solvents
D. All of the above, as necessary
E. None of the above

23. Technician A says that porosity can be caused by a current setting that is too low. Technician B says that porosity can be caused by too long an arc. Who is correct?
A. Technician A only
B. Technician B only
C. Both Technicians A and B
D. Neither Technician A nor B
24. Low-hydrogen electrodes may be stored
   A. In sealed cans or heated rod ovens
   B. Under water
   C. In petroleum jelly
   D. Any of the above
   E. None of the above

25. As the material being welded increases in thickness, the travel speed of the weld must
   A. Increase
   B. Decrease
   C. Either A or B, depending on the desired effect
   D. Stay the same
   E. None of the above
WLD-L6
Use the Carbon Arc Process to Cut and Gouge Base Weld Materials
Self-Assessment No. 3 Answer Key

WELDER SERIES
MASTER Technical Module No. WLD-L07

SUBJECT: WELDING TECHNICIAN

TIME: 3 HOURS

- DUTY: SHIELDED METAL ARC WELDING (SMAW) (BASIC)
- TASK: Apply Welders Identification

OBJECTIVE(S):

Upon completion of this unit the student will be able to:

A. Discuss welder identification systems;
B. Use tools, etc., to apply welder identification; and,
C. Use temperature sticks to indicate temperatures.

INSTRUCTIONAL MATERIALS:

Student Workbook
Written test on processes in this module
Transparencies prepared to emphasize each subject
Hobart Institute Video Material
Miller Module Method Video materials
The classroom handouts will consist of student worksheets and alloy charts
Personal protective equipment
Shielded Metal Arc Welding machine
Welding shop tools
Selection of base metals for welding and cutting
Selection of filler metals and electrode wire
MASTER Handout No. 1 (WLD-L7-HO1)
MASTER Handout No. 2 (WLD-L7-HO2)
MASTER Handout No. 3 (WLD-L7-HO3)
MASTER Handout No. 4 (WLD-L7-HO4)
MASTER Handout No. 5 (WLD-L7-HO5)
MASTER Handout No. 6 (WLD-L7-HO6)
MASTER Laboratory Aid (WLD-L7-LA)
MASTER Laboratory Worksheet (WLD-L7-LW)
MASTER Self-Assessment No. 1
MASTER Self-Assessment No. 2
MASTER Self-Assessment No. 3
REFERENCES:

TEXT:

OTHER:
Competency Standards, American Welding Society, Latest Edition
Welding Inspection, American Welding Society, Miami, FL, Latest Edition

STUDENT PREPARATION:

Student must demonstrate appropriate communication skills and understand principles of basic physical science and mathematics as verified by placement test or completion of required prerequisite courses. Students will complete the following modules:

WLD-L1 "Preheat Joint"
WLD-L2 "Initiate Welding Process"
WLD-L3 "Perform Weld Sequence"
WLD-L4 "Control Weld Technique"
WLD-L5 "Maintain Preheat and Perform Interpass"
WLD-L6 "Use the Carbon Arc Process to Cut and Gouge Base Weld Materials"
INTRODUCTION:

The Course Introduction will Include:
- An overview of practices and expectations of the welding profession
- A class demonstration of marking of work by applying welder identification

PRESENTATION OUTLINE:

Instructor Topics:
A. Welder’s Identification applied using AWS guidelines and welding procedure specification
B. Welders Tools used for marking
C. Marking and Identification of materials by Welding Inspectors
D. Methods to Indicate Temperatures

Student Activities:
Students will observe examples of company procedures for marking:
A. Any required individual identification marked will be adjacent to each weld
B. Companies provide instructions in welding operations manual or manufacturing instructions and procedures
C. Markings are usually made with low stress steel die stamps
D. Requirements for detailed records are included in welding procedure specification
E. Students will practice with temperature “sticks” or indicators that melt or change color

PRACTICAL APPLICATION:

The student will gain knowledge and experience with practice in Welder’s Identification and marking materials using AWS guidelines.

EVALUATION AND/OR VERIFICATION:

Written examinations will be given in this module to determine student progress. Students will use welder's identification tools and temperature indicators.

SUMMARY:

Marking of work is guided by welding procedures, policies, or specifications and is an important indicator of quality procedures being followed.
NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-L8) dealing with controlling post-weld temperature according to procedures.
WLD-L7-HO1
Apply Welders Identification
Attachment 1: MASTER Handout No. 1

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Discuss welder identification systems;
B. Use tools, etc., to apply welder identification; and,
C. Use temperature sticks to indicate temperatures.

MODULE OUTLINE:

Instructor Topics:
A. Welder’s Identification applied using AWS guidelines and welding procedure specification
B. Welders Tools used for marking
C. Marking and Identification of materials by Welding Inspectors
D. Methods to Indicate Temperatures

Student Activities:
Students will observe examples of company procedures for marking:
A. Any required individual identification marked will be adjacent to each weld
B. Companies provide instructions in welding operations manual or manufacturing instructions and procedures
C. Markings are usually made with low stress steel die stamps
D. Requirements for detailed records are included in welding procedure specification
E. Students will practice with temperature “sticks” or indicators that melt or change color
OBJECTIVE(S):

Upon completion of this unit the student will be able to:

a. Discuss the reasons for heat treating;
b. Discuss the time/temperature chart
c. List the different quenching media
d. Estimate metal heat temperature by color; and
e. List reasons for stress relieving workpieces.

MODULE OUTLINE:

I. Discuss the Reasons for Heat Treating
   A. Hardening for utility
   B. Tempering for toughness without brittleness

II. Discuss the Time/Temperature Chart

III. List the Different Quenching Media (In order of severity or speed of quenching)
   A. Brine (water and sodium chloride or sodium hydroxide)
   B. Water
   C. Fused (liquid) salts
   D. Molten lead
   E. Soluble oil and water
   F. Oil
   G. Air

IV. Estimate Metal Heat Temperature by Color
   A. Use of temper color chart for tempering
   B. *Chicken Wire* markings warn of overheating

V. List Reasons for Stress Relieving Workpieces
   A. Increased machinability
   B. Increased workability in cold processes

VI. Special Safety Concerns of Heat Treating
   A. Protective Gear against...
      1. Heat
      2. Fumes
      3. Concussion
   B. Toxicity of Certain Media

VII. Special Problems in Heat Treating
    A. Brittleness
    B. Distortion
    C. Discoloration (sometimes unimportant)
    D. Inadvertent heat treating
OBJECTIVE(S):

Upon completion of this unit the student will be able to:

a. Perform file test to test for metal hardness;
b. Use other tests to identify metals, and,
c. Perform Rockwell hardness tests.

MODULE OUTLINE:

I. Perform File Test to Test for Metal Hardness
   A. Imprecise method, good for rough estimates only
   B. Requires more experienced machinist

II. Use Other Tests to Identify Metals
   A. High-carbon steels show more spark bursts than do low-carbon steels.
   B. Non-ferrous metals
      1. Aluminum
      2. Magnesium
      3. Brass
      4. Bronze
      5. Nickel
      6. Tin
      7. Others

III. Perform Rockwell Hardness Tests
    A. Ferrous metals
    B. Non-ferrous metals

IV. Perform Brinell Hardness Tests
    A. Ferrous metals
    B. Non-ferrous metals

V. Other Hardness Tests as Specified by the Instructor
   A. Ferrous metals
   B. Non-ferrous metals

Student laboratory exercises as assigned by Instructor.

**BASIC SHIELDED METAL ARC WELDING (SMAW) AND OXY-FUEL GAS CUTTING**

1. Define Selected Welding Terms Per AWS A3.0
   a. Define arc welding process terms
   b. Define standard joint terminology
   c. Define common weld discontinuities
   d. Name welding equipment, supply and consumables
   e. Define common shop terms including proper equipment names
   f. Define material terms
   g. Define common metallurgy terms

2. Describe AWS Code for Mild Steel Electrodes
   a. List, describe and define
   b. List low hydrogen electrodes
   c. List iron powder electrodes
   d. Describe electrode by welding position
   e. Describe electrode by current and polarity
   f. Describe electrode by penetration

3. Set Up Welding Machine to Required Polarity
   a. List polarities for commonly used electrodes
   b. Describe both polarities
   c. Describe advantages and disadvantages of alternating current

4. Use Correct Start and Stop Techniques for SMAW Electrodes
   a. Describe and demonstrate start for non-low hydrogen SMAW electrode
   b. Describe and demonstrate stop for non-low hydrogen SMAW electrodes with filled craters
   c. List reasons for the importance of low hydrogen in weld metal
   d. Explain the reason for low hydrogen starts and stops and how they work and why required specifically with E7018

5. Set Up Equipment for Shielded Metal Arc Welding
   a. Inspect area for safety
   b. Adjust current and polarity for specific job requirements
   c. Choose type and size of electrode
   d. Wear applicable personal safety equipment

6. Strike an Arc, Run Continuous Stringer Bead
   a. Stand and position oneself correctly
   b. Operate welding helmet
c. Verbally warn others of intent to arc weld
d. Strike an arc
e. Weld with stringer bead technique
f. Perform weld tie ins to make continuous bead
7. Weld Using Weave Technique
   a. Maintain required weld quality
   b. Maintain proper weld width uniformly
   c. Maintain proper travel speed
d. Match correct oscillation for various electrodes
e. Match applications to weave techniques, as they apply
f. List the advantages and disadvantages of weave techniques
g. List the advantages and disadvantages of stringer techniques
h. Perform weld using weave technique
i. Concentrate on dwell times at edges of weld pool
8. Weld Multi-Layer Buildup
   a. Weld a dam to outline area being welded for each layer
   b. Apply each layer neatly, straight and with good fusion throughout
c. Chip slag after each pass
d. Weld passes which over lap to crown of last weld bead
e. Demonstrate control of bead height
9. Set Up and Shut Down Oxy-Fuel Equipment
   a. Follow manufacturer's recommended practice
   b. Inspect equipment and work area for safety
c. Assemble oxy-fuel equipment
d. Open fuel gas cylinder 1/2 turn
e. Open oxygen as cylinder all the way
f. Adjust fuel gas and oxygen working pressure per manufacturer's recommendation
g. Purge lines one at a time. One second for each 10 feet of hose length
10. Cut Steel Plate Using Oxy-Fuel Equipment
    a. Make manual free hand straight line cuts
    b. Cut manually straight lines using cutting jib
c. Bevel plate with manual oxy-fuel equipment
d. Manually cut blind holes in thick material
e. Manually cut sheet metal with minimal distortion
Student laboratory exercises as assigned by Instructor.

ADVANCED SHIELDED METAL ARC WELDING (SMAW) AND CUTTING

1. Weld Single V Groove Welds With Open Roots From One Side
   a. Bevel 3/8" steel plate to 37 1/2° using oxy-fuel gas cutting e.g.
   b. Use grinder to remove oxide larger and smooth plate
   c. Use grinder to create root face of 3/32" to 1/8"
   d. Tack single V groove joint with 3/32" root opening
   e. Place joint in the 1G position
   f. Place joint in 2G position once task is mastered
   g. Place joint in 3G position once task is mastered
   h. Place joint in 4G position once task is mastered
   i. Weld the root with Direct Current Electrode Positive using 1/8" E6010. Use tight arc length and keyhole technique to produce a well fused root bead extending 1/16" above the plate.
   j. Weld chipped side slag and the root bead is wire brushed
   k. Fill the balance of the groove with 3/32", 1/8" and/or 5/32" E7018 using the stringer bead technique
   l. Visual test finished weld and root face bends evaluated to AWS D1.1 criteria

2. Weld Various Diameters of Pipe to Plate
   a. Inspect area for safety
   b. Place plate flat on welding table
   c. Place 3" pipe vertically on top of plate and tacked in place
   d. Leave weld coupon in the 2F fixed position
   e. Apply a 3/8" fillet weld using 1/8" E7018 and a stringer bead technique
   f. Visually inspect weld to AWS D1.1
   g. Fill pipe with water for 24 hours
   h. Check for leak

3. Produce SMAW Pipe - 5G Position
   a. Measure the pipe
   b. Mark the cut line with a wrap around and soapstone
   c. Cut the bevel using oxy-fuel gas equipment
   d. Clean the bevel face with a grinder, remove all oxide and smooth bevel face
   e. Use the grinder to add a root face of from 3/32" to 1/8"
   f. Tack the single V groove pipe joint with a 3/32" root opening
g. Place the joint in the 5G fixed position, using an 1/8" E6010 and a keyhole technique. Weld the root pass upward producing a root weld which is well fused and has a 1/16" weld reinforcement above the plate
h. Chip slag and wire brush weld
i. Grind any lack of fusion and/or high spots
j. Weld the balance of the groove upward with 3/32" or 1/8" E7018 using the stringer bead technique
k. Visually inspect weld on the root and face sides to ASME Section 9
l. Remove four guided bend specimens from 2:00, 4:00, 8:00 and 10:00 positions prepared and two & eight are root bend specimens. Four & ten are face bend specimens. Guided bend tests are evaluated to ASME Section 9 criteria

4. Produce SMAW - 2G Position Groove Welds
   a. Measure the pipe
   b. Mark the cut line with a wrap around and soapstone
   c. Cut the bevel using oxy-fuel gas equipment
   d. Clean the bevel face with a grinder, remove all oxide and smooth bevel face
   e. Use the grinder to add a root face of from 3/32" to 1/8"
   f. Tack the single V groove pipe joint with a 3/32" root opening
   g. Weld pipe joint
   h. Place the joint in the 2G fixed position, using an 1/8" E6010 and a keyhole technique. Weld the root pass upward producing a root weld which is well fused and has a 1/16" weld reinforcement above the plate.
   i. Chip slag and wire brush. Grind any lack of fusion and/or high spots
   j. Weld balance of the groove upward with 3/32" or 1/8" E7018 using the stringer bead technique
   k. Visually inspect weld on the root and face sides to ASME Section 9
   l. Remove four guided bend specimens from 2:00, 4:00, 8:00 and 10:00 positions prepared and two & eight are root bend specimens. Four & ten are face bend specimens. Guided bend tests are evaluated to ASME Section 9 criteria

5. Roll Weld Pipe - SMAW
   a. Measure the pipe
   b. Mark the cut line with a wrap around and soapstone
   c. Cut the bevel using oxy-fuel gas equipment
   d. Clean the bevel face with a grinder, remove all oxide and smooth bevel face
   e. Use the grinder to add a root face of from 3/32" to 1/8"
   f. Tack the single V groove pipe joint with a 3/32" root opening
   g. Roll weld pipe
   h. Place pipe coupon on workbench in the 1G roll welding position.
   i. Weld the root bead using 1/8" E6010 and the keyhole technique. The weld is performed in the 2:00 to 12:30 position
   j. Chip slag and wire brush. Grind any lack of fusion and/or high spots
k. Weld balance of groove upward with 3/32" or 1/8" E7018 using the weave technique

l. Visually inspect weld on the root and face sides to ASME Section 9

m. Remove four guided bend specimens from 2:00, 4:00, 8:00 and 10:00 positions prepared and two & eight are root bend specimens. Four & ten are face bend specimens. Guided bend tests are evaluated to ASME Section 9 criteria

6. Produce SMAW Pipe - 5G Position
   a. Measure the pipe and
   b. Mark the cut line with a wrap around and soapstone
   c. Cut the bevel using oxy-fuel gas equipment
   d. Clean the bevel face with a grinder, remove all oxide and smooth bevel face
   e. Use the grinder to add a root face of from 3/32" to 1/8"
   f. Weld pipe
   g. Tack the single V groove pipe joint with a 3/32" root opening
   h. Place the joint in the 5G fixed position, using an 1/8" E6010 and a keyhole technique
   i. Weld the root pass upward producing a root weld which is well fused and has a 1/16" weld reinforcement above the plate
   j. Chip slag and wire brush. Grind any lack of fusion and/or high spots
   k. Weld balance of groove upward with 3/32" or 1/8" E7018 using the weave technique
   l. Visually inspect weld on the root and face sides to ASME Section 9
   m. Remove four guided bend specimens from 2:00, 4:00, 8:00 and 10:00 positions prepared and two & eight are root bend specimens. Four & ten are face bend specimens. Guided bend tests are evaluated to ASME Section 9 criteria

7. Produce SMAW Pipe - 6G Position
   a. Measure the pipe
   b. Mark the cut line with a wrap around and soapstone
   c. Cut the bevel using oxy-fuel gas equipment
   d. Clean the bevel face with a grinder, remove all oxide and smooth bevel face
   e. Use the grinder to add a root face of from 3/32" to 1/8"
   f. Weld pipe
   g. Tack the single V groove pipe joint with a 3/32" root opening
   h. Place the joint in the 6G fixed position, using an 1/8" E6010 and a keyhole technique
   i. Weld the root pass upward producing a root weld which is well fused and has a 1/16" weld reinforcement above the plate
   j. Chip slag and wire brush. Grind any lack of fusion and/or high spots
   k. Weld balance of groove upward with 3/32" or 1/8" E7018 using the stringer bead technique
   l. Visually inspect weld on the root and face sides to ASME Section 9
1. Remove four guided bend specimens from 2:00, 4:00, 8:00 and 10:00 positions prepared and two & eight are root bend specimens. Four & ten are face bend specimens. Guided bend tests are evaluated to ASME Section 9 criteria.

8. Create SMAW Pipe to ASME Section 9
   a. Bevel two pieces of pipe to 30° bevel angle using oxy-fuel gas cutting equipment.
   b. Clean bevel face and a 3/32" root face is applied using a hand held grinder.
   c. Set welding condition to weld open roots.
   d. Tack pipe nipples together to form a V groove with a 1/8" root opening.
   e. Place pipe in the 5G fixed position. The root pass is welded and cleaned by wire brushing.
   f. Weld balance of the V groove with this procedure.
   g. Visual inspection is made and evaluated by ASME Section 9.
   h. Make four bend samples and evaluate by ASME Section 9.

9. Interpret Welding Procedures
   a. Identify process.
   b. Name joint design.
   c. List base material.
   e. Name electrode size and type being used.
   f. List filler material (if required), classification and specification.
   g. Identify shielding gas - type and mixture.
   h. List pre and post heat and interpass temperature.
   i. Describe initial and interpass cleaning.
   j. Describe technique which is used.
   k. Produce single or multiple pass weld.
   l. Choose current type.
   m. Set current amperage.
   n. Set current polarity.
   o. Set voltage.
Apply Welders Identification  
Attachment 6: MASTER Handout No. 6

Student laboratory exercises as assigned by Instructor.

**PIPE WELDING - SMAW**

1. Produce End Preparations  
   a. Produce end preparations with oxy-fuel cutting  
   b. Produce end preparations with plasma cutting  
   c. Produce end preparations with mechanical cutting  
   d. Produce end preparations with grinding

2. Fit and Tack Weld Pipe  
   a. Cut and single bevel pipe to 37 1/2°  
   b. Ground bevel face and touch up to within tolerances  
   c. Check that pipe ends are square within given tolerances  
   d. Prepare root face within given tolerances  
   e. Align pipe to within given tolerances  
   f. Set root opening to within given tolerances  
   g. Tack pipe according to welding procedure specification - maintaining root opening

3. Roll Weld Open Root Pass on Pipe - 1G Position  
   a. Fit up and tack pipe joint using 1/8" E6010 electrode, weld the root pass on pipe in the 1 o'clock to (2:00 o'clock position) according to procedure using the roll welding technique  
   b. Weld remainder of pipe in the 1G roll welding position with E6010  
   c. Weld the remaining portion of the groove using the weave technique using 5/32" E6010 electrode roll

4. Weld Open Root Pipe Joint - 2G Position  
   a. Weld using 1/8" E6010  
   b. Cut and grind pipe ends will be to single bevel edge preparations of 37 1/2°  
   c. Fit together the two pipe ends to a single V edge preparation with given tolerances  
   d. Weld root pass to ASME Section 9 requirements  
   e. Fill balance of the groove with E6010 using the stringer technique to ASME Section 9 requirements

5. Weld Open Root Pipe - 5G Position  
   a. Fit and tack weld pipe to within tolerances  
   b. Place pipe in the 5G position  
   c. Weld the root pass using 1/8" E6010 to ASME Section 9 requirements  
   d. Grind the finished root pass to remove high spots and any slag at weld toes
e. Weld the remainder of the groove using 3/32" and/or 1/8" E7018 using the stringer bead technique to ASME Section 9 requirements.

6. Pass Guided Bond Tests Per ASME Section 9
   a. Remove bend samples from pipe at the 10, 2, 8 & 4 o'clock positions
   b. If the material is 3/8" or thinner 10 o'clock and 8 o'clock receive root bends and 2 o'clock and 4 o'clock receive face bends. If the pipe wall thickness is over 3/8" side bends shall be performed on all samples.
   c. Weld remainder of pipe in 1G position using E7018
   d. Perform low hydrogen starts and stops
   e. Weld using stringer bead technique
   f. Weld using weave technique
   g. Chip slag wire brush and grind as necessary to assure clean weld deposits

7. Weld Open Root Pipe - 2G Position
   a. Use 1/8" E6010
   b. Cut and ground pipe ends to single bevel edge preparations of 37 1/2°
   c. Fit together two pipe ends to a single V edge preparation within given tolerances
   c. Weld root pass to ASME Section 9 requirements
   d. Clean weld pass by chipping slag, wire brushing and grinding where necessary to assure a clean, well fused weld deposit
   e. Weld remainder of the groove using E7018 with the stringer bead technique

8. Weld Pipe Open Root Passes All Positions Using GMAW
   a. Set up GMAW equipment
   b. Adjust wire feeder drive system
   c. Adjust shielding gas system and flow rate
   d. Adjust GMAW gun to allow proper tip to work distance and gas coverage
   e. Set welding condition for short circuit transfer - Wire Feed Speed
   f. Set welding condition for short circuit transfer - Voltage
   g. Set welding condition for short circuit transfer - Tip to work Distance
   h. Weld root using a string bead technique

9. Weld Pipe With Backing Using FCAW-G
   a. Bevel pipe ends
   b. Touch up bevel face with grinder
   c. Fit and tack backing ring to one pipe end
   d. Fit other pipe over backing ring
   e. Adjust gap and tack in place
   f. Adjust shielding gas flow
   g. Adjust wire feed system
   h. Adjust power source to procedure specification
   i. Set wire feed speed to procedure specification
   j. Adjust voltage to procedure specification
   k. Adjust inductance to procedure specification
I. Adjust GMAW gun for tip to work distance and shielding gas
m. Weld according to procedure specification
The shielded metal arc welding (SMAW) process has a number of serious safety hazards associated with it:

CAUTION: Specific safety precautions must be taken to ensure a proper breathing atmosphere in all welding areas.

A. Weld only in ventilated areas. Welding shielding gases can displace the air needed for breathing. These gases are odorless and colorless, and most are heavier than air.
B. Weld in a position that will allow your head to be out of the welding plume, but will still give a good view of the welding arc. The welding plume could contain harmful fumes and gases.
C. Provide enough ventilation wherever welding and cutting are performed. Welding in confined spaces may require special procedures, such as the use of an air-supplied hood or hose mask.
D. Do not weld on dirty plate or plate contaminated with an unknown material. The fumes and gases which are formed could be hazardous to health.

