Dance and movement therapy is a form of psychotherapy that uses the body, dance, and movement as the primary mediums for the therapeutic process. Dance is a fundamental art form that involves the body as an instrument of self-expression; movement is a universal means of learning and communicating. Dance and movement therapy is the psychotherapeutic use of movement as a process that furthers the emotional, cognitive, and physical integration of the individual. The American Dance Therapy Association (ADTA) supports and promotes this young profession by establishing and maintaining high standards of professional training and practice. The ADTA provides a registry process, a code of ethics for the profession, and a program approval process for graduate programs in dance and movement therapy. Education and training for dance and movement therapy is compatible with programs in counseling and psychology. Increasingly, dance and movement therapists are becoming certified and licensed as counselors, psychologists, and social workers. Thus dance and movement therapy provides an exciting career opportunity for those interested in dance and the helping professions. Contains 16 references. (Author/EMK)
Dance/Movement Therapy: A Unique Career Opportunity

Leslie Flint Armeniox

University of North Carolina Greensboro
Abstract

Dance/movement therapy is a form of psychotherapy that uses the body, dance, and movement as the primary mediums for the therapeutic process. The American Dance Therapy Association (ADTA) supports and promotes this young profession by establishing and maintaining high standards of professional training and practice. The ADTA provides a registry process, a code of ethics for the profession, and a program approval process for graduate programs in dance/movement therapy. Education and training for dance/movement therapy is compatible with programs in counseling and psychology. Increasingly, dance/movement therapists are becoming certified and licensed as counselors, psychologists, and social workers. Thus, dance/movement therapy provides an exciting career opportunity for those interested in dance and the helping professions.
Dance/movement Therapy: A Unique Career Opportunity

Dance is a fundamental art form that involves the body as an instrument of self-expression. Historically, people have used dance for celebration, mourning, and other ceremonial or ritual experiences. Movement is a universal means of learning and communicating. Beginning in utero, movement serves as the primary means for exploration and interaction with the environment. As individuals develop, their movement becomes a highly personalized signature of themselves. Moreover, body movement reflects feelings about the self and relationships with others. Psychological states manifest in physiological counterparts such as muscle tension, breathing patterns, and gestures. Through the medium of dance, the body and its movement become tools for emotional expression, social interaction, and behavioral change. Thus, the body, dance, and movement provide a powerful medium for the therapeutic process. This medium is called Dance/movement therapy.

Dance/movement therapy is the psychotherapeutic use of movement as a process which furthers the emotional, cognitive, and physical integration of the individual (American Dance Therapy Association, 1998a). The American Dance Therapy Association (ADTA) is the recognized professional organization for dance/movement therapists. The ADTA was established in 1966 as a result of a growing interest in dance/movement therapy as a helping profession. Since that time, the ADTA has maintained high standards of professional training and practice through ethics and standards for the profession and program approval standards for academic programs (1998a, 1998d). The ADTA also publishes the American Journal of Dance Therapy, a
Dance/movement therapy

refereed professional publication and sponsors an annual conference focused on research and practice of dance/movement therapy. Currently, the ADTA has approximately 1200 members from the United States and 29 countries around the world (ADTA, 1997). In 1998, dance/movement therapy was listed as one in 100 best careers for the 21st century (Field, 1998).

In practice, dance/movement therapy affects changes in emotions, cognition, physical functioning, and behavior. It is distinguished from other recreational and educational uses of dance by its goals and process orientation. The dance/movement therapist does not teach dance technique or follow a set curriculum. Neither does she/he engage clients in dancing purely for enjoyment or leisure, or for physical exercise. The dance/movement therapist instead focuses on movement as it emerges within the relationship established by a client and therapist. Body movement is the primary medium for the interaction. The flow of movement in dance/movement therapy is analogous to the traditional flow of words in counseling and psychotherapy. Moreover, it is immediate, spontaneous, and often less defended than verbal interchange.

The dance/movement therapist seeks to facilitate growth by starting where the client is developmentally and moving appropriately toward the client's goals. Thus, the emerging movement develops into a dance created from the contributions of the client, the dance/movement therapist, and the context within which they are moving. The therapist may direct or choreograph movements and dances that serve as interventions and assist the client with meeting goals for treatment. Interventions may address symptoms,
personality characteristics, and behaviors in the physical, social, cognitive, and psychological spheres (American Dance Therapy Association, 1998a).

In order to determine interventions, dance/movement therapists rely on information gleaned from body movement that can be applied both diagnostically and therapeutically. Systems of movement observation and analysis and movement observation instruments provide objective and structured ways for dance/movement therapists to apply this information (Laban, 1964; 1971; Dell, 1970; North, 1972; Davis, 1975). These systems and instruments are complex and require rigorous, specialized training. The trained observer interprets movement observations within the client’s context and the context of the treatment setting. The dance/movement therapist also uses data gathered from other assessments, such as interviews, psychological tests, and the client’s history in conjunction with movement observations in an effort to gain a thorough understanding of the client (Armeniox, 1997).

Dance/movement therapy may be utilized as a primary or ancillary form of treatment. Dance/movement therapists work with people of all ages individually and in groups. Additionally, they work in a variety of settings including hospitals, schools, rehabilitation centers, correctional facilities, residential and outpatient treatment centers, developmental centers, and private practice (ADTA, 1998a, 1998b). Dance/movement therapists work with a variety of issues and concerns including mental health disorders, substance abuse, eating disorders, autism and developmental delay, abuse and trauma, attention-deficit and learning disorders and dissociative disorders. Furthermore, dance/movement therapy provides a powerful medium for personal growth during times of...
transition, for dealing with issues of grief and loss, and for enhancing creativity and personal performance.

During a dance/movement therapy session, the therapist may move with the client(s) and observe and/or direct movement. Clients are invited to participate in ways that feel comfortable or to observe others moving until they feel comfortable to join. Often, the energy of a group that is moving and dancing is contagious, and clients may find themselves easily participating despite initial anxiety or fears. Music may be used or the group may rely on its own rhythms as a basis for synchrony. As movements emerge, movement themes are developed to clarify their meanings. Metaphor and active imagination may be introduced and utilized for movement exploration and expression. Participants may identify adaptive responses, or introduce and practice behavioral changes. The dance created is the basis for interaction, expression, empathy, and cohesion.

The dance/movement therapy experience provides a vehicle for insight, integration of mind and body, and rebuilding of trust in oneself and others. In group sessions, the shared experience provides additional opportunities for growth. Although movement, dance, and the creative process are the primary focus of this modality, dance/movement therapists also use processes that overlap with established forms of treatment. For example, relaxation, desensitization, exposure, cognitive interventions, distraction, and narrative techniques may be integrated into dance/movement therapy approaches (Johnson, Cohen, Adams, Armeniox, Jampel, & Dayton, 1998).

Research in dance/movement therapy has been primarily narrative and descriptive. Most empirical work has been done in the area of assessment (Johnson, Cohen, Adams, Adams, Cohen,
Armeniox, Jampel, and Dayton, 1998). However, a recent meta-analysis of outcome studies determined the mean-effect size of dance/movement therapy on core psychiatric symptoms to be ES = .37 (range .15 to .54) (Cruz & Sabers, 1998). This is comparable to effect sizes of verbal psychotherapy (ES = .32, in Smith & Glass, 1977). While this is promising, there is a significant need for more empirical research on assessment, interventions, and outcomes (Johnson, Cohen, Adams, Armeniox, Jampel, & Dayton, 1998).

Preparation for dance/movement therapy occurs on the graduate level. Studies include courses such as dance/movement therapy theory and practice, dance/movement therapy group process, theories of psychotherapy, psychiatric diagnosis, human development, developmental movement, research, group dynamics and process, and movement observation. Additionally, an internship supervised by a registered dance/movement therapist is required (ADTA, 1998b). The ADTA approves graduate programs that meet ADTA stated requirements and publishes a list of approved programs. Recommended pre-requisites for training include extensive dance training in a variety of dance forms and a liberal arts background with an emphasis in psychology, kinesiology, and dance teaching experience (ADTA, 1998b).

The ADTA also provides a two-tiered registry of members (ADTA, 1998b). The first level of registry, Dance Therapist Registered (DTR), indicates completion of educational requirements and readiness to practice in a professional setting as a member of a team and/or under supervision. The second, Academy of Dance Therapists Registered (ADTR), indicates completion of two years supervised experience after receiving the DTR
and readiness to teach dance/movement therapy, provide clinical supervision, and engage
in private practice as a dance/movement therapist. Additionally, dance/movement
therapists have been certified and licensed as counselors, psychologists, and clinical social
workers in many states (ADTA, 1996). Increasingly, dance/movement therapists are being
certified as National Certified Counselors (NCC) through the National Board for Certified
Counselors (ADTA, 1998c).

Dance/movement therapy is a growing profession that offers a unique and creative
approach to helping others and numerous opportunities for professional growth as well.
Undergraduate students with interests in dance and psychology or counseling may find it
especially appealing. For professionals with masters degrees in counseling, psychology,
and social work, dance/movement therapy offers an opportunity to build on one’s
experience by adding an expressive, nonverbal dimension. Those interested in learning
more about dance/movement therapy may contact the ADTA web site,
ADTA@AOL.com, or write the following address: American Dance Therapy
Association, 10632 Little Patuxant Parkway, 2000 Century Plaza, Suite 108, Columbia,
MD 21044.

II. REPRODUCTION RELEASE:

In order to disseminate as widely as possible timely and significant materials of interest to the educational community, documents announced in the monthly abstract journal of the ERIC system, Resources in Education (RIE), are usually made available to users in microfiche, reproduced paper copy, and electronic media, and sold through the ERIC Document Reproduction Service (EDRS). Credit is given to the source of each document, and, if reproduction release is granted, one of the following notices is affixed to the document.

If permission is granted to reproduce and disseminate the identified document, please CHECK ONE of the following three options and sign at the bottom of the page.

<table>
<thead>
<tr>
<th>Level 1</th>
<th>Level 2A</th>
<th>Level 2B</th>

<td><img src="image3" alt="Sample" /></td>
</tr>
</tbody>
</table>

The sample sticker shown below will be affixed to all Level 1 documents.

The sample sticker shown below will be affixed to all Level 2A documents.

The sample sticker shown below will be affixed to all Level 2B documents.

Documents will be processed as indicated provided reproduction quality permits. If permission to reproduce is granted, but no box is checked, documents will be processed at Level 1.

I hereby grant to the Educational Resources Information Center (ERIC) nonexclusive permission to reproduce and disseminate this document as indicated above. Reproduction from the ERIC microfiche or electronic media by persons other than ERIC employees and its system contractors requires permission from the copyright holder. Exception is made for non-profit reproduction by libraries and other service agencies to satisfy information needs of educators in response to discrete inquiries.

AN INVITATION TO SUBMIT DOCUMENTS TO ERIC/CASS

What is ERIC?

The Educational Resources Information Center (ERIC) is a national information system designed to provide users with ready access to an extensive body of education-related literature. The ERIC database, the world’s largest source of education information, contains more than 850,000 abstracts of documents and journal articles on education research and practice. Print and database ERIC products are distributed to thousands of locations around the world. You can access ERIC online via commercial vendors and public networks, on CD-ROM, on the Internet, or through the printed abstract journals, Resources in Education and Current Index to Journals in Education.

What is ERIC/CASS?

The ERIC Counseling and Student Services Clearinghouse (ERIC/CASS) is one of sixteen subject specific clearinghouses. Its scope area includes school counseling, school social work, school psychology, mental health counseling, marriage and family counseling, career counseling, and student development, as well as parent, student, and teacher education in the human resources area. Topics covered by ERIC/CASS include: the training, supervision, and continuing professional development of aforementioned populations; counseling theories, methods, and practices; assessment and diagnosis procedures such as testing and interviewing and the analysis and dissemination of the resultant information; outcomes analysis of counseling interventions; identification and implementation of strategies which foster student learning and achievement; personnel workers and their relation to, career planning, family consultations and student services activities; identification of effective strategies for enhancing parental effectiveness; and continuing preparation of counselors and therapists in the use of new technologies for professional renewal and the implications of such technologies for service provision.

Advantages of Having a Document in ERIC

- World-Wide Visibility
- Free Reproduction/Distribution
- Free Publicity/Marketing
- Timely Dissemination of Your Publication
- Assurance That Your Publication Will Always Be Available
- Ease of Submission
- Freedom to Publish Elsewhere

Selection Criteria Employed by ERIC

Quality of Content—All documents received are evaluated by subject experts against the following kinds of quality criteria: contribution to knowledge, significance, relevance, newness, innovativeness, effectiveness of presentation, thoroughness of reporting, relation to current priorities, timeliness, authority of source, intended audience, comprehensiveness.

Legibility and Reproducibility—Documents must be legible and easily readable.

Reproduction Release (see reverse)—All documents must be accompanied by a signed Reproduction Release form indicating whether or not ERIC may reproduce the document.

Appropriate Kinds of Documents for ERIC

- Research Reports/Technical Papers
- Program/Project Descriptions and Evaluations
- Opinion Papers, Essays, Position Papers
- Monographs, Treatises
- Speeches and Presentations
- State of the Art Studies
- Instructional Materials and Syllabi
- Teaching and Resource Guides
- Manuals and Handbooks
- Curriculum Materials
- Conference Papers
- Bibliographies, Annotated Bibliographies
- Legislation and Regulations
- Tests, Questionnaires, Measurement Devices
- Statistical Compilations
- Taxonomies and Classifications
- Theses and Dissertations

A document does not have to be formally published to be entered into the ERIC database. In fact, ERIC seeks out the unpublished or “fugitive” material not usually available through conventional library channels.

Where to Send Documents?

If you and/or your organization have papers or materials that meet the above criteria and you would like to submit them for possible inclusion in ERIC’s Resources in Education abstract journal, please send two laser print copies and a signed Reproduction Release form for each to:
