This document reports on a congressional subcommittee's review of the federal role in education. The review included visits to 15 states and testimony from more than 225 principals, teachers, and other education stakeholders. The committee's purpose was to identify the steps that lead in the direction of either excellence or failure. The subcommittee found that successful schools and school systems were not the product of federal funding but instead were characterized by parents involved in the education of their children, local control, emphasis on basic academics, and dollars spent on the classroom. The central theme of the findings is that the federal government cannot consistently replicate success stories in the form of federal programs. Rather, the government should empower parents by reducing the family federal tax burden; encourage parental choice in education; return federal elementary and secondary education funds to states and local school districts through flexible grants; use federally funded education programs only for methods backed by reliable, replicable research; streamline and consolidate federal education programs; and reform or eliminate ineffective and inefficient programs. In short, the federal government should serve education as a research and statistics-gathering agency, disseminating findings and enabling states to share best practices with each other. The report was adopted by the subcommittee by a vote along Republican-Democrat party lines of 5-2. The 17 page minority report, "Crossroads Hearings: A Republican Assault on Public Education," is printed as an appendix. (RJM)

Acknowledgments

The Chairman wishes to thank the hundreds of people who made this project possible:

- Parents and students who gave thoughtful testimony concerning their experiences with what works and what is wasted in education.

- Teachers who provided a front line view of what works in the classroom.

- Principals, administrators and staff of schools around the country, who graciously opened their doors to host Subcommittee hearings and demonstrate what is working in education today.

- State education officials whose input presented the Subcommittee with valuable insight into the administration of federal education programs.

- Policy experts and federal officials who brought familiarity and in-depth knowledge with education programs to the hearings.

- The staff of the House of Representatives Committee on Education and the Workforce who put in untold hours of work on this project, and without whom, the Crossroads project could not have succeeded.

- The many community leaders and activists, business owners and everyday citizens who have attended hearings and made their experiences available to the Subcommittee.

In giving their time and testimony, the individuals mentioned above have each contributed to an important debate in our country: how to improve education. Creating and maintaining the best education system in the world will require nothing less than the commitment of more individuals like those who have been involved in this project. These individuals all deserve credit for their contributions.
INTRODUCTION

The Subcommittee on Oversight and Investigations, in accordance with Rule X of the U.S. House of Representatives, undertook an intensive review of the federal role in education. This review, which included extensive visits to schools across the country, is the only known such review ever performed by the Committee or by Congress.

EXECUTIVE SUMMARY

America's educational system is at a crossroads. Down one path can be found the many successful schools and systems that have emerged from the crisis of the 1980s to become shining examples of educational excellence. Down the other path are schools that are mired in failure or that have implemented erroneous reforms, succeeding only in worsening their already dismal performances. At the intersection of these two paths are the vast majority of America's schools—stagnating in mediocrity—at the crossroads of excellence and failure.

The purpose of the Committee on Education and the Workforce's Crossroads project was to identify the steps that lead in the direction of either excellence or failure in order to develop a positive vision for change. At a time when the economy continues to grow and technological advancements of the information age are fundamentally changing how we live and work, our nation should not be willing to accept mediocrity in education. America needs to develop a world class education system that is second to none. In order to succeed, our education system must have flexibility and vision—a willingness to think and act "outside of the box"—for the sake of our children.

Since the seminal report A Nation at Risk was released in 1983 describing the "rising tide of mediocrity" in America's schools, there have been some improvements. More students than ever are going on to college. SAT scores have risen moderately and fourth grade students have performed well on international comparison tests. However, despite these few bright spots, current indicators paint a disappointing picture overall of the preparedness of today's students to continue our nation's economic strength well into the 21st century.

- 40 percent of fourth-graders do not read at even a basic level;
- Half of the students from urban school districts fail to graduate on time, if at all;
- Average 1996 NAEP scores among 17-year-olds are lower than they were in

---

3 Ibid.
1984, a year after *A Nation at Risk* was released;

- U.S. 12th graders only outperformed two out of 21 nations in mathematics;\(^4\)
- American students fall farther behind students from other countries the longer they are in school;\(^5\)
- Public institutions of higher education annually spend $1 billion on remedial education.\(^6\)

The factors behind stagnant scores and declining international performance must be addressed to ensure that U.S. students are competitive in a global marketplace when they graduate.

For more than 40 years, the federal government has been increasingly influential in local schooling. Since 1957, when the Soviet Union launched the Sputnik satellite, federal education spending and red tape has been expanding and becoming more involved in the classroom. Since 1980, nearly $400 billion has been spent by the federal government on education.

**A key decision at the crossroads:** It is time for America to take a careful look at what billions of federal education dollars have purchased, and to make hard decisions about whether to continue expanding the federal role, or to return control to parents and teachers.

The Crossroads project began in 1995 as a project of the House Education and Workforce Committee’s Subcommittee on Oversight and Investigations, under the leadership of Chairman Pete Hoekstra. Its mission was to answer the following questions about education:

1. What are the elements of a successful school?
2. To what extent do federal education programs contribute or detract from those factors?
3. What works and what is wasted?

After asking the General Accounting Office (GAO) to determine the elements of successful schools, the Subcommittee began a series of hearings around the country to look at what works and what is wasted at the local level.\(^7\) The Subcommittee traveled to 15 states and heard from more than 225 witnesses. These hearings gave principals,

---

teachers, parents, students and state officials from around the country a rare opportunity to share their experiences about what works and what is wasted. Rather than relying on a small, elite group of witnesses who could leave their work to come to Washington and testify, the Subcommittee visited educators, parents and students where learning takes place: the classroom. From small towns to major cities, real people discussed real successes and problems in education. Apart from these hearings, these voices may never have been heard.

Based on the findings of GAO and these hearings, the Subcommittee found that successful schools and school systems were not the product of federal funding and programs, but instead were characterized by:

- Parents involved in the education of their children;
- Local control;
- Emphasis on basic academics;
- Dollars spent on the classroom, not bureaucracy and ineffective programs.

### The Current Federal Role

In addition to these findings, the Crossroads project researched the nature of the current federal role in education. The Committee found a system fraught with failure and bureaucracy:

- **More than 760 federal education programs**: For the first time in the history of federal education funding, the Committee assembled the most comprehensive list of federal education programs to date. At least 39 federal agencies oversee more than 760 education programs, at a cost of $100 billion a year to taxpayers. The Congressional Research Service has confirmed that these numbers are accurate, and even added additional programs to the 760 originally found by the committee.

The leviathan of federal education programs has actually led to a cottage industry in selling information on program descriptions, application deadlines and filing instructions for each of the myriad of federal education programs. The Education Funding Research Council identifies potential sources of funds for local school districts, and sells for nearly $400 the *Guide to Federal Funding for Education*. The company promises to steer its subscribers to “a wide range of Federal programs,” and offers these subscribers timely updates on “500 education programs.” More recently, the *Aid for Education Report* published by CD Publications advertised that “huge sums are available...in the federal government alone, there are nearly 800 different education programs that receive authorization totaling almost a hundred billion dollars.”
Mountains of Paperwork: Even after accounting for recent reductions, the U.S. Department of Education still requires over 48.6 million hours worth of paperwork per year - or the equivalent of 25,000 employees working full-time. The Subcommittee has attempted to quantify the number of pages required by recipients of federal funds in order to qualify for assistance. Without fully accounting for all the attachments and supplemental submissions required with each application, the Committee counted more than 20,000 pages of applications states must fill out to receive federal education funds each year.

A “Shadow” Department of Education: The Department of Education touts that it is one of the smallest federal agencies with 4,637 employees, and that it has a relatively small administrative budget. What many people do not realize, however, is that there are nearly three times as many federally funded employees of state education agencies administering federal education programs, as there are U.S. Department of Education employees. According to GAO, there are about 13,400 FTEs (full-time equivalents) funded with federal dollars to administer these programs for state education agencies.

As little as 65-70 cents reaches the classroom: A recent study found that for every tax dollar sent to Washington for elementary and secondary education, 85 cents is returned to local school districts. The remaining 15 cents is spent on bureaucracy and national and research programs of unknown effectiveness. The Department of Education has since released a study, which also found that about 85 cents of federal dollars reaches school districts for use in the classroom. Although these studies provided information not previously available on federal education spending, they only examined what was returned to school districts, still several layers of bureaucracy away from the classroom.

To date, no studies exist to enable us to determine what portion of federal education dollars actually reach the classroom, or what schools and state education agencies must spend to apply for education dollars and comply with their requirements. However, audits of school district spending indicate just how little in general reaches the classroom. A recent audit of the New York City School District found that only 43 percent of the district’s total funds were spent on direct classroom expenditures.

---

Given the 48.6 million paperwork hours required to receive federal education dollars and the school district bureaucracies funds must pass through to reach the classroom, it is not unreasonable to assume that another 15-20 cents spent outside the classroom. This would mean a net return of 65-70 cents to the classroom.

- **The 487 Step Labyrinth:** In 1993, Vice-President Gore's National Performance Review discovered that the Department of Education's discretionary grant process lasted 26 weeks and took 487 steps from start to finish. It was not until 1996 that the Department finally took steps to begin "streamlining" their long and protracted grant review process, a process that has yet to be completed and fully implemented. After the streamlining is complete it will only take an average of 20 weeks and 216 steps to complete a review.\(^\text{12}\)

- **Federal Dollars for Baywatch and Jerry Springer:** The Department of Education's Office of Special Education and Rehabilitative Services Media and Captioning Services funds closed captioning for "educational" programs such as *Baywatch, Ricki Lake, The Montel Williams Show, and Jerry Springer*. By funding captioning for these programs - funding which could easily be provided by the television industry or other commercial enterprises - the federal government is demonstrating to the American people just how far away it is from supporting what works and identifying federal education priorities.

**Programs for Every Problem**

The massive array of federal education programs was not created overnight, but developed slowly, as an attempt to address specific problems. Each program received minimal funding at the outset, and most have received additional funds from one year to the next. The current arrangement of federal education funding is as follows: local tax dollars go to Washington, where they are allocated to a variety of purposes, usually to address what someone in the federal government sees as a problem. The money is then returned to states and school districts in the form of categorical programs. This process puts smaller school districts at a disadvantage: States and local school districts are highly dependent on administrators and skilled grant writers to obtain these federal dollars and comply with their requirements, which places a greater burden on poorer and smaller school systems.

The effectiveness of these programs is seldom measured, even as the problems continue to mount. Evaluations of federal programs almost always measure process, not

---

whether or not they help children learn. For example, the largest education program for disadvantaged children has spent more than $100 billion over 30 years while producing hardly any evidence of positive, lasting results. Congress must ensure that such wasteful use of tax dollars is stopped.

It is time for the burden of proof to shift to the federal government. **If it cannot be demonstrated that a particular federal program is more effectively spending funds than state and local communities would otherwise spend them, Congress should return the money to the states and the people, without any burdensome strings attached.** This Subcommittee has found little evidence proving the effectiveness of federal programs, or that federal programs are more effective than local efforts.

Now is the time to act on what we’ve learned. The central theme of what we learned is that the federal government cannot consistently and effectively replicate success stories throughout the nation in the form of federal programs. Instead, federal education dollars should support effective state and local initiatives, ensuring that it neither impedes local innovation and control, nor diverts dollars from the classroom through burdensome regulations and overhead.

**Empower Parents**
- Reduce the family federal tax burden;
- Encourage parental choice in education at all levels of government;
- Create opportunity scholarships for poor children in Washington, D.C., and other federal empowerment zones;
- Allow states to send Title I (Aid to Disadvantaged Students) funds to impoverished parents as grants in order to enable their children to receive additional academic assistance.

**Return Control to the Local Level**
- Return federal elementary and secondary education funds to states and local school districts through flexible grants;
- Expand opportunities for waivers from burdensome regulations;
- Give states and school districts greater freedom to consolidate program funds to more effectively address pressing needs;
- Provide no-strings-attached funds for charter school start-up costs.

**Encourage What Works in the Classroom**
- Federally funded education programs should only use proven methods backed by reliable, replicable research;
- Research and evaluation should concentrate on measuring outcomes and less on process—such as how many children are served by a particular program.
Send Dollars to the Classroom

- Streamline and consolidate federal education programs;
- Reform or eliminate ineffective and inefficient programs;
- Reduce paperwork burden.

Fifteen years ago our nation was diagnosed as being at risk - at risk of entering the 21st Century lagging behind other industrialized nations economically and educationally. Since then there has been little evidence of the federal government effectively addressing this problem through its hundreds of duplicative and uncoordinated education programs.

In order to address the continued crisis, education policy in this country needs to be re-oriented around ensuring that children receive a quality education, not preserving programs and bureaucracies. Significant progress needs to be made by all levels of government: Solving problems at the federal level is only one component.

Congress has already begun to take action. The findings of the Crossroads Project have underscored an education agenda that has encouraged “flex” grants, parental choice in education, education savings accounts, scholarships for low income children, charter schools, and getting dollars to the classroom.

The federal government should only play a limited role in education: It should serve education at the state and local level as a research and statistics gathering agency, disseminating findings and enabling states to share best practices with each other. Local educators must be empowered to teach children with effective methods and adequate resources, without federal interference. Parents must once again be in charge of the education of their children. Schools should be havens for learning, safe from drugs and violence.

Much work remains. It is time for the federal bureaucracy to move out of the way- to put children first - by supporting what works. The Crossroads Report points the way.
AT THE CROSSROADS OF EXCELLENCE, MEDIOCRITY AND FAILURE

In 1983, then Secretary of Education Terrel Bell and the National Commission on Excellence in Education released the report, *A Nation at Risk.* In this report, the commission described the "rising tide of mediocrity" in American education and warned of the dire consequences that would surely result if the educational establishment didn’t quickly change course. This, in many ways, marked the beginning of an educational reform movement that has achieved many noteworthy successes but, unfortunately, has yet to produce a system that provides an excellent and truly equitable education for all children. Many of the recommendations of the report went unheeded, which recently led education leaders and former members of the Commission to conclude that "vast institutions don’t change because they should...[t]hey change only when they must."2

Today, America’s educational system is at a crossroads. Down one path can be found the many successful schools and systems that have emerged from the “rising tide of mediocrity” of the early 1980s to become shining examples of educational excellence. Down the other path are schools that are mired in failure or that have implemented erroneous reforms, succeeding only in worsening their already dismal performances. At the intersection of these two paths are the vast majority of America’s schools – stagnating in mediocrity – at the crossroads of excellence and failure.

Recent statistics paint a stark picture of the continued crisis in American education:

A semi-literate nation:

- Forty percent of fourth-graders do not read at even a basic level.3 Fifty-seven percent of urban students score below the basic level.

- A 1992 survey by the Department of Education found that between 21 to 23 percent, or about 40 million of the 191 million adults in this country, are in the bottom of five literacy assessment proficiency categories. This means that nearly one in four adults has such rudimentary reading and writing skills that they would not be able to write a letter to their credit card company about a mistake in their bill.

---

1 *A Nation At Risk* outlined risk indicators such as: 13 percent of all 17-year-olds were functionally illiterate (today 25 percent score below basic on NAEP proficiency tests). The Commission proposed reforming the education system in fundamental ways in the areas of content, teaching, standards, the use of time, leadership, and fiscal support.

2 *A Nation Still at Risk: An Education Manifesto*, April 30, 1998. This manifesto resulted from a meeting of prominent education reformers, business leaders and policy makers sponsored by The Center for Education Reform, Empower America, The Heritage Foundation and The Thomas B. Fordham Foundation.

Almost 50 percent of the nation’s adults performed at the bottom two of the five categories. Sixty-eight percent of the nation’s adult prison population read and write at the bottom two out of five proficiency levels.

Failing Education Systems in Urban America

Forty-nine percent of teachers in urban districts report that physical conflicts among students are a moderate or serious problem in their school. This figure is 31 percent for non-urban schools (see Figure 5).

Half of the students from urban school districts fail to graduate on time, if at all (See Figure 3).

Low expectations have consequences: The performance of 17-year-old African-American and Hispanic students is equal to that of 13-year-old white students in every subject.

Stagnant Scores

Mathematics: Average 1996 NAEP scores for 17-year-olds are not significantly different than they were in 1973.

Writing: Average 1996 NAEP scores among 17-year-olds are lower than they were in 1984, a year after A Nation at Risk was released.

Reading: The average score of 17-year-olds in 1996 is not significantly different than their counterparts in 1971.

Unprepared to Compete in a Global Marketplace:

Data from the Third International Mathematics and Science Study (TIMSS) suggest that the “relative international standing” of U.S. students declines as they reach higher grades in school.

---

7Ibid.
U.S. 12th graders only outperformed two out of 21 nations in mathematics.\textsuperscript{10}

Public institutions of higher education annually spend $1 billion on remedial education.\textsuperscript{11} Nearly 30 percent of first-time college freshmen enroll in at least one remedial course and 80 percent of all public, four-year universities offered remedial courses.\textsuperscript{12}

In 1995, private-sector and federal employers spent a combined $55.3 billion to provide training in basic academic skills.\textsuperscript{13} According to U.S. manufacturers, 40 percent of all 17-year-olds do not have the math skills and 60 percent lack the reading skills to hold down a production job at a manufacturing company.\textsuperscript{14}

\textbf{Academic Improvement Since \textit{A Nation at Risk}: Not Exactly the S&P 500}

Unlike the explosive growth in the stock market the nation has experienced since the early 1980s, the pace of academic improvement since 1983 has been painstakingly slow, and numerous indicators are showing continued signs of stagnation or decline.

