ABSTRACT

A case study is presented of a Texas educational facilities program that was developed to provide long-term state assistance to school districts for the construction or renovation of their facilities by providing equal access to revenue for the specific purpose of repaying debt issued to finance instructional facilities. This report presents a brief historical context in which the facilities program was developed, then describes the schema for Texas school finance. Next, the facilities program is described, including the eligibility criteria and the funding formulas that deliver state aid. The impact of the program on local tax rates and debt issuance is discussed, and the unique features of the program and its future challenges are assessed. Appendices present statistical tables on the instructional facilities allotment awards for 1998-99 listed by school district and on the principal debt financed with instructional facilities allotment for 1997-99 listed by school district. (Contains 19 references.) (GR)

Introduction

In 1997-98, almost 4 million students were enrolled in more than 1,000 Texas public school districts. The districts and the students who attend them are as diverse as the state. District enrollments range in size from 20 students to more than 190,000, with two-thirds of the state's school districts enrolling fewer than 1,500 students. School district characteristics vary widely across the state, from densely populated metropolitan areas in and around major cities to sparsely populated rural areas of the state where bus routes routinely stretch more than 60 miles in one direction. The students who attend these schools reflect the diversity of the state's population. More than one-third of Texas schoolchildren are Hispanic. Forty-five percent of the students are white, and 14 percent are African-American.

Financing public education in Texas costs approximately \$22 billion each year, over half of that funded by ad valorem property taxes levied by local school districts. The state contributes its share through biennial appropriations from general revenue and other sources every two years when the Texas Legislature convenes. Like many other states, litigation has driven public policy decisions toward an equalized school finance system. The Texas approach seeks to ensure that districts have equal access to revenue by effectively equalizing the value of property tax bases. District property wealth is measured by calculating the value of its tax base on a per student basis. The poorest districts in the state have average property wealth per student of less than \$50,000, while the wealthiest districts average more than \$465,000 per student. Providing equal access to revenue among districts with such great disparities in wealth has posed a continuing challenge for policymakers.

Until recently, most of the policy initiatives have focused on equalizing funds for operations and maintenance. In September 1997, Texas implemented its first program specifically designed to provide long-term state assistance to school districts for the construction or renovation of facilities. Building upon the overall school finance system, the Texas facilities program provides equal access to revenue for the specific purpose of repaying debt that is issued to finance instructional facilities.

The Texas facilities program has several features that combine to make the program different from facilities programs in most other states. By funding yearly debt service, the state appropriation leverages substantially more construction than programs that provide cash grants to fund construction projects. The first biennial appropriation of \$200 million is supporting debt service on nearly \$4 billion in long-term debt. By supplementing local tax effort, the Texas program allows local taxpayers of property-poor districts to finance more debt than they can afford on their own. The funding formula effectively reduces the need for local taxes, saving the poorest of participating districts more than \$0.50 per \$100 of taxable value on their local tax rates. Another unique feature of the Texas facilities program is its lack of centralized decision-making. Facilities needs are determined by local districts, not by state level administrators. Districts are assumed to have determined their local needs for facilities when they receive voter approval to issue the eligible debt.

This discussion begins with a brief look at the historical context in which the facilities program was developed, then describes the schema for Texas school finance. Next, the facilities program is described, including the eligibility criteria and the funding formulas that deliver state aid. The following section will look at the impact of the program on local tax rates and debt issuance. The final section assesses the unique features of the program as well as its challenges for the future.

History

In order to appreciate the significance of the facilities program for Texas school finance policy, it is important to understand the context within which it was implemented. Texas school finance policy has been shaped for more than two decades by litigation and legislative initiatives aimed at providing equalized funding for public schools. Over the years, court decisions have defined the standards by which the equity of the school finance system is measured, and legislators have responded by developing funding mechanisms aimed at meeting those standards of equity. The concept of “local control” has been the driving force behind policy development of all kinds in Texas, particularly in recent years. This emphasis on local control combined with the continuing threat of litigation has had a significant impact on the evolution of Texas school finance policy.

Texas has been engaged for years in various lawsuits to provide equitable funding for public schools. While there are other notable cases, the most influential litigation includes a series of lawsuits that began with *Edgewood Independent School District vs. William Kirby [Edgewood I]*,¹ originally filed in 1984. Though the litigation focused on funding for operations, funding for facilities was an issue from the start. The first district court ruling on *Edgewood I* warned that, “School facilities will present a major problem during the next decade. The problem is a state problem, and it will probably require state, as opposed to only local district resources, to produce an adequate solution.”² This 1987 decision was overturned two years later on appeal, but the Texas Supreme Court agreed that facilities funding was an important issue yet to be resolved.