CAUTION: Electrical shock can be avoided by following specific safety precautions.

A. Do not touch live electrical parts.
B. Ground all electrical equipment and the work-piece to prevent accidental electrical shocks.
C. Use the correct welding cable size for both the ground lead and the welding lead. Sustained overloading will cause cable failure and result in possible electrical shock or fire hazard.
D. Be sure all electrical connections are tight, clean, and dry. Poor electrical connections can heat up and even melt, causing dangerous arcs and sparks.
E. Keep dry. Moisture and water can conduct electricity. Fix water leaks immediately.
F. Keep welding cables and connectors in good condition. Improper or worn electrical connections can cause short circuits and can increase the chance of an electrical shock.
G. Avoid open-circuit voltage. Open-circuit voltage is much higher than welding voltage.
H. Shut off electrical power when working on welding equipment.

CAUTION: Ultraviolet and infrared rays emitted by the welding arc, as well as the spatter from the welding arc, can injure eyes and burn skin. Specific safety precautions must be followed to ensure adequate protection.
A. Wear 100% cotton clothing. It will not catch fire easily, it offers good protection from light welding spatter, and it is cooler in the summer and warmer in the winter.

B. Cover all skin surfaces. Keep shirt sleeves rolled down.

C. Wear cuffedless pants to eliminate spatter traps.

D. Wear leather boots. Pant legs should cover boot tops.

E. Wear clean clothing. Oil and grease stained clothes will tend to ignite from welding spatter.

F. For more severe welding conditions, wear protective clothing such as heat resistant jackets, aprons, and leggings.

G. Wear safety glasses to protect from arc flashes, mechanical injury, or other mishaps.

H. Wear ear protection, not only where there is noise but where there is a chance that spatter or sparks could get into the ears.

I. Wear a 100% cotton cap to protect the head from sparks or spatter.

J. Wear long gauntlet leather gloves.

K. Do not touch hot metal with bare hands. Use pliers and wear leather gloves.

L. Protect nearby workers from exposure to the welding arc by putting up shields.

M. Wear a welding helmet with the correct shade of welding lens. Choose the correct lens from a filter recommendations table (see Figure 2).

### FILTER RECOMMENDATIONS
(adapted from ANSI Safety Standard Z49.1-88)

<table>
<thead>
<tr>
<th>Application</th>
<th>Minimum Shade No.</th>
<th>Suggested Shade*</th>
</tr>
</thead>
<tbody>
<tr>
<td>Less than 60 amps</td>
<td>7</td>
<td>9</td>
</tr>
<tr>
<td>60 to 160 amps</td>
<td>8</td>
<td>10</td>
</tr>
<tr>
<td>160 to 250 amps</td>
<td>10</td>
<td>12</td>
</tr>
<tr>
<td>250 to 500 amps</td>
<td>11</td>
<td>14</td>
</tr>
</tbody>
</table>

* As a general rule, start with a shade that is too dark to see the arc zone. Then go to a lighter shade which gives sufficient view of the arc zone without exerting a strain on your eyes.

**Figure 2 Filter Recommendations**

**CAUTION:** Specific precautions must be taken to ensure that there is no loss of property due to welding sparks, spatter, and heat.

A. If possible, weld in specially designated areas or enclosures of noncombustible construction.

B. Remove combustibles from the work area by at least 35 feet if possible.
C. Cover combustibles that can not be removed from the welding area with tight-fitting flame-resistant material. Items that should be covered include combustible walls, floors, ceilings, and any cracks or other openings that might let a spark pass through it.

D. If welding is to be performed on or adjacent to a metal wall, ceiling, or partition, move combustibles on the other side to a safe location.

E. If combustibles can not be adequately sealed off or removed, station a fire watcher at that location. The fire watcher must have adequate fire extinguishing capabilities.

F. Do not weld on materials having either a coating or internal structure that is combustible.

G. Place hot scrap and slag in non-combustible containers.

H. Ensure that fire extinguishers are available nearby.

I. Conduct a thorough examination for evidence of a fire before leaving the work area, and continue a fire check for at least 30 minutes after the welding operation has been completed.

J. Follow all company safety procedures regarding welding in hazardous areas.

CAUTION: NEVER carry a butane lighter into a welding area. These are considered to be mini-Molotov cocktails.
DON'T CARRY A BOMB IN YOUR POCKET.

Attachment 8: MASTER Laboratory Worksheet

Worksheet:

1. Choose Proper Power Source
   Step 1. With the procedures and electrodes used at maintenance and fabrication facilities, choose a constant current (CC) power source for the Shielded Metal Arc Welding process. Some units are a combination of constant current (CC) and constant voltage (CV). This type of power source will have one or two switches to change from constant current to constant voltage.

   Step 2. An alternating current (AC) welding power source could be used with the low-hydrogen family of electrodes, but choose a constant current (CC) power source if possible.

2. Choose a Proper Electrode
   Step 1. Choose the proper electrode for the job.

   NOTE: The maintenance technician uses E6010 and E7018 electrodes for most SMAW applications. The E6010 belongs to the fast-freeze family of electrodes and the E7018 belongs to the low-hydrogen family of electrodes. The E6010 provides a deep digging, deep penetrating type of weld and may be used for non-critical fabrication.

   The E7018 low-hydrogen is used as the primary electrode for fabrication and other code-quality welds. The low-hydrogen family also includes E7015, E7016, and E7048. Hydrogen in the weld deposit causes brittleness called hydrogen embrittlement, which leads to cracking and potential weld failure.

   Step 2. Store the electrodes properly.
   a. Low-hydrogen electrodes:
      (1) These electrodes are packaged in hermetically sealed (watertight) cans. Be careful not to damage the cans which would allow air and moisture to attack the electrodes in the cans.
      (2) Once the cans are opened, store the electrodes in a rod oven at 150°F to 300°F.
      (3) Re-dry electrodes that have been outside a sealed container or a properly heated rod oven for several hours by baking them one hour at 700°F to 800°F and storing them in a rod oven.

   NOTE: Some welding procedures also set a time limit on the number of hours that low-hydrogen electrodes can be...
kept out of a rod oven prior to use. Times vary from two to four hours, depending on the type of base metal to be welded and the humidity levels of the environment.

b. Do not store the E6010 fast-freeze electrodes in rod ovens. Fast-freeze electrodes require the presence of small amounts of moisture in order to run smoothly.

Step 3. Match the low-hydrogen family members with the polarities that are used with them (see Figure 5).

Figure 6 Typical Current Ranges for Electrodes

3. Prepare Weldment for Welding
Step 1. Oxyacetylene cut, carbon air arc gouge/cut, or machine cut/mill material to the desired shape/contour for each type of weld joint configuration needed for each welding task at hand.

a. Weld joint configuration will depend upon:
(1) Product design  
(2) Material thickness  
(3) Design strength requirements  
(4) Welding process employed  

b. SMAW weld joint configuration may be a:  
(1) Lap joint  
(2) Tee joint  
(3) Corner joint  
(4) Edge joint  
(5) Butt joint with backing  
(6) Butt joint without backing

Step 2. Clean the areas to be welded prior to fit-up  
a. Remove rust, paint, and any other coatings by wire brushing, grinding, sanding, or filing  
b. Remove oils and greases with a safe, suitable solvent

Step 3. Turn on the power source and set the current range (amps) on the machine at the lower end of the setting as suggested for the electrode size.

Step 4. Obtain a piece of scrap metal of the approximate type and thickness for the weld joint to be made.

Step 5. Practice welding on the scrap metal and adjust the current setting as needed to produce a good weld.

4. Complete Welding Operation

Step 1. Tack weld a joint that is defect free and can be incorporated into the finished product.

Step 2. Use any preheat that may be required by welding codes or company procedures.

Step 3. Make the required weld to be defect free and pleasing in appearance.

Step 4. Use proper weld bead placement according to the weld joint design.  
a. When making seam welds, produce the weld beads by using very little oscillation or some oscillation.  
b. When making fillet welds, produce the weld beads by using some oscillation. Fillet welds in the vertical position can also be run using a weaving technique.  
c. When making groove welds, produce the weld beads by using some oscillation and/or by weaving. When making groove welds on butt joints, the amount of weaving will depend on the welding position and the weld joints. It may also be limited by applicable welding codes and/or company standards.

Step 5. Maintain the correct welding travel speed. Weld bead size can be changed by varying the arc travel speed. Bead size and travel speed are inversely related: a decrease in travel speed will result in an increase in the weld bead height and width, and an increase in travel speed will result in a decrease in the weld bead height and width.
a. As the material thickness increases, the travel speed must slow down.

b. For a given material thickness and joint design, as the welding amperage is increased so is the arc travel speed. Conversely, as the amperage is decreased, the arc travel is slowed.

c. Higher welding speeds are attainable by using the forehand (pushing) technique.

5. Troubleshoot Welding Problems

Step 1. Be aware of the welding variables and how they can affect the weld. Below is a list of eleven welding variables for the SMAW process:

a. Type of electrode
b. Diameter of electrode
c. Type of current (AC or DC)
d. Current polarity (DC+ or DC-)
e. Current setting
f. Arc length
g. Travel speed
h. Electrode angle
i. Electromagnetic arc blow
j. Electrode manipulation technique (drag, whip)
k. Thoroughness of slag removal prior to restarts and new bead placement

Step 2. Be aware of general welding variables and how they can affect the weld:

a. Type of base metal
b. Thickness of base metal
c. Surface condition of base metal (clean, rusty, or painted)
d. Atmospheric conditions

Step 3. Be aware of any weld discontinuity and the relevant welding variables that may have caused it.

Self-Assessment No. 1

Circle the best answer.

1. What is the approximate temperature required for stress relief annealing of low-carbon steels?
   A. 950°
   B. 1000°
   C. 1950°
   D. 1700°
   E. None of the above

2. What crystalline processes result from stress relief annealing?
   A. All grains reform into softer grains
   B. Distorted grains reform into softer grains
   C. Ferrite grains reform into softer grains while pearlite grains are basically unaffected
   D. Pearlite grains reform into softer grains while ferrite grains are basically unaffected
   E. None of the above

3. Which of the following is NOT a cause of quenching cracks?
   A. Improper quenching medium
   B. Overheating during the austenitizing cycle
   C. Improper quenching angle
   D. All of the above are causes of quenching cracks
   E. None of the above answers is correct

4. Which of the following is NOT a characteristic of typical quench cracks?
   A. The fracture tends to run from the surface toward the center in a smooth curve
   B. Untempered quench cracks will not show any decarburization
   C. Tempered fracture surfaces will show a fine crystalline structure
   D. All of the above are characteristic of quench cracks
   E. None of the above
5. During tempering by color, which of the following colors represents the highest temperature?
   A. Gold
   B. Purple
   C. Dark Straw
   D. Pale Blue
   E. Violet

6. During tempering by color, which of the following colors represents the lowest temperature?
   A. Gold
   B. Purple
   C. Dark Straw
   D. Pale Blue
   E. Violet

7. What is meant by step quenching?
   A. The workpiece is first quenched in a slow medium (e.g., air) then in a fast medium (e.g., water)
   B. The workpiece is first quenched in a fast medium (e.g., water) then in a slow medium (e.g., air)
   C. The weaker parts of the workpiece are quenched separately from the main body of the workpiece
   D. The workpiece is lowered into the quenching medium in steps so that different parts of the workpiece attain different hardnesses
   E. None of the above

8. What is the simplest thing that the technician can do to minimize the vapor-blanket stage of liquid quenching?
   A. Agitate the workpiece or the medium
   B. Heat the quenching medium to just below its boiling point
   C. Quickly insert the workpiece into the medium
   D. Slowly insert the workpiece into the medium
   E. None of the above

9. Liquid carburizing, as used in case hardening, utilizes ________ and is therefore extremely dangerous.
   A. Sodium chloride
   B. Calcium carbonate
   C. Cyanide salts
   D. Ammonia
   E. None of the above
10. Workpieces which have been cut with an oxyacetylene torch often display edge hardness because

A. The torch was starved for oxygen
B. The workpiece was cut at too low a temperature
C. The wrong type of cutting torch was used
D. Oxyacetylene torches always leave hardened edges
E. None of the above

Circle the best answer.

1. The hardness of a metal is its ability to resist:
   A. Permanent deformation.
   B. Oxidation.
   C. Chemical reaction.
   D. All of the above answers are forms of hardness.
   E. None of the above.

2. Rockwell testing machines test the sample metal's resistance to:
   A. Abrasion.
   B. Penetration.
   C. Elastic deformation.
   D. Electricity.
   E. None of the above.

3. Materials such as nitrided steel and hard cast irons generally have Rockwell hardness numbers in excess of
   A. B-50.
   B. B-75.
   C. B-100.
   D. B-150.
   E. None of the above.

4. During the file test, if the file will mark the metal but not cut into it, then the metal should be treated as:
   A. High-alloy steel.
   B. Mild steel.
   C. Hardened tool steel.
   D. Medium-carbon steel.
   E. None of the above.

5. Probably the best use of the spark test is to:
   A. Determine the alloy content of the sample.
   B. Identify cast iron.
   C. Compare the sample to a known piece.
   D. All of the above answers are valid.
   E. None of the above.
6. Tool steel has a Rockwell hardness of ________, while hardened tool steel has hardness number of ________.  
A. C-42 - C-64  
B. C-42 - B-65  
C. C-64 - C-42  
D. B-65 - C-42  
E. None of the above.

7. Which of the following surfaces should be avoided when hardness testing?  
A. Curved  
B. Rough  
C. Decarburized  
D. All of the above surfaces should be modified before testing the sample's hardness.  
E. None of the above.

8. For hardness testing, the minimum recommended clearance from the edge is:  
A. 1/2”  
B. 1/4”  
C. 1/8”  
D. 1/16”  
E. None of the above.

9. If a Rockwell tester is in daily use, it should be calibrated:  
A. Annually.  
B. Monthly.  
C. Weekly.  
D. Daily.  
E. Never.

10. Technician A says that, for large samples, multiple hardness test should be made and their results averaged. Technician B says that many materials vary in hardness over the length of the sample. Who is correct?  
A. Technician A only  
B. Technician B only  
C. Both technicians are correct.  
D. Neither technician is correct.

Choose the best answer.

1. The size of the bead is ________ proportional to the speed of travel.
   A. Directly
   B. Inversely
   C. Not
   D. None of the above

2. The eye shield of the welding helmet should be:
   A. Just light enough to clearly see the arc.
   B. Too dark to clearly see the arc.
   C. A minimum of #5.
   D. None of the above.

3. Welding in confined spaces may require:
   A. Air supplied hoods or hose masks.
   B. Frequent breaks.
   C. Large, high-displacement fans.
   D. All of the above.
   E. None of the above.

4. Long sleeves protect the arms against:
   A. Ultraviolet radiation.
   B. Infrared radiation.
   C. Welding splatter.
   D. All of the above.
   E. None of the above.

5. Which of the following is NOT a variable in the SMAW process?
   A. Current polarity
   B. Arc length
   C. Length of the electrode
   D. All of the above are variables in the process.
   E. None of the above.
6. Acceptable welding footwear includes:
   A. Roman sandals.
   B. Tennis shoes.
   C. Canvas boots.
   D. All of the above.
   E. None of the above.

7. A welder whose travel speed is too fast may have problems with:
   A. Excess convexity.
   B. Overlap.
   C. Porosity.
   D. All of the above.
   E. None of the above.

8. Technician A says that low-hydrogen electrodes can only be in the open air for two to four hours. Technician B says that the humidity and the base metal determine the amount of time that low-hydrogen electrodes can be exposed. Who is correct?
   A. Technician A only.
   B. Technician B only.
   C. Both Technicians A and B.
   D. Neither Technician A nor B.

9. E6010 electrodes should only be used with:
   A. DC-.
   B. DC+.
   C. AC.
   D. There is no such electrode.

10. Technician A says that they should weld only in well ventilated areas. Technician B says that welding produces gases that are odorless, colorless, and heavier than air. Who is correct?
    A. Technician A only.
    B. Technician B only.
    C. Both Technicians A and B.
    D. Neither Technician A nor B.

11. Technician A says that they should never carry butane lighters into the welding area because they may explode. Technician B says that gasoline should never be taken into the welding area, either. Who is correct?
    A. Technician A only.
    B. Technician B only.
    C. Both Technicians A and B.
    D. Neither Technician A nor B.
12. When repairing welding equipment, its electrical power should be:
   A. On.
   B. Off.
   C. On or off, depending on the repair.
   D. The SMAW machine is not electrical.

13. To prevent electrical shocks, all electrical equipment and the work piece should be:
   A. On rubber work mats.
   B. Elevated off the floor.
   C. Grounded.
   D. All of the above.
   E. None of the above.

14. Which of the following electrodes is NOT in the low-hydrogen family?
   A. E7015
   B. E7016
   C. E7018
   D. All of the above are low-hydrogen electrodes.
   E. All of the above are fast-freeze electrodes.

15. Technician A says that undercutting is caused by too much current. Technician B says that wet electrodes can also cause undercutting. Who is correct?
   A. Technician A only.
   B. Technician B only.
   C. Both Technicians A and B.
   D. Neither Technician A nor B.

16. Fire inspections should be continued for at least _________ after completion of the welding.
   A. Fifteen minutes
   B. Thirty minutes
   C. One hour
   D. Two hours

17. The welding area should be:
   A. Isolated from other workers by shields.
   B. At least 35 feet from combustible materials.
   C. Dry.
   D. All of the above.
   E. None of the above.
18. Seam welds generally require ___________ oscillation.
   A. No
   B. Very little
   C. Moderate
   D. Great

19. Technician A says that all electrical connections must be tight, clean, and dry. Technician B says that poor electrical connections can heat up and even melt. Who is correct?
   A. Technician A only.
   B. Technician B only
   C. Both Technicians A and B
   D. Neither Technician A nor B

20. If it is impractical to properly remove combustible materials from the vicinity of the welding, then:
   A. Do not weld
   B. Take frequent breaks to inspect the area for fires
   C. Station a fire watcher near the combustible materials
   D. Any of the above is acceptable
   E. None of the above

21. E7018 electrodes should never be used with
   A. DC-
   B. DC+
   C. AC
   D. There is no such electrode

22. Areas to be welded should be thoroughly cleaned
   A. Prior to fit-up
   B. By brushing, sanding, or grinding
   C. With safe solvents
   D. All of the above, as necessary
   E. None of the above

23. Technician A says that porosity can be caused by a current setting that is too low. Technician B says that porosity can be caused by too long an arc. Who is correct?
   A. Technician A only
   B. Technician B only
   C. Both Technicians A and B
   D. Neither Technician A nor B
24. Low-hydrogen electrodes may be stored
   A. In sealed cans or heated rod ovens
   B. Under water
   C. In petroleum jelly
   D. Any of the above
   E. None of the above

25. As the material being welded increases in thickness, the travel speed of the weld must
   A. Increase
   B. Decrease
   C. Either A or B, depending on the desired effect
   D. Stay the same
   E. None of the above

WELDER SERIES
MASTER Technical Module No. WLD-L08

SUBJECT: WELDING TECHNICIAN     TIME: 8 HOURS

- DUTY: SHIELDED METAL ARC WELDING (SMAW) (BASIC)
- TASK: Control Post-Weld Temperature According to Procedures

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Identify welding procedure specification;
B. Use welding current or flame to control temperature; and,
C. Use temperature stick or other indicators to indicate temperatures.

INSTRUCTIONAL MATERIALS:

Student Workbook
Written tests on control of post-weld temperatures
Transparencies prepared to emphasize each subject
Hobart Institute Video Material
Miller Module Method Video materials
The classroom handouts will consist of student worksheets and alloy charts
Personal protective equipment
Shielded Metal Arc Welding machine
Welding shop tools
Selection of base metals for welding and cutting
Selection of filler metals and electrode wire
MASTER Handout No. 1 (WLD-L8-HO1)
MASTER Handout No. 2 (WLD-L8-HO2)
MASTER Handout No. 3 (WLD-L8-HO3)
MASTER Handout No. 4 (WLD-L8-HO4)
MASTER Handout No. 5 (WLD-L8-HO5)
MASTER Handout No. 6 (WLD-L8-HO6)
MASTER Laboratory Aid (WLD-L8-LA)
MASTER Laboratory Worksheet (WLD-L8-LW)
MASTER Self-Assessment No. 1
MASTER Self-Assessment No. 2
MASTER Self-Assessment No. 3

TEXT:

OTHER:

*Competency Standards*, American Welding Society, Latest Edition

STUDENT PREPARATION:

Student must demonstrate appropriate communication skills and understand principles of basic physical science and mathematics as verified by placement test or completion of required prerequisite courses. Students will complete the following modules:

- **WLD-L1** “Preheat Joint”
- **WLD-L2** “Initiate Welding Process”
- **WLD-L3** “Perform Weld Sequence”
- **WLD-L4** “Control Weld Technique”
- **WLD-L5** “Maintain Preheat and Perform Interpass”
- **WLD-L6** “Use the Carbon Arc Process to Cut and Gouge Weld Materials”
- **WLD-L7** “Apply Welders Identification”
INTRODUCTION:

The Course Introduction will Include:
- An overview of temperature control procedures for post weld operations
- A class demonstration of effective temperature controls
- Use of indicators to determine temperatures

PRESENTATION OUTLINE:

Instructor Topics:
A. Welding Procedure Specifications
B. Preheat and interpass temperatures may be specified as:
   1. Minimum temperatures only (mild carbon steel with no special requirements)
   2. Maximum temperature only (aluminum and nickel alloys)
   3. Minimum and maximum temperatures (low alloy steels with impact requirements)
C. Tempering and Stress relieving in post weld heat treatment
D. Heating area and Holding time
E. Cooling rates
F. Applicable Codes and Specifications
G. Heat sources and temperature indication tools must not adversely affect weldment

Student Activities:
A. Heating and cooling materials, following welding procedure specifications
B. Use of heat sources and temperature indicators
C. Making adjustments to improve weld quality
D. Observation of the use of welding procedures during field trip

PRACTICAL APPLICATION:

Control of post weld temperatures is a procedural reality in a quality work environment with welding procedures and specifications. Welding procedures and specifications are requirements, not advisory in nature. Upon employment students must follow welding procedures with particular care during production operations.

EVALUATION AND/OR VERIFICATION:

Written examinations will be given in this module to determine student progress. Students will see typical instructions used in a manufacturing environment during a field trip using welding procedures specifications.
SUMMARY:

Welding procedures and specifications are requirements, not advisory in nature. Students must follow them with particular care during production operations.

NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-L9) dealing with post cleaning weld.
OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Identify welding procedure specification;
B. Use welding current or flame to control temperature; and,
C. Use temperature stick or other indicators to indicate temperatures.

MODULE OUTLINE:

Instructor Topics:
A. Welding Procedure Specifications
B. Preheat and interpass temperatures may be specified as:
   1. Minimum temperatures only (mild carbon steel with no special requirements)
   2. Maximum temperature only (aluminum and nickel alloys)
   3. Minimum and maximum temperatures (low alloy steels with impact requirements)
C. Tempering and Stress relieving in post weld heat treatment
D. Heating area and Holding time
E. Cooling rates
F. Applicable Codes and Specifications
G. Heat sources and temperature indication tools must not adversely affect weldment

Student Activities:
A. Heating and cooling materials, following welding procedure specifications
B. Use of heat sources and temperature indicators
C. Making adjustments to improve weld quality
D. Observation of the use of welding procedures during field trip
OBJECTIVE(S):

Upon completion of this unit the student will be able to:

a. Discuss the reasons for heat treating;
b. Discuss the time/temperature chart
c. List the different quenching media
d. Estimate metal heat temperature by color; and
e. List reasons for stress relieving workpieces.

MODULE OUTLINE:

I. Discuss the Reasons for Heat Treating
   A. Hardening for utility
   B. Tempering for toughness without brittleness

II. Discuss the Time/Temperature Chart

III. List the Different Quenching Media (In order of severity or speed of quenching)
   A. Brine (water and sodium chloride or sodium hydroxide)
   B. Water
   C. Fused (liquid) salts
   D. Molten lead
   E. Soluble oil and water
   F. Oil
   G. Air

IV. Estimate Metal Heat Temperature by Color
   A. Use of temper color chart for tempering
   B. *Chicken Wire* markings warn of overheating

V. List Reasons for Stress Relieving Workpieces
   A. Increased machinability
   B. Increased workability in cold processes

VI. Special Safety Concerns of Heat Treating
   A. Protective Gear against...
      1. Heat
      2. Fumes
      3. Concussion
   B. Toxicity of Certain Media

VII. Special Problems in Heat Treating
   A. Britteness
   B. Distortion
   C. Discoloration (sometimes unimportant)
   D. Inadvertent heat treating
OBJECTIVE(S):

Upon completion of this unit the student will be able to:

a. Perform file test to test for metal hardness;
b. Use other tests to identify metals; and,
c. Perform Rockwell hardness tests.

MODULE OUTLINE:

I. Perform File Test to Test for Metal Hardness
   A. Imprecise method, good for rough estimates only
   B. Requires more experienced machinist

II. Use Other Tests to Identify Metals
    A. High-carbon steels show more spark bursts than do low-carbon steels.
    B. Non-ferrous metals
       1. Aluminum
       2. Magnesium
       3. Brass
       4. Bronze
       5. Nickel
       6. Tin
       7. Others

III. Perform Rockwell Hardness Tests
     A. Ferrous metals
     B. Non-ferrous metals

IV. Perform Brinell Hardness Tests
     A. Ferrous metals
     B. Non-ferrous metals

V. Other Hardness Tests as Specified by the Instructor
   A. Ferrous metals
   B. Non-ferrous metals

Student laboratory exercises as assigned by Instructor.

BASIC SHIELDED METAL ARC WELDING (SMAW) AND OXY-FUEL GAS CUTTING

1. Define Selected Welding Terms Per AWS A3.0
   a. Define arc welding process terms
   b. Define standard joint terminology
   c. Define common weld discontinuities
   d. Name welding equipment, supply and consumables
   e. Define common shop terms including proper equipment names
   f. Define material terms
   g. Define common metallurgy terms

2. Describe AWS Code for Mild Steel Electrodes
   a. List, describe and define
   b. List low hydrogen electrodes
   c. List iron powder electrodes
   d. Describe electrode by welding position
   e. Describe electrode by current and polarity
   f. Describe electrode by penetration

3. Set Up Welding Machine to Required Polarity
   a. List polarities for commonly used electrodes
   b. Describe both polarities
   c. Describe advantages and disadvantages of alternating current

4. Use Correct Start and Stop Techniques for SMAW Electrodes
   a. Describe and demonstrate start for non-low hydrogen SMAW electrode
   b. Describe and demonstrate stop for non-low hydrogen SMAW electrodes with filled craters
   c. List reasons for the importance of low hydrogen in weld metal
   d. Explain the reason for low hydrogen starts and stops and how they work and why required specifically with E7018

5. Set Up Equipment for Shielded Metal Arc Welding
   a. Inspect area for safety
   b. Adjust current and polarity for specific job requirements
   c. Choose type and size of electrode
   d. Wear applicable personal safety equipment

6. Strike an Arc, Run Continuous Stringer Bead
   a. Stand and position oneself correctly
   b. Operate welding helmet
7. Weld Using Weave Technique
   a. Maintain required weld quality
   b. Maintain proper weld width uniformly
   c. Maintain proper travel speed
   d. Match correct oscillation for various electrodes
   e. Match applications to weave techniques, as they apply
   f. List the advantages and disadvantages of weave techniques
   g. List the advantages and disadvantages of stringer techniques
   h. Perform weld using weave technique
   i. Concentrate on dwell times at edges of weld pool

8. Weld Multi-Layer Buildup
   a. Weld a dam to outline area being welded for each layer
   b. Apply each layer neatly, straight and with good fusion throughout
   c. Chip slag after each pass
   d. Weld passes which over lap to crown of last weld bead
   e. Demonstrate control of bead height

9. Set Up and Shut Down Oxy-Fuel Equipment
   a. Follow manufacturer's recommended practice
   b. Inspect equipment and work area for safety
   c. Assemble oxy-fuel equipment
   d. Open fuel gas cylinder ½ turn
   e. Open oxygen as cylinder all the way
   f. Adjust fuel gas and oxygen working pressure per manufacturer's recommendation
   g. Purge lines one at a time. One second for each 10 feet of hose length

10. Cut Steel Plate Using Oxy-Fuel Equipment
    a. Make manual free hand straight line cuts
    b. Cut manually straight lines using cutting jib
    c. Bevel plate with manual oxy-fuel equipment
    d. Manually cut blind holes in thick material
    e. Manually cut sheet metal with minimal distortion
Student laboratory exercises as assigned by Instructor.

ADVANCED SHIELDED METAL ARC WELDING (SMAW) AND CUTTING

1. Weld Single V Groove Welds With Open Roots From One Side
   a. Bevel 3/8" steel plate to 37 1/2° using oxy-fuel gas cutting e.g.
   b. Use grinder to remove oxide larger and smooth plate
   c. Use grinder to create root face of 3/32" to 1/8"
   d. Tack single V groove joint with 3/32" root opening
   e. Place joint in the 1G position
   f. Place joint in 2G position once task is mastered
   g. Place joint in 3G position once task is mastered
   h. Place joint in 4G position once task is mastered
   i. Weld the root with Direct Current Electrode Positive using 1/8" E6010. Use tight arc length and keyhole technique to produce a well fused root bead extending 1/16" above the plate.
   j. Weld chipped side slag and the root bead is wire brushed
   k. Fill the balance of the groove with 3/32", 1/8" and/or 5/32" E7018 using the stringer bead technique
   l. Visual test finished weld and root face bends evaluated to AWS D1.1 criteria

2. Weld Various Diameters of Pipe to Plate
   a. Inspect area for safety
   b. Place plate flat on welding table
   c. Place 3" pipe vertically on top of plate and tacked in place
   d. Leave weld coupon in the 2F fixed position
   e. Apply a 3/8" fillet weld using 1/8" E7018 and a stringer bead technique
   f. Visually inspect weld to AWS D1.1
   g. Fill pipe with water for 24 hours
   h. Check for leak

3. Produce SMAW Pipe - 5G Position
   a. Measure the pipe
   b. Mark the cut line with a wrap around and soapstone
   c. Cut the bevel using oxy-fuel gas equipment
   d. Clean the bevel face with a grinder, remove all oxide and smooth bevel face
   e. Use the grinder to add a root face of from 3/32" to 1/8"
   f. Tack the single V groove pipe joint with a 3/32" root opening
g. Place the joint in the 5G fixed position, using an 1/8" E6010 and a keyhole technique. Weld the root pass upward producing a root weld which is well fused and has a 1/16" weld reinforcement above the plate.

h. Chip slag and wire brush weld

i. Grind any lack of fusion and/or high spots

j. Weld the balance of the groove upward with 3/32" or 1/8" E7018 using the stringer bead technique

k. Visually inspect weld on the root and face sides to ASME Section 9

l. Remove four guided bend specimens from 2:00, 4:00, 8:00 and 10:00 positions prepared and two & eight are root bend specimens. Four & ten are face bend specimens. Guided bend tests are evaluated to ASME Section 9 criteria

4. Produce SMAW - 2G Position Groove Welds

   a. Measure the pipe
   b. Mark the cut line with a wrap around and soapstone
   c. Cut the bevel using oxy-fuel gas equipment
   d. Clean the bevel face with a grinder, remove all oxide and smooth bevel face
   e. Use the grinder to add a root face of from 3/32" to 1/8"
   f. Tack the single V groove pipe joint with a 3/32" root opening
   g. Weld pipe joint
   h. Place the joint in the 2G fixed position, using an 1/8" E6010 and a keyhole technique. Weld the root pass upward producing a root weld which is well fused and has a 1/16" weld reinforcement above the plate.
   i. Chip slag and wire brush. Grind any lack of fusion and/or high spots
   j. Weld balance of the groove upward with 3/32" or 1/8" E7018 using the stringer bead technique
   k. Visually inspect weld on the root and face sides to ASME Section 9
   l. Remove four guided bend specimens from 2:00, 4:00, 8:00 and 10:00 positions prepared and two & eight are root bend specimens. Four & ten are face bend specimens. Guided bend tests are evaluated to ASME Section 9 criteria

5. Roll Weld Pipe - SMAW

   a. Measure the pipe
   b. Mark the cut line with a wrap around and soapstone
   c. Cut the bevel using oxy-fuel gas equipment
   d. Clean the bevel face with a grinder, remove all oxide and smooth bevel face
   e. Use the grinder to add a root face of from 3/32" to 1/8"
   f. Tack the single V groove pipe joint with a 3/32" root opening
   g. Roll weld pipe
   h. Place pipe coupon on workbench in the 1G roll welding position.
   i. Weld the root bead using 1/8" E6010 and the keyhole technique. The weld is performed in the 2.00 to 12:30 position
   j. Chip slag and wire brush. Grind any lack of fusion and/or high spots
k. Weld balance of groove upward with 3/32" or 1/8" E7018 using the weave technique
l. Visually inspect weld on the root and face sides to ASME Section 9
m. Remove four guided bend specimens from 2:00, 4:00, 8:00 and 10:00 positions prepared and two & eight are root bend specimens. Four & ten are face bend specimens. Guided bend tests are evaluated to ASME Section 9 criteria

6. Produce SMAW Pipe - 5G Position
   a. Measure the pipe and
   b. Mark the cut line with a wrap around and soapstone
   c. Cut the bevel using oxy-fuel gas equipment
   d. Clean the bevel face with a grinder, remove all oxide and smooth bevel face
   e. Use the grinder to add a root face of from 3/32" to 1/8"
   f. Weld pipe
   g. Tack the single V groove pipe joint with a 3/32" root opening
   h. Place the joint in the 5G fixed position, using an 1/8" E6010 and a keyhole technique
   i. Weld the root pass upward producing a root weld which is well fused and has a 1/16" weld reinforcement above the plate
   j. Chip slag and wire brush. Grind any lack of fusion and/or high spots
   k. Weld balance of groove upward with 3/32" or 1/8" E7018 using the weave technique
   l. Visually inspect weld on the root and face sides to ASME Section 9
   m. Remove four guided bend specimens from 2:00, 4:00, 8:00 and 10:00 positions prepared and two & eight are root bend specimens. Four & ten are face bend specimens. Guided bend tests are evaluated to ASME Section 9 criteria

7. Produce SMAW Pipe - 6G Position
   a. Measure the pipe
   b. Mark the cut line with a wrap around and soapstone
   c. Cut the bevel using oxy-fuel gas equipment
   d. Clean the bevel face with a grinder, remove all oxide and smooth bevel face
   e. Use the grinder to add a root face of from 3/32" to 1/8"
   f. Tack the single V groove pipe joint with a 3/32" root opening
   g. Place the joint in the 6G fixed position, using an 1/8" E6010 and a keyhole technique
   h. Weld the root pass upward producing a root weld which is well fused and has a 1/16" weld reinforcement above the plate
   i. Chip slag and wire brush. Grind any lack of fusion and/or high spots
   j. Weld balance of groove upward with 3/32" or 1/8" E7018 using the stringer bead technique
   k. Visually inspect weld on the root and face sides to ASME Section 9
l. Remove four guided bend specimens from 2:00, 4:00, 8:00 and 10:00 positions prepared and two & eight are root bend specimens. Four & ten are face bend specimens. Guided bend tests are evaluated to ASME Section 9 criteria

8. Create SMAW Pipe to ASME Section 9
a. Bevel two pieces of pipe to 30° bevel angle using oxy-fuel gas cutting equipment
b. Clean bevel face and a 3/32" root face is applied using a hand held grinder
c. Set welding condition to weld open roots
d. Tack pipe nipples together to form a V groove with a 1/8" root opening
e. Place pipe in the 5G fixed position. The root pass is welded and cleaned by wire brushing
f. Weld balance of the V groove with this procedure
g. Visual inspection is made and evaluated by ASME Section 9
h. Make four bend samples and evaluate by ASME Section 9

9. Interpret Welding Procedures
a. Identify process
b. Name joint design
c. List base material
d. Give dimensions for root treatment
e. Name electrode size and type being used
f. List filler material (if required), classification and specification
g. Identify shielding gas - type and mixture
h. List pre and post heat and interpass temperature
i. Describe initial and interpass cleaning
j. Describe technique which is used
k. Produce single or multiple pass weld
l. Choose current type
m. Set current amperage
n. Set current polarity
o. Set voltage
Student laboratory exercises as assigned by Instructor.

PIPE WELDING - SMAW

1. Produce End Preparations
   a. Produce end preparations with oxy-fuel cutting
   b. Produce end preparations with plasma cutting
   c. Produce end preparations with mechanical cutting
   d. Produce end preparations with grinding

2. Fit and Tack Weld Pipe
   a. Cut and single bevel pipe to 37 1/2°
   b. Ground bevel face and touch up to within tolerances
   c. Check that pipe ends are square within given tolerances
   d. Prepare root face within given tolerances
   e. Align pipe to within given tolerances
   f. Set root opening to within given tolerances
   g. Tack pipe according to welding procedure specification - maintaining root opening

3. Roll Weld Open Root Pass on Pipe - 1G Position
   a. Fit up and tack pipe joint using 1/8" E6010 electrode, weld the root pass on pipe in the 1 o'clock to (2:00 o'clock position) according to procedure using the roll welding technique
   b. Weld remainder of pipe in the 1G roll welding position with E6010
   c. Weld the remaining portion of the groove using the weave technique using 5/32" E6010 electrode roll

4. Weld Open Root Pipe Joint - 2G Position
   a. Weld using 1/8" E6010
   b. Cut and grind pipe ends will be to single bevel edge preparations of 37 1/2°
   c. Fit together the two pipe ends to a single V edge preparation with given tolerances
   d. Weld root pass to ASME Section 9 requirements
   e. Fill balance of the groove with E6010 using the stringer technique to ASME Section 9 requirements

5. Weld Open Root Pipe - 5G Position
   a. Fit and tack weld pipe to within tolerances
   b. Place pipe in the 5G position
   c. Weld the rootpass using 1/8" E6010 to ASME Section 9 requirements
   d. Grind the finished root pass to remove high spots and any slag at weld toes
6. Pass Guided Bond Tests Per ASME Section 9
   a. Remove bend samples from pipe at the 10, 2, 8 & 4 o'clock positions
   b. If the material is 3/8" or thinner 10 o'clock and 8 o'clock receive root bends and 2 o'clock and 4 o'clock receive face bends. If the pipe wall thickness is over 3/8" side bends shall be performed on all samples.
   c. Weld remainder of pipe in 1G position using E7018
   d. Perform low hydrogen starts and stops
   e. Weld using stringer bead technique
   f. Weld using weave technique
   g. Chip slag wire brush and grind as necessary to assure clean weld deposits

7. Weld Open Root Pipe - 2G Position
   a. Use 1/8" E6010
   b. Cut and ground pipe ends to single bevel edge preparations of 37 1/2°
   c. Fit together two pipe ends to a single V edge preparation within given tolerances
   d. Weld root pass to ASME Section 9 requirements
   e. Clean weld pass by chipping slag, wire brushing and grinding where necessary to assure a clean, well fused weld deposit
   f. Weld remainder of the groove using E7018 with the stringer bead technique

8. Weld Pipe Open Root Passes All Positions Using GMAW
   a. Set up GMAW equipment
   b. Adjust wire feeder drive system
   c. Adjust shielding gas system and flow rate
   d. Adjust GMAW gun to allow proper tip to work distance and gas coverage
   e. Set welding condition for short circuit transfer - Wire Feed Speed
   f. Set welding condition for short circuit transfer - Voltage
   g. Set welding condition for short circuit transfer - Tip to work Distance
   h. Weld root using a string bead technique

9. Weld Pipe With Backing Using FCAW-G
   a. Bevel pipe ends
   b. Touch up bevel face with grinder
   c. Fit and tack backing ring to one pipe end
   d. Fit other pipe over backing ring
   e. Adjust gap and tack in place
   f. Adjust shielding gas flow
   g. Adjust wire feed system
   h. Adjust power source to procedure specification
   i. Set wire feed speed to procedure specification
   j. Adjust voltage to procedure specification
   k. Adjust inductance to procedure specification
1. Adjust GMAW gun for tip to work distance and shielding gas
2. Weld according to procedure specification
The shielded metal arc welding (SMAW) process has a number of serious safety hazards associated with it:

**CAUTION:** Specific safety precautions must be taken to ensure a proper breathing atmosphere in all welding areas.

A. Weld only in ventilated areas. Welding shielding gases can displace the air needed for breathing. These gases are odorless and colorless, and most are heavier than air.
B. Weld in a position that will allow your head to be out of the welding plume, but will still give a good view of the welding arc. The welding plume could contain harmful fumes and gases.
C. Provide enough ventilation wherever welding and cutting are performed. Welding in confined spaces may require special procedures, such as the use of an air-supplied hood or hose mask.
D. Do not weld on dirty plate or plate contaminated with an unknown material. The fumes and gases which are formed could be hazardous to health.

**CAUTION:** Electrical shock can be avoided by following specific safety precautions.

A. Do not touch live electrical parts.
B. Ground all electrical equipment and the work-piece to prevent accidental electrical shocks.
C. Use the correct welding cable size for both the ground lead and the welding lead. Sustained overloading will cause cable failure and result in possible electrical shock or fire hazard.
D. Be sure all electrical connections are tight, clean, and dry. Poor electrical connections can heat up and even melt, causing dangerous arcs and sparks.
E. Keep dry. Moisture and water can conduct electricity. Fix water leaks immediately.
F. Keep welding cables and connectors in good condition. Improper or worn electrical connections can cause short circuits and can increase the chance of an electrical shock.
G. Avoid open-circuit voltage. Open-circuit voltage is much higher than welding voltage.
H. Shut off electrical power when working on welding equipment.

**CAUTION:** Ultraviolet and infrared rays emitted by the welding arc, as well as the spatter from the welding arc, can injure eyes and burn skin. Specific safety precautions must be followed to ensure adequate protection.
A. Wear 100% cotton clothing. It will not catch fire easily, it offers good protection from light welding spatter, and it is cooler in the summer and warmer in the winter.
B. Cover all skin surfaces. Keep shirt sleeves rolled down.
C. Wear cuffless pants to eliminate spatter traps.
D. Wear leather boots. Pant legs should cover boot tops.
E. Wear clean clothing. Oil and grease stained clothes will tend to ignite from welding spatter.
F. For more severe welding conditions, wear protective clothing such as heat resistant jackets, aprons, and leggings.
G. Wear safety glasses to protect from arc flashes, mechanical injury, or other mishaps.
H. Wear ear protection, not only where there is noise but where there is a chance that spatter or sparks could get into the ears.
I. Wear a 100% cotton cap to protect the head from sparks or spatter.
J. Wear long gauntlet leather gloves.
K. Do not touch hot metal with bare hands. Use pliers and wear leather gloves.
L. Protect nearby workers from exposure to the welding arc by putting up shields.
M. Wear a welding helmet with the correct shade of welding lens. Choose the correct lens from a filter recommendations table (see Figure 2).

* As a general rule, start with a shade that is too dark to see the arc zone. Then go to a lighter shade which gives sufficient view of the arc zone without exerting a strain on your eyes.

Figure 2 Filter Recommendations

CAUTION: Specific precautions must be taken to ensure that there is no loss of property due to welding sparks, spatter, and heat.

A. If possible, weld in specially designated areas or enclosures of noncombustible construction.
B. Remove combustibles from the work area by at least 35 feet if possible.
C. Cover combustibles that can not be removed from the welding area with tight-fitting flame-resistant material. Items that should be covered include combustible walls, floors, ceilings, and any cracks or other openings that might let a spark pass through it.

D. If welding is to be performed on or adjacent to a metal wall, ceiling, or partition, move combustibles on the other side to a safe location.

E. If combustibles can not be adequately sealed off or removed, station a fire watcher at that location. The fire watcher must have adequate fire extinguishing capabilities.

F. Do not weld on materials having either a coating or internal structure that is combustible.

G. Place hot scrap and slag in non-combustible containers.

H. Ensure that fire extinguishers are available nearby.

I. Conduct a thorough examination for evidence of a fire before leaving the work area, and continue a fire check for at least 30 minutes after the welding operation has been completed.

J. Follow all company safety procedures regarding welding in hazardous areas.

**CAUTION:** NEVER carry a butane lighter into a welding area. These are considered to be mini-Molotov cocktails.

DON'T CARRY A BOMB IN YOUR POCKET.
WLD-L8-LW
Control Post-Weld Temperature According to Procedures
Attachment 8: MASTER Laboratory Worksheet

Worksheet:

1. **Choose Proper Power Source**
   
   **Step 1.** With the procedures and electrodes used at maintenance and fabrication facilities, choose a constant current (CC) power source for the Shielded Metal Arc Welding process. Some units are a combination of constant current (CC) and constant voltage (CV). This type of power source will have one or two switches to change from constant current to constant voltage.

   **Step 2.** An alternating current (AC) welding power source could be used with the low-hydrogen family of electrodes, but choose a constant current (CC) power source if possible.

2. **Choose a Proper Electrode**
   
   **Step 1.** Choose the proper electrode for the job.

   **NOTE:** The maintenance technician uses E6010 and E7018 electrodes for most SMAW applications. The E6010 belongs to the fast-freeze family of electrodes and the E7018 belongs to the low-hydrogen family of electrodes. The E6010 provides a deep digging, deep penetrating type of weld and may be used for non-critical fabrication.

   The E7018 low-hydrogen is used as the primary electrode for fabrication and other code-quality welds. The low-hydrogen family also includes E7015, E7016, and E7048. Hydrogen in the weld deposit causes brittleness called hydrogen embrittlement, which leads to cracking and potential weld failure.

   **Step 2.** Store the electrodes properly.

   a. **Low-hydrogen electrodes:**

      (1) These electrodes are packaged in hermatically sealed (watertight) cans. Be careful not to damage the cans which would allow air and moisture to attack the electrodes in the cans.

      (2) Once the cans are opened, store the electrodes in a rod oven at 150°F to 300°F.

      (3) Re-dry electrodes that have been outside a sealed container or a properly heated rod oven for several hours by baking them one hour at 700°F to 800°F and storing them in a rod oven.

   **NOTE:** Some welding procedures also set a time limit on the number of hours that low-hydrogen electrodes can be
kept out of a rod oven prior to use. Times vary from two to four hours, depending on the type of base metal to be welded and the humidity levels of the environment.

b. Do not store the E6010 fast-freeze electrodes in rod ovens. Fast-freeze electrodes require the presence of small amounts of moisture in order to run smoothly.

Step 3. Match the low-hydrogen family members with the polarities that are used with them (see Figure 5).

Figure 6 Typical Current Ranges for Electrodes

3. Prepare Weldment for Welding

Step 1. Oxyacetylene cut, carbon air arc gouge/cut, or machine cut/mill material to the desired shape/contour for each type of weld joint configuration needed for each welding task at hand.

a. Weld joint configuration will depend upon:
(1) Product design  
(2) Material thickness  
(3) Design strength requirements  
(4) Welding process employed

b. SMAW weld joint configuration may be a:
   (1) Lap joint  
   (2) Tee joint  
   (3) Corner joint  
   (4) Edge joint  
   (5) Butt joint with backing  
   (6) Butt joint without backing

Step 2. Clean the areas to be welded prior to fit-up
   a. Remove rust, paint, and any other coatings by wire brushing,  
      grinding, sanding, or filing  
   b. Remove oils and greases with a safe, suitable solvent

Step 3. Turn on the power source and set the current range (amps) on the machine  
   at the lower end of the setting as suggested for the electrode size.

Step 4. Obtain a piece of scrap metal of the approximate type and thickness for  
   the weld joint to be made.

Step 5. Practice welding on the scrap metal and adjust the current setting as  
   needed to produce a good weld.

4. Complete Welding Operation

Step 1. Tack weld a joint that is defect free and can be incorporated into the  
   finished product.

Step 2. Use any preheat that may be required by welding codes or company  
   procedures.

Step 3. Make the required weld to be defect free and pleasing in appearance.

Step 4. Use proper weld bead placement according to the weld joint design.  
   a. When making seam welds, produce the weld beads by using very  
      little oscillation or some oscillation.
   b. When making fillet welds, produce the weld beads by using some  
      oscillation. Fillet welds in the vertical position can also be run  
      using a weaving technique.
   c. When making groove welds, produce the weld beads by using  
      some oscillation and/or by weaving. When making groove welds  
      on butt joints, the amount of weaving will depend on the welding  
      position and the weld joints. It may also be limited by applicable  
      welding codes and/or company standards.

Step 5. Maintain the correct welding travel speed. Weld bead size can be changed  
   by varying the arc travel speed. Bead size and travel speed are inversely  
   related: a decrease in travel speed will result in an increase in the weld  
   bead height and width, and an increase in travel speed will result in a  
   decrease in the weld bead height and width.
a. As the material thickness increases, the travel speed must slow down.
b. For a given material thickness and joint design, as the welding amperage is increased so is the arc travel speed. Conversely, as the amperage is decreased, the arc travel is slowed.
c. Higher welding speeds are attainable by using the forehand (pushing) technique.

5. Troubleshoot Welding Problems

Step 1. Be aware of the welding variables and how they can affect the weld. Below is a list of eleven welding variables for the SMAW process:

- a. Type of electrode
- b. Diameter of electrode
- c. Type of current (AC or DC)
- d. Current polarity (DC+ or DC-)
- e. Current setting
- f. Arc length
- g. Travel speed
- h. Electrode angle
- i. Electromagnetic arc blow
- j. Electrode manipulation technique (drag, whip)
- k. Thoroughness of slag removal prior to restarts and new bead placement

Step 2. Be aware of general welding variables and how they can affect the weld:

- a. Type of base metal
- b. Thickness of base metal
- c. Surface condition of base metal (clean, rusty, or painted)
- d. Atmospheric conditions

Step 3. Be aware of any weld discontinuity and the relevant welding variables that may have caused it.
WLD-L8
Control Post-Weld Temperature According to Procedures
Self-Assessment No. 1

Circle the best answer.

1. What is the approximate temperature required for stress relief annealing of low-carbon steels?
   A. 950°
   B. 1000°
   C. 1950°
   D. 1700°
   E. None of the above

2. What crystalline processes result from stress relief annealing?
   A. All grains reform into softer grains
   B. Distorted grains reform into softer grains
   C. Ferrite grains reform into softer grains while pearlite grains are basically unaffected
   D. Pearlite grains reform into softer grains while ferrite grains are basically unaffected
   E. None of the above

3. Which of the following is NOT a cause of quenching cracks?
   A. Improper quenching medium
   B. Overheating during the austenitizing cycle
   C. Improper quenching angle
   D. All of the above are causes of quenching cracks
   E. None of the above answers is correct

4. Which of the following is NOT a characteristic of typical quench cracks?
   A. The fracture tends to run from the surface toward the center in a smooth curve
   B. Untempered quench cracks will not show any decarburization
   C. Tempered fracture surfaces will show a fine crystalline structure
   D. All of the above are characteristic of quench cracks
   E. None of the above
5. During tempering by color, which of the following colors represents the highest temperature?
   A. Gold
   B. Purple
   C. Dark Straw
   D. Pale Blue
   E. Violet

6. During tempering by color, which of the following colors represents the lowest temperature?
   A. Gold
   B. Purple
   C. Dark Straw
   D. Pale Blue
   E. Violet

7. What is meant by *step quenching*?
   A. The workpiece is first quenched in a slow medium (e.g., air) then in a fast medium (e.g., water)
   B. The workpiece is first quenched in a fast medium (e.g., water) then in a slow medium (e.g., air)
   C. The weaker parts of the workpiece are quenched separately from the main body of the workpiece
   D. The workpiece is lowered into the quenching medium in steps so that different parts of the workpiece attain different hardnesses
   E. None of the above

8. What is the simplest thing that the technician can do to minimize the vapor-blanket stage of liquid quenching?
   A. Agitate the workpiece or the medium
   B. Heat the quenching medium to just below its boiling point
   C. Quickly insert the workpiece into the medium
   D. Slowly insert the workpiece into the medium
   E. None of the above

9. Liquid carburizing, as used in case hardening, utilizes _________ and is therefore extremely dangerous.
   A. Sodium chloride
   B. Calcium carbonate
   C. Cyanide salts
   D. Ammonia
   E. None of the above
10. Workpieces which have been cut with an oxyacetylene torch often display edge hardness because
A. The torch was starved for oxygen
B. The workpiece was cut at too low a temperature
C. The wrong type of cutting torch was used
D. Oxyacetylene torches always leave hardened edges
E. None of the above

Control Post-Weld Temperature According to Procedures
Self-Assessment No. 2

Circle the best answer.

1. The hardness of a metal is its ability to resist:
   A. Permanent deformation.
   B. Oxidation.
   C. Chemical reaction.
   D. All of the above answers are forms of hardness.
   E. None of the above.

2. Rockwell testing machines test the sample metal's resistance to:
   A. Abrasion.
   B. Penetration.
   C. Elastic deformation.
   D. Electricity.
   E. None of the above.

3. Materials such as nitrided steel and hard cast irons generally have Rockwell hardness numbers in excess of
   A. B-50.
   B. B-75
   C. B-100.
   D. B-150.
   E. None of the above.

4. During the file test, if the file will mark the metal but not cut into it, then the metal should be treated as:
   A. High-alloy steel.
   B. Mild steel.
   C. Hardened tool steel.
   D. Medium-carbon steel.
   E. None of the above.

5. Probably the best use of the spark test is to:
   A. Determine the alloy content of the sample.
   B. Identify cast iron.
   C. Compare the sample to a known piece.
   D. All of the above answers are valid.
   E. None of the above.
6. Tool steel has a Rockwell hardness of ________, while hardened tool steel has hardness number of ________.
   A. C-42 - C-64
   B. C-42 - B-65
   C. C-64 - C-42
   D. B-65 - C-42
   E. None of the above.

7. Which of the following surfaces should be avoided when hardness testing?
   A. Curved
   B. Rough
   C. Decarburized
   D. All of the above surfaces should be modified before testing the sample's hardness.
   E. None of the above.

8. For hardness testing, the minimum recommended clearance from the edge is:
   A. 1/2”
   B. 1/4”
   C. 1/8”
   D. 1/16”
   E. None of the above.

9. If a Rockwell tester is in daily use, it should be calibrated:
   A. Annually.
   B. Monthly.
   C. Weekly.
   D. Daily.
   E. Never.

10. Technician A says that, for large samples, multiple hardness test should be made and their results averaged. Technician B says that many materials vary in hardness over the length of the sample. Who is correct?
    A. Technician A only
    B. Technician B only
    C. Both technicians are correct.
    D. Neither technician is correct.

Control Post-Weld Temperature According to Procedures
Self-Assessment No. 3

Choose the best answer.

1. The size of the bead is ______ proportional to the speed of travel.
   A. Directly
   B. Inversely
   C. Not
   D. None of the above

2. The eye shield of the welding helmet should be:
   A. Just light enough to clearly see the arc.
   B. Too dark to clearly see the arc.
   C. A minimum of #5.
   D. None of the above.

3. Welding in confined spaces may require:
   A. Air supplied hoods or hose masks.
   B. Frequent breaks.
   C. Large, high-displacement fans.
   D. All of the above.
   E. None of the above.

4. Long sleeves protect the arms against:
   A. Ultraviolet radiation.
   B. Infrared radiation.
   C. Welding splatter.
   D. All of the above.
   E. None of the above.

5. Which of the following is NOT a variable in the SMAW process?
   A. Current polarity
   B. Arc length
   C. Length of the electrode
   D. All of the above are variables in the process.
   E. None of the above.
6. Acceptable welding footwear includes:
   A. Roman sandals.
   B. Tennis shoes.
   C. Canvas boots.
   D. All of the above.
   E. None of the above.

7. A welder whose travel speed is too fast may have problems with:
   A. Excess convexity.
   B. Overlap.
   C. Porosity.
   D. All of the above.
   E. None of the above.

8. Technician A says that low-hydrogen electrodes can only be in the open air for two to four hours. Technician B says that the humidity and the base metal determine the amount of time that low-hydrogen electrodes can be exposed. Who is correct?
   A. Technician A only.
   B. Technician B only.
   C. Both Technicians A and B.
   D. Neither Technician A nor B.

9. E6010 electrodes should only be used with:
   A. DC-.
   B. DC+.
   C. AC.
   D. There is no such electrode.

10. Technician A says that they should weld only in well ventilated areas. Technician B says that welding produces gases that are odorless, colorless, and heavier than air. Who is correct?
    A. Technician A only.
    B. Technician B only.
    C. Both Technicians A and B.
    D. Neither Technician A nor B.

11. Technician A says that they should never carry butane lighters into the welding area because they may explode. Technician B says that gasoline should never be taken into the welding area, either. Who is correct?
    A. Technician A only.
    B. Technician B only.
    C. Both Technicians A and B.
    D. Neither Technician A nor B.
12. When repairing welding equipment, its electrical power should be:
   A. On.
   B. Off.
   C. On or off, depending on the repair.
   D. The SMAW machine is not electrical.

13. To prevent electrical shocks, all electrical equipment and the work piece should be:
   A. On rubber work mats.
   B. Elevated off the floor.
   C. Grounded.
   D. All of the above.
   E. None of the above.

14. Which of the following electrodes is NOT in the low-hydrogen family?
   A. E7015
   B. E7016
   C. E7018
   D. All of the above are low-hydrogen electrodes.
   E. All of the above are fast-freeze electrodes.

15. Technician A says that undercutting is caused by too much current. Technician B says that wet electrodes can also cause undercutting. Who is correct?
   A. Technician A only.
   B. Technician B only.
   C. Both Technicians A and B.
   D. Neither Technician A nor B.

16. Fire inspections should be continued for at least _________ after completion of the welding.
   A. Fifteen minutes
   B. Thirty minutes
   C. One hour
   D. Two hours

17. The welding area should be:
   A. Isolated from other workers by shields.
   B. At least 35 feet from combustible materials.
   C. Dry.
   D. All of the above.
   E. None of the above.
18. Seam welds generally require __________ oscillation.
   A. No
   B. Very little
   C. Moderate
   D. Great

19. Technician A says that all electrical connections must be tight, clean, and dry. Technician B says that poor electrical connections can heat up and even melt. Who is correct?
   A. Technician A only.
   B. Technician B only
   C. Both Technicians A and B
   D. Neither Technician A nor B

20. If it is impractical to properly remove combustible materials from the vicinity of the welding, then:
   A. Do not weld
   B. Take frequent breaks to inspect the area for fires
   C. Station a fire watcher near the combustible materials
   D. Any of the above is acceptable
   E. None of the above

21. E7018 electrodes should never be used with
   A. DC-
   B. DC+
   C. AC
   D. There is no such electrode

22. Areas to be welded should be thoroughly cleaned
   A. Prior to fit-up
   B. By brushing, sanding, or grinding
   C. With safe solvents
   D. All of the above, as necessary
   E. None of the above

23. Technician A says that porosity can be caused by a current setting that is too low. Technician B says that porosity can be caused by too long an arc. Who is correct?
   A. Technician A only
   B. Technician B only
   C. Both Technicians A and B
   D. Neither Technician A nor B
24. Low-hydrogen electrodes may be stored
   A. In sealed cans or heated rod ovens
   B. Under water
   C. In petroleum jelly
   D. Any of the above
   E. None of the above

25. As the material being welded increases in thickness, the travel speed of the weld must
   A. Increase
   B. Decrease
   C. Either A or B, depending on the desired effect
   D. Stay the same
   E. None of the above

WELDER SERIES
MASTER Technical Module No. WLD-L09

SUBJECT: WELDING TECHNICIAN
TIME: 4 HOURS

DUTY:
SHIELDED METAL ARC WELDING (SMAW) (BASIC)

TASK:
Post Clean Weld

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Identify material not associated with weld metal;
B. Use a variety of tools to remove residue material; and,
C. Identify when all slag, etc., is removed.

INSTRUCTIONAL MATERIALS:

Student Workbook
Written tests on cleaning processes after welding
Transparencies prepared to emphasize each subject
Hobart Institute Video Material
Miller Module Method Video materials
The classroom handouts will consist of student worksheets and alloy charts
Personal protective equipment
Shielded Metal Arc Welding machine
Welding shop tools
Selection of base metals for welding and cutting
Selection of filler metals and electrode wire
MASTER Handout No. 1 (WLD-L9-H01)
MASTER Handout No. 2 (WLD-L9-H02)
MASTER Handout No. 3 (WLD-L9-H03)
MASTER Handout No. 4 (WLD-L9-H04)
MASTER Handout No. 5 (WLD-L9-H05)
MASTER Handout No. 6 (WLD-L9-H06)
MASTER Laboratory Aid (WLD-L9-LA)
MASTER Laboratory Worksheet (WLD-L9-LW)
MASTER Self-Assessment No. 1
MASTER Self-Assessment No. 2
MASTER Self-Assessment No. 3

TEXT:

OTHER:

*Competency Standards*, American Welding Society, Latest Edition

STUDENT PREPARATION:

Student must demonstrate appropriate communication skills and understand principles of basic physical science and mathematics as verified by placement test or completion of required prerequisite courses.

- **WLD-L1** “Preheat Joint”
- **WLD-L2** “Initiate Welding Process”
- **WLD-L3** “Perform Weld Sequence”
- **WLD-L4** “Control Weld Technique”
- **WLD-L5** “Maintain Preheat and Perform Interpass”
- **WLD-L6** “Use the Carbon Arc Process to Cut and Gouge Weld Materials”
- **WLD-L7** “Apply Welders Identification”
- **WLD-L8** “Control Post-Weld Temperature According to Procedures”
INTRODUCTION:

The Course Introduction will Include:

- An overview of the need for post weld operations and weld cleaning procedures
- A class demonstration of effective weld cleaning techniques
- A discussion on activities resulting in further training and an increase of skill and knowledge leading to certification in related program areas.

PRESENTATION OUTLINE:

Instructor Topics:

A. Joint preparation and cleaning of surfaces for welding
B. Post cleaning of weld following welding procedure specifications
C. Examples of cleaning processes followed by major manufacturers
D. Demonstrate knowledge of the proper application of welding skills

Student Activities:

A. Joint preparations and metal cleaning of surfaces for welding
B. Oxygen cutting, air carbon arc, or plasma cutting (may involve marking or grinding followed by cleaning)
C. Post cleaning of weld (with examples from major industries of specific products and cleaning methods)
D. Oxide layers may be removed by grinding, sanding, or stainless brushing

PRACTICAL APPLICATION:

The student needs to know and fully appreciate the importance of all steps in welding procedure specification. The alternatives may be costly rework or rejection of product by customers.

EVALUATION AND/OR VERIFICATION:

Written examinations will be given in this module to determine student progress. Practical exercises will be evaluated by student and instructor.

SUMMARY:

Many industries have welded products that are marketed to customers in aerospace, pressure vessel, and aviation sectors that demand top quality in the welding procedures and post weld treatment processes that are critical to product outcomes.
NEXT LESSON ASSIGNMENT:

MASTER Technical Module (WLD-L10) dealing with post finishing weld.
OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Identify material not associated with weld metal;
B. Use a variety of tools to remove residue material; and,
C. Identify when all slag, etc., is removed.

MODULE OUTLINE:

Instructor Topics:
A. Joint preparation and cleaning of surfaces for welding
B. Post cleaning of weld following welding procedure specifications
C. Examples of cleaning processes followed by major manufacturers
D. Demonstrate knowledge of the proper application of welding skills

Student Activities:
A. Joint preparations and metal cleaning of surfaces for welding
B. Oxygen cutting, air carbon arc, or plasma cutting (may involve marking or grinding followed by cleaning
C. Post cleaning of weld (with examples from major industries of specific products and cleaning methods
D. Oxide layers may be removed by grinding, sanding, or stainless brushing
OBJECTIVE(S):

Upon completion of this unit the student will be able to:

a. Discuss the reasons for heat treating;
b. Discuss the time/temperature chart
c. List the different quenching media
d. Estimate metal heat temperature by color; and
e. List reasons for stress relieving workpieces.

MODULE OUTLINE:

I. Discuss the Reasons for Heat Treating
   A. Hardening for utility
   B. Tempering for toughness without brittleness

II. Discuss the Time/Temperature Chart

III. List the Different Quenching Media (In order of severity or speed of quenching)
   A. Brine (water and sodium chloride or sodium hydroxide)
   B. Water
   C. Fused (liquid) salts
   D. Molten lead
   E. Soluble oil and water
   F. Oil
   G. Air

IV. Estimate Metal Heat Temperature by Color
   A. Use of temper color chart for tempering
   B. Chicken Wire markings warn of overheating

V. List Reasons for Stress Relieving Workpieces
   A. Increased machinability
   B. Increased workability in cold processes

VI. Special Safety Concerns of Heat Treating
   A. Protective Gear against...
      1. Heat
      2. Fumes
      3. Concussion
   B. Toxicity of Certain Media

VII. Special Problems in Heat Treating
   A. Britteness
   B. Distortion
   C. Discoloration (sometimes unimportant)
   D. Inadvertent heat treating
OBJECTIVE(S):

Upon completion of this unit the student will be able to:

a. Perform file test to test for metal hardness;
b. Use other tests to identify metals; and,
c. Perform Rockwell hardness tests.

MODULE OUTLINE:

I. Perform File Test to Test for Metal Hardness
   A. Imprecise method, good for rough estimates only
   B. Requires more experienced machinist

II. Use Other Tests to Identify Metals
   A. High-carbon steels show more spark bursts than do low-carbon steels.
   B. Non-ferrous metals
      1. Aluminum
      2. Magnesium
      3. Brass
      4. Bronze
      5. Nickel
      6. Tin
      7. Others

III. Perform Rockwell Hardness Tests
     A. Ferrous metals
     B. Non-ferrous metals

IV. Perform Brinell Hardness Tests
    A. Ferrous metals
    B. Non-ferrous metals

V. Other Hardness Tests as Specified by the Instructor
   A. Ferrous metals
   B. Non-ferrous metals

Student laboratory exercises as assigned by Instructor.

BASIC SHIELDED METAL ARC WELDING (SMAW) AND OXY-FUEL GAS CUTTING

1. Define Selected Welding Terms Per AWS A3.0
   a. Define arc welding process terms
   b. Define standard joint terminology
   c. Define common weld discontinuities
   d. Name welding equipment, supply and consumables
   e. Define common shop terms including proper equipment names
   f. Define material terms
   g. Define common metallurgy terms

2. Describe AWS Code for Mild Steel Electrodes
   a. List, describe and define
   b. List low hydrogen electrodes
   c. List iron powder electrodes
   d. Describe electrode by welding position
   e. Describe electrode by current and polarity
   f. Describe electrode by penetration

3. Set Up Welding Machine to Required Polarity
   a. List polarities for commonly used electrodes
   b. Describe both polarities
   c. Describe advantages and disadvantages of alternating current

4. Use Correct Start and Stop Techniques for SMAW Electrodes
   a. Describe and demonstrate start for non-low hydrogen SMAW electrode
   b. Describe and demonstrate stop for non-low hydrogen SMAW electrodes with filled craters
   c. List reasons for the importance of low hydrogen in weld metal
   d. Explain the reason for low hydrogen starts and stops and how they work and why required specifically with E7018

5. Set Up Equipment for Shielded Metal Arc Welding
   a. Inspect area for safety
   b. Adjust current and polarity for specific job requirements
   c. Choose type and size of electrode
   d. Wear applicable personal safety equipment

6. Strike an Arc, Run Continuous Stringer Bead
   a. Stand and position oneself correctly
   b. Operate welding helmet
c. Verbally warn others of intent to arc weld
d. Strike an arc
e. Weld with stringer bead technique
f. Perform weld tie ins to make continuous bead

7. Weld Using Weave Technique
   a. Maintain required weld quality
   b. Maintain proper weld width uniformly
   c. Maintain proper travel speed
   d. Match correct oscillation for various electrodes
   e. Match applications to weave techniques, as they apply
   f. List the advantages and disadvantages of weave techniques
   g. List the advantages and disadvantages of stringer techniques
   h. Perform weld using weave technique
   i. Concentrate on dwell times at edges of weld pool

8. Weld Multi-Layer Buildup
   a. Weld a dam to outline area being welded for each layer
   b. Apply each layer neatly, straight and with good fusion throughout
   c. Chip slag after each pass
   d. Weld passes which over lap to crown of last weld bead
   e. Demonstrate control of bead height

9. Set Up and Shut Down Oxy-Fuel Equipment
   a. Follow manufacturer's recommended practice
   b. Inspect equipment and work area for safety
   c. Assemble oxy-fuel equipment
   d. Open fuel gas cylinder ½ turn
   e. Open oxygen as cylinder all the way
   f. Adjust fuel gas and oxygen working pressure per manufacturer's recommendation
   g. Purge lines one at a time. One second for each 10 feet of hose length

10. Cut Steel Plate Using Oxy-Fuel Equipment
    a. Make manual free hand straight line cuts
    b. Cut manually straight lines using cutting jib
    c. Bevel plate with manual oxy-fuel equipment
    d. Manually cut blind holes in thick material
    e. Manually cut sheet metal with minimal distortion
Student laboratory exercises as assigned by Instructor.