![Figure 1](image-url)

\textbf{Trends in NAEP Reading Scores for the Nation}

While math scores have improved slightly over the past 15 years, reading scores have not (Figures 1 and 2). In 1994, 30 percent of fourth graders, 30 percent of eighth-graders and 36

\textsuperscript{10} Ibid.
\textsuperscript{12} Ibid.
percent of 12th-graders attained the Proficient level in reading or higher. Only three to seven percent reached the Advanced level.15

Figure 2

Federal Funds for Elementary and Secondary Education vs. NAEP Reading Scores

Impoverished Outcomes: Urban Education

Figure 3

Half of All Urban High School Students Fail to Graduate in Four Years, If At All

SOURCE: Education Week analysis based on the U.S. Department of Education's Common Core of Data.

This stagnation and mediocrity is magnified within urban and high-poverty areas where many obstacles exist to running successful schools. There have been repeated studies showing that students in high-poverty urban settings are falling even further behind. For example, in the District of Columbia Public School System during the 1996-97 school year:16

- 33 percent of third-graders scored below the basic level in reading and math;
- 72 percent of eighth-graders scored below basic in math;
- Only 53 percent of the students entering D.C. high schools in ninth grade remained in the system to graduate four years later.

![Figure 4: Percent of Students Scoring At or Above “Basic” Level on NAEP](image)

Across the country, urban schools are producing too many students who lack the skills they need to succeed. While there are many notable exceptions, students in these schools generally learn less, and in settings that are more violent and generally less conducive to learning than suburban or rural schools. Many cities risk losing yet another generation of children to mediocrity, poverty and violence because their schools have not been held accountable for graduating their students with skills and a meaningful diploma.

Falling Behind in the Global Marketplace

Compounding concerns about stagnating scores is the repeated poor performance of U.S. students in international comparisons. The recent Third International Mathematics and Science Study (TIMSS), provides an in-depth analysis of how the United States ranks globally at the fourth, eighth and twelfth grade achievement levels.\(^\text{17}\)

**INTERNATIONAL AVERAGE = 500**

NOTE: Nations not meeting international sampling and other guidelines are shown in parentheses.

The TIMSS study shows that in the eighth grade, 20 countries outperformed U.S. students in both math and science. This places the U.S. ahead of only seven countries – Iran, Kuwait, Columbia, South Africa, Cyprus, Portugal, and Lithuania. U.S. 12th-graders scored below the international average and among the lowest of the 21 TIMSS nations in both mathematics and science general knowledge in the final year of secondary school, only outscoring Cyprus and South Africa.

The scores of America’s best and brightest in math and science do not improve this dismal picture. The performance of U.S. twelfth-grade advanced mathematics students was among the lowest of the 16 TIMSS nations. Eleven nations outperformed the United States, while our scores were not significantly different from those of four other nations. Not one single country scored below the United States on the assessment of advanced mathematics.

Interestingly, students from the U.S. do not fare so poorly in the earlier years, and only begin to fall behind toward their middle-school years (Figure 6). The study found that when comparing

---

\(^{17}\) The Third International Mathematics and Science Study (TIMSS) represents the most extensive investigation of mathematics and science education ever conducted. The study is sponsored by the International Association for the Evaluation of Educational Achievement, and is funded by the National Science Foundation and the National Center for Education Statistics.
fourth-grade achievement levels to their international counterparts, the United States fared very well. U.S. students performed above the international mean in both math and science. In science, U.S. students in the fourth grade were out-performed by only one country – Korea.

The factors behind the declining international performance of U.S. students must be addressed. In today’s global economy, such results suggest that our students are competitive in the earlier grades, but when they enter the job market, they are at a serious competitive disadvantage. Furthermore, these scores only provide part of the picture. International comparisons center on mean averages and tend to mask the extent of dismal scores of those students that fall below the mean within each country.

Birth of the “Crossroads Project”

When Congressman Hoekstra became Chairman of the Subcommittee on Oversight and Investigations in 1994, he immediately directed the Subcommittee to begin a review of successful schools and school systems around the country in order to guide the Committee’s understanding of what is working in education. By establishing successful schools as the standard, the Subcommittee could then review what factors led to their success, and analyze to what extent federal education policy contributed or detracted from those factors.
GAO Report on Best Practices

To this end, Mr. Hoekstra’s first step as Chairman of the Subcommittee was to commission a study by the General Accounting Office (GAO) to compile a list of schools that performed exceptionally well. Chairman Hoekstra then requested that the GAO identify, even if only in a rudimentary way, the key factors or practices that were shared by each. The result was striking. Success in these institutions was not based on educational levels of teachers, the socioeconomic status of its students, or on the amount of money that was invested by the school district. Instead, the key shared components of successful schools were found to include the following:

- A well-defined mission focused on academics;
- An environment that encourages parental involvement and collaboration with staff;
- School autonomy;
- Rigorous and well-focused curricula;
- Effective and engaging instruction.\(^\text{18}\)

Finding Success in Chicago

Armed with this information, in May 1995 Chairman Hoekstra decided to hold a field hearing in Chicago, IL, home to one of the most troubled school districts in the country. His goal was to gather testimony, to visit schools that were beating the odds by performing at exceptional levels, and to look for evidence of key success factors identified in the GAO report.

The Subcommittee visited a private elementary school, Our Lady of the Gardens, situated in a housing project on the far south side of Chicago. Here, in the middle of a community riddled by violence, poverty and decay, where public schools had a dropout rate approaching 60 percent, the Subcommittee saw a school whose graduates attended college at a rate exceeding 95 percent. The contrast was stunning. To what did the principal attribute her success? Confirming the findings of the GAO report on best practices, the principal credited strong parental involvement, autonomous control, and an emphasis on basic academics.

Later that same day, the Subcommittee toured and held a hearing at Washington Irving Elementary School, a public school in a low-income area just south of the Eisenhower Expressway. This school, which once performed well below average, now led the city in academic achievement. A tour of the school revealed teachers leading creative classroom projects — utilizing resources not typically seen in large, urban schools, students actively involved in the lessons they were being taught, and parents helping in many, if not most, of the classrooms visited by the Subcommittee. To what did the principal attribute her success? She took control of her school’s budget, driving resources away from bureaucracies and into her classrooms. She pressured poor teachers to move out of the school, and unilaterally ended social

promotion. Today in her school, a student will not graduate beyond the eighth grade unless he or she can read and perform math at an eighth-grade level.\(^{19}\)

The hearing held by the Subcommittee that day included many similar success stories— all with the same basic underlying themes behind their success: active parental involvement, an emphasis on basic academics, and a determination to focus limited resources on classroom needs.\(^{20}\)

**THE FEDERAL ROLE IN EDUCATION: Bureaucracy vs. Children**

Considering the themes that were emerging as the keys to successful schools, Chairman Hoekstra asked the Subcommittee to determine the full scope of federal education spending to determine to what extent these four basic principles were taken into consideration in the development and implementation of federal education policy.

What the Subcommittee has found in federal education programs is an abysmal, bureaucratic response to the serious education problems of our nation. Indeed, findings produced by the Crossroads project have found that:

- Federal education programs lack evidence of effectiveness;
- Federal education programs are often inefficient and duplicative.

**Just How Large is the Federal Education Bureaucracy?**

The first step in this process was to determine how many federal education programs currently exist. The Subcommittee soon learned that this was not an easy question to answer. In fact, in a hearing before this Committee, Secretary of Education Richard Riley admitted that he did not know exactly how many federal education programs exist.

\[
\text{Hoekstra:} \quad \text{How many education programs do you estimate that we have throughout the Federal government?}
\]

\[
\text{Riley:} \quad \text{We have – what is the page? It's around 200. I’ve got it here. One thing that I do think is misleading is to talk about 760 –}
\]

\[
\text{Hoekstra:} \quad \text{Well, how many do you think there are?}
\]

\[
\text{Riley:} \quad \text{We have – I’ve got a page here with it.}
\]

\[
\text{Hoekstra:} \quad \text{Just the Department of Education alone or is this including all other agencies?}
\]

\(^{20}\) Ibid.
Riley: It's just a couple less than 200.

Hoekstra: Is this just the Department of Education?

Riley: Just the Department of Education.

Hoekstra: How about including other agencies and those kinds of things?

Riley: Well, that's where I was going to get into the 760.

Hoekstra: I'm not talking about 760. I'm talking about your analysis of how many you think there are, including the other agencies.

Riley: You mean education programs?

Hoekstra: Yes, K-12, higher ed.

Riley: Well, I haven't analyzed any reference to something that might touch on that in some indirect way, but as far as I know, those programs are really in our department, generally, unless you're talking about the Indian programs under Interior, and of course, you've got Defense Department programs under Defense.

760 Federal Education Programs...and Counting

Because neither the U.S. Department of Education nor any other federal agency was able to provide accurate information concerning the number of federal education programs, the Subcommittee decided to compile the list independently. The result was the most comprehensive list of federal education programs that had ever been compiled.

During 1995 and 1996, the Committee assembled this list using information provided by the Office of Management and Budget's (OMB's) Catalog of Federal Domestic Assistance (CFDA). The Congressional Research Service (CRS) then identified more than 100 additional programs that OMB did not include under its definition of "Educational Programs" in the CFDA. The initial list amounted to 760 federal education programs that spanned 39 separate agencies, boards, and commissions at the cost about $100 billion (1995 figures).

Next, the Committee contacted the 39 agencies and requested verification that the programs were within their jurisdiction. If the programs were correctly identified, the agencies were asked to provide essential information on each program in order to allow the Committee to properly oversee the programs. Agencies were also asked to submit additional program names if applicable. Since February 1996, the federal agencies have added more than 100 programs to the original list of 760.

Working with the information from the CFDA, CRS, and federal agencies, the Committee spent months updating the list—adding fiscal year 1997 funding information and analyzing the programs. Approximately 100 programs were removed from the list because they were either
repealed, or because they were only marginally "educational" despite having been defined as such by OMB. However, each and every program, whether funded or unfunded, is listed as an active federal program by the Office of Management and Budget. Thus, schools and universities must sift through these programs in their search for federal funds, whether or not they are actually funded.

Around the same time that the Subcommittee was compiling its list of 760 federal education programs, the Subcommittee learned that the Education Funding Research Council, a private organization that identifies potential sources of funds for local school districts, produces the **Guide to Federal Funding for Education**. The company promises to steer its subscribers to "a wide range of Federal programs," and offers these subscribers timely updates on "500 education programs." More recently, the **Aid for Education Report** published by CD Publications advertised that "huge sums are available...in the federal government alone, there are nearly 800 different education programs that receive authorization totaling almost a hundred billion dollars." In short, the leviathan of federal education programs has actually led to a cottage industry in selling information on program descriptions, application deadlines and filing instructions for each of the myriad of federal education programs.

On May 8, 1997, the list was published and a number of Members of Congress, including the Speaker of the House, sent a letter to the President, soliciting his support for the on-going task of evaluating the federal role in education. Even though the Secretary received a list of actual education programs, verified by both CRS and OMB, nevertheless on July 14, 1997, Secretary Riley stated by letter on behalf of the President that the list of 760 federal education programs is "significantly overstated."

Total Number of Programs: 788

Total Funding: $96,869,343,420.00

Note: This table includes all authorized programs regardless of funding, as well as off-budget spending (such as student lending programs).

Figure 7: The Current Federal Role in Education
It Takes a Village to Complete the Paperwork

One of the main problems with delivering federal education aid to states and communities through such a vast array of programs is the added cost in paperwork and personnel necessary to apply for and to keep track of the operations of each of these programs. Many of the costs are hidden in the burdens placed on teachers and administrators in time and money to complete federal forms for this multitude of overlapping federal programs.

Ohio: 50 percent of Paperwork for Six Percent of Funds

In 1996 Governor Voinovich of Ohio noted that local schools in his state had to submit as many as 170 federal reports totaling more than 700 pages during a single year. This report also noted that more than 50 percent of the paperwork required by a local school in Ohio is a result of federal programs - this despite the fact that the federal government accounts for only 6 percent of Ohio’s educational spending.21

The Subcommittee has attempted to quantify the number of pages required by recipients of federal funds in order to qualify for assistance. Without fully accounting for all the attachments and supplemental submissions required with each application, the Subcommittee counted more than 20,000 pages of applications.

25,000 Paperwork Employees

So how much time is spent completing this paperwork? In the recently released strategic plan of the Department of Education, the administration highlights the success of the Department in reducing paperwork burdens by an estimated 10 percent – which according to their own estimate accounts for 5.4 million man hours in FY 1997.22 If this statistic is accurate, it would mean that the Department of Education is still requiring nearly 50 million hours worth of paperwork each year – or the equivalent of 25,000 employees working full-time.

A Nine-Pound Application “Birthed” in Boston

Unfortunately, even this estimate is likely to underestimate the true paperwork burden to local schools and universities across the country. According to the President of Boston University, Jon Westling, Boston University spent 14 weeks and approximately 2,700 employee hours completing the paperwork required to qualify for federal Title IV funding. They were slowed by the repeated corrections and clarifications requested by the Department. In the end, the University spent the equivalent of 1.5 personnel years compiling what turned out to be a nine-pound application. Interestingly, the Department of Education had estimated that the application should only take three hours to complete. Considering that there are 6,500

institutions of higher education, the paperwork needed for Title IV alone could account for 9,700 employees each year.23

The “Shadow” Department of Education

The Department of Education touts that it is one of the smallest federal agencies with 4,637 employees, and that it has a relatively small administrative budget. What many people do not realize, however, is that there is nearly three times as many federally funded employees of state education agencies administering federal education programs, as there are U.S. Department of Education employees. According to GAO, there are about 13,400 FTEs (full-time equivalents) funded with federal dollars to administer these programs for state education agencies.24

![Figure 8](image)

The Department also has the lowest ratio of career civil service employees to political appointees of all the agencies - 29.7 career employees for every political appointee, 146 political appointees for an agency with about 4,600 employees. The next lowest ratio is the Agency for Housing and Urban Development (HUD), with 97.5 employees for every political appointee. What that means is that HUD only has 101 appointees for an agency of 10,400 employees - which is more than twice the size of the Education Department.25

Several state administrators have observed that it takes many more state employees to administer federal program dollars than state funded programs. For example, in Florida, 374 employees administer $8 billion in state funds. However, 297 state employees are required to

---

24 U.S. General Accounting Office, *Education Finance: The Extent of Federal Funding in State Education Agencies*, GAO/HEHS-95-3, October, 1994, p. 11. The number of full-time equivalents is not necessarily the total number of employees.
oversee only $1 billion in federal funds - six times as many per dollar. In Georgia, 229 employees administer $8.85 billion in state funds, while 93 administer $800 million in federal funds - 4.5 times as many per dollar.  

65 Cents on the Dollar?

A recent study found that for every tax dollar sent to Washington for elementary and secondary education, 85 cents is returned to local school districts. The remaining 15 cents is spent on bureaucracy and national and research programs of unknown effectiveness. The study also found that some states receive a greater return per tax dollar than do others. Connecticut has the lowest return on its investment - only 39 cents for every tax dollar (See Table 3). The Department of Education has since released a study, which also found that about 85 cents of federal dollars reaches school districts for use in the classroom. Although these studies provided information not previously available on federal education spending, they only examined what returned to school districts, still several layers of bureaucracy away from the classroom.

</table>

To date, no studies exist to enable us to determine what portion of federal education dollars reach the classroom nationwide, or what schools and state education agencies must spend to apply for education dollars and comply with their requirements. However, audits of school district spending indicate just how little in general reaches the classroom. A recent audit of the New York City School District found that only 43 percent of the district’s total funds were spent on direct classroom expenditures.\textsuperscript{29} Given the 48.6 million paperwork hours required to receive federal education dollars and the school district bureaucracies funds must pass through to reach the classroom, it is not unreasonable to assume that another 20-15 cents spent outside the classroom. This would mean a net return of 65-70 cents to the classroom.

For example, Dr. Charles Garris, the superintendent of the small Unionville-Chadds Ford School District in eastern Pennsylvania, testified that he has been questioning whether applying for federal funds is worth the expense. He did the math to determine what he had spent to apply for federal funds for the 1997-98 school year. Before the end of the year he had spent over $2,400, which is 13 percent of the $21,796 he expects to receive from the federal government. Moreover, based on past years, he can expect to spend at least another 25 percent of his allotment on administration before it reaches classrooms because of federal requirements. As a result, Dr. Garris has decided that it is no longer cost effective even to apply for certain programs.

**Enough is Enough**

To determine what administrators at the local level thought of federal programs, the Subcommittee sent out surveys to local school superintendents from 10 states to solicit their input on a variety of issues (See Appendix B). One area about which they were questioned concerned their view of the paperwork burden that accompanies federal education funding. One superintendent, feeling that the survey we sent was one too many forms for him to complete wrote,

\begin{quote}
We have too much paperwork and too many forms to fill out, and then we receive this...the purpose of federal education programs should be to help children...I think your Committee should work on these things.
\end{quote}

While most of the questions posed in the survey invoked varied responses, the concern over the paperwork burden was unanimous. The repeated theme was that paperwork reduction should be a top priority of the administration and the Congress.

The 487-Step Labyrinth: Government Attempts to Reinvent Itself

The next issue addressed by the Subcommittee was the amount of time and number of personnel required by the federal government to read, review, and file applications for federal grants. The Subcommittee found that the Department of Education’s discretionary grant process lasted 26 weeks and took 487 steps from start to finish. It is unclear how many individuals are involved in each step. Even though Vice President Gore’s National Performance Review discovered this long and protracted process in 1993, it was not until 1996 that the Department finally took steps to begin “streamlining” their grant review process, a process which has yet to be completed and fully implemented. After the streamlining is complete it will only take an average of 20 weeks and 216 steps to complete a review.\(^\text{30}\) This is an unnecessarily complicated and burdensome process that, according to the Department, is “central to nearly all the Department’s services” and is “a major function at the Department of Education.”\(^\text{31}\)

Costly Requirements and Regulations

Congress and the federal government have created many programs to improve education, but have not been able to provide funding for all of them. Consequently, states and local school districts must come up with the rest of the funds out of their education budgets to comply with federally mandated requirements. Many of these requirements regulate asbestos removal and disabled access to school buildings. One of the most contentious and costly mandates for many local school districts, however, is special education.