The Texas Supreme Court has issued rulings on four *Edgewood* cases. Each ruling has prompted legislative initiatives aimed at creating a system of school finance that would pass constitutional muster and provide equalized funding. Much of the legal battle has focused on language in the Texas Constitution stating that “[a] general diffusion of knowledge [is] essential to the preservation of the liberties and rights of the people . . . [I]t shall be the duty of the Legislature of the State to establish and make suitable provision for the support and maintenance of an efficient system of public free schools.”³

Edgewood IV is of particular importance to the issue of facilities funding. In January 1994, the District Court deemed the school finance system constitutional *except* for the

¹ *Edgewood Independent School District [ISD] v. William Kirby*, 777 S.W.2d 391 (Tex. 1989). (Originally styled as *Edgewood vs. Bynum*, but re-styled before the trial in January, 1987.) [*Edgewood I.*]

³ Texas Constitution of 1876, Article VII § 1.

funding of facilities.⁴ The district judge issued an injunction that would have prohibited school districts from issuing bonds after September 1, 1995, unless the Legislature addressed the facilities issue during its 1995 session. The Supreme Court heard the case in May of 1994, and issued a ruling that lifted the injunction in early January of 1995, just before the start of the legislative session. In a 5-4 vote, the Supreme Court rejected the lower court ruling that the facilities issue rendered the whole system unconstitutional. However, the opinion emphasized that “the challenge to the school finance law based on adequate provision for facilities *fails only because of an evidentiary void*. Our judgement in this case should not be interpreted as a signal that the school finance crisis in Texas has ended. [Emphasis added.]”⁵ The Court went on to say that “[a]n efficient system of public education requires not only classroom instruction but also the classrooms where that instruction is to take place.”⁶ While the Court stopped short of declaring the whole system unconstitutional because the state failed to provide a specific program for funding facilities, the majority opinion included the following passage:

We acknowledge, and the State concedes, that if the cost of providing a general diffusion of knowledge rises to the point that a district cannot meet its operations and facilities needs within the equalized program, the State will, at that time, have abdicated its constitutional duty to provide an efficient school system. From the evidence, it appears that this point is near.⁷

A dissenting opinion, issued by Justice Rose Spector, strongly criticized the state’s lack of equitable financing for school facilities. Spector wrote:

The unfairness of this [school finance] system is exacerbated by Senate Bill 7’s failure to include any provisions for facilities . . . This is not a significant problem for the wealthiest districts, since they are able to generate sufficient additional funds from their own tax bases by levying debt taxes. Poor districts, however, are able to generate only a small fraction of those amounts. Poor districts are thus forced to choose between funding current operations and funding capital expenditures.⁸

Although legislators considered implementing the current facilities program in 1995, they instead provided funding for a grant program that provided cash for construction projects. The \$170 million appropriated for the grant program fell far short of even the most conservative state estimates of need, which ranged at that time between \$2 and \$3 billion.⁹ Meanwhile, *Edgewood* plaintiffs accumulated evidence to demonstrate the mounting inequity of facilities financing and prepared to continue litigation in case the

1997 legislative session failed to address facilities needs.¹⁰ Legislators responded by enacting the Instructional Facilities Allotment program effective September 1, 1997. Referred to here as the Texas facilities program, this initiative has proven a vital addition to the school finance system.

Texas School Finance

School finance litigation in Texas, as in many other states, has focused broadly on ensuring the equitable education of all children who attend public schools. One of the primary differences between states is the way in which equity is defined. These definitions are often linked to provisions within each state's constitution, and these definitions can vary substantially. Other important differences involve the methods employed to deliver an equitable education to each child. State policies most often seek to equalize either revenue or spending on a per student basis. Schools in Texas have long been financed using local property taxes, and prior to the *Edgewood* litigation, there were huge disparities in access to revenue from one district to another.¹¹ The Texas system focuses on providing school districts with equal access to revenue per student, rather than equal spending per student.

While the Texas school finance system provides districts with substantially equal access to revenue, it does not require that schools take advantage of that access. The state funds that are generated by local tax effort may be considered an incentive to levy taxes, up to a limit, but no school is required to levy even a minimum tax unless they wish to access matching state funds. Virtually all Texas school districts do levy the minimum tax required for participation in the state funding program; however, all school districts do not fully maximize their access to matching state revenue.

Since the Texas Constitution expressly prohibits a statewide property tax, ensuring equal access to revenue has proven a formidable challenge for Texas policymakers. After many attempts, lawmakers struck upon a plan in 1993 that passed constitutional muster in the 1995 Supreme Court ruling on *Edgewood IV*, referred to above. The district court ruling on *Edgewood IV* described standards by which equity of the system can be measured. These standards, while not upheld in the Supreme Court ruling, are often used by policymakers to assess equity in their current deliberations on school funding. These standards measure the amount of revenue that is within the equalized system and the proportion of Texas school children attending schools that receive equalized revenue.

CREATING EQUAL ACCESS TO REVENUE FOR TEXAS PUBLIC SCHOOLS

The school finance system in Texas is based upon local tax effort and state funds that provide a guaranteed yield for each penny of tax effort. The state funds effectively

¹⁰Michele McLaughlin and Lisa Dawn, "Financing Public School Facilities in Texas," Austin, Texas: Equity Center, 1996. This report was developed for the expressed purpose of filling the "evidentiary void" on facilities financing noted in the *Edgewood IV* decision.

¹¹ Billy D. Walker and Daniel T. Casey, *The Basics of Texas Public School Finance*, Sixth Edition, 1996, pp. 9-13.

provide a guaranteed tax base upon which revenue can be generated. State aid is based on the difference between the revenue yield of the local tax levy and the guaranteed revenue yield. In this way, the system attempts to provide equal access to revenue for equal tax effort.¹²

Tax effort and state aid

In order to be eligible for state matching funds, districts must levy a minimum maintenance and operations tax of \$0.86 per \$100 of taxable value.¹³ Virtually all school districts in Texas levied the minimum tax in 1998. Tax revenue generated by the \$0.86 is considered the local fund assignment, and any tax effort above that amount is considered to be the “enrichment and facilities” tax. The local fund assignment makes districts eligible to receive Tier I funding, if applicable. Tax effort on the next \$0.64 above the \$0.86 local fund assignment generates Tier II state aid for districts with property wealth per student below the revenue base provided by the guaranteed yield, currently at \$210,000 per weighted student.

Access to equalized revenue through the Tier II program is maximized at total tax rates of \$1.50. In 1998, 279 districts receiving Tier II had total tax rates at or above \$1.50. Another 237 districts had tax rates between \$1.42 and \$1.50.¹⁴ With tax rates in half of all districts near or above \$1.50, policymakers are increasingly sensitive to the last Supreme Court ruling that the state will have “abdicated its constitutional duty to provide an efficient system” when tax rates have risen to the point that a district “cannot meet its operations and facilities needs within the equalized program.”¹⁵ Concerns about the ability of Tier II to meet the needs of districts undoubtedly influenced the decision to implement the facilities program in 1997. These concerns continue to fuel discussion about raising the \$1.50 limit and other measures intended to help equalize tax effort for debt that is not eligible for the current facilities program.

Financing Facilities

Before implementation of the facilities program, Texas school districts had few options for meeting local facilities needs. Very little state money had ever been directed toward facilities funding, and legislators had been reluctant to make long-term commitments. However, substantial documented needs and the continuing threat of litigation inspired lawmakers to enact two grant programs in the early 1990s. Until recently, Tier II funds provided an important source of funds to help pay for facilities in districts with total tax rates at or below \$1.50. As noted above, tax rates in many districts are approaching or

¹² While the system is based on the concept of equalized access to revenue, actual differences in access remain.

¹³ Texas Education Code § 42.252. Note: All tax rates are presented in terms pennies per \$100 of taxable value.

¹⁴ Based on data reported to the Public Education Information Management System (PEIMS) at the Texas Education Agency for the 1997-98 school year.

¹⁵ *Edgewood ISD v. Meno*, 893 S.W.2d 450 (Tex. 1995), 480.

are beyond the Tier II limit of \$1.50, creating a sense of urgency to equalize funds for facilities in recent years.¹⁶

Emergency Grant (1991)

Prior to the inception of the current facilities program, the Texas legislature enacted two short-term grant programs. The Emergency Grant program was authorized in 1991, shortly after a statewide inventory of school facilities indicated that districts had collective needs of more than \$2 billion for facilities.¹⁷ The Emergency Grant program provided \$50 million intended to address emergency needs identified by the inventory. Funds were distributed to 131 districts based on the need to correct an “imminent danger.” Priority to receive funds was based on property wealth, tax effort, and a five-year growth rate.¹⁸ Grants were limited to no more than \$150 per student.

School Facilities Assistance Grant (1995)

The School Facilities Assistance Grant was authorized by the 74th Legislature in 1995, when legislators balked at implementation of the guaranteed yield program proposed by the Chairman of the Senate Education Committee, Senator Teel Bivins.¹⁹ Although the Supreme Court had just issued its qualified approval of the system with specific warnings concerning the financing of facilities, the major focus of legislators was directed at re-writing the entire Texas Education Code.²⁰ While legislators recognized the need to do something about facilities, they were hesitant to make the type of long-term commitment implicit in Bivins’ proposal. Instead, they authorized the School Facilities Assistance Grant program for \$170 million.

The facilities assistance grant distributed funds to districts based on tax effort and property wealth per student.²¹ The awards were limited to \$266 per student or \$500,000, whichever was greater. Although 566 districts qualified for funds under this program, the \$170 million appropriation provided only enough funding to cover 276 awards to districts.²²

Tier II options

Before the facilities program, only Tier II districts with a total tax effort \$1.50 or less may have had the opportunity to access equalized revenue for facilities financing. However, this financing scheme put facilities needs at odds with needs for operating revenue. Districts with tax rates above \$1.50 could generate only local revenue on tax effort that exceeded the \$1.50 limit. Local revenue among the districts continues to vary widely. Districts in the lowest wealth category generated as little as \$4.17 per penny per

¹⁶ See the last section, “Final Footnote,” regarding recent developments in the Texas school finance system.

student in revenue in 1998, while the districts in the highest wealth category generated more than \$81.00. As average total tax rates have approached and exceeded the \$1.50 rate, access to equalized revenue in Tier II for facilities has become increasingly limited.²³

Texas Facilities Program

The Instructional Facilities Allotment program (the facilities program) was created with the passage of House Bill 4 in 1997, which contained provisions that were nearly identical to those proposed by Senator Bivins in Senate Bill 5 during the 1995 session. The main purpose of House Bill 4 was to provide tax relief in the form of an increased homestead exemption. Due to its delivery mechanism, the facilities program can also be considered a tax relief program. The facilities program involves a partnership between local school districts and the state to repay long-term debt that is issued for the construction or renovation of school facilities. The program was designed to help repay debt for which districts first levied a tax on or after September 1, 1997. A total of 229 districts received facilities allotment awards in 1998-99, ranging from approximately \$16,000 to \$8.6 million. State aid totaled \$121 million, and districts were required to provide a total of \$130 million in matching local tax effort.²⁴

ELIGIBILITY

In order to receive funds, districts must:

1. Have authority to issue debt
2. Submit an application before issuing debt
3. Use funds for qualified projects
4. Levy and collect sufficient taxes to pay the local share of the program

Have Authority to Issue Debt

Districts must have voter approval to issue eligible debt before they apply for facilities funds. School bonds and certain lease-purchase agreements are considered eligible debt.²⁵ Voters give districts authority to issue bonds by election. Rather than active approval, authority to enter lease-purchase agreements is indicated by a lack of voter disapproval. Districts must post their intentions to enter a lease-purchase agreement for at least 60 days prior to entering such an agreement.²⁶ Voters may call a referendum on the decision to enter into the lease-purchase, if they present a petition with signatures from at least five percent of registered voters within the 60-day notice period. If there are no valid requests for a referendum, voter approval is assumed and districts have authority to enter the lease-purchase agreement.²⁷

²³ See final footnote regarding recent changes in the Texas school finance system.

²⁴ See *Appendix A*.

²⁵ Texas Administrative Code § 61.1032(d)(1). Only lease-purchase agreements for real property under Local Government Code § 271.004 are eligible under the facilities program.

²⁶ Local Government Code § 271.004(a).

²⁷ Local Government Code § 271.004(b).

Submit an Application before Issuing Debt

Districts must make an application to the state education agency for facilities program funds before the debt is issued.²⁸ Typically, districts submit their applications after they conduct a successful bond election or the notice period for a lease-purchase agreement has expired. Some districts do not issue the debt until they receive confirmation that their application was approved for facilities funding. Other districts move forward with the issuance of debt in the absence of a state commitment, budgeting as though they will pay the debt service costs from local revenue and amending their budgets if they later receive facilities funding. Districts may apply to the program even when funding has been depleted in order to meet the statutory requirements to apply for funds before the debt is issued. These applications preserve eligibility of the debt service for the facilities program should additional funding become available in the future.²⁹

Use Funds for Qualified Projects

Debt must be used to finance instructional facilities.³⁰ Qualified projects include new schools and renovations or additions of classrooms, auditoriums, and other support facilities. Athletic facilities and central administrative facilities are not qualified.³¹ Expenditures on non-qualified items are pro-rated and subtracted from eligible debt service when calculating the allotment awards.³²

Levy and Collect Sufficient Taxes

Because the facilities program is based on a guaranteed yield for tax effort, districts must levy local taxes to meet their local share of the obligation.³³ Districts that fail to levy and collect sufficient taxes may see a reduction in either their state aid for the Tier II program or in their future facilities allotments.

CALCULATING THE FACILITIES ALLOTMENT

The dollar amount of the facilities allotment is based on two calculations. One determines the maximum amount of eligible debt service for which districts can receive state aid. The other determines how much of the eligible debt service is paid by the state and how much is paid by the local district. The facilities program provides a guaranteed yield for each penny of tax effort per student in average daily attendance (ADA).

²⁸Texas Administrative Code § 61.1032(d)(2).

²⁹Texas Administrative Code § 61.1032(k)(2).

³⁰ Texas Education Code § 46.003.

³¹ See Texas Education Agency website for description of Instructional and Non-Instructional Facilities at <http://www.tea.state.tx.us/school.finance/facilities/ifa/qual.html>.

³² Texas Administrative Code § 61.1032(h)

³³ Texas Administrative Code § 61.1032(m).

Allotment Limit

The allotment limit, as prescribed in the statute, must be calculated first. The maximum allotment a district may receive during a biennium is equal to \$250 per student in average daily attendance, or \$100,000, whichever is more.³⁴ The allotment limit is calculated at the time the application is received. Districts may request assistance on more than one debt instrument for combined debt service obligations up to the biennial allotment limit. For example, a district may make an application for debt service equal to \$100 per student in one application in the first year of the biennium. The district may submit another application for debt service equal to \$150 per student during the second year of the biennium, for a cumulative total of \$250 debt service per student.³⁵

State and local share

Next, the ratio that determines the state and local shares of the allotment is calculated on the basis of district wealth factors and student enrollment. Annual state aid is based on the lesser of the allotment limit or the actual debt service. The award is recalculated each year using current values for property wealth and enrollment. As a result, the amount of state aid a district will receive from the program will fluctuate from year to year.

Table 1. Example facilities allotment calculation for 1998-99

District ABC		
1998-99 Average Daily Attendance	= 1,000	
1997 Property value	= \$100,000,000	
1998-99 Annual debt service	= \$100,000	
Allotment limit	= \$250 x 1,000 ADA	= \$250,000/biennium
Local yield/penny	= \$100,000,000/10,000	= \$10,000
Local yield/penny/student	= \$10,000/1,000	= \$10.00
Percentage of state share	= $(\$28 - \$10/\$28) \times 100$	= 64.3%
Percentage of local share	= 100% - 64.3%	= 35.7%
Allotment limit or debt service	$\$100,000 < \$250,000$	= \$100,000
1998-99 State share	= $\$100,000 \times 64.3\%$	= \$64,300
1998-99 Local share	= $\$100,000 \times 35.7\%$	= \$35,700

³⁴ Texas Education Code § 46.005.

³⁵ State funding for both applications is subject to adequate appropriation.

IMPACT OF FACILITIES PROGRAM

Local Tax Rate Relief

The facilities program is designed to provide equalized revenue for taxes levied by local school districts to repay long-term debt. The guaranteed yield mechanism allows districts to issue more debt than their local tax bases alone could support. Put another way, this program allows districts to reduce the need for local tax increases to support the issuance of eligible debt. In FY 1999, the facilities program is expected to provide approximately \$121 million to districts in lieu of local tax effort.³⁶ Districts avoided an average of \$0.15 in tax effort as a result of their access to equalized revenues provided by the facilities program. Ten districts avoided local tax rate increases of at least \$0.50, with the poorest avoiding \$0.92 on the local tax levy. Districts with large concentrations of economically disadvantaged students and districts with low wealth per student experienced the greatest tax savings, as illustrated on the charts below.³⁷

Figure 1. Average tax rate savings by percent of economically disadvantaged students

³⁶ See Appendix A.

³⁷ See Appendix C.

Figure 2. Average avoided tax effort by wealth quartile

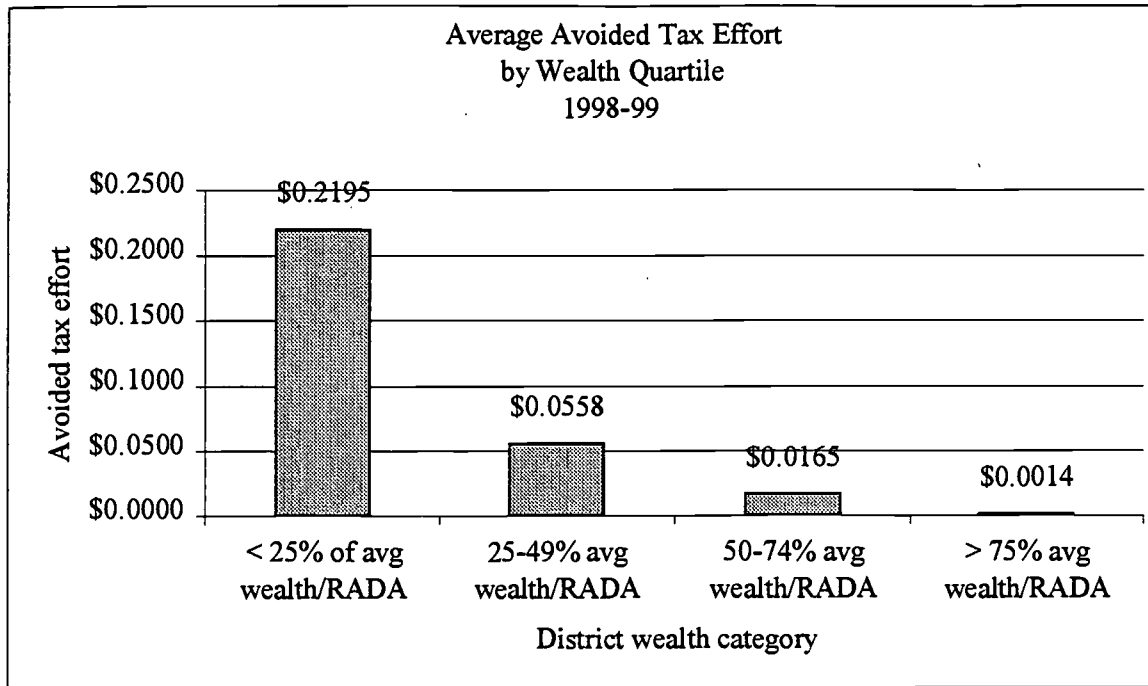

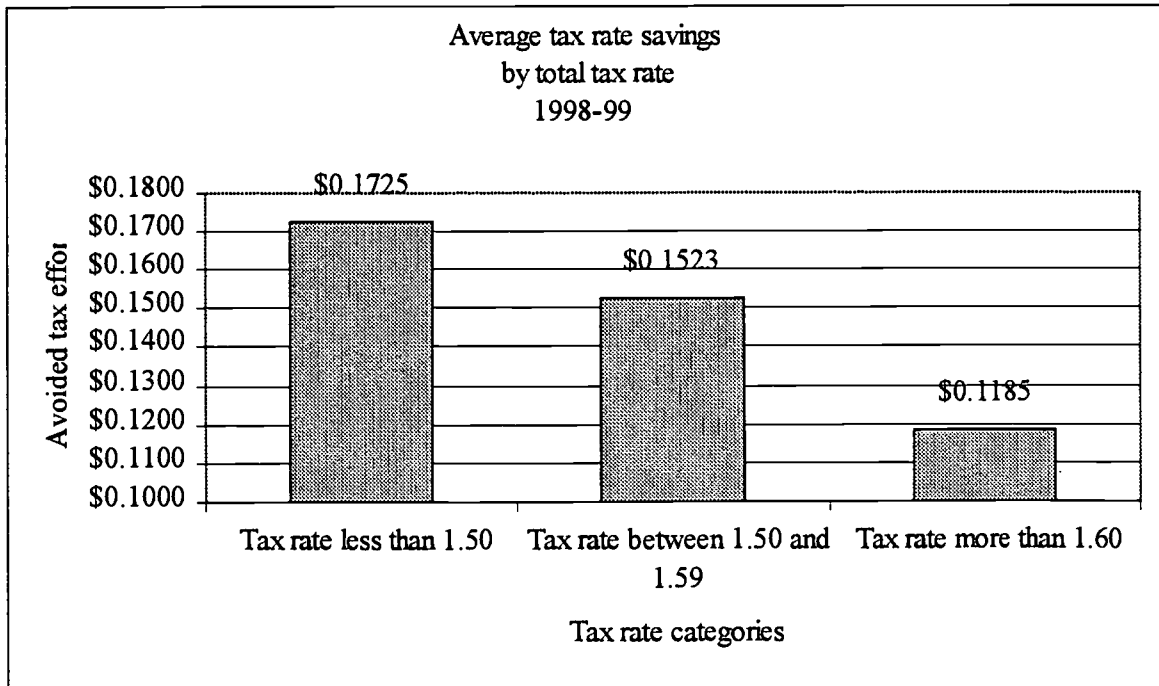

Figure 3. Average tax rates savings by total tax rate

Debt Issuance

School districts issued approximately \$1.3 billion in bonds during FY 1996 and \$1 billion during FY 1997. By contrast, districts issued almost \$2.9 billion in bonds FY 1998, a 162 percent increase over the prior year's issues.³⁸ While a generally robust economy and low interest rates certainly influenced the bond market, the facilities program is perceived to have played significant role this dramatic increase in debt issuance over a single year.

With the promise of state matching funds, school districts were able to gain voter support for bond issues that had failed in the past or had never even been attempted due to a perceived lack of support. Bond sales in the 100 poorest school districts in Texas declined from the prior year in both FY 1996 and FY 1997. Following implementation of the facilities program in FY 1998, these districts issued 132 percent more debt than they had in FY 1997. See Table 2 below for information on voter-approved debt.

Table 2. Voter-approved debt (in millions)

	FY 1996 Debt issued	Change from prior year	FY 1997 Debt issued	Change from prior year	FY 1998 Debt Issued	Change from prior year
All districts						
Total voter- approved debt	\$1,664	\$450	\$1,091	(\$572)	\$2,859	\$1,768
Change in voter-approved debt		+ 3%		- 34%		+ 162%
100 Lowest Wealth Districts						
Total voter- approved debt	\$356	(\$66)	\$346	(\$10)	\$802	\$456
Change in voter-approved debt		- 7%		- 3%		+ 132%

Districts had more than \$388 million in lease-purchase principal outstanding at the end of FY 1998, much of it issued over the year, including one lease agreement worth \$94 million. Lease-purchase agreements to finance school facilities were authorized in 1986, but implementation was delayed due to a variety of problems with interpretation. Districts first used lease-purchase agreements in FY 1995.

Assessing the Program

There are several characteristics of the Texas facilities program that, taken in combination, result in a unique system that may be useful to consider in other states with similar needs and delivery mechanisms. This section will review some of the characteristics as well as some of the implications inherent in the program design.

UNIQUE CHARACTERISTICS

While many of these features may be found in other states' facilities programs, the combination of features employed by the Texas program make it unique. The requirement to issue debt and the local assessment of need are especially noteworthy.

Funding Debt Service

By funding debt service rather than construction, the facilities program was able to create a tremendous impact on access to funds for facilities projects. This approach allowed Texas school districts to undertake nearly \$4 billion in facilities projects for a biennial appropriation of \$200 million.³⁹ Thus, the current program provided districts with access to almost 20 times more money for projects than the same appropriation would have provided if the money had been used to pay for construction. Low interest rates allowed districts to issue more debt for the same cost, which further drove up the total amount of debt issued.

Determining Facilities Needs

The statute authorizing the facilities program states that the "board of trustees and voters of a school district shall determine district needs concerning construction, acquisition, renovation, or improvement of instructional facilities."⁴⁰ This approach is substantially different than most other states' policies. The Texas program explicitly directs decisions about facilities needs to the local level, and state-level administration of the program is limited to a review that determines whether the debt is eligible and the proposed facilities projects are qualified. Facilities programs in many other states require districts to gain approval from a state-level agency for their facilities projects. The Texas program intends for local districts to identify their own needs and develop their own plans to meet those needs. Rather than drive district decisions about facilities, the Texas facilities

³⁹ See *Appendix B*.

⁴⁰ Texas Education Code § 46.003(f).

program provides matching state funds to those districts that take the local initiative to fund qualified facilities projects with eligible long-term debt.

CHALLENGES FOR THE FUTURE

Requirement to Issue Debt

Although research on the issue is lacking, anecdotal evidence clearly indicates that some districts will never be able to gain access to the facilities program as it currently exists because participation requires the issuance of debt. Taxpayers in some communities are reluctant to approve debt, regardless of the state incentive provided through the facilities guaranteed yield program. However, a growing student population and aging physical plants across the state are indications that facilities will continue to pose an important need for school districts.

Districts that have difficulty gaining voter approval to issue debt may find it increasingly difficult to fund facilities needs. Lease-purchase agreements provide districts with an opportunity to issue debt without active voter approval. (See "Eligibility" above.) Due to the legal complexity of lease-purchase arrangements, additional time and expenses are required.

Statutory conflict with lease-purchase provisions

The statute authorizing the facilities program clearly indicates that lease-purchase agreements are eligible for the facilities program. It also states that the districts must levy a bond tax in order to qualify for funds. However, the Attorney General has taken the position that districts may not levy a tax of any kind to repay a lease-purchase agreement.⁴¹ Instead, districts are required to demonstrate that their "unintended surplus" of state aid (based upon tax effort) is sufficient to cover their debt service payments. In order to comply with the facilities program requirement for districts to levy sufficient local taxes to cover their share of the allotment, a tax rate is imputed for districts that have lease-purchase agreements.

One option policymakers could choose to resolve this conflict would involve giving districts the authority to pay for lease-purchase agreements from tax revenue. Another option might involve excusing districts that use lease-purchases from the facilities program requirement to levy taxes. However, that would run counter to the legislative intent and expose the state to possible challenges from districts that issued bonds and were required to levy taxes.

⁴¹ Jim Thomassen, Assistant Attorney General, Chief, Public Finance Division, All Bond Counsel letter dated July 11, 1995, item number 8.a. This position is based on an opinion rendered in *Madeley v. Trustees of Conroe ISD*, 130 S.W.2d at 929 (Tex. Civ. App., Beaumont 1939, writ dismissed, judgment corrected.)

Local Control and the Concern Over Accountability of Public Funds

Though the statute clearly states that districts will determine their own needs, there is some concern regarding the accountability of public funds. TEA has begun to make site visits to projects that were financed through the facilities program, but has not been provided with the additional resources to conduct full-scale monitoring activities.

CONCLUSION

The Texas facilities program delivered equalized funding to help fund nearly \$4 billion worth of facilities-related projects in its first two years of implementation. Those districts with the lowest wealth per student and the highest concentration of economically disadvantaged students received the largest portion of funding, reflecting a successful endeavor to direct resources to districts based on their ability to pay for their own needs. By reducing the need for local tax effort, the program serves to provide tax relief to local property owners.

The facilities program also provides maximum flexibility for districts to determine when and what they want to undertake in terms of facilities projects. This philosophy is consistent with recent policy trends to drive decision-making to the local level. However, the “passive” voter approval of lease-purchase agreements may raise concerns about accountability in the future.

Legislators are currently proposing to expand the facilities program by at least \$150 million for the next biennium, and a number of districts are already poised and “waiting in line” for the next available funding. While it may take several years for Texas to meet all of its facilities needs, continued growth of the facilities program will eventually allow districts the opportunity to catch up with existing needs and plan ahead for the future.

A FINAL FOOTNOTE

In May of 1999, the Texas Legislature made a number of changes to the school finance system that directly affect state assistance for facilities. These changes include additional funding for new facilities assistance awards and an increase in the guaranteed yield for facilities assistance from \$28 to \$35 per student per penny of tax effort. An additional program, known as the Existing Debt Allotment, was established to provide assistance for most debt that was issued before the inception of the current facilities program. In making these changes, legislators also prohibited districts from using Tier II funds to pay for debt service on bonds or lease-purchase agreements. While some of these changes were well-planned, others have created unintended consequences on the school finance system. Efforts to clarify legislative intent are framing what promises to be a serious debate in 2001 focused on the interaction between the broad system of school finance and the specific mechanisms used to deliver facilities funding.

REPRODUCTION RELEASE

(Specific Document)

I. DOCUMENT IDENTIFICATION:

Title: <i>Financing Public School Facilities in Texas: A Case Study</i>	
Author(s): <i>Lisa Dawn</i>	
Corporate Source:	Publication Date:

II. REPRODUCTION RELEASE:

In order to disseminate as widely as possible timely and significant materials of interest to the educational community, documents announced in the monthly abstract journal of the ERIC system, *Resources in Education* (RIE), are usually made available to users in microfiche, reproduced paper copy, and electronic media, and sold through the ERIC Document Reproduction Service (EDRS). Credit is given to the source of each document, and, if reproduction release is granted, one of the following notices is affixed to the document.

If permission is granted to reproduce and disseminate the identified document, please CHECK ONE of the following three options and sign at the bottom of the page.

The sample sticker shown below will be affixed to all Level 1 documents

PERMISSION TO REPRODUCE AND DISSEMINATE THIS MATERIAL HAS BEEN GRANTED BY

Sample

TO THE EDUCATIONAL RESOURCES INFORMATION CENTER (ERIC)

1

Level 1

Check here for Level 1 release, permitting reproduction and dissemination in microfiche or other ERIC archival media (e.g., electronic) and paper copy.

The sample sticker shown below will be affixed to all Level 2A documents

PERMISSION TO REPRODUCE AND DISSEMINATE THIS MATERIAL IN MICROFICHE, AND IN ELECTRONIC MEDIA FOR ERIC COLLECTION SUBSCRIBERS ONLY, HAS BEEN GRANTED BY

Sample

TO THE EDUCATIONAL RESOURCES INFORMATION CENTER (ERIC)

2A

Level 2A

Check here for Level 2A release, permitting reproduction and dissemination in microfiche and in electronic media for ERIC archival collection subscribers only

The sample sticker shown below will be affixed to all Level 2B documents

PERMISSION TO REPRODUCE AND DISSEMINATE THIS MATERIAL IN MICROFICHE ONLY HAS BEEN GRANTED BY

Sample

TO THE EDUCATIONAL RESOURCES INFORMATION CENTER (ERIC)

2B

Level 2B

Check here for Level 2B release, permitting reproduction and dissemination in microfiche only

Documents will be processed as indicated provided reproduction quality permits.
If permission to reproduce is granted, but no box is checked, documents will be processed at Level 1.

I hereby grant to the Educational Resources Information Center (ERIC) nonexclusive permission to reproduce and disseminate this document as indicated above. Reproduction from the ERIC microfiche or electronic media by persons other than ERIC employees and its system contractors requires permission from the copyright holder. Exception is made for non-profit reproduction by libraries and other service agencies to satisfy information needs of educators in response to discrete inquiries.

III. DOCUMENT AVAILABILITY INFORMATION (FROM NON-ERIC SOURCE):

If permission to reproduce is not granted to ERIC, or, if you wish ERIC to cite the availability of the document from another source, please provide the following information regarding the availability of the document. (ERIC will not announce a document unless it is publicly available, and a dependable source can be specified. Contributors should also be aware that ERIC selection criteria are significantly more stringent for documents that cannot be made available through EDRS.)

Publisher/Distributor:	N/A
Address:	
Price:	

IV. REFERRAL OF ERIC TO COPYRIGHT/REPRODUCTION RIGHTS HOLDER:

If the right to grant this reproduction release is held by someone other than the addressee, please provide the appropriate name and address:

Name:	N/A
Address:	

V. WHERE TO SEND THIS FORM:

Send this form to the following ERIC Clearinghouse: ERIC Clearinghouse on Educational Management 1787 Agate Street 5207 University of Oregon Eugene, OR 97403-5207
--

However, if solicited by the ERIC Facility, or if making an unsolicited contribution to ERIC, return this form (and the document being contributed) to:
