A study used the Vocational-Technical Education Consortium of States (V-TECS) workplace skills inventory in a validation exercise for use of the inventory in Hawaii. A facilitator reduced the size of the V-TECS instrument. The resulting document was tested using several colleagues of the principal investigator before it was used in the field. The sample was stratified in a specific way. Small business owners, site managers of franchises, and shift managers of larger firms were selected for the interview group. Opinions of persons new to management who had only recently risen from the ranks were of primary interest. From the original V-TECS material, 12 generic criteria emerged: developing an employment plan; seeking and applying for employment opportunities; accepting employment; communicating on the job; interpreting the economics of work; adapting and coping with change; solving problems and critical thinking; maintaining safe and healthy work environment; demonstrating work ethics and behavior; demonstrating technological literacy; maintaining interpersonal relationships; and demonstrating team work. The survey of 57 items organized in the 12 sections was administered to 136 individuals (131 usable responses). A five-point Likert scale was used, with 5 as the highest ranking. Most ratings were generally high. Even the lowest rated item, assess entrepreneurship skills, received an above average rating of 3.27. (Appendixes include the V-TECS Workplace Skills Inventory and Inventory as Modified and Implemented in Hawaii.) (YLB)

Introduction

Legal compliance considerations

The Carl D. Perkins Vocational and Applied Technology Act Amendments of 1990, PL 101-397, had two major themes: access to occupational education opportunities by special populations and program improvement. This document, and others preceding it, is designed primarily to facilitate program improvements. Adequacy in meeting the needs of special populations is reported in the Annual Performance Report published each December.

In Section III (g) it is mandated that: “Each State board in consultation with the State council shall establish a limited number of technical committees to advise the council and the board on the development of model curricula to address State labor market needs. Technical committees shall develop an inventory of skills that may be used by the State board to define state-of-art curricula. Such inventory will provide the type and level of knowledge and skills needed for entry, retention and achievement in occupational areas taught in the State. The State board shall establish procedures for membership, operation, and duration of such committees consistent with the purposes of this Act. The membership shall be representatives of (1) employers from any relevant occupation for which the committee is established; (2) trade or professional organizations representing any relevant occupations; and (3) organized labor where appropriate.”

The State council has been replaced by the Workforce Development Council, which is administratively attached to the Department of Labor and Industrial Relations. The Workforce Development Council is consultative to the State Board.
Rationale

When teaching a subject that clearly has occupational implications, it is important to reference that which is taught with what employers say is relevant. There should be congruence between prescribed educational programs and that which industry thinks is relevant. In Hawaii, the general assumption is that most of the existing curricula are appropriate for the various student populations for which they are offered. However, research has indicated that there is a need for more precise skills identification and more precision in the measurement of the acquisition of those skills. More efforts are needed in the placement of graduates in relevant, “well paying” jobs and those with the prospect of a promising career ladder.

The data reported from the Hawaii Department of Labor and Industrial Relations and other sources indicate that most employment opportunities are found in such comparatively low paying fields as sales, cashiering, waiter/waitress and janitor. Self-sufficiency then becomes the question.

What is needed in Hawaii is a “skilled” workforce. The State needs to develop the capacity to compete for the high technology jobs. To attract new industries, the existence of a skilled work force is the most important inducement for new industry.
Hawaii's Experience with Technical Committees

For several years, the Office of the State Director for Vocational Education, through the mechanism of the federally mandated Technical Committees, has prepared inventories of "skills, knowledge, and personal attributes." These inventories have been developed to be appropriate to Hawaii's unique geographical situation and special workplace requirements. Inventories have been prepared and tested in the areas of

1. Electronics
2. Automotive technology
3. Child care
4. Gerontology
5. Computer programming
6. Graphic arts
7. Accounting
8. Diversified agriculture
9. Food service
10. Drafting
11. Office administration and technology (secretarial)
12. Nurses aide
13. Computer repairer
14. Hotel front desk operations
15. Metals technology
16. Landscaping and turf management
17. Sales
18. Entrepreneurship
Generic Workplace Skills

The State, as a member of V-TECS (Vocational-Technical Education Consortium of States), has identified generic aspects of occupations that have few regional considerations. Substantial efforts have been made to avoid duplication of effort. The technical committees have been directed to be sensitive to local conditions and requirements. The inventories have been, in effect, "home-grown." These taxonomies have reflected local cultural norms and have been reflective of the Hawaiian economy.

However, up until now the State Board through the auspices of its administrative arm, the Office of the State Director for Vocational Education (OSDVE), has not focused on the generic aspect of workplace placement. This has been done, to a certain extent, by the V-TECS consortium. Most efforts undertaken on a national basis need some refinement to accommodate local considerations. This study makes use of the V-TECS inventory developed nationally. It is in essence a validation exercise for use of the inventory in Hawaii. The inventory of concepts, skills and attributes considers most things associated with job placement success. Job placement success involves the process of successful solicitation of an employment opportunity. The inventory, as slightly modified, also includes the basic skills and understandings necessary for job retention and professional advancement. The primary purpose of this document is to provide data, elicited from local employers and supervisors, about the process of obtaining and retaining a good job.

A different approach has been used in the conceptualization of the technical committee. Traditionally, under the auspices of the Perkins Act of 1984, a Technical Committee was selected from a statewide pool of persons. These persons were selected for their special expertise, relevant experience and an understanding of the local industry. In the past, the technical committees developed several drafts of a given inventory with the assistance of an OSDVE staff member. When consensus was finally reached, the criteria identified were rated by a stratified sample of employers in the particular area under study. Frequencies and measures of central tendency were computed, analyzed, and published.

The process evolved with time, experience, and a more precise understanding of the industry and occupations being studied. This Technical Committee on Workplace Placement reflects broadly on "Concepts, Skills, and Attributes Necessary for Employment, Retention, and Promotion."
A committee, in the traditional sense, was not actually formed. In a departure from past procedures, the initial inventory was not developed by the OSDVE facilitator. As previously mentioned, it was derived from an available V-TECS instrument (refer to Appendix A). However, the facilitator did reduce the size of the V-TECS instrument that was used in Hawaii. The resulting document had a reasonable degree of face validity and was referenced against several of the principal investigator’s colleagues before it was used in the field.
Sampling

The sample was stratified in a specific way. Small business owners, site managers of franchises, and shift managers of larger firms were selected for the group to be interviewed. The principal investigator or facilitator was primarily interested in the opinions of persons who were new to management and who had only recently risen from the ranks. When a person becomes management, his or her attitudes about workplace values and organizational priorities may change. However, he or she is not that far removed from the “rank and file” as to preclude an understanding of their concerns and social priorities. He or she is aware of the concerns of employees as well as the priority of management.

The sample, when selected, revealed a strong bias for retail and service agencies. It might be noted that this is characteristic of the economy of the State of Hawaii as a whole. Because of the variance in the method in which the instrument was administered, the survey cannot be considered as meeting the standards of a structured survey methodology. Albeit, a good deal of meaningful information was collected through the pragmatic and generally effective process employed.

As previously suggested, it was decided to edit the V-TECS document. This was done to facilitate acceptance by the intended audience in the setting of Hawaii. So questions that seemed similar or identical were deleted and others not considered relevant to local conditions were either modified or changed. One entire section, “maintaining professionalism,” was deleted entirely. The jobs being addressed could not be considered “professional” using the traditional connotation of the word. The items contained in the section were covered, for the most part, in other parts of the inventory. The instrument as modified and employed is reproduced in Appendix “B.”
Conceptual Components and Their Specific Rationale

There were twelve generic criteria that emerged from the original V-TECS material forwarded by that organization for use in Hawaii. They were as follows: (1) developing an employment plan; (2) seeking and applying for employment opportunities; (3) accepting employment; (4) communicating on the job; (5) interpreting the economics of work; (6) adapting and coping change; (7) solving problems and critical thinking; (8) maintaining safe and healthy environment; (9) demonstrating work ethics and behavior; (10) demonstrating technological literacy; (11) maintaining interpersonal relationships; and (12) demonstrating teamwork.

These topical headings and their sequencing were done by the V-TECS staff. There was no indication that any given criterion or group of criteria was weighted more heavily than another nor logical sequencing of items. However, the Hawaii facilitator decided not to change the section titles or the sequence in which sections and/or items were presented.

The following describes each cluster or section although the items are largely self-explanatory.

Developing an employment plan

Some young people, seeking their first job, or older people, who have been out of the job market for years, have an unclear idea about the protocol of finding a position. For that matter, the same could be said to be true for most people trying to find a job. In some cases, finding any kind of a job, often becomes the immediate objective. The situation may require a great deal of expediency. Young people just
leaving high school, junior college, or a four-year college have often been exposed to some type of counseling in the general area of career planning. Unfortunately, for high school students this orientation usually takes place during the ninth grade or freshman year. Few high school freshmen intend to seek immediate employment at the age of 15. As a result, the skills of “resume writing” or “setting up a preliminary interview” have been forgotten or displaced by the time they must seek full-time employment. Many college students may never have held a full-time job. So some structure or sequence needs to be identified in what may be a long and challenging process.

Seeking and applying for employment opportunities

This involves the “nitty gritty” of that which is discussed in the first section. Hopefully, the prospective applicant has a general field of occupational interest. However, it is important to remember that the reference point is Hawaii in 1998.

Because of the State’s prolonged economic slump, some applicants may be seeking any kind of employment. It may be an opening for which the applicant has only the most rudimentary skills and qualifications. Realistically, identifying those employers who are actually likely to be hiring is important to planning. The sequence of prescribed steps in the application process may vary from firm to firm. Many companies interview as many as 50 applicants for a single entry-level position. This, in fact, has been established in a number of employer surveys conducted by this principal investigator. Other employers may only consider a handful of applicants for a higher-level position.

Accepting employment

This section of the inventory deals primarily with “paperwork.” Most of the paperwork will have to be completed by a personnel specialist or clerk who specializes in personnel matters. An applicant needs to read the forms, ask for explanations, and complete the forms.
Communicating on the job

Prior research, conducted by this investigator and others, indicates that this is one of the most important factors in job retention and advancement. Writing coherently is important. Most employment does not require an exhaustive vocabulary. However, knowing how to write simple, comprehensible sentences is very important. Learning quickly the technical vocabulary of the occupation or firm is a real asset. It is important to be familiar with technical terms that are used in manuals associated with a job.

Interpreting the economics of work

The new employee needs to identify the role and responsibilities of the employer's business in relationship to the larger economic structure; and, as new employee, what is expected of him/her as it relates to business opportunity.

Adapting and coping with change

All social units are dynamic and in a constant state of change or evolution. Appointment of a new supervisor with a different administrative style than the previous occupant takes some adjustment. Organizations are under constant informal or formal reorganization. An applicant who aspires to persist and prosper must be sensitive to these changes. Accommodating changes in management styles, new technology, and/or agency priorities is essential to organizational survival.

Solving problems and critical thinking

Critical thinking is necessary in the analysis of a problem or opportunity. It is also important to analyze the problem, to determine alternative solutions, and to make a decision.
Maintaining safe and healthy work environment

A new employee should be aware of the safety requirements of the work environment. He/she must identify and observe safety and health policies and procedure.

Demonstrating work ethics and behavior

Everyone should be familiar with the general rules, regulations, and policies that govern organizational and interpersonal relationships in the workplace and to act ethically and professionally at all times.

Demonstrating technological literacy

New employees should be aware of the generic technical skills they are expected to have mastered prior to their employment. Once employed, they should be willing to hone those technical competencies that are essential to their job.

Maintaining interpersonal relationships

This section describes those behaviors that a new employee must value in order to be a productive worker, such as recognizing individual diversity and displaying a positive attitude.

Demonstrating team work

A new employee should evaluate the "team" and "individualistic" aspects of the assigned job and the benefits of task completion resulting from multiple input.
Qualifications and Approach
Taken in Reporting the Results

As previously indicated, there are twelve categories of items listed on the form used in this study. The one commonality is “employment.” The items involve considerations affecting and involving both management and labor. Some categories have more items than others. The report primarily describes the quantitative findings of the undertaking. It tells a great deal about the “employability criteria” used by persons newly appointed to first-level manager. The respondents range from newly appointed shift managers at major fast food outlets to those who have been recognized as preeminent small business persons.
Administration of the Survey

The survey was administered to 136 individuals on the island of Oahu. This was done between April and November of 1998. One hundred and thirty-one of the interviews were deemed suitable for use. The sample was stratified geographically by region. Areas from Haleiwa to Hawaii Kai were canvassed. Although the entire state could not be covered, approximately 82 percent of the population of the state resides on Oahu. The areas of Waianae, Haleiwa and Waimanalo resemble, in many respects, the rural settings found in the neighbor islands. The suburban areas of Kailua, Hawaii Kai, and Pearl City also resemble the suburban-like areas of many of the neighbor islands. Downtown Honolulu is considered the only metropolitan area in the state. This urban setting was covered with an intensity appropriate to its population.

As previously mentioned, the persons solicited for interview were predominately from the first-level management of service or retail firms. It was assumed that they would have the perspective of both management and labor. The great majority of those interviewed were in their first management-level position. No human resource specialists or personnel directors, characteristic in the organization of large firms, were solicited for inclusion in this sample. Only persons having day to day contact with people having line responsibilities and those dealing with the public were included. The human resource offices and personnel officers of larger firms have been previously consulted on various studies of a, somewhat, similar nature.

The interviews and data collection process took between fifteen minutes to two hours to conduct. This did not include travel time. Often the participants wanted to study the questions in advance before responding. Some of the data collection took as many as three visits to obtain a usable interview form. All necessary clarifications of terms were provided by the facilitator or principal investigator. About one in
seven of those contacted declined to participate. The reason most frequently given for declining was the lack of time. However, others managed time to provide detailed information and offer extensive anecdotes to their quantified responses.

The instrument included 57 items organized in twelve sections or components. The items, as such, solicited assessments of the relative importance of various concepts, skills, and attributes associated with successful employment. A five point Likert scale was used. A respondent could indicate his or her perception of the relative importance of the item by giving it a very high, or “5” rating; or a “very low,” or “1” designation. A “3” rating indicated a “average” or noncommittal assessment. A “2” rating suggested a less than average assessment, and a “4” represented a high or higher than average rating. All comments and other expressed qualifications were recorded on the form itself. The principal investigator conducted all data and information gathering activities.

The data were coded and reduced by the staff of OSDVE. Marginals and measures of central tendency were computed. The items were ranked in order to achieve additional perspective. Please see Table 13 on page 37.
Findings

One of the primary purposes of career counseling is to match a person's personal interests with relevant employment opportunities. Hopefully, when one enters the job market on a full-time basis, he/she will be able to obtain a position that is consistent with his/her primary interests.

Most of the respondents in the survey agreed that "matching interest to employment area" was an important consideration. In about 79 percent of the recorded assessments, respondents rated this item as either an important or very important consideration (refer to Table 1). The average rating was 4.10. Only three persons in the sample gave this consideration a rating of less than "3".

Equally important, to some people, is matching the ability or potential of an individual to do a given job with that job. On item 1.2 of the inventory, participants were asked if it was important to "Match aptitudes with employment area." Nearly half of those canvassed thought this was of paramount importance (refer to Table 1). However, the remainder of the study population was not as confident that this was as important. The average score was only 3.75.

On item 1.3, "Identify short term work goals," most felt that it was important to do this. However, in relation to the other things measured in this section, it was not relatively important. The average rating was a 3.67, which was the lowest ranked mean score for that particular section (refer to Table 1).

The last two items in the section devoted to "Developing an employment plan" were very similar to the first item. "Attitudes" and "personality types" were similar but not exactly the same as "interest." It might be presumed that "attitudes" were judged more important than interest. Seventy-seven percent thought a "positive attitude" rated a
“4” or “5” (refer to Table 1). Previous research conducted by this principal investigator or facilitator has indicated that “positive attitude” is of paramount value to most employers. Almost half thought it was critically important to match one’s personality to a job.

Section 2 deals with the actual application process. Item 2.1, “Locate employment opportunities” seemed somewhat confusing to many of those who were interviewed. Many wondered whether this item meant “finding a given opening” or if it involved simply identifying the mechanism for getting employed with any firm or agency. Participants in the survey were counseled that the former interpretation was that which was intended. Nearly two-thirds of the responses were higher than “3.”
Item 2.2 asked how important it was for the applicant to identify the requirements of a position opening. Most respondents thought this was an important consideration. Over 75 percent rated this item as being “important” (“4”) or “very important” (“5”). Please refer to Table 2.

"Locate resources for finding, employment," which is item 2.3, was interpreted to mean searching classified advertisements, contacting an employment agency, or soliciting the services of friends. Approximately half (54 percent) gave this item an above average assessment (refer to Table 2). The mean score was 3.60. "Preparing a resume" was rated much higher—4.07.

Learning how to prepare a resume often takes place in high school. Counselors, both from the educational and business communities, can assist an applicant with this. Many of the firms interviewed were hiring people at a level that did not require a resume or even an in-depth application. As a consequence "Preparing a resume" was not as valued as it might have been for higher-level positions. Only 16 percent gave the item a below average rating (refer to Table 2). The mean score was 4.07.

Item number 2.5 involved preparing for an interview. Only thirteen percent of the participants in the canvas felt interview preparation warranted a low rating (refer to Table 2).

Item 2.6 addressed the preparation of a letter of application. Nearly 55 percent rated this item a “4” or “5”.

Writing an interview follow-up letter did not seem of particular importance to those interviewed. The average rating was only 3.33 (refer to Table 2). The relative ranking of the item was 55 out of a possible 57. In other words, 54 of the items on the interview schedule were of greater importance.

The next item, 2.8, was described as “Complete application form.” The average rating was 4.11. The largest number of respondents, 51 percent, gave this item the highest rating (refer to Table 2).

Item number 2.9, “Identify attire for job interview,” meant “appropriate attire.”

The inclusion of section 3.0 in the inventory involved “Accepting Employment.” A new employee must understand the nature of accepting a job, especially in light of getting one's name added to the payroll. Item 3.1, “Complete Employee's Withholding Allowance,” generated an average score of 4.30 (refer to Table 3).
Section 4 dealt with aspects of communication skills—written, oral, and intangible skills such as interpreting body language.

Most respondents felt that sensitivity, in this area, was a desirable employee attribute. Only about 7 percent of the supervisors interviewed did not think that understanding body language was particularly important (refer to Table 4). The mean score was 3.96. This represented a comparatively low ranking.

An interesting dichotomy appeared on the item “Prepare written communication.” Although 87 percent of the supervisors thought written communication skills were somewhere between “moderately important” and “very important,” only 26 percent gave this attribute the highest priority (refer to Table 4). Once again, this may reflect the nature of their typical employees and the requirements of the jobs. Most of the supervisors interviewed were interested in filling jobs that did not require a of writing. The positions to which they generally hired did not require mastery of technical, written material.

It was more important that prospective employees “Follow written directions.” On item 4.3, 47 percent of those participating gave this item the highest rating possible (refer to Table 4). On this item, the mean score was 4.10.

Section 5 focuses on “Interpreting the Economics of Work.”

On item 5.1, “Describe responsibility of job assignment,” 53 percent of those participating in the survey gave this item a “5” or the highest rating possible (refer to Table 5). The mean was 4.35, and the item was ranked sixth out of the 57 workplace criteria (refer to Table 13). Clearly, the supervisors thought it was very important that an employee know what was expected of her/him.

Closely allied with the first item was item 5.2. This item was presented as “Describe responsibility of employer or management.” Seventy-nine percent of the supervisors rated this item “4” or “5” (refer to Table 5). The mean score of 4.22 was the second highest in this segment of the instrument (refer to Table 13).

The next item required some explanation on the part of the interviewer or principal investigator. The item described as “Investigate opportunities and options for business ownership,” presented some difficulty in interpretation. Only one in five of those interviewed gave this item the highest rating (refer to Table 5). The
average score was 3.33, and this was the next to the lowest of the 57 items when placed in rank order (refer to Table 13).

Item 5.4, described as "Assess entrepreneurship skills," ranked last with a mean rating of 3.27 (refer to Tables 5 and 13).

On the item, "Identify work-related terminology," no respondent gave this a "1" or the lowest rating (refer to Table 5). The average rating was 3.91.

The first item in section 6 was "Evaluate transition plan." Less than one in five found this to be a very important attribute (refer to
Table 6). The mean for this item was 3.61 and the item ranked 50th out of the 57 items in relative importance (refer to Table 13).

</tbody>
</table>

On the next item which was described as “Exhibit ability to handle stress,” three out of four of the respondents gave this item an above average rating (refer to table 6). The average score was 4.07. It was considered important by the respondents.

The last item in section 6, also received mixed reactions from employers and supervisors. Thirty-six percent of the supervisors gave this the highest rating (refer to Table 6). However, others were not so sure that this was a characteristic to be valued.

One of the larger sections of the inventory involved “problem solving” and “critical thinking.” The first item in this section involved the ability to identify a problem. Over half of the new supervisors and managers gave “problem identification” the highest rating (refer to Table 7). The mean was a high 4.35 and the item ranked 5th overall (refer to Table 13).
Identifying a solution to the problem at hand was considered as almost equally important. An equal number of supervisors rated this item a “5” as had the previous item (refer to Table 7). However, the overall average rating was a somewhat lower value of 4.30. Reasoning skills, which are an inherent part of problem identification and solution selection, was ranked even higher by some of the respondents (refer to Table 7). Almost 60 percent of the respondents gave this their highest assessment. However, the overall assessment averaged 4.18.

As with all of the items that involved problem solving and critical thinking criteria, “Evaluate options” as a criterion for employability received an average rating of 4.19, and only three participants in the survey rated it a less than average assessment (refer to Table 7).

</table>
Item 7.5, "Set priorities," received the highest rating available on the scale from 47 percent of the respondents (refer to Table 7). The clear mode on this, as with all but one of the items in this section, was "5."

On "Select and implement a solution to a problem," the average rating was 4.18. However, this was not as high as the item involved with "Problem identification." Forty-four percent of the participants in the sample rated this item a "5."

"Evaluate results of implemented option" was given a higher than an average assessment of "3" by about 74 percent of those participating (refer to Table 7).

Item 7.8 involved "Access employer and employee responsibility in solving a problem." Only 4 percent of the respondents did not think this was an important consideration (refer to Table 7). It received an average rating of about 4.10.

Section 8 involved the matter of safety. This section of the instrument produced some of the highest ratings.

Fifty-six percent of the respondents gave the "Identification of safety and health rules and procedures" their highest rating (refer to Table 8). The overall assessment of the sample population produced a mean score of 4.30. The ability to demonstrate proficiency in the use of equipment involved in the operation of a job was even more important. Fifty-eight percent of the respondents rated this item "5" (refer to Table 8). "Act during emergencies" was also important. Almost three out of four respondents gave this item an above average rating (refer to Table 8). The mean score on this criterion was 4.23.

On item number 8.4, "Maintain work area," the mean score was 4.26, and fewer than 8 percent of those who were questioned gave this item a score less than the average rating of "3" (refer to Table 8). The ability to identify hazardous substances in the workplace was also highly valued. Here 59 percent of those questioned gave the item the highest rating possible (refer to Table 8). The mean was 4.29.

Section 9 contained items which surface when decisions must be made regarding retention or promotion of an employee. For instance, item 9.1 sought to determine if the employee understands the rules, regulations, and policies of the workplace. Only ten percent of those asked felt that this was less than an “average” consideration (refer to Table 9). The average rating was 4.14, which fell just about at the median in the ranking of items (refer to Table 13).

“Practice cost effectiveness” was the second item in terms of perceived importance in this section. Almost all the respondents were favorably inclined to this item. However, there was a range in the responses from an average rating of “3” to a much stronger endorsement of “5” (refer to Table 9). The average score was 4.08.

</table>

On item 9.3, "Practice time management," 83 percent rated the item a "4" or "5" (refer to Table 9). The average score was 4.27, and the mode was "5."

On item 9.4, which involved employees taking responsibility for their decisions and actions, 50 percent rated the item "5" (refer to Table 9). The mean score was 4.29.

The next two items were fairly similar in context. They involve "initiative" and "assertiveness." On item 9.5 "Display initiative," nearly half of those surveyed thought this quality warranted a "5"
rating (refer to Table 9). The average score was 4.32. The aggregate rating for “Display assertiveness” was slightly lower. The participants in the survey rated this item 4.25, and about 82 percent felt that the concept warranted an above average rating (refer to Table 9).

The highest rated item in this particular section and for the inventory as a whole was the last one, “Demonstrate willingness to learn.” It was considered the highest of all workplace skills listed. Fifty-five percent of the supervisors surveyed awarded this item the highest rating (refer to Tables 9 and 13). It might be implied from this finding that employers are willing to hire someone who does not demonstrate job skills but has the willingness to learn.

Section 10 was titled “Demonstrate technological literacy.” About one in four felt that “keyboarding” warranted a high rating (refer to Table 10). However, the average score was only 3.39 and that was near the bottom of the ranking of all items (refer to Table 13). There was a similar pattern of response on the item “Demonstrate basic knowledge of computing.” Less than one in five thought the criterion warranted the highest rating (refer to Table 10) and the average rating was 3.52.

Item 11.2 was described as "Channel and control emotions." Forty-five percent of the respondents gave this the highest rating (refer to Table 11). On this item, as on each of the others in this section, the criteria were deemed important. The average score was 4.12.

One of the things that managers are expected to do is to settle conflicts in the workplace. About 46 percent of those in the survey thought this was highly important (refer to Table 11). The mean score was 4.00. That aggregate score placed the item below the median of all scores (refer to Table 13).

Fifty-six percent of the supervisors rated "positive attitude" a "5." The mean of 4.33 was one of the highest aggregate scores observed.
The last section of the inventory is entitled “Demonstrating team work.” On the item “Match team member skills and group activity,” 70 percent of the supervisors responded with a “4” or “5.” The modal response was “5” and the aggregate mean was 4.09 (refer to Table 12).

On item 12.2, “Work with team members,” 48 percent of those participating in the study rated this item a “5” (refer to Table 12).

Item 12.3 is “Complete a relevant task.” Almost everyone agreed with this criteria. The average score, 4.38, placed this item second in the overall ranking (refer to Tables 12 and 13).

The final item on the inventory involved “evaluation.” Thirty-nine percent of the participants gave “evaluation” the highest rating, and the mean score was 3.88 (refer to Table 12).
Some Observations of a General Nature, Summary of Findings, and a Brief Discussion of the Results

Over the past two decades, there has been a good deal of discussion about standards and accountability. Traditionally, it was possible to review a person's certificates, diplomas, and transcripts to ascertain his/her generic preparation for the workplace. Now an applicant's achievement of competencies and standards are being carefully studied.

Many institutions have begun to rely on standardized test scores as an indicator of an individual's actual competency. Scores have also become an indicator of workplace readiness.

A prospective employer will look to those standards and competencies in ascertaining readiness of a job applicant. As a result, the business community has begun to demand that relevant skills be identified. Skills standards are then to be used to demonstrate an applicant's actual competence in a given area. The Carl Perkins Vocational Education and Applied Technology Act of 1984 first called for state-wide Technical Committees to ascertain the knowledge, skills, and attributes necessary to do a given job. Many states, including Hawaii, developed such committees. In Hawaii, 20 technical reports have been prepared to date.

The instrument used in this validation exercise was derived from the V-TECS Workplace Skills Inventory. It was initially modified in the interests of brevity and internal consistency.
There were 12 sections in the generic workplace inventory used by this particular study. Some items covered things relevant to the initial job search. Other sections involved factors dealing with retention and promotion.

Table 13 shows the complete rank order listing of all 57 generic workplace inventory skills used in this study.

It should be noted that most of the ratings, in this validation exercise, were generally high. Even the lowest rated item, “Assess entrepreneurship skills,” received an above average rating of 3.27.

Two of the top three ranked items involved the individual’s basic approach to the workplace. “Willingness to learn” was ranked highest and “Display a positive attitude” ranked sixth. However, there was only .8 of a point in the aggregate scores generated by the two items.

From the standpoint of supervisors, willingness to learn may be the most critical factor in workplace readiness. The second highest ranked item involved “Complete a relevant task.” The third and fourth highest rated criteria involved knowledge components. More specifically, they involved “Knowledge of equipment” and a clear understanding of the individual’s “job assignment” within the organization. The first of these knowledge components may reflect the importance of adjusting to the rapid growth in technology characteristics of many workplaces.

The item that was ranked fifth had to do with “problem solving.” The most important component of that section was “problem identification.” All other items were generally rated as being important, but the key element is perceived as realizing a problem exists. The data would tend to suggest that the process of solving the problem is really secondary.

As previously mentioned, the sections and items were organized in a manner that suggested an intended sequence. The first section dealt with the initial activities in finding a job. The final section involved an assessment of the employee in terms of being a “team player.”

In the first section, the respondents were most likely to value matching an individual with the job. The items measuring “interest,” “attitudes,” and “personality” were rated as high considerations.
The actual process of application was the central consideration of the second section. Preparing an attractive resume, completing the application neatly and completely, and dressing appropriately for the interview were considered quite important. No one reported hiring anyone without an interview. Few seemed to place a high value of a follow-up letter. However, this may have been due to the level at which those surveyed did most of their hiring.

On the section dealing with communications, the supervisors gave highest marks to “following written communications.”

In Section 7, “problem solving” and “critical thinking” were addressed. Identifying the fact that a problem may exist received the most attention. Sorting through options, determining the best solution, and implementing that solution also were highly valued. All items on this section had an average rating of 4.00 or higher.

All of those interviewed appeared to have a sincere interest in safety and health considerations. They were particularly keen about “rules,” “procedures,” and “hazardous substances.”

Section 9 dealt with work ethics and behavior. “Initiative,” “time management,” and “assertiveness” were the things most valued by the managers and supervisors.

“Maintaining interpersonal relationships” was Section 11. Three items in the section involved controlling your temper, solving your problems and keeping positive. “Positive attitudes” in workplace situations has a high degree of validity and has appeared with reliability in employer satisfaction surveys conducted in Hawaii.

Section 12 seemed to imply that being a “team player” is the paramount quality of acceptable workplace behavior. “Complete a relevant task” was the highest rated item in this section. Most respondents thought teamwork was one good way to conduct business in the workplace.

Only two respondents gave “evaluation” less than an average rating.

Appendix A

V-TECS Workplace Skills Inventory
Tomorrow's worker must meet world-class standards, be a creative and responsible problem solver, have skills and attitudes on which employers can build, and fit into a high-performance organization.

The 98 Workplace Skills identified by commerce and industry across the country can help assure our workers are ready to meet the challenge.
Introduction

Workplace Skills

In September 1991, Illinois, in conjunction with V-TECS established an initial commerce and industry advisory group to identify the workplace skills needed by all employees. Individuals selected to participate represented large and small businesses from rural and urban settings. An extended advisory group of 49 individuals was also selected from the 23 V-TECS member states.

Information on workplace skills was collected from all member states then validated by the two advisory groups (listed on pages 9-11). A set of 98 workplace skills determined to be critical for every worker was developed. Essential knowledge, skills, and attitudes associated with each of the 98 skills were identified. These skills were then grouped into 13 duty areas and performance standards were set, instructional activities were designed, and an item bank was developed. The material was field tested in 16 states (see page 12).

Workplace skills are defined as the generic essential employment skills related to seeking, obtaining, keeping and advancing in any job. You may review the complete list of Workplace Skills on page 3. On pages 4-7, all of the Elements for one of the skills is shown. As you examine this example, remember that all these elements were developed for each of the 98 Workplace Skills.
Generic Workplace Skills

Workplace Skills

Duty/Task List

Page 1

DUTY/TASKLIST

Occupation: 001 WORKPLACE SKILLS

Duty/Task Description

A 001 DEVELOPING AN EMPLOYMENT PLAN
A 002 Match weaknesses to employment area.
A 003 Identify short term work goals.
A 004 Match attitudes to job area.
A 005 Identify personality type to job area.
A 006 Match previous capabilities to job area.
A 007 Identify career information from counseling sources.
A 008 Demonstrate a drug-free status.
B 001 SEEKING AND APPLYING FOR EMPLOYMENT OPPORTUNITIES
B 002 Locate employment opportunities.
B 003 Identify job requirements.
B 004 Prepare an application.
B 005 Prepare for job interview.
B 006 Identity conditions for employment.
B 007 Evaluate job application.
B 008 Identity skills in applying for a job.
B 009 Write job application.
B 10 Write interview follow-up letter.
B 11 Complete job application form.
B 12 Identity drive for job interview.
C 001 ACCEPTING EMPLOYMENT
C 002 Apply for social security number.
C 003 Complete state and federal tax forms.
C 004 Accept or reject employment offer.
C 005 Complete Employee's Withholding Allowance Certificate Form W-4.

Page 2

DUTY/TASKLIST

Occupation: 001 WORKPLACE SKILLS

Duty/Task Description

D 001 COMMUNICATING ON THE JOB
D 002 Communicate daily with clients.
D 003 Use telephone etiquette.
D 004 Interpret the use of body language.
D 005 Prepare written communication.
D 006 Follow written directions.
D 007 Ask questions about task.
E 001 INTERPRETING THE ECONOMICS OF WORK
E 002 Identify the role of business in the economic system.
E 003 Identify responsibilities of employee.
E 004 Identify company areas and appearance standards.
E 005 Participate in meetings.
E 006 Identify work-related terminology.
E 007 Identify how to treat people with respect.
F 001 MAINTAINING PROFESSIONALISM
F 002 Participate in employment orientation.
F 003 Assess business image, products and/or services.
F 004 Identify positive behaviors.
F 005 Identify company areas and appearance standards.
F 006 Participate in meetings.
F 007 Identify how to treat people with respect.
G 001 ADAPTING AND COMING CHANGE
G 002 Identify elements of job transition.
G 003 Formulate transition plan.
G 004 Identity implementation procedures for a transition plan.
G 005 Evaluate the transition plan.
G 006 Examine ability to handle stress.
G 007 Write a letter of resignation.

Page 3

DUTY/TASKLIST

Occupation: 001 WORKPLACE SKILLS

Duty/Task Description

H 001 SOLVING PROBLEMS AND CRITICAL THINKING
H 002 Identify the problem.
H 003 Identify solutions to a problem and their impact.
H 004 Employ reasoning skills.
H 005 Evaluate options.
H 006 Select alternatives.
H 007 Select and implement a solution to a problem.
H 008 Evaluate results of implemented action.
H 009 Organize workloads.
H 100 Maintain employer and employee responsibility in solving a problem.
I 000 MAINTAINING SAFE AND HEALTHY WORK ENVIRONMENT
I 001 Identify safety and health rules and regulations.
I 002 Demonstrate the knowledge of equipment in the work place.
I 003 Identify conservation and environmental practices and policies.
I 004 Act during emergencies.
I 005 Maintain work area.
I 006 Identify hazardous substances in the work place.
J 000 DEMONSTRATING WORK ETHICS AND BEHAVIOR
J 001 Identify established rules, regulations, and policies.
J 002 Practice cost effectiveness.
J 003 Practice time management.
J 004 Assume responsibility for decisions and actions.
J 005 Exhibit pride.
J 006 Display initiative.
J 007 Demonstrate assertiveness.
J 008 Demonstrate openness to learn.
J 009 Identify the value of maintaining regular attendance.
J 010 Apply ethical reasoning.

Page 4

DUTY/TASKLIST

Occupation: 001 WORKPLACE SKILLS

Duty/Task Description

K 000 DEMONSTRATING TECHNOLOGICAL LITERACY
K 001 Demonstrate basic keyboarding skills.
K 002 Demonstrate basic word processing skills.
K 003 Recognize impact of technological change on tasks and people.
L 000 MAINTAINING INTERPERSONAL RELATIONSHIPS
L 001 Value individual diversity.
L 002 Respond to praise or criticism.
L 003 Provide constructive praise or criticism.
L 004 Evaluate and control emotional reactions.
L 005 Resolve conflicts.
L 006 Display a positive attitude.
L 007 Identify and react to stress/interpersonal/interpersonal.
M 000 DEMONSTRATING TEAM WORK
M 001 Identify style of leadership in the work team.
M 002 Match team member skills and group activity.
M 003 Work with team members.
M 004 Complete a team task.
M 005 Evaluate outcomes.

DUTY: H Solving Problems and Critical Thinking
TASK: 006 Set priorities.

Page 1

PERFORMANCE OBJECTIVE

CONDITIONS FOR PERFORMANCE OF TASK

Prioritization Worksheet

PERFORMANCE

Set priorities.

STANDARD

Six tasks in the three situations must be prioritized and the reasons for prioritization justified.

SOURCE

Workplace Skills committee.

PERFORMANCE STEPS:

1. List work tasks that must be accomplished.
2. Evaluate the work list for urgent tasks to complete.
3. Rank the items in order of need for completion.
4. List reasons for placing each task in its position.

ENABLING COMPETENCIES:

1. Define priorities.
2. Recall information about values and attitudes.
3. Put a list of tasks in order by priority for accomplishment.

Page 2

RELATED ACADEMIC SKILLS:

LA006 Adapts Strategy Reading
LA007 Adapts Strategy Speaking
LA038 Attends Directions/Task
LA039 Collects/Organizes Information-Oral/Written Reading
LA078 Compiles/Edits Paragraph/Sequences
LA088 Compiles/Edits Sentences

LA192 Evaluates Information-Written Purpose
LA250 Infers/Predicts Information-Written Purpose
LA260 Infers/Predicts Information-Written Purpose
LA263 Presents Formal Speech Persuasive

INSTRUCTIONAL ACTIVITIES:

1. Lead a discussion on what priorities are and how setting priorities depends on values, attitudes, environment, etc.
2. Role-play situations where priorities must be set and analyze why students prioritized the way they did.
3. Lead a group discussion on current situations where the students have had to set priorities.

### STUDENT INSTRUCTIONS:

- **Read the situation.** After each situation, give two reasons why the task was given priority.

### PERFORMANCE ACTIVITY I

**SITUATION**

You are working on a production report that is due tomorrow. The phone rings and it's your friend. He's working on his car and needs your help with the repair work as you are the only one who knows how to do the particular repair. You are typing a report for your boss that is due later next day. A co-worker has come to you for help getting another report out by the end of the day. Your term paper is due next Friday and you have been working on it all day, but are not close to completing it. Your boss calls and asks you to work late every night this week because Tom, your co-worker, has broken his leg and someone is needed to replace him.

1. **List six tasks which need to be prioritized in the above situation.**

   - A.
   - B.
   - C.
   - D.
   - E.
   - F.

2. **Rank the six tasks from most important (1) to least important (6) and explain the ranking of each task.**

   - **Priority #1:**
     - Explain placement: ____________________________
   - **Priority #2:**
     - Explain placement: ____________________________
   - **Priority #3:**
     - Explain placement: ____________________________
   - **Priority #4:**
     - Explain placement: ____________________________
   - **Priority #5:**
     - Explain placement: ____________________________
   - **Priority #6:**
     - Explain placement: ____________________________

---

### PERFORMANCE ACTIVITY II

**OBJECTIVE:**

Given a problem situation, students must organize and prioritize the workload to complete work assignments on schedule.

---

**BEST COPY AVAILABLE**
Workplace Skills

Elements for

DUTY: H Solving Problems and Critical Thinking
TASK: 006 Set priorities.

STUDENT INSTRUCTIONS:

Read the following situation carefully. List all the work items that are to
be done. Prioritize the list according to things that "MUST" be done,
"SHOULD" be done and things that can "WAIT". Write one paragraph
stating why you organized and prioritized the workload the way you
did.

TIPS:

1. List the work items to be done.
2. Prioritize the list according to the three categories.
3. Write one paragraph stating why you put the workload into
those categories.

PERFORMANCE ACTIVITY II

Work Assignment Worksheet

DIRECTIONS:

Read the situation and identify what tasks must be completed.
Prioritize the task by what must get done, should get done and what
can wait. Prioritize the tasks from most important to least important.

SITUATION:

It is 11:55 a.m. Your position is office assistant. You have assigned
duties that you must perform daily such as delivering the mail, picking
the mail up at the end of the day, filing, watering the plants and any
necessary typing that is assigned to you by your boss. You also help
others doing various tasks when necessary. Your boss has just given
you a two page letter to type that must go in the mail tonight. Also
two letters which are dated to be sent tomorrow.

You still have to get the mail out by 4:30 and your co-worker has
given you a stack of papers that must be copied by tomorrow at 4
p.m. Filing is piling up on your desk. You also have to fill the copy
machine with paper sometime before it runs out as that is your
assigned job. You also need to clean your desk out because it is
office policy that at work areas should be neat and clean at all
times to present an attractive setting to customers. The plants need
watering. There are reference books on your desk that need to
be returned to the office library; they have been on your desk for
two days.

1. Set your priorities: what MUST get done today and what SHOULD
be done and what things can WAIT until later. Organize those
tasks in order of importance.

A. THINGS THAT MUST GET DONE:

1.
2.
3.

B. THINGS THAT SHOULD BE DONE:

1.

C. THINGS THAT CAN WAIT:

1.
2.
3.
4.

WHY I PRIORITIZED THE TASKS THE WAY I DID:

2. Using the same situation, prioritize the tasks in the order you feel is the
most important to the least important to complete. Explain why you
prioritized the tasks the way you did.

3. Why I organized the tasks the way I did:

2. Can vary as long as reasoning is given.

PERFORMANCE ACTIVITY II ANSWER KEY

A. THINGS THAT MUST GET DONE:

1. Type two page letter for boss
2. Deliver mail
3. Gather mail and fill copy machine

B. THINGS THAT SHOULD GET DONE:

1. Copy work for co-worker
2. File papers
3. Return reference books

C. THINGS THAT CAN WAIT:

1. Clean desk
2. Water plants (this could be placed under "Things that
should get done")

2. Can vary as long as reasoning is given.

DUTY: H Solving Problems and Critical Thinking
TASK: 006 Set priorities.

INSTRUCTIONAL MATERIALS:

PERFORMANCE EVALUATION CHECKLIST

STANDARD:
Six tasks in the three situations must be prioritized and the reasons for prioritization justified.

INSTRUCTIONS FOR PERFORMANCE ACTIVITY:

Instruct students to read the situation and choose which task takes priority. Instruct them to defend their choice with two statements as to why they prioritized the way they did. *Note: students may prioritize differently depending on their values, family situations, etc.

DIRECTIONS:

Use the following checklist to evaluate the student's performance. Place an 'X' in the column to the right of each step to show that the student has passed.

<table>
<thead>
<tr>
<th>Passed</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Identified the priority of the tasks found in the situation.</td>
</tr>
<tr>
<td>2. Justified the priority for the six tasks.</td>
</tr>
</tbody>
</table>

NOTE: All steps must be performed.

Similar material has been developed for every task in the Workplace Skills list!
