ABSTRACT

This report describes how the National Center on Educational Outcomes (NCEO) Framework for Educational Accountability, which specifies outcomes and indicators for six developmental levels (ages three and six, grades four, eight, and twelve, and post-school), can be used to implement parts of the National Association of State Directors of Special Education's (NASDSE) conceptual model for a "balanced system of accountability." The NASDSE model of accountability includes three components: system accountability, individual student accountability, and input/process accountability. The NCEO model provides indicators for the following domains: (1) academic and functional literacy; (2) physical health; (3) responsibility and independence; (4) citizenship; (5) personal and social well-being; (6) satisfaction; (7) participation; and (8) family involvement. The report discusses terminology uses in the NCEO framework, fundamental assumptions underlying the framework, and using the framework for educational accountability. How the NCEO framework and the NASDSE accountability model can work together is addressed and examples of applications of the NCEO framework are provided. It also describes sources of information that can be adopted or adapted for use in system-wide or individual accountability. Appendices include possible data sources for early childhood indicators and possible data sources for school-age indicators. (CR)

Abstract

Recent federal legislation, from the passage of the Goals 2000: Educate America Act in 1990 to the Amendments to the Individuals with Disabilities Education Act (IDEA) in 1997, has focused greater attention on the issues of accountability and the need for standards-based education reform. The National Association of State Directors of Special Education (NASDSE) developed a conceptual model for a “balanced system of accountability” that includes system standards, inputs and processes, and student learning outcomes. We at the National Center on Educational Outcomes (NCEO) developed a framework for educational accountability in which we specify outcomes and indicators for six developmental levels (ages three and six, grades four, eight, and twelve, and post-school). We describe how the NCEO framework can be used to implement parts of the NASDSE model. In addition to a description of the NCEO Framework for Educational Accountability, we describe the domains, indicators, and sources of information that can be adopted or adapted for use in system-wide or individual accountability.

NCEO FRAMEWORK FOR EDUCATIONAL ACCOUNTABILITY
Accountability in Educational Reform

The passage of the Goals 2000: Educate America Act in 1990, and subsequent federal legislation such as the Improving America's Schools Act, has focused the attention of the nation on accountability and the need for standards-based education reform. The passage of the 1997 Amendments to the Individuals with Disabilities Education Act (IDEA) has placed even greater emphasis on the issue of accountability. States are required to have established goals for performance of students with disabilities, and assess progress toward achieving those goals. The performance of students with disabilities will be accounted for by indicators such as test scores, dropout rates, and graduation records. Every two years, states will report their progress to the public and, based on that progress, each state will be expected to revise its state improvement plan. Students with disabilities will be included in general state and district-wide assessment programs with appropriate accommodations where necessary. Reports on the number and performance of students with disabilities who take regular assessments will begin in July 1, 1998. In addition, states must also develop guidelines for the participation in an alternate assessment for those students with disabilities who cannot be included in the regular assessment with accommodations. The alternate assessments must be developed and implemented by July 1, 2000. Whether motivated by federal legislation or through their own initiative, states are investing significant time, energy, and resources developing and modifying assessment and accountability systems.

If accountability systems are to be meaningful, assessments must align with standards and curricula. Both of these, in turn, must be based on consensus about what is important for students to know, and when and how to identify the extent to which they have mastered necessary skills and knowledge. States and districts will want to build on what is currently available, and modify and adapt existing assessments to provide the needed information.

Development of the NASDSE Model for a Balanced, Inclusive Accountability System

Recognizing the increased emphasis on accountability in educational reform, the National Association of State Directors of Special Education (NASDSE) took steps to clarify how accountability should be applied to students with disabilities. In 1995 NASDSE published Vision for a Balanced System of Accountability and introduced a model of accountability comprised of three components: (1) system accountability, (2) individual student accountability, and (3) input/process accountability (see Figure 1). The pivotal concept for this model is that balanced accountability is evidenced where an educational system is accountable for ensuring that all children, including those with disabilities, benefit from their educational experience through equal access, high standards and high expectations, and become caring, productive, socially involved citizens who are committed to life-long learning.
The fundamental principle of this model of accountability is the dynamic balance between and among the three major components of the system. This theory envisions a social system as a triangle and proposes that, in an ideal state, each of the three poles of the triangle is robust and performs its unique function to provide balance. In reality, however, a relative imbalance often prevails with one pole assuming dominance over the others. For example, an overemphasis on procedural matters can result in high rates of exclusion of students with disabilities from system assessments and inadequate accountability for individual student achievement.

Figure 1. NASDSE's Model for a Balanced, Inclusive Accountability System
Starting in October 1996, NASDSE began a series of invitational conferences to further develop and operationalize the model. The first conference, entitled *Accountability in Special Education: Enhancing Student Accountability*, was held at the Wingspread Conference Center in Racine, Wisconsin and has become known as the NASDSE Wingspread I Conference. Focusing on the individual student component of the model, educational stakeholders convened to make the Individualized Educational Program (IEP) a more useful process, and attempted to enhance the IEP document for both instruction and accountability. NASDSE's Wingspread II Conference, held in October 1997, focused on the system accountability component of the model. Participants at this conference identified guiding principles for development, implementation, and evaluation of a balanced, inclusive accountability system. NASDSE published a report of this conference, *Guiding Principles for an Inclusive Accountability System*.

### Development of the NCEO Framework for Educational Accountability

In the early 1990s, NCEO personnel worked with hundreds of stakeholders to develop a conceptual model of educational results and indicators to guide the accountability process. NCEO used a multi-attribute consensus building (MAC) process to help generate and reach agreement on the outcomes and indicators included in the model at six developmental levels (ages three and six, grades four, eight, and twelve, and post-school).

Different groups of stakeholders, meeting over a two-year time period, were used to identify results and indicators for each developmental level. Because this information was developed over time, it was contained in a series of 12 different documents, two per developmental level (one giving the outcomes and indicators, a second giving the sources of data). We have always assumed that a conceptual framework of educational accountability should be dynamic, subject to change, and responsive to review, criticism, and changes in assessment practices over time. And, we have solicited external review and critique of the model from individuals and professional groups. Based on much input, we have revised the conceptual model into the framework shown in Figure 2.

The comprehensive framework is designed to be used for the development or revision of district and state assessment and accountability systems. This framework can also be used to design alternate assessment systems and guide the IEP planning process for students with disabilities, ensuring that individual goals are comprehensive and aligned with state or district standards.

We examined the domains of results and indicators at each age level and looked for ways to
simplify the format. Before making these simplifications to the framework, we sought the input of several people who had worked on the development of the model, or were currently adapting it for their own use. We were ever mindful of the process of developing the initial framework, but at the same time, sensitive to the fact that if it is not in a useable format, it will not be used. We attempted to eliminate redundancy and overlap among the age level indicators and provide a consistent format. By changing the way we identify the indicators at each level, we have accommodated suggestions that the framework be modified to use as a basis for an alternate assessment, to guide the development of IEPs, or to structure accountability for the performance of individuals (see Kratochwill & Elliott, 1997).

Figure 2. NCEO's Framework for Educational Accountability
We also modified the framework so that it can be used on both an individual level and on large scale systems. For example, under the domain Physical Health, one of the results is “Students Demonstrate Age-Appropriate Physical Development.” An indicator for this result is “Growth and physical development in expected range.” When used as part of an individual accountability system, evaluators would record whether the individual student’s growth and development are within the expected range. When used as a system indicator, evaluators would count the number or percentage of students whose growth or physical development is in the expected range.

In this paper we present the revised Framework of Educational Accountability. We start with a brief review of terminology.

**Terminology**

**Accountability:** A systematic method to assure stakeholders — educators, policymakers, and the public — that schools are producing desired results. Accountability includes common elements such as goals, indicators of progress toward meeting those goals, measures, analysis of data, reporting procedures, and consequences or sanctions.

**Assessment:** The process of collecting information (including test data), for the purpose of making decisions about individuals, groups, or systems.

**Domains:** Clusters of inputs, processes, or outcomes.

**Educational Processes:** Educational opportunities; includes student participation, family involvement, the availability of accommodations, state/school district practices, school building level practices, and classroom instructional practices.

**Educational Results:** The outcomes of interactions between individuals and educational experiences, both individually and system-wide.

**Indicators:** Symbolic representations of one or more inputs, processes, or results that can be used in making comparisons or evaluations. They can be numbers, percentages, or other representations such as test scores, levels of participation, or perceptions of student accomplishments. Indicators can be used for comparisons over time, for comparisons to an absolute standard, or for comparisons among and within groups.
Inputs and Resources: Characteristics and resources that impact and support student learning, including student characteristics, fiscal and physical factors, personnel, family characteristics, community characteristics, and policies.

Sources of Information: Tests, existing data banks, etc. that can be used to provide information on indicators.

Fundamental Assumptions

As we developed the conceptual framework of educational accountability we made some fundamental assumptions. These were as follows:

- A framework of inputs, processes, and results is needed for all students, and at the broadest level, should apply to all students regardless of the characteristics of individuals.

- The framework should primarily focus on intended results (e.g., high levels of student achievement), but be sensitive to unintended results (e.g., high levels of dropout) as well.

- The framework should include both direct (e.g., math skills) and indirect (e.g., getting a job) results.

- Indicators of results for students receiving special education services should be related, conceptually and statistically, to those identified for students without disabilities.

- Indicators should reflect the diversity of gender, culture, race, and other characteristics of students in today's school population.

- While indicators ideally should meet research standards, those that do not could still be used. (For example, we should not have to wait until we can reliably and validly assess a result before considering it important enough to assess.)

- A comprehensive system of indicators should provide information needed to make policy decisions at the national, state, and local levels.

- A comprehensive system of indicators should be flexible, dynamic, and responsive to review and criticism. It should also change to meet identified
needs and future developments in the measurement of inputs, contexts, educational processes, and results.

Using the Framework for Educational Accountability

A complete model of educational accountability takes into account educational results, educational inputs and resources, and educational processes. All of these are reflected in NCEO’s framework for educational accountability, which was illustrated in Figure 2. The framework is presented in a circular format to express its dynamic nature and the interdependence of all its elements. It is intended that this NCEO framework be adopted or adapted by states and local districts as they design or modify assessment and accountability systems.

Information can be collected on inputs, processes, and results indicators, as well as on various domains (see Figure 3). For each indicator, different kinds of data can be collected and reported.

Indicators of inputs include elements such as adequacy of physical facilities and teacher/pupil ratio. Educational process indicators include instructional accommodations, opportunities to learn, and partnerships with the community. Figure 3A serves as an example of educational input and resource indicators (additional examples are contained in Figures 3B–F and Tables 1 and 2. Figures 4A–4F illustrate indicators for educational processes).

Over the past several years numerous focus groups of stakeholders identified six domains of educational results, along with three domains that have been designated as educational processes. Within each of the results domains, stakeholders specified important educational results for which school personnel should be gathering data. These results are listed in Figures 5A–5F (as well as the student-oriented domains noted in Figures 4A–4C). Tables 1 and 2 provide specific suggested indicators for each of the results. The indicators are listed in a way that will enable district and state personnel to adapt them for use in either system or individual accountability.

Note that Tables 1 and 2 include results and indicators for a broad range of ages and abilities. For each indicator a filled square marks the developmental level at which it is suggested the data first be collected. For example, under the Domain “Academic and Functional Literacy,” there is the result “Students Demonstrate Competence in Communication.” One of the indicators for this is “Use and comprehend language that effectively accomplishes the purpose of the communication.” The darker square appears at Age 3, and flows throughout the developmental process. This depicts the idea that you would begin to monitor that particular outcome at Age 3, but would clearly want to continue to monitor this throughout
Figure 3. Framework for Educational Accountability with Domains, Indicators, and Sources of Information
the age ranges. For most students, the sophistication and level of ability expected would also rise accordingly.

We have prepared two additional documents relating to the Framework for Educational Accountability. The first focuses on using the framework with a post-school population, and considers the relationship to school-to-work and SCANS indicators. The second focuses specifically on academic results and indicators. We recognize that some states are restricted to looking at only academic results and indicators, and others may choose to start with academic domains and subsequently broaden to include other areas.

Possible Sources of Information for the Indicators

NCEO personnel asked numerous measurement experts to identify possible sources of information for the indicators, suggesting that they focus on existing or readily available sources of information. We believe a comprehensive accountability system will be more readily implemented if school personnel can rely on existing information rather than creating entirely new information collection systems. Possible sources of information are listed in the Appendices.

The NASDSE and NCEO Models Work Together

The NASDSE Model for a Balanced, Inclusive Accountability System provides a conceptual framework for accountability. NASDSE has chosen to focus on the distinction between accountability for system results and accountability for student learning outcomes, and has combined inputs and processes as the third component in their triangle. The NASDSE model is designed to show what a balanced system of accountability looks like.

The NCEO framework, on the other hand, focuses on how to implement an accountability model. The NCEO model differentiates educational inputs and resources from educational processes, and integrates educational results for systems and individuals. The framework is portrayed in a circular, interconnected fashion, as each component influences and is influenced by the other components.
Applications of the NCEO Framework

There are several examples of how the NCEO framework has been applied within educational settings. Three of these examples are highlighted below.

Iowa’s ISEE Results

The Iowa Special Education (ISEE) Results system is a mechanism for collecting information and developing reports that describe special education outcomes. Iowa adapted the outcomes in NCEO’s model as the basis for its accountability system. The specific “Goal Codes” used in Iowa are shown in Figure 6. These goal codes are used on students’ IEPs, and standards for acceptable performance are identified for each goal.

At the end of the goal period (usually the end of the school year), four decisions are made: (1) progress conclusion, (2) discrepancy conclusion, (3) independence conclusion, and (4) goal status. For example, the progress conclusion compares the student’s actual performance with the expected level of performance for that student. The discrepancy conclusion compares the magnitude of the discrepancy between actual student performance and acceptable student performance at the end of the goal period with the discrepancy at the beginning of the goal period. (See I-SEE Results 97 User’s Manual, 1997, for excellent examples of the decisions and details on how to make them.)

Minnesota Charter Schools

The NCEO framework has also been used as the basis for the evaluation of Minnesota’s charter schools (see Center for Applied Research and Educational Improvement, December 1996). Seven domains and multiple indicators of student performance within each area were used to evaluate 16 charter schools.

The following specific indicators allowed evaluators to collect a common set of data on schools that were widely divergent in approach to providing educational services:

Academic Performance
- Percent of students scoring above the 50th percentile on standardized tests of reading and math.
- Percent passing the Minnesota basic graduation tests in reading and math.
- Percent of parents reporting improved academic progress for their son or daughter.
Presence and Participation
- Absenteeism rate during the 1994-95 school year (last year for which complete data are available).

Contribution and Citizenship
- Percent of students who have been suspended or subjected to other disciplinary actions during the 1995-96 school year.
- Percent of students involved in criminal activity.
- Percent of students involved in school community projects during the 1995-96 school year.

Physical Health
- Percent of students reporting engagement in high risk behaviors.

Personal and Social Adjustment
- Percent of students satisfied with self
- Percent of students getting along with others.

Responsibility and Independence
- Percent of staff reporting satisfaction with student responsibility and discipline.
- Percent of students reporting responsible use of daily time.

Satisfaction
- Parent satisfaction with various aspects of the school.
- Student satisfaction with the charter school experience.
- Percent of students eligible for re-enrollment who re-enroll for the 1996-97 school year.

School Choice Evaluation

Minnesota has a school choice program called the High School Graduation Incentives Program (HSGI). The program is designed to meet the needs of students at risk of not completing traditional programs. Students who are (1) behind two or more years academically have dropped out of school, (2) are expelled from school, (3) are pregnant or a custodial parent, or (4) are at risk for other reasons, may enroll at any time during the school year in any school in the state. The impact of this program on students with disabilities was evaluated using an adaptation of the original NCEO framework (Lange & Ysseldyke, 1998). The seven domains used to guide the evaluation were:

- Academic and Functional Literacy
- Presence and Participation
• Contribution and Citizenship
• Responsibility and Independence
• Personal and Social Adjustment
• Physical Health
• Satisfaction

The findings for the indicators within these domains are summarized in Figure 7.

**Indicators for Participation**

**Students Present in Group/School Activities**
- Attending early care/education programs
- Attending residential or hospital settings, separate schools, separate classes
- Received intervention services and no longer needs them
- Absenteeism rate from early care/educational programs

**Students Participate in Group/School Activities**
- Participate in family activities
- Participate in the community with parents, siblings, or friends
- Actively participate in a variety of learning activities
- Participate in extracurricular activities during the school year
- Explore career options within the community
- Have employment experience before leaving school
- Move between school settings during the school year (mobility rate)
- Participate in district, state, and national testing programs (including alternate testing programs)

**Students Complete School**
- Drop out of school
- Earn a GED diploma
- Earn a certificate of completion/attendance
- Graduate with a diploma

**Families Demonstrate Access to Resources to Support Child**
- Families are knowledgeable about community resources and programs needed by their child
- Families are connected to appropriate service providers/agencies
- Families have adequate social and economic resources to appropriately parent children
- Families have parenting skills to anticipate and meet developmental needs of children
- Families live in safe environments (free of community and family violence, and substance abuse)

**Families Demonstrate the Presence of Family Support and Coping Skills**
- Families use community resources and programs needed by students
- Families provide environments supportive of their child's education and learning
- Family members attend or participate in school/community-based programs in which their child is enrolled
- Family system positively supports child's development
- Families are prepared to cope with student's needs after student leaves school

Indicators for Accommodation

Students Use Enrichments, Adaptations, Accommodations, or Compensations Necessary to Achieve Outcomes in Each of the Major Domains

- Use accommodations to participate in activities in home, school, and community environments
- Use accommodations to get around in their environments
- Use accommodations to communicate
- Use accommodations to manage personal needs
- Use accommodations for academic purposes
- Aware of necessary enrichments, adaptations, accommodations, or compensations needed to function in variety of home, school, and community settings
- Demonstrate ability to ask for assistance to access needed enrichments, adaptations, accommodations, or compensations

### Indicators for Academic and Functional Literacy

**Students Demonstrate Competence in Communication**
- Use and comprehend language that effectively accomplishes the purpose of the communication
- Follow simple directions
- Follow multi-step directions

**Students Demonstrate Competence in Problem-Solving Strategies and Critical Thinking Skills**
- Demonstrate curiosity, persistence, and exploratory behavior in play and age-appropriate activities
- Demonstrate an understanding of cause and effect
- Begin to participate in problem solving
- Generate, test, and evaluate solutions to concrete problems
- Demonstrate problem solving and critical thinking skills

**Students Demonstrate Competence in Pre-Academic Skills**
- Demonstrate an understanding of basic relational concepts
- Recognize that symbols/objects can be used to represent other objects and events
- Demonstrate early literary skills (e.g., sequencing events, recognizing and naming letters)
- Demonstrate the ability to recognize that ideas and thoughts can be represented in oral and written language
- Demonstrate an interest in books and listening to stories
- Demonstrate basic mathematical concepts
- Demonstrate skills in listening and attending
- Become motivated and actively involved in learning tasks

**Students Demonstrate Competence in Academic Skills (math, reading, and writing)**
- Demonstrate competence in math to function in home, school, and community environments
- Demonstrate competence in reading to function in home, school, and community environments
- Demonstrate competence in writing to function in home, school, and community environments
- Demonstrate excellence in math, reading, and writing skills
- Demonstrate need for remediation

**Students Demonstrate Competence in Other Academic and Non-Academic Areas**
- Demonstrate competence in other academic areas (science, foreign language, geography, social studies, etc.) to function in home, school, and community environments
- Participate in and enjoy the arts (fine and performing)

**Students Demonstrate Competence in Using Technology**
- Demonstrate ability to use technology (e.g., tape recorders, computers, etc.)
- Demonstrate ability to apply technology to enhance functioning in home, school, and community environments

---

*Figure 5A. Indicators for Academic and Functional Literacy Domain*
**Indicators for Physical Health**

**Students Demonstrate Age-Appropriate Physical Development**
- Growth and physical development in expected range
- Receive appropriate nutrition (e.g., not obese or undernourished)
- Have had serious injuries that require medical attention
- Abuse or neglect reported to authorities

**Students Have Access to Basic Health Care**
- Receive age-appropriate immunizations
- Receive health care supervision including education, diagnosis, and treatment services
- Have dental examinations and appropriate treatment

**Students are Physically Fit**
- Actively engage in large motor play activities
- Meet individualized standards of physical fitness

**Students are Aware of Basic Safety, Fitness, and Health Care Needs**
- Aware of basic safety precautions and procedures
- Aware of basic fitness needs
- Aware of basic health care needs
- Aware of the dangers of use and abuse of tobacco, alcohol, drugs, poisons, and medicines
- Recognize signs of drug and alcohol use, and dependence
- Aware of human reproduction and prevention of sexually transmitted diseases
- Know when, where, and how to access health care

**Students Make Healthy Lifestyle Choices**
- Aware of nutritional choices
- Make good nutritional choices
- Participate regularly in sports, recreational, or exercise activities
- Indicate use of tobacco, alcohol, or drugs
- Indicate having had unprotected sex

**Sources of Information on Domains and Indicators**
Indicators for Responsibility and Independence

Students Demonstrate Age-Appropriate Independence
- Separate easily from parents/guardians in familiar and comfortable situations
- Initiate and follow through on activities
- Occupy self without continuous adult involvement
- Show concern for others, including family members
- Able to decide when help is needed and obtain it in an emergency
- Act responsibly in a family, group, or individual situation

Students are Responsible for Self
- Feed self with limited assistance
- Feed self and participate appropriately in mealtime routines
- Use the toilet with limited assistance
- Dress self with limited assistance
- Dress self
- Attend to own hygiene needs
- Follow basic safety rules
- Take care of own belongings
- Look to others for support
- Access a support network that effectively advocates for student
- Effectively advocate for self
- Prioritize and set goals, and persevere toward them

Students Get About in Environment
- Get to and from destinations within school (i.e., familiar locations)
- Get to and from a variety of destinations (e.g., walk, bicycle, use public transportation)
- Have an awareness of the larger community
- Complete transactions in the community (e.g., shop, to the library, bank, etc.)
- Know how to access community services (e.g., rehabilitation, counseling, employment, health, etc.)
- Have a driver's permit or license

Figure 5C. Indicators for Responsibility and Independence Domain

Sources of Information on Domains and Indicators
Indicators for Citizenship

Students Comply with Age-Appropriate Rules, Limits, and Routines
- Participate in routines in familiar environments
- Follow rules and limits

Students Accept Responsibility for Age-Appropriate Tasks at Home and School
- Help with simple tasks in natural environments
- Perform assigned classroom duties
- Show consideration of others and engage in helping behaviors

Students Comply with School and Community Rules
- Act as responsible citizen (e.g., recycle, help others, care about the environment, respect property)
- Understand work roles and responsibilities as student and citizen
- Comply with school rules (indicators can include expulsion/suspension rates, or rate students subjected to disciplinary actions)
- Act as law-abiding citizen (indicators can include vandalism rate and magnitude, crime rate and magnitude, and reported involvement in the legal system)

Students Volunteer
- Use interests and abilities to benefit others and contribute to the group
- Participate in school and classroom governance activities
- Volunteer time to school, civic, community, or non-profit activities

Students are Familiar with Voting
- Know civic structures and the roles and responsibilities of citizenship
- Know the significance of voting
- Aware of the procedures necessary to register and vote

Figure 5D. Indicators for Citizenship Domain
Indicators for Personal and Social Well-Being

Students Cope Effectively with Personal Challenges, Frustrations, and Stressors
- Deal appropriately with frustration and unfavorable events
- Differentiate familiar from unfamiliar people, settings, and situations
- Express feelings and needs in socially acceptable ways
- Demonstrate appropriate degree of self-control and responsibility
- Cope with personal challenges, frustrations, and stressors
- Demonstrate a knowledge and acceptance of the consequences of behavior

Students Possess a Good Self Image
- Demonstrate or acknowledge a positive sense of self-worth
- Identify strengths, skills, and needs

Students Get Along with Other People
- Initiate and respond to social contacts with other children
- Engage in extended social interactions with other children
- Engage in appropriate play with other children (e.g., parallel, associative, and emerging cooperative play skills)
- Initiate and respond to social contacts with adults
- Appropriately express needs to other children and adults
- Interact appropriately with other children
- Have friends own age and part of a social network
- Interact appropriately with adults (e.g., cooperation)
- Engage in productive group work
- Demonstrate skill in interacting and making decisions in social situations, including during interpersonal conflict

Students Respect Cultural and Individual Differences
- Recognize and respect similarities and differences between self and others
- Respect and show concern for others
- Acknowledge cultural, racial, ability, and family differences
- Participate in making the school and community welcoming and inclusive of diversity

Figure 5E. Indicators for Personal and Social Well-Being Domain
EDUCATIONAL RESULTS FOR SYSTEMS & INDIVIDUALS

Domains
- Academic and Functional Literacy
- Physical Health
- Responsibility and Independence
- Citizenship
- Personal and Social Well-Being
- Satisfaction
- Other

Indicators for Satisfaction

Children are Satisfied with Early Childhood Educational Experience
- Enjoy participation in early childhood settings
- Enjoy participation in educational settings

Students are Satisfied with Educational Experience
- Satisfied with accomplishments in school
- Indicate received what is needed to be successful
- Satisfied with progress toward achieving educational outcomes
- Satisfied with what is provided in school (e.g., curriculum, extracurricular, instruction, and supports)
- Satisfied with high school experience

Parents/Guardians are Satisfied with Children's Early Childhood/Educational Services
- Satisfied with how early childhood/educational services meet child's needs
- Satisfied with how early childhood/educational services meet family's needs
- Satisfied with own level of involvement in educational decision making

Parents/Guardians are Satisfied with Students' Educational Services
- Satisfied with students' level of accomplishment in academic and social areas
- Satisfied with what is being provided in school (curriculum, extracurricular, instruction, and supports)
- Satisfied with progress toward achieving educational outcomes
- Satisfied with high school experience
- Satisfied with extent student is prepared to live in society

Community is Satisfied with Children's Early Childhood/Educational Services
- Providers/education staff are satisfied with how support services meet child's needs
- Providers/education staff are satisfied with how support services meet family's needs
- Providers are satisfied with their own level of involvement with service-related decision making and delivery of services
- Community (policymakers, members of business community, general public) is satisfied with how childhood/educational services meet child's needs
- Community is satisfied with how early childhood/educational services meet family's needs

Community is Satisfied with Students' Educational Services
- Community satisfied with what is being provided in school (curriculum, extracurricular, instruction, and supports)
- Community satisfied with student progress toward achieving educational outcomes

</tbody>
</table>
**Figure 7. Findings for Students with Disabilities Attending HSGI Programs**

**Academic and Functional Literacy**
- On average, students \( (n = 59) \) attending alternative schools fell within the average range as measured by performance on two subtests (math and reading) of the Weschler Individual Achievement Test (WIAT [mean = 100, standard deviation = 16]). Achievement in the area of writing was consistently lower for all students (Reading = 93.2, average; Math = 88.5, average; Writing = 83.7, low average).
- For students with and without disabilities who persisted (stayed in school for the academic year with fewer than 30 absences \( [n = 26] \)), the average standard score on the reading subtest of the WIAT was significantly higher at Time 2 when compared to Time 1.
- At Time 1, for students with disabilities \( (n = 14) \), the average standard score in math was significantly lower than for students without disabilities \( (n = 45) \). Standard scores in reading and writing were lower, but there was not a significance difference.

**Presence and Participation**
- On average, students with and without disabilities who persisted completed credits expected for 1 high school year in the 9-month study duration.
- On average, students with disabilities were enrolled in school and attended school fewer days than students without disabilities.
- Half of all students surveyed report they would not be attending school if they were not in the alternative school.

**Contribution and Citizenship**
- Twelve percent of respondents from the student survey report they would be engaged in unlawful behavior if not in the alternative school.

**Responsibility and Independence**
- A significant difference was evident in the area of school responsibility behaviors as reported on teacher checklists at Time 1 between students who later dropped out of school and those who persisted with average ratings consistently lower for students who later dropped out of school.
- Teachers' and students' perceptions of students' demonstrated responsibility (on-task behavior, assignment completion, on-time behavior checklists) behaviors differed. Students consistently rated themselves higher in the area of responsibility and independence as compared with teacher ratings.

**Personal and Social Adjustment**
- Special education students reported a decrease in disruptive behavior that is validated by teacher report.

**Physical Health**
- Most frequently reported high-risk behaviors including marijuana use, alcohol use, tobacco use, sex with condom, and sex without protection. Reported participation was considerably higher than the national average.
- Despite evidence of engagement in high-risk behaviors, persisters \( (n = 28) \) maintained achievement within the average range over the academic year.

**Satisfaction**
- Overall, students report a high level of satisfaction with their alternative program.

Appendix A

Possible Data Sources for Early Childhood Indicators
Possible Data Sources for Early Childhood Indicators

Academic and Functional Literacy

- Parent/guardian observations
- Teacher observations
- Parent/guardian ratings using scales or checklists
- Teacher ratings using scales or checklists
- Parent/guardian survey or interview
- Teacher survey or interview
- Child survey or interview
- Record review
- Video-tape
- Play-based assessment
- Standardized assessment test data from state departments of education
- Classroom records of student participation on specific instructional units

Presence and Participation

- Data from state departments of education or human services, e.g. child count data
- State licensing agency records for private day care facilities, nursery schools, etc.
- Survey of private and community day care programs
- Records from state or school districts
- Survey of Early Childhood Special Education programs
- Public school program data bases
- State follow-up surveys for early intervention services
- Survey of Parents as Teachers programs
- Parent/guardian ratings using scales or checklists
- Teacher ratings using scales or checklists
- Child survey or interview
- Records of city or county recreational programs
- Survey of community organizations and/or park and recreation departments
- Data from the National Association for the Education of Young Children, or Early Childhood Institute on Mainstreaming
- Data from the National Center for Education Statistics

Family Involvement

- Case reviews
- Published satisfaction survey from state education and health agencies
- Parent/guardian survey
- Individual family survey or interview
- Child survey or interview
- Professional staff survey or interview
• Parent/guardian ratings using scales or checklists
• Teacher ratings using scales or checklists
• Survey of Parents as Teachers programs
• Records of public programs
• Records of parent/teacher organizations
• Program surveys
• Items from the National Center for Education Statistics’ National Household Education Survey
• Records or survey data from parent/family support organizations
• Survey of Head Start programs
• Records of parent/guardian participation in early childhood/school activities
• Records from state departments of social or family services
• Data from Children’s Defense Fund or other organization
• Local or state poverty rate statistics
• Community statistics on crime trends
• Data from state or local child protection services
• State demographic records on high risk indicators
• Data from home visits
• Data from local education agencies
• Case reviews of Individualized Education Plans
• Medicaid/Medicare records

Accommodation and Adaptation
• Data from local education agencies or state departments
• Case reviews of Individual Education Plans
• Records of pre-referral intervention activities
• Medicaid/Medicare records
• Parent/guardian survey or interview
• Individual family survey or interview
• Child survey or interview
• Parent/guardian ratings using scales or checklists
• Teacher ratings using scales or checklists

Physical Health
• Data from public school programs, screening clinics, physicians or hospitals
• Records from county or state departments of health or WIC programs
• Items from the National Health Interview Survey of Child Health (Rand Corporation, 1980)
• Participation rates in free or reduced breakfast or lunch programs sponsored with federal or state subsidies
• Usage rates of abuse hotline services
Data from state or local child protection services
Hospital or poison control center records showing trends and national comparisons
Hospital emergency records
Records from child care centers
School health records
Data from U.S. Department of Health and Human Services, Public Health Services
Parent/guardian ratings using scales or checklists
Teacher ratings using scales or checklists
Medicaid/Medicare records
Surveys of local health departments
Survey of local park and recreation departments

Responsibility and Independence
Parent/guardian survey or interview
Parent/guardian ratings using scales or checklists
Teacher ratings using scales or checklists
Informal parent/guardian observations
Informal teacher observations
Child survey or interview

Contribution and Citizenship
Parent/guardian observations
Teacher observations
Parent/guardian ratings using scales or checklists
Teacher ratings using scales or checklists
Parent/guardian survey or interview
Child survey or interview

Personal and Social Adjustment
Parent/guardian survey or interview
Teacher survey or interview
Parent/guardian ratings using scales or checklists
Teacher survey using scales or checklists
Parent/guardian observations
Teacher observations
Child survey or interview

Satisfaction
Parent/guardian survey or interview
Parent/guardian ratings using scales or checklists

96
Teacher ratings using scales or checklists
Provider survey or interview
Teacher survey or interview
Observation of education staff during interdisciplinary team activities
Community member survey or interview
Policymaker survey or interview
Parent/guardian observation or reports
Teacher observation or reports
Child interview or survey

Some of the individuals who suggested possible sources of data also cited assessments that might be helpful in collecting information on the indicators. The following list of published materials may be useful for some of the indicators. Inclusion in this list does not imply its endorsement by the National Center on Educational Outcomes or its funding agency.

**Battelle Developmental Inventory Screening Test**, Publisher: DLM Teaching Resources/Riverside Publishing

**Beginning Milestones**, Publisher: DLM

**Boehm Test of Basic Concepts- Preschool Version**, Publisher: The Psychological Corporation

**Bracken Basic Concept Scale**, Publisher: Psychological Corporation

**BRIGANCE Diagnostic Inventory of Early Development**, Publisher: Curriculum Associates

**Carolina Curricula: Preschoolers with Special Needs**, Publisher: Paul Brookes

**Child Behavior Checklist**, Publisher: Thomas M Achenbach

**Child's Observation Record (COR)**, Publisher: High/Scope Educational Research Foundation

**Denver Developmental Screening Test II**, Publisher: Denver Developmental Materials

**The Developmental Resource**, Publisher: Grune and Stratton

**Early Childhood Environment Rating Scale**, Publisher: Teachers College Press

**Early Coping Skills**, Publisher: Scholastic Testing Service

**Early Screening Inventory**, Publisher: Teachers College Press

**Early Screening Profiles**, Publisher: American Guidance Service

**Ecobehavioral Assessment of Social Interaction (EASI)**, Available from: Mary McEvoy, Ph.D., University of Minnesota

**Ecobehavioral System for Complex Assessment of Preschool Environments (ESCAPE)**, Publisher: Juniper Gardens Children’s Project, Bureau of Child Research, University of Kansas

*Family Resource Scale*, Publisher: Western Carolina Center

*Help for Special Preschoolers Assessment Checklist: Ages 3-6*, Publisher: VORT Corporation

*Home Observation for the Measurement of the Environment (HOME) Scale*, Publisher: University of Arkansas Press

*Inventory for Client and Agency Planning (ICAP)*, Publisher: DLM Teaching Resources

*Learning Accomplishment Profile- Diagnostic Edition*, Publisher: Kaplan Press

*National Health Interview Survey of Child Health (NHISCH)*, Publisher: Rand Corporation

*The Pictorial Scale of Perceived Competence and Social Acceptance for Young Children*, Publisher: University of Denver

*Preschool Language Scales*, Publisher: Psychological Corporation

*The Primary Program*, Publisher: University of Nebraska

*Rating Individual Participation in Teams*, Available from D.B. Bailey, UNC- Chapel Hill

*Scales of Independent Behavior (SIB)*, Publisher: DLM Teaching Resources

*Social Attributes Checklist*, Publisher: Clearinghouse on Elementary and Early Childhood Education

*Social Skills Rating System*, Publisher: American Guidance Service

*System to Plan Early Childhood Services (SPECS)*, Publisher: American Guidance Service

*Temperament Assessment Battery for Children*, Publisher: Clinical Psychology

*Vineland Adaptive Behavior Scales*, Publisher: American Guidance Service

Appendix B

Possible Data Sources for School-Age Indicators
Possible Data Sources for School-Age Indicators

Academic and Functional Literacy
- Teacher observations of student in academic environments
- Student contracts, portfolios, or performance records
- Parent/guardian survey or interview
- Teacher survey or interview
- Teacher ratings
- Student survey or interview
- Peer survey or interview
- School or district results from statewide assessment program
- Performance on language, mathematics, reading or writing tests
- Performance-based assessment results
- Results of speech or language assessments (for students receiving services)
- Selected items from U.S. census on percentage of students who are “linguistically isolated” (living in a household where no one over age 14 speaks English fluently or as their only language)
- Observations of student performance and scaling responses using rubrics from existing problem-solving and critical thinking skills materials
- School or district participation records in speech, debate, or theater
- Selected items from the National Center for Education Statistic’s National Assessment of Educational Progress
- Comparison of performance on tasks to the U.S. Department of Education’s Youth Indicators 1993: Trends in the Well-Being of American Youth
- Analysis of teaching plans
- Inventory of technology available to school populations in the school or district
- Ratings of success after six months in next environment
- Reports by the U.S. Office of Technology Assessment (OTA)

Presence and Participation
- School or district statistics
- State education department records or annual state reports to U.S. Office of Special Education Programs
- Parent/guardian survey or interview
- Student survey or interview
- Peer survey or interview
- School enrollment and attendance records, including transfers to other schools within the district and to other districts
- Student medical records (consent required)
- Number of students suspended, expelled, and average length of all suspensions and expulsions
• Data from the Office of Special Education and Rehabilitative Services, U.S. Department of Education
• Testing records from local schools or districts, state departments of education and relevant national agencies
• District special education records
• Survey/interview of building principal, school psychologist, or special education staff
• District records of open enrollment patterns
• Private school enrollment records
• Weekly probe analysis of lesson plans to measure average and range of different planned activities
• Teacher ratings of active student participation
• Systematic observation of students
• Participation rates on project fairs
• Rates of homework completion
• Attendance records of student-sponsored events
• Membership rosters in school clubs
• Transportation records
• School record or record from community agency of student participation in community activities
• Selected items from the National Center for Education Statistics’ National Assessment on Educational Progress
• Selected items on programs and practices from the biennial Elementary and Secondary School Survey (conducted by the U.S. Department of Education’s Office of Civil Rights)
• Selected items from the 1993 National Household Education Survey
• Selected items from the National Center for Education Statistics’ National Education Longitudinal Study
• Records from national testing program (e.g. NAEP, NELS)
• Private agency records (e.g. ACE, ACT, ETS)
• State reports to U.S. Office of Special Education Programs
• Vocational education follow-up records
• Student transcripts and graduation records obtained from districts
• Records from Adult Education Office in Washington, D.C.
• American Council on Education- state reports on GED testing and test results

Family Involvement
• School district records of program participation
• Attendance or service records from community agencies or programs
• Appointment records of school counselors or building principals
• Parent/guardian survey or interview
• Teacher survey or interview
• Student survey or interview
• Peer survey or interview
• School volunteer and visitation records
• Parent/guardian attendance rates at school events and meetings
• Teacher records
• Records from state or local child protection services
• Records from state public health, social services or mental health agency
• Selected items from the 1993 National Household Education Survey on parent/guardian participation in school and home supports for children's education
• Selected questions from the National Center for Education Statistics' Schools and Staffing Survey on parent/guardian participation

Physical Health
• Teacher survey or interview
• Family survey or interview
• Student survey or interview
• Peer survey or interview
• Student health screenings
• Report of cafeteria staff regarding student nutritional choices
• Student achievement or performance in health and nutritional coursework, physical education curriculum, basic safety curriculum, and basic fitness curriculum
• School or district statistics
• Selected items from the U.S. Department of Education's Youth Indicators 1993: Trends in the Well-Being of American Youth
• Teacher observation
• Family inventory of sports equipment
• Membership in athletic teams, clubs or attendance at camps
• Participation records from community agencies/groups (i.e. YMCA, YWCA, Scouts, City Parks, etc.)
• School accident records
• School health records on number and percentage of students who report illness
• Selected items from the 1993 National Household Education Survey
• Peer reports
• School or district performance records in the President's Physical Fitness program
• Comparison of school or district data to findings reported in the National Center for Education Statistics' National Education Longitudinal Study
• Selected items from the National Institute on Drug Abuse's National Household Survey on Drug Abuse
• Selected items from the National Center for Health Statistics' National Health Interview Survey
• Administrative school records of violations
• Biannual Center for Disease Control Youth Risk Behaviors Survey (YRBS)
Skin fold test for obesity/underweight
Report nutritional choices within past week or day to assess good and poor choices
Finger-prick cholesterol check
Participation in sports, (competitive and intramural) and clubs
Selected items from adaptive behavior scales or checklists (e.g. Responsibility and Independence Scale for Adolescents, PASS, Scales of Independent Behavior)
State examinations on Health
Fitness tests and physical exams

Responsibility and Independence
Teacher observations in free time situations (e.g. recess, lunch, before and after school)
Records of parent/guardian-teacher conferences
Parent/guardian survey or interview
Teacher survey or interview
Student records regarding on-time assignments and finished assignments
Student survey or interview
School or district records
Data on use of personal care assistant services
Lost and found reports in building or district
School counselor records
Teacher observation of cooperative learning groups
Teacher observation of personal appearance
Results of teacher assessments, e.g. the Vineland Adaptive Behavior Scales or the Performance Assessment for Self-Sufficiency (PASS), Responsibility and Independence Scale for Adolescents, Scales of Independent Behavior
Open-ended test

Administrative records from post-secondary institutions

Contribution and Citizenship
Participation records of school or district-wide efforts (e.g. community food drives, recycling programs)
Records of school property damage or repair
Custodial records of trash and recycling patterns
Teacher observations of students during free time (e.g. recess, lunch, before and after school)
Parent/guardian survey or interview
Student survey or interview
Teacher survey or interview
Selected items from the 1993 National Household Education Survey on student suspension, expulsion, and school contacts regarding behavior
Selected items from the National Center on Education Statistics' *Schools and Staffing Survey* on the level of school behavior problems

- School or district discipline reports
- Attendance records in special community programs
- Teacher records of behavioral programs and contingencies
- Student achievement or performance records
- Content analysis of student products
- Classroom or school election records
- Participation records in student councils
- Student participation records in school or community productions (e.g. theater, musical concerts)