ADVANCED SHIELDED METAL ARC WELDING (SMAW) AND CUTTING

1. Weld Single V Groove Welds With Open Roots From One Side
   a. Bevel 3/8" steel plate to 37 1/2° using oxy-fuel gas cutting e.g.
   b. Use grinder to remove oxide larger and smooth plate
   c. Use grinder to create root face of 3/32" to 1/8"
   d. Tack single V groove joint with 3/32" root opening
   e. Place joint in the 1G position
   f. Place joint in 2G position once task is mastered
   g. Place joint in 3G position once task is mastered
   h. Place joint in 4G position once task is mastered
   i. Weld the root with Direct Current Electrode Positive using 1/8" E6010. Use tight arc length and keyhole technique to produce a well fused root bead extending 1/16" above the plate.
   j. Weld chipped side slag and the root bead is wire brushed
   k. Fill the balance of the groove with 3/32", 1/8" and/or 5/32" E7018 using the stringer bead technique
   l. Visual test finished weld and root face bends evaluated to AWS D1.1 criteria

2. Weld Various Diameters of Pipe to Plate
   a. Inspect area for safety
   b. Place plate flat on welding table
   c. Place 3" pipe vertically on top of plate and tacked in place
   d. Leave weld coupon in the 2F fixed position
   e. Apply a 3/8" fillet weld using 1/8" E7018 and a stringer bead technique
   f. Visually inspect weld to AWS D1.1
   g. Fill pipe with water for 24 hours
   h. Check for leak

3. Produce SMAW Pipe - 5G Position
   a. Measure the pipe
   b. Mark the cut line with a wrap around and soapstone
   c. Cut the bevel using oxy-fuel gas equipment
   d. Clean the bevel face with a grinder, remove all oxide and smooth bevel face
   e. Use the grinder to add a root face of from 3/32" to 1/8"
   f. Tack the single V groove pipe joint with a 3/32" root opening
g. Place the joint in the 5G fixed position, using an 1/8" E6010 and a keyhole technique. Weld the root pass upward producing a root weld which is well fused and has a 1/16" weld reinforcement above the plate.

h. Chip slag and wire brush weld

i. Grind any lack of fusion and/or high spots

j. Weld the balance of the groove upward with 3/32" or 1/8" E7018 using the stringer bead technique

k. Visually inspect weld on the root and face sides to ASME Section 9

l. Remove four guided bend specimens from 2:00, 4:00, 8:00 and 10:00 positions prepared and two & eight are root bend specimens. Four & ten are face bend specimens. Guided bend tests are evaluated to ASME Section 9 criteria

4. Produce SMAW - 2G Position Groove Welds

a. Measure the pipe

b. Mark the cut line with a wrap around and soapstone

c. Cut the bevel using oxy-fuel gas equipment

d. Clean the bevel face with a grinder, remove all oxide and smooth bevel face

e. Use the grinder to add a root face of from 3/32" to 1/8"

f. Tack the single V groove pipe joint with a 3/32" root opening

g. Weld pipe joint

h. Place the joint in the 2G fixed position, using an 1/8" E6010 and a keyhole technique. Weld the root pass upward producing a root weld which is well fused and has a 1/16" weld reinforcement above the plate.

i. Chip slag and wire brush. Grind any lack of fusion and/or high spots

j. Weld balance of the groove upward with 3/32" or 1/8" E7018 using the stringer bead technique

k. Visually inspect weld on the root and face sides to ASME Section 9

l. Remove four guided bend specimens from 2:00, 4:00, 8:00 and 10:00 positions prepared and two & eight are root bend specimens. Four & ten are face bend specimens. Guided bend tests are evaluated to ASME Section 9 criteria

5. Roll Weld Pipe - SMAW

a. Measure the pipe

b. Mark the cut line with a wrap around and soapstone

c. Cut the bevel using oxy-fuel gas equipment

d. Clean the bevel face with a grinder, remove all oxide and smooth bevel face

e. Use the grinder to add a root face of from 3/32" to 1/8"

f. Tack the single V groove pipe joint with a 3/32" root opening

g. Roll weld pipe

h. Place pipe coupon on workbench in the 1G roll welding position.

i. Weld the root bead using 1/8" E6010 and the keyhole technique. The weld is performed in the 2:00 to 12:30 position

j. Chip slag and wire brush. Grind any lack of fusion and/or high spots
k. Weld balance of groove upward with 3/32" or 1/8" E7018 using the weave technique
l. Visually inspect weld on the root and face sides to ASME Section 9
m. Remove four guided bend specimens from 2:00, 4:00, 8:00 and 10:00 positions prepared and two & eight are root bend specimens. Four & ten are face bend specimens. Guided bend tests are evaluated to ASME Section 9 criteria

6. Produce SMAW Pipe - 5G Position
   a. Measure the pipe and
   b. Mark the cut line with a wrap around and soapstone
   c. Cut the bevel using oxy-fuel gas equipment
   d. Clean the bevel face with a grinder, remove all oxide and smooth bevel face
   e. Use the grinder to add a root face of from 3/32" to 1/8"
   f. Weld pipe
g. Tack the single V groove pipe joint with a 3/32" root opening
h. Place the joint in the 5G fixed position, using an 1/8" E6010 and a keyhole technique
i. Weld the root pass upward producing a root weld which is well fused and has a 1/16" weld reinforcement above the plate
j. Chip slag and wire brush. Grind any lack of fusion and/or high spots
k. Weld balance of groove upward with 3/32" or 1/8" E7018 using the weave technique
l. Visually inspect weld on the root and face sides to ASME Section 9
m. Remove four guided bend specimens from 2:00, 4:00, 8:00 and 10:00 positions prepared and two & eight are root bend specimens. Four & ten are face bend specimens. Guided bend tests are evaluated to ASME Section 9 criteria

7. Produce SMAW Pipe - 6G Position
   a. Measure the pipe
   b. Mark the cut line with a wrap around and soapstone
c. Cut the bevel using oxy-fuel gas equipment
d. Clean the bevel face with a grinder, remove all oxide and smooth bevel face
e. Use the grinder to add a root face of from 3/32" to 1/8"
f. Weld pipe
g. Tack the single V groove pipe joint with a 3/32" root opening
h. Place the joint in the 6G fixed position, using an 1/8" E6010 and a keyhole technique
i. Weld the root pass upward producing a root weld which is well fused and has a 1/16" weld reinforcement above the plate
j. Chip slag and wire brush. Grind any lack of fusion and/or high spots
k. Weld balance of groove upward with 3/32" or 1/8" E7018 using the stringer bead technique
l. Visually inspect weld on the root and face sides to ASME Section 9
1. Remove four guided bend specimens from 2:00, 4:00, 8:00 and 10:00 positions prepared and two & eight are root bend specimens. Four & ten are face bend specimens. Guided bend tests are evaluated to ASME Section 9 criteria.

8. Create SMAW Pipe to ASME Section 9
   a. Bevel two pieces of pipe to 30° bevel angle using oxy-fuel gas cutting equipment
   b. Clean bevel face and a 3/32" root face is applied using a hand held grinder
   c. Set welding condition to weld open roots
   d. Tack pipe nipples together to form a V groove with a 1/8" root opening
   e. Place pipe in the 5G fixed position. The root pass is welded and cleaned by wire brushing
   f. Weld balance of the V groove with this procedure
   g. Visual inspection is made and evaluated by ASME Section 9
   h. Make four bend samples and evaluate by ASME Section 9

9. Interpret Welding Procedures
   a. Identify process
   b. Name joint design
   c. List base material
   d. Give dimensions for root treatment
   e. Name electrode size and type being used
   f. List filler material (if required), classification and specification
   g. Identify shielding gas - type and mixture
   h. List pre and post heat and interpass temperature
   i. Describe initial and interpass cleaning
   j. Describe technique which is used
   k. Produce single or multiple pass weld
   l. Choose current type
   m. Set current amperage
   n. Set current polarity
   o. Set voltage
Student laboratory exercises as assigned by Instructor.

PIPE WELDING - SMAW

1. Produce End Preparations
   a. Produce end preparations with oxy-fuel cutting
   b. Produce end preparations with plasma cutting
   c. Produce end preparations with mechanical cutting
   d. Produce end preparations with grinding

2. Fit and Tack Weld Pipe
   a. Cut and single bevel pipe to 37 1/2°
   b. Ground bevel face and touch up to within tolerances
   c. Check that pipe ends are square within given tolerances
   d. Prepare root face within given tolerances
   e. Align pipe to within given tolerances
   f. Set root opening to within given tolerances
   g. Tack pipe according to welding procedure specification - maintaining root opening

3. Roll Weld Open Root Pass on Pipe - 1G Position
   a. Fit up and tack pipe joint using 1/8" E6010 electrode, weld the root pass on pipe in the 1 o'clock to (2:00 o'clock position) according to procedure using the roll welding technique
   b. Weld remainder of pipe in the 1G roll welding position with E6010
   c. Weld the remaining portion of the groove using the weave technique using 5/32" E6010 electrode roll

4. Weld Open Root Pipe Joint - 2G Position
   a. Weld using 1/8" E6010
   b. Cut and grind pipe ends will be to single bevel edge preparations of 37 1/2°
   c. Fit together the two pipe ends to a single V edge preparation with given tolerances
   d. Weld root pass to ASME Section 9 requirements
   e. Fill balance of the groove with E6010 using the stringer technique to ASME Section 9 requirements

5. Weld Open Root Pipe - 5G Position
   a. Fit and tack weld pipe to within tolerances
   b. Place pipe in the 5G position
   c. Weld the rootpass using 1/8" E6010 to ASME Section 9 requirements
   d. Grind the finished root pass to remove high spots and any slag at weld toes
5. Pass Guided Bond Tests Per ASME Section 9
   a. Remove bend samples from pipe at the 10, 2, 8 & 4 o'clock positions
   b. If the material is 3/8" or thinner 10 o'clock and 8 o'clock receive root bends and 2 o'clock and 4 o'clock receive face bends. If the pipe wall thickness is over 3/8" side bends shall be performed on all samples.
   c. Weld remainder of pipe in 1G position using E7018
   d. Perform low hydrogen starts and stops
   e. Weld using stringer bead technique
   f. Weld using weave technique
   g. Chip slag wire brush and grind as necessary to assure clean weld deposits

6. Weld Open Root Pipe - 2G Position
   a. Use 1/8" E6010
   b. Cut and ground pipe ends to single bevel edge preparations of 37 1/2°
   c. Fit together two pipe ends to a single V edge preparation within given tolerances
   d. Weld root pass to ASME Section 9 requirements
   e. Clean weld pass by chipping slag, wire brushing and grinding where necessary to assure a clean, well fused weld deposit
   f. Weld remainder of the groove using E7018 with the stringer bead technique

7. Weld Pipe Open Root Passes All Positions Using GMAW
   a. Set up GMAW equipment
   b. Adjust wire feeder drive system
   c. Adjust shielding gas system and flow rate
   d. Adjust GMAW gun to allow proper tip to work distance and gas coverage
   e. Set welding condition for short circuit transfer - Wire Feed Speed
   f. Set welding condition for short circuit transfer - Voltage
   g. Set welding condition for short circuit transfer - Tip to work Distance
   h. Weld root using a string bead technique

8. Weld Pipe With Backing Using FCAW-G
   a. Bevel pipe ends
   b. Touch up bevel face with grinder
   c. Fit and tack backing ring to one pipe end
   d. Fit other pipe over backing ring
   e. Adjust gap and tack in place
   f. Adjust shielding gas flow
   g. Adjust wire feed system
   h. Adjust power source to procedure specification
   i. Set wire feed speed to procedure specification
   j. Adjust voltage to procedure specification
   k. Adjust inductance to procedure specification
1. Adjust GMAW gun for tip to work distance and shielding gas
m. Weld according to procedure specification
The shielded metal arc welding (SMAW) process has a number of serious safety hazards associated with it:

CAUTION: Specific safety precautions must be taken to ensure a proper breathing atmosphere in all welding areas.

A. Weld only in ventilated areas. Welding shielding gases can displace the air needed for breathing. These gases are odorless and colorless, and most are heavier than air.
B. Weld in a position that will allow your head to be out of the welding plume, but will still give a good view of the welding arc. The welding plume could contain harmful fumes and gases.
C. Provide enough ventilation wherever welding and cutting are performed. Welding in confined spaces may require special procedures, such as the use of an air-supplied hood or hose mask.
D. Do not weld on dirty plate or plate contaminated with an unknown material. The fumes and gases which are formed could be hazardous to health.

CAUTION: Electrical shock can be avoided by following specific safety precautions.

A. Do not touch live electrical parts.
B. Ground all electrical equipment and the work-piece to prevent accidental electrical shocks.
C. Use the correct welding cable size for both the ground lead and the welding lead. Sustained overloading will cause cable failure and result in possible electrical shock or fire hazard.
D. Be sure all electrical connections are tight, clean, and dry. Poor electrical connections can heat up and even melt, causing dangerous arcs and sparks.
E. Keep dry. Moisture and water can conduct electricity. Fix water leaks immediately.
F. Keep welding cables and connectors in good condition. Improper or worn electrical connections can cause short circuits and can increase the chance of an electrical shock.
G. Avoid open-circuit voltage. Open-circuit voltage is much higher than welding voltage.
H. Shut off electrical power when working on welding equipment.

CAUTION: Ultraviolet and infrared rays emitted by the welding arc, as well as the spatter from the welding arc, can injure eyes and burn skin. Specific safety precautions must be followed to ensure adequate protection.
A. Wear 100% cotton clothing. It will not catch fire easily, it offers good protection from light welding spatter, and it is cooler in the summer and warmer in the winter.

B. Cover all skin surfaces. Keep shirt sleeves rolled down.

C. Wear cuffless pants to eliminate spatter traps.

D. Wear leather boots. Pant legs should cover boot tops.

E. Wear clean clothing. Oil and grease stained clothes will tend to ignite from welding spatter.

F. For more severe welding conditions, wear protective clothing such as heat resistant jackets, aprons, and leggings.

G. Wear safety glasses to protect from arc flashes, mechanical injury, or other mishaps.

H. Wear ear protection, not only where there is noise but where there is a chance that spatter or sparks could get into the ears.

I. Wear a 100% cotton cap to protect the head from sparks or spatter.

J. Wear long gauntlet leather gloves.

K. Do not touch hot metal with bare hands. Use pliers and wear leather gloves.

L. Protect nearby workers from exposure to the welding arc by putting up shields.

M. Wear a welding helmet with the correct shade of welding lens. Choose the correct lens from a filter recommendations table (see Figure 2).

FILTER RECOMMENDATIONS
(adapted from ANSI Safety Standard Z49.1-88)
SMAW

<table>
<thead>
<tr>
<th>Application</th>
<th>Minimum Shade No.</th>
<th>Suggested Shade*</th>
</tr>
</thead>
<tbody>
<tr>
<td>Less than 60 amps</td>
<td>7</td>
<td>9</td>
</tr>
<tr>
<td>60 to 160 amps</td>
<td>8</td>
<td>10</td>
</tr>
<tr>
<td>160 to 250 amps</td>
<td>10</td>
<td>12</td>
</tr>
<tr>
<td>250 to 500 amps</td>
<td>11</td>
<td>14</td>
</tr>
</tbody>
</table>

* As a general rule, start with a shade that is too dark to see the arc zone. Then go to a lighter shade which gives sufficient view of the arc zone without exerting a strain on your eyes.

Figure 2 Filter Recommendations

CAUTION: Specific precautions must be taken to ensure that there is no loss of property due to welding sparks, spatter, and heat.

A. If possible, weld in specially designated areas or enclosures of noncombustible construction.

B. Remove combustibles from the work area by at least 35 feet if possible.
C. Cover combustibles that can not be removed from the welding area with tight-fitting flame-resistant material. Items that should be covered include combustible walls, floors, ceilings, and any cracks or other openings that might let a spark pass through it.

D. If welding is to be performed on or adjacent to a metal wall, ceiling, or partition, move combustibles on the other side to a safe location.

E. If combustibles can not be adequately sealed off or removed, station a fire watcher at that location. The fire watcher must have adequate fire extinguishing capabilities.

F. Do not weld on materials having either a coating or internal structure that is combustible.

G. Place hot scrap and slag in non-combustible containers.

H. Ensure that fire extinguishers are available nearby.

I. Conduct a thorough examination for evidence of a fire before leaving the work area, and continue a fire check for at least 30 minutes after the welding operation has been completed.

J. Follow all company safety procedures regarding welding in hazardous areas.

CAUTION: NEVER carry a butane lighter into a welding area. These are considered to be mini-Molotov cocktails.

DON'T CARRY A BOMB IN YOUR POCKET.
1. **Choose Proper Power Source**

   **Step 1.** With the procedures and electrodes used at maintenance and fabrication facilities, choose a constant current (CC) power source for the Shielded Metal Arc Welding process. Some units are a combination of constant current (CC) and constant voltage (CV). This type of power source will have one or two switches to change from constant current to constant voltage.

   **Step 2.** An alternating current (AC) welding power source could be used with the low-hydrogen family of electrodes, but choose a constant current (CC) power source if possible.

2. **Choose a Proper Electrode**

   **Step 1.** Choose the proper electrode for the job.

   **NOTE:** The maintenance technician uses E6010 and E7018 electrodes for most SMAW applications. The E6010 belongs to the fast-freeze family of electrodes and the E7018 belongs to the low-hydrogen family of electrodes. The E6010 provides a deep digging, deep penetrating type of weld and may be used for non-critical fabrication.

   The E7018 low-hydrogen is used as the primary electrode for fabrication and other code-quality welds. The low-hydrogen family also includes E7015, E7016, and E7048. Hydrogen in the weld deposit causes brittleness called hydrogen embrittlement, which leads to cracking and potential weld failure.

   **Step 2.** Store the electrodes properly.

   **a. Low-hydrogen electrodes:**

   (1) These electrodes are packaged in hermetically sealed (watertight) cans. Be careful not to damage the cans which would allow air and moisture to attack the electrodes in the cans.

   (2) Once the cans are opened, store the electrodes in a rod oven at 150°F to 300°F.

   (3) Re-dry electrodes that have been outside a sealed container or a properly heated rod oven for several hours by baking them one hour at 700°F to 800°F and storing them in a rod oven.

   **NOTE:** Some welding procedures also set a time limit on the number of hours that low-hydrogen electrodes can be
kept out of a rod oven prior to use. Times vary from two to four hours, depending on the type of base metal to be welded and the humidity levels of the environment.

b. Do not store the E6010 fast-freeze electrodes in rod ovens. Fast-freeze electrodes require the presence of small amounts of moisture in order to run smoothly.

3. Prepare Weldment for Welding

Step 1. Oxyacetylene cut, carbon air arc gouge/cut, or machine cut/mill material to the desired shape/contour for each type of weld joint configuration needed for each welding task at hand.

a. Weld joint configuration will depend upon:
(1) Product design  
(2) Material thickness  
(3) Design strength requirements  
(4) Welding process employed  

b. SMAW weld joint configuration may be a:  
(1) Lap joint  
(2) Tee joint  
(3) Corner joint  
(4) Edge joint  
(5) Butt joint with backing  
(6) Butt joint without backing

Step 2. Clean the areas to be welded prior to fit-up  
   a. Remove rust, paint, and any other coatings by wire brushing,  
      grinding, sanding, or filing  
   b. Remove oils and greases with a safe, suitable solvent

Step 3. Turn on the power source and set the current range (amps) on the machine at the lower end of the setting as suggested for the electrode size.

Step 4. Obtain a piece of scrap metal of the approximate type and thickness for the weld joint to be made.

Step 5. Practice welding on the scrap metal and adjust the current setting as needed to produce a good weld.

4. Complete Welding Operation  
   Step 1. Tack weld a joint that is defect free and can be incorporated into the finished product.
   Step 2. Use any preheat that may be required by welding codes or company procedures.
   Step 3. Make the required weld to be defect free and pleasing in appearance.
   Step 4. Use proper weld bead placement according to the weld joint design.  
   a. When making seam welds, produce the weld beads by using very little oscillation or some oscillation.
   b. When making fillet welds, produce the weld beads by using some oscillation. Fillet welds in the vertical position can also be run using a weaving technique.
   c. When making groove welds, produce the weld beads by using some oscillation and/or by weaving. When making groove welds on butt joints, the amount of weaving will depend on the welding position and the weld joints. It may also be limited by applicable welding codes and/or company standards.
   Step 5. Maintain the correct welding travel speed. Weld bead size can be changed by varying the arc travel speed. Bead size and travel speed are inversely related: a decrease in travel speed will result in an increase in the weld bead height and width, and an increase in travel speed will result in a decrease in the weld bead height and width.
a. As the material thickness increases, the travel speed must slow down.

b. For a given material thickness and joint design, as the welding amperage is increased so is the arc travel speed. Conversely, as the amperage is decreased, the arc travel is slowed.

c. Higher welding speeds are attainable by using the forehand (pushing) technique.

5. Troubleshoot Welding Problems

Step 1. Be aware of the welding variables and how they can affect the weld. Below is a list of eleven welding variables for the SMAW process:

a. Type of electrode 
b. Diameter of electrode 
c. Type of current (AC or DC) 
d. Current polarity (DC+ or DC-) 
e. Current setting 
f. Arc length 
g. Travel speed 
h. Electrode angle 
i. Electromagnetic arc blow 
j. Electrode manipulation technique (drag, whip) 
k. Thoroughness of slag removal prior to restarts and new bead placement

Step 2. Be aware of general welding variables and how they can affect the weld:

a. Type of base metal 
b. Thickness of base metal 
c. Surface condition of base metal (clean, rusty, or painted) 
d. Atmospheric conditions

Step 3. Be aware of any weld discontinuity and the relevant welding variables that may have caused it.
WLD-L9
Post Clean Weld
Self-Assessment No. 1

Circle the best answer.

1. What is the approximate temperature required for stress relief annealing of low-carbon steels?
   A. 950°
   B. 1000°
   C. 1950°
   D. 1700°
   E. None of the above

2. What crystalline processes result from stress relief annealing?
   A. All grains reform into softer grains
   B. Distorted grains reform into softer grains
   C. Ferrite grains reform into softer grains while pearlite grains are basically unaffected
   D. Pearlite grains reform into softer grains while ferrite grains are basically unaffected
   E. None of the above

3. Which of the following is NOT a cause of quenching cracks?
   A. Improper quenching medium
   B. Overheating during the austenitizing cycle
   C. Improper quenching angle
   D. All of the above are causes of quenching cracks
   E. None of the above answers is correct

4. Which of the following is NOT a characteristic of typical quench cracks?
   A. The fracture tends to run from the surface toward the center in a smooth curve
   B. Untempered quench cracks will not show any decarburization
   C. Tempered fracture surfaces will show a fine crystalline structure
   D. All of the above are characteristic of quench cracks
   E. None of the above
5. During tempering by color, which of the following colors represents the highest temperature?
   A. Gold
   B. Purple
   C. Dark Straw
   D. Pale Blue
   E. Violet

6. During tempering by color, which of the following colors represents the lowest temperature?
   A. Gold
   B. Purple
   C. Dark Straw
   D. Pale Blue
   E. Violet

7. What is meant by step quenching?
   A. The workpiece is first quenched in a slow medium (e.g., air) then in a fast medium (e.g., water)
   B. The workpiece is first quenched in a fast medium (e.g., water) then in a slow medium (e.g., air)
   C. The weaker parts of the workpiece are quenched separately from the main body of the workpiece
   D. The workpiece is lowered into the quenching medium in steps so that different parts of the workpiece attain different hardnnesses
   E. None of the above

8. What is the simplest thing that the technician can do to minimize the vapor-blanket stage of liquid quenching?
   A. Agitate the workpiece or the medium
   B. Heat the quenching medium to just below its boiling point
   C. Quickly insert the workpiece into the medium
   D. Slowly insert the workpiece into the medium
   E. None of the above

9. Liquid carburizing, as used in case hardening, utilizes ______ and is therefore extremely dangerous.
   A. Sodium chloride
   B. Calcium carbonate
   C. Cyanide salts
   D. Ammonia
   E. None of the above
10. Workpieces which have been cut with an oxyacetylene torch often display edge hardness because
A. The torch was starved for oxygen
B. The workpiece was cut at too low a temperature
C. The wrong type of cutting torch was used
D. Oxyacetylene torches always leave hardened edges
E. None of the above

Post Clean Weld
Self-Assessment No. 2

Circle the best answer.

1. The hardness of a metal is its ability to resist:
   A. Permanent deformation.
   B. Oxidation.
   C. Chemical reaction.
   D. All of the above answers are forms of hardness.
   E. None of the above.

2. Rockwell testing machines test the sample metal’s resistance to:
   A. Abrasion.
   B. Penetration.
   C. Elastic deformation.
   D. Electricity.
   E. None of the above.

3. Materials such as nitrided steel and hard cast irons generally have Rockwell hardness numbers in excess of
   A. B-50.
   B. B-75.
   C. B-100.
   D. B-150.
   E. None of the above.

4. During the file test, if the file will mark the metal but not cut into it, then the metal should be treated as:
   A. High-alloy steel.
   B. Mild steel.
   C. Hardened tool steel.
   D. Medium-carbon steel.
   E. None of the above.

5. Probably the best use of the spark test is to:
   A. Determine the alloy content of the sample.
   B. Identify cast iron.
   C. Compare the sample to a known piece.
   D. All of the above answers are valid.
   E. None of the above.
6. Tool steel has a Rockwell hardness of _________, while hardened tool steel has hardness number of _________.
   A. C-42 - C-64
   B. C-42 - B-65
   C. C-64 - C-42
   D. B-65 - C-42
   E. None of the above.

7. Which of the following surfaces should be avoided when hardness testing?
   A. Curved
   B. Rough
   C. Decarburized
   D. All of the above surfaces should be modified before testing the sample's hardness.
   E. None of the above.

8. For hardness testing, the minimum recommended clearance from the edge is:
   A. 1/2”
   B. 1/4”
   C. 1/8”
   D. 1/16”
   E. None of the above.

9. If a Rockwell tester is in daily use, it should be calibrated:
   A. Annually.
   B. Monthly.
   C. Weekly.
   D. Daily.
   E. Never.

10. Technician A says that, for large samples, multiple hardness test should be made and their results averaged. Technician B says that many materials vary in hardness over the length of the sample. Who is correct?
    A. Technician A only
    B. Technician B only
    C. Both technicians are correct.
    D. Neither technician is correct.

10. d
Choose the best answer.

1. The size of the bead is ________ proportional to the speed of travel.
   A. Directly
   B. Inversely
   C. Not
   D. None of the above

2. The eye shield of the welding helmet should be:
   A. Just light enough to clearly see the arc.
   B. Too dark to clearly see the arc.
   C. A minimum of #5.
   D. None of the above.

3. Welding in confined spaces may require:
   A. Air supplied hoods or hose masks.
   B. Frequent breaks.
   C. Large, high-displacement fans.
   D. All of the above.
   E. None of the above.

4. Long sleeves protect the arms against:
   A. Ultraviolet radiation.
   B. Infrared radiation.
   C. Welding splatter.
   D. All of the above.
   E. None of the above.

5. Which of the following is NOT a variable in the SMAW process?
   A. Current polarity
   B. Arc length
   C. Length of the electrode
   D. All of the above are variables in the process.
   E. None of the above.
6. Acceptable welding footwear includes:
   A. Roman sandals.
   B. Tennis shoes.
   C. Canvas boots.
   D. All of the above.
   E. None of the above.

7. A welder whose travel speed is too fast may have problems with:
   A. Excess convexity.
   B. Overlap.
   C. Porosity.
   D. All of the above.
   E. None of the above.

8. Technician A says that low-hydrogen electrodes can only be in the open air for two to four hours. Technician B says that the humidity and the base metal determine the amount of time that low-hydrogen electrodes can be exposed. Who is correct?
   A. Technician A only.
   B. Technician B only.
   C. Both Technicians A and B.
   D. Neither Technician A nor B.

9. E6010 electrodes should only be used with:
   A. DC-.
   B. DC+.
   C. AC.
   D. There is no such electrode.

10. Technician A says that they should weld only in well ventilated areas. Technician B says that welding produces gases that are odorless, colorless, and heavier than air. Who is correct?
    A. Technician A only.
    B. Technician B only.
    C. Both Technicians A and B.
    D. Neither Technician A nor B.

11. Technician A says that they should never carry butane lighters into the welding area because they may explode. Technician B says that gasoline should never be taken into the welding area, either. Who is correct?
    A. Technician A only.
    B. Technician B only.
    C. Both Technicians A and B.
    D. Neither Technician A nor B.
12. When repairing welding equipment, its electrical power should be:
   A. On.
   B. Off.
   C. On or off, depending on the repair.
   D. The SMAW machine is not electrical.

13. To prevent electrical shocks, all electrical equipment and the work piece should be:
   A. On rubber work mats.
   B. Elevated off the floor.
   C. Grounded.
   D. All of the above.
   E. None of the above.

14. Which of the following electrodes is NOT in the low-hydrogen family?
   A. E7015
   B. E7016
   C. E7018
   D. All of the above are low-hydrogen electrodes.
   E. All of the above are fast-freeze electrodes.

15. Technician A says that undercutting is caused by too much current. Technician B says that wet electrodes can also cause undercutting. Who is correct?
   A. Technician A only.
   B. Technician B only.
   C. Both Technicians A and B.
   D. Neither Technician A nor B.

16. Fire inspections should be continued for at least _________ after completion of the welding.
   A. Fifteen minutes
   B. Thirty minutes
   C. One hour
   D. Two hours

17. The welding area should be:
   A. Isolated from other workers by shields.
   B. At least 35 feet from combustible materials.
   C. Dry.
   D. All of the above.
   E. None of the above.
18. Seam welds generally require ____________ oscillation.
   A. No
   B. Very little
   C. Moderate
   D. Great

19. Technician A says that all electrical connections must be tight, clean, and dry. Technician B says that poor electrical connections can heat up and even melt. Who is correct?
   A. Technician A only.
   B. Technician B only
   C. Both Technicians A and B
   D. Neither Technician A nor B

20. If it is impractical to properly remove combustible materials from the vicinity of the welding, then:
   A. Do not weld
   B. Take frequent breaks to inspect the area for fires
   C. Station a fire watcher near the combustible materials
   D. Any of the above is acceptable
   E. None of the above

21. E7018 electrodes should never be used with
   A. DC-
   B. DC+
   C. AC
   D. There is no such electrode

22. Areas to be welded should be thoroughly cleaned
   A. Prior to fit-up
   B. By brushing, sanding, or grinding
   C. With safe solvents
   D. All of the above, as necessary
   E. None of the above

23. Technician A says that porosity can be caused by a current setting that is too low. Technician B says that porosity can be caused by too long an arc. Who is correct?
   A. Technician A only
   B. Technician B only
   C. Both Technicians A and B
   D. Neither Technician A nor B
24. Low-hydrogen electrodes may be stored
   A. In sealed cans or heated rod ovens
   B. Under water
   C. In petroleum jelly
   D. Any of the above
   E. None of the above

25. As the material being welded increases in thickness, the travel speed of the weld must
   A. Increase
   B. Decrease
   C. Either A or B, depending on the desired effect
   D. Stay the same
   E. None of the above

WELDER SERIES
MASTER Technical Module No. WLD-L10

SUBJECT: WELDING TECHNICIAN

TIME: 6 HOURS

• DUTY: SHIELDED METAL ARC WELDING (SMAW) (BASIC)
• TASK: Post Finish Weld

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Identify requirements of the welding procedure specification.
B. Use wire brushes, etc., to meet the requirements of the welding procedure specification.

INSTRUCTIONAL MATERIALS:

Student Workbook
Written examinations on post finish process
Transparencies prepared to emphasize each subject
Hobart Institute Video Material
Miller Module Method Video materials
The classroom handouts will consist of student worksheets and alloy charts
Personal protective equipment
Shielded Metal Arc Welding machine
Welding shop tools
Selection of base metals for welding and cutting
Selection of filler metals and electrode wire
MASTER Handout No. 1 (WLD-L10-HO1)
MASTER Handout No. 2 (WLD-L10-HO2)
MASTER Handout No. 3 (WLD-L10-HO3)
MASTER Handout No. 4 (WLD-L10-HO4)
MASTER Handout No. 5 (WLD-L10-HO5)
MASTER Handout No. 6 (WLD-L10-HO6)
MASTER Laboratory Aid (WLD-L10-LA)
MASTER Laboratory Worksheet (WLD-L10-LW)
MASTER Self-Assessment No. 1
MASTER Self-Assessment No. 2
MASTER Self-Assessment No. 3

TEXT:

OTHER:

Competency Standards, American Welding Society, Latest Edition
Welding Inspection, American Welding Society, Miami, FL, Latest Edition

STUDENT PREPARATION:

Student must demonstrate appropriate communication skills and understand principles of basic physical science and mathematics as verified by placement test or completion of required prerequisite courses. Students will complete the following modules:

WLD-L1 “Preheat Joint”
WLD-L2 “Initiate Welding Process”
WLD-L3 “Perform Weld Sequence”
WLD-L4 “Control Weld Technique”
WLD-L5 “Maintain Preheat and Perform Interpass”
WLD-L6 “Use the Carbon Arc Process to Cut and Gouge Weld Materials”
WLD-L7 “Apply Welders Identification”
WLD-L8 “Control Post-Weld Temperature According to Procedures”
WLD-L9 “Post Clean Weld”
INTRODUCTION:

The Course Introduction will Include:

- The importance of post finishing the job after welding
- Quality procedures are reflected in the final product

PRESENTATION OUTLINE:

Instructor Topics:

A. "Post finishing" is defined as the process steps to be followed after welding.
B. These steps may be further testing, cleaning, polishing or metal preparation (hardening, etc.) prior to painting or galvanizing the finished product.
C. Many metal products are purchased by customers who require not only a perfect welding product, a high quality finish or appearance that is important to the end user.
D. Applications of chemical cleaning, sanding, and metal preparation for finishing.
E. Importance of the weld to strength function, fit and finish.

Student Activities:

A. Tour a production facility and observe manufacturing processes beginning with materials selection, preparation, welding, weld inspection, and ending with the finishing of the metal product.
B. Assessing the importance of the weld quality to strength, function, fit, and finish.

PRACTICAL APPLICATION:

The student will gain an appreciation for his work as it relates to strength, function, fit, and finish. Quality demands that the product meet or exceed all specifications.

EVALUATION AND/OR VERIFICATION:

Written examinations will be given in this module to determine student progress. Practical work will be evaluated by the student and the instructor, and the "customer."

SUMMARY:

Removal of scale, slag, oxides at various steps of the welding process; use of quality welding techniques, and final surface preparation leads to a product that also has high appearance value and surface durability.
NEXT LESSON ASSIGNMENT:

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Identify requirements of the welding procedure specification.
B. Use wire brushes, etc., to meet the requirements of the welding procedure specification.

MODULE OUTLINE:

Instructor Topics:
A. "Post finishing" is defined as the process steps to be followed after welding.
B. These steps may be further testing, cleaning, polishing or metal preparation (hardening, etc.) prior to painting or galvanizing the finished product.
C. Many metal products are purchased by customers who require not only a perfect welding product, a high quality finish or appearance that is important to the end user.
D. Applications of chemical cleaning, sanding, and metal preparation for finishing.
E. Importance of the weld to strength function, fit and finish.

Student Activities:
A. Tour a production facility and observe manufacturing processes beginning with materials selection, preparation, welding, weld inspection, and ending with the finishing of the metal product.
B. Assessing the importance of the weld quality to strength, function, fit, and finish.
OBJECTIVE(S):

Upon completion of this unit the student will be able to:

a. Discuss the reasons for heat treating;
b. Discuss the time/temperature chart
c. List the different quenching media
d. Estimate metal heat temperature by color; and
e. List reasons for stress relieving workpieces.

MODULE OUTLINE:

I. Discuss the Reasons for Heat Treating
   A. Hardening for utility
   B. Tempering for toughness without brittleness

II. Discuss the Time/Temperature Chart

III. List the Different Quenching Media (In order of severity or speed of quenching)
   A. Brine (water and sodium chloride or sodium hydroxide)
   B. Water
   C. Fused (liquid) salts
   D. Molten lead
   E. Soluble oil and water
   F. Oil
   G. Air

IV. Estimate Metal Heat Temperature by Color
   A. Use of temper color chart for tempering
   B. Chicken Wire markings warn of overheating

V. List Reasons for Stress Relieving Workpieces
   A. Increased machinability
   B. Increased workability in cold processes

VI. Special Safety Concerns of Heat Treating
   A. Protective Gear against...
      1. Heat
      2. Fumes
      3. Concussion
   B. Toxicity of Certain Media

VII. Special Problems in Heat Treating
    A. Britteness
    B. Distortion
    C. Discoloration (sometimes unimportant)
    D. Inadvertent heat treating
OBJECTIVE(S):

Upon completion of this unit the student will be able to:

a. Perform file test to test for metal hardness;
b. Use other tests to identify metals; and,
c. Perform Rockwell hardness tests.

MODULE OUTLINE:

I. Perform File Test to Test for Metal Hardness
   A. Imprecise method, good for rough estimates only
   B. Requires more experienced machinist

II. Use Other Tests to Identify Metals
    A. High-carbon steels show more spark bursts than do low-carbon steels.
    B. Non-ferrous metals
       1. Aluminum
       2. Magnesium
       3. Brass
       4. Bronze
       5. Nickel
       6. Tin
       7. Others

III. Perform Rockwell Hardness Tests
     A. Ferrous metals
     B. Non-ferrous metals

IV. Perform Brinell Hardness Tests
    A. Ferrous metals
    B. Non-ferrous metals

V. Other Hardness Tests as Specified by the Instructor
   A. Ferrous metals
   B. Non-ferrous metals

Student laboratory exercises as assigned by Instructor.

**BASIC SHIELDED METAL ARC WELDING (SMAW) AND OXY-FUEL GAS CUTTING**

1. Define Selected Welding Terms Per AWS A3.0
   a. Define arc welding process terms
   b. Define standard joint terminology
   c. Define common weld discontinuities
   d. Name welding equipment, supply and consumables
   e. Define common shop terms including proper equipment names
   f. Define material terms
   g. Define common metallurgy terms

2. Describe AWS Code for Mild Steel Electrodes
   a. List, describe and define
   b. List low hydrogen electrodes
   c. List iron powder electrodes
   d. Describe electrode by welding position
   e. Describe electrode by current and polarity
   f. Describe electrode by penetration

3. Set Up Welding Machine to Required Polarity
   a. List polarities for commonly used electrodes
   b. Describe both polarities
   c. Describe advantages and disadvantages of alternating current

4. Use Correct Start and Stop Techniques for SMAW Electrodes
   a. Describe and demonstrate start for non-low hydrogen SMAW electrode
   b. Describe and demonstrate stop for non-low hydrogen SMAW electrodes with filled craters
   c. List reasons for the importance of low hydrogen in weld metal
   d. Explain the reason for low hydrogen starts and stops and how they work and why required specifically with E7018

5. Set Up Equipment for Shielded Metal Arc Welding
   a. Inspect area for safety
   b. Adjust current and polarity for specific job requirements
   c. Choose type and size of electrode
   d. Wear applicable personal safety equipment

6. Strike an Arc, Run Continuous Stringer Bead
   a. Stand and position oneself correctly
   b. Operate welding helmet
c. Verbally warn others of intent to arc weld
d. Strike an arc
e. Weld with stringer bead technique
f. Perform weld tie ins to make continuous bead

7. Weld Using Weave Technique
a. Maintain required weld quality
b. Maintain proper weld width uniformly
c. Maintain proper travel speed
d. Match correct oscillation for various electrodes
e. Match applications to weave techniques, as they apply
f. List the advantages and disadvantages of weave techniques
g. List the advantages and disadvantages of stringer techniques
h. Perform weld using weave technique
i. Concentrate on dwell times at edges of weld pool

8. Weld Multi-Layer Buildup
a. Weld a dam to outline area being welded for each layer
b. Apply each layer neatly, straight and with good fusion throughout
c. Chip slag after each pass
d. Weld passes which over lap to crown of last weld bead
e. Demonstrate control of bead height

9. Set Up and Shut Down Oxy-Fuel Equipment
a. Follow manufacturer's recommended practice
b. Inspect equipment and work area for safety
c. Assemble oxy-fuel equipment
d. Open fuel gas cylinder ½ turn
e. Open oxygen as cylinder all the way
f. Adjust fuel gas and oxygen working pressure per manufacturer's recommendation
g. Purge lines one at a time. One second for each 10 feet of hose length

10. Cut Steel Plate Using Oxy-Fuel Equipment
a. Make manual free hand straight line cuts
b. Cut manually straight lines using cutting jib
c. Bevel plate with manual oxy-fuel equipment
d. Manually cut blind holes in thick material
e. Manually cut sheet metal with minimal distortion
Student laboratory exercises as assigned by Instructor.

ADVANCED SHIELDED METAL ARC WELDING (SMAW) AND CUTTING

1. Weld Single V Groove Welds With Open Roots From One Side
   a. Bevel 3/8" steel plate to 37 1/2° using oxy-fuel gas cutting e.g.
   b. Use grinder to remove oxide larger and smooth plate
   c. Use grinder to create root face of 3/32" to 1/8"
   d. Tack single V groove joint with 3/32" root opening
   e. Place joint in the 1G position
   f. Place joint in 2G position once task is mastered
   g. Place joint in 3G position once task is mastered
   h. Place joint in 4G position once task is mastered
   i. Weld the root with Direct Current Electrode Positive using 1/8" E6010. Use tight arc length and keyhole technique to produce a well fused root bead extending 1/16" above the plate.
   j. Weld chipped side slag and the root bead is wire brushed
   k. Fill the balance of the groove with 3/32", 1/8" and/or 5/32" E7018 using the stringer bead technique
   l. Visual test finished weld and root face bends evaluated to AWS D1.1 criteria

2. Weld Various Diameters of Pipe to Plate
   a. Inspect area for safety
   b. Place plate flat on welding table
   c. Place 3" pipe vertically on top of plate and tacked in place
   d. Leave weld coupon in the 2F fixed position
   e. Apply a 3/8" fillet weld using 1/8" E7018 and a stringer bead technique
   f. Visually inspect weld to AWS D1.1
   g. Fill pipe with water for 24 hours
   h. Check for leak

3. Produce SMAW Pipe - 5G Position
   a. Measure the pipe
   b. Mark the cut line with a wrap around and soapstone
   c. Cut the bevel using oxy-fuel gas equipment
   d. Clean the bevel face with a grinder, remove all oxide and smooth bevel face
   e. Use the grinder to add a root face of from 3/32" to 1/8"
   f. Tack the single V groove pipe joint with a 3/32" root opening
g. Place the joint in the 5G fixed position, using an 1/8" E6010 and a keyhole technique. Weld the root pass upward producing a root weld which is well fused and has a 1/16" weld reinforcement above the plate.

h. Chip slag and wire brush weld

i. Grind any lack of fusion and/or high spots

j. Weld the balance of the groove upward with 3/32" or 1/8" E7018 using the stringer bead technique

k. Visually inspect weld on the root and face sides to ASME Section 9

l. Remove four guided bend specimens from 2:00, 4:00, 8:00 and 10:00 positions prepared and two & eight are root bend specimens. Four & ten are face bend specimens. Guided bend tests are evaluated to ASME Section 9 criteria.

4. Produce SMAW - 2G Position Groove Welds

a. Measure the pipe

b. Mark the cut line with a wrap around and soapstone

c. Cut the bevel using oxy-fuel gas equipment

d. Clean the bevel face with a grinder, remove all oxide and smooth bevel face

e. Use the grinder to add a root face of from 3/32" to 1/8"

f. Tack the single V groove pipe joint with a 3/32" root opening

g. Weld pipe joint

h. Place the joint in the 2G fixed position, using an 1/8" E6010 and a keyhole technique. Weld the root pass upward producing a root weld which is well fused and has a 1/16" weld reinforcement above the plate.

i. Chip slag and wire brush. Grind any lack of fusion and/or high spots

j. Weld balance of the groove upward with 3/32" or 1/8" E7018 using the stringer bead technique

k. Visually inspect weld on the root and face sides to ASME Section 9

l. Remove four guided bend specimens from 2:00, 4:00, 8:00 and 10:00 positions prepared and two & eight are root bend specimens. Four & ten are face bend specimens. Guided bend tests are evaluated to ASME Section 9 criteria.

5. Roll Weld Pipe - SMAW

a. Measure the pipe

b. Mark the cut line with a wrap around and soapstone

c. Cut the bevel using oxy-fuel gas equipment

d. Clean the bevel face with a grinder, remove all oxide and smooth bevel face

e. Use the grinder to add a root face of from 3/32" to 1/8"

f. Tack the single V groove pipe joint with a 3/32" root opening

g. Roll weld pipe

h. Place pipe coupon on workbench in the 1G roll welding position.

i. Weld the root bead using 1/8" E6010 and the keyhole technique. The weld is performed in the 2:00 to 12:30 position.

j. Chip slag and wire brush. Grind any lack of fusion and/or high spots
Weld balance of groove upward with 3/32" or 1/8" E7018 using the weave technique

Visually inspect weld on the root and face sides to ASME Section 9

Remove four guided bend specimens from 2:00, 4:00, 8:00 and 10:00 positions prepared and two & eight are root bend specimens. Four & ten are face bend specimens. Guided bend tests are evaluated to ASME Section 9 criteria

Produce SMAW Pipe - 5G Position

a. Measure the pipe and
b. Mark the cut line with a wrap around and soapstone
c. Cut the bevel using oxy-fuel gas equipment
d. Clean the bevel face with a grinder, remove all oxide and smooth bevel face
e. Use the grinder to add a root face of from 3/32" to 1/8"
f. Weld pipe
g. Tack the single V groove pipe joint with a 3/32" root opening
h. Place the joint in the 5G fixed position, using an 1/8" E6010 and a keyhole technique
i. Weld the root pass upward producing a root weld which is well fused and has a 1/16" weld reinforcement above the plate
j. Chip slag and wire brush. Grind any lack of fusion and/or high spots
k. Weld balance of groove upward with 3/32" or 1/8" E7018 using the weave technique
l. Visually inspect weld on the root and face sides to ASME Section 9
m. Remove four guided bend specimens from 2:00, 4:00, 8:00 and 10:00 positions prepared and two & eight are root bend specimens. Four & ten are face bend specimens. Guided bend tests are evaluated to ASME Section 9 criteria

Produce SMAW Pipe - 6G Position

a. Measure the pipe
b. Mark the cut line with a wrap around and soapstone
c. Cut the bevel using oxy-fuel gas equipment
d. Clean the bevel face with a grinder, remove all oxide and smooth bevel face
e. Use the grinder to add a root face of from 3/32" to 1/8"
f. Weld pipe
g. Tack the single V groove pipe joint with a 3/32" root opening
h. Place the joint in the 6G fixed position, using an 1/8" E6010 and a keyhole technique
i. Weld the root pass upward producing a root weld which is well fused and has a 1/16" weld reinforcement above the plate
j. Chip slag and wire brush. Grind any lack of fusion and/or high spots
k. Weld balance of groove upward with 3/32" or 1/8" E7018 using the stringer bead technique
l. Visually inspect weld on the root and face sides to ASME Section 9
l. Remove four guided bend specimens from 2:00, 4:00, 8:00 and 10:00 positions prepared and two & eight are root bend specimens. Four & ten are face bend specimens. Guided bend tests are evaluated to ASME Section 9 criteria

8. Create SMAW Pipe to ASME Section 9
   a. Bevel two pieces of pipe to 30° bevel angle using oxy-fuel gas cutting equipment
   b. Clean bevel face and a 3/32" root face is applied using a hand held grinder
   c. Set welding condition to weld open roots
   d. Tack pipe nipples together to form a V groove with a 1/8" root opening
   e. Place pipe in the 5G fixed position. The root pass is welded and cleaned by wire brushing
   f. Weld balance of the V groove with this procedure
   g. Visual inspection is made and evaluated by ASME Section 9
   h. Make four bend samples and evaluate by ASME Section 9

9. Interpret Welding Procedures
   a. Identify process
   b. Name joint design
   c. List base material
   d. Give dimensions for root treatment
   e. Name electrode size and type being used
   f. List filler material (if required), classification and specification
   g. Identify shielding gas - type and mixture
   h. List pre and post heat and interpass temperature
   i. Describe initial and interpass cleaning
   j. Describe technique which is used
   k. Produce single or multiple pass weld
   l. Choose current type
   m. Set current amperage
   n. Set current polarity
   o. Set voltage
Student laboratory exercises as assigned by Instructor.

**PIPE WELDING - SMAW**

1. **Produce End Preparations**
   a. Produce end preparations with oxy-fuel cutting
   b. Produce end preparations with plasma cutting
   c. Produce end preparations with mechanical cutting
   d. Produce end preparations with grinding

2. **Fit and Tack Weld Pipe**
   a. Cut and single bevel pipe to 37 1/2°
   b. Ground bevel face and touch up to within tolerances
   c. Check that pipe ends are square within given tolerances
   d. Prepare root face within given tolerances
   e. Align pipe to within given tolerances
   f. Set root opening to within given tolerances
   g. Tack pipe according to welding procedure specification - maintaining root opening

3. **Roll Weld Open Root Pass on Pipe - 1G Position**
   a. Fit up and tack pipe joint using 1/8" E6010 electrode, weld the root pass on pipe in the 1 o'clock to (2:00 o'clock position) according to procedure using the roll welding technique
   b. Weld remainder of pipe in the 1G roll welding position with E6010
   c. Weld the remaining portion of the groove using the weave technique using 5/32" E6010 electrode roll

4. **Weld Open Root Pipe Joint - 2G Position**
   a. Weld using 1/8" E6010
   b. Cut and grind pipe ends will be to single bevel edge preparations of 37 1/2°
   c. Fit together the two pipe ends to a single V edge preparation with given tolerances
   d. Weld root pass to ASME Section 9 requirements
   e. Fill balance of the groove with E6010 using the stringer technique to ASME Section 9 requirements

5. **Weld Open Root Pipe - 5G Position**
   a. Fit and tack weld pipe to within tolerances
   b. Place pipe in the 5G position
   c. Weld the rootpass using 1/8" E6010 to ASME Section 9 requirements
   d. Grind the finished root pass to remove high spots and any slag at weld toes
6. Pass Guided Bond Tests Per ASME Section 9
   a. Remove bend samples from pipe at the 10, 2, 8 & 4 o'clock positions
   b. If the material is 3/8" or thinner 10 o'clock and 8 o'clock receive root bends and 2 o'clock and 4 o'clock receive face bends. If the pipe wall thickness is over 3/8" side bends shall be performed on all samples.
   c. Weld remainder of pipe in 1G position using E7018
   d. Perform low hydrogen starts and stops
   e. Weld using stringer bead technique
   f. Weld using weave technique
   g. Chip slag, wire brush and grind as necessary to assure clean weld deposits

7. Weld Open Root Pipe - 2G Position
   a. Use 1/8" E6010
   b. Cut and ground pipe ends to single bevel edge preparations of 37 1/2°
   c. Fit together two pipe ends to a single V edge preparation within given tolerances
   d. Weld root pass to ASME Section 9 requirements
   e. Clean weld pass by chipping slag, wire brushing and grinding where necessary to assure a clean, well fused weld deposit
   f. Weld remainder of the groove using E7018 with the stringer bead technique

8. Weld Pipe Open Root Passes All Positions Using GMAW
   a. Set up GMAW equipment
   b. Adjust wire feeder drive system
   c. Adjust shielding gas system and flow rate
   d. Adjust GMAW gun to allow proper tip to work distance and gas coverage
   e. Set welding condition for short circuit transfer - Wire Feed Speed
   f. Set welding condition for short circuit transfer - Voltage
   g. Set welding condition for short circuit transfer - Tip to work Distance
   h. Weld root using a string bead technique

9. Weld Pipe With Backing Using FCAW-G
   a. Bevel pipe ends
   b. Touch up bevel face with grinder
   c. Fit and tack backing ring to one pipe end
   d. Fit other pipe over backing ring
   e. Adjust gap and tack in place
   f. Adjust shielding gas flow
   g. Adjust wire feed system
   h. Adjust power source to procedure specification
   i. Set wire feed speed to procedure specification
   j. Adjust voltage to procedure specification
   k. Adjust inductance to procedure specification
1. Adjust GMAW gun for tip to work distance and shielding gas.
2. Weld according to procedure specification.
The shielded metal arc welding (SMAW) process has a number of serious safety hazards associated with it:

**CAUTION:** Specific safety precautions must be taken to ensure a proper breathing atmosphere in all welding areas.

A. Weld only in ventilated areas. Welding shielding gases can displace the air needed for breathing. These gases are odorless and colorless, and most are heavier than air.

B. Weld in a position that will allow your head to be out of the welding plume, but will still give a good view of the welding arc. The welding plume could contain harmful fumes and gases.

C. Provide enough ventilation wherever welding and cutting are performed. Welding in confined spaces may require special procedures, such as the use of an air-supplied hood or hose mask.

D. Do not weld on dirty plate or plate contaminated with an unknown material. The fumes and gases which are formed could be hazardous to health.

**CAUTION:** Electrical shock can be avoided by following specific safety precautions.

A. Do not touch live electrical parts.

B. Ground all electrical equipment and the work-piece to prevent accidental electrical shocks.

C. Use the correct welding cable size for both the ground lead and the welding lead. Sustained overloading will cause cable failure and result in possible electrical shock or fire hazard.

D. Be sure all electrical connections are tight, clean, and dry. Poor electrical connections can heat up and even melt, causing dangerous arcs and sparks.

E. Keep dry. Moisture and water can conduct electricity. Fix water leaks immediately.

F. Keep welding cables and connectors in good condition. Improper or worn electrical connections can cause short circuits and can increase the chance of an electrical shock.

G. Avoid open-circuit voltage. Open-circuit voltage is much higher than welding voltage.

H. Shut off electrical power when working on welding equipment.

**CAUTION:** Ultraviolet and infrared rays emitted by the welding arc, as well as the spatter from the welding arc, can injure eyes and burn skin. Specific safety precautions must be followed to ensure adequate protection.
A. Wear 100% cotton clothing. It will not catch fire easily, it offers good protection from light welding spatter, and it is cooler in the summer and warmer in the winter.

B. Cover all skin surfaces. Keep shirt sleeves rolled down.

C. Wear cuffless pants to eliminate spatter traps.

D. Wear leather boots. Pant legs should cover boot tops.

E. Wear clean clothing. Oil and grease stained clothes will tend to ignite from welding spatter.

F. For more severe welding conditions, wear protective clothing such as heat resistant jackets, aprons, and leggings.

G. Wear safety glasses to protect from arc flashes, mechanical injury, or other mishaps.

H. Wear ear protection, not only where there is noise but where there is a chance that spatter or sparks could get into the ears.

I. Wear a 100% cotton cap to protect the head from sparks or spatter.

J. Wear long gauntlet leather gloves.

K. Do not touch hot metal with bare hands. Use pliers and wear leather gloves.

L. Protect nearby workers from exposure to the welding arc by putting up shields.

M. Wear a welding helmet with the correct shade of welding lens. Choose the correct lens from a filter recommendations table (see Figure 2).

---

**FILTER RECOMMENDATIONS (adapted from ANSI Safety Standard Z49.1-88)**

<table>
<thead>
<tr>
<th>SMAW</th>
<th>Application</th>
<th>Minimum Shade No.</th>
<th>Suggested Shade*</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Less than 60 amps</td>

</tbody>
</table>

* As a general rule, start with a shade that is too dark to see the arc zone. Then go to a lighter shade which gives sufficient view of the arc zone without exerting a strain on your eyes.

---

**Figure 2 Filter Recommendations**

---

**CAUTION:** Specific precautions must be taken to ensure that there is no loss of property due to welding sparks, spatter, and heat.

A. If possible, weld in specially designated areas or enclosures of noncombustible construction.

B. Remove combustibles from the work area by at least 35 feet if possible.
C. Cover combustibles that cannot be removed from the welding area with tight-fitting flame-resistant material. Items that should be covered include combustible walls, floors, ceilings, and any cracks or other openings that might let a spark pass through it.

D. If welding is to be performed on or adjacent to a metal wall, ceiling, or partition, move combustibles on the other side to a safe location.

E. If combustibles cannot be adequately sealed off or removed, station a fire watcher at that location. The fire watcher must have adequate fire extinguishing capabilities.

F. Do not weld on materials having either a coating or internal structure that is combustible.

G. Place hot scrap and slag in non-combustible containers.

H. Ensure that fire extinguishers are available nearby.

I. Conduct a thorough examination for evidence of a fire before leaving the work area, and continue a fire check for at least 30 minutes after the welding operation has been completed.

J. Follow all company safety procedures regarding welding in hazardous areas.

CAUTION: NEVER carry a butane lighter into a welding area. These are considered to be mini-Molotov cocktails. DON'T CARRY A BOMB IN YOUR POCKET.
Worksheet:

1. **Choose Proper Power Source**
   
   **Step 1.** With the procedures and electrodes used at maintenance and fabrication facilities, choose a constant current (CC) power source for the Shielded Metal Arc Welding process. Some units are a combination of constant current (CC) and constant voltage (CV). This type of power source will have one or two switches to change from constant current to constant voltage.

   **Step 2.** An alternating current (AC) welding power source could be used with the low-hydrogen family of electrodes, but choose a constant current (CC) power source if possible.

2. **Choose a Proper Electrode**

   **Step 1.** Choose the proper electrode for the job.

   **NOTE:** The maintenance technician uses E6010 and E7018 electrodes for most SMAW applications. The E6010 belongs to the *fast-freeze* family of electrodes and the E7018 belongs to the *low-hydrogen* family of electrodes. The E6010 provides a deep digging, deep penetrating type of weld and may be used for non-critical fabrication.

   The E7018 low-hydrogen is used as the primary electrode for fabrication and other code-quality welds. The low-hydrogen family also includes E7015, E7016, and E7048. Hydrogen in the weld deposit causes brittleness called hydrogen embrittlement, which leads to cracking and potential weld failure.

   **Step 2.** Store the electrodes properly.

   a. **Low-hydrogen electrodes:**

      (1) These electrodes are packaged in hermetically sealed (watertight) cans. Be careful not to damage the cans which would allow air and moisture to attack the electrodes in the cans.

      (2) Once the cans are opened, store the electrodes in a rod oven at 150°F to 300°F.

      (3) Re-dry electrodes that have been outside a sealed container or a properly heated rod oven for several hours by baking them one hour at 700°F to 800°F and storing them in a rod oven.

   **NOTE:** Some welding procedures also set a time limit on the number of hours that low-hydrogen electrodes can be...
kept out of a rod oven prior to use. Times vary from two
to four hours, depending on the type of base metal to be
welded and the humidity levels of the environment.

b. Do not store the E6010 fast-freeze electrodes in rod ovens. Fast-
freeze electrodes require the presence of small amounts of
moisture in order to run smoothly.

Step 3. Match the low-hydrogen family members with the polarities that are used
with them (see Figure 5).

Figure 5 Welding Rod Polarities

Definitions:
AC Alternating Current
DC+(DCRP) Direct Current Reverse Polarity
DC-(DCSP) Direct Current Straight Polarity

3. Prepare Weldment for Welding
Step 1. Oxyacetylene cut, carbon air arc gouge/cut, or machine cut/mill material
to the desired shape/contour for each type of weld joint configuration
needed for each welding task at hand.

a. Weld joint configuration will depend upon:
(1) Product design  
(2) Material thickness  
(3) Design strength requirements  
(4) Welding process employed

b. SMAW weld joint configuration may be a:
   (1) Lap joint  
   (2) Tee joint  
   (3) Corner joint  
   (4) Edge joint  
   (5) Butt joint with backing  
   (6) Butt joint without backing

Step 2. Clean the areas to be welded prior to fit-up
   a. Remove rust, paint, and any other coatings by wire brushing, grinding, sanding, or filing
   b. Remove oils and greases with a safe, suitable solvent

Step 3. Turn on the power source and set the current range (amps) on the machine at the lower end of the setting as suggested for the electrode size.

Step 4. Obtain a piece of scrap metal of the approximate type and thickness for the weld joint to be made.

Step 5. Practice welding on the scrap metal and adjust the current setting as needed to produce a good weld.

4. Complete Welding Operation

Step 1. Tack weld a joint that is defect free and can be incorporated into the finished product.

Step 2. Use any preheat that may be required by welding codes or company procedures.

Step 3. Make the required weld to be defect free and pleasing in appearance.

Step 4. Use proper weld bead placement according to the weld joint design.
   a. When making seam welds, produce the weld beads by using very little oscillation or some oscillation.
   b. When making fillet welds, produce the weld beads by using some oscillation. Fillet welds in the vertical position can also be run using a weaving technique.
   c. When making groove welds, produce the weld beads by using some oscillation and/or by weaving. When making groove welds on butt joints, the amount of weaving will depend on the welding position and the weld joints. It may also be limited by applicable welding codes and/or company standards.

Step 5. Maintain the correct welding travel speed. Weld bead size can be changed by varying the arc travel speed. Bead size and travel speed are inversely related: a decrease in travel speed will result in an increase in the weld bead height and width, and an increase in travel speed will result in a decrease in the weld bead height and width.
a. As the material thickness increases, the travel speed must slow down.
b. For a given material thickness and joint design, as the welding amperage is increased so is the arc travel speed. Conversely, as the amperage is decreased, the arc travel is slowed.
c. Higher welding speeds are attainable by using the forehand (pushing) technique.

5. Troubleshoot Welding Problems

Step 1. Be aware of the welding variables and how they can affect the weld. Below is a list of eleven welding variables for the SMAW process:
   a. Type of electrode
   b. Diameter of electrode
   c. Type of current (AC or DC)
   d. Current polarity (DC+ or DC-)
   e. Current setting
   f. Arc length
   g. Travel speed
   h. Electrode angle
   i. Electromagnetic arc blow
   j. Electrode manipulation technique (drag, whip)
   k. Thoroughness of slag removal prior to restarts and new bead placement

Step 2. Be aware of general welding variables and how they can affect the weld:
   a. Type of base metal
   b. Thickness of base metal
   c. Surface condition of base metal (clean, rusty, or painted)
   d. Atmospheric conditions

Step 3. Be aware of any weld discontinuity and the relevant welding variables that may have caused it.
Circle the best answer.

1. What is the approximate temperature required for stress relief annealing of low-carbon steels?
   A. 950°
   B. 1000°
   C. 1950°
   D. 1700°
   E. None of the above

2. What crystalline processes result from stress relief annealing?
   A. All grains reform into softer grains
   B. Distorted grains reform into softer grains
   C. Ferrite grains reform into softer grains while pearlite grains are basically unaffected
   D. Pearlite grains reform into softer grains while ferrite grains are basically unaffected
   E. None of the above

3. Which of the following is NOT a cause of quenching cracks?
   A. Improper quenching medium
   B. Overheating during the austenitizing cycle
   C. Improper quenching angle
   D. All of the above are causes of quenching cracks
   E. None of the above answers is correct

4. Which of the following is NOT a characteristic of typical quench cracks?
   A. The fracture tends to run from the surface toward the center in a smooth curve
   B. Untempered quench cracks will not show any decarburization
   C. Tempered fracture surfaces will show a fine crystalline structure
   D. All of the above are characteristic of quench cracks
   E. None of the above
5. During tempering by color, which of the following colors represents the highest temperature?
   A. Gold
   B. Purple
   C. Dark Straw
   D. Pale Blue
   E. Violet

6. During tempering by color, which of the following colors represents the lowest temperature?
   A. Gold
   B. Purple
   C. Dark Straw
   D. Pale Blue
   E. Violet

7. What is meant by *step quenching*?
   A. The workpiece is first quenched in a slow medium (e.g., air) then in a fast medium (e.g., water)
   B. The workpiece is first quenched in a fast medium (e.g., water) then in a slow medium (e.g., air)
   C. The weaker parts of the workpiece are quenched separately from the main body of the workpiece
   D. The workpiece is lowered into the quenching medium in steps so that different parts of the workpiece attain different hardnesses
   E. None of the above

8. What is the simplest thing that the technician can do to minimize the vapor-blanket stage of liquid quenching?
   A. Agitate the workpiece or the medium
   B. Heat the quenching medium to just below its boiling point
   C. Quickly insert the workpiece into the medium
   D. Slowly insert the workpiece into the medium
   E. None of the above

9. Liquid carburizing, as used in case hardening, utilizes ________ and is therefore extremely dangerous.
   A. Sodium chloride
   B. Calcium carbonate
   C. Cyanide salts
   D. Ammonia
   E. None of the above
10. Workpieces which have been cut with an oxyacetylene torch often display edge hardness because
   A. The torch was starved for oxygen
   B. The workpiece was cut at too low a temperature
   C. The wrong type of cutting torch was used
   D. Oxyacetylene torches always leave hardened edges
   E. None of the above
1. a
2. c
3. d
4. a
5. c
6. d
7. b
8. a
9. c
10. a
WLD-L10
Post Finish Weld
Self-Assessment No. 2

Circle the best answer.

1. The **hardness** of a metal is its ability to resist:
   A. Permanent deformation.
   B. Oxidation.
   C. Chemical reaction.
   D. All of the above answers are forms of hardness.
   E. None of the above.

2. Rockwell testing machines test the sample metal's resistance to:
   A. Abrasion.
   B. Penetration.
   C. Elastic deformation.
   D. Electricity.
   E. None of the above.

3. Materials such as nitrided steel and hard cast irons generally have Rockwell hardness numbers in excess of
   A. B-50.
   B. B-75.
   C. B-100.
   D. B-150.
   E. None of the above.

4. During the file test, if the file will mark the metal but not cut into it, then the metal should be treated as:
   A. High-alloy steel.
   B. Mild steel.
   C. Hardened tool steel.
   D. Medium-carbon steel.
   E. None of the above.

5. Probably the best use of the spark test is to:
   A. Determine the alloy content of the sample.
   B. Identify cast iron.
   C. Compare the sample to a known piece.
   D. All of the above answers are valid.
   E. None of the above.
6. Tool steel has a Rockwell hardness of ________, while hardened tool steel has hardness number of ________.
   A. C-42 - C-64
   B. C-42 - B-65
   C. C-64 - C-42
   D. B-65 - C-42
   E. None of the above.

7. Which of the following surfaces should be avoided when hardness testing?
   A. Curved
   B. Rough
   C. Decarburized
   D. All of the above surfaces should be modified before testing the sample's hardness.
   E. None of the above.

8. For hardness testing, the minimum recommended clearance from the edge is:
   A. 1/2”
   B. 1/4”
   C. 1/8”
   D. 1/16”
   E. None of the above.

9. If a Rockwell tester is in daily use, it should be calibrated:
   A. Annually.
   B. Monthly.
   C. Weekly.
   D. Daily.
   E. Never.

10. Technician A says that, for large samples, multiple hardness test should be made and their results averaged. Technician B says that many materials vary in hardness over the length of the sample. Who is correct?
    A. Technician A only
    B. Technician B only
    C. Both technicians are correct.
    D. Neither technician is correct.

Choose the best answer.

