A Collaborative Consultation Model: Changing the Way Head Start Prepares Personnel To Work with Families at School, at Home and in the Community. Six-Session Training Guide.

The Personnel Preparation Curriculum is a collaborative consultative model for training professionals, including Head Start teachers, parents, and paraprofessionals, to work with families to address the educational needs of children. The activity-based model views families as being in charge, and professionals as partners with parents. Six collaborative consultative skills constitute the body of training: cooperation, consultative time-sharing, conversational instruction, shared expertise, self-evaluation, and collaborative brainstorming. The curriculum was field tested at 36 sites with 230 professionals, including Head Start teachers, and found to be successful on the basis of three positive effects: (1) trainees in the program demonstrated retention of collaborative and consultative working strategies after six months; (2) trainees reflected that they routinely used the research-based knowledge acquired by participating in family-focused activities in their day-to-day professional work with families; and (3) trainees, regardless of discipline or level of experience, indicated they understood the meaning of "shared expertise" and felt comfortable working as partners with parents and family members. (The six session training guide, which contains activity worksheets and projects, is included. Contains 30 references.)
A COLLABORATIVE CONSULTATION MODEL: CHANGING THE WAY HEAD START PREPARES PERSONNEL TO WORK WITH FAMILIES AT SCHOOL, AT HOME AND IN THE COMMUNITY

SIX-SESSION TRAINING GUIDE

HEAD START FOURTH NATIONAL RESEARCH CONFERENCE
WASHINGTON DC, JULY 9, 1998

PERMISSION TO REPRODUCE AND DISSEMINATE THIS MATERIAL HAS BEEN GRANTED BY

Susan H. Turben
TO THE EDUCATIONAL RESOURCES INFORMATION CENTER (ERIC)
WE NEED TO BEGIN TO VIEW OUR WORK WITH FAMILIES AS A PARTNERSHIP IN WHICH WE ARE CONSULTANTS, BUT THE FAMILIES ARE IN CHARGE.
Each training activity is designed to move you through a series of skills that enhance your family-centered expertise.
FIVE-STEP PROTOCOL FOR HEAD START PERSONNEL PREPARATION

STEP I. Introducing Co-Trainers

- Co-trainers introduce themselves as parent and teacher duos for an activity that teaches a collaborative consultative skill. The co-trainers briefly describe their experience using each skill and give an example of how they use it.

STEP II. Reading the Family Story

- Co-trainers explain that each session’s family-based activity is based on a “real” family who is receiving Head Start services. Co-trainers take turns reading the story aloud, in order to give participants a sense that the story is actually “happening”. Handouts focus on family concerns.

STEP III. Taking the Family Picture

- Co-trainers describe the family-focused aspect of each skill. Participants construct a family sculpture or ecological “map”. Handouts focus on social policy and family relationships.

STEP IV. Teaching the Skills

- Co-trainers conduct a preset activity, based on family-child concerns and learning style, demonstrating the skill.

STEP V. Reflecting on the Learning:

- Co-trainers and participants jointly write several sentences to briefly share their personal and professional learning.
STEP 1: NAME OF ACTIVITY: "Crazy Daisies" (A Mobile about family diversity)

STEP 2: FAMILY GOAL: The family/parents need the professionals to gain a greater acceptance of their own unique family configuration, and beyond that, to gain a sense of appreciation of the strengths that are present, despite not fitting the image of the mythical American family.

STEP 3 CONTENT OBJECTIVES: Family Issues, Professional Development

FAMILY DIVERSITY - Need for increased awareness of and sensitivity to the range of contemporary family lifestyle variations and their unique dynamics and needs (E.G.: never married single parent, divorced single parent, blended families, grandparents raising grandchildren, foster parents, cohabiting unmarried parents, gay and lesbian families...).

STEP 4: ACTION STEPS:

1. Co-trainers welcome participants and distribute the curriculum description and handouts for the family story activity. They take turns reading the TUNYCLIFF Family story aloud while participants are reading along, using the hard copy of the story provided by the co-trainers.

