This study presents findings of longitudinal research that studied the predictive utility of five temperament constructs measured in preschool children and their subsequent behavioral adjustment 5 years later in elementary school. Adjustment as measured by composites of the Behavior Assessment System for children was predicted by parent ratings of children's temperament over a 5-year period. Consistent with previous research over a 3-year period by the same authors, emotional intensity was found to be the strongest predictor of all composites. Parentally perceived emotionality contributes to school perceived adjustment. These findings support the importance of early pro-social skill training of children to enhance adjustment. (Author/EMK)
Prediction of Adjustment
From Preschool Temperament

ABSTRACT

Adjustment as measured by composites of the Behavior Assessment System for Children were predicted by parent ratings of children's temperament over a five year period. Consistent with previous research over a three year period, emotional intensity was the strongest predictor of all composites. Parental perceived emotionality contributes to school perceived adjustment. These findings support the importance of early pro-social skill training of children to enhance adjustment.
Prediction of Adjustment From Preschool Temperament

While there is a growing body of research demonstrating a relationship between temperament and behavior problems, there are few longitudinal studies establishing the predictive utility of the temperament construct. The practical utility of temperament theory depends, in part, on the predictive validity of measures of temperamental characteristics. This longitudinal research studied the predictive utility of five temperament constructs measured in preschool children and their subsequent behavioral adjustment five-years later in elementary school.

The available literature suggests moderate relations between various measures of temperament and measures of adjustment among children (e.g. Barron & Earls, 1984; Bates, Maslin & Frankel, 1989; Carey, Fox & McDevitt, 1977; Caspi, Henry, McGee, Moffitt & Silva, 1995; Kyrios & Prior, 1990; Pfeffer & Martin, 1984; Thomas & Chess, 1977). The temperament dimension of negative emotionality correlates most consistently with other behavioral adjustment related constructs. Often referred to as emotional intensity, negative emotionality characteristics include the amount and intensity of anger, hostility, and crying, particularly in response to frustration. Other temperament variables that have been found to relate to adjustment include adaptability, activity and persistence.

The present authors found in a previous research that the temperamental dimension of emotional intensity predicted both externalizing and internalizing issues, and that persistence predicted learning problems (attention and academic performance) over a 3-year period, based on initial parental ratings of preschool temperament and later teacher ratings.

Method
In the present study, the parent version of the Temperament Assessment Battery for Children (Martin, 1988) was completed on an unselected group of 75 preschoolers who were involved in prekindergarten screenings. The TABC was designed to measure six dimensions. **Activity** measures the tendency to engage in gross-motor movement, particularly vigorous, fast movement. **Adaptability** measures the ease and speed with which a child adjusts to new social situations. **Approach/Withdrawal** measures the tendency to approach vs. move-away from new social situations. **Distractibility** or Ease-of-Management-Through-Distraction measures the ease with which a child’s attention can be redirected to appropriate environmental stimuli. **Persistence** measures attention span and the tendency to continue to try and solve a difficult social or learning problem. **Emotional Intensity** has been defined. Five-years later, their classroom teachers completed The Teacher Scale of the Behavior Assessment Scale for Children (Reynolds & Kamphaus, 1993). Composite scores from **Externalizing Problems**, **Internalizing Problems**, **School Problems** and **Adaptive Skills** were used as dependent variables.

**Results**

**Externalizing Problems** was predicted by **Emotional Intensity**, **Approach/Avoidance** and **Activity** with a multiple R of .50, over a five-year period. This suggests children perceived by their parents at age five as reacting with greater emotionality and activity were also perceived by their teachers five-years later as having more conduct problems, aggression and activity. **Internalizing Problems** was also predicted by **Emotional Intensity**, suggesting that negative emotionality may also translate into anxiety and social problems. To a lesser degree, **Activity** and **Persistence** predicted **School Problems**, while Emotional Intensity and Adaptability related to Adaptive skills 5-years later.
Discussion

These findings suggesting that children's early biologically determined behavior can be used to a degree to predict adjustment five years later has important implications for parents and developmental investigators. Not all of school-related behavior problems are attributable to parenting.

Since temperamental differences predict different behavioral outcomes, it may be beneficial to provide students rated with greater emotionality and activity with developmentally appropriate training in pro-social skills. These may include basic social skills (Boys Town, 1991; Goldstein, 1988), conflict resolution skills, and self-management skills (Jenson, Rhode & Reavis, 1997; Rhode, Jenson & Reavis, 1996). These students may also benefit from a more structured environment with increased predictability in order to reduce frustration. An environment structured to meet their need for activity may also decrease perceived behavior problems. Future research is needed in this area to empirically establish the efficacy of these approaches. School personnel need training to understand the implications of this research and the relationship between temperament and adjustment.

Title: Prediction of Adjustment From Preschool Temperament

Author(s): Nelson, Young, Grant

II. REPRODUCTION RELEASE:

In order to disseminate as widely as possible timely and significant materials of interest to the educational community, documents announced in the monthly abstract journal of the ERIC system, Resources in Education (RIE), are usually made available to users in microfiche, reproduced paper copy, and electronic media, and sold through the ERIC Document Reproduction Service (EDRS). Credit is given to the source of each document, and, if reproduction release is granted, one of the following notices is affixed to the document.

If permission is granted to reproduce and disseminate the identified document, please CHECK ONE of the following three options and sign at the bottom of the page.

Level 1

PERMISSION TO REPRODUCE AND DISSEMINATE THIS MATERIAL HAS BEEN GRANTED BY

TO THE EDUCATIONAL RESOURCES INFORMATION CENTER (ERIC)

Check here for Level 1 release, permitting reproduction and dissemination in microfiche or other ERIC archival media (e.g., electronic) and paper copy.

Level 2A

PERMISSION TO REPRODUCE AND DISSEMINATE THIS MATERIAL IN MICROFICHE, AND IN ELECTRONIC MEDIA FOR ERIC COLLECTION SUBSCRIBERS ONLY, HAS BEEN GRANTED BY

TO THE EDUCATIONAL RESOURCES INFORMATION CENTER (ERIC)

Check here for Level 2A release, permitting reproduction and dissemination in microfiche and in electronic media for ERIC archival collection subscribers only.

Level 2B

PERMISSION TO REPRODUCE AND DISSEMINATE THIS MATERIAL IN MICROFICHE ONLY HAS BEEN GRANTED BY

TO THE EDUCATIONAL RESOURCES INFORMATION CENTER (ERIC)

Check here for Level 2B release, permitting reproduction and dissemination in microfiche only.

Documents will be processed as indicated provided reproduction quality permits. If permission to reproduce is granted, but no box is checked, documents will be processed at Level 1.

I hereby grant to the Educational Resources Information Center (ERIC) nonexclusive permission to reproduce and disseminate this document as indicated above. Reproduction from the ERIC microfiche or electronic media by persons other than ERIC employees and its system contractors requires permission from the copyright holder. Exception is made for non-profit reproduction by libraries and other service agencies to satisfy information needs of educators in response to discrete inquiries.

APA 98

APA 98
Dear 1998 APA Presenter:

The ERIC Clearinghouse on Counseling and Student Services invites you to contribute to the ERIC database by providing us with a written copy of the presentation you made at the American Psychological Association’s 106th Annual Convention in San Francisco August 14-18, 1998. Papers presented at professional conferences represent a significant source of educational material for the ERIC system. We don’t charge a fee for adding a document to the ERIC database, and authors keep the copyrights.

As you may know, ERIC is the largest and most searched education database in the world. Documents accepted by ERIC appear in the abstract journal Resources in Education (RIE) and are announced to several thousand organizations. The inclusion of your work makes it readily available to other researchers, counselors, and educators; provides a permanent archive; and enhances the quality of RIE. Your contribution will be accessible through the printed and electronic versions of RIE, through microfiche collections that are housed at libraries around the country and the world, and through the ERIC Document Reproduction Service (EDRS). By contributing your document to the ERIC system, you participate in building an international resource for educational information. In addition, your paper may listed for publication credit on your academic vita.

To submit your document to ERIC/CASS for review and possible inclusion in the ERIC database, please send the following to the address on this letterhead:

1. Two (2) laser print copies of the paper,
2. A signed reproduction release form (see back of letter), and
3. A 200-word abstract (optional)

Documents are reviewed for contribution to education, timeliness, relevance, methodology, effectiveness of presentation, and reproduction quality. Previously published materials in copyrighted journals or books are not usually accepted because of Copyright Law, but authors may later publish documents which have been acquired by ERIC. However, should you wish to publish your document with a scholarly journal in the future, please contact the appropriate journal editor prior to submitting your document to ERIC. It is possible that some editors will consider even a microfiche copy of your work as “published” and thus will not accept your submission. In the case of “draft” versions, or preliminary research in your area of expertise, it would be prudent to inquire as to what extent the percentage of duplication will effect future publication of your work. Finally, please feel free to copy the reproduction release for future or additional submissions.

Sincerely,

Jillian Barr Joncas
Assistant Director for Acquisitions and Outreach