1. The size of the bead is ________ proportional to the speed of travel.
   A. Directly
   B. Inversely
   C. Not
   D. None of the above

2. The eye shield of the welding helmet should be:
   A. Just light enough to clearly see the arc.
   B. Too dark to clearly see the arc.
   C. A minimum of #5.
   D. None of the above.

3. Welding in confined spaces may require:
   A. Air supplied hoods or hose masks.
   B. Frequent breaks.
   C. Large, high-displacement fans.
   D. All of the above.
   E. None of the above.

4. Long sleeves protect the arms against:
   A. Ultraviolet radiation.
   B. Infrared radiation.
   C. Welding splatter.
   D. All of the above.
   E. None of the above.

5. Which of the following is NOT a variable in the SMAW process?
   A. Current polarity
   B. Arc length
   C. Length of the electrode
   D. All of the above are variables in the process.
   E. None of the above.
6. Acceptable welding footwear includes:
   A. Roman sandals.
   B. Tennis shoes.
   C. Canvas boots.
   D. All of the above.
   E. None of the above.

7. A welder whose travel speed is too fast may have problems with:
   A. Excess convexity.
   B. Overlap.
   C. Porosity.
   D. All of the above.
   E. None of the above.

8. Technician A says that low-hydrogen electrodes can only be in the open air for two to four hours. Technician B says that the humidity and the base metal determine the amount of time that low-hydrogen electrodes can be exposed. Who is correct?
   A. Technician A only.
   B. Technician B only.
   C. Both Technicians A and B.
   D. Neither Technician A nor B.

9. E6010 electrodes should only be used with:
   A. DC-.
   B. DC+.
   C. AC.
   D. There is no such electrode.

10. Technician A says that they should weld only in well ventilated areas. Technician B says that welding produces gases that are odorless, colorless, and heavier than air. Who is correct?
    A. Technician A only.
    B. Technician B only.
    C. Both Technicians A and B.
    D. Neither Technician A nor B.

11. Technician A says that they should never carry butane lighters into the welding area because they may explode. Technician B says that gasoline should never be taken into the welding area, either. Who is correct?
    A. Technician A only.
    B. Technician B only.
    C. Both Technicians A and B.
    D. Neither Technician A nor B.
12. When repairing welding equipment, its electrical power should be:
   A. On.
   B. Off.
   C. On or off, depending on the repair.
   D. The SMAW machine is not electrical.

13. To prevent electrical shocks, all electrical equipment and the work piece should be:
   A. On rubber work mats.
   B. Elevated off the floor.
   C. Grounded.
   D. All of the above.
   E. None of the above.

14. Which of the following electrodes is NOT in the low-hydrogen family?
   A. E7015
   B. E7016
   C. E7018
   D. All of the above are low-hydrogen electrodes.
   E. All of the above are fast-freeze electrodes.

15. Technician A says that undercutting is caused by too much current. Technician B says that wet electrodes can also cause undercutting. Who is correct?
   A. Technician A only.
   B. Technician B only.
   C. Both Technicians A and B.
   D. Neither Technician A nor B.

16. Fire inspections should be continued for at least _______ after completion of the welding.
   A. Fifteen minutes
   B. Thirty minutes
   C. One hour
   D. Two hours

17. The welding area should be:
   A. Isolated from other workers by shields.
   B. At least 35 feet from combustible materials.
   C. Dry.
   D. All of the above.
   E. None of the above.
18. Seam welds generally require _________ oscillation.
   A. No
   B. Very little
   C. Moderate
   D. Great

19. Technician A says that all electrical connections must be tight, clean, and dry. Technician B says that poor electrical connections can heat up and even melt. Who is correct?
   A. Technician A only.
   B. Technician B only
   C. Both Technicians A and B
   D. Neither Technician A nor B

20. If it is impractical to properly remove combustible materials from the vicinity of the welding, then:
   A. Do not weld
   B. Take frequent breaks to inspect the area for fires
   C. Station a fire watcher near the combustible materials
   D. Any of the above is acceptable
   E. None of the above

21. E7018 electrodes should never be used with
   A. DC-
   B. DC+
   C. AC
   D. There is no such electrode

22. Areas to be welded should be thoroughly cleaned
   A. Prior to fit-up
   B. By brushing, sanding, or grinding
   C. With safe solvents
   D. All of the above, as necessary
   E. None of the above

23. Technician A says that porosity can be caused by a current setting that is too low. Technician B says that porosity can be caused by too long an arc. Who is correct?
   A. Technician A only
   B. Technician B only
   C. Both Technicians A and B
   D. Neither Technician A nor B
24. Low-hydrogen electrodes may be stored
   A. In sealed cans or heated rod ovens
   B. Under water
   C. In petroleum jelly
   D. Any of the above
   E. None of the above

25. As the material being welded increases in thickness, the travel speed of the weld must
   A. Increase
   B. Decrease
   C. Either A or B, depending on the desired effect
   D. Stay the same
   E. None of the above

SUBJECT: WELDING TECHNICIAN

TIME: 15 HOURS

- DUTY: SHIELDED METAL ARC WELDING (SMAW)
  (ADVANCED)
- TASK: Pass a Performance Qualification Test Using SMAW on
  Carbon Steel Pipe in the 6G Position

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Set-up work area and equipment;
B. Set-up work piece; and,
C. Weld test piece according to specifications.

INSTRUCTIONAL MATERIALS:

Student Workbook
Written tests on SMAW with carbon steel pipe
Transparencies prepared to emphasize each subject
Hobart Institute Video Material
Miller Module Method Video materials
The classroom handouts will consist of student worksheets and alloy charts
Personal protective equipment
Shielded Metal Arc Welding machine
Welding shop tools
Selection of base metals for welding and cutting
Selection of filler metals and electrode wire
MASTER Handout No. 1 (WLD-L11-HO1)
MASTER Handout No. 2 (WLD-L11-HO2)
MASTER Handout No. 3 (WLD-L11-HO3)
MASTER Handout No. 4 (WLD-L11-HO4)
MASTER Handout No. 5 (WLD-L11-HO5)
MASTER Handout No. 6 (WLD-L11-HO6)

TEXT:

OTHER:

*Competency Standards*, American Welding Society, Latest Edition

STUDENT PREPARATION:

Student must demonstrate appropriate communication skills and understand principles of basic physical science and mathematics as verified by placement test or completion of required prerequisite courses. Students will complete the following modules:

- WLD-L1 “Preheat Joint”
- WLD-L2 “Initiate Welding Process”
- WLD-L3 “Perform Weld Sequence”
- WLD-L4 “Control Weld Technique”
- WLD-L5 “Maintain Preheat and Perform Interpass”
- WLD-L6 “Use the Carbon Arc Process to Cut and Gouge Weld Materials”
- WLD-L7 “Apply Welders Identification”
- WLD-L8 “Control Post-Weld Temperature According to Procedures”
- WLD-L9 “Post Clean Weld”
- WLD-L10 “Post Finish Weld”
INTRODUCTION:

The Course Introduction will Include:
- An overview of the need for pipe welding in welding occupations
- A class demonstration of effective pipe welding techniques
- A discussion on training activities resulting in an increase of skill and knowledge leading to certification.

PRESENTATION OUTLINE:

Instructor Topics:
A. Emphasizes the advantages and disadvantages involved with the use of SMAW equipment
B. Present joint design, concepts, and welding terms for pipe welding
C. Interpret drawings and blueprints for pipe welding
D. Demonstrate the proper application of welding skills for pipe welding
E. Demonstrate adequate preparation of welding surfaces
F. Increase student skill level to pass certification tests offered by an employer
G. Prepare butt joints, and tee joints, for welding
H. Increase knowledge of current industry standards and techniques
I. Demonstrate SMAW in the flat, horizontal, vertical and overhead positions
J. Identify polarity requirements using SMAW on various metals
K. Demonstrate preheat and how to maintain desired temperature
L. Identify welding variables and their effects on weld quality
M. Identify the AISI steel classification system
N. Match SMAW electrodes to an appropriate base metal

Student Activities:
A. Preheat weld surface
B. Perform welds in multiple positions
C. Use welding technique suitable for pipe welding
D. Perform single pass and multi-pass welds
E. Make adjustments to improve weld quality

PRACTICAL APPLICATION:

The student will gain knowledge and experience in this area with as much practice as possible.

EVALUATION AND/OR VERIFICATION:

Examinations will be given in this module to determine student progress. The student will critique his work and the instructor will evaluate quality of weld.
SUMMARY:

Emphasis is placed on skill necessary to pass a SMAW performance qualification test for pipe welding.

NEXT LESSON ASSIGNMENT:

WLD-L11-H01
Pass a Performance Qualification Test Using SMAW on Carbon Steel Pipe
In the 6G Position
Attachment 1: MASTER Handout No. 1

OBJECTIVE(S):

Upon completion of this unit the student will be able to:
A. Set-up work area and equipment;
B. Set-up work piece; and,
C. Weld test piece according to specifications.

MODULE OUTLINE:

Instructor Topics:
A. Emphasizes the advantages and disadvantages involved with the use of SMAW equipment
B. Present joint design, concepts, and welding terms for pipe welding
C. Interpret drawings and blueprints for pipe welding
D. Demonstrate the proper application of welding skills for pipe welding
E. Demonstrate adequate preparation of welding surfaces
F. Increase student skill level to pass certification tests offered by an employer
G. Prepare butt joints, and tee joints, for welding
H. Increase knowledge of current industry standards and techniques
I. Demonstrate SMAW in the flat, horizontal, vertical and overhead positions
J. Identify polarity requirements using SMAW on various metals
K. Demonstrate preheat and how to maintain desired temperature
L. Identify welding variables and their effects on weld quality
M. Identify the AISI steel classification system
N. Match SMAW electrodes to an appropriate base metal

Student Activities:
A. Preheat weld surface
B. Perform welds in multiple positions
C. Use welding technique suitable for pipe welding
D. Perform single pass and multi-pass welds
E. Make adjustments to improve weld quality
WLD-L11-HO2
Pass a Performance Qualification Test Using SMAW on Carbon Steel Pipe
In the 6G Position
Attachment 2: MASTER Handout No. 2

OBJECTIVE(S):

Upon completion of this unit the student will be able to:

a. Discuss the reasons for heat treating;
b. Discuss the time/temperature chart
c. List the different quenching media
d. Estimate metal heat temperature by color; and
e. List reasons for stress relieving workpieces.

MODULE OUTLINE:

I. Discuss the Reasons for Heat Treating
   A. Hardening for utility
   B. Tempering for toughness without brittleness

II. Discuss the Time/Temperature Chart

III. List the Different Quenching Media (In order of severity or speed of quenching)
   A. Brine (water and sodium chloride or sodium hydroxide)
   B. Water
   C. Fused (liquid) salts
   D. Molten lead
   E. Soluble oil and water
   F. Oil
   G. Air

IV. Estimate Metal Heat Temperature by Color
   A. Use of temper color chart for tempering
   B. *Chicken Wire* markings warn of overheating

V. List Reasons for Stress Relieving Workpieces
   A. Increased machinability
   B. Increased workability in cold processes

VI. Special Safety Concerns of Heat Treating
   A. Protective Gear against...
      1. Heat
      2. Fumes
      3. Concussion
   B. Toxicity of Certain Media

VII. Special Problems in Heat Treating
   A. Brittleness
   B. Distortion
   C. Discoloration (sometimes unimportant)
   D. Inadvertent heat treating
Pass a Performance Qualification Test Using SMAW on Carbon Steel Pipe
In the 6G Position
Attachment 3: MASTER Handout No. 3

OBJECTIVE(S):

Upon completion of this unit the student will be able to:

a. Perform file test to test for metal hardness;
b. Use other tests to identify metals; and,
c. Perform Rockwell hardness tests.

MODULE OUTLINE:

I. Perform File Test to Test for Metal Hardness
   A. Imprecise method, good for rough estimates only
   B. Requires more experienced machinist

II. Use Other Tests to Identify Metals
   A. High-carbon steels show more spark bursts than do low-carbon steels.
   B. Non-ferrous metals
      1. Aluminum
      2. Magnesium
      3. Brass
      4. Bronze
      5. Nickel
      6. Tin
      7. Others

III. Perform Rockwell Hardness Tests
    A. Ferrous metals
    B. Non-ferrous metals

IV. Perform Brinell Hardness Tests
    A. Ferrous metals
    B. Non-ferrous metals

V. Other Hardness Tests as Specified by the Instructor
    A. Ferrous metals
    B. Non-ferrous metals

Pass a Performance Qualification Test Using SMAW on Carbon Steel Pipe
In the 6G Position
Attachment 4: MASTER Handout No. 4

Student laboratory exercises as assigned by Instructor.

BASIC SHIELDED METAL ARC WELDING (SMAW) AND OXY-FUEL GAS CUTTING

1. Define Selected Welding Terms Per AWS A3.0
   a. Define arc welding process terms
   b. Define standard joint terminology
   c. Define common weld discontinuities
   d. Name welding equipment, supply and consumables
   e. Define common shop terms including proper equipment names
   f. Define material terms
   g. Define common metallurgy terms

2. Describe AWS Code for Mild Steel Electrodes
   a. List, describe and define
   b. List low hydrogen electrodes
   c. List iron powder electrodes
   d. Describe electrode by welding position
   e. Describe electrode by current and polarity
   f. Describe electrode by penetration

3. Set Up Welding Machine to Required Polarity
   a. List polarities for commonly used electrodes
   b. Describe both polarities
   c. Describe advantages and disadvantages of alternating current

4. Use Correct Start and Stop Techniques for SMAW Electrodes
   a. Describe and demonstrate start for non-low hydrogen SMAW electrode
   b. Describe and demonstrate stop for non-low hydrogen SMAW electrodes with filled craters
   c. List reasons for the importance of low hydrogen in weld metal
   d. Explain the reason for low hydrogen starts and stops and how they work and why required specifically with E7018

5. Set Up Equipment for Shielded Metal Arc Welding
   a. Inspect area for safety
   b. Adjust current and polarity for specific job requirements
   c. Choose type and size of electrode
   d. Wear applicable personal safety equipment

6. Strike an Arc, Run Continuous Stringer Bead
   a. Stand and position oneself correctly
b. Operate welding helmet
c. Verbally warn others of intent to arc weld
d. Strike an arc
e. Weld with stringer bead technique
f. Perform weld tie ins to make continuous bead

7. Weld Using Weave Technique
   a. Maintain required weld quality
   b. Maintain proper weld width uniformly
   c. Maintain proper travel speed
   d. Match correct oscillation for various electrodes
   e. Match applications to weave techniques, as they apply
   f. List the advantages and disadvantages of weave techniques
   g. List the advantages and disadvantages of stringer techniques
   h. Perform weld using weave technique
   i. Concentrate on dwell times at edges of weld pool

8. Weld Multi-Layer Buildup
   a. Weld a dam to outline area being welded for each layer
   b. Apply each layer neatly, straight and with good fusion throughout
   c. Chip slag after each pass
   d. Weld passes which overlap to crown of last weld bead
   e. Demonstrate control of bead height

9. Set Up and Shut Down Oxy-Fuel Equipment
   a. Follow manufacturer's recommended practice
   b. Inspect equipment and work area for safety
   c. Assemble oxy-fuel equipment
   d. Open fuel gas cylinder ½ turn
   e. Open oxygen as cylinder all the way
   f. Adjust fuel gas and oxygen working pressure per manufacturer's recommendation
   g. Purge lines one at a time. One second for each 10 feet of hose length

10. Cut Steel Plate Using Oxy-Fuel Equipment
    a. Make manual free hand straight line cuts
    b. Cut manually straight lines using cutting jib
    c. Bevel plate with manual oxy-fuel equipment
    d. Manually cut blind holes in thick material
    e. Manually cut sheet metal with minimal distortion
ADVANCED SHIELDED METAL ARC WELDING (SMAW) AND CUTTING

1. Weld Single V Groove Welds With Open Roots From One Side
   a. Bevel 3/8" steel plate to 37 1/2° using oxy-fuel gas cutting e.g.
   b. Use grinder to remove oxide larger and smooth plate
   c. Use grinder to create root face of 3/32" to 1/8"
   d. Tack single V groove joint with 3/32" root opening
   e. Place joint in the 1G position
   f. Place joint in 2G position once task is mastered
   g. Place joint in 3G position once task is mastered
   h. Place joint in 4G position once task is mastered
   i. Weld the root with Direct Current Electrode Positive using 1/8" E6010. Use tight arc length and keyhole technique to produce a well fused root bead extending 1/16" above the plate.
   j. Weld chipped side slag and the root bead is wire brushed
   k. Fill the balance of the groove with 3/32", 1/8" and/or 5/32" E7018 using the stringer bead technique
   l. Visual test finished weld and root face bends evaluated to AWS D1.1 criteria

2. Weld Various Diameters of Pipe to Plate
   a. Inspect area for safety
   b. Place plate flat on welding table
   c. Place 3" pipe vertically on top of plate and tacked in place
   d. Leave weld coupon in the 2F fixed position
   e. Apply a 3/8" fillet weld using 1/8" E7018 and a stringer bead technique
   f. Visually inspect weld to AWS D1.1
   g. Fill pipe with water for 24 hours
   h. Check for leak

3. Produce SMAW Pipe - 5G Position
   a. Measure the pipe
   b. Mark the cut line with a wrap around and soapstone
   c. Cut the bevel using oxy-fuel gas equipment
   d. Clean the bevel face with a grinder, remove all oxide and smooth bevel face
   e. Use the grinder to add a root face of from 3/32" to 1/8"
   f. Tack the single V groove pipe joint with a 3/32" root opening
g. Place the joint in the 5G fixed position, using an 1/8" E6010 and a keyhole technique. Weld the root pass upward producing a root weld which is well fused and has a 1/16" weld reinforcement above the plate

h. Chip slag and wire brush weld

i. Grind any lack of fusion and/or high spots

j. Weld the balance of the groove upward with 3/32" or 1/8" E7018 using the stringer bead technique

k. Visually inspect weld on the root and face sides to ASME Section 9

l. Remove four guided bend specimens from 2:00, 4:00, 8:00 and 10:00 positions prepared and two & eight are root bend specimens. Four & ten are face bend specimens. Guided bend tests are evaluated to ASME Section 9 criteria

4. Produce SMAW - 2G Position Groove Welds

a. Measure the pipe

b. Mark the cut line with a wrap around and soapstone

c. Cut the bevel using oxy-fuel gas equipment

d. Clean the bevel face with a grinder, remove all oxide and smooth bevel face

e. Use the grinder to add a root face of from 3/32" to 1/8"

f. Tack the single V groove pipe joint with a 3/32" root opening

g. Weld pipe joint

h. Place the joint in the 2G fixed position, using an 1/8" E6010 and a keyhole technique. Weld the root pass upward producing a root weld which is well fused and has a 1/16" weld reinforcement above the plate

i. Chip slag and wire brush. Grind any lack of fusion and/or high spots

j. Weld balance of the groove upward with 3/32" or 1/8" E7018 using the stringer bead technique

k. Visually inspect weld on the root and face sides to ASME Section 9

l. Remove four guided bend specimens from 2:00, 4:00, 8:00 and 10:00 positions prepared and two & eight are root bend specimens. Four & ten are face bend specimens. Guided bend tests are evaluated to ASME Section 9 criteria

5. Roll Weld Pipe - SMAW

a. Measure the pipe

b. Mark the cut line with a wrap around and soapstone

c. Cut the bevel using oxy-fuel gas equipment

d. Clean the bevel face with a grinder, remove all oxide and smooth bevel face

e. Use the grinder to add a root face of from 3/32" to 1/8"

f. Tack the single V groove pipe joint with a 3/32" root opening

g. Roll weld pipe

h. Place pipe coupon on workbench in the 1G roll welding position.

i. Weld the root bead using 1/8" E6010 and the keyhole technique. The weld is performed in the 2:00 to 12:30 position

j. Chip slag and wire brush. Grind any lack of fusion and/or high spots

1465
k. Weld balance of groove upward with 3/32” or 1/8” E7018 using the weave technique
l. Visually inspect weld on the root and face sides to ASME Section 9
m. Remove four guided bend specimens from 2:00, 4:00, 8:00 and 10:00 positions prepared and two & eight are root bend specimens. Four & ten are face bend specimens. Guided bend tests are evaluated to ASME Section 9 criteria

6. Produce SMAW Pipe - 5G Position
a. Measure the pipe and
b. Mark the cut line with a wrap around and soapstone
c. Cut the bevel using oxy-fuel gas equipment
d. Clean the bevel face with a grinder, remove all oxide and smooth bevel face
e. Use the grinder to add a root face of from 3/32" to 1/8"
f. Weld pipe
g. Tack the single V groove pipe joint with a 3/32" root opening
h. Place the joint in the 5G fixed position, using an 1/8" E6010 and a keyhole technique
i. Weld the root pass upward producing a root weld which is well fused and has a 1/16" weld reinforcement above the plate
j. Chip slag and wire brush. Grind any lack of fusion and/or high spots
k. Weld balance of groove upward with 3/32" or 1/8" E7018 using the weave technique
l. Visually inspect weld on the root and face sides to ASME Section 9
m. Remove four guided bend specimens from 2:00, 4:00, 8:00 and 10:00 positions prepared and two & eight are root bend specimens. Four & ten are face bend specimens. Guided bend tests are evaluated to ASME Section 9 criteria

7. Produce SMAW Pipe - 6G Position
a. Measure the pipe
b. Mark the cut line with a wrap around and soapstone
c. Cut the bevel using oxy-fuel gas equipment
d. Clean the bevel face with a grinder, remove all oxide and smooth bevel face
e. Use the grinder to add a root face of from 3/32" to 1/8"
f. Tack the single V groove pipe joint with a 3/32" root opening
g. Place the joint in the 6G fixed position, using an 1/8" E6010 and a keyhole technique
h. Weld the root pass upward producing a root weld which is well fused and has a 1/16" weld reinforcement above the plate
i. Chip slag and wire brush. Grind any lack of fusion and/or high spots
j. Weld balance of groove upward with 3/32" or 1/8" E7018 using the stringer bead technique
k. Visually inspect weld on the root and face sides to ASME Section 9
1. Remove four guided bend specimens from 2:00, 4:00, 8:00 and 10:00 positions prepared and two & eight are root bend specimens. Four & ten are face bend specimens. Guided bend tests are evaluated to ASME Section 9 criteria.

8. Create SMAW Pipe to ASME Section 9
   a. Bevel two pieces of pipe to 30° bevel angle using oxy-fuel gas cutting equipment
   b. Clean bevel face and a 3/32" root face is applied using a hand held grinder
   c. Set welding condition to weld open roots
   d. Tack pipe nipples together to form a V groove with a 1/8" root opening
   e. Place pipe in the 5G fixed position. The root pass is welded and cleaned by wire brushing
   f. Weld balance of the V groove with this procedure
   g. Visual inspection is made and evaluated by ASME Section 9
   h. Make four bend samples and evaluate by ASME Section 9

9. Interpret Welding Procedures