2. Co-trainers assign participants as family members in each of the above family variations. For example, distribute index cards, each describing a family: blended family: dad, step-mom, 2yr. old daughter, 10 year old son.

3. Participants in each family, group together to assign family roles within their group, according to the type of family that they have been assigned.

4. Co-trainers give each "family" a box of collage materials, as well as sticks and string to create a mobile to represent their family. Each "family" to be encouraged to tap their creativity to create a unique mobile to reflect each individual member in their family, and how they fit together as a family as reflected by the mobile.

5. Co-trainers ask each "family" to share their own mobile with the entire group, describing their process in creating it - have larger group respond to what they are seeing and hearing. Co-trainers point out the uniqueness of individual members, how family balances, etc.

6. After all "families" share their mobile, co-trainers facilitate with the whole group - listing similarities and differences, on a large newsprint, among the various types of families. Co-trainers continue to facilitate, emphasizing that all types of families have similarities and commonality, as well as uniqueness.
STEP 4: ACTION STEPS Cont'd

7. "Families" return to working with their family group - brainstorming what they feel are roadblocks for them as a family because of how their type of family might be viewed by professionals.

8. Co-trainer facilitate discussion among the larger group as each family shares their struggles/roadblocks when working with professionals.

9. Finally, each "family" returns to their group to statement a need from professionals as they work with their unique family - We need professionals to.....

10. Co-trainers have each family share their statement with the larger group and summarize the process.

STEP 5: ATTAINMENT OF OBJECTIVES, EVALUATION OF ACTIVITIES:

A. This activity will remind professionals of the reality of the wide range of families that are present in our society, as well as the image of the mythical American family that many still view as the norm or ideal.

B. This activity will provide an opportunity for professionals to feel/experience the uniqueness of a family variation.

C. This activity will challenge professionals to reflect on the similarities/commonalties among all families.

D. This activity will challenge professionals to appreciate the uniqueness and special needs of different family variations.

STEP 6: BARRIERS/OBSTACLES:

A. Participants may have difficulty acknowledging or discussing certain family variations, such as gay and lesbian families, cohabiting unmarried, etc.

B. Some participants may be resistant to the use of art.

### LISTENING - OBSERVING - VERIFYING

**PARENTS/CAREGIVERS AND YOUNG CHILDREN TOGETHER**

Understanding of the interactional relationship between parents, caregivers and young children requires careful listening (what we hear), observation (what we see), and verification of verbal and nonverbal information (what we say) through sensitive questions, restatements, invitations to expand, and pauses. Care must be taken in identifying specific, objective information free of personal attitudes or feelings. Utilize the following worksheet during the activity as a guide. Make notes of specific behaviors observed or information reported without making judgments about the information communicated. Note how information was or could have been verified through what is said (e.g., questions, restatements, etc.). Remember, further information from families may emerge based on the environment created and upon the extent and type relationship developed. Again, be specific without embellishment.

### INITIATION VS. RESPONSE

REFERENCE LIST

A Collaborative Consultation Model: Changing The Way Head Start Prepares Personnel to Work with Families at School, at Home and in the Community

**Rationale for the project:** "We must encourage Head Start to forge partnerships with key community and state institutions...and we must ensure that these partnerships are constantly renewed and recrafted to fit the needs of families..." (Shalala, 1994, p. 8). This edict accompanied the proposed bipartisan reauthorization legislation, creating a broad set of recommendations to be fulfilled by Head Start in the 21st Century.

Partnerships and community collaboration may be examples of what the future Head Start will look like "outside" in communities and neighborhoods, but will Head Start staffers and families also see themselves as competent collaborators and partners "inside" Head Start centers and in families homes? Will they be equipped to employ such consultation strategies as a) consultative scheduling, b) multi-sensory conversational instruction, c) shared expertise, d) child-family evaluation, e) classroom collaborative brainstorming, and f) paired response teaching and learning. Innovative staff development and training methods will be needed, if the answer is to be a resounding "yes!"

**Purpose and Background:** This research tests the effectiveness of a collaborative consultative training model aimed at Head Start teachers and paraprofessional personnel, as a result of participation in six, ninety minute collaborative consultative training sessions. This activity-based training model grew out of a personnel preparation project, funded by the Ohio Department of Health, Bureau of Early Intervention, to prepare an 18-hour Early Intervention Personnel Verification Curriculum for professionals from 12 disciplines.

The Personnel Preparation Curriculum was successfully field tested at 36 sites with 230 professionals, including Head Start teachers, parents and paraprofessionals. Results indicated three promising and positive effects. First, trainees demonstrated retention of collaborative and consultative working strategies after six months. Second, participants reflected they routinely used the research-based knowledge acquired by participating in family-focused activities in their day-to-day professional work with families. Third, professionals, regardless of discipline or level of experience, indicated they understood the meaning of "shared expertise" and felt comfortable working as co-partners with parents and family members, instead of feeling as if they were the "experts."
Personnel Preparation Training Protocol: The collaborative consultation model views families as "being in charge," and teachers, professionals and paraprofessional staff, as "co-partners" with parents. Professionals and paraprofessionals share their expertise with families, but find ways to allow parents to have an equal role in the teaching and learning of their children. This collaborative design has been successful for elementary school programs (Thousand, Villa, Whitcomb & Nevin, 1996.) Early education of handicapped children programs and early intervention programs have also used the model successfully in both home and classroom settings (Turben, 1997.)

Six collaborative consultative skills constitute the body of training. Parent and professional co-trainers teach one collaborative consultative skill at each session:

1. Cooperation
2. Consultative-time sharing
3. Conversational instruction
4. Shared expertise
5. Self-evaluation

Conclusion: Diverse staff backgrounds and varied levels of experience present a significant challenge to Head Start administrators, regional trainers, specialists and professionals and paraprofessionals, who are responsible for the training of personnel. Generally, staff members consider most training workshops chores, perhaps because training is generally designed by content area, rather than skills directly related to an individual's skills and strengths.

An activity-based "collaborative consultation" model, skill-based and family centered, appeals to staff because the training answers the question, "What do I get out of it?" They receive resource information they can use in their jobs, and they receive practice in performing six practical skills they are able to reinforce every day. These skills promote self-development, group cooperation and inclusiveness. These traits will become essential if Head Start is to fulfill both the edict and promise that prompted legislators to reauthorize this program.

Head Start personnel work with parents as “Partners”

Guidelines for Practice

1. Parents should have the opportunity to be involved in all planning meetings related to children and their families.
2. Plan to give parents ideas that fit within the family’s daily routine.
3. Families should be the ultimate decision-makers.
4. Written plans should be easy for families to understand, and flexible enough to allow for frequent changes.

Adapted from: Barnard, K. Equals in this partnership: Parents of disabled at-risk infants and toddlers speak to professionals. Arlington, VA: Zero To Three / National Center for Clinical Infant Programs.

HEAD START CHECKLIST

Do I really believe that parents are my equal and, in fact, are experts on their child?

Do I show the same respect for the value of parents’ time as I do for my own time by educating myself about an individual child and observing each child’s strengths?

Do I speak plainly to families and tell parents their child’s good points?

Do I have conferences and make visits at times and places that are convenient for the family?

Do I share information with other teachers and professionals to insure that families do not expend unnecessary energy searching for assistance and services?

Adapted from Focal Point, (1987), 2 (2), Research and Training Center, Regional Research Institute for Human Services, Portland State University.
FAMILY-FOCUSED TEACHING

PHASES OF INTERVIEW:

Key Questions
How do you involve family members in discussions about what they want for their children?

How do you resolve disagreements about educational goals?

How do you identify teaching strategies that have a high probability for success?

What does your “individual plan” look like for each family?