Twenty-three years ago in 1975, Congress passed the Individuals with Disabilities Education Act (IDEA). This historic legislation requires local school districts to provide disabled students with a “free and appropriate education,” which, while bringing federal aid to disabled children also mandated that communities fund special education at much higher levels. However, when it was passed, Congress agreed to fund 40 percent of its cost. Currently it only funds 9 percent, which means that states and districts must make up the difference. Because the federal government has not met its obligation to states and schools, there are fewer funds available to meet the unique needs and priorities of local schools.

Scores of Programs for Every Problem

A reasonable justification for this myriad of federal education programs could be that there are 760 separate and distinct problems, and that each program addresses one of them. Unfortunately, this is not the case. After identifying each and every education program scattered throughout the federal government, the Subcommittee categorized the programs according to their mission and by the services they provide. The Subcommittee then separated each category into more specific subject categories and then listed them according to the population they were intended to serve.

\(^\text{31}\) Ibid.
The Subcommittee found an incredible overlap and duplication in the services and populations covered by separate federal education programs. For example, the Subcommittee found nine art programs, 11 drug education programs, 14 literacy programs, 22 violence prevention programs and 63 math and science programs. GAO has found more than 127 programs targeting at-risk and delinquent youth. And according to GAO, “multiple programs dispersed among several agencies creates the potential for inefficient services and ineffective use of funds.” (See Figure 9)32

Figure 9: Three Target Groups Served by Multiple Programs and Agencies

Additional evidence of duplication and overlap is evident in that many cabinet agencies have their own education offices. For example, despite the existence of 63 math and science programs, the Department of Energy has a division devoted to “Education in Science, Technology, Engineering and Math.”34 This division provides curriculum support, teacher training and other scientific information. The Department recently announced the creation of a new “education task force” devoted to determine how it can best enhance science, math and technology education, as well as providing schools with access to its scientific, technological and supercomputing resources.

In addition to the Department of Energy’s K-12 education programs, there are many other examples of overlapping programs between agencies, and although attempts have recently been made to consolidate some duplicative programs, much work remains to be done.

Baywatch and Jerry Springer: Your Tax Dollars at Work

The Department of Education's Office of Special Education and Rehabilitative Services, Media and Captioning Services provides deaf and visually impaired individuals with access to films, videos, and television programs, many of which are of dubious cultural or educational merit. The objective of this program is supposedly to promote the general welfare of the deaf and hard-of-hearing by bringing to those individuals films, videos and television programs that play an important part in the general cultural advancement of hearing individuals. According to the Department, if it's on television, "it's part of the culture," says Ernest Hairston, an associate director in the Education Department's office of special education programs.35

Closed captioning is provided for "diverse" programs such as:

- Baywatch
- Ricki Lake
- The Montel Williams Show
- Jerry Springer

A special program is dedicated to closed captioning major sports programs.36

Some of the federally funded captioned shows are far from being "family television." For example, the Jerry Springer show issues a "strong advisory" prior to the show urging parents not to let their children watch it. Recent episodes include "Stripper Wars," "I Have a Bizarre Sex Life," and "You Can't Have My Man." The show is a huge hit with young people, according to the ratings, which has caused at least one NBC affiliate to pull the show out of concern for "youth viewership" and alleged outbreaks of school fights inspired by the show.37

By funding captioning for these programs - funding which could easily be provided by the television industry or other commercial enterprises - the federal government is demonstrating to the American people just how far away it is from supporting what works and identifying federal education priorities.

On the Playground with the Federal Government

The federal government funds hundreds of research projects at universities and private organizations around the country. One example of such a program, described as a "school improvement program" by the Department of Education, is the Women's Education Equity program. According to GAO, this program only sends 17 percent of its funds to school districts.

Over the last 22 years over the program's existence, the GAO has found "little evidence of [the program's] effectiveness in eliminating sex bias in education." It described the program as

35 Steven Drummond, "Tabloid TV, Courtesy Of The Education Department," Teacher Magazine, April, 1998.
one "with no director, with a staff of one and one-quarter persons in two different offices of the
Department... with too many resources [going] for direct services to small numbers of
persons." In 1996 its grantees included a project called "Gender Based Teasing and Bullying in
Grades K-5" which examines teasing and bullying as antecedents to adolescent sexual
harassment.

In addition, recent statistics do not back allegations of severe sex bias in education. The
latest math and science test scores indicate girls have virtually caught up in math and closed the
gap in science, and for two decades girls have outperformed boys in NAEP reading scores. According to the Census Bureau, recent college completion rates of students ages 25 to 29 show
that the proportion of women completing college has surpassed that of men: 29.3 percent of
women completed college, as compared to 26.3 percent of men.

Federally Funded “Holiday Awareness”

The Safe and Drug-Free Schools program is an example of a program designed to address a
very real problem, but with a one-size-fits all solution that in the end accomplishes little. The
program sends funds to the majority of school districts in the country, only targeting 30 percent
to areas based on need. School districts often lack the funds to supplement the federal funding
and implement more expensive, research based programs. Consequently, the majority of funds
are used for staff training and technical assistance.  

Dr. Lawrence Sherman, a witness at a Crossroads hearing examining federal drug prevention
programs, summarized for the subcommittee the findings contained his 655 page report on drug
prevention programs. He and his University of Maryland colleagues determined that:

---

40 U.S. General Accounting Office, Safe and Drug-Free Schools: Balancing Accountability with State and Local Flexibility, GOA/HEHS-98-3, p. 34
Most crime prevention funds are being spent where they are needed least, that is, in low risk crime areas, rather than where the violence is concentrated in America. Secondly, most crime prevention programs...have not been evaluated rigorously and are not going to be unless legislative policy changes. And third...the most federal funding goes to the least effective programs.41

In addition, the Subcommittee found that projects funded with federal Safe and Drug Free School Funds included the following:

- The State of Michigan spent $81,000 for giant plastic teeth and toothbrushes;42
- $124,000 was awarded by the U.S. Department of Education to the New Haven, Conn., Police Department to organize, among other things, a “holiday awareness project” designed to “encourage awareness of and participation in holidays and events significant to racial, religious, ethnic or sexual orientation groups;”43
- The Fairfax County School District in Virginia spent $181,397 to send teachers to a Maryland island resort for “training.” 44

When Safe and Drug-Free School dollars are spent on drug-prevention programs, the results have been minimal. An analysis of studies measuring the effectiveness of school-based drug prevention programs found that, based on eight “methodologically rigorous” studies, substance abuse programs like those funded by Safe and Drug-Free Schools have a very small effect on behavior.45 A more recent study of school-based drug prevention programs funded under Safe and Drug-Free Schools found that few schools used the funds for prevention programs that have been found effective in previous research. Consequently, only a few drug prevention programs produced results, and even those effects were small.46

Not only has Safe and Drug-Free Schools not been found to be effective, GAO recently reported that the Safe and Drug-Free Schools program is one of 127 federal programs that target at-risk and delinquent youth, and received $2.5 billion in funding in 1995. Thirty-four provide both violence and substance prevention. The Departments of Health and Human Services,

41Statement of Dr. Lawrence W. Sherman, Department of Criminology and Criminal Justice, University of Maryland, Committee on Education and the Workforce, Subcommittee on Oversight and Investigations, What Works? What’s Wasted in Federal Drug Violence Prevention Programs?, Washington, DC, June 24, 1997, No. 105-42, p. 25.
Education and Justice administer 48 of these programs, and the remainder are scattered in 10 other federal agencies or entities (see Figure 9).  

Fraught with Failure

While it is easy to laugh at the anecdotal stories of wasteful spending within many of these programs, the dismal evaluations of the overall success of these programs is not so funny. Not only are many federal programs failing because the funds are allocated through such a wide array of programs, many of the individual programs within that array that have been evaluated lack evidence of success. Many of these programs were created to address particular needs, and their failure to accomplish their stated intentions simply means that taxpayer dollars are wasted.

According to GAO, “federally funded programs have historically placed a low priority on results and accountability.” In order to more fully document the extent to which reliable data demonstrating the effectiveness of federal programs exists, the Subcommittee compiled a summary of recent Department of Education evaluations of each of the major education programs within the Committee’s jurisdiction.

What the Subcommittee found was that it is very difficult to determine whether the majority of federal education spending is doing anything to improve student achievement. It has been years since many programs have been evaluated, and often those reviews are more concerned with process - accounting for numbers of participants and educators, not whether the children are actually better off as a result of being served by a particular program. Perhaps most disturbing is that most federal education programs have never been evaluated to determine their impact on student outcomes.

A Complete Lack of Evidence of Effectiveness

The GAO report on best practices cited earlier also found that there are few evaluations demonstrating the effectiveness of federal education programs, and many of the studies that do exist lack the “methodological rigor” to determine effectiveness in an empirical manner. Billions of dollars are spent on programs where even the most basic information on effectiveness is lacking. GAO reported in November 1997 that “no central source of information exists about all the programs providing services to the same target groups among different agencies or about those providing a similar service to several target groups...[w]e do not know what is working and what is not in today’s programs”

According to the GAO, the clearest evidence about a “lack of positive effect” from federal expenditures comes from the largest, most expensive education program which has spent nearly $100 billion since 1965. A recent official evaluation of this program, Aid to Disadvantaged

51 Ibid, p. 11.
Children (Chapter 1, now known as Title I) determined that it did not reduce the effect of poverty on a student’s achievement. The initial gap in test scores between the more disadvantaged students participating in Chapter 1 and non-participants did not narrow as a result of the more disadvantaged students participating in the special program.52

In 1994, Title I was changed in order to make real improvements in children’s learning, and the results are not yet in on improvements in student outcomes. Its slowness to change, however, in light of a lack of evidence of effectiveness is an example of the inherent shortcomings of federally designed education programs: It takes many years’ innovations and effective practices to effect change in federal laws. Allowing for experimentation, flexibility and innovation at the state and local level can facilitate this process and prevent entrenched programs from spending billions without results.

Lack of Follow-Through

Federally funded, reliable, replicable research demonstrating the effectiveness of programs and teaching methods has been relatively scarce. One instance of this type of research was Project Follow-Through, “the largest, most expensive research study in the history of education.”53 The study began in 1976 and continued through 1995, involved more than 70,000 children in more than 180 schools, and cost more than $1 billion. The purpose of the study was to determine which teaching methods could raise average performance levels of the nation’s poorest schools, where test scores averaged around the 20th percentile, to that of mainstream America (the 50th, or average, percentile).

The teaching method found to have the greatest positive impact on basic reading and computation, problem solving skills, as well as self-esteem, was that of Direct Instruction. This was a controversial finding as it flew in the face of progressive educators promoting less structured, non-directive, “child-centered” education. Follow-Through found that methods of instruction that stressed “learning to learn” or “self esteem” showed either negative average effects or no average effect.54

Despite this massive effort which utilized empirical research to determine what works in education, the National Institute of Education, part of the U.S. Department of Education, issued a report which questioned the validity of using scientific research to measure educational outcomes:

The audience for Follow-Through evaluations is an audience of teachers. This audience does not need the statistical findings of experiments when deciding how to best educate children. They decide such matters on the basis of complicated public and private understandings, beliefs, motives and wishes.

Such thinking reflected a view that regarded research-based teaching methods as irrelevant to improving student learning. According to Bonnie Grossen of the University of Oregon’s National Center to Improve the Tools of Educators, this attitude “has left teachers without the tools that they need to build a sound professional knowledge base” and determine the effectiveness of innovations and avoid fads.

Even though more than $1 billion was spent to complete this study, the Department never effectively disseminated its findings. For example, one of the findings of Follow-Through was that a teaching model similar to what is known as “whole language” reading instruction was found to be an ineffective approach to use with disadvantaged students. The effective use of the data produced by Follow-Through may have prevented the “pendulum” swings from phonics to whole-language and back to phonics that have taken their toll on the reading ability of many children.55

**Ineffective Assistance**

Even programs designed to make federal programs effective do not appear to be helping their intended customers. Recognizing the complexity state and local school systems face with so many education programs with varying requirements, technical assistance is provided through what are known as Comprehensive Regional Assistance Centers (CRAC), as well as through the Regional Education Labs.

Funded at $27 million in FY 98, the CRACs assist state education agencies and local school districts in their efforts to receive federal funds and correctly implement programs. Their overall objective is “to help coordinate and integrate the implementation of the Elementary and Secondary Education Act and other federal education programs with state and local activities.” Regional Labs, funded at $51 million in FY 98, “conduct applied research and development, provide technical assistance, develop multimedia education materials and other products, and disseminate information in an effort to help others use knowledge from research and practice to improve education.”

Although they do not provide direct funding to public and private schools, according to their official program description “the activities undertaken by the centers benefit those schools.” Recent data collected by the Department of Education indicate, however, show that the CRACs and the Labs are less than helpful in providing assistance with important issues many states and districts are currently facing, such as standards-based reform, new legislation, and flexibility and accountability provisions in federal legislation (Table 4).

Recent Inspector General Audits of the Education Laboratories have found evidence that their use of federal funds is not always in the best interest of children and supporting what works. A 1998 audit report of the WestEd Regional Laboratory in California found that it did not comply with certain Federal laws and regulations in how it spent federal dollars, and improperly billed the U.S. Government for subcontractor work.\(^{57}\) WestEd was also found to have improperly spent:

- $5,179 to lease a Jeep Grand Cherokee for the Lab’s Director
- More than $1,000 on foreign travel and airfare upgrades
- $450 to pay for a Disc Jockey to provide entertainment at the board’s two-day staff meeting at a resort

In February 1998 the Inspector General also reported that the University of North Carolina at Greensboro could not justify $2.3 million in federal dollars used for salaries and fringe benefits. It could not provide evidence that an appropriate amount of time and effort was spent to operate the Southeastern Regional Vision for Education (Lab) to justify such costs.\(^{58}\)

**WHAT WORKS: OUTSIDE OF THE BELTWAY**

Because of the apparent vacuum of reliable evidence that federal programs are effectively spending tax dollars to improve education, the Subcommittee traveled around the county to hear the perspective of parents, students, teachers, community leaders and administrators on what works and what’s wasted. We visited 26 education institutions and heard from more than 225 witnesses in an attempt to gain a better understanding of what parents, teachers and local educators believe is working in America’s education system. Witnesses shared many different success stories, but sounded four common themes at every hearing - the keys to educational success:

---

• Parental Involvement and Empowerment;
• Local Control;
• Basic academics;
• Dollars to the classroom, not to bureaucracies.

The following section describes how each of these elements contributes to success at the local level.

</table>
I think there is an arrogance on the part of the school bureaucracy that assumes that they know best what is for everybody's children. I assume the opposite. I don't think anybody can make a better decision for their children than the parent.

-- Mr. Stahl, parent, Napa, California

Research has found that a student whose parent or guardian is involved in their education is more likely to succeed. Parents who take responsibility for ensuring that their children receive a high-quality education are the keys to success at the local level.

- Children in single-parent families are more likely to experience early school problems than children in two-parent families.\(^59\)

- In 1995, 3- to 5-year-olds living with two biological or adoptive parents were more likely to have been read to three or more times a week, to have been told a story once a week, or to have visited the library in the previous month than 3- to 5-year-olds living with one biological or adoptive parent.\(^60\)

- First- and second-graders aged 6-8 living with one biological or adoptive parent were more likely to experience academic problems and to have their parents report that they were academically below the middle of their class than those students living with two biological or adoptive parents.\(^61\)

- Twenty-two percent of children living with divorced mothers must repeat a grade and 30 percent of children born to a single parent must repeat a grade. Only 12 percent of children from two-parent families have to repeat a grade in school.\(^62\)

Unfortunately, the proportion of children raised in two-parent families is declining rapidly. The proportion of children living in single-parent families has more than doubled since 1970. In 1994, 25 percent of children under age 18 lived in single-parent families, while 11 percent did so in 1970. In 1994, 60 percent of black children lived in single parent families compared to 19 percent of white children and 29 percent of Hispanic children.

\(^{60}\) Ibid, p. 208.

\(^{61}\) Ibid, p. 209.

What this means is that children from all backgrounds are facing increasingly difficult family situations, making it more difficult to learn, and all the more important that schools are as effective as possible. The data show that even children from two-parent, low-income families out-perform students from high income families headed by a single parent. As family cohesiveness declines, so will academic performance.

When a parent is involved in their child's educational experience, it only strengthens their academic progress. Federal programs that attempt to provide a substitute for parents actually may have the negative effect of distancing parents from a child's educational experience, from school breakfasts to after-school care.

**Catholic Schools: A Model of Parental Involvement**

At a national average of $2,178 a year, tuition at Catholic schools is lower than all other forms of private education. Yet these schools have been teaching children with successful results regardless of their background. Because costs are kept as low as possible, schools must rely on parents to provide many of the "extras" that parents have come to take for granted in public education. Relying on parents, however, is not considered by Catholic school principals to be a liability. Rather, they see it as one of the reasons for their success in the midst of adverse economic and social conditions.

At the Kentucky hearing, Sister Amelia Stenger described the role of parental involvement in the success of Catholic schools.

*Catholic schools depend on the involvement and resources of parents more than they depend on any government agency. Parents advise the principal and the pastor on policies of the school, they volunteer their time to extracurricular activities for the students and they greatly assist faculty and staff. Many of the activities in which parents are involved could not take place without their assistance. Often schools cannot afford to pay someone to take care of these activities, therefore our parents are our most vital resource.*

Dependence on parental involvement for day-to-day educational activities provides a built-in accountability mechanism for the schools - they cannot operate without the parents and therefore cannot ignore their presence.

**Removing Barriers to Parental Involvement**

Successful schools with high levels of parental involvement find that removing barriers to involvement is an important factor of their success. English instruction, literacy classes, student-
parent classes, and job training are a few of the ways in which schools have involved parents who were previously on the periphery of school activities. Mr. Joe Lucente, the principal of a charter school in the heart of Los Angeles, described how his school attempted to include as many parents as possible:

Before we became a charter school, yes, that [only certain parents volunteering] was a problem. However, when we became a charter school, we opened up a variety of vehicles for parental involvement...If your need was to learn English, we had English classes. If your need was basic literacy, we had literacy classes.

Ms. Earl Lene Jones, a fifth-grade public school teacher in Napa, California, testified that parental support was “critical in all aspects of educating the child.” She described a hands-on parental involvement program in her school:

At our school we have something called the Child and Parents Succeeding Program...the parent or guardian or caretaker comes in and sits right next to the child during the course of a school day. They sit with the child and help the child stay focused, help the child to read, help the child to work problems. We found this is quite effective, but lets the other children see that there is involvement and caring from parents.

Mrs. Beverly Tunney, a Chicago public school principal observed that making parents comfortable - especially low-income parents - is very important:

As the parents have become more comfortable in the school setting and experience the excitement of learning, we have found a higher rate of parents volunteering within Healy [School] and a base group of parents that have an expanded knowledge of curriculum, the learning process, and raising children.64

Mrs. Cleaster Mims, principal of the Marva Collins Preparatory School in Cincinnati testified that her school expected participation by the parents: “We...believe that parents should be actively involved, so our organization or our school expects parent participation. We do not see parents as intruders...we strongly believe that parents should know each day what is happening with their children when they entrust them to us.”

Encouraging Parental Involvement in Phoenix

ATOP Academy is a public charter school in Phoenix that serves a mostly African-American population in the inner city. The school has been very successful and currently has a waiting list

---

of some 175 students. When students come to the school, parents are asked to agree to the following as part of their involvement in the school:

1. Restrict television watching during the week.
2. Spend 15-20 minutes on school nights reading to their children.
3. Attend all parent-teacher conferences.
4. Attend Parent Involvement Committee monthly meetings.
5. Participate in their child’s classroom activities.

This up-front commitment encourages parents to be involved, giving them very specific tasks to accomplish and build upon.

School Choice: Parental Choices In Control

*Can anyone name one public school in Ohio that has closed because of poor performance?*
-- Kenneth Blackwell, Treasurer of State of Ohio

The Subcommittee visited the two cities where publicly funded school-choice programs have been implemented, Milwaukee and Cleveland, as examples of parental choice bringing about true local control.

While it is still too early to determine the full extent of the impact school choice will have on the children in these cities, initial studies have found that children attending the school of their choice have measurably improved academic achievement.

Both sides of the school choice debate recognize that when parents select the school their child attends, they are more satisfied (Table 5). Nationally, the U.S. Department of Education found this to be the case by wide margins:

| Table 5 |
|-----------------|----------------|
| **Percentage of parents of students in grades 3-12 who were very satisfied with aspects of their child’s school: 1993** |
| Chosen Public School | 61.2 |
| Chosen Private School | 82.5 |
| Assigned Public School | 52.3 |

Choice, particularly in many center cities, provides what is perhaps the only remaining avenue to a good education: private schools. True equity and access in education is achieved when parents are allowed to make choices about their children’s education. To define “access”

---

and “equity” exclusively in terms of public schools is to miss out on the overall objective of education: children learning.

Paving the Way in Milwaukee

In April 1990, Wisconsin Gov. Tommy Thompson signed legislation which enacted the Milwaukee Parental Choice Program. This program provides state funding for low-income children in the city to attend private, nonsectarian schools of choice. Spearheaded by Rep. Annette “Polly” Williams, a Democrat from Milwaukee, the program has survived several rounds of Constitutional challenges and has expanded every year since its inception. The American Civil Liberties Union (ACLU), National Association for the Advancement of Colored People (NAACP) and the National Education Association (NEA) filed a suit which until recently prevented the program from expanding from 1,650 to 15,000 students, as signed into law by Gov. Thompson in 1995.

In response to the court injunction, which prevented the program from expanding, in order to accommodate the overwhelming demand, people in Wisconsin donated more than $1.6 million to Partners Advancing Values in Education (PAVE). This private organization gave 50 percent scholarships to about 2,000 low-income students who had enrolled in religious schools under the expanded voucher program. Still, this amount was not nearly enough to accommodate the demand of those parents who wanted to start sending their children to private schools, but who were still in the public school system.

On June 10, 1998, the Wisconsin Supreme Court ruled that students could use state-funded scholarships to attend religious schools of their choice, clearing the way for expansion of the program to 15,000 students. The court affirmed the primacy of parental choice in directing where the vouchers are spent. Judge Donald Seinmetz wrote for the court that “not one cent flows from the state to a sectarian private school...except as a result of the necessary and intervening choices of individual parents.”

In 1995, the Committee held a hearing on school choice to provide low-income families the same opportunities that those who can afford a private school education currently enjoy. School choice empowers parents, and allows them to make the decisions concerning the education of their children. Ms. Pilar Gonzalez, a Milwaukee parent, described the need for local control and parental empowerment:

[Milwaukee Public Schools have] become an educational prison for many low-income families while providing our children with only a mediocre curriculum. This must change and we as parents must assume the responsibility for that together.

---

Ms. Zakiya Courtney, the director of Parents for Choice added that:

_We need more options for our children. Not fewer. We believe the role of the federal government in education is to respect parents and support their choice in education for their children._

In February 1996, data from the Milwaukee school choice experiment were made available to the public. Professors Jay P. Greene of the University of Houston Center for Public Policy and Paul E. Peterson of Harvard University's Program in Education Policy and Governance conducted a detailed assessment of this information. Their study found:

- Reading scores of choice students who had participated in the program three and four years, on average, scored 3 to 5 percentile points higher, respectively, than those of comparable low-income public school students;

- Math scores, on average, were 5 and 12 percentile points higher, respectively.

The implications of these findings are extremely significant. As Greene and Peterson note, "If similar success could be achieved for all minority students nationwide, it could close the gap separating white and minority test scores by somewhere between one-third and more than one-half."68

**Finding Hope in Cleveland**

After spending billions of dollars and producing decades of failure, the Cleveland Public School System is perhaps one of the best examples of what is not working in education. Since 1978, $1.1 billion in state and local tax dollars has been spent on its desegregation program, one of the most expensive in the nation. In a system where 80 percent of the students are in poverty, and 20 percent change addresses each year, only one in three Cleveland students receives a high school diploma. On any given day, nearly one in six students are absent. Twelve percent of the city's ninth-graders passed all required state proficiency tests in 1995, compared to 54 percent for the entire state. Of Cleveland's eighth-graders in 1990-91, 46 percent had dropped out by 1995, and only 7 percent graduated and passed the 12th grade proficiency test.

To address the failures of this dying school system, Ohio Gov. George Voinovich signed a two-year budget package in 1995 that created a $5 million pilot voucher program. This particular voucher program was the first in the nation to include religious schools. Low-income students can receive up to 90 percent of private-school tuition cost, and all other Cleveland students are eligible to receive vouchers worth 75 percent of tuition.

Nearly two years after the 1995 hearing in Milwaukee, 21 parents, students, teachers, administrators, state and local officials lined up to testify on behalf of the successes of the state-

---

funded Cleveland Scholarship and Tutoring Program. Included for the record were more than 50 letters, primarily from recipients of scholarships, testifying to how their education has changed for the better under the voucher system.

Many witnesses shared experiences similar to Adasha Bias, third-grade student at Hope Central Academy. She told of how she was unable to learn in her public school because children were always disrupting class. And even though they had computers at her old school, at Hope they did not just have games—technology provided learning tools used to instruct them in math and reading.
Hello. My name is Adasha Bias. I am in third grade. This is my second year at Hope Central Academy. I've learned a lot at Hope.

In my old school, the kids were bad. They threw things, got into fights all the time, and we didn't get to learn. I feel safe here.

There is no fighting, and the kids don't throw things. At my old school we had computers, but they only had opera. At Hope, all computers have math, reading, and language. I really love all computers. I love my teachers here, they work really hard with us. We do projects here. I never did projects in my old school.

So, for my grades have been outstanding. My favorite subjects are reading and math.

Please help us keep up the good work, and keep our school open.

Thank you.
Ms. Ballard-Hunt, a single mother of four children, shared how her children’s behavior and learning improved when they were able to attend Hope Academy through Cleveland Scholarship Tutoring Program. Diagnosed as having behavior problems and in need of counseling while in public school, her daughter Antonice had no interest in school and was a D and F student. At Hope her behavior problems were brought under control through the concerted efforts of her teacher and principal. She can now read better than her mother. Her first-grader who did not know the alphabet learned to read within a few months. Ms. Ballard-Hunt told the Subcommittee that the scholarship program “opens up opportunities for the future of our children...it has helped keep my daughters alive.”

Ms. Bert Holt, director of the Cleveland Scholarship and Tutoring Program, described a system where parents were finally able to be in charge of their children’s education. “The Scholarship Voucher Choice Program is indeed evolving and producing revolutionary results. The parents are happy. They are in charge...Parents are taking responsibility for themselves and their children. They are making choices and accepting consequences.”

Delvoland Shakespeare, a parent of children attending a Cleveland Catholic school and recently profiled by The Wall Street Journal, gave a heartfelt account of his sacrifices to send his children to a “working” school:

> When I look on the news...I see a mayor who is trying to take over our school system and now lawsuits are being raised up. We don't have time for that...each and every day...my child misses out on a day of education that he should have. I took it upon myself before the voucher program even existed to take the little resources that me and my wife has to send our child to a private school. It was hard for me...That was my choice...it was worth it...I want my child to have the best opportunity he possibly can.

Councilwoman Fanny Lewis, the leader of the fight to bring choice to Cleveland also testified:

> I am convinced that nobody can educate us but us. If we are not involved in the educational process of our youngsters, they are not going to be educated properly.

Chosen at random to receive the scholarships, low-income children attending Hope Academy experienced significant gains in reading and math, according to a Harvard University study released in June 1997. Students in kindergarten through third grade after one year scored, on average, 5.5 percentile points higher on standardized reading tests and 15 percentile points higher in math. All children in all grades improved. This is a stark contrast to other studies that have

---

shown that students with comparable backgrounds tend to lose an average of one to two percentile points each year that they are in school.71

Parents Teaching Their Children at Home

Many parents are involved in their children’s education at home: Home schooling is one of the fastest growing educational movements in the United States. A study conducted in 1996 Home School Legal Defense Association estimated the number of home schooling students at 1.23 million. Because of growth trends it is now estimated that there are 1.5 million home schooled-children in the United States. The study points out that "there are more home school students nationwide that there are public school students in Wyoming, Vermont, Delaware, North Dakota, Alaska, South Dakota, Rhode Island, Montana, and Hawaii - combined."72

Not only is home schooling spreading to diverse segments of society, they have performed well on standardized tests. Of the 1997 graduating class, the American College Test High School Profile Report found that home-educated students averaged 22.5 on the ACT while the national average is 21. A perfect score is a 36.

The Federal Role

The testimony of witnesses demonstrates that the best models of parental involvement are locally driven. More often than not the principal of the school, who knows the parents, primarily drives the level of parental involvement. No witnesses asked for federal dollars to increase parental involvement. It is clear that programs from Washington are unable to emulate parental involvement, no matter how hard these programs try.

School choice is another very important component of empowering parents. It allows parents to decide where their children should attend the school where they believe their child will receive the best education possible. The school choice programs examined by the Subcommittee, as well as others, were brought into being by local parents - without federal dollars or encouragement.

Local, state, and federal governments must ensure that their programs and policies do not make it harder for parents to fulfill their responsibilities to their children. It must ensure that it is not burdening principals and teachers, impeding them from making his or her school as child-centered as possible. Parents who wish to teach their children at home should be free to do so without burdensome requirements and unnecessary government oversight. Parents who wish to send their children to safe, drug-free and effective schools should be allowed to make that choice. Providing as many opportunities as possible for parents to be a part of their child’s education will help increase accountability, and will help more children to receive a high-quality education.

As former Secretaries of Education William Bennett and Lamar Alexander told the Committee on Economic and Educational Opportunities in 1995:

"Except when the civil rights of individuals are menaced, the federal government should never impede the capacity of families, teachers, communities and states to decide how best to provide education to their children, and should never substitute its judgment for theirs." 73

---

The handcuffs have been taken off, yes, but we are in a fishbowl too. Everyone watches what we do and how we do it, and we do it very well, and we do it very well because we have local control. We set the policy at the local level, and we have control over where the money goes and how it is spent.

-- Mr. Joe Lucente, LA Charter School Principal

Mr. McKeon: The superintendent doesn’t have any say over you? Who is your boss?
Mr. Lucente: 160 staff members, the community, 1300 parents...

Parents who are involved in their children’s education know what is working and what is not. Monitoring their child’s progress by spending time in their classroom and observing school operations gives the parent a good opportunity to see how effectively their child is being educated. A high level of accountability is therefore in place when parents are involved, which facilitates local control and oversight.

Charter Schools: Autonomy In Exchange For Accountability

It is a waiver of all waivers...this autonomy is in exchange for accountability.
-- Dr. Yvonne Chan, Principal, Los Angeles Unified School District

At the hearing in Los Angeles, Calif., which primarily focused on Charter Schools, the Subcommittee heard about what has taken place in the relatively new movement of charter schools. Mr. Premack, Director of the Charter Schools Project, Institute for Education Reform, was responsible for conducting a review of the charter schools in the state of California. He argued that while charter schools are not a panacea, they have cut back on bureaucracy and provide a new level of accountability not often found in public schools:

We have taken a 6,000-page, 13-volume Education Code and a variety of other codes and launched all of them...[In exchange for that comes accountability...the school is accountable for results. They operate under a limited term, usually a five-year contract called a charter; and if the students don't learn, the charter is not renewed or revoked - a pretty powerful concept...the schools put a lot on the line, [teachers] are putting their jobs on the line for student performance. In exchange, the handcuffs are gone, the
Removing bureaucracy facilitates local innovation and the implementation of local solutions to local problems. As Ms. Sharon Ramano, a teacher at the Wildcat Academy in New York described it,

We’re structured differently...you don’t have to call up every time and wait six weeks for an idea to go through. You basically do what you have to do and you have the whole autonomy to be able to...you have paperwork and you are held accountable, but I just don’t think we are held hostage, time-wise, scheduling-wise, we’re not held hostage.

Good Intentions Do Not Always Lead To Good Results

Good intentions without accountability do not necessarily lead to success. Mr. Flanigan is the Chairman of the School Choice Foundation Inc, in New York. He described how he and his wife adopted a sixth-grade class in the “I Have a Dream” national program. They guaranteed to send any child from their adopted class, who graduated from high school, to college free of charge. Of the 48 kids in this class, only one completed college. Mr. Flanigan characterized the program as a failure.

This experience led Mr. Flanigan to seek a program that did work. What he found was that the inner-city Catholic school system had remarkable success with underprivileged kids. Because of this, Mr. Flanigan decided to start a scholarship program, Student-Sponsor Partnerships, which provide high school scholarships to inner-city children from impoverished and primarily single parent families. The program has thus far graduated 1,000 scholarship recipients, and 75 percent have gone to four-year colleges. Mr. Flanigan credited this kind of success with the fact that the Catholic schools are about “freedom.” Students and teachers choose to be where they are; principals choose which teachers to employ. Based on his experience, he testified that:

When schools are accountable, the parents and students who have the freedom to choose where they wish to be educated, they will become good schools. If schools do not meet the requirements of those parents and their students, they will and should close.44

An audit of Mr. Flanigan’s scholarship program by the RAND Corporation found that the scholarship recipients were of the same demographic background as those who attended zoned public schools in inner-city New York. After four years in the public schools, only the top 10 percent of the senior class took the SAT, scoring an average combined score of 642 out of 1600. Scholarship recipients who moved a few blocks away to private schools scored an average of 803, and 60 percent of those students took the test.

Investing in the Future: Community Involvement in Arkansas

Business and community partnerships with schools and students in their community are also examples of “what works” about local control. Community involvement can come in many different forms: funding, volunteers, apprenticeship opportunities, as well as community pride, which encourages students to succeed.

Many witnesses at the Arkansas hearing spoke of the importance of community collaboration with schools. One program called STRIVE operates in conjunction with the University of Arkansas at Little Rock. The goal of this program is to give teachers a better idea of what the business community wants and needs by actually bringing the teachers to the businesses. As a result they have seen students gain in math and science.

Dr. Charles Adair, a school superintendent testified that community ownership is crucial:

>[P]ublic schools are for all parties involved to feel a partnership, whether it be administrators, teachers, parents, businesses, patrons, grandparents, students or school board members. The school belongs to all residents of the school district and for it to work all should feel ownership. 75

A local school board member surmised, “[I]f the initiative for improving the schools were shifted to these communities, I believe the people would respond in an even greater fashion.”

The Federal Role

Georgia’s Secretary of Education, Dr. Linda Schrenko, perhaps summed up local control the best when she told the Subcommittee while in rural Milledgeville, GA:

>[T]he most frequent message I have heard is that no one can make better decisions about local education than the parents, teachers, and students in those local communities... It is my heartfelt belief that locally controlled programs have and always will do a better job of meeting local education needs... I call for our federal governments to recognize that local decisions yield some of the highest quality education results.76

Parents involved in their children’s education, either as volunteers, choosing their child’s school, helping with their homework, or teaching them at home, will have a close view of whether their children are receiving a good education. Local school officials who know they are being held in close scrutiny will make decisions based on local needs. The federal government is

---

75 Testimony of Dr. Charles Adair, Field Hearing on Education at a Crossroads, Committee on Education and the Workforce, Little Rock, AR, May 29, 1997, No. 105-34.
76 Testimony of Superintendent Linda Schrenko, Field Hearing on Education at a Crossroads, Committee on Education and the Workforce, Milledgeville, GA, April 22, 1997, No. 105-16.
further away from students and local accountability and as a result has created "one-size fits all" programs and policies, which fail to give local educators the flexibility to adapt to unique local needs. Accountability must be "created" through regulations and requirements, which leads to the bureaucracy and paperwork schools are faced with today, diverting the focus from accountability and results to process and compliance. Schools and school districts that have designed innovative solutions to effectively address their unique problems have often done so in spite of such bureaucratic oversight, not because of it.
Throughout the hearings the Subcommittee found another characteristic of successful schools to be a focus on “mastering the basics”—making sure students can read well and do basic math at early grades and then go on to do more complex work. When education becomes less child-centered and more controlled by administrators and bureaucrats, more interests dictate what children should be learning such that by the end of the day they have spent only a fraction of their time in school on basic academics.

Successful schools have implemented research-based academic programs that improve children’s academic performance, and have stayed away from faddish programs that produce inadequate results.

The Importance of Effective Reading Instruction

The Subcommittee heard from several witnesses who described at the California hearings the detrimental effects of instructing children to read using “whole language” methods of instruction. In the 1980s, California used a teaching method called “whole language,” almost to the complete exclusion of phonics instruction. “Phonics” refers to teaching methods that instruct beginning readers how to break unfamiliar words into letters and sounds. “Whole language” teaching methods in their most basic form teach a child to read by learning words in the context of literature. Recent research findings by Dr. Reid Lyon of the National Institute for Child Health and Human Development, as well as many others, have shown that effective reading instruction must include phonics.

After having just implemented whole-language based reading instruction in the 1980s, California recently switched back to phonics-based instruction. In 1996, it allocated $52 million for textbooks and teacher training to make the switch. Such a dramatic turn around is understandable: after having been near the top for years, California reading scores plummeted to a ranking of 49 out of the 50 states. Both Democrats and Republicans argue that this focus on whole language and lack of emphasis on phonics is one of the primary reasons for California's poor test scores in reading. Indeed, many states that have used whole language in the past are facing the same problem of low reading test scores: in the last two years, 67 bills have been proposed in state houses around the country that would require phonics to be a component of reading instruction.77

In Los Angeles, the Subcommittee heard from a parent who described how her children who learned to read after whole language instruction was implemented, failed to excel despite her best efforts:

As a front-line parent with six children in public school from first grade to the University...Some of my kids are highly motivated, some only minimally motivated — and that with parental pressure. They’ve grown up in a literature-rich environment, with minimal TV watching. I have read to them almost daily. I earned a teaching credential myself...I have been on School Site Councils, PTA boards, and a classroom volunteer. Still, I could not prevent my children from suffering some of the effects of a lousy curriculum and a poor pedagogy.78

Children need to have a firm grasp of the basic tools that enable them to move on to advanced subjects. Those who fail to master these skills, especially those from impoverished backgrounds, will only fall further behind. Mr. Joseph Schulze, Superintendent of Muskegon Public Schools in Michigan, testified that children must learn the basics before moving on to other issues:

[Their priority] first and foremost is to educate students to read with understanding, to write with clarity, to compute with accuracy, to communicate effectively and understand our history and culture and to live responsibly in this civility. These objectives must be met first before we assume other challenges.

Knowing how to read is the most basic component of learning, and children who advance from grade to grade without knowing how to read are being robbed of the most essential skill they need to succeed in life. Knowing what works in reading instruction is therefore critical. California is an example of a state that was finally willing to acknowledge what was not working, replacing whole language with research-based phonics instruction, putting children first and rather than a particular philosophy of teaching.

Core Knowledge: Equity in Knowledge, Equity in Education

In Pennsylvania and Colorado, the Subcommittee heard from parents whose children attend school schools that have implemented the “Core Knowledge Sequence” program, a curriculum that is the result of research into the highest performing elementary school systems around the world. Several parents described how their children advanced in knowledge at a faster pace and in a more systematic manner than their other children who were not a part of the program.

The Core Knowledge Sequence is based on the principle that true equity in education can be achieved only when children are taught a “common” curriculum — a curriculum that builds on knowledge at each grade level to develop a consistency of learning seldom seen in traditional elementary school curricula. There are presently more than 700 schools in 43 states that have implemented Core Knowledge as their curriculum. An estimated 80 percent of those schools are public.

According to the Core Knowledge Foundation, it seeks to “provide children, regardless of background, with the shared knowledge they need to be included in our national literate culture.” Many children from impoverished backgrounds enter school at a severe disadvantage to other children because they are not familiar with the broad body of knowledge that most speakers and writers take for granted that people understand. Ensuring that all children have access to this knowledge prevents them from falling farther behind their more advantaged peers. In addition, the specific skills and knowledge children learn in each grade allow teachers and parents to determine the progress of their children.

Charter Schools: Free to Focus on the Basics

Because of their relative autonomy, many charter schools around the country are able to focus basic academics in ways their public school counterparts are not.

In fact, many charters have made such a focus one of their primary selling points.

Dr. Raymond Jackson, the CEO of the ATOP Academy Charter School in Phoenix, AZ, described how, after 25 years in public education, he started a public charter school which now has 300 students and an additional 175 on a waiting list.

ATOP is one of the most successful charter schools, emphasizing basic academics, a strict discipline code, small classroom size, and heavy parental involvement. It serves a largely minority student population. Both certified and non-certified teachers are used and the students dress in uniforms each day. Mr. Jackson explained that they were able to teach their kindergartners to read because they take time to diagnose their level of reading as well as the degree to which they may be frustrated.

At the ATOP Academy, they do not just “talk” about learning—they see it happening every day. Their focus is on results, not process or matching their programs to federal guidelines and priorities. Mr. Jackson described for the Committee how his school is different in this way:

_In most schools, the language of the classroom is primarily a language about the process of teaching something. It is not itself a language of learning. We came to call this language ‘talkinabout’ because we saw so many people talking about reading, but not actually reading, talking about writing, but not actually writing. Talkinabout is an abstract language...it is a rumor about learning...We talk about people learning, but we are not actually teaching kids how to learn._

---

79 See: www.coreknowledge.org
The Importance of Literature: Marva Collins Prep in Cincinnati, Ohio

Opened in the basement of a Baptist church in 1990 with 44 students, the non-sectarian Marva Collins Prep School in Cincinnati has been described by many as a “miracle school.” Children at this school are primarily from disadvantaged backgrounds and are 99 percent minority, yet they score two to six grade levels above their entrance level scores. But according to Mrs. Mims, the school’s CEO, it should not be seen as a “miracle” when:

- Three- and four-year olds know their multiplication tables;
- Kindergartners read The Secret Garden;
- Third- and fourth-graders read and understand Homer’s Odyssey.

Ms. Mims described for the Subcommittee how parents would bring their children to her school who were diagnosed as having “Attention Deficit Disorder” in order to avoid having to give them medication. At Marva Collins, these students have become avid readers and critical thinkers.

Mrs. Mims credits their success largely to the importance they place on studying the great works of literature. From a young age, children are reading Shakespeare and learning to appreciate great books. See Spot Run type books have been replaced entirely by the classics. Money, while important, was not the essential component assuring their success.

Houston: Basic Academics and Phonics Raise Test Scores

In the Acres Homes section of Houston is a shining example of what works in education. With a proven track record for more than two decades, Wesley Elementary serves children in a violent and drug-infested neighborhood in Houston. The school is 99 percent minority and 90 percent of its students qualify for free or reduced school lunches. Despite these circumstances which usually predict low achievement levels, Wesley test scores are consistently among the highest in the state. In 1996, 100 percent of Wesley’s students passed the Texas Assessment of Academic Skills (TAAS) in reading, easily surpassing the statewide passing rate of 70 percent for schools with similar demographics. It is not uncommon to find kindergartners reading 2nd grade books. Although 10 percent of Houston students are found to need special education, only three percent of Wesley students are in special education classes. These results are achieved at a cost of $2,500 per child, which is $1,000 less than the district average.80

Mr. Thaddeus Lott became the principal of Wesley in 1975, when only 18 percent of its third-graders were at or above grade level in reading. Deciding that “it’s a myth that if you’re born community and your skin is a certain color that you can’t achieve on a higher level,” he aggressively implemented the proven method of instruction known as “direct instruction” or DISTAR.81 His formula for success centered on basic academics, and includes rigorous teacher training, strict discipline, and high expectations. In a typical classroom, “the pace is quick, the goals are set high, and no disruptions are tolerated.” By 1980, test scores in both reading and

---

81 Ibid.
vocabulary were above the 80th percentile - more than 40 points higher than the scores of similar schools. Today, due to its continued success, parents desperate to give their children an opportunity to excel often resort to lying about where they live in order to get their children in Wesley.82

Mr. Lott has been consistently successful because he has not been swayed by the rise and fall of various education fads and progressive education methods which view learning as a child-centered “discovery” process, de-emphasizing correct answers and “basic” skills.83 He divides his students in classes by ability, ensuring that teachers do not need to develop lesson plans for more than three skill levels. New teachers receive rigorous training and are held accountable, as Mr. Lott places a high priority on tracking progress and tests students on a regular basis.

Despite Wesley’s proven record using DISTAR, the school had to hold candy sales and delay technology purchases to purchase curriculum materials because it was not a “state-approved” curricula. Now, however, Wesley is a charter school and Mr. Lott has the flexibility to spend its curriculum dollars on the curriculum that works.

The Houston School District recently implemented a uniform strategy for reading instruction in all schools and grades that emphasizes basic skills. Reading in grades K-3 must be taught in an uninterrupted block of at least 90 minutes each day, with six “prongs” to its approach: phonemic awareness, print, alphabetic and orthographic awareness, comprehension strategies and reading practice. The goal is to have all children reading at grade level by the third grade.84

Early results of the new reading curriculum have been encouraging. In spite of the daunting obstacles that are often present in a district where 65 percent of the students qualify for free or reduced price lunches, student test scores have increased steadily at all grade levels, and in some cases dramatically. Fourth-graders have improved 11 percentage points since 1996, the year before the new mandate went into effect, with 89 percent now meeting the minimum standards of the reading test.

The Federal Role: Reliable, Replicable Research Based Practices

When it comes to encouraging basic academics, again there is little the federal government can or ought to do directly at the local level. Instead, it can take steps to ensure that it is not discouraging basic academics by not tying federal dollars to “faddish” teaching methods such as whole language. Ensuring that federal dollars are spent to fund research or teacher training that advances research-based teaching methods is one way to accomplish this. When parents are given a voice and the opportunity to hold teachers and schools accountable, they most effectively will ensure that children are being taught the basics.

DOLLARS FOR CLASSROOMS, NOT BUREAUCRATS

Don't swamp us with the paperwork and we can have a lot more money going to the kids.
-- Dr. Yvonne Chan, Vaughan Learning Center, California

Despite the billions of dollars spent on federal education programs over the last two decades, there is still little evidence demonstrating its effect on student achievement. In other words, there is not any evidence that tax dollars were more effectively spent in federal programs than they would have been had the dollars never left the state. Moreover, federal programs force states to comply with many rules and regulations, and often favor larger school districts who can afford to hire "professional" grant writers to win grant awards.

The Subcommittee found that schools have been most successful when they have been able to implement child-centered spending priorities, cutting through bureaucracy and battling cumbersome requirements.

$1.2 Million More for the Children

One of the most successful stories the Subcommittee heard was that of Dr. Yvonne Chan, Principal of the Vaughn Learning Center in Los Angeles, California. The Vaughn Learning Center is located in a community that is a federally-designated "Empowerment Zone" due to its extreme poverty and high crime status and in 1990, was cited as one of the worst schools in the L.A. Unified Schools District. Ninety-five percent of the students are Hispanic.\(^{85}\)

Dr. Chan described what it was like before her school became a charter school. She testified, "I thought my job was teaching reading, writing, and arithmetic...my real job was the three Bs: Busing, Budget, and But." The "but" came into play when she would say, "I've got an idea about how to improve something," the answer she was given was that's a good idea "but." She told the Subcommittee that as a Charter School, "All that has changed...we are not like before, a black hole of resources."

As a charter school principal, Dr. Chan told her school district, "if you can't give us the dollars then give us the freedom." In their first year they saved $1.2 million by cutting waste and putting children first. With the help of reformed gang members in their community, they installed a computer system of 212 computers all connected to the internet. Parents helped to build 14 classrooms in 10 months, and extended the number of days in class from 163 days to 200.

Nearly all of Dr. Chan's students receive free lunches as part of the federally funded school lunch program. But because five out of 1,200 children did not qualify they had to spend $80,000 to keep track of the five. She asked the question, "How much does it cost to feed five?" She

\(^{85}\) Testimony of Dr. Yvonne Chan, Field Hearing on Education at a Crossroads, Subcommittee on Oversight and Investigations, Committee on Education and the Workforce, January 30, 1997, No. 105-11.
estimated at most, $2,000. They now implement what she calls universal feeding where they feed all of the students and position the $78,000 for some better use.

Dr. Chan concluded her testimony by saying, “we are the poorest school in the district and yet the test scores continue to rise and there is almost perfect attendance.”

Changing the way they spent their resources as a school was fundamental to turning Vaughn into a school that focused on children and learning. Eliminating waste and spending dollars on the classroom changed the climate of Vaughn into one of parental involvement and learning.

**Tracking Dollars to the Classroom in South Carolina**

Dr. Barbara Nielsen, Superintendent of Education for the State of South Carolina, discussed her state’s efforts to track dollars to the classroom at the Subcommittee’s “Dollars to the Classroom” hearing in Washington, D.C. She outlined many promising initiatives that will improve education in her state, but stated:

> Perhaps the single most important step we have taken toward that goal is to encourage our state to take a hard, clear look at how we spend the money we have, to see if our resources are serving children as efficiently and effectively as possible.\(^8\)

They accomplished this by adopting an accounting system produces “user-friendly” information about how they spend their education dollars. In 1995 South Carolina became the first state in the nation to implement the In$ite accounting product.\(^7\) The system takes a “mass of data organized for regulatory accounting” and for the first time, “tells us where the money really goes.” The system allows them to target their funding better by understanding where the dollars go, ultimately putting children at the center of funding issues rather than requirement.\(^8\)

\(^{87}\) In$ite was developed by Coopers & Lybrand, L.L.P.

\(^{88}\) See [http://www.state.sc.us/sde/fam/linkpage.htm](http://www.state.sc.us/sde/fam/linkpage.htm) for additional details on the In$ite findings in South Carolina.
South Carolina is currently tracking administrative costs at the state level in order to reduce state administrative costs to less than one percent of the budget. South Carolina presently sends 98.5 percent to school districts. The state is encouraging districts to implement this accounting system in order to reduce their costs to less than five percent of their total budgets.

InSite, perhaps most importantly, provides the public with understandable, valuable information, increasing their ability to participate in the discussion of important education decisions. Information from the system is available to all, and is even posted on the Internet.

The next step in this process is to develop a methodology for a “productivity quotient” for all schools and districts. This system would combine student achievement data with cost data in order to show to taxpayers how much return their investment is producing, in terms of student learning.

South Carolina is now helping hundreds of other school districts and states interested in implementing this system. The system is already in place in several other states and school districts, and the U.S. Chamber of Commerce and Coopers and Lybrand are working to put this technology into as many places as possible.

**Child-Centered Education Funding**

Arizona Superintendent of Public Instruction Lisa Keegan described for the Subcommittee the system of education funding she believed to be most child-centered and equitable. While Arizona has not yet implemented such a plan, it is the direction in which they are headed as they comply with a court order to restructure their school finance system. However, the city of Seattle recently announced plans to design a similar funding mechanism for their schools, and the idea, sometimes called “school-based education funding” is rising in prominence among education reformers.

According to Ms. Keegan, education dollars should be “strapped to the back of a child” and follow a child to whichever school he or she attends:

> Though most assume this is how the system functions, at least within the traditional public schools, I assure you it does not... Very few principals have any control over funds “due” their schools, and worse, have no idea how much money the arrival of a child at their school is worth.
Ms. Keegan proposed a funding system that essentially sends dollars to the classroom with the child. Such a system would increase equity and access, reduce bureaucracy, and create a true educational marketplace. She called for an end to:

... arbitrary and in fact meaningless distinctions between “public” and “charter” and “private” schools...a child is well-served where they can learn, they are not well-served when he or she is in an environment where they can’t learn, they are not well-served when they are trapped in any environment where they are doomed to fail.⁹⁹

A child-centered education funding system would empower parents to make decisions about where their children should attend schools, empower schools receiving the funds to use the money to address the unique needs of their students as efficiently as possible, and to create an accountability system based at the local level. The question of what portion of education dollars reach the classroom would be easily answered: they arrive at the classroom with the child.

The Federal Role

Ensuring that federal education dollars are child centered and spent in the classroom does not necessarily call for an expansion of federal data collection: creating a bureaucracy to track dollars to the classroom would only add to the problem. State and local education agencies can advance accountability by implementing accounting systems that would give taxpayers evidence of where the money is being spent. The role of the federal government is to eliminate ineffective and inefficient education spending and allocate dollars to proven initiatives that make improving education in the classroom their first priority.

The primary purpose of the Crossroads project was to listen and learn in order to make the case for change. Much of what works is simply a matter of common sense. It does not take rocket science to conclude that a good education starts with the family and good instruction. These hearings, however, presented the opportunity to principals, teachers, parents, students and state officials from around the country to share their experiences with what works and what is wasted. Rather than relying on a small, elite group of witnesses who could leave their work to come to Washington and testify, the Subcommittee visited educators, parents and students where learning takes place: the classroom. From small towns to major cities, real people discussed real successes and problems in education. Apart from these hearings, these voices may never have been heard.

Now is the time to act on what we’ve learned. And the central theme of what we learned is that the federal government cannot consistently and effectively replicate success stories throughout the nation in the form of federal programs. Instead, federal education dollars should support effective state and local initiatives, ensuring that it neither impedes local innovation and control, nor diverts dollars from the classroom through burdensome regulations and overhead.

Reforming the federal role in education is a process that will take time. It has taken thirty years to get to where we are now. However, there are many bold initiatives that Congress can pass to reverse this trend and restore parental and local control over education.

The Federal Role: Supporting What Works

The massive array of federal education programs began as an attempt to address specific problems. Each program received minimal funding at the outset, and most have received additional funds from one year to the next. The current arrangement of federal education funding is as follows: local tax dollars go to Washington, where they are allocated to a variety of purposes, usually to address what someone in the federal government sees as a problem. The money is then returned to states and school districts in the form of categorical programs. This process puts smaller school districts at a disadvantage: States and local school districts are highly dependent on administrators and skilled grant writers to obtain these federal dollars and comply with their requirements, which places a greater burden on poorer and smaller school systems.

It is time to shift the burden of proof of effectiveness to the federal government. If the U.S. Department of Education cannot demonstrate to Congress that a particular program is more effectively spending the money than it would otherwise be spent as part of a general grant, that money should be returned to the states without strings. The largest program, Title I, Aid to Disadvantaged Children, has spent over $100 billion over 30 years with little or no evidence that this program has improved the learning of the children it serves. Congress should ensure that such a waste of funds never happens again.
Return Federal Elementary and Secondary Education Funds to States and Local School Districts

Now, if reform is radical simplification, and if we must organize to stop using our teacher's time, our principal's time, our student's time towards initiatives that are not productive to student learning, then your Committee can do this nation a remarkable service if you...end or at least consolidate these programs.

--Dr. William Moloney, Commissioner of Education, Colorado

The most comprehensive way to return control of education to parents and school districts is to consolidate all elementary and secondary education funds and send them back to school districts and states in the form of flexible grants. This would shift the balance of power back to parents by facilitating program development and oversight at the local level. Congress could redistribute the funds based on poverty as they are now, but not attach any strings to the dollars.

There are presently several efforts underway to enact legislation that would consolidate certain programs into flexible grants in order to change the federal funding role from being compartmentalized and program-centered to child-centered. Such grants would enable state education agencies, districts and schools to tailor education programs to the unique needs of their students. Accountability and effectiveness would become the focus of federal programs instead of administration and compliance.

Consolidation “Flex” Grants

One immediate avenue Congress can take to send education dollars to the classroom is through consolidating elementary and secondary education programs into flexible grants. Because there are so many small categorical programs, even combining as many as 31 programs, as one plan proposes, only amounts to $2.7 billion. That so many programs spend under $3 billion total is also an argument for consolidating them. Programs could also be consolidated at the discretion of the state, in effect an “optional” grant: Either the legislature or the Governor could decide to receive funds through different federal programs, or as one grant.

Short of implementing a comprehensive education “flex” grant, in the short term, Congress can do the following to put children first and to free states and local school districts from the burdens of unproductive paperwork and regulations.

EMPOWER PARENTS

The federal government can encourage parental involvement in schools by empowering them to be in control of their children’s education. The following could facilitate this:

- **Reduce family tax burdens**: Cutting taxes can strengthen families by making it more economically feasible to have one parent home during the day and involved with their child’s education during the school day their classroom, or even teaching their child at home. Tax cuts would also free-up income that could be used for tutoring services, summer enrichment...
programs, school tuition, or other expenses they might choose to incur that would help their child's education.

- **Tax-Free Savings for Education**: Parents are empowered when they have the resources to make decisions that serve the best education interests of their child. Tax credits are a means of providing resources for education without diverting valuable dollars to administrative overhead and bureaucracy and places dollars for education directly into the hands of parents.

Congress recently passed a bill that accomplishes this - the Parents and Students Savings Account Plus Act. If signed into law this act would allow individuals to contribute up to $2,000 a year per child to an education IRA. Although the contribution would be taxable, interest would accumulate tax-free. Savings in the account could be used for any education-related expense, such as school tuition, books, tutoring, special classes, school uniforms, and transportation costs.

- **Encourage parental choice.** Giving parents the opportunity to choose where they send their children to school gives them more control over the quality of their education. No parent should be forced to send their child to an ineffective, violent or drug-infested school. Although school choice programs should be developed and implemented at the state and local level, school choice can be encouraged at the federal level by empowering low-income families to send their children to effective schools through scholarship programs.

The implementation of tax-free savings accounts would provide some relief for taxpayers who send their children to alternative schools. Many families with disabled children, or children with behavior or drug problems are sending their children to alternative schools that address the particular needs of specific categories of students. Some of these schools can cost as much as $40,000 a year.

The House has proposed several pieces of legislation that would provide opportunities specifically for low-income children to escape dangerous or academically failing schools:

**Opportunity Scholarships for students in Washington, D.C.**: Led by House Majority Leader Dick Armey, for several years Congress has been unsuccessful in enacting legislation that would provide opportunity scholarships for low-income children in the troubled DC school system. In its current form this proposal would provide $7 million for $3,200 scholarships for about 1,800 low-income students to attend schools of their choice.

**HELP for Poor Children in Failing Schools**: Another way to encourage choice for poor children is to allow states to spend federal dollars to create choice programs. Title VI, essentially an education reform block grant, could be vehicle for such a provision. Congressmen Frank Riggs (R-CA) and Jim Talent (R-MO) have introduced legislation that would allow states to create scholarship programs for disadvantaged children living in certain areas using their Title VI block grant dollars.
• **Jump Starts for Charter Schools:** Many charter schools are indefinitely stalled by a lack of capital to start their schools. Leasing or buying buildings for the school can be prohibitively expensive, and charter schools do not often have access to loan or financing options. The federal government currently provides some funds for states to distribute to qualifying charters for start-up costs. In order to expand access to charter schools, Congress should continue its support. In addition, it should not attach strings to the funds and burden them with additional regulations or restrictions or otherwise interfere with their autonomy, and leave to the states entirely how charters should be selected to receive funds.

• **Send Title I to Intended Beneficiaries:** In order to give states true flexibility in providing educational assistance to their disadvantaged students Congress could give states the option to use their Title I program funds to provide direct grants for disadvantaged students. Parents could use these grants for private school tuition or outside tutoring assistance at learning centers.

### RETURN CONTROL TO THE LOCAL LEVEL

Expanding local control means reducing the number of decisions about education spending made in Washington. States and local school districts should have the flexibility to allocate funds where they are most needed, and should implement local accountability measures to ensure that the funds will be spent effectively.

**Expand Ed-flex flexibility:** One way in which Congress could send decision making to the state and local level is to expand the current Ed-flex program to all 50 states and provide for more flexibility, such as allowing program funds to be consolidated with other programs.

The Ed-Flex program currently allows only 12 states to issue federal program waivers instead of the Department.90 This program simplifies the waiver process and enables more school districts to take advantage of available waivers, giving them greater flexibility within federal programs. Many schools are successfully using Ed-Flex to waive the statutory threshold schools must meet in order to implement a school-wide comprehensive reform program with federal Title I funds.91

States, however, are not given broad discretion to consolidate federal programs to address one area of particular need. Current waiver authorities cannot waive the requirements that would enable schools to implement truly new and innovative programs. If Congress wants to pass legislation that meets the expectations of increasing flexibility it should allow for states and local school districts to waive more requirements and completely consolidate their federal funds should they desire to do so.

90 The 12 states are: Colorado, Illinois, Iowa, Kansas, Maryland, Massachusetts, Michigan, New Mexico, Ohio, Oregon, Texas and Vermont.
ENCOURAGE BASIC ACADEMICS

In order to ensure that the federal government does not impede classroom learning by funding ineffective teaching methods and training, it should create criteria and standards for any federally funded research to ensure that any information disseminated by the federal government is based on reliable, replicable research. Research funded by the federal government should be peer-reviewed by disinterested parties before it is distributed, and should meet minimum standards of replicability and statistical significance.

SEND DOLLARS TO THE CLASSROOM

Streamline Federal Education Programs

The Crossroads Project found more than 760 federal education programs. Many of them have similar objectives and the exact same constituency. Even more are small, narrowly tailored programs, many of which were created to serve particular constituencies and special interests and not national education interests. In order to ensure that scarce resources are not spent on small, inefficient programs that only serve narrow constituencies, these programs should be consolidated and the savings sent back to states and local school districts. One way in which this could be done is to consolidate all elementary and secondary education programs that are currently funded at less than $1 million. Currently 56 programs fall below that level.92

Eliminate Unfunded Programs

To alleviate the burden of having to keep track of more than one hundred education programs that are no longer funded, and to promote a more efficient system, Chairman Hoekstra introduced the Clean Books Act of 1997. This bill would repeal 69 of the over 100 unfunded programs, including “Education Programs for Commercial Drivers” and “Consumer and Homemaking Education.”

Free School Districts to Fund Their Priorities: Increase Federal Funding for Special Education

Congress should do all it can to fulfill its obligation to local school districts to fully fund its share of the mandate placed upon them to provide a free and appropriate education for children, disabled or not. Local school districts are hamstrung by the numerous and expensive requirements in the nation’s special education law. Districts are often forced to set aside important general education funding needs to come close to complying with federal requirements.

Reallocating federal funds to special education, without increasing overall education spending, would free-up resources at the local level for general education. In effect this would send more funds to the local level for the classroom, but the funds would remain at the local level in locally designed programs to meet their unique needs and priorities.

92 Based on FY1997 figures.
Reduce the Paperwork Burden

In order to determine what states receive from federal programs for the costs involved in applying for the funds, it is important to know what administrative burden states must fund with their own tax dollars. Most states do not currently track what they must spend of their own funds to receive and comply with federal programs.

The Subcommittee is working, in cooperation with several states, to investigate the extent and cost of the federal paperwork burden. At the direction of the Governor, state education agencies are compiling all the paperwork required by federal education programs and determining the cost of filling out these forms. Such information will enable Congress and the Department to determine how to reduce paperwork and whether the OMB estimates of paperwork burden hours is accurate. In addition, the states participating in this project will be better able to do a cost-benefit analysis of what they receive from federal programs.

As accountability is based more at the state and local level, federal reporting requirements and audits will decrease. This will decrease the paperwork burden and increase resources for instruction.

Hold the Federal Government Accountable: The Results Act

In the past federal programs have placed a low priority on ensuring that their programs are held accountable and actually produce results. To address this serious deficiency in the management of federal programs, Congress passed the Government Performance and Results Act (GPRA) in 1994 in order to require by law that agencies give Congress information by which they can analyze the performance and cost of federal programs. Performance data collected as a result of this legislation will help determine which programs are effective and which should be either eliminated or consolidated into a proven program.

GPRA requires the Department to clearly define their missions, develop long-term goals as well as annual goals, measure their performance by their attainment of these goals, and report to Congress their progress. Under GPRA, the Department is also required to perform program evaluations and use the data to improve their effectiveness.

REFORMING THE FEDERAL ROLE FOR THE 21ST CENTURY

Fifteen years ago, our nation was diagnosed as being at risk - at risk of entering the 21st Century lagging behind other industrialized nations economically and educationally. Since then there has been little evidence of the federal government effectively addressing this problem through its hundreds of duplicative and uncoordinated education programs.

Education policy in this country needs to be re-oriented towards ensuring that children receive a quality education, not preserving programs and bureaucracies. Significant progress needs to be made by all levels of government - solving problems at the federal level is only one component.
The federal government should only play a limited role in education: It should serve education at the state and local level as a research and statistics-gathering agency, disseminating findings and enabling states to share best practices with each other. Local educators must be empowered to teach children with effective methods and adequate resources, without federal interference. Parents must once again be in charge of the education of their children. Schools should be havens for learning, safe from drugs and violence.

Much work remains. It is time for the federal bureaucracy to move out of the way and put children first by supporting what works.

Dear Superintendent,

The goal of this survey is to assess, in a rudimentary way, the impact of federal education policies and regulations on the activities of local education agencies. To do this, we are requesting information from you on the profile of your district and on the sources and uses of your federal education funds. In addition, we are requesting background information on the costs related to federal regulations, mandates (funded and unfunded), and requirements tied to federal program participation.

While some of the information requested in this survey is very specific, please do not go beyond readily available information to complete this survey. If the requested data is not readily available, either provide a “best guess” estimate of the statistic, or simply skip the question. Please feel free to elaborate on any section, or to provide additional comments to the survey as you see fit.

Thank you in advance for your assistance in this very important project. If you have any questions, please feel free to contact the individuals listed on the cover of this survey.

Sincerely,

PETE HOEKSTRA
Chairman,
Subcommittee on Oversight and Investigations
**DISTRICT PROFILE:**

**Enrollment in 1995-96 School Year**

- Total
- Average Daily Attendance
- Percent Minority Students
- Percent Eligible for Free or Reduced Lunch

**Personnel in 1995-96 School Year (in FTEs)**

Please include a list of other federal education programs for which your district applied and the grant amounts received (discretionary grant programs). What is the estimated cost of applying for these programs? Please try to separate out the estimated cost for applications that were not funded.

OTHER GRANTS

Name of Grant.................................................................
Estimated Cost to Complete Required Reports......
Estimated Cost to Complete/Plan.................................
Size of Final Grant..........................................................

REGULATIONS

In addition to program rules and regulations, many education programs require assurances of broader federal regulatory compliance before federal grants can be provided. The bulk of the regulatory costs are due to laws pertaining to accessibility (ADA, IDEA, and the Rehabilitation Act), asbestos (Asbestos Hazard Emergency Response Act), lead in paint and drinking water (Lead Contamination Control Act), underground storage tanks (Resource Conservation and Recovery Act), and radon. Finally, the National School Board Association has repeatedly testified that the Davis-Bacon Act, which requires the payment of federally determined prevailing wages on federally-funded construction, inflates the cost of school construction.

Please provide any available information you may have concerning the added costs of federal regulations on the operation of your district. If no information is available, please comment on your “sense” of the cost, the usefulness of the regulations, and any insights into whether these regulations could be simplified, eliminated or left to the states.
PROGRAM EVALUATION

While various evaluations are performed on federal education programs, it would be helpful to get an “in the trenches” view of the successful aspects of these programs, as well as any problems stemming from either the operation or administration of federal programs. Please provide any comments you may have concerning federal programs for which you have received funding (Chapter I, Safe and Drug Free Schools, Eisenhower Professional Development, Bilingual Education, IDEA, etc.).

What are the greatest barriers your district faces in providing all your students a high quality education?

How have federal education programs contributed to your local education goals?

How have federal education programs detracted from your local education goals?

Ideally, how would your district like to use federal education funds, assuming they were provided in a single block grant, or in a more flexible funding stream?
What are the greatest benefits, cost or otherwise, to participation in federal education programs?

How does your district integrate Federal education programs into your regular instruction program?

How well have federal officials met your needs for information and flexibility with regard to Federal education programs? (e.g. Did the Department of Education communicate with you in a timely manner regarding program regulations? Do they respond promptly to any questions or concerns? Have they worked with your district to enable you to use federal programs in a way which best serves your local goals?)
The following are the expenses incurred from 1995 to 1998 by Republicans and Democrats for field hearings and other activities for the Crossroads Project.

Minority Views

CROSSROADS HEARINGS: A REPUBLICAN ASSAULT ON PUBLIC EDUCATION

I. Introduction

For the past 18 months, the Oversight and Investigations Subcommittee held 18 oversight hearings under the umbrella of "Education at a Crossroads: What Works and What's Wasted". The Majority had a predetermined agenda that it sought witnesses to verify or validate; they refused to allow the Minority to call sufficient numbers of witnesses to have a truly balanced record.

This staged education road-show—with its preordained agenda to discredit federal aid to education and undermine the Department of Education—failed to make a single recommendation to improve public education. Rather than engaging in objective, bipartisan fact-finding, the Majority repeatedly stacked the hearings to promote their political agenda. The Republican report reflects little of what their own witnesses said during hearings.

During each Crossroads hearing, the Majority dictated the subject matter, selected the witnesses, and structured the panels, without consultation or involvement of the Minority. The Majority limited the Minority to one witness per panel with a 5 or 6 to 1 Majority-to-Minority witness ratio. A total of 189 majority witnesses were selected by the Republican Majority with the Democratic Minority being allowed only 26.¹

Rather than seek testimony on programs and proposals that boost student achievement, enhance teacher performance, address crumbling and overcrowded schools, and improve

¹ See Appendix 1
technology in the schools, the Majority stacked the hearings with people they sought out to support their preordained conclusions.

In truth, the Crossroads hearings were orchestrated to discredit local administrators of public schools and minimize the value and use of federal dollars by falsely suggesting too few dollars from federal programs go to the classroom. Since the Republicans took control of the House of Representatives in 1994, they have engaged in an unsubstantiated, untrue, and unrelenting assault on federal aid to public education. The Republicans have proposed:

- Abolishing the Department of Education.
- Diverting billions of dollars in public school funds for private school vouchers
- Cutting school lunches
- Block-granting Title I education programs, thus abolishing program accountability and targeting to poor students
- Ending equal opportunity in higher education
- Gutting bilingual education
- Tax cuts for the wealthy to send children to private schools
- Slashing billions of dollars from education programs
- Eliminating the summer youth jobs program
- Eliminating school-to-work opportunities for high school students
- Eliminating the in-school interest subsidy for student loans
- Eliminating the safe and drug-free school program

The Republican Majority’s legislative platform fails to support America’s public school children, its parents, teachers, and community leaders to meet unprecedented challenges facing
public schools. Today, K-12 enrollments are increasing at record rates. Public schools face a $112 billion school building crisis to address crumbling and overcrowded schools. Class sizes remain unacceptably high, and schools are facing more children for whom English is a second language. The Majority Crossroads Report not only attempts to undermine the federal/state partnership in education, it ignores these critical priorities. The Majority has squandered a key opportunity to provide leadership on renewing our nation's public schools and enhancing educational opportunities for all Americans. "What's Wasted" is valuable time the Majority had to create a positive record of support for public education which the public is demanding of the federal government and which stands out as our greatest national responsibility.

II. False Attacks on Education

1. MYTH: Over 788 Federal education programs directly impact elementary and secondary education

The Crossroads Report is designed to weaken the nation's public schools by propagating myths, distortions, misconceptions, and outright lies about the federal-state education partnership.

Last year, the Majority falsely claimed time and time again, that there were 788 federal education programs.² It has consistently been in the context of problems with K-12 education in America, leaving the clear impression that those 788 programs are aimed at addressing K-12

---

¹ Representative Hoekstra stated that he sought and received confirmation of the list from the Congressional Research Service (CRS): "Is this an accurate list of government’s involvement in education? And they said it is accurate..." (Congressional Record, March 19, 1996). However, in a memorandum from CRS to the Education Committee Majority, February 15, 1997, CRS stated: other than looking for expired authorizations, we have not questioned whether programs categorized as being education-related by OMB in CFDA actually are, or are not, education-related. Determination of whether a program supports education may be judgmental or arbitrary.
education needs. An examination of the 788 list shows it has little relationship to K-12 education. The list includes some 33 research and training programs within the Department of Agriculture, none designed for elementary and secondary students, and are not “education programs” by any reasonable stretch.

The National Oceanic Administration, which deals with the study of pollution and management and resources of our marine environment, is listed with 16 “education programs”. The collection of data, or research, or similar items do not belong on a K-12 education list.

The Department of Defense has 20 programs listed in this document, dealing with research activities that the DOD conducts: information gathering, information disseminating, training programs within the Defense Department. They are not K-12 education programs.

The Energy Department has 22 items listed. The Department of Health and Human Services has 169 programs listed in this document, that range from child welfare programs, substance abuse, AIDS prevention programs, programs for diabetes, and all of the Centers for Disease Control programs of research; these programs are important, but they are not K-12 education programs.

This list of “education programs” also includes: 60 medical research grant programs in NIH; 12 nutrition programs; military training; billions of dollars in disaster relief; and scores of other programs such as the “Boat Sludge Educational Grant Program,” and the “Air Transportation Centers of Excellence Program.”

The truth is the 788 programs include:

183 are no longer authorized or funded;
139 are postsecondary or adult education programs;
71 fund special research;

---

See Appendix 2
Of the 305 programs identified as Department of Education programs, 122 are unauthorized, unfunded, or simply non-existent. Of the remaining 183 Department of Education programs pertaining to pre-K through postgraduate education and training, only 102 programs impact elementary and secondary education. Crossroads exaggerated its relevance to 788 “programs”. The reality is there are only 102 K-12 education programs.

Notwithstanding correspondence from Secretary Riley to Chairman Goodling that refutes the 788 federal education programs, and notwithstanding a GAO report indicating that only 105 programs administered by the Department of Education are aimed specifically at K-12 education, the Republican Majority continues to propagate the 788 federal education myth.

Ignoring the truth, the Majority has continued to use this inflated list to suggest inefficient duplication of federal programs and excessive federal bureaucracy. In fact the Clinton administration has worked with Congress to strengthen our education programs.

- Through the 1993 National Performance Review, the Clinton Administration has worked to eliminate unnecessary and ineffective programs. Through Fiscal Year 1997, the Department proposed to eliminate, phase-out, or consolidate more than 100 programs.

---

4 See Federal Education Funding: Multiple Programs and Lack of Data Raise Efficiency and Effectiveness Concerns (GAO/T-HEHS-98-46, Nov. 6, 1997).
5 See Appendix 3
• The Department of Education administers more dollars per employee than any other Cabinet-level agency. Currently, 98 cents of every appropriated dollar goes to states, schools, and students.

2. **MYTH: Lack of Accountability on Programs' Effectiveness**

The Republican Majority charges that the effectiveness of federal education programs are seldom measured, particularly Title I. The Majority’s report states that “billions of dollars are spent on programs where even the most basic information on effectiveness is lacking”. The fact is that every two years the Department of Education issues the “Biennial Evaluation Report” which contains an assessment of programs administered by the Department. In addition to information on goals, objectives, and strategic initiatives, the report summarizes evaluation findings on what helps program participants to increase their achievement and improve their performance.

In response to research indicating that closing the achievement gap between disadvantaged students and their more advantaged peers had stalled, the 1994 reauthorization of Title I implemented several monitoring requirements designed to promote student improvement. The Department also developed a plan to link Title I program objectives to specific indicators to assess whether program objectives are met. For instance the objective to have well-qualified teachers and aides serve low-achieving students was linked to increased training and credentialing of teachers and aides. The Department also commissioned more than a dozen studies⁶ to be used in achieving its overall objectives to help disadvantaged children meet high standards.

---

⁶ See Appendix 4
Title I is a perfect example of how the Department’s use of evaluations play an important role in strengthening a program. However, the Republican Majority’s emphasis on block grant granting, eliminating oversight, and eliminating paperwork, flies in the face of the kinds of assessments that the Majority purport to want. The reality is that assessments are not possible without information.

3. MYTH: Too little is going to the classroom because of bloated bureaucracy

In furtherance of their agenda to undermine federal education programs, the Republicans falsely claim that the Department of Education and the programs the Department operates are gobbling up funds for often wasteful administrative purposes rather than targeting dollars to the classroom. The Majority has falsely claimed that 35 to 40 cents of every federal education dollar “get sucked up into the bureaucracy and paperwork”.

There is no truth to this demagoguery. In fact, less than 2% of the Department of Education’s budget is spent on federal administrative costs. The remaining 98% of the Department’s budget is sent out to states, school districts, and local communities. In addition, nearly all major elementary and secondary education programs include a 5% cap on funds that may be used by state and local educators for administrative purposes and for program coordination, evaluation, and technical assistance.

The most disturbing theme of this false mantra is the incipient condemnation of state and local officials “wasting” federal moneys and not getting “dollars to the classroom”. Their theme

---

7 Indeed, the Department has the lowest administrative overhead of the 14 cabinet agencies, with only one employee for every $7 million in budget authority.
8 See Appendix 5
is that notwithstanding the fact that only 2% is kept in the federal bureaucracy and 98% of federal funds go out to the states, only 65% get to the classroom. In fact, understanding where education dollars go at the local level has been limited by a lack of detailed data that is consistent across school districts. Frankly, we do not believe this is our business, and abhor this interference into local affairs. We believe it is enough for the “feds” to make sure their own bureaucratic expense stays at 2%, and the states stays at 5%. For instance, the determination of whether an expense is classified as administrative or instructional varies from one school district to another. Some schools classify teacher aides and professional development as administrative, while others classify them as instructional. Recently, Coopers & Lybrand developed a financial analysis model that provides a source of detailed information on where the education dollar goes, including how much money reaches the school level and how much is used for instruction, professional development, administration, and other functions. The model is being implemented in 2 states (South Carolina and Rhode Island) and several dozen school districts in other states. Based on 1995-96 data provided by the state of South Carolina for 33 school districts and by the Milwaukee Public Schools, this accounting system shows that:

- In Milwaukee, 90% of all Title I funds were spent at the school level. Information on the share of Title I funds spent at the school and district levels is being obtained for the South Carolina districts, but the similar percentages spent on instruction and instructional support in both areas suggest that the school share in South Carolina will be similar to that in Milwaukee.

- Although Milwaukee and the South Carolina districts used their Title I funds in somewhat different ways, they spend the same proportion of their funds (93%) on instruction and instructional support. Over three-fourths of the Title I money was spent on direct instruction (77-78%), and an additional 15-16% went for instructional support.
The real reason too few dollars are going to classroom is because we are underinvesting in education at all levels of government. In particular, the federal share of education funding has declined. Since 1980, the federal share of elementary and secondary spending decreased from 13% to 7.8%. In higher education, the reduction was 18.0% to 11.9%.

![The Federal Share of Education Funding Has Declined](chart)

Source: National Center for Education Statistics

In fact, the Department of Education makes up only 1.8% of the 1998 federal budget, down from 2.5% in the mid-eighties (see chart below). These reductions are occurring in the face of record level enrollments in K-12 and higher education; increased number of students with disabilities being served in federal programs; and more children having difficulty speaking English.
According to recent national polls, well over half the public believes we are investing too little in education; 75% of the public supports using federal budget surplus funds for education. We will only succeed in bringing more dollars to the classroom when we are committed to increasing our investments in our neighborhood schools and communities.

4. **MYTH: The Department of Education is bureaucratic and inflexible**

In fact, current law provides broad authority that gives parents, teachers, school administrators, and school districts greater control over how federal education dollars are spent. Under this Education Flexibility Partnership Demonstration Program (Ed-Flex) state education agencies and school districts can now get waivers\(^9\) exempting them from federal requirements in order to improve schools and raise the academic achievement of students.

---

\(^9\) Under the waiver authorities in the Elementary and Secondary Education Act (ESEA), the Goals 2000: Educate America Act and the School-to-Work Opportunities Act, school districts, state education agencies and states may request waivers from particular federal requirements that impede efforts to increase student achievement. These three education laws and the Job Training Partnership Act (JTPA) give the U.S. Secretaries of Education and Labor...
The following are examples of waivers that have been approved by the Secretary, and which are representative of the types of waivers an Ed-Flex State might consider in order to improve teaching and learning for its students:

The Fort Worth, Texas School District received a waiver allowing it to target an extra portion of its Title I dollars to four high-poverty, inner-city elementary schools. The schools were chosen for a complete overhaul due to low achievement on the Texas Assessment of Academic Skills (TAAS) and other factors. Each school uses Title I funds to improve instruction for all its students and is reorganizing staff, lengthening the school year, enhancing instruction in reading and math, providing extensive teacher training, and strengthening links to the community.

Montgomery County Schools in Troy, North Carolina received a waiver permitting Troy Elementary School to implement a school-wide program even though the percentage of children from low-income families at the school (45.75%) is slightly below the statutory minimum poverty threshold required for school-wide programs. The school has undergone extensive planning to implement its school-wide program, which promotes the integration of resources and emphasizes continual assessments of students' progress.

As part of Oregon's comprehensive school improvement efforts, the Oregon Department of Education received a waiver of certain requirements of the Carl D. Perkins Vocational and Applied Technology Education Act. The waiver allows consortia of school districts and community colleges, based on Oregon's workforce development regions, to qualify for and receive Federal funds under the Perkins Act. The waiver also enables small community colleges the ability to waive requirements in both statutory and regulatory requirements of JTPA and many federal elementary and secondary education programs.
to join these consortia by allowing all participating institutions in a consortium to contribute to the $50,000 the law otherwise requires each postsecondary institution to contribute. The consortia will use the Perkins funds to strengthen vocational education programs for both high school and postsecondary school students.

III. What Works: Strong Support for Federal Education Funding

Despite the Majority’s repeated attempts to exclude witnesses who support a strong federal-state education partnership, the subcommittee did hear from witnesses who thought the federal government’s role in education is not only effective, but indispensable. Large numbers of disadvantaged public school children depend on federal assistance, from school lunches to bilingual education to the education of children with disabilities and other programs. Witnesses recounted that the federal government became involved in education because of the failure of many states and communities to appropriately educate their citizenry. A witness at the Des Moines, Iowa hearing testified that over the past twenty years it was the federal government that insisted disabled children receive an education. Prior to the federal involvement local school districts did nothing to educate the disabled. She recalled that disabled children were excluded from all educational programs and either educated in basements or expelled from schools.10

At a Crossroads hearing in Washington, D.C., Delain Eastin, the Superintendent of Public Instruction for the State of California pointed out that education is a national priority because of its importance in developing an informed and responsible citizenry as the foundation of a strong

---

10 Before the Individuals with Disabilities Education Act was enacted in 1975, P.L. 94-142, more than 1 million children with disabilities were denied an education in America's public schools. IDEA began a partnership among federal, state, and local governments, and with families and teachers to reach a national goal: educating children with disabilities. Today, more than 5.8 million school-age children exercise their right to a free, appropriate education in the public schools.
economy and the national defense. She expressed unqualified support for a strong and continuous federal role in public education.

Other witnesses, like Ruth McKenna, Chief Deputy Superintendent for Instructional Services in California, and Elaine Scott, former Chairperson of the Arkansas State Board of Education, testified in support of "a very strong role for the federal government" to improve education at the state and local levels. Both McKenna and Scott testified that federal dollars have dramatically closed the gap between rich and poor schools in some states. Testimony of these witnesses was confirmed in a January 1998, report of the General Accounting Office. That report, entitled "School Finance: State and Federal Efforts to target Poor Students", made the following conclusions: "Federal funding was more targeted to poor students than state funding in 45 of 47 states. On average, for every $1 of federal funding districts received for each student, they received an additional $4.73 in federal funding per poor student. In general, the greater federal targeting had the effect of raising the additional funding for poor students from the state-only average of $.62 to a combined state and federal average of $1.10, a 77-percent increase. This increase reflects that most states' relatively small share of federal funds was highly targeted."

Over the 18 month period we learned that the role of the federal government is indispensable in helping to effectuate local school reform. At a subcommittee hearing in New York, Paul Schwarz, Co-Director, of the Central Park East Secondary School testified that Goals 2000 funds have served to develop a teaching mentoring program which helps teachers' assistants become certified teachers, which, in turn, serves to address the shortage of minority teachers in New York City public schools. Schwarz also discussed how federal challenge grants for technology were being used in New York City public schools to develop digital libraries in
schools, new multimedia curriculum content, and wide area networking to link learning resources across schools.

In Cincinnati, Nancy Schlemmer, Secretary of the National Parent Teachers Association, stated that federal Title I and Eisenhower Professional Development funds have allowed Cincinnati to shape its education reform efforts by developing stronger connections between schools and families, higher standards for curriculum, improvements for professional development, and improvements in teaching and educational choices for families and students. More specifically, Cincinnati Public Schools use Eisenhower Professional Development funds to help math and science teachers align their own practices with nationally recognized standards. Additionally, Title I funds are used in the “Three Plus Program.” This program helps students who are more than two years over age for the third grade receive intensive academic support in order to advance to their age appropriate grade. Another local program, the Parent Facilitators Program, uses Title I to implement a ten-week parent training course. Parents learn how to lead parent groups, develop parent/child learning pacts, and promote child outreach activities.

In Louisville, Kentucky and in Little Rock, Arkansas, we learned that Title I funds are used to reduce class size in elementary schools, provide additional help in science and math courses, and provide interdisciplinary teacher planning. Those are only a few examples of how federal efforts combined with state and local efforts will raise achievement standards and ensure that the American workforce in the 21st Century remains the world’s best.

These and other witnesses who testified in support of a strong federal role in education represent the views of the public in general, who overwhelmingly support additional federal aid
for education. In a “Dollars to the Classroom”\textsuperscript{11} hearing, another of the Majority’s attempt to undermine the federal role in education backfired. Their own witness, Dr. Barbara Nielsen, Superintendent of Education, State of South Carolina, testified that of the seven percent of funds received from the federal government, “most of it gets to the classroom… and most of it goes for instruction, instructional support, and what we call general operations.”

We believe that federal and local partnerships in education must be continued and strengthened. Only then will we assure that all children have equal access and equal opportunity to quality education, regardless of their social and economic status.

IV. The Democratic Agenda

The Crossroads report ignores the major priorities facing public education. The Clinton Administration and Democrats in Congress have set forth a comprehensive agenda to improve public education. The Republican Crossroads Report failed to address these and other high education priorities:

1. Public Schools Face a $112 billion School Building Crisis.\textsuperscript{12} Democrats have proposed legislation that would help repair crumbling and overcrowd schools through the issuance of zero-interest bonds. Republicans have already voted against this critical initiative.

2. Class sizes Remain Unacceptably High. Large class sizes significantly undermine student achievement. Studies confirm that small class sizes promote effective

\textsuperscript{11} May 8, 1997

\textsuperscript{12} In February 1995, a General Accounting Office (GAO) report, School Facilities: Condition of America's Schools (GAO/HEHS-95-61), estimated that it would cost about $112 billion in capital improvements to restore America's
teaching and learning. Democrats have proposed a $12 billion initiative over seven years to help local schools provide small classes in the early grades.

3. **Too many Classrooms Lack Competent Teachers.** The key to achieving high academic standards requires small class sizes with teachers who are qualified to teach. Democrats have proposed states implement basic skills testing for new teachers, as a condition for receiving funds for class size reductions. The funds could also be spent on helping teachers improve reading instruction; providing mentors or other support for newly hired teachers; and providing incentives to recruit qualified teachers to high poverty schools. Democrats have also made substantial proposals for enhancing and revamping teacher training programs at institutions of higher education.

4. **Many High Poverty Communities Lack Resources to Renew their Public Schools Alone.** Democrats have proposed comprehensive measures to address the needs of high poverty school districts through the introduction of legislation to create Education Opportunity Zones (H.R. 3813) and fund public school renewal projects. H.R. 3813 is designed to strengthen public schools and help students master the basics where the need is the greatest: in high poverty urban and rural communities where low expectations, too many poorly prepared teachers and wholly inadequate facilities are commonplace. The bill will invest $1.5 billion over 5 years, to raise achievement and share lessons learned with school districts around the country. H.R. 1436, the Public Schools Renewal and Improvement Act, provides assistance to locally-driven public school renewal efforts.

---

multi-billion dollar investment in schools to good overall condition. The GAO report expressed concerns about the ability of schools to provide adequate instructional programs with inadequate buildings and equipment.
5. **Resources for Early Childhood Learning are Substantially Inadequate.**

Research shows that children's experiences in the earliest years are critical to their development and future success. President Clinton has proposed an Early Learning Fund to provide challenge grants to communities to support programs to improve early learning and quality and safe child care for children ages 1-5. The Clinton Administration has also proposed to increase investment in Head Start by $3.4 billion over five years; the plan would also double the number of children served by Early Head Start. Head Start provides early, continuous and comprehensive child development and family support services.

V. **Conclusion**

It is clear to us that as the Majority stood at the Crossroads on Education, they decided to ignore what the people want and what our children need. They chose a narrow, political, and partisan path, fueled by empty rhetoric while parents, teachers and local schools across the nation are struggling to solve the real problems: crumbling and overcrowded schools, large class sizes, teacher performance, and improving technology in the schools. The Crossroads road-show has come up empty.

U.S. Department of Education—Unfunded

Alaska and Native Hawaiian Cultural Arts Development Consortia for Technology (84.300)

Bilingual Education: Career Ladder Program

Bilingual Education: National Professional Development Institutes

Bilingual Education Training for all Teachers Program

Bilingual Vocational Instructional Materials, Methods, and Techniques (84.100)

Civics Education: Instruction in Civics, Government and the Law (84.123)

* Class Size Demonstration Grant (K-12, p 11)

College Housing and Academic Facilities Loans (84.142)

* Community Education Employment Centers (p.4)

* Community Schools Partnerships (K-12, p11)

Consolidated Overseas American-Sponsored Schools Assistance Program

Construction, Reconstruction, and Renovation of Academic Facilities (84.172)

Cooperative Education (84.055)

* Delugo and Territorial Education Improvement Program (K-12, p8)

Demonstration Grants for Critical Language/Area Studies

Demonstration and Innovation Projects of National Significance in Assistive Technology for Individuals with Disabilities (84.231)

Douglas Teacher Scholarships (84.176)

* Early Childhood Education Training (ProDev, p3)

* Education Finance Incentive Program (K-12, p 8)

Eisenhower Leadership Program (84.261)

Endowment Challenge Grants (84.031C)

ESEA Title I Migrant Program — coordination grants (84.144)

ESEA Title I State School Improvement Grants (84.218)

* Extended Time for Learning and Longer School Year (K-12, p7)

Family and Community Endeavor Schools Grant Program (84.285)

Foreign Languages Assistance: Incentive Grants (84.294)

* Foreign Periodicals (Post Sec, p 30)

* Goals 2000 Community Partnerships (K-12, p 8)

Higher Education: Cooperative Education (84.055)

Howard University: Clinical Law Center

Howard University: Construction

145
Impact Aid: Facilities Maintenance (84.040)

- Impact Aid: Increases in Military Dependents (K-12, p7)

Indian Education: Special Programs (84.299)
Indian Education: Adult Education (84.062)
Indian Education National Activities

- Innovative Elementary School Transition Projects (K-12, p 10)

Innovative Projects for Community Service (84.116)

- International Education Comparative Analyses (K-12, p9)

Law School Clinical Experience

Legal Training for the Disadvantaged

Literacy Training for Homeless Adults

Middle School Teaching Demonstration Programs

- Minority-Focused Civics Education (K-12, p9)

National Board for Professional Teaching Standards

- National Mini Corps Program (Post Sec, p. 8)

National Occupational Information Coordinating Committee (No CFDA)

- National Student Savings Program (Post Sec, p. 9)

- National Teacher Academies (ProDev, p4)

Olympic Scholarships (84.301)

OPE: SFA Database and Information Line

- Patricia Roberts Harris Graduate Fellowship (Post Sec, p. 25)

- Presidential Access Scholarships (Post Sec, p. 9)

Programs for Indian Children/Demonstrations (84.299)

Programs for Indian Children/Professional Development (84.299)

- Removal of Architectural Barriers to the Handicapped (Constr, p. 3)

School, College, and University Partnerships (84.204)

School Facilities Infrastructure Improvement (84.284)

Small State Teaching Initiative

- Special Child Care Services for Disadvantaged College Students (Post Sec, p. 9)

- State and Local Programs for Teacher Excellence (ProDev, p3) “never funded”

State Postsecondary Review Program (84.267)

Teacher Corps

Teacher Research Dissemination

Territorial Assistance for the Virgin Islands

Territorial Teacher Training Assistance Program

- Title I Demonstrations of Innovative Practices (K-12, p7)

Training in Early Childhood Education and Violence Counseling
Training Programs for Educators: Alcohol Abuse (84.238)

Urban and Rural Education Assistance

Vocational and Adult Education: National Programs/Data Systems (SOICC)

* Workplace and Community Transition Training for Incarcerated Youth Offenders (K-12, p10)
* Women and Minorities Science and Engineering Outreach Demonstration (Post Sec, p 10)
* Women and Minority Participation in Graduate Education (Post Sec, p29)

U.S. Department of Education — Double-Counted or Items that are Not Programs:

Adult Education: National Programs (84.191) — not a separate program
Bilingual Education Field Initiated Research — not a separate program
Bilingual Education: Instructional Services (84.003) — double-counted
Capacity Building for Traditionally Underserved Populations (84.315) — not a separate program
Christa McAuliffe Fellowships — not a separate program
Elementary and Secondary Education Act: Evaluation and Studies — not a separate program
Even Start: Family Literacy in Women’s Prisons Program — not a separate program
Even Start: Indian Tribes and Tribal Organizations (84.258) — not a separate program
Even Start: Migrant Education (84.255) — not a separate program
Even Start: Statewide Family Literacy Program — not a separate program
Federal Real Property Assistance Program (84.145) — not a separate program
FIPSE (Pennsylvania Telecommunications Network) — not a separate program
Foreign Languages Assistance (84.249) — double-counted
Fulbright-Hays Training Grants-Foreign Curriculum Consultants (84.020) — not a separate program
Fund for the Improvement of Education: Character Education Partnerships (84.215) — not a separate program
Fund for the Improvement of Education: Recognition Programs (Blue Ribbon Schools) (84.215) — not a separate program
Fund for the Improvement of Education: Student Assessment Initiative (84.215) — not a separate program
Gallaudet University: Endowment Grant (84.994K) — not a separate program
Howard University: Endowment Program — not a separate program
Howard University, Howard University Hospital — not a separate program
Howard University: Research — not a separate program
Impact Aid: Federal Acquisition of Real Property — double-counted
Indian and Native Hawaiian Vocational Education (84.259) — not a separate program
* Interlibrary Cooperation and Resource Sharing (p3)(84.035) deauthorized
International: Overseas - Doctoral Dissertation (84.022) — not a separate program
International: Overseas - Faculty Research Abroad (84.019) — not a separate program
International: Overseas - Group Projects Abroad (84.031) — not a separate program
National Assessment of Educational Progress (84.999) — double-counted
National Assessment Governing Board—advisory board, not a program
National Education Dissemination System—not a separate program
National Education Goals Panel—advisory board, not a program
National Institute on Disability and Rehabilitation Research (84.133)—not a separate program
NIDRR: Mary Switzer Fellowships (84.133)—not a separate program
NIDRR: Miscellaneous—not a separate program
NIDRR: Outreach to Minority Colleges and Universities (84.133)—not a separate program
NIDRR: Peer Review—not a separate program
NIDRR: Rehabilitation Service: American Indians with Disabilities (84.250)—not a separate program
NIDRR Research Training—not a separate program
NIDRR: Small Business Innovation Research—not a separate program
Regional Education Laboratories—double-counted
Rehabilitation Act Evaluation—not a separate program
Rehabilitation Services: Service Projects—double-counted
Smith Hughes Vocational Education Permanent Appropriation—not a program
IDEA: Program for Severely Disabled Children (84.086)—double-counted
Vocational Education: Indians Set-Aside (84.101)—not a separate program

Other Agencies—Unfunded and misidentified items
* 1890's Buildings and Facilities Program (Constr. p. 1)—unfunded
* Academic Research Infrastructure (ARI) (Constr. p. 2)—unfunded
* ADAMHA Small Instrumentation Program Grants (OMB 1&2, p 6)—deauthorized

Appalachian Vocational and Other Education Facilities and Operations (23.012) (ARC)—deauthorized in 1976
Arizona Historical Documents Education Foundation (GSA) This was a one-time ear-marked appropriation in GSA’s 1995 appropriation bill for a construction project.
* Assistance for Delinquent and At-Risk Youth, (K-12, p11)—unfunded.
* Basic, Applied, and Advanced Research in Science and Engineering (Post Sec, p. 12)—deauthorized
* Basic and applied scientific research (Research, p. 5)—deauthorized
* Bilingual Vocational Instructor Training (K-12, p28)—unfunded
* Biometry and Risk Estimation: Health Risks from Environmental Exposures (K-12, p45) — unfunded
* Centers of Excellence Bilingual and Bicultural Minority Pre-Faculty Fellowship Grants (ProDev, p5) This was a 2-year demonstration grant that ended in 1996. It will not be funded again.
* Child Development Associate Scholarships (ProDev, p11)—unfunded
* Christopher Columbus Fellowship Program (Post Sec, p. 8)—Since 1993, the Foundation has not received a federal appropriation.

Cooperative Extension Service (10.500)—not a program, but an administrative unit of USDA
* Department of Defense Dependent Schools (K-12, p6)—deauthorized
* Families and Children with Disabilities Support Act of 1994 (SS, p2)—unfunded
Federal Employment for Disadvantaged Youth: Part-Time (CFDA 27.003) (OPM)—deauthorized

- Federal Transit Managerial Training Grants (ProDev, p 7)—unfunded
- Federal Transit Grants for University Research and Training (Post Sec, p 14)—deauthorized
- Financial Assistance Program: Science Education and Technical Information (Post Sec, p. 19)—unfunded
- Grants for Mining and Mineral Resources and Research Institutes (Post Sec, p. 13)—deauthorized
- Health Services in the Pacific Basin (Post Sec, p. 36)—unfunded

Higher Education Strengthening Grants (10.211)—unfunded

Homeless Veterans Reintegration Project Labor, Veterans’ Employment and Training — unfunded

- Human Nutrition Information Service (OMB 1&2, p2)— deauthorized
- Independent Education and Science Projects and Programs (K-12, p15)— unfunded
- International Educational Exchange: Samantha Smith Memorial Exchange Program, (K-12, p. 12)—unfunded
- Job Training for the Homeless, Demo (p. 4)—unfunded
- Language Grant Program (ProDev, p6)—deauthorized
- Mental Health Clinical and AIDS Service-Related Training Grants (PostSec, p.39)—unfunded
- Minority Honors Training and Industrial Assistance Program (Post Sec, p 18)—deauthorized
- Minority Math Science Leadership Development Recognition (Post Sec, p. 19)—deauthorized
- Minority Undergraduate Training for Energy Related Careers (Post Sec, p 18)—deauthorized
- Museum Science Education Program (OMB1&2, p 1)—unfunded

National Council on Disability (CFDA 92.001)—this was a one-time publication on IDEA—not a program.

National Fire Academy Educational Program (CFDA 83.010) National Fire Academy (FEMA)—This is an organizational unit of the U.S. Fire Administration, not a program.

- National Security Education Program (Post Sec, p. 5)—deauthorized

National Service Trust (Corp. Nat’l Serv)—This is not a program. It is an account at the U.S. Treasury.

- National Workforce Literacy Assistance Collaborative (p.4)—this was a pilot program and is now unfunded.

National Endowment for Children’s Education Television (11.551) (DOC)—unfunded

Part D: Juvenile Gangs and Drug Abuse and Drug Trafficking (16.544) (DOJ)—not a separate program

Population Protection Planning (CFDA 83.514) State and Local Programs and Support (FEMA)—deauthorized

- Post-Vietnam Era Veterans’ Educational Assistance (Post Sec, page 16)—deauthorized

Pre-Freshmen Enrichment (81.047) (DOE)—unfunded

- Pre-Service Teacher Enhancement Programs (Post Sec, p. 8)—unfunded
- Program for Study of Eastern Europe and the Independent States of the former Soviet Union—unfunded

Public and Indian Housing Family Investment Centers Program (14.861)—unfunded

- Science and Engineering Research Semester (Post Sec, p. 18)—unfunded
- Self Determination Grants: Indian Tribal Governments (SS, p3)—deauthorized

Shelter Survey Technician Program: Job Qualification Training, State and Local Programs and Support Directorate (FEMA)—unfunded

Teacher Research Associate Program (TRAC) (DOE)—unfunded

149
Technical Assistance Program (No CFDA) (HHS)—unfunded

- Training and Public Awareness Projects in Technology Related Assistance for Individuals with Disabilities (Training, p. 15)—unfunded

- Training and Technical Assistance: Indian Tribal Governments (ProDev, p6)—unfunded

- Transition Assistance Program (p. 1)—unfunded

- Transitional Living for Runaway and Homeless Youth (SS, p 5)—deauthorized

Urban Youth Corps (No CFDA, No description) (DOT)—unfunded

- Used Energy-Related Laboratory Equipment Grants (Post Sec, p 17)—unfunded

- Vista: Literacy Corps (Gen Ed, p11)—unfunded

- Vocational Training for Certain Veterans Receiving VA pensions (p. 11) VA is not allowing anymore people into this program and intends to phase it out once the last person has completed the program.

- Workers Technology Skill Development Act (p. 3)—deauthorized

- Young Scholars (K-12, p 18)—This program is no longer funding new proposals

- Youth Conservation Corps (K-12, p. 9)—unfunded

- Youth Fair Chance (under Job Training Partnership Act) (p.4)—FY95 funding rescinded; no further appropriation; authorization expires at the end of FY97.

Title I Studies

- An analysis of Title I state performance reports for assessment results will be conducted annually. Baseline data for 1995-96 are included in a report, supported by the Department of Education and recently published through the Council of Chief State School Officers. The National Assessment will include subsequent data for the 1996-97 and 1997-98 school years.

- A National Assessment of Educational Progress (NAEP) trend analysis and state-by-state comparison of student performance in high-poverty schools will be available in Summer 1998.

- An examination of trend data in urban school districts that looks at selected districts with 3 years of achievement results will be included in the National Assessment of Title I.

- Longitudinal information through the Longitudinal Evaluation of School Change and Performance (LESCP), supplemental with data from the National Longitudinal Survey of Schools (NLSS), will also include trends in student achievement. One-year change in student achievement results, collected through the LESCp, will first be reported in Spring 1999. The NLSS will report baseline results in Spring 1999.

- The LESCp mandated under Title I is evaluating the impact of the key features of Title I legislation on schools, classrooms, and students. The evaluation examines a specially selected sample of 71 Title I elementary schools and tracks the impact of key features of the new legislation—such as standards-based curriculum and schoolwide programs—on both instructional practices and student achievement. The content areas of central importance are reading and mathematics. The first baseline report, which focuses on classroom practices, will be available in early Summer 1998. Annual reports will follow, with a final report due in 2001.

- The National Longitudinal Survey of Schools will complement the LESCp with a nationally representative survey examining how well Title I schools are implementing standards-based improvements. The study will also look at the extent to which schools use their outcome data to change classroom practice and how they measure progress continuously. The first and second interim reports are due in Spring and Fall 1998. A final report will be submitted in 2000.

- Baseline and Follow-up Studies of State-Level Planning and Implementation of Title I and other Federal Programs provide information regarding the
planning process and early implementation of Title I, other state-administered programs under Improving America's Schools Act (IASA), and Goals 2000. Key issues include the process of developing state plans, setting standards, implementing accountability systems, and providing support to districts. The final report for the baseline study is expected in August 1998. The follow-up study will collect information in Fall 1998, and a final report is due in early 1999.

- An Evaluation of Federal Efforts to Assist School Reform has collected indicators, from the customers' perspective, of the federal government's performance in promoting improved state-, local-, and school-level practices under Title I and other federally supported efforts. How the filed has responded to the Department of Education's new authority to waive statutes and regulations is a particular focus. A final report, Reports on Reform from the Field, was released in Fall 1997.

- Study of Local Implementation will analyze districts' implementation of Title I and other federally supported efforts. The study will focus on issues related to local planning and implementation of federal programs—specifically standards and assessments, professional development, parental involvement and community engagement, and targeting. The study will be completed in Spring 1999, with data available in early Winter 1998.

- An Evaluation of Title I Participation of Private School Students surveyed a nationally representative sample of districts and private school representatives to examine the issues in allocation procedures and consultation regarding the participation of private school students. A final report was transmitted to Congress in July 1998.

- A Title I Targeting Study is examining how 17 of the largest districts allocate Title I funds to schools, the poverty data used to determine eligibility, and exceptions made to the rules governing allocations. An examination of changes in how districts allocate funds and the effects of individual targeting provisions will draw upon existing LEA records from as sample of districts. A final report is expected in Fall 1998.

- A targeting and Resource Allocation Study will examine how Title I and other federal resources are used at the school and district levels—how the allocation and use of resources varies by poverty; how resources are allocated for specific strategies emphasized in the law (e.g., schoolwide programs, professional development, and parent involvement); how resource allocation decisions are made; and the share of funds used for administration, instruction, and other functions. A contract for the study was awarded in fall 1997, and a final report is due in January 1999.
The Study of Barriers to Parent Involvement presents findings on common barriers to effective parent involvement in Title I schools. It also reports on policies and programs that have overcome these barriers and improved parent involvement and practitioners and policymakers follows from the findings. The study was completed in winter 1997.

The Study of the Impact of Title I Schoolwide Programs on Migrant Children examines the extent to which schoolwide programs affect learning opportunities for migrant students. Because schoolwide programs enable all students to benefit from Title I resources, these programs may facilitate access to services for migrant students. At issue, however, is the concern that the unique needs of migrant students may not be met. An interim report was submitted to the Congress in January 1998, with a final report to follow in Summer 1998.

* Authorization allows funds set aside at the State level to be used for technical assistance or other activities in addition to State administration.

**NOTE:** In all cases, the percentages shown are the maximum amounts that States can use for administration. Some States will use smaller amounts for some programs. On the other hand, the maximum amount for a few programs is actually slightly higher than what is shown because the statute allows States to reserve X% or Y%, whichever is greater; this will have only a minimal impact on the overall totals, but allows the smallest States to use, for administration, a portion significantly greater than the national averages.
