This packet contains 21 lessons, each providing ideas and teaching activities to accompany a specific story or book to be used to teach economic concepts. The booklet contains practical, classroom-tested lesson plans to use with popular children's stories. The economic concepts used in this curriculum are identified in "Indiana's Social Studies Curriculum Guide" and the "Voluntary National Content Standards" developed by the National Council on Economic Education. The curriculum also contains generic handouts that can be used with any children's book. These handouts include two useful decision models: (1) the Decision Tree (from the popular "Econ and Me" video series); and (2) the Five-Step Decision Grid. The curriculum contains an annotated bibliography of other popular children's books that are useful for introducing economic concepts. Sections of the book include: (1) "Economic Concepts"; (2) "Teaching Activities Based on Popular Children's Stories"; (3) "Handouts to Use with Other Stories"; (4) "Annotated Bibliography of Other Books"; and (5) "Indiana Proficiency Guide in Economics (K-6)." (Annotated bibliography contains 63 references.) (EH)

Some of the clip art in this curriculum is from the following publications of the Carson-Dellosa Publishing Company, Inc.: Clip Art Collection I, Clip Art Collection II, and Kid's Clip Art. Permission granted.

The Indiana Department of Education (IDOE) thanks the National Council on Economic Education for permission to use annotated, bibliographic entries from several of their excellent publications.

Generous financial support for this curriculum project was provided by the EconomicsAmerica program of the Indiana Council for Economic Education (ICEE). Nancy Vollmer and Andria Duke of the ICEE staff also helped compile the annotated bibliography, as did Betty Sue Williams, classroom teacher from Centerville Elementary in Oldham County, Kentucky.

A special thanks is extended to David Ballard, Economic Education Consultant with IDOE, and to Susan Bougher and Jennifer Banning, teachers at Miller School in the Lafayette School Corporation, for their creative ideas and support of this project.

The authors are also grateful to the publications staff of IDOE for their excellent layout and art work and to Jayne Hershman of West Lafayette, Indiana, who edited the final version of this curriculum.

Part 4: Annotated Bibliography of Other Books ..................... 4-1

Part 5: Indiana Proficiency Guide in Economics (K-6) ............. 5-1
Introduction

There is a growing recognition from educators and other opinion leaders that to be effective citizens, students must have a basic understanding of the economic world around them. Many excellent curriculum materials have been developed recently to help accomplish this important task. This new elementary curriculum booklet, *Teaching Economics Using Children's Literature*, is another addition to this growing collection of materials. The booklet contains practical, classroom-tested lesson plans to use with popular children's stories. The economic concepts used in this curriculum are identified in Indiana's *Social Studies Curriculum Guide* and the *Voluntary National Content Standards* developed by the National Council on Economic Education.

Why Use Children's Literature?

Why is using children's literature to teach economics so effective? First, since children (and teachers!) love stories, using literature is a very motivational teaching technique. Second, as economic concepts are taught within the context of literature, students realize that economics is a very real and interesting part of the world around them. And third, using children's literature allows teachers, as the proverb says, "to kill two birds with one stone." In a crowded curriculum this interdisciplinary approach is certainly appealing.

Using the Curriculum

The main part of *Teaching Economics Using Children's Literature* consists of 21 lessons, each providing ideas and teaching activities to accompany a specific story or book. The curriculum also contains "generic" handouts that can be used with any children's book. These handouts include two very useful decision models: the Decision Tree (from the popular *Econ and Me* video series) and the Five-Step Decision Grid. Finally, the curriculum contains an annotated bibliography of other popular children's books that are excellent for introducing economic concepts.
A Key Assumption

Teaching Economics Using Children's Literature is based on the key assumption that teachers already have a basic understanding of the economic concepts presented in the lessons. For example, individual lessons contain no detailed explanations of economic concepts, nor are answers provided to simple questions. However, the first part of the curriculum does contain simple definitions and explanations of 25 basic economic concepts. Also, the Indiana Economics Social Studies Proficiencies for grades K-6 are provided in the last part of the curriculum.

The Indiana Department of Education is confident that you will enjoy using these lessons to make economics come alive to your students through the exciting world of children's literature.

For More Information

For further information about curriculum materials or training in economics education, please contact the Indiana Department of Education, Office of Program Development, Room 229, State House, Indianapolis, IN 46204-2798, (317) 232-9186.
Part 1

Economic Concepts
This section describes the economic concepts identified throughout this curriculum booklet. These concepts are listed below in the order that they appear.

- Goods
- Services
- Consumer
- Producer
- Productive Resources
- Natural Resources
- Human Resources
- Capital Resources
- Entrepreneur
- Production Model
- Scarcity
- Opportunity Cost
- Trade-Offs
- Money
- Price
- Marketplace
- Exchange and Trade
- Specialization
- Interdependence
- Productivity
- Economic Systems
- Profit
- Role of Government
- International Trade
- Circular Flow Model

These definitions and explanations are based on the Voluntary National Content Standards developed by the National Council on Economic Education (NCEE), A Framework for Teaching Basic Economic Concepts (NCEE), Economics: What and When (NCEE), and the Indiana Social Studies Proficiency Guide.
Goods

Content Statement: Goods are tangible items that people want.

Student Language: A good is something people want that you can touch or hold.

Example: Any item you can buy at a store is a good.

Services

Content Statement: Services are activities that satisfy people's wants.

Student Language: A service is something that one person does for someone else.

Example: Washing a car, fixing a lawn mower, cutting hair, or teaching students are examples of services.

Consumer

Content Statement: Consumers are people who satisfy their wants by using goods and services.

Student Language: Consumers are people who buy goods and services.

Example: When Sarah purchased a dress, she was a consumer.
Producer

Content Statement: Producers combine productive resources to make goods and provide services.

Student Language: Producers are people who make goods or provide services.

Example: A mechanic is a producer of car repair services.

Productive Resources

Content Statement: Productive resources are all natural, human, and capital resources used in the production of goods and services.

Student Language: Productive resources are the natural, human, and capital resources we need to produce goods and services.

Example: Steel, plastic, different types of workers, and many kinds of tools and equipment are some of the productive resources necessary to produce a car.

Natural Resources

Content Statement: Natural resources (often collectively referred to as "land") are the "gifts of nature" necessary for production; they are present without human intervention.
Student Language: Natural resources are things found in nature that we use in production.

Example: Oil, water, air, minerals, wild animals, and land are examples of natural resources.

Attention! Strictly speaking, natural resources refer only to items found naturally without any human invention. Thus, any raw materials that have been to some degree processed by humans, such as the cotton cloth or metal zippers used to make blue jeans, are technically not natural resources. However, with elementary students it is helpful to include the raw materials of production under the category of natural resources.

Human Resources

Content Statement: Human resources, also called labor, represent the quantity and quality of human effort used in production.

Student Language: Human resources are the people who work in jobs to produce goods and services.

Example: Line workers, secretaries, managers, and engineers are examples of the human resources used to produce an automobile.

Attention! The special skills that workers acquire through education and training are referred to as human capital. It takes scarce time and resources to acquire human capital. Workers who have acquired human capital are usually paid more than those who haven't.
Capital Resources

Content Statement: Capital resources are goods that are produced and used to make other goods and services.

Student Language: Capital resources are special goods such as tools, equipment, machines, and buildings which are used to produce other goods and services.

Example: The school building and all the equipment in it are the capital resources needed to produce education.

Attention! Wild animals are properly classified as natural resources. But animals used to help in production, such as plow animals, should be considered capital resources.

Entrepreneur

Content Statement: Entrepreneurs are people who organize other productive resources to make goods and services. They assume the risk and gain the profits.

Student Language: Entrepreneurs are people who take the risk to start a business. They have to organize all of the productive resources.

Example: Henry Ford was an entrepreneur who used his personal savings to design a factory which produced automobiles on an assembly line.
Production Model

Content Statement: The production model illustrates how the three productive resources are combined to produce goods and services.

Student Language: The production model shows how the three productive resources are combined to produce goods and services.

Example:

Production

<table>
<thead>
<tr>
<th>Natural resources</th>
<th>Human resources</th>
<th>Capital resources</th>
</tr>
</thead>
<tbody>
<tr>
<td>(Inputs)</td>
<td></td>
<td>(Output)</td>
</tr>
</tbody>
</table>

Goods and Services
Scarcity

Content Statement: Scarcity is the condition of not being able to have all of the goods and services that one wants. It exists because there are not enough productive resources to produce all that people want. Scarcity means that people have to make choices.

Student Language: Scarcity means not being able to have everything that you want. Scarcity forces us to make choices.

Example: When you go shopping, your scarcity of income forces you to make choices. You can't buy everything you want!

Attention! In certain situations, a good may not seem scarce. For example, you may have too many desks in your classroom and want to get rid of some. In an economic sense, however, a desk is still a scarce good. It has a price and is not freely available.

Opportunity Cost

Content Statement: The opportunity cost of a choice is the value of the best alternative given up.

Student Language: When you make a decision, the most valuable alternative that you don't choose is your opportunity cost.

Example: Sue wants to be a nurse and teacher, but she can't be both. She decides to be a nurse, so being a teacher is her opportunity cost.
Attention!  Your opportunity cost is not the sum of all possible alternatives. Suppose Sue also wants to be a secretary, but it is her third choice. Her opportunity cost — being a teacher — would not change by choosing to be a nurse. Your opportunity cost is your next best alternative.

Trade-Offs

Content Statement:  Trade-offs means getting a little more of one option in exchange for a little less of something else. Few choices are all-or-nothing decisions; most involve trade-offs.

Student Language:  Trade-offs means getting a little less of one thing in order to get a little more of another.

Example:  Jeff loved to buy baseball cards. So when he used part of his birthday money to buy some candy instead, he was trading off cards for candy.

Money

Content Statement:  Money is anything commonly used to exchange goods and services. To be effective, money must be scarce, durable, portable, and divisible.

Student Language:  Money is what people use to buy goods and services.

Example:  Many different items have been used as money throughout history, including gold, silver, shells, tobacco, and paper.
**Price**

Content Statement: The price is what people pay when they buy a good or service and what they receive when they sell a good or service. In a free market, price is determined by supply and demand.

Student Language: The price is the amount of money that people pay when they buy a good or service. It is determined by the buying and selling decisions of consumers and producers.

Example: Sue paid a price of $.50 for the pack of gum.

Attention! Prices change constantly, depending on changes in supply and demand. In any market, there is one market clearing price that makes the amount buyers want to buy equal to the amount sellers want to sell.

**Marketplace (Market)**

Content Statement: A marketplace, or market, exists whenever buyers and sellers exchange goods and services.

Student Language: Markets are places where people buy and sell goods and services.

Examples: At the farmer's market, I purchased some apples.
Exchange and Trade

Content Statement: Exchange is trading goods and services for other goods and services or for money. Barter is trading without money. People exchange goods and services because they expect to be better off after the exchange.

Student Language: Exchange is trading goods and services for other goods and services or for money. Barter is trading without money. People exchange goods and services because they expect to be better off after the exchange.

Example: When John went to the store, he exchanged $15 for a soccer ball. Roberto bartered his used bat for Jerry's kickball.

Specialization

Content Statement: People specialize when they produce a narrower range of goods and services than they consume. Specialization increases productivity and results in greater interdependence.

Student Language: People specialize when they work in jobs where they produce a few special goods and services. When people specialize they produce more, but they also must depend more on one another.

Example: John is a mechanic. He gets his hair cut at Joe's Barber Shop. Joe goes to John to get his car fixed. John and Joe earn more by specializing, but they must depend on one another.
Attention! Division of labor is a "special" kind of specialization. It occurs when the production of a good is broken down into numerous, separate tasks, with different workers performing each task.

Interdependence

Content Statement: Interdependence occurs when people and nations depend on one another to provide each other's wants. Greater specialization and trade lead to greater interdependence.

Student Language: Interdependence occurs when people and nations depend on one another to provide the goods and services they want. The more people specialize and trade, the more interdependent they become.

Example: Canada and the United States are very interdependent because they trade so much with one another.

Productivity

Content Statement: Productivity is a ratio of output (goods and services) produced per unit of input (productive resources) over some period of time.

Student Language: Productivity measures how many goods and services are produced over a period of time. It is usually measured as output per hour. You can increase productivity by producing more goods and services with the same resources, or by producing the same goods and services with fewer resources.
Example: When Mary purchased a paint gun, she greatly increased her productivity — she painted many more houses each month.

Attention! Labor productivity (output per worker hour) is the most common measure of productivity. In agriculture, output per acre is the most common. Increases in productivity occur primarily by investing in (1) Better Technology, and (2) Education and Training.

Economic Systems

Content Statement: Every society has an economic system, the institutional framework a society uses to allocate its productive resources to produce and distribute goods and services.

An economic system answers these questions:

1. What Goods and Services Will Be Produced?
2. How Will Goods and Services Be Produced?
3. Who Will Consume the Goods and Services?

The three fundamental kinds of economic systems are market, command, and traditional.

Student Language: An economic system is how a country decides to produce and distribute goods and services. Every country has some kind of economic system.

Example: The economic system of the United States is primarily a market economy because the prices of goods, services, and productive resources guide most economic activity.
Attention! No economy is purely market, command, or traditional. Economies contain elements of all three, although one will predominate.

**Profit**

**Content Statement:** Profit is the difference between the sales revenues and the costs of producing a good or service.

**Student Language:** When you produce and sell a good or service, your profit is the difference between the money you make when you sell it and your cost of making it.

**Example:** Bill received $200 from selling lemonade. He figured all his costs were $125. His profit was $75.

**Role of Government**

**Content Statement:** The main role of government in a market economy is to (1) Provide a legal framework, (2) Insure competition, (3) Provide public goods, such as roads and national defense, and (4) Control "market failures," such as pollution and animal extinction.

Government is financed through taxation.

**Student Language:** The main role of government in an economy is to:

1. Provide laws to help the economy run smoothly.
2. Make sure there is enough competition among businesses.
3. Provide public goods, such as roads and national defense.
4. Control bad effects, such as pollution and wild animal protection.

The government gets its money by collecting taxes.

Example: Enforcing business contracts through the legal system is an important role that government plays in the United States economy.

**International Trade**

**Content Statement:** Foreign trade is the exchange of goods and services between people and institutions in different nations. Voluntary trade increases specialization and competition and gives people a broader range of choices in buying goods and services.

*Exports* are domestic goods and services that are sold to buyers in other nations.

*Imports* are goods and services that are bought from sellers in other nations.

*Quotas* and *tariffs* are common barriers to international trade.

**Student Language:** International trade is the exchange of goods and services between countries. Trade between countries, like trade between people, increases specialization, competition, and world production.

*Exports* are goods and services produced in one country and then sold to buyers in another.

*Imports* are goods and services bought from sellers in other countries.
Nations use quotas (limits on imports) and tariffs (taxes on imports) to limit international trade.

Example: Consumers in nations who engage in international trade increase their overall standard of living.

Attention! The issue of international trade is often controversial. It is true that some workers in specific industries may be hurt by trade. For example, some American clothing workers have had to change jobs during the past 25 years because of clothing imports. However, this trade allows Americans to buy quality clothing at good prices, resulting in a higher standard of living for the U.S. and for our trading partners. For this reason, most economists agree that it is good to let countries trade as much as possible. Indeed, international trade is growing throughout the world.

Circular Flow Model

Content Statement: The circular flow model of a pure market economy illustrates the interactions of households and businesses in three markets: products (goods and services), productive resources, and financial capital.

Student Language: The circular flow model shows how households, businesses, and financial institutions interact as they exchange goods and services.
Example:

![Diagram of economic cycles involving businesses, financial capital market, households, productive resources, and goods and services.]

Attention! This model shows businesses borrowing savings only from households. In reality, the situation is more complex, since businesses as well as households provide savings to the market. Also, consumers and governments compete with businesses to borrow the available savings.

With younger children, you do not need to show the financial capital market.
Part 2

Teaching Activities

Based on Popular Children's Stories
Lesson Overview

Charlie and his favorite sheep produce a good — a new cloak. Students learn about the different productive resources (natural, human, and capital) that Charlie uses. Charlie does not specialize in his production — he does all the production steps himself (unit production).

Key Economic Concepts

Productive Resources
Human Resources
Specialization

Natural Resources
Capital Resources

Materials
Handouts 1 and 2

Teaching Procedure

1. Carefully describe and explain the different productive resources using the Production Model. (See Part 1 — Economic Concepts.) For younger students, this may take several short lessons. Try to show examples of real tools, cut out pictures of resources from magazines, etc.

2. As you read the story, tell students to mentally note examples of productive resources.

3. Divide the class into groups of three. On Handout 1, list/classify the productive resources found in the story. (Younger students may want to draw pictures.)

Another option is to have students make index cards of the specific productive resources found in the story and then put them on the board under the correct productive resource category.

4. Gather all students together and in turn have each group share an example
of a productive resource that they listed on Handout 1. Continue until all resources have been identified. Record group responses on the board.

5. Have students complete Handout 2, "Pumpkin Producers."

Key Questions to Ask Students

1. Was Charlie producing a good or service? (Service)

2. What are some examples of other kinds of goods and services?

3. What are some of the productive resources Charlie used to make his cloak? (Natural — land, wood for energy, any natural resources that went into making raw materials or capital resources; Human — Charlie’s labor; Capital — pot, scissors, needle, etc.)

4. Did Charlie specialize in making his cloak? (No, he did everything himself. He did not divide the labor. He engaged in unit production.)

Follow-Up Activities

1. Play Dough Production: Give each student a small piece of play dough. Have students do some or all of these tasks:
   - Make an example of a natural resource.
   - Make an example of a capital resource.
   - Show someone (a human resource!) producing a good or service.

2. Pat Your Head, Clap Your Hands, and Stomp Your Feet! In a large group, call out the names of various productive resources. If you call out a natural resource, students must pat their heads. If you call out a human resource, they must clap their hands; a capital resource (e.g. hammer), they must stomp their feet.

3. Design a Factory: Have students draw peanut butter and jelly sandwiches being made inside their own specially designed "Peanut Butter and Jelly Sandwich Factory." Show people working at various jobs and also show various types of capital resources being used. Be creative and have fun!!
Charlie (and his pet sheep!) needed many **productive resources** to produce his cloak. Discuss the story with your group. List as many productive resources as you can that Charlie used. List them under the correct type of productive resource — either natural, human, or capital.

<table>
<thead>
<tr>
<th>Natural Resources (Raw Materials)</th>
<th>Human Resources</th>
<th>Capital Resources</th>
</tr>
</thead>
</table>

In real life, how do people *get* productive resources?
Pumpkin Producers!

In the columns below, identify the resources necessary to produce pumpkins.

<table>
<thead>
<tr>
<th>Natural Resources (Raw Materials)</th>
<th>Human Resources</th>
<th>Capital Resources</th>
</tr>
</thead>
</table>

Write a paragraph describing how to produce pumpkins. Be sure to discuss productive resources! Give your paragraph a title and use your best writing. Use correct spelling and punctuation.
The Giving Tree
by Shel Silverstein
Harper Collins Publishers, 1964

Lesson Overview

This is a tender story about a tree and a boy. The tree loves the boy so much that it is willing to give the boy everything that it has (apples, shade, branches, and trunk). This story represents the ultimate sacrifice of love and the serene acceptance of another's capacity to love in return.

Key Economic Concepts

<table>
<thead>
<tr>
<th>Natural Resources</th>
<th>Economic Wants</th>
</tr>
</thead>
<tbody>
<tr>
<td>Scarcity</td>
<td>Price</td>
</tr>
</tbody>
</table>

Materials

Handouts 1, 2, & 3

Teaching Procedure

1. Carefully read and discuss this story with your students. Define and discuss the words sacrifice, natural resource, and scarcity.

2. Using Handout 1, have students make a list of all the natural resources that the tree gave to the boy and how the boy used them for his own benefit. Point out how the boy's wants changed as he grew older. Have students identify their various wants and list them on the board.

3. Explain the concept of scarcity. Divide the class into three groups and have them make a list of natural resources. Compare the lists and discuss the concept of scarcity as it applies to natural resources.

4. Discuss how some things are more scarce than others. Explain that the price of something reveals how scarce it is compared to other things.

5. In large print, write the word APPRECIATE across the blackboard. Discuss the importance of being appreciative. Ask the students if they feel the boy showed appreciation towards the tree. How does appreciation of our natural resources help us to make better choices?
6. On Handout 2, have students write a note of appreciation to the tree. Then write a note of appreciation to someone who has sacrificed something for them (mother, father, teacher, grandparent, etc.).

7. List **goods** (products) that are directly related to apple trees (wood, apple pies, caramel apples, applesauce, cider, apple juice, apple butter, etc.). Discuss why these goods are all **scarce**.

8. Complete Handout 3, the *Writer's Journal for The Giving Tree*.

---

**Key Questions to Ask Students**

1. What are **natural resources**? (*gifts of nature, source of raw materials*)
   Why are natural resources **scarce**? (*not enough for everyone to have all they want*)

2. In the marketplace, how can you tell if one resource (or **good**) is **more scarce** than another? (*Its price gives the clue!*) Give examples.

3. Discuss the differences between **renewable** and **nonrenewable** resources?

4. What are the **economic wants** in this story? Did the boy really need all the tree gave him? What are the consequences when we lose control of our wants? (*We purchase goods and services we cannot afford.*)

5. Did the boy appreciate the tree's sacrifices? How does appreciation help us make better choices?

---

**Follow-Up Activities**

1. *Play Dough Production*: Make examples of natural resources.

2. *Bulletin Board*: Create a bulletin board using the headings "Renewable Resources" and "Nonrenewable Resources." Cut out and categorize pictures from magazines.

4. **Field Trip**: Visit an apple orchard. Discuss the natural, capital, and human resources used to produce apples.

5. **Kids in the Kitchen**: Make an apple pie. Read and discuss the story, *How to Make an Apple Pie*, by Marjorie Priceman.

Dear Giving Tree,

Thank You,

Dear ____________

Thank You,
1. In your own words, tell what the economic word *scarcity* means.

2. Write a sentence describing the *scarcity* situation in *The Giving Tree*.

3. In your own words, tell how the tree felt about giving up most of its natural resources. Did giving make the tree happy? Was the tree happy at the end of the story?

4. Did the boy understand and appreciate the tree's sacrifice for him?
Lesson Overview

*The Doorbell Rang* is a story that emphasizes the spirit of giving. It is an amusing story of two children about to eat a dozen cookies. Each time the children start to eat their cookies, the doorbell rings. Each ring of the doorbell brings more and more children. The cookies have to be redistributed each time. This lesson is an excellent way to introduce the concept of scarcity.

Key Economic Concepts

<table>
<thead>
<tr>
<th>Scarcity</th>
<th>Productive Resources</th>
</tr>
</thead>
</table>

Materials

Handouts 1 & 2

Teaching Procedure

1. Carefully read and discuss this story with your students. Discuss and give examples of the economic concept of *scarcity*.

2. Discuss how the concept of scarcity applies to the story. What would have happened if grandmother hadn't brought the children another batch of cookies? (Cookies would be even more scarce!)

3. On Handout 1, have students color the dozen cookies on the sheet, cut them out, and use them to act out the story. Reinforce the concept of scarcity as they divide up the cookies each time the doorbell rings.

4. Using Handout 2, have students complete the Writer's Journal.
Key Questions to Ask Students

1. What is scarcity? (not having enough of something) Why is scarcity a problem for the children in the story? (There are not enough cookies!)

2. Suppose each child in the story has a cookie. Could cookies still be scarce? (Yes, still not enough for children to have all they want! In fact, even if all wants for cookies are satisfied in a particular situation, economists still classify cookies as a scarce good!)

3. When scarce goods are sold in stores, what do they always have? (a price) How do we know if one good is more scarce than another? (higher price)

4. Can you think of anything that is not scarce? (saltwater at the beach, garbage, sand in the desert) Why? (They are freely available. There is enough for everyone to have all they want!)

5. What natural resources (raw materials), human resources, and capital resources are used in this story to make cookies?

Follow-Up Activities

1. Play Dough Production: Give each child some play dough. Have each student produce a dozen cookies. Read the story out loud and have students divide up the play dough cookies to accompany the story.

2. Kids in the Kitchen Economics: Have the students make a batch of chocolate chip cookies. As the class is baking cookies, identify the natural resources (raw materials), human resources, and capital resources used to make cookies.

3. Scarcity List: Brainstorm and identify things that can be listed under the headings of "Scarce Goods" and "Scarce Services."

4. Field Trip: Visit a bakery and analyze the production process. In the classroom, draw, label, and write a paragraph describing how baked goods are produced from productive resources.
The Doorbell Rang!

Create a dozen of your favorite kind of cookies. Color, decorate, and cut them out. Use the cookies to show how they were divided up in the story, *The Doorbell Rang*. On a separate sheet of paper, write about all the **productive resources** that would go into making a real batch of cookies.
1. In your own words, tell how you think Sam and Victoria felt when they experienced the problem of *scarcity*? Did they like dividing up the cookies?

__________________________________________________________________________

__________________________________________________________________________

__________________________________________________________________________

__________________________________________________________________________

2. How can you tell if a good is *very scarce* or *not very scarce*? On a separate piece of paper, draw a picture to go with your explanation.

__________________________________________________________________________

__________________________________________________________________________

__________________________________________________________________________

__________________________________________________________________________

3. Cut out pictures and paste them under these two headings: Very Scarce Goods and Not Very Scarce Goods.
Lesson Overview

To prove he is responsible enough to own a pet and to repay a debt of money to his sister, Arthur decides to start a pet business — providing pet care service to community members. He advertises by putting up signs around the neighborhood. Business is very good. Arthur not only earns a wage (from which he pays his debt), but also gains a pet when one of his "clients" has puppies under his bed.

Key Economic Concepts

Goods
Income
Choices

Services
Wage
Entrepreneur

Materials

Handouts 1 and 2

Teaching Procedure

1. Describe the differences and similarities of goods and services. Using Handout 1, title one hotel GOODS and the other SERVICES. Have students cut out pictures from magazines or draw pictures of goods and services and glue them to the correct hotel.

2. As students read the story, have them identify goods and services shown in the illustrations or mentioned in the story. (These could be added or drawn on the Hotel Handouts above.)

3. Define entrepreneur. Discuss how Arthur fits this definition.

4. Pass out Handout 2. Students should interview at least five people at home or in the community. They should ask what work the people do to earn an income and then complete the interview form.
5. As a class, analyze and discuss the data. Determine which people provide a **good** and which provide a **service**. Were any of the people interviewed entrepreneurs? Discuss why or why not.

### Key Questions to Ask Students

1. What were Arthur's job choices? **(work in a bank or a junk yard)**

2. Why did Arthur start a business? **(to earn income so he could repay a debt and to prove he was responsible enough to own a pet)**

3. What is the difference between a **good** and a **service**?

4. Was Arthur providing a **good** or a **service**? **(service)**

5. Is Arthur considered an **entrepreneur**? **(yes)** Why? **(because he made the choice to organize and manage a business)**

6. Do you think it is more difficult being an **entrepreneur** or working for someone else? Why? **(Probably more difficult being an entrepreneur. Must organize all the productive resources. Must be willing to take a risk. Always requires long hours and much dedication. People like being their own boss. Possibility for much profit.)**

### Follow-Up Activities

1. **Field Trip:** Go to the businesses of people interviewed and have students take photos of them at work. Attach photos to Handout 1 and make a class booklet called "Community Providers of Goods and Services."

2. **Charades:** On slips of paper, put examples of goods and services. Have a student draw a slip and act out how to produce the good or service. The class guesses what job it is and whether it provides a good or a service.

3. **Start a Classroom Business:** Try one that provides a good and then one that provides a service. Compare and contrast. For example: a) Make packets of note cards with matching envelopes. b) Be "envelope stuffers" for the principal, school secretary, lunch supervisor, or other teachers.

4. **It's All in the Advertising!** Have students choose an occupation or business that interests them and make posters advertising it.
Handout 1
Arthur's Pet Business

*Make one hotel labeled GOODS and one hotel labeled SERVICES
Handout 2

BE A COMMUNITY REPORTER

REPORTER

INTERVIEWEE

1. What good or service do you produce to earn an income?

2. Do you work by yourself or do you work as part of a group? If you work as part of a group, what are the good and bad points about working this way?

3. What capital resources (tools, machinery, equipment) do you use?

4. What special training (human resources/human capital) do you need to do your job?

5. How did you decide to do this kind of work? Would you recommend this kind of work to others?
Lesson Overview

This is a story about a boy named Jack who wakes up with an enormous appetite for pancakes. His mother informs him that before she can make pancakes, he must first gather all the necessary ingredients. Jack must cut the wheat, take it to the miller, have the wheat ground, and gather the eggs — a step by step process for making pancakes the old fashioned way!

Key Economic Concepts

<table>
<thead>
<tr>
<th>Specialization</th>
<th>Division of Labor</th>
</tr>
</thead>
<tbody>
<tr>
<td>Interdependence</td>
<td>Productive Resources</td>
</tr>
</tbody>
</table>

Materials

Handouts 1 & 2

Teaching Procedure

1. Carefully read and discuss the story with your students. Explain these concepts: specialization, division of labor, and interdependence. Reinforce the idea that raw materials come from natural resources. Discuss natural, human, and capital resources as related to this story.

2. Using Handout 1, have students classify vocabulary words from Pancakes, Pancakes! under appropriate concept column.

3. Complete Handout 2, the Writer’s Journal for Pancakes, Pancakes!

4. Working in small groups, list all the people it took to make the pancakes (specialization). Discuss the concepts of specialization and interdependence. Emphasize that when people specialize they always become more dependent on one another (interdependence).

Key Questions to Ask Students

1. What are the differences between natural, human, and capital resources?
2. Define specialization and interdependence. How does the term division of labor apply in this story? How does specialization affect economic production? (increases productivity and, therefore, the quantity of goods and services produced; standardizes production) Does specialization make someone more or less dependent on others? (more)

3. What are some ways people specialize in your community? How does this make people in your community interdependent? (must depend on one another to provide goods and services)

4. What is a marketplace? Brainstorm examples of different marketplaces (stores, city markets, auctions, stock markets, etc.). How are they different? How are the same? (always places where buyers and sellers get together to determine prices)

5. How do rural marketplaces in less developed countries differ from a marketplace such as a large department store in the United States? (haggling for prices, goods often displayed on ground, sometimes takes place only one or two days each week, etc.)

6. When your family makes pancakes, do you follow all the steps in the story? Why not? (It takes too much scarce time!) How do marketplaces help you make pancakes? (You can buy ingredients that others produce. You can even buy complete pancake mixes!)

Follow-Up Activities

1. Flow Chart: Design a pancake production flow chart to go with this story.

2. Kids in the Kitchen: Make pancakes with your students and enjoy breakfast together. Have students list different items they could put into or on their pancakes to change the taste.

3. Maple Syrup: Do a teaching unit on maple syrup. Research information on how maple syrup is produced. Make a flow chart illustrating this process.

4. How Other Products Are Produced: Research how other products are produced. Research ingredients and the production process. Create your own story! (i.e., Hot Dogs, Hot Dogs; Popcorn, Popcorn; or Soda, Soda.)
Handout 1

PANCAKES, PANCAKES!

1. Put the following vocabulary words in the correct column:
   
   wheat, donkey, miller, stone, water, Jack,
   water wheel, egg, hen, milk, plate, cow, pail,
   fire, firewood, mixing bowl, wooden spoon,
   frying pan, mother, flail

   Watch out! Some of them may be tricky! (For example, is a donkey a natural resource or a capital resource?)

<table>
<thead>
<tr>
<th>NATURAL RESOURCES (Raw Materials)</th>
<th>HUMAN RESOURCES (Labor)</th>
<th>CAPITAL RESOURCES</th>
</tr>
</thead>
</table>

2. On the back of this paper, draw pictures of natural, human, and capital resources.
1. In your own words, explain what specialization means. Why do people specialize?

2. From the story, list at least three examples of specialization.

3. List all the steps Jack took in gathering the ingredients necessary for making pancakes.

3. On the back of this paper, draw and color a delicious plate of pancakes.
Lesson Overview

Geraldine the goat literally puts her whole self into the weaving of a Navajo rug. After being sheared for her wool, she watches as Glenmae cleans, dries, combs, spins, and dyes her wool. Geraldine is so proud. A lot of her is in that rug. She hopes to grow her wool quickly so she can be a part of the next Navajo rug.

Key Economic Concepts

- Unit Production
- Assembly Line
- Specialization
- Division of Labor
- Interdependence

Materials

- Handouts 1 & 2
- Construction Paper
- Glue
- Scissors

Teaching Procedure

1. After reading the story, define and discuss unit production. Point out that Glenmae did all the steps herself in the rug's production. Discuss how long this process could have taken. Use the illustrations of the story showing the regrowth of Geraldine's wool as an indicator of the passage of time.

2. Define and discuss division of labor, specialization, interdependence, and assembly line.

3. (optional) Illustrate these concepts by making "hamburgers" using Lesson 8 from the Play Dough Economics curriculum.

4. Using Handout 1, have students create a paper "rug." Follow these steps:
   a. Prepare a 9" x 12" sheet of construction paper to use as a "loom."
   b. Measure and cut ten 1" x 9" strips of paper in various colors.
   c. Have students weave paper strips on the loom and glue down all ends.

Note starting and completion time.
5. For the assembly line part of Handout 1, assign jobs to several students:
   - paper folders for looms
   - paper measurers for strips
   - paper measurer for looms
   - paper cutters for strips
   - paper cutters for looms
   - 10 paper weavers
   - paper ends gluers

6. Specify some total number of minutes for unit and assembly line production. Compare and contrast the production results.

7. Using Handout 2, have students design their own assembly lines to make a product (such as ice cream sandwiches, cookies, tennis shoes).

Key Questions to Ask Students

1. Was Glenmae producing a good or a service? (a good)

2. Did Glenmae specialize in making the rug? (No, she did everything herself. She engaged in unit production.)

3. How long was the production time in the making of the rug? (several weeks) Why? (because Glenmae did all the work herself)

4. When people specialize, like on an assembly line, they become more interdependent. What does this mean? (depend more on one another)

Follow-Up Activities

1. Field Trip Time! Take a field trip to a candy factory or a bakery that uses assembly line production. Also try to visit a small business that produces the same products using unit production. Compare and contrast.

2. How Much Does It Cost? Compare the cost of products mass-produced to those made using unit production. Are they the same? Are they different? What would account for this?

3. Can It Be Done? Can services be produced using an assembly line? Can they be produced using a specialized process that divides the labor? Visit a local electric company or water company and discuss these concepts during your visit, or have a company representative visit your classroom.
Handout 1

Making a Paper Navajo Rug

NAME ____________________________

UNIT PRODUCTION

Steps necessary to produce a "rug:"

1. Create Paper "Loom"
2. Cut 10 Strips
3. Weave Strips
4. Glue Ends

Amount of Time Used for Production:________

Number of Rugs Produced:________

ASSEMBLY LINE PRODUCTION

Number of People on the Assembly Line:________

Amount of Time Used for Production:________

Number of Rugs Produced:________
Design your own assembly line for making English muffin pizzas or fruit salad.

Brainstorm ideas of goods to produce. Choose one and design an assembly line for its production.
Lesson Overview

Mitchell the dinosaur is bored and wants to move away. His decision to move costs him something, something very important left behind. Mitchell solves the dilemma, builds a new home, and keeps an old friend.

Key Economic Concepts

- Choices
- Opportunity Cost
- Scarcity
- Productive Resources
- Human Resources
- Natural Resources
- Capital Resources
- Materials
- Handouts 1 & 2

Teaching Procedure

1. Following the reading of the story, discuss Mitchell's two choices: to move or to stay.

2. Explain **opportunity cost** and discuss Mitchell's opportunity cost.

3. Using Handout 1, tell students to pretend they are moving away in two weeks with Mitchell. They may take only one suitcase. Have students list, draw, or cut out magazine pictures of what they would like to take in the suitcase.

4. Explain that due to a **scarcity** (be sure to define this) of space, they may only choose two items to take. Have the students circle the two items on their suitcase.

5. In small groups, have the students explain their choices.
6. Since all students will be living with Mitchell in one hut, tell them that they can now only take one item, again due to a scarcity of space. Have students choose the one item and explain their choice. Discuss the opportunity cost of each choice.

7. Using Handout 2, have students write their choice and their opportunity cost on the appropriate tag.

8. Have students color and cut out the suitcases and luggage tags. Attach tags to suitcases with yarn. Display on a bulletin board.

Key Questions to Ask Students

1. What choices did Mitchell have? (to move, to stay)

2. What did he decide? (to move) What was his opportunity cost? (to stay)

3. What productive resources did Mitchell use when making his new hut? (stones, large boulders, trees, bushes, mud, flowers, wood, himself, tools to put doorknob on and to plant flowers)

4. Which of these productive resources are human, capital, or natural?

Follow-Up Activity

1. Build a House! Divide the class into small groups and give each group a baggie of assorted items such as: small amount of clay, yarn, paper clips, rubber bands, squares of paper, popsicle sticks, toothpicks, small pebbles, or beads. As a group, students should build a house with the items in the baggie. Following the activity, discuss scarcity and productive resources.

4. Econ and Me: View and discuss the "Opportunity Cost" lesson from the Econ and Me video series.
Handout #1
Mitchell Is Moving

NAME
Handout #2
Mitchell Is Moving

My choice is:

My opportunity cost is:
Lesson Overview

Uncle Jed's Barbershop is a heartwarming story about a barber who travels the countryside cutting poor folks' hair. Uncle Jed has a kind heart and a giving spirit. He lives for the day that he can own his own barbershop. It takes a long time and many setbacks before his lifelong dream is fulfilled. This is a wonderful story that emphasizes the true spirit of sacrifice, love, and commitment to a dream.

Key Economic Concepts

- Specialization
- Opportunity Cost

Materials

- Handouts 1, 2, & 3

Teaching Procedure

1. Carefully read and discuss this story with your students. Define the words sacrifice, specialization, and opportunity cost.

2. Discuss the economic concepts of specialization and opportunity cost and how they relate to Uncle Jed.

3. On Handout 1, complete the chart by identifying special services provided by the businesses. After students finish, discuss why businesses specialize in the goods and services they produce.

4. Have students complete the Writer's Journal, Handout 2.

5. Complete Handout 3, My Opportunity Costs. Divide students into small groups to discuss their opportunity costs.
Key Questions to Ask Students

1. Did Uncle Jed produce a **good** or a **service**? (service)

2. What is **opportunity cost**? (your next best alternative) What was Uncle Jed's opportunity cost when he decided to help Sarah Jean? (giving up using his money for a barber shop) How do you make good choices? (consider all opportunity costs) What was the opportunity cost of a decision you made?

3. What does it mean to **specialize**? (working in jobs where you produce a few special goods or services) How are the terms specialization and careers related? Discuss why a community needs people doing many specialized jobs. What would our community be like if no one wanted to specialize in medicine, education, business, etc.?

4. Are we ever too old to fulfill our dreams? Uncle Jed was 79 years old when his dream came true. Can you think of others who had to wait until old age to fulfill their dreams? (Grandma Moses, Col. Sanders from Kentucky Fried Chicken) What are your dreams? What special **good** or **service** do you want to produce when you grow up? What education or special training will you need to fulfill your dream?

Follow-Up Activities

1. **Play Dough Economics**: Give each child a piece of play dough. Have them show someone specializing as they produce a service.

2. **Career Day**: Have a career day where members of the community speak about their careers. Have students research and write about what good or service they want to provide when they grow up. Discuss what effect their career could have on their community. (This is a good time to discuss economic interdependence.)

3. **Recording Opportunity Costs**: Have students record in their journals the opportunity costs of the decisions they made during a day. This helps students become aware of how many daily decisions they make and what they must give up with each decision. Students can use the "My Scarcity Situations" handout from Part 3.
### Handout 1

**Special Services in Our Community**

<table>

Which decision was the most difficult for you? ____________________

Why was it the most difficult? ____________________
The Little Painter of Sabana Grande
by Patricia Maloney Markun
Bradbury Press, 1993

Lesson Overview

Fernando loves art and is going to paint for the first time. He learns to make paint from natural resources. Unfortunately, he has no paper! After much persuasion, Fernando's parents allow him to paint the outside of their adobe house. Now all his neighbors want houses like the Espino family.

Key Economic Concepts

<table>
<thead>
<tr>
<th>Productive Resources</th>
<th>Trade</th>
</tr>
</thead>
<tbody>
<tr>
<td>Natural Resources</td>
<td></td>
</tr>
<tr>
<td>Capital Resources</td>
<td>Human Resources</td>
</tr>
</tbody>
</table>

Materials

Handout 1 & 2

Teaching Procedure

1. Define and discuss **productive resources**.

2. While reading the story, have students identify the productive resources and place them in the correct category on Handout 1.

3. Define **trade**. Brainstorm and discuss how Fernando might get the paper he so desperately wants. List these on the board.

4. Do the following trading lesson adapted from Lesson 6 in *Play Dough Economics*. Give students five - ten minutes to make a good out of clay. Give each student a chance to tell about his or her good. Explain that students will have four minutes to **trade** for the good they want most. They may trade **goods** or **services**, and may make as many trades as they want. Discuss possible services they might perform to acquire a good.

5. Perform trades. After five minutes, discuss the trading outcomes.
6. Explain that trades are made daily by each of us in many ways. Brainstorm some of the ways trading might occur during a student's day. For example, a student might trade an eraser to get a pencil. A student might get to go to the movies by washing the family car.

7. Encourage students to make trades throughout one week, using Handout 2 to monitor the trades. At the end of the week, discuss the trading outcomes.

Key Questions to Ask Students

1. What productive resources did Fernando use to create his paintings? (charcoal, berries, dried grass, clay, paintbrushes, clay posts, adobe house, himself)

2. Which are natural, capital, and human resources? (natural: charcoal, berries, dried grass, clay; capital: clay pots, paintbrushes, adobe house; human: Fernando)

3. How could Fernando have gotten the paper he wanted? (buy it, trade a good for it, trade a service for it)

4. When people make a trade, who benefits? Why? (both, since they both get what they want)

5. Why is trading sometimes difficult? (Each person must want what the other has. We use money to make trade easier.)

Follow-Up Activities

1. Nature's Own Colors: Create your own set of colors using natural resources. Tea bags in warm water create brown. Onion skins boiled in water create golden yellow. Mashed beets or crushed red raspberries give a reddish purple color; crushed blueberries provide blue. Research and create other colors. Paint with all these natural colors. Let students trade for a color they do not have.
Handout 1

The Little Painter's Productive Resources

NAME ________________________________

As you read, list the **productive resources** mentioned in the story. Decide if they are **natural**, **human**, or **capital resources**.

<table>
<thead>
<tr>
<th>Human</th>
<th>Natural</th>
<th>Capital</th>
</tr>
</thead>
</table>

Pretend that you are a candle maker. Draw or cut out pictures for the **productive resources** that you might use.

<table>
<thead>
<tr>
<th>Human</th>
<th>Natural</th>
<th>Capital</th>
</tr>
</thead>
</table>
Handout 2

The Trades I Make!

NAME ________________________________

For one week, keep track of the trades in Section A that you make to acquire the goods or services you want. At the end of the week, complete Section B at the bottom of the page.

SECTION A

<table>
<thead>
<tr>
<th>Day of Week</th>
<th>What You Traded</th>
<th>What You Received</th>
</tr>
</thead>
</table>

Section B (Use tally marks to complete this section.)

1. Number of trades: ____________________________

2. Number of goods traded for goods: ____________________________

3. Number of goods traded for services: ____________________________

4. Number of services traded for goods: ____________________________

5. Number of services traded for services: ____________________________

2-39
Lesson Overview

This is a nonfiction story about different kinds of ants and how they live and work together. Ants live in colonies, and all ants have particular jobs to do, much like workers in our cities. Working together, ants keep their "cities" growing and surviving almost anywhere.

Key Economic Terms

<table>
<thead>
<tr>
<th>Jobs</th>
<th>Wages</th>
</tr>
</thead>
<tbody>
<tr>
<td>Workers</td>
<td>Services</td>
</tr>
<tr>
<td>Taxes</td>
<td>Government</td>
</tr>
</tbody>
</table>

Materials

Handouts 1 & 2  Candy Treats

Teaching Procedure

1. While reading the story, compare the types of ants and their specific jobs to workers in your own community.

2. Following reading, complete Handout 1, referring to class discussion.

3. Explain that certain services (jobs) are often performed by government agencies. Give examples: police officers, trash collectors, water department workers, highway workers, etc.

4. Review why people have jobs: to earn money (wages) to purchase goods and services they do not provide for themselves.

5. Discuss taxes. Explain that citizens pay taxes to the government, which then pays the wages of its workers. (Optional: Discuss some different kinds of taxes.)

6. Refer to Handout 1 and identify the community jobs that are often provided by government agencies. Discuss which of these jobs can also be provided by private businesses. (water, trash, etc.)
7. Using Handout 2, let students color, cut out, and count their money. Tell students this is their weekly pay. They can use it to buy some candy treats. But wait! First they must pay for certain government services. Collect $.50 for road repair, $1.00 for police and fire protection, and $.75 for trash pick-up. As each transaction takes place, students should calculate how much pay is left. Let students buy candy treats with their remaining money. Discuss the activity.

Key Questions to Ask Students

1. What are the jobs of some of the ants? (harvester, workers, etc.)
2. Do they provide goods or services? (services)
3. How do these jobs compare to jobs in your community? (highway workers, trash collectors, grain elevator workers, builders, pest controllers, cooks, moms, armed services, police, etc.)
4. How are your community workers paid? (with wages)
5. Where does the money come from to pay these wages? (private employers, taxes collected by government)
6. Why do people pay taxes? (to pay for certain services that may not be provided sufficiently by private businesses: police protection, national defense, roads)

Follow-Up Activities

1. Design Your Own Money: Use a blank form and have students design their own currency for use in a class mini economy.
2. Let's Visit the __________: Take a field trip to the local trash, water, highway, fire, or police departments. Visit the mayor, city hall, or a local legislator. Create a class book of the jobs explored.
Handout 1

*Ants and Community Workers*
*How Do They Compare?*

NAME _______________________________________

Complete the table below referring to the story if needed. List the types of ants, what job each ant performs, and who in your own community might perform that kind of job.

[Image of coloring activity]
Lesson Overview

Travel around the world with the Greenstreet kids as they discover what it takes to make ice cream. Through this story, the students will visit the places where the different ingredients (natural resources) in ice cream are found. There are many Billboards in the story that provide interesting facts pertaining to ice cream.

Key Economic Concepts

Productive Resources  Interdependence,
Market Price       Supply & Demand

Materials

Handouts 1 & 2

Teaching Procedure

1. Discuss with your students about all of the productive resources used in ice cream production. Emphasize how we often use resources from other countries to produce ice cream (interdependence).

2. Read the story once for fun. Then read it again and list on the board the ingredients found in ice cream. Discuss the "billboards" found in the story. (Billboards give interesting facts about ice cream.)

3. Using the world map, locate countries or states which have natural resources (raw materials) used in the production of ice cream. Complete Handout 1 together.

4. Brainstorm and list brand names of ice cream and ice cream flavors. Discuss marketing and advertisements. What do we look for when we buy ice cream? (good taste, pretty packaging, price, etc.) Discuss how advertising affects the demand for ice cream.
5. Using Handout 2, have students draw and design their own brand of ice cream. Discuss marketing concepts and techniques. Discuss the terms **consumer**, **producer**, **perishable**, and **nonperishable**.

6. Have students get the market price of particular brands of ice cream.

---

**Key Questions to Ask Students**

1. Who are the **producers** in this story? Who are the **consumers**? Who **demands** ice cream? (consumers) Who **supplies** ice cream? (producers)

2. Give examples of **interdependence** found in this story. Why did the ice cream producers get raw materials from other countries? (They didn't have certain raw materials and could get them more cheaply from other countries. This keeps the price of ice cream lower for consumers.)

3. Why do **producers** sell so many different kinds of ice cream? How do producers get **consumers** to buy their ice cream?

4. What is the **market price** of a half gallon of vanilla ice cream? Why does the price vary from brand to brand and from store to store?

---

**Follow-Up Activities**

1. **Grocery Shopping**: Have students go grocery shopping with their parents and list all the ice cream products, brand names, and prices they observe.

2. **Play Dough Production**: Give each student a variety of colors of play dough and have them develop a new ice cream flavor. To increase the demand for their product, write a descriptive advertisement.

3. **Dairy Farm**: Visit a dairy farm or have a dairy farmer visit and talk to the students about owning a dairy farm. List all the related products that we get from cows. Read *Who Owns the Cow* by Andrew Clements.

4. **Kids in the Kitchen Day**: Make homemade ice cream. Compare the taste with ice cream bought at the store.

5. **Collage**: Make a collage (using pictures from magazines or newspaper advertisements) of a variety of ice cream products. List market prices.
## Follow An Ice Cream Cone Around The World

<table>
<thead>
<tr>
<th>Natural Resource (Raw Materials)</th>
<th>Location</th>
</tr>
</thead>
<tbody>
<tr>
<td>Milk</td>

</tr>
<tr>
<td>Sugar Cane (sugar)</td>
<td></td>
</tr>
<tr>
<td>Orchids (vanilla beans)</td>
<td></td>
</tr>
<tr>
<td>Cacao beans (cocoa)</td>
<td></td>
</tr>
</tbody>
</table>

Draw and label **capital resources** used to produce ice cream:
Handout 2

The Ice Cream Company

Brand Name of Ice Cream: ________________________________

Company Name: ________________________________________

Produced in: City ______________ State ________________

Flavor: ______________ Market Price Per Gallon: __________

Draw and design your own ice cream product. Write a paragraph explaining why consumers should buy your ice cream instead of another brand!
Lesson Overview

*The Tortilla Factory* is a simple, yet enjoyable way to introduce the concept of production to your students. The book very simply explains the process of producing tortillas, from collecting the productive resources to marketing the final product. Students will learn the differences between the natural resources, capital resources, and human resources used in production.

<table>
<thead>
<tr>
<th>Key Economic Concepts</th>
<th>Natural Resources</th>
<th>Productive Resources</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Capital Resources</td>
<td>Human Resources</td>
</tr>
<tr>
<td></td>
<td>Human Capital</td>
<td>Investment</td>
</tr>
<tr>
<td></td>
<td>Interdependence</td>
<td></td>
</tr>
</tbody>
</table>

**Materials**

- Handouts 1 & 2
- Classified Newspaper Ads
- Magazines for cutting out pictures

**Teaching Procedure**

1. Read *The Tortilla Factory* orally to the class. Be sure to show all illustrations to the class as you read.

2. Write the words **Natural Resources**, **Human Resources**, and **Capital Resources** on the board. Before giving the definitions to the students, let them brainstorm what they think each concept might mean.

3. On the board, list each **productive resource** found in the book under the correct category.

4. Have each student choose three items from his or her desk (e.g., textbook, pencil, paper, ruler). Using Handout 1, have students list the specific **productive resources** necessary to produce the item.
5. Complete Handout 2, where students make a human resources collage. Provide the class with numerous magazines to use for cutting.

6. Complete Handout 3. Students must cut out different jobs from the classified advertisements, listing the necessary education/training and skills and estimating a yearly salary/wage. You may want students to cut out more than three jobs. Discuss the handout questions.

---

Key Questions to Ask Students

1. What production steps are required to produce the tortillas? (farmer collecting productive resources to grow corn, someone picking corn, truck taking corn to factory, machines grinding corn, etc.)

2. What are the three productive resources? (Natural, human, capital)

3. Can you produce tortillas without the use of natural resources (raw materials) or human resources? Explain. (No, you need both. You need raw materials to have something for the human resources to process.)

4. What capital resources are used to produce the tortillas? (trucks, machines, buildings, etc.) How do producers get capital goods? (They must save — forgo buying consumption goods — and then invest the savings in capital goods. This requires discipline and risk taking. There is no guarantee the investment will be profitable.)

5. What special human capital (skills, training, education) do human resources need to produce tortillas? (knowledge in growing corn, using capital resources, etc.)

6. In the story, what are some examples of interdependence in the production of tortillas? (depending on other producers to make tools and equipment, drive trucks, grind corn, grocery store to sell, etc.)

7. Bonus Question! What do the producers of tortillas have to do to make a profit? (They have to receive a price for their product that will cover all of their costs of production!)
Follow-up Activities

1. *Field Trip:* Go to a factory where unit production is taking place.

2. *Assembly Line:* Design and produce a product using an assembly line.
Choose one of the above items. Draw a sequence of pictures from start to finish showing how the product is made.
Human Resources

When you grow up, you will have to produce a good or a service. What human resources will you need?

Using clippings from magazines, make a collage of people (human resources) performing jobs. List the *human capital* (special skills and education) necessary to do the work. Use other sheets of paper if necessary.

| Picture of People Working (Human Resources) | Necessary Human Capital (Education, Skills, Training) |

| 2-53 |
Answer these Questions about the Classified Advertisements.

1. Which job pays the most? __________________________
Which job pays the least? ________________________

2. Which job demands the most education and training?
   __________________________
Which job demands the most skills? ______________________

3. What relationship do you see between the job salary and the required education/training and skills requirements?
   __________________________
   __________________________

4. What is the term economists use to describe the education, training, and skills that human resources have? __________________________

5. What good or service do you want to produce when you are an adult?
   __________________________

6. What education/ training will you need?
   __________________________
   __________________________

7. What kind of skills will you need? __________________________
   __________________________
Lesson Overview

When all their possessions were burned in a fire, a little girl, her mother, and grandmother save all their extra money to buy a special chair. The characters make choices to save in order to obtain something important to them.

Key Economic Concepts

<table>
<thead>
<tr>
<th>Human Resources</th>
<th>Wages</th>
</tr>
</thead>
<tbody>
<tr>
<td>Savings</td>
<td>Consumers</td>
</tr>
<tr>
<td>Scarcity</td>
<td>Opportunity Cost</td>
</tr>
</tbody>
</table>

Materials

Handouts 1 & 2  3 x 5 Cards

Teaching Procedure

1. Discuss decisions that people make concerning money. What do people do with their money? Write their responses on the board.

2. Read the story to the class.

3. Explain human resources and wages. Discuss "tips" and how they differ from wages. Form groups and have each group create a list of what students would save their tips for if they worked in a restaurant. Write the lists on large sheets of paper and display them in the room or hallway. Entitle the lists "Economic Wants We Would Save For."

4. Introduce the economic concepts of scarcity and opportunity cost.

5. Have each student draw and color a picture of a favorite good on a 3 x 5 card. Put cards on the board with masking tape. One at a time, have students identify their two best choices, choose the good they want, and identify the opportunity cost. (Lesson 4 in the Play Dough Economics Curriculum is a similar activity for teaching opportunity cost.)

7. Discuss family budgets. What goes into a budget? How are they helpful? Why are they difficult to keep? Complete Handout 2 on budgeting. Have each group put its budget on a transparency when presenting to the class.

Key Questions to Ask Students

1. Explain the difference between a producer and a consumer.

2. What are examples of human resources in the story? (workers in diner, salespeople in store) What do human resources receive for their labor? (wages and salaries)

3. What are examples of scarcity and opportunity cost in the story? (Not enough money; choosing to save instead of buying other things, choosing one color of chair instead of another, etc.)

4. What is the opportunity cost of saving? (not being able to buy something you want in the present) Which is more difficult — spending or saving? (Saving!) Why? (It takes discipline to forgo current wants.)

5. What is the opportunity cost of spending? (not saving for the future)

Follow-Up Activities

1. Create a List: Have students create a list of all the people and their responsibilities that make a diner successful.

2. Field Trip: Take a field trip to a local diner or restaurant.

3. Speaker: Invite a banker to speak to the class about saving and investing.

4. Classroom Jobs: Create classroom jobs and pay students. Require them to save a percentage of their earnings and keep accurate records.
1. Your aunt sent you $15 for your birthday. In the space below, draw, label, and color two goods (each with a price of $15) that you would like to buy with the money. Unfortunately, you can only buy one!

What is your scarcity problem? ________________________________________________________________________
Which good would you buy? ________________________________________________________________________
What is your opportunity cost? ________________________________________________________________________

2. This is your lucky day! Your Uncle Joe sent you $20 for being a great kid. In the space below, draw, label, and color three goods, each with a price of $20, that you would like to buy.

What is your scarcity problem? ________________________________________________________________________
Which good would you buy? ________________________________________________________________________
What is your opportunity cost? ________________________________________________________________________

3. If you decide to save the $20 your uncle sent you instead of spending it, do you still have an opportunity cost? Explain.

4. On the back create some other opportunity cost situations/problems.
Pretend your group is a family of four. You must plan a monthly family budget with an after tax income each month of $2,400. You must allocate money for the budget categories below. Make the best estimates you can. (You may need some grown-up advice!) When you are done, present your family budget to the class. How does your budget compare with the budget of the other groups? Does your teacher think it is a realistic budget? Show your budget to your parents and get their reaction!

Rent or House Payment

Food

Utilities (gas, electric, water, sewage, trash — estimate each one!)

Cable TV

Clothing Costs

Costs of Kid's Activities (Choose several.)

House Maintenance

Car Repair Bills

Gasoline

Recreation (ball games, movies, etc.)

Eating Out

Presents (birthday, Christmas savings, etc.)

Other Expenses (stamps, kid's allowances, vacation savings fund, etc.)
Lesson Overview

Quentin Stowe is an ordinary boy who catches a leprechaun. His wish for all the money in the world is granted, and ends up causing many unexpected problems. As Quentin helps to solve these problems, he learns much about the important economic concept of money.

Key Economic Concepts

<table>
<thead>
<tr>
<th>Money</th>
<th>Barter</th>
</tr>
</thead>
<tbody>
<tr>
<td>Market Price</td>
<td>Scarcity</td>
</tr>
<tr>
<td>Role of Government</td>
<td>Inflation</td>
</tr>
</tbody>
</table>

Materials

Handouts 1 & 2
Five-Step Decision Grid (from Part 3)

Teaching Procedure

1. Before introducing the story, discuss these questions with the class.
   a. What is money? (anything commonly used to exchange goods and services)
   b. Why do we have money? (medium of exchange — to make trade easier)
   c. What are the different types of money that has been used? (possible responses: wampum, tobacco, paper, gold & silver coins)
   d. Ask students to describe a world without money!

2. Explain the four characteristics of money (scarce, durable, divisible, portable). Discuss why these characteristics are important.

4. Read the book. Throughout the story, discuss the economic concepts.

5. Complete Handouts 1 and 2.
To supplement the concepts of barter, money, and inflation, you can use activities from the Play Dough Economics curriculum.

---

**Key Questions to Ask Students**

1. The money Quentin had was **currency**. Today, what makes up most of the money supply (M1)? *(checking and savings accounts — in fact, the M1 money supply is about two thirds checking accounts! In real life, even if Quentin had all the currency, people could still use checks!)*

2. What does **barter** mean? *(exchanging goods/services without money)*
   Why is barter difficult? *(Each person must want what the other has!)*

3. Which of the four characteristics of money is most important? *(scarcity)*
   Why? *(If it's not scarce, the other characteristics don't matter much.)*

4. In the story, how did the people of Cedar Ferry make their new money, Dillies, "scarce"? *(stamping it with "Cold Cut") How do we keep our real money scarce? *(The U.S. Treasury makes it very hard to counterfeit.)*

5. In an economy, what happens when governments print too much money to pay debts? *(inflation)*
   If the price of milk rises, does this mean there is inflation? *(not necessarily; inflation is when all prices rise)*

6. Are credit cards the same as money? *(No, credit cards are a form of borrowing. You must pay them back with money.)*

---

**Follow-Up Activities**

1. **Video Programs:** Use the excellent videos, The Fisherman Who Needed a Knife and Why Money *(Lesson 9 from the Trade-Offs series).*

2. **Recording Price Changes:** Research past inflation rates. Also research the price changes of **specific** products. Graph the results.

3. **Write a Skit:** Write a skit illustrating how money makes trade easier.
Divide into groups of 4-5. Pretend your group is a country. In the space, design a currency. Make sure that you make it difficult to counterfeit! Then answer the questions about your country's money system. Use the back if necessary.

Our Currency

1. How did you make your currency difficult to counterfeit? In other words, how did you make it scarce?

2. Will you allow checks (checking accounts) to be used as money? Explain.

3. How will your country get more money if it needs it?

4. How will your country keep inflation from happening?

5. Will people in your country use credit cards? How are credit cards different from money?
Many things have been used for money. To be effective, money should have four characteristics. It should be:

- SCARCE — not easy to get or copy
- PORTABLE — easy to carry
- DIVISIBLE — easy to divide
- DURABLE — long-lasting

These items have been used for money in U.S. history:

- **Wampum** (small beads made from shells, woven together)
- **Tobacco** (especially in colonial Virginia)
- **Gold coins**
- **Paper**

**Directions:**

1. Use the Five-Step Decision Model (in Part 3 of this curriculum) to determine which item would be best to use for money.

2. In the space below, write a paragraph explaining your decision. Use complete sentences and correct grammar and spelling.

The Best Money
Lesson Overview

Eleven-year-old Claudia Kincaid feels that too much responsibility has been placed on her at home. To make her family appreciate her more, she decides to run away from home. Claudia persuades her younger brother, Jamie, to accompany her on a trip to a most unlikely place — the Metropolitan Museum of Art in New York City.

Key Economic Concepts

<table>
<thead>

<tbody>
<tr>
<td>Savings</td>
<td>Opportunity Cost</td>
</tr>
<tr>
<td>Price</td>
<td>Interdependence</td>
</tr>
<tr>
<td>Inflation</td>
<td></td>
</tr>
</tbody>
</table>

Materials

Handouts 1 & 2

Teaching Procedure

1. Before reading, give a brief background on the New York Metropolitan Museum of Art, including the location and the types of items on display. Ask students what kinds of things they would have to consider before running away to the Metropolitan Museum of Art.

2. Read The Mixed Up Files of Mrs. Basil E. Frankweiler. This book can be read two chapters at a time for a total of five reading days.

3. Define and discuss the key economic concepts. Tell students to point out examples of these concepts as you read.
4. After discussing the concepts, focus specifically on the concepts of **scarcity** and **opportunity cost**. Divide students into small groups and complete Handout 1. (The Decision Tree and Five-Step Models are in Part 3.)

5. Discuss the concept of **relative scarcity** (i.e., how the price of a good reflects how scarce it is relative to another good). Complete Handout 2.

---

**Key Questions to Ask Students**

1. What is the difference between a **good** and a **service**? What **services** did the children depend on to help make their escapade a success? (school bus, train, museum, taxi, newspaper, etc.) This is an example of what economic concept? (*interdependence*)

2. What does the economics term **scarcity** mean? (the condition of not being able to have all of the goods and services one wants) How do we know a good or service is scarce? (It has a price.) What was the children's most frequent scarcity problem? (scarcity of money!) What does scarcity always force us to do? (make choices)

3. How do we know if a good or service is **more scarce** than another? (It has a higher price.) What was the best example of a very scarce item in the story? (angel statue of Michelangelo) Why did it sell for only $225 in the auction? (No one knew it was genuine, i.e., extremely scarce!)

4. Compared to prices today, the prices of things in the story (e.g., tuna sandwich — $.35) were very inexpensive. What is it called when the prices of almost all goods and services increase over time? (**Inflation**) What is the basic cause of inflation? (too much money created relative to available goods and services)

5. Claudia and Jamie made many choices. When Claudia chose to visit the U.N. instead of having dessert, what was her **opportunity cost**? (dessert!) What were other examples of opportunity cost in the story?
Follow-up Activities

1. Video: View the video From the Mixed Up Files of Mrs. Basil E. Frankweiler.

2. Art Report: Have students research and give an oral report on some of the art in the Metropolitan Museum of Art. What were some prices of the art pieces? Discuss why some art is very expensive and some isn't.

4. My Scarcity Situations: Have students complete this scarcity and opportunity cost activity from Part 3 of this curriculum.
What Should I Take?

Fortunately, you're not running away from home like Claudia and Jamie! However, your best friend has invited you to go on a one week backpacking trip in the Rocky Mountains. Your friend says you must take a sleeping bag, tent, canteen, mess kit, food, and a backpack. You want to take many extra things, including matches, extra clothes, maps, flashlight, extra flashlight batteries, knife, ax, aspirin, suntan lotion, mosquito repellent, poncho, books, first aid kit, compass, harmonica, collapsible fishing rod and gear, binoculars, and a book entitled Surviving in the Wilderness.

A. Unfortunately, you can only fit nine of these extra items in your backpack. In the blanks below list them in order of importance.

1. 
2. 
3. 
4. 
5. 
6. 
7. 
8. 
9. 

B. What is your scarcity problem?

C. What does scarcity force you to do?

D. When you make choices there are alternatives you do not choose. When you chose your ninth item above, what was the next best item you did not choose? In economics, what do we call this next best alternative?

E. Use the Decision Tree or the Five-Step Decision Grid to show why you chose item nine above instead of the next best item.
Scarce and More Scarce!

In economics, any good or service that has a price is considered scarce. However, some goods and services are more scarce than others. For example, a pencil is considered a scarce good since it is not freely available and has a price. It is not as scarce, however, as a gold necklace. The more scarce something is, the higher its price.

Sometimes events occur that change the scarcity of certain goods or services. Read each scenario below and answer the questions.

1. A snow storm with record snowfall suddenly hit Indiana in late October. What goods or services might become much more scarce? Why?

2. Your geographical region has been hit with a record heat wave. Record high temperatures are expected for the next several days. What goods and services might become more scarce? Would their prices rise? Explain why or why not.

3. Draw a cartoon strip illustrating a situation in which the relative scarcity of a good or service changes (for example, see 1. and 2. above).
Lesson Overview

*Cally's Enterprise* features Cally Lippincott and Chuck Foster as the main characters. Cally first meets Chuck while she is at home recuperating from a broken leg. Chuck appears at her door as part of a newspaper selling contest asking people to buy a subscription to the local paper. Chuck is trying to win a trip to Ocean City and wants Cally to become his partner in the contest. He agrees to give Cally half of the profits when they win.

**Key Economic Concepts**
- Goods/Services
- Partnership
- Opportunity Cost
- Marketing Strategies
- Starting a Business
- Entrepreneur
- Market Economy
- Competition

**Materials**
Handouts 1 & 2

**Teaching Procedure**

1. Read and discuss Chapters 1 - 4. Discuss what things Cally considered (time involved, school work, leisure time, etc.) before accepting Chuck's offer. Explain and discuss the concept of *opportunity cost*.

2. In groups, have students complete Handout 1. Encourage students to use the Decision-Making Grid in Part 3. Discuss answers.

3. Read and discuss Chapters 5 - 8. Discuss the *marketing strategies* Cally and Chuck used to get people to buy a paper.

5. Read and discuss Chapters 9 - 13. Discuss what effects, both positive and negative, that losing the contest had on Chuck and Cally's partnership.
6. After completing the book, refer back to the key economic concepts listed above. Put a brief definition of each concept on the board. Organize the class into groups of 3 or 4. Have students discuss each term and decide how they relate to Cally and Chuck.

Key Questions to Ask Students

1. Why did Chuck want Cally as a business partner? *(He could sell a lot more newspapers in a shorter amount of time.)*

2. What are some possible disadvantages of forming a business *partnership*? *(You have to share profits; there may be disagreements.)*

3. Were Cally and Chuck trying to sell a *good* or a *service* to their prospective customers? Explain your answer. *(Both — a newspaper is a good, but delivering it is a service.)*

4. What was the *opportunity cost* of Cally's decision to help Chuck? *(Whatever else she would have done with her time spent on the business!)*

5. Why is a newspaper business dependent on its *marketing* department? *(Without new subscribers, the newspaper business would lose money and might even have to go out of business.)*

6. What are the benefits to the newspaper of doing business in a *market economy* as opposed to a *command economy*? *(In a market economy, the newspaper is free to make its own business decisions. It can set prices, develop its own marketing strategies, hire and fire employees, etc. It is also free to express ideas and opinions that the government may not like.)*

7. Consumers benefit the most in a market economy when there is *competition* among sellers. Is there competition for a local newspaper, which may be the only one in town? *(Even though there is only one newspaper, there is still other competition. There are regional and national newspapers, news magazines, the internet, etc. This competition forces local newspapers to keep their prices competitive and provide good service.)*
Follow-up Activities

1. *Bulletin Board:* Use advertisements from your town's newspaper to develop a bulletin board entitled "Businesses in Our Community." Divide the board in half, displaying local goods for sale on one side and local services for sale on the other.

2. *Class Visitor:* Invite an advertising executive to speak to the class.

3. *Create Ads:* Create new ads for local businesses and ask the owners to critique them.
Every day each of us, individually or in groups, must make decisions. Many of these are relatively unimportant, but some may be very important and will affect not only ourselves, but others around us. Below are some situations that require a choice. In each situation, identify what is scarce, your decision, the opportunity cost of your decision, and why you made your decision.

1. You want to go to the championship basketball game tonight at the gym. But you have not finished your science project, which is due tomorrow. It will take at least four hours to complete the project. What will you do?

   What is Scarce? _____________________________________________

   Decision ___________________________________________________

   Opportunity Cost _____________________________________________

   Why? _______________________________________________________

2. You have $10 in your savings account. The new T-shirt you have been saving for is now on sale for $10. But next week is your mother's birthday, and the perfume she wants is $10. How will you spend the $10?

   What is Scarce? _____________________________________________

   Decision ___________________________________________________

   Opportunity Cost _____________________________________________

   Why? _______________________________________________________
3. You want to try out for the soccer team and the swimming team, but they both practice at the same time. What will you do?

What is Scarce? _____________________________________________________________

Decision _____________________________________________________________

Opportunity Cost _____________________________________________________________

Why? _____________________________________________________________

4. You have been offered a $6 per hour lifeguard job this summer. You like the job a lot and could see friends at the pool. However, your uncle offers you a job mowing lawns for his lawn care business. It's hot and dirty work, but it pays $8 per hour. What job will you choose?

What is Scarce? _____________________________________________________________

Decision _____________________________________________________________

Opportunity Cost _____________________________________________________________

Why? _____________________________________________________________

5. Your community has received $50,000 in new taxes. One group of citizens wants to use the money to build a new softball field, since there is currently no place for the girls' league to play. Another group wants to build an outdoor environmental learning center, which would include planting quite a few trees. How should the money be spent?

What is Scarce? _____________________________________________________________

Decision _____________________________________________________________

Opportunity Cost _____________________________________________________________

Why? _____________________________________________________________
Marketing involves all of the activities, including advertising, which help get the product to the consumers. *How you market a product will have a great effect on how profitable it will be.* You may have a wonderful product, but if it is not marketed well, you may not sell very many. Try a few of these examples with your classmates. Work with a partner or in small groups. Be prepared to present your marketing strategies to the class.

1. *Newspaper Ads* — On a piece of drawing paper, create an advertisement with all the necessary information needed to sell your product.

2. *Radio Ads* — Write a dialogue and/or jingle that could be used to sell your product on the radio.

3. *TV Ads* — Create a TV commercial for your product or service. Videotape it to show the class.

4. *Door-to-Door Selling* — Pretend you are the sales person and your partner is the customer. Give your sales presentation to your partner as if you had just knocked on the door trying to sell your product.

5. *Packaging* — How your product is packaged is crucial. Choose a particular good and draw how it will be packaged. Why are environmental and product safety concerns an issue with packaging?

6. *Product Displays* — Where and how your product is displayed in a store is also crucial to sales. How will you get a store to accept your product? How much shelf space will be reserved for it? Will the store let you put up any special displays? If not, are you willing to pay for a nice display area? How much? Create a display for your product. Draw how you would like it to be.

7. *Catalogs* — Many producers use catalogs to market their products. Design a catalog entry for a product. Make it as attractive and persuasive as possible so people will order your product instead of someone else's!
Lesson Overview

Karana is an Indian girl stranded alone on an island for 18 years. When the rest of her tribe is forced to flee the island, she learns to use her human resources and the island's natural resources to survive.

Key Economic Concepts

- Natural Resources
- Human Resources
- Scarcity
- Capital Resources
- Trade
- Specialization
- Division of Labor
- Conservation

Materials

Handouts 1 & 2
Five-Step Decision Grid (in Part 3)

Teaching Procedure

1. Introduce the story to your students. Discuss these questions:
   a. What is a desert island?
   b. How could you survive on a desert island?
   c. What kinds of productive resources would there be on the island?

2. Introduce the concept of scarcity. What natural resources would be scarce on a desert island? What natural resources would not be scarce there? (sea water, air)

   *Note: Some students might think that the natural resources on the island were not scarce, since they were freely available to Karana. It is true that some, like the air and sea water, were not scarce. But the other resources were indeed scarce for Karana, even though they had no market price, since it took her scarce time and energy to get them!

3. Discuss with the students the different types of productive resources.
4. Read the story. It might be best to divide the book into sections (Chapters 1-5, 6-10, 11-15, 16-20, 21-29). After each section be sure to discuss any pertinent economic concepts.

5. As the students read the book, have them keep a journal focusing on how Karana uses the resources to survive.

7. Divide into small groups. Have students complete the responses and then use the Five-Step Decision Model to analyze the elephant conservation scenario. The scenario is based on actual policies being debated now in Africa (Wall Street Journal article, 1/7/97).

Key Questions to Ask Students

1. How did tribe members specialize in production? (There are various examples. The men and women had special, strictly defined tasks within the tribe.)

2. What did the Aleuts want to trade for the right to hunt otter? (They agreed to divide the catch.) Who benefits when a voluntary trade is made (and promises are kept!)? (Both parties expect to benefit.)

3. What effect did the Aleuts' hunting have on the otters? (They hunted too many, threatening the natural balance; otters became more scarce.)

4. Why is it difficult to conserve natural resources such as water and wild animals? (When no one owns natural resources, there is less incentive to conserve. No one owned the otters, so they were over hunted.)

5. Did Karana have to be a producer to survive? (Yes!)

6. How were Karana's productive resources different from those used by producers in your community? (many differences in all three productive resources)
7. The island's natural resources were very important to Karana. How were these resources used? (build a shelter, find food, defense, etc.) What natural resources were especially scarce? (wood, sea elephant teeth)

Follow-Up Activities

1. Flash Cards: Make flash cards with the name of a resource on one side and the type of resource on the other.

   Example: Water (front) Natural Resource (back)

2. Keep a Diary: Create a diary based on Karana's daily activities. Highlight every entry that deals with productive resources.

3. Vocabulary List: Keep a vocabulary list of all economic concepts discussed.

4. Build a Shelter: Provide a limited supply of scarce resources (glue, popsicle sticks, yarn, construction paper, wood chips, etc.). Have the students use the resources to build some kind of a shelter. Have them explain what human resources they used to construct the shelter.

5. Deer Conservation Plan: Create a conservation plan to help control the deer population in Indiana. Ask someone from the Indiana Department of Natural Resources to speak to the class about this problem.
1. List natural resources mentioned in the story and how Karana used them.

<table>
<thead>
<tr>
<th>Natural Resource</th>
<th>How Used</th>
</tr>
</thead>
</table>

2. What does the economic term scarcity mean? Give an example.

3. Since the natural resources on the island were freely available to Karana, how could they possibly be considered scarce?

4. Which of these resources was the most scarce for Karana? Why?

5. Which natural resources in the story could actually be consider "free" to Karana, i.e., not scarce? Explain.
Handout 2

Jobs and Special Skills

1. What does division of labor mean? Give an example.

2. How was the labor divided in the Indian village? How is the labor divided in your school? Give examples.

3. What special skills (human capital) helped Karana to survive?

4. Write a paragraph describing the good or service you want to produce when you grow up. Tell why. Also describe the skills and training it will take. How will you get the skills and training?

What I Want to Produce When I Grow Up
Handout 3

Conservation and Stewardship

1. What does it mean to be a good steward of natural resources? Do you think Karana was a good steward? Why?

2. In some places, certain wild animal species are threatened, and some have become extinct. Which animal in the story was threatened? Why?

3. Why is a wild animal like the otter or wild eagle threatened, while an animal like the chicken is not?

4. Use the Five-Step Decision Model to solve this conservation problem.

Scenario: Kumutu is a poor village in Zimbabwe. The village lies next to a large game preserve. Unfortunately, wild elephants roam on village lands, often damaging crops. The villagers want to be able to kill some elephants for food and for crop protection. Villagers can also make a lot of money from selling the ivory tusks and from selling hunting permits each year to safari operators. The money will greatly improve the villagers’ difficult lives. However, at this time there is a total ban on killing elephants.

To help the villagers, the government has proposed an Elephant Conservation Plan. It would give villagers permits to kill three elephants each year or to sell the hunting rights for these three elephants to safari operators. According to a government spokesman, "There is a surplus of elephants in the park now, and this would give villagers a way to protect their crops and improve their lives. Also, the villagers would be motivated to watch out for poachers on their land. The poachers are killing many elephants, and the government just doesn't have enough money to stop them."

"This plan is awful," replied Sally Jones from the Animal Humane Society. "An elephant is not a cow. There are other ways to help villagers besides killing these beautiful animals!" Should the Conservation Plan be implemented?
Lesson Overview

*Kid Power Strikes Back* focuses on a neighborhood business organized by Janie Golden. Janie and her friends decide to expand their Kid Power summer business of grooming lawns, walking dogs, and running errands to shoveling driveways and sidewalks during the winter. Throughout the book, Janie and her friends learn valuable lessons in economics. They confront concepts such as open market, monopoly, and, most important, competition.

### Key Economic Concepts

- Markets
- Specialization
- Monopoly
- Market Survey
- Profit
- Competition
- Advertising
- Entrepreneurship

### Materials

Handouts 1 & 2

### Teaching Procedure

1. Before reading *Kid Power Strikes Back*, discuss with your students the kinds of money-making jobs they have performed. Discuss whether their jobs provided a **good** or **service** to their customers. Ask what **productive resources** were necessary, what **price** they charged, and how they determined the price.

2. Define and discuss the Key Economic Concepts above.

3. Read *Kid Power Strikes Back* orally to the class or individually if enough copies are available. Highlight economic concepts as you read. Then have students complete Handout 1 - Economics Concepts in the Story.
4. Put students into groups of four or five. Each group should visit a different class in the school and brainstorm possible services that the class would like the group to perform. Then meet and select three services the group would actually like to provide to the other class. (Examples: pencil sharpening, wash desks, straighten library books, supervise milk break, etc.)

5. On Handout 2, Market Survey, list these three services. Make copies and distribute them to the students in the other class. Based on the survey results, decide what service to provide and make an offer to the class. (Use Handout 3 for this.) Payment can be mini-economy money, tokens, class privileges, candy, etc. The two teachers will have to coordinate this. Create a contract, as per the instructions on Handout 3.

Key Questions to Ask Students

1. Why was Kid Power so successful? (provided a valuable service at a good price, kids worked together as a team, helpful advice of parents, etc.)

2. Why was it beneficial for Janie to hire her sister Carol as a manager? (Carol had organizational skills and could keep track of the jobs. By specializing in what she did best, Carol reduced Janie's work load.)

3. What is a market? (the interaction of buyers and sellers) How are prices determined in a market? (supply and demand)

4. What is competition? (other sellers who produce the same good or service) Why were Kid Power customers willing to pay Johnny more money for his services even though they thought he was employed by Kid Power? (He did even better work than Kid Power.)

5. List some of the specific characteristics possessed by Janie and her employees that made them successful entrepreneurs (persistent, good work ethic, disciplined, flexible, motivated). What motivated them? (primarily the money they earned)
6. **What is a contract?** Why are they important in our economy? Who enforces contracts in our economy? (*binding agreements between businesses; contracts help create a stable, just, and efficient economy; government enforces contracts*)

**Follow-up Activities:**

1. **School Services:** Make a list of services the class could provide to the principal, librarian, school nurse, or other personnel. Identify the types of capital resources (tools or equipment) and special skills (human capital) each group would need to provide the service.

2. **Classroom Visitor:** Invite an entrepreneur to visit and explain how he or she started a business. Discuss the challenges in starting the business and how they were overcome. Discuss the character qualities that are necessary to be a successful entrepreneur.

3. **Kid Power:** Read the original *Kid Power* book. See the book citation in the bibliography.
Economic Concepts in the Story

There are many economic concepts illustrated in *Kid Power Strikes Back*. Define each concept below and identify an example of it in the story.

1. Services

2. Capital Resources

3. Scarcity

4. Opportunity Cost

5. Entrepreneurship

6. Specialization

7. Profit

8. Competition

9. Open Markets

10. Monopoly
Our group came to your class earlier and brainstormed possible services your class would like to receive from us. Below are three services we are willing to provide. Each student in your class should complete a Market Survey. This will help us determine which service your class wants most.

Put 1, 2, or 3, in the second column. Discuss with your teacher what price you would be willing to pay to receive the service. Put that in the third column.

<table>
<thead>
<tr>
<th>The Service Our Group Can Provide</th>
<th>Which Is Your First, Second, and Third Choice?</th>
<th>What &quot;Price&quot; Is Your Class Willing to Pay?</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

109

2-84
1. Meet as a group to discuss the details of the agreement you will make with the other classroom. Use the questions below to help you.

   a. Service to be provided:

   b. Number of times the service will be provided:

   c. "Price" you will charge for the service:

   d. Other possible items to include in a contract:

2. Once your group has agreed on the items above, present your offer to the other classroom. Negotiate and come to agreement about the final details.

3. Create an agreement (a contract!) in your own words to be signed by representatives from your group and the other classroom.
Lesson Overview

*Leave the Cooking to Me* is a humorous, yet touching story of a young girl's responsibility for keeping meals on the table for her single-parent mother and her little sister. Shirley Merton decides to take this daily chore a step further. Without her mother's knowledge, Shirley, a.k.a. Vanessa, opens her own catering business. Her enthusiasm for her new job keeps her from becoming discouraged when she is faced with the many problems and decisions that go along with being an entrepreneur.

**Key Economic Concepts**

- Entrepreneur
- Opportunity Cost
- Human Capital
- Profit
- Productive Resources
- Human Resources
- Specialization
- Costs

**Materials**

Handouts 1 & 2

**Teaching Procedure**

1. Before reading *Leave the Cooking to Me*, define and discuss the following economic concepts: entrepreneur, opportunity cost, productive resources, human capital, specialization, costs, and profit.

2. To introduce the book, ask the students to identify typical summer jobs for students. Have students share their own job experiences. Discuss good and bad points about typical summer jobs.
3. Read *Leave the Cooking to Me*.

4. List and discuss the different problems and decisions that Shirley faced in her catering business. Discuss the creative things she did to be successful.

5. Complete and discuss Handout 1. Work individually or in groups.

6. Work in small groups. Tell students to form a catering business. They must decide on a name for their business, devise a menu with appropriate prices, and develop a marketing strategy. Use Handout 2.

---

**Key Questions to Ask Students**

1. How did "Vanessa" get involved in the catering business? (She helped a friend's mother put on a dinner party.)

2. What was Vanessa's *opportunity cost* when she decided to go into business for herself? (She gave up time with her friends, working for someone else, and much of her free time.)

3. What *productive resources* did Vanessa need to operate her business? (human resources — herself and her friends; capital resources — cooking equipment, oven, car, etc.; natural resources — water, land, raw materials)

4. What *human capital* (special skills and training) did Vanessa have? (She was a gifted cook, a good organizer, and a quick thinker.)

5. To be successful, Vanessa had to depend on other people or other producers. Give examples of this *interdependence*. (Examples — friends being there for work, her own health, a car and gas for transportation, the grocery having all the ingredients, etc.)

6. Every business must hire *human resources (labor)*. Do businesses want to hire more labor? What are some potential problems when dealing with human resources? (Businesses want to hire the labor they need to produce, but no more. There are many problems — absenteeism, lack of effort, poor skills, quitting at the last minute, etc.)
7. Vanessa tried to earn a profit. What is profit? Do you think she was successful? (Profit is the money that is left after subtracting all costs; she was probably successful since she had so much business and wanted to keep it going.)

Follow-up Activities

1. Yellow Pages: Using the phone book's yellow pages, list the different types of catering services in your town.

2. Classroom Visitor: Have a local caterer come to the class to discuss the different aspects of the catering business.

3. Create an Ad: Design an advertisement for your own catering service that could be placed in the yellow pages.

4. Serve Lunch!: Ask the cafeteria supervisor if your class can help serve in the lunch room one day a week for a month.
1. Human Resources: Every business needs human resources (labor). You are interested in starting a concession stand at the elementary basketball games. What kinds of human resources would you need to hire for your business? What skills (human capital) would they need?

2. Interdependence: You are the owner of a local taco restaurant. Who are some of the people and businesses you must depend on for your own business to be successful?

3. Profit: Your school economics club runs a snow cone business each Friday. You sell your snow cones for $.50 each. Your school has 650 students, teachers, and staff. Estimate how much profit you think your business could make in one month.

1. List the types of services (parties, banquets, etc.) your business will provide.

2. Create a complete menu for your business, including prices. (You may want to take a survey of your neighbors or classmates to find out what menu items most appeal to them.) Use additional paper if necessary.
3. How will you get people to use your service? Create a plan for **marketing** your catering business. Develop some creative advertisements for magazines, newspaper, the radio, or television.

4. **Optional Activity** - Assign different days to each group and have them prepare all or part of their menu to bring in and share with the class.
Lesson Overview

The subject for this year's contest at school is "Conservation." Ten-year-old Andy Moller, who lives on an Iowa farm, and his cousin Jack are both determined to win the $50 prize. The two boys devise hilarious ways to conserve resources — including eating insects and cooking hamburgers on a car engine!

Key Economic Concepts

- Conservation
- Productive Resources
- Boycott
- Role of Government

- Scarcity
- Price
- Productivity

Materials

Handouts 1 & 2

Teaching Procedure

1. List and discuss the key economic concepts. Have the students write the definitions of these concepts.

2. Introduce the book by asking the students if they have ever entered an essay contest. Discuss responses. Ask students to explain what they would write about if the topic of a contest were "Conservation."

3. As you read the book, have students identify economic concepts and keep them in an economics journal. Have them focus on the situations in which the concepts occur.

4. Make a collage of productive resources (natural, human, capital). Find at least five of each. Identify each kind of resource by circling them with different colored markers.
5. Complete Handout 1. Discuss student responses.

6. Complete Handout 2. Let students show and explain their inventions.

7. Optional: Hold an Invention Fair. (See Follow-Up Activities below.)

Key Questions to Ask Students

1. What good was produced on Andy's family's farm? (milk) What important information did the farmers get each day on the radio? (weather and prices) Why do prices change? (changes in supply and demand)

2. Andy wants to boycott the contest. What is a boycott? (refusing to buy, sell or use a good or service in order to change policy)

3. How are the terms productivity and conservation similar? (both deal with using resources efficiently) Explain how Andy's bug idea was a way to increase productivity. (get more food from the same amount of land)

4. What do high prices tell us? (that a good or service is relatively scarce) How can prices help us conserve? (High prices discourage resource use. They also make it more profitable for producers to supply resources.)

5. How does government promote conservation? (sets rules and regulation about resource use and pollution)

6. Who hired the health inspector? (government) Why? (public safety) Where did the money come from to pay the inspector? (taxes)

Follow-Up Activities

1. Essay Contest: Have an economic theme for an essay contest.

2. Conservation Decisions: Create a journal based on daily "conservation decisions" students make.

3. Invention Convention: Conduct an invention convention. You could use the Choices and Changes curriculum (Intermediate Level) of the National Council on Economic Education.
Prices Help Us Conserve!

Price is the clue that tells us how scarce a resource is compared to other resources. The more scarce something is, the higher its price and vice versa. When a valuable resource like oil becomes more scarce, its price rises. The high price does two things: 1. It encourages consumers to use less, and 2. It encourages producers to find and produce more oil, since they want to make higher profits. This happens automatically in the oil markets without involving the government. Isn't this good news about conserving our natural resources?

On the back, answer these questions. Discuss your answers with your teacher.

1. What are some examples of scarce natural resources?
2. If we use coal and it becomes more scarce, what will happen to its price?
3. What will consumers do as a result of this price change? Why?
4. What will producers of coal do as a result of this price change? Why?
5. How will these actions by consumers and producers change the price?

Draw a series of pictures illustrating these changes in the market for coal. Be creative. Below each picture briefly explain what is happening.
Suppose you entered the Conservation Contest in the story. What invention would you invent to help conserve valuable natural resources? Draw a picture below with a brief explanation.

List some of the productive resources you used to make the invention.

1. What do you think would be the price of your invention?

2. Do you think businesses would buy your invention? Why or why not? Would the price of your invention affect the businesses' decision?

3. If the government made businesses use your invention, how might this affect the prices of the products they sell? Do you think the government should do this? Why or why not?
Lesson Overview

This story, based on a real event, tells how the Hatch family and the people of Grand Island, Nebraska, survive a night of terror when their town is devastated by several tornados. Together they not only live through the tragedy but rebuild their lives and their community.

Key Economic Concepts

- Productive Resources
- Scarcity
- Government Agencies
- Taxes
- Specialization
- Public Goods

Materials

- Handouts 1 & 2

Teaching Procedure

1. Introduce the story by discussing storms and other natural disasters. Focus on the rebuilding that follows natural disasters.

2. Teach or review the economic concepts of scarcity and types of productive resources. Discuss the productive resources which are available before and after a tornado. Emphasize how many resources become relatively more scarce after a disaster. This is the reason that prices increase for generators, lanterns, bottled water, etc.

3. Read the story. Discuss key economic concepts as they appear. Have students keep a dictionary of these economic concepts. Another possibility is to have students keep a list of all the productive resources they find in the story on the Productive Resources handout in Part 3.

4. After reading the story, have the class create two lists — of productive resources in the community before and after the storm. Have students write a paragraph comparing the two lists.
5. Complete Handout 1. Explain how government agencies, which are financed by taxes, are different from non-government agencies.

6. Complete Handout 2. Emphasize that government provides certain public goods, like road and national defense, since there are few incentives for private businesses to do so.

Key Questions to Ask Students

1. What government agencies assisted the community after the twisters destroyed the town? (Fire and Police, Civil Defense, National Guard, REACT, Government Housing, etc.) How are government agencies supported? (taxes)

2. Why don't private businesses provide public goods like national defense and roads in a town? (A business wouldn't make a profit. It is virtually impossible to keep non-payers from using the roads or to get everyone to pay for national defense. Those who didn't pay would benefit anyway!)

3. In this story, do you think that human resources (labor) and natural resources are of equal importance? Explain. (Answers will vary.)

4. Rebuilding a community takes much time and many scarce productive resources. How would you respond to someone who said, "I think that the tornado was ultimately good for the economy, since the rebuilding effort will provide employment for many workers." (Wrong! The resources used to rebuild the community now cannot be used for other valuable uses in the economy. There really is an opportunity cost.)

Follow-Up Activities

1. Bulletin Board: Find newspaper articles regarding natural disasters and share these with the class. Make a bulletin board of these articles.

2. Classroom Visitor: Invite a police officer or other emergency officials to explain how they help during situations like tornados.

3. Field Trip: Take a field trip to the local Red Cross agency.
1. In every community there are many services. What is the main difference between government services and non-government services?

2. List all the community services and organizations mentioned in the story. Put a circle around all those that are government services.

3. In the story, the police department and the Red Cross joined forces to help the community. List the ways these two agencies helped. Next, list ways they could have helped, but didn’t.

Imagine your community has just been destroyed by a tornado. You are put in charge of creating an agency to assist the victims. Write a plan of action. In your plan include: types of services, funding sources, and any other significant information. How would you rebuild? What would you rebuild first? On another piece of paper draw a plan of your new community.
Handout 2

Government Services

1. What are examples of government services in your community? Where do government services get the money to operate?

2. What are examples of non-government services in your community? Where do they get the money to operate?

3. Some services are provided by both governments and private businesses. Put an X in one of the three blanks to show how each service is typically provided.

<table>
<thead>
<tr>

2. Why are roads in your community something that cannot be provided very well by private business?

3. Which government service do you think is most important? Explain why.
Part 3

Handouts

To Use with Other Books
Decision Tree

Use the Decision Tree to help you make choices! Here are the steps:

1. Define the Problem
2. List the Two Choices
3. Evaluate the Choices (List good and bad points about each choice.)
4. Make a Decision!

Decision Tree Diagram:

- Decision
- Good Points
  - Smiley Face
  - Bad Points
    - Sad Face
- Choice
- Problem
Use the Five-Step Decision Model to help you make decisions!

1. **Define the Problem** — Analyze the situation; gather facts. What is the problem?

2. **List Alternative Solutions** — List feasible alternatives for solving the problem.

3. **List Important Criteria** — What important values/goals will influence the decision?

4. **Evaluate the Alternative Solutions** — Evaluate how each alternative "fits the criteria." Put +'s and -'s in grid to show if alternatives "fit" the criteria.

5. **Make a Decision!**

<table>
<thead>
<tr>
<th>Criteria</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
</tr>
<tr>
<td></td>
</tr>
<tr>
<td></td>
</tr>
<tr>
<td></td>
</tr>
<tr>
<td></td>
</tr>
</tbody>
</table>

**Decision Grid**

<table>
<thead>
<tr>
<th>Alternatives</th>

</thead>
<tbody>
<tr>
<td></td>
</tr>
<tr>
<td></td>
</tr>
<tr>
<td></td>
</tr>
<tr>
<td></td>
</tr>
<tr>
<td></td>
</tr>
</tbody>
</table>
Decisions, Decisions, Decisions!

The characters in many stories have to solve scarcity problems, and this usually means having to make some difficult decisions! Answer the questions below about a scarcity problem a book character had to solve.

1. What was a scarcity problem confronted by one of the book's characters?

2. What were the alternatives (choices) for solving the problem?

3. What decision did the character make?

4. What was the opportunity cost of the decision?

5. Write a paragraph explaining why you think it was a good or bad decision. Write neatly and use correct spelling and grammar.
My Scarcity Situations

People confront scarcity situations and scarcity problems every day. Answer the questions below about your scarcity situations.

1. Describe a **scarcity situation** you faced recently.

2. What was **scarce** in the situation?

3. What **decision** did you make because of the scarcity?

4. What was the **opportunity cost** of your decision?

5. Write a paragraph about this or another scarcity situation. What decision did you have to make? Do you think you made a good decision? Explain why or why not.
Economics is everywhere! Give examples from the story, including page number, which illustrate the economics concepts below. (You may not find an example for every concept.) For longer books, complete the handout as you read.

Natural Resources:

Human Resources:

Capital Resources:

Scarcity:

Opportunity Cost:

Specialization:

Interdependence:

Exchange/Trade:

Role of Government in the Economy:

You will probably find other examples of economic concepts. List them on the back. (Other concepts include Profit, Economic Systems, Supply, Demand, Entrepreneurship, International Trade, and Competition. You may find even more concepts!)
Productive Resources

1. In almost all stories there are examples of many types of productive resources. In the book you just read, identify some of them.

<table>
<thead>
<tr>
<th>Natural Resources (Raw Materials)</th>
<th>Human Resources</th>
<th>Capital Resources</th>
</tr>
</thead>
</table>

2. In the space below, draw the Production Model, which shows the productive resources being combined to produce a good or service.
In an economy, people and businesses **specialize** in what they produce. They then must **depend** on each other to provide productive resources, goods, and services. In the center of the "Interdependence Web" below, put a character in the story who had to depend on others. In the other circles, put the people (businesses, workers, etc.) the character depended on.

In the story did it help when the character depended on others? ________

On the back write a paragraph explaining your answer.
What's in a Job?

Many different kinds of human resources are needed to produce goods and services. Pick a job done by a character in the story you just read, then answer the questions.

What is the character's job? ________________________________

What special skills (human capital) does the character need to do the job?

What education do you think is necessary for this job?

What are the good points and bad points about the job?

What good or service do you want to produce when you grow up?

On the back, write a paragraph explaining why. The title of your paragraph should be: "What I Want to Produce When I Grow Up."
In many stories you learn about people from all over the world. Our economy depends on the productive resources, goods, and services that we get by trading with other countries.

Search your classroom (or home) for clothing and other items produced in other countries. Write them on scrap paper. Then meet in small groups and list at least ten items, each from a different country. Mark these on a wall map or on a transparency of the world. What patterns do you see?

<table>
<thead>
<tr>
<th>ITEM</th>
<th>COUNTRY</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
</tr>
</tbody>
</table>

On the back write a paragraph explaining how trading helps countries.
Economics Bingo!

There are many economic words and ideas in the stories you have read. After reading the stories and learning about economics, you are now ready to play the Economics Bingo Game!

First write BINGO in the shaded squares. Your teacher will list all the economics words you have studied on the board. On the Bingo card write one of these words in each square. (You may write a word only once under each letter.) Your teacher will draw these words "out of a hat" and say the definition. Put a token on the square if you have the word. Five in a row makes Economics Bingo!
Three Cheers for Capital Resources!

1. Give three examples of capital resources in the story you read.

2. Explain how each capital resource increased productivity.

3. How do businesses get capital resources?

A Capital Invention!

In the space below, draw a capital resource that you invented to help produce a special good or solve a special problem. Below your drawing explain how the capital resource works. Report to the class.
'Round and 'Round the Economy Goes!

Use people, businesses, goods and services, and productive resources from the story to fill in/label the Circular Flow Model of the economy. Also show which way the money flows!
Part 4

Annotated Bibliography
Bibliography

The teacher-recommended books cited in this bibliography are excellent for teaching economics to children. You may want to use the handouts provided in Part 3 of this curriculum to teach specific economics concepts.

The Indiana Department of Education thanks the National Council on Economic Education for their permission to use citations taken from their excellent Master Curriculum Guide publications, Teaching Strategies K-2, Teaching Strategies 3-4, and Personal Finance Economics. Betty Sue Williams, classroom teacher from Centerville Elementary in Oldham County, Kentucky, also recommended several books cited in this bibliography.

This story follows bananas from Honduras, where they are produced, to the United States, where they are consumed. Children learn about the many specialized workers who produce and market the fruit.

This interesting story is about a dollar bill and the many hands that exchange it. Throughout the book, interesting facts about money are told in storyboard form. The key economic concepts are economic systems, money, and exchange.

This book describes in simple terms how supply and demand work in a market economy to determine prices and to influence what goods and services are produced.

Animals explain the steps of producing a book, including writing, editing, and publishing.

Learn how baseball bats are produced. Many economic concepts are featured, including production, assembly line, and specialization.

Nino owns a pizzeria. When someone offers him the opportunity to expand his pizzeria, Nino has to decide if money is all there is to owning a business. Key economic concepts are opportunity cost and specialization.
The girl in the story begins to notice just how valuable the services her mother provides really are. Although you can’t assign a precise value to mothering, students will enjoy calculating the value of a mother’s work.

This is a good story to help children understand the production process. The book shows how the farmer feeds and milks the cow and then sends the milk to market. Key economic concepts are natural, human, and capital resources and interdependence.

The city council members in Turkeytown own all the corn that people need to feed their turkeys. When the townspeople move to Pumpkinville and start feeding their turkeys pumpkin seeds, the council members try to destroy the pumpkin crop. Key concepts are competition, markets, and price.

Frank and Ernest operate a business-sitting service. When they are hired to take care of a baseball team, they must improve their human capital by learning all about the business of baseball.

This book contains a story and information about the history, production, and preparation of popcorn. Recipes are included.

This Italian folktale tells how Tony the baker produces a loaf of bread.

This story is about a young man who controlled the peanut market. He uses his fortune to help the entire country. The economic focus is marketing and entrepreneurship.

Dozens of occupations are illustrated in this picture book of people at work on land, sea, and air, day and night.

Students learn the basics of building a wood-frame house, and meet the many people who are involved in the process, from architect to carpenter. Key concepts are jobs, specialization, interdependence, and resources.

Due to a scarcity of space, a skyscraper must be built in a busy city. Through simple text and illustrations, readers follow the building of a skyscraper step by step. What human resources are needed? What jobs do they perform? What capital resources are used? Students will find answers to these and many more questions.
Gilman, Phoebe. *The Wonderful Pigs of Jillian Jiggs*, Scholastic, Inc., 1988. Jillian decides to be an entrepreneur and open a business making and selling stuffed pigs. Her problems begin when she discovers that she likes her pigs so much that she can't sell them! What should she do?

Herman, Charlotte. *Max Malone Makes a Million*, Henry Holt, 1991. When Max reads about a boy his own age who gets rich selling cookies, Max decides to make his fortune, too.

Jennets, Aylette. *The Bakery Factory*, Thomas Y. Crowell Co., 1978. Have you ever wondered where the bread, pastries, and donuts at the grocery store come from? Explore a bakery factory and learn about all the productive resources needed to produce baked goods. Learn all the production steps as the goods are made from raw materials on an assembly line and are finally put on the supermarket shelves. Try one of the recipes to make tasty delights of your own.

Johnson, Hannah Lyons. *From Seed to Salad*, Lothrop, See, and Shepard, 1978. Children learn how they can work together to plant, cultivate, and harvest a vegetable garden. Salad dressing recipes are included.

Kehret, Pet. *The Richest Kids in Town*, Cobblehill Books, 1994. Two boys design a variety of money-making schemes that don't quite work out. They both have a savings goal. Now, all they need is to earn some income!

Klevin, Jill Ross. *The Turtle Street Trading Company*, Delacort Press, 1982. Four youngsters from California successfully start and manage their own kid's trading company. Their business is recycling old junk for a nominal fee. The children soon learn there is no such thing as a small business.

Klevin, Jill Ross. *Turtles Together Forever*, Delacort Press, 1982. This book is the counterpart to *The Turtle Street Trading Company*. One of the members of the business moves and starts his own company. Entrepreneurship is a key economic concept.

Kuklin, Susan. *From Head To Toe: How A Doll Is Made*, Hyperion Books For Children, 1994. Take a behind the scenes tour to learn how dolls are made. Skilled workers (human resources) create beautiful dolls for all to enjoy. See in full color how dolls are assembled, hair is styled, and clothes are designed.
The Lacey family lives on a Vermont farm. In addition to farming, the family harvests maple sap for sugar and syrup. Students encounter many economic concepts as they learn about the process of sap harvesting.

This is a beautifully illustrated picture book that alphabetically lists all the goods one finds on Market Street.

Jelly beans sell for one cent at the roadside stand in this interesting book, which introduces the basic units of money.

The story chronicles the success of an entrepreneurial venture, as Rufus Mayflower proves he can make better toothpaste at a lower cost.

Jan Matzeliger invents a machine that increases output, lowers the price of shoes, and makes them affordable for all people. The key concept is productivity.

Interdependence is illustrated as family members and people in the community help one another in everyday situations.

This book provides parents and teachers with creative ways to encourage their children’s entrepreneurial abilities.

Rosie makes a series of trades to get her grandmother a birthday present.

The villagers who live on each side of a river do not like each other very much. Their attitudes change when the bridge connecting the villages is destroyed and the people realize how much they depend on one another to supply goods and services.

To earn enough money to buy a video game, Pam and Julie decide to open a lemonade stand. They argue over how to advertise, and the lemonade war begins.

This reading series describes the productive resources required to produce a variety of goods, including baseball bats, T-shirts, ice cream, bubble gum, crayons, and pennies.
Eleven-year-old Janie Golden is looking forward to getting a new ten-speed bike until
her mother informs the family that she has been laid off from her job. The only way
Janie will get her bike now is by making the money herself.

Learn all about the capital resources used in construction.

Bill has always dreamed of owning his own hunting dogs. He is faced with many
decisions throughout the book in an attempt to make his dreams come true.

Curious George escapes from the zoo and eventually lands a job as a window washer.
Learn about the skills that qualify people for their jobs and characteristics of a
responsible worker.

Henry Reed comes to America from Italy for the summer to live with his aunt and uncle.
His teacher in Naples asks him to do something in America to illustrate free enterprise.
Henry immediately forms a business partnership with Margaret Glass, the girl next door.

Henry Reed decides to dissolve his business partnership with Margaret and go into
business for himself. He opens up a baby-sitting service for the Greater Grover’s Corner
area.

The authors present a photographic essay and story about different kinds of shoes
people wear.

This book features dozens of different workers and the jobs they do.

Based upon the premise that “everyone is a worker,” this book features hundreds of
specialized jobs and emphasizes the interdependence of everyone at work.

Bea, who is tired of kindergarten, trades jobs with her father and learns about the work
he does.

The Once-Ler tells a story of a local scarcity problem and describes the trade-offs
involved in resource use.
This easy-to-read book helps students understand that wooden chairs begin as natural resources. Special jobs, clothing, and tools are discussed and illustrated as the wood moves from forest to factory.

Mr. Smeds and Mr. Spats discuss voluntary exchange.

Smart tells the story of a boy who has trouble understanding the value of money.

Lester presents the dilemma of a boy with unlimited wants who refuses to make choices.

Follow Stephanie's photo as it is put into an envelope, addressed, stamped, mailed, processed through the postal system, and delivered to her cousin Kathy. This beautifully colored picture book details the steps of sending a letter.

Eleven-year-old Andy spends the summer playing baseball and trading baseball cards. In the process, he makes some special discoveries about himself and his family. Key concepts include barter, trade, price, and scarcity.

Eunice and Joy, best friends since birth, run their own catering service, "Have Your Cake." When something comes between them, Eunice finds herself running the business alone.

This is a wonderful story about a mouse and a whale who learn to depend on one another as they share a common bond — survival.

Alexander explores the consequences of his spending decisions.

Four orphaned children discover an old, red boxcar that provides a home for them. The children discover many productive resources and raw materials that help them survive.

This is Laura Ingalls Wilder's diary of her 1894 trip from the drought-stricken Dakota Territory to the Ozarks. She describes the towns, rivers, people, and events that happened along the way. Important concepts are productive resources, productivity, and economic growth.

Williams, Vera B. *Something Special For Me*, Greenwillow Books, 1983. Rosa confronts scarcity and opportunity cost for herself and her family as she chooses her own birthday present.

Wing, Natasha *Jalapeno Bagels*, Atheneum Books for Young Readers, 1996. For his school's International Day, Pablo decides to produce a very special bread – jalapeno bagels made from his parents' own special recipe. Key concepts are productive resources, specialization, and interdependence.

Part 5

Indiana Proficiency Guide
in Economics (K-6)
FOCUS: SELF, FAMILY, FRIENDS, AND SCHOOL

### ECONOMICS

**Explain how people meet basic economic wants and needs.**

- Identify goods and services that people need and want.

- Describe how people work to obtain food, shelter, and clothing (goods and services).

- Describe the economic activities that family members do together.

- Identify specific jobs that people do.

- Explain that people earn money (income) by working.

- Using magazine pictures, make a mural or collage of basic needs or goods and services. Label the collage with symbols for food, shelter, clothing, etc.

- Use play dough to make models of goods or people performing services.

- Make a pictorial journal of economic activities in which they participate.

- Name and discuss different jobs that people do.

- Play “charades,” by acting out the role of individuals earning money by performing various jobs.

**ECONOMICS**

Describe how people depend on each other to supply economic goods and services.

- Explain how natural, human, and capital resources are used to produce goods and services.

- Identify people who provide goods and services to the community (e.g., school workers, firefighters, police officers, doctors, factory workers, storekeepers, farmers, homemakers, etc.).

- Explain why people specialize in different jobs.

- Explain how people earn and use their income.

- Identify people who are producers, consumers, and both producers and consumers.

- Identify the productive resources used to produce specific goods and services.

- Participate in a job fair where community members discuss their jobs.

- Establish a classroom mini-economy (see Resource Section).

- Mount pictures from newspapers and magazines showing people earning income in many different ways. Work in small groups, using ad sections from newspapers to categorize ways people might spend money.

- Construct a pictorial graph dividing people into 3 categories: producers, consumers, and both producers and consumers.

<tr>
<td><strong>ECONOMICS continued . . .</strong></td>
<td><strong>Simulate a city council making choices. List the opportunity costs of various choices.</strong></td>
</tr>
<tr>
<td>- Identify the opportunity cost of various consumer and producer choices (the most valuable alternative you have to give up to get something you want).</td>
<td>- Conduct a “math productivity contest,” comparing the number of math problems completed with and without calculator.</td>
</tr>
<tr>
<td>- Explain how tools and machines (capital) make people more productive.</td>
<td></td>
</tr>
</tbody>
</table>
### ECONOMICS

**Proficiency Statements and Indicators**

Students should be able to:

- Explain how the scarcity of natural, human, and capital resources has affected economic choices in Indiana.
- Explain how money makes trade (barter) easier.
- Explain how goods and services produced in Indiana have changed over time.
- Give examples of how increases in productivity have affected Indiana business and agriculture.
- Compare and contrast manufactured and agricultural products of Indiana with those of states in different regions.

**Sample Student Activities**

Students might:

- Construct a pictorial map of different goods and services produced in Indiana.
- Make a chart or a collage showing the different types of money used.
- Take a study trip to a museum to examine early Indiana products. Compare with present-day products.
- In small groups, gather information on Indiana inventors and report on how they affected business and agriculture.
- Make a graph comparing Indiana's products with those of other states. Use the information gathered to set up a "Hoosier Mini-Economy" (see Resource Section).
<table>
<thead>
<tr>
<th>Proficiency Statements and Indicators</th>
<th>GRADE FOUR</th>
</tr>
</thead>
<tbody>
<tr>
<td>Students should be able to:</td>
<td>Sample Student Activities</td>
</tr>
<tr>
<td></td>
<td>Students might:</td>
</tr>
<tr>
<td>ECONOMICS continued . .</td>
<td>1) Take a study trip to an Indiana port. Gather information and make a chart of products shipped from Indiana and products shipped to the state. 2) Construct a map showing major exports from Indiana to world locations; explain why Indiana is among the major exporting states.</td>
</tr>
<tr>
<td>• Describe the importance of Indiana’s products in world trade.</td>
<td>• Make graphs of major sources of state revenues and major categories of spending.</td>
</tr>
<tr>
<td>• Examine the sources and uses of state tax revenues.</td>
<td>• Research and report on the lives and work of specific business leaders and entrepreneurs.</td>
</tr>
<tr>
<td>• Describe how business leaders and entrepreneurs have influenced Indiana history.</td>
<td></td>
</tr>
<tr>
<td>Proficiency Statements and Indicators</td>
<td>Sample Student Activities</td>

<td>--------------------------</td>
</tr>
<tr>
<td>Students should be able to:</td>
<td>Students might:</td>
</tr>
<tr>
<td><strong>ECONOMICS</strong></td>
<td></td>
</tr>
<tr>
<td>Describe the productive resources and market relationships that influence the way people produce goods and services and earn a living in different parts of the United States.</td>
<td></td>
</tr>
<tr>
<td>• Explain how economic decisions are made in a market economy by demonstrating the relationship among economic factors (such as scarcity, choice, opportunity cost, money, goods and services, price, and supply and demand).</td>
<td></td>
</tr>
<tr>
<td>• Construct a simple circular flow model of a market economy.</td>
<td></td>
</tr>
<tr>
<td>• Give examples illustrating the economic interdependence of different regions of the United States.</td>
<td></td>
</tr>
<tr>
<td>• Prepare a market analysis to create and run student businesses (e.g., desk-cleaning business, plant watering service, recreation managers, chalkboard engineers, photographers, etc.). See the Resource Section.</td>
<td></td>
</tr>
<tr>
<td>• Use drawings or pictures from magazines to create a bulletin board illustrating the circular flow model of the U.S. economy.</td>
<td></td>
</tr>
<tr>
<td>• Keep a journal of the food eaten in one day. On a map, locate the regions that produce these foods.</td>
<td></td>
</tr>
</tbody>
</table>
### Proficiency Statements and Indicators

**Students should be able to:**

#### ECONOMICS continued . . . .

- Explain how interdependence is a result of specialization and how specialization increases productivity.

- Identify natural resources and related occupations found in the regions of the United States and speculate why certain careers are more common in one region than in another.

- Trace the development of technology and inventions and analyze their impact on productivity throughout the history of the United States.

#### Sample Student Activities

**Students might:**

- 1) Invite a business person to the classroom to discuss specific business decisions (e.g., wages, profits, job skills). 2) Chart different types of jobs, the type of education needed and corresponding salaries. 3) Take a field trip to a soft drink, potato chip or other type of factory to observe specialization and productivity factors.

- 1) Make a map of the United States showing resources and related occupations. 2) Identify the various careers and occupations involved in specific products (e.g., breakfast cereal, tennis shoes) and services (e.g., restaurants, healthcare, etc.).

- 1) Make a time line of inventions and technological developments. In small groups, discuss how these developments affected productivity. 2) Have an “Invention Convention” demonstrating historical and/or student-made inventions. Explain the real or possible impact of each invention.
## FOCUS: WESTERN CULTURES

### Grade Six

#### Proficiency Statements and Indicators

**Student should be able to:**

**ECONOMICS**

*Demonstrate the influence of physical and cultural factors upon the economic systems found in countries of the Western World.*

- Explain how physical geography, specialization, and trade influence the ways people earn income in various countries.

- Explain how increased specialization and trade make countries more wealthy yet more interdependent.

- Explore how different economic systems (traditional, command, market) answer the basic economic questions of **what to produce, how to produce, and for whom to produce.**

#### Sample Student Activities

**Students might:**

- 1) Plan a family budget for a family of four based on the per capita income of a nation. 2) Develop charts and graphs showing the economic role of women in several countries.

- Choose several common products (e.g., a candy bar, items of clothing, etc.). Identify the ingredients or components. Research and identify locations on a world map where these products originated.

- 1) Write to the embassies of selected countries requesting information. Develop a chart comparing/contrasting standards of living among these countries. 2) Research the type of economic system or systems used in a country over a long period of time. Analyze changes in everyday life as economic systems develop or change (e.g., change from a traditional to a market economy).
## FOCUS: WESTERN CULTURES

### Grade Six

<th>Sample Student Activities</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Student should be able to:</strong></td>
<td><strong>Students might:</strong></td>
</tr>
</tbody>
</table>

### ECONOMICS continued . . .

- Describe the level and sources of income (gross domestic product-GDP) in countries of the Western World.

- Compare and contrast how education and technology influence productivity and economic development in countries of the Western World.

- Identify situations in which the actions of consumers and producers are helpful (e.g., education) or harmful (e.g., pollution) to others, inside and outside a country, who are not directly involved in the consumption or production of a product.

- Explain how international trade requires a system for exchanging money between nations.

- Color code a world map showing different GDP levels. Create a profile of specific countries highlighting economic factors (e.g., GDP, productive resources; trade statistics).

- Compare GDP levels with literacy rates/levels of educational attainment, use of technology, etc.

- 1) Report on pollution levels in different countries and on ways different countries deal with pollution. 2) Play the role of consumers and producers of products from various countries. Compare points of view.

- Analyze the classified ads from a foreign, English-language newspaper. Convert salaries to dollars.
Policy Notification Statement

It is the policy of the Indiana Department of Education not to discriminate on the basis of race, color, religion, sex, national origin, age, or handicap, in its programs or employment policies as required by the Indiana Civil Rights Act (I.C. 22-9.1), Title VI and VII (Civil Rights Act of 1964), the Equal Pay Act of 1973, Title IV (Educational Amendments), and Section 504 (Rehabilitation Act of 1973).

Inquiries regarding compliance with Title IX may be directed to the Human Resources Director, Indiana Department of Education, Room 229, State House, Indianapolis, IN 46204-2798, or to the Director of the Office of Civil Rights, Department of Health and Human Services, Washington, DC; Dr. Suellen Reed, State Superintendent of Public Instruction.
