This compilation of annotated bibliographies focuses on current popular and important topics in social studies education. The bibliographies, drawn from the ERIC database of education-related literature, include recent (mostly 1994-1998) citations with abstracts from the National Council for the Social Studies (NCSS)-published journals, "Social Studies and the Young Learner" and "Social Education." The broad field of social studies/social science education has many "hot topics" that engage and challenge practitioners and researchers. Five categories of current discourse and debate are discussed in this volume. They are: (1) global education; (2) multicultural education; (3) law-related education; (4) scope and sequence; and (5) citizenship education. In addition to the bibliographies, ERIC Digests on related topics are included. Information on how to obtain the journal articles and documents listed in the ERIC Database and on how to submit documents to ERIC (including an ERIC Reproduction Release Form) is provided. (LB)

Introduction

This volume is a compilation of annotated bibliographies on current popular and important topics in social studies education. The bibliographies, drawn from the ERIC database of education-related literature, include recent (mostly 1994-1998) citations with abstracts from only the National Council for the Social Studies (NCSS)-published journals, Social Studies and the Young Learner and Social Education. In addition to the bibliographies, several ERIC/ChESS Digests on related topics are included.

The topics of the bibliographies were selected based on the questions most frequently posed to the NCSS Information Services department and the ERIC/ChESS User Services division, both of which respond to thousands of information requests annually from teachers, students, parents, education administrators, researchers, policymakers, and the general public. It should be noted these bibliographies are just a sampling of the materials listed in the ERIC database and published in Social Education and Social Studies and the Young Learner on these topics. The ERIC database contains citations with abstracts to hundreds of additional journal articles and documents on the topics covered in this book and on many other topics in education.

The ERIC Database

The ERIC database contains more than one million citations with abstracts to journal articles, teaching and curriculum guides, conference papers, research reports, bibliographies, books, and other materials, all pertaining to education. The ERIC database is available free for searching in many large public and university libraries and on the Internet. ERIC Resource Collections, which provide access to ERIC resources such as the ERIC database, collections of ERIC documents on microfiche, and the Thesaurus of ERIC Descriptors, are located at libraries and other institutions worldwide. To find out the location of the ERIC Resource Collection nearest you, search the Directory of ERIC Resource Collections on the World Wide Web at <www.ed.gov/BASISDB/EROD/eric/SF>, or call ACCESS ERIC at 1-800-LET-ERIC (538-3742). To search the ERIC database on the Internet, point your World Wide Web browser to this collection of links to sites providing ERIC database access, courtesy of the ERIC Clearinghouse on Assessment and Evaluation: <ericae.net/search.htm>.

The ERIC System

The ERIC database is at the heart of the largest, oldest education information system in the world, the ERIC system. Sponsored by the U.S. Department of Education and the National Library of Education, the ERIC system is a nationwide network of 16 subject-oriented clearinghouses and several support components working together to improve U.S. education by increasing and facilitating the use of educational research and information to improve practice in learning, teaching, educational decision making, and research, wherever and whenever these activities take place.
The ERIC Clearinghouses

Each of the 16 clearinghouses in the ERIC system specializes in a broad subject area as it relates to education. The clearinghouses monitor the literature of their broad subject areas and contribute bibliographic citations with abstracts for that literature to the ERIC database. In addition to building the ERIC database, the clearinghouses provide a variety of services and products, most for free or a nominal fee. The Clearinghouses answer questions in their subject areas and about the ERIC system using the ERIC database, the Internet, and a variety of other print and electronic sources; develop news bulletins, bibliographies, guides on using ERIC, and other free or inexpensive materials; publish handbooks of materials for classroom use, monographs on important topics, bibliographies, and ERIC Digests; and maintain extensive World Wide Web sites, electronic journals, listservs, and other electronic resources on their broad subject area or on topics within their subject scope.

For a complete list of ERIC Clearinghouses and their respective subject scopes, contact:

The ERIC Clearinghouse for Social Studies/Social Science Education (ERIC/ChESS)

ERIC/ChESS monitors the literature and developments in and publishes materials on the teaching and learning of the social studies, including history, geography, economic education, and civic education; social sciences, including anthropology, archaeology, sociology, social psychology, and political science; art, music, and architecture; philosophy, law, and international education; and gender equity and social bias/discrimination.

In addition to helping build the ERIC database, ERIC/ChESS offers a variety of products and services. ERIC/ChESS responds to questions within our subject scope as well as general questions about the ERIC system; maintains an extensive World Wide Web site at <www.indiana.edu/~ssdc/eric_chess.htm>; annually publishes eight or more ERIC Digests, brief introductions to current topics of interest to educators, plus a bibliography of related resources; publishes resource guides, lesson plan collections, bibliographies, teaching guides, and scholarly analyses, all listed in our free catalog; publishes a biannual electronic newsletter, Keeping Up, which includes news on developments in the ERIC system, ERIC/ChESS, and social studies, social science, art, and music education; and, for the cost of travel and per-diem expenses, presents workshops on a variety of topics, including the services of the ERIC system and
ERIC/ChESS, how to search the ERIC database, and more.

The National Council for the Social Studies (NCSS)

Founded in 1921, National Council for the Social Studies has grown to be the largest association in the country devoted solely to social studies education. NCSS engages and supports educators in strengthening and advocating social studies. With members in all 50 states, the District of Columbia, and 69 foreign countries, NCSS serves as the umbrella organization for elementary, secondary, and college teachers of history, geography, economics, political science, sociology, psychology, anthropology, and law-related education. Organized into a network of more than 110 affiliated state, local, and regional councils and associated groups, the NCSS membership represents K-12 classroom teachers, college and university faculty members, curriculum designers and specialists, social studies supervisors, and leaders in the various disciplines that constitute the social studies. NCSS can be contacted at:

National Council for the Social Studies

An Overview of Five Hot Topics
by John J. Patrick

The broad field of social studies/social science education is full of "hot topics" that engage and challenge practitioners and researchers. Five categories of current discourse and debate are:

- global education
- multicultural education
- law-related education
- citizenship education
- scope and sequence

These five "hot topics" are treated in this volume, which includes annotated bibliographies drawn from the ERIC database. The five "hot topics" were identified on the basis of inquiries by users of the services of the ERIC Clearinghouse for Social Studies/Social Science Education (ERIC/ChESS) and the National Council for the Social Studies (NCSS). This overview defines the five "hot topics" in this volume and discusses their significance in the field of social studies/social science education.

Global Education

Global education "emphasizes the commonalities and connections among human beings and recognizes human differences and uniqueness" (Anderson 1994, 3). A recent publication of the National Association of Elementary School Principals affirmed the central importance of an international and global perspective in the curriculum of schools (Taylor 1997). In support of an international and global perspective in education, this volume included several position statements from leading professional associations. Three examples are presented below:

- The realities of global interdependence require understanding the increasingly important and diverse global connections among world societies and the frequent tensions between national interests and global priorities.
  —National Council for the Social Studies

- Our lives are part of a global community—one joined by common economic, social, cultural, and civic concerns. Education in the United States must prepare us to participate in this global community.
  —Council of Chief State School Officers

- Schools must provide young people opportunities to (a) develop an awareness and appreciation of other cultures; (b) understand the interdependence of the world’s people; and (c) recognize that the world is becoming one interactive economic and social system.
  —National Association of State Boards of Education
The preceding statements indicate a trend in education toward recognition that if we would educate students to comprehend and cope with social reality, then we must emphatically bring an international and global perspective to the school curriculum. If not, our students will neither understand nor deal effectively with the most fundamental economic, social, and political forces shaping their lives today, which are bringing peoples and places of our world into relationships of unprecedented interdependence. There is no escape from this worldwide phenomenon, only the choice of whether or not to try to comprehend and cope with its challenges.

The United States is inextricably connected to peoples and places throughout the world. Events in far-away places involving peoples of very different cultures and civilizations inevitably influence the United States, and this global impact on Americans is pervasive and continuous. Global educators emphasize that if young Americans would be educated adequately for productive and fulfilling lives in the world of today and tomorrow, their education must be informed by a global perspective.

The globalization of social studies education requires at least prominent places in the school curriculum for world geography and world history. Most social studies educators seem to agree, and the new state-level content standards prominently include world geography and world history. Both subjects are treated more extensively in the school curriculum today than they were during the 1980s or before. This trend is supported by the established place of geography in the schedule of the National Assessment of Educational Progress (NAEP) and the new place proposed for world history, which is on the NAEP schedule for the first time (2005, if present plans are maintained).

**Multicultural Education**

Multicultural education tends to be advocated in tandem with global education. Its proponents seek inclusion in the curriculum of long-neglected groups that have suffered discrimination. Most advocates of multicultural education wish to fully democratize and legitimize the political and social system of the United States, not to overturn and replace it with a radical alternative.

Multicultural educators emphasize cultural pluralism as an existing and desirable characteristic of American society. They propose to educate citizens for participation in a society of equitable, mutually respectful, and harmonious interaction among diverse groups that will continue to preserve their different identities in tandem with their citizenship in the United States. Further, they would promote "cultural democracy" with freedom and rights for diverse groups in the United States (Banks 1997).

Multicultural educators applaud principles of American democracy. A leading multicultural educator, Gloria Ladson-Billings, writes, "Almost every discussion of multiculturalism and multicultural education is placed in the context of democracy and citizen participation" (1992, 308). And Geneva Gay, another leading educator, states that a primary
purpose of multicultural education is to contribute to the improvement of education for democratic citizenship. She writes, "Multicultural interpretations of citizenship act as a critical voice, a civic conscience, and a reality filter for general education values and goals for democracy" (1994, 103).

Multicultural educators would foster cultural pluralism and democratic citizenship through a school curriculum and classroom instruction that favor (1) inclusion and accurate portrayal of groups previously neglected or stereotyped, and (2) preservation of minority group identities and cultures in the United States. They agree with multicultural historian Ronald Takaki, "Through their narratives and circumstances, the people of America's diverse groups are able to see themselves and each other in our common past . . . By sharing their stories, they invite us to see ourselves in a different mirror" (1993, 16-17). This "different mirror" is a symbol of multiple perspectives on the past and present of different cultural groups in the United States, which can be used to reflect various multicultural meanings in classrooms from which some groups have been excluded or diminished.

Multicultural educators believe that equitable treatment of diverse minority groups involves more than recognition and toleration of differences. It also requires respect and security for the rights of minority groups to maintain their members and sustain their cultural integrity. Multicultural educators reject the "melting pot" symbol of American unity and use the stained glass window, tapestry, and mosaic to project images of cultural pluralism in opposition to monocultural tendencies in American education. Social historian Reed Ueda describes how multicultural education in schools has begun to transform the curriculum to serve the goal of cultural pluralism in a "cultural democracy," Professor Ueda writes, "Whereas schools for most of the twentieth century endeavored to build a supra-ethnic identity, in the late twentieth century schools gave priority to the preservation and inculcation of group identities and cultures. The schools still taught about the shared values that underlay American national identity, but they also cultivated alternative identities and cultures" (1994, 140-141).

Many indicators point to the success of multicultural challenges and perspectives in the social studies curriculum of elementary and secondary schools. In the title of his latest book, Harvard sociologist Nathen Glazer (1997, 19) proclaims, We Are All Multiculturalists Now. Professor Glazer writes, "Multiculturalism of some kind there is, and there will be. The fight is over how much, what kind for whom, at what ages, under what standards." In his acknowledgment of multiculturalism's success in the American education establishment, Glazer raises a disturbing question, "Will multiculturalism undermine what is still, on balance, a success in world history, a diverse society that continues to welcome further diversity, with a distinctive and common culture of some merit?" (1997, 20).

Law-Related Education

All individuals and groups in the multicultural society of the United States live under a common Constitution and laws. Thus, law-related education (LRE) is an essential part of public education.
Leaders of LRE have defined their field as “those organized learning experiences that provide students and educators with opportunities to develop the knowledge and understanding, skills, attitudes and appreciations necessary to respond effectively to the law and legal issues in our complex and changing society” (Special Committee on Youth Education for Citizenship 1995, 54). In line with this definition, central ideas of LRE programs pertain to why certain legal procedures have been established and how they work in resolving disputes.

Given the fundamental place of law in our American society, every citizen needs to know how the legal and political systems function, how the law affects them, and how they can affect it. LRE provides young people with knowledge, skills, and attitudes necessary for informed, responsible participation in our American constitutional democracy. LRE clearly and indisputably increases students' knowledge of the justice system, government, and the rights and responsibilities of citizenship in a constitutional democracy. There also is evidence that LRE contributes to development of skills in civic participation, decision making, and critical thinking. Finally, positive attitudes about the law, the justice system, and responsible citizenship may be enhanced through LRE programs (Miller and Singleton 1997).

Citizenship Education

Law-related education is directly connected to the central purpose of the social studies in the school curriculum, which is education for citizenship in a democracy. The National Council for the Social Studies, for example, proclaims that social studies education should "promote civic competence" and that the "primary purpose of social studies" is development among students of the capacity to be "citizens of a culturally diverse, democratic society" (Schneider, et al 1994, vii). And the American Federation of Teachers emphatically proclaims that education for citizenship and democracy is the overarching goal of the social studies curriculum (Education for Democracy Project 1987).

The state-level content standards projects in the social studies emphasize the subject matter of civics/government and education for democratic citizenship. For example, the Texas Essential Knowledge and Skills for Social Studies (Texas Education Agency 1997), the state's content standards document for social studies, includes the subject matter of civics/government and the theme of education for democratic citizenship as pervasive strands of the curriculum from kindergarten through grade twelve. Thus, content standards on civics/government and education for democratic citizenship are specified at every grade level of the curriculum.

The state-level content standards documents tend to reflect the definition of civic education set forth in the National Standards for Civics and Government, "Education in civics and government is informed, responsible participation in political life by competent citizens committed to the fundamental values and principles of American constitutional democracy" (Quigley, et al 1994, 1). This definition denotes three main dimensions of education for democratic citizenship: civic knowledge, civic skills, and civic dispositions. Civic knowledge consists of the principles and practices of constitutional democracy in the United States. Civic skills involve cognitive and participatory capacities necessary to the use of knowledge to make
informed decisions about public issues and to act effectively on those decisions. Civic dispositions refer to attitudes and behavioral orientations: habits that foster civility, self-restraint, trustworthiness, tolerance, respect for the rights of others, and responsibility for the public good.

The global resurgence of democracy in the 1990s, in the wake of the Soviet Union's collapse and the worldwide decline of communism, has stimulated a global trend of interest in civics or education for democratic citizenship. Educators in post-communist countries have looked to the United States of America for leadership and resources in developing curriculum and instruction on education for democratic citizenship. Two agencies of the United States government, the National Endowment for Democracy (NED) and the United States Department of Education, have been prominently involved as resource providers for projects on education for democratic citizenship conducted jointly by American educators with colleagues abroad, especially those in post-communist countries. These international civics projects have led to revitalization within the United States of interest and activity in civic education. For example, interest among Eastern European civic educators in the idea of civil society and its relationship to democracy and education for democratic citizenship has stimulated a strong surge of thought and action among Americans about these aspects of civic education in the United States.

Scope and Sequence

Global education, multicultural education, law-related education, and citizenship education are key components in the scope and sequence of the social studies (Schneider, et al 1994). Scope and sequence refers to the breadth and order of subjects in the school curriculum.

Content standards documents either completed or in development by the state-level departments of education throughout the United States provide compelling evidence for the dominance of the four topics listed above in the K-12 curriculum (Glidden 1998). Two representative and prominent examples of the current scope and sequence of the social studies curriculum are the Texas Social Studies Framework (Social Studies Center for Education Development 1999) and the History-Social Science Framework for California Public Schools (History-Social Science Curriculum Framework and Criteria Committee 1997). These two recently published curriculum frameworks emphasize four core academic disciplines: history, geography, economics, and civics/government. And they treat globalism, multiculturalism, law-related education, and civism or democratic citizenship as central themes in each of the four core subjects.

A major curriculum document of the National Council for the Social Studies emphasizes global connections, cultural diversity, and democratic citizenship among ten central “strands” of the exemplary social studies curriculum (Schneider, et al 1994). These “strands” are posited as the key content elements of any scope and sequence for the social studies curriculum.

Curriculum framework and content standards documents of state education departments are included in the ERIC database. These documents are recommended as worthy current examples of scope and sequence in the social studies curriculum (Glidden 1998).

A Global Perspective on Human Rights Education

by John J. Patrick

Human Rights Day (December 10, 1998) marks the 50th anniversary of the Universal Declaration of Human Rights. On December 10, 1948, the United Nations adopted this document. It is not legally binding on the signatories, but it has moral force that commands worldwide respect. Thus, the United Nations Universal Declaration of Human Rights is a standard by which many people throughout the world judge the conditions of citizenship and government internationally and within their own countries. This document, which includes 30 articles pertaining to various human rights, is also a focal point of education about human rights in schools throughout the world.

Conceptions and Origins. "Human rights are the claims that all human beings are justly entitled to make merely by virtue of their being human" (Plattner 1995, 573). In the seventeenth and eighteenth centuries, when this idea became prominent in Western Europe and North America, it carried the label "natural rights" to denote derivation of these rights from the nature of every human being. Each person, according to the natural rights concept, possesses equally certain immutable rights by virtue of her or his membership in the human species; it is the duty of a just government to protect these rights.

The United States Declaration of Independence, adopted July 4, 1776, expresses the "natural rights" idea in these memorable words: "We hold these Truths to be self-evident, that all Men are created equal, that they are endowed by their Creator with certain unalienable Rights, that among these are Life, Liberty, and the Pursuit of Happiness. That to secure these Rights Governments are instituted among Men, deriving their just powers from the Consent of the Governed. That whenever any form of Government becomes destructive of these Ends, it is the right of the People to alter or Abolish it and to institute new Government..."

This Declaration of Independence by and for the people of a new American nation still has global implications. The same can be said about the Declaration of the Rights of Man and the Citizen issued by France's National Assembly in 1789, which proclaimed: "The end of all political associations is the preservation of the natural and imprescriptible rights of man; and these rights are liberty, property, security, and resistance of oppression."

The 1787 Constitution and the 1791 Bill of Rights of the United States of America were designed and adopted to address the civic values of the 1776 Declaration of Independence. This Constitution reflects the understanding among America's founders that the individual's rights are at risk if a government is either too strong or too weak. A good government simultaneously is empowered and limited. It is empowered sufficiently by the people to secure their rights against domestic or foreign predators. And this government's power is also limited sufficiently by the supreme law of its constitution to protect the people's rights against abuses by their own governors.

During the nineteenth and twentieth centuries, the concept of natural rights was transformed into the idea of human rights. This change reflected an expansion of the scope or range of rights to include two types of claims.

The first and older type is negative; it would limit the power of a government to protect peoples' rights against its power. The second and newer type of claim is positive; it would enhance the power of the government to do something for the person to enable her or him in some way. Thus, the late twentieth century idea of human rights, which incorporates both the positive and negative types, means that "certain things ought not to be done to any human being and certain other things ought to be done for every human being" (Perry 1998, 13).

The older negative claims on rights are exemplified by Articles 1-21 of the United Nations Universal Declaration of Human Rights. These Articles imply that no government or society should act against individuals in certain ways that would deprive them of inherent political or personal rights, such as freedom of speech, press, assembly, and religion. The newer positive claims on rights are exemplified by Articles 22-28 of the Universal Declaration of Human Rights. They imply that every government and society should act for individual members to enable them to enjoy certain social and economic rights or benefits pertaining to social security, employment, housing, education, health care, and general standard of living.

Conflict and Consensus about Negative and Positive Rights. There is general or global agreement among advocates of human rights that both types of rights, the negative and positive, must be included in a worthy constitutional government. However, there is worldwide conflict or disagreement about which type of rights is primary and most important in a constitutional democracy.

Advocates for the primacy and predominance of positive rights claim that "freedom is more important than freedom of speech." They argue that the duties of government to provide social and economic welfare benefits for all the people require enhancement of public power and authority to enter all areas of economic and social life to promote communal good (Patrick 1991, 622).

By contrast, proponents of the negative rights tradition worry about the enormous increase of centralized government power required to provide positive rights through large-scale public programs. This could lead to a government so powerful...

John J. Patrick is Director of the ERIC Clearinghouse for Social Studies/Social Science Education, Director of the Social Studies Development Center, and Professor of Education at Indiana University.
and insufficiently limited that it could arbitrarily deprive particular persons (those out of favor with authorities) of their traditional personal and political rights. Thus, they maintain that human rights generally depend upon the primacy of guaranteed negative rights. They assert: a constitutional democracy that would only recognize negative rights is incomplete; one that would only or primarily recognize positive rights is impossible (Patrick 1991, 623).

Alternative Perspectives on the Universality of Human Rights. United Nations documents proclaim the universality of human rights, as did Enlightenment-era philosophers and founders of the United States of America. So, too, have major world religions recognized the equal worth and dignity of all persons, a universalist idea that undergirds human rights. For example, Pope John Paul II has often expressed the global or universal relationship between human rights and the worth and dignity of each person (Schall 1998, 59).

These claims to the universality of human rights have been disputed by particularists and historicists, those who see them only as expressions of Western civilization rather than as global aspirations and standards. They view the current international surge of constitutional democracy and human rights as cultural imperialism by the West against the non-West. By contrast, universalists see a global destiny for human rights, a viewpoint supported by the worldwide decline of totalitarian regimes during the latter part of the twentieth century (e.g., the communist regimes of Central and Eastern Europe). The universalists claim that people everywhere, if given a choice, will choose free government and human rights.

Curricular Applications and Resources. There is a strong international movement for human rights education. According to leading educators, teaching and learning about human rights in age-appropriate ways is feasible and desirable from kindergarten through grade twelve and beyond. Schools in most parts of the world have incorporated human rights education into the curriculum. Further, international non-governmental organizations (NGOs) are committed to human rights education.

Two important sources of information for human rights education are (1) Human Rights Watch; 485 Fifth Avenue, New York, NY 10017-6104; T: (212) 972-8400; F: (212) 972-0905; E: <hrwnyc@hrw.org> and (2) Freedom House; 120 Wall Street, New York, NY 10005; T: (212) 514-8040; F: (212) 514-8045. Both organizations produce annual reports on the status of freedom and human rights throughout the world.

Two university-based centers that produce first-rate educational materials on human rights are (1) Center for Teaching International Relations of the Graduate School of International Studies at the University of Denver; Denver, CO 80208; T: (303) 871-3106; F: (303) 871-2456; E: <mmontgom@adu.edu>; and (2) Center for the Study of Human Rights at Columbia University; 119 International Affairs Building, MC: 3565, New York, NY 10027; T: (212) 854-2479; F: (212) 316-4578; E: <csh@columbia.edu>.

Conclusion. During the second half of the twentieth century, support of human rights has become prominent throughout the world, and the flagrant abuse of those rights anywhere is likely to become a global concern. Most governments in the nation-states of today's world recognize the legitimacy of international interest in the inherent rights of every person, even if some do it grudgingly or superficially. Given the global primacy of human rights, there should be pervasive and systematic human rights education in schools throughout the world.

References and ERIC Sources. The following list of resources includes references used to prepare this Digest. The items followed by an ED number are available in microfiche and/or paper copies from the ERIC Document Reproduction Service (EDRS). For information about prices, contact EDRS, 7420 Fullerton Road, Suite 110, Springfield, Virginia 22153-2852; telephone numbers are (703) 440-1400 and (800) 443-1742. Entries followed by an EJ number, annotated monthly in CURRENT INDEX TO JOURNALS IN EDUCATION (CIJE), are not available through EDRS. However, they can be located in the journal section of most larger libraries by using the bibliographic information provided, requested through interlibrary loan, or ordered from commercial reprint services.

Global Education: Internet Resources
by Laura A. Pinhey

Developments over the past two decades have increased the media exposure of nations and interactions among them in politics, trade, education, science, medicine, entertainment, and athletics, as well as other arenas. Such attempts at international cooperation are frequently marred or thwarted by cultural misunderstandings. When citizens are reasonably informed about the cultures of other nations, the possibility of effective, fruitful interactions among nations is enhanced. In preparing today’s students for the realities of life in the global age, global education is becoming crucial to the curriculum.

A good global education curriculum consists of more than simply facts and figures about nations and their relations with one another; it also encourages understanding of cultural differences and similarities, tolerance, and a globally interdependent view of the world. The goals of global education may be realized as never before through the use of telecommunications technologies such as the World Wide Web, electronic mail, and teleconferencing. These tools allow teachers to take global education beyond the textbook by connecting their classes with other students and even politicians, scientists, authors, CEOs, and other leaders from around the world. Opportunities for students and teachers to talk and work with people in other nations via these new communication media are opportunities to dispel stereotypes and forge camaraderie, both elemental steps toward building the mutual respect required for international relations in the global age.

Over the past 30 years, numerous non-profit organizations and grassroots groups have formed to further the cause of global education. Many of these groups produce curricula, newsletters, and books; develop education standards; conduct workshops and conferences; and support collaborative projects such as pen and keypal programs and exchange programs. Appropriately, many of these organizations maintain World Wide Web sites describing their programs and sometimes featuring on-line versions of their publications and other resources. This Digest points to the websites of some of the leading global education organizations, programs, and resources currently on the World Wide Web.

Note: The author has selected these sites because of their potential usefulness for global educators; however, she neither endorses all the content of the Internet resources on this list nor the beliefs of the organizations sponsoring them, nor does she guarantee the stability of the sites or the accuracy of the information provided on them.

American Forum for Global Education
www.globaled.org/
The website of this non-profit organization provides information about the AFGE listerv for discussion of ideas and practices in global education; materials and programs for both the classroom and professional development; study tours and other projects; and a publications catalog.

CU-SeeMe Schools
www.gsn.org/cu/index.html
This section of the Global Schoolhouse website (presented by the Global SchoolNet Foundation and sponsored by Microsoft) is dedicated to informing teachers about the CU-SeeMe Schools program available to K-12 schools which have Internet videoconferencing capability. CU-SeeMe allows K-12 students and their teachers to interact and cooperate with other students, famous politicians, CEOs, scientists, authors, and other leaders around the world.

Children’s International Summer Villages (CISV International)
www.ncl.ac.uk/~npb
According to their website, CISV is an “independent, non-political volunteer organization promoting peace education and cross-cultural friendship.” CISV supports activities and programs that foster inter-cultural learning among children, young people, adults, and families.

Choices for the 21st Century Education Project
www.brown.edu/Research/Choices/
The website of this program of the Thomas J. Watson Jr. Institute for International Studies at Brown University features both classroom and community resources, including excerpts from the “Choices for the 21st Century” curriculum units, an annotated library of resources appropriate for use with the “Choices” curriculum, and information about “Choices” teacher workshops.

Council of Chief State School Officers (CCSSO) Position and Recommendations for Action on Global Education
www.ccsso.org/intlpol.html

Foreign Policy Association (FPA)
www.fpa.org/
This non-profit, non-governmental, non-partisan educational organization aims to educate Americans about significant world issues that affect their lives. The “Great Decisions” program, which focuses on secondary, college, and adult education about key foreign policy issues, is the core of the FPA’s education efforts. The website includes extensive information on FPA’s various programs, an opportunity to join the FPA on-line discussion group, and an on-line bookstore of FPA publications.

Global Educator’s Guide to the Internet
www.educ.ox.ac.uk/faculty/riechen
This guide is part of a Master’s of Education project at the University of Victoria. The guide begins with a lengthy

Laura Pinhey is Coordinator of User Services and Products for the ERIC Clearinghouse for Social Studies/Social Science Education at Indiana University in Bloomington, Indiana.
discussion of global perspective; cross-cultural awareness; using telecommunications and the Internet to promote a global perspective; telecommunications, action projects, and the Internet as alternative media; using the Internet effectively and cautiously; and global communication. Also describes and links to global education resources and projects on the World Wide Web, newsgroups, and listservs. Note: this site is intended to accompany the print version, which is available for order.

Global SchoolNet Foundation
www.gsn.org/

"Linking Kids Around the World" is the motto displayed on this website. The resources and information on the site enable teachers, parents, and students to connect with classroom teachers and students around the world, join existing global education projects (such as International Schools CyberFair), or develop their own global education projects.

I*EARN (International Education and Resource Network)
www.igeap.org/learn/nn

Students and teachers from member schools in 30 countries collaborate via telecommunications on projects in the creative arts, language arts, humanities, social studies, science, and the environment and action projects that aim to improve the quality of life on the planet.

Intercultural E-Mail Classroom Connections (IECC)
www.iecc.org

St. Olaf College hosts several free electronic mailing lists for teachers and classes interested in establishing classroom pen-pal and project exchanges through e-mail. This site provides information about subscribing to and using these lists and links to websites of other international e-mail classroom connection projects.

Kidlink
www.kidlink.org/

Kidlink is a non-profit grassroots organization aimed at getting youth through the age of 15 involved in global dialog via public mailing lists, a private network for real-time interactions such as chats, and an on-line art exhibition site. Kidlink is supported by volunteers, mainly teachers and parents; over 100,000 children in 117 countries have participated in Kidlink since it began operation in 1991. This website extensively describes the history and structure of Kidlink and how to join.

National Council for Social Studies (NCSS) Position on Global Education
www.ncss.org/standards/positions/global.html

The full text of the NCSS position statement on K-12 global education, developed by the International Activities Committee of NCSS, is provided in this section of the NCSS website.

SPICE (Stanford Program on International and Cross-Cultural Education)
www-ci.stanford.edu/SPICE/index.html

An outreach program of the Institute for International Studies (IIS) at Stanford University, SPICE provides up-to-date curriculum materials on international topics for grades 6-14. The SPICE website consists of an on-line version of the SPICE publications catalog, which includes curricular materials on contemporary world issues, world cultures, world geography, and world history. The site also features the full-text of several free, introductory lesson plans, and the annual newsletter "SPICE Connections."

United Nations CyberSchoolBus
www.un.org/Pubs/CyberSchoolBus/index.html

Curriculum, activities, and resources on the United Nations (UN), numerous nations, and international events and days of commemoration. Also featured is information on the Model UN, a simulation of the UN system; and the UN Publications' Educational Bookstore.

World Wise Schools (WWS)
www.peacecorps.gov/www/dp/wws1.html

The World Wise Schools program of the Peace Corps allows United States educators and their students in grades 3-12 to correspond with Peace Corps Volunteers throughout the world. Besides information about how educators can participate in WWS, this site includes lesson plans, teaching guides, information on how to obtain educational videos, and other educational resources.

Recent Trends in Global/International Education
by Paul Haakenson

Swiftly changing global realities are affecting classrooms in virtually all parts of the United States, and increased efforts are needed to help students make sense of the global age. Today's young people are exposed to images from around the world through media and the entertainment industry as never before. Global linkages are increasingly visible to the general public through environmental issues, telecommunications networks, and international trade. These developments contribute to intercultural understanding, and misunderstanding, within nations and across the globe, and point toward the need to help students navigate this sea of information.

For over 25 years, the field of global/international education has attempted to develop a rationale and resources to support educators who make explorations of the world and its peoples a part of their curriculum. Many educators have written that in order to be fully prepared for the complexities of the 21st century, young people should be imbued with a global perspective. Attaining this world view may involve several approaches, including the study of cultures, languages, international issues, responsible citizenship in an interdependent world, and global connections within local communities. The literature on global/international education offers strong models and substantial resources for practitioners. The following trends reveal sources of continued growth and support for global/international education.

Not Just for High Schools Anymore. While the initial interest in teaching for global awareness at the high school level has continued, there appears to be an increased movement toward expanding the international components at the elementary and middle school levels. There are numerous articles outlining rationales, activities, and approaches to including global issues in elementary curricula (Angell and Avery 1992). An important addition is the Association for Supervision and Curriculum Development (ASCD) Global Education Framework. The framework is being piloted in 14 elementary schools throughout the U.S., with one in the Netherlands, and is a significant contribution to the field. There are also substantive efforts to support the internationalization of community colleges and universities, through increased student/faculty exchange, international student recruitment, involvement in overseas development, and professional training for staff and faculty.

Standards. A major effort is underway to develop standards for global/international education. It is headed by the Council of Chief State School Officers, the Ellict School of International Affairs of The George Washington University, and the American Forum for Global Education. These standards offer a perspective on what America's youth need to learn about the world, including content areas, skill competencies, and attitudes. They are designed to facilitate the integration of a global/international perspective into existing curricula. The ultimate effect these standards will have on classroom instruction has been debated, but their existence will contribute much to the on-going dialogue about priorities of teaching and learning in schools. For a preliminary report on the standards and placement on the mailing list, contact Fred Czarra at The Council of Chief State School Officers (CCSSO), One Massachusetts Ave., NW, Washington DC 20001-1431, 202/408-5505.

Projects in Progress. A number of promising global/international education projects are underway. Global Involvement, Inc. is directing a project to develop materials and staff development programs for international studies in major cities of two regions: 1) Chicago, Indianapolis, Milwaukee and 2) New York City, Trenton, and Philadelphia. Through their Education 2000 project, the American Forum for Global Education seeks to create and implement a curriculum design in six communities focused on our interconnected world. The International Education Consortium has developed curricula and staff development models with a humanities approach to global studies, as well as a nonwestern literature project. The Stanford Program on International and Cross-Cultural Education (SPICE) is carrying out research on assessments of global education programs nationwide. The National Council for the Social Studies (NCSS) is a strong advocate of global studies, particularly through its International Activities Committee. The National Association of Elementary School Principals (NAESP) and the National Middle School Association (NMSA) offer mini-grants to schools for global/international education projects. The Alberta Global Education Project in Canada is an important source of information on new resources and current thinking in the field.

Teacher Education. There has been increased attention to infusion of a global perspective in teacher preparation programs (Merryfield 1992; Tucker and Cistone 1991). The Global Awareness Project of Florida International University carries out preservice and inservice teacher education on global/international studies, as well as successful community and school-university partnerships in this field of education. The Professional Development Schools project of The Ohio State University seeks to combine pre- and in-service education by linking student teachers with internationally-minded teachers in the schools. Several other teacher education programs have also developed a strong global component. Teacher preparation with an emphasis

Paul Haakenson is a graduate student in Social Studies Education at Indiana University and serves as the editor of Global Connection, the newsletter of the ASCD Global Education Network.
on teaching for a global perspective is becoming a vital and
effective means to the advancement of global/international
education.

State Efforts. Efforts to promote global/international education
at the state level are less clear, though several states have been
more active than others. The California International Studies
Project based at Stanford University is a statewide attempt to
provide international studies centers around the state for
curriculum and staff development. Wisconsin has extended its
international education efforts through state legislation, new
programs, teacher institutes, and a well-received guide to
curriculum planning in global studies. Also, Minnesota has
articulated its model learner outcomes for international
education. In recent years, ASCD has identified a Global
Commissioner from each state to assist them in several projects.
Further information on state-level activities, publications, and
reports can be gained through Fred Czarr at CCSSO.

Telecommunications. One of the most exciting new directions
in global/international education is the vast array of computer
networking resources. The International Education and Resource
Network (I*EARN) is a non-profit international telecommunications
network of primary and secondary schools in 21 countries, through
which students work collaboratively on projects to make a meaningful
difference in the world. The Institute for Global Communications
(IGC) provides computer networking tools for international
communications and information exchange, including EcoNet, PeaceNet, and
ConflictNet. There are numerous other projects which engage
students from different countries in electronic mail exchanges,
simulations of foreign policy negotiations, or discussions of
works of literature as a point of departure toward understanding
cultural similarities and differences.

Essential Resources. These resources and references will help
educators interested in exploring global/international education
gain a sense of what is available and how practitioners structure
learning activities around these concepts in the classroom.

- An annotated bibliography for elementary and secondary
teachers on global education is available through John Cogan,
Curriculum & Instruction, University of Minnesota,
Minneapolis, MN 55455, 612/625-1896. It includes general,
implementation, research, and organizational references.

- The American Forum for Global Education holds annual
conferences and produces quality resources, including their
monthly newsletter ACCESS and a Global Resource Book. The
Forum is also a part of the International Network for Global
Education (INGE), which serves to promote teaching about
global issues in schools and colleges throughout the world.
Contact: 120 Wall Street, Suite 2600, New York, NY 10005,
212/742-8232.

- For more on ASCD initiatives, contact: ASCD Field
Services, 1250 N. Pitt St., Alexandria, VA 22314-1453,
703/549-9110. Addresses for Global Commission members in each state
and the 14 pilot schools are available from the ASCD Global
Education Network, which also offers current information on
global/international education projects and resources through
their newsletter Global Connection and occasional papers.

Civic Education for Global Understanding

by Charles Titus

April 1994

Preparation of young people for effective citizenship has been a major concern of American educators. Today, however, when the world has been made immeasurably smaller through revolutionary developments in communications and transportation, and as the planet is threatened by a constellation of transnational problems of staggering complexity, a different approach to citizenship preparation seems needed. This approach—which might be called civic education for global understanding—includes a renewed engagement with and dedication to the civic needs of our nation. It continues to involve "explicit and continuing study of the basic concepts and values underlying our democratic community and constitutional order" in the United States (Butts 1988, 184). It also incorporates, however, recognition that Americans are residents of a planet that has become a global village. This development requires our civic attention and action on a transnational and transcultural scale (Boulding 1988).

Why Do Americans Need Civic Education for Global Understanding? Plainly, American civic involvement needs restoration. Stuart Langton (1990, 307) has observed that post-modern life in the United States has created a number of "alienating conditions" which have become "barriers to healthy civic life today." These barriers, according to Langton, include an unending and rapid cascade of change, especially in the amount of information available and the speed with which it is handled; an enormous range of complex problems at local, national, and international levels; and confusion about "the amount of disinformation in advertising and public debate." Such factors contribute to an "apathy and consumerism" which numb Americans and induce in them a sense of helplessness "in the face of forces beyond their control."

This alienation bias, according to Suzanne Morse (1989, 1), contributed to a continuing decline in the number of citizens who vote in public elections. Further, there has been troubling unfamiliarity of voters on key issues and problems when they do go to the polls. Serious societal dislocation such as crime, homelessness, and violence haunts America. These conditions call for renewed civic education about the structures and functions of American government and about a sense of community in America.

But beyond these very real demands for citizenship education devoted to the internal civic requirements of the nation, there exists, too, a need for a broader understanding that will equip young Americans to live effectively in the complex and interrelated world to which their country is inextricably connected. A host of transnational problems, including the disposal and regulation of nuclear weapons, the world-wide difficulties of environmental pollution, shortages of natural resources, and a rapidly emerging interdependent world economy, has in one way or another transformed the lives of almost all Americans. Our students need familiarity with what Elise Boulding (1988) has called a "global civic culture." That familiarity would help Americans recognize their obligations to their own nation and to the planet at large.

What Are the Components of Civic Education for Global Understanding? The first component involves educating young Americans about their nation's history and government, with emphasis upon the core concepts of democracy in the United States. The core concepts reflect content from four systems—political, legal, economic, and social—which when conjoined form the substance of democratic citizenship (Jarolimek 1990). This first component acknowledges American citizenship in a nation-state, which has its own history, traditions, culture, national identity, and national interests.

The second component sharpens student awareness that the responsibilities of citizenship extend far beyond national boundaries and recognizes that irreversible global changes are challenging long-standing conceptions of American civic education. It enhances a growing sense of a civic responsibility to the planet at large. This second component of civic education for global understanding involves "development of competent and responsible citizens whose perspective, knowledge, and skills will enable them to participate more effectively in local, state, national, and international affairs" (Branson 1989, 1).

What are the Goals of Civic Education for Global Understanding? Included in the first set of goals is a revivified civic interest and increased participation in community and national affairs by citizens; an improved civic literacy which flows from a sound understanding of the fundamental structure and operation of the American governmental system (including the United States Constitution); and an ability to make reasoned, reflective decisions about public policy issues. A renewed appreciation of America's history and cultures is also included among these goals, as is a heightened respect for an understanding of the bedrock of the American political experience. Achievement of these goals will help insure that Americans maintain and improve the democratic framework which has sustained the United States since its founding more than two centuries ago.

The second set of goals encompasses an enhanced recognition by Americans that their obligations of citizenship extend beyond the nation's frontiers; that all people have a common identity as members of the human species; and that the plethora of conditions once categorized as national problems are now, or very soon will be, transnational problems that require a

Charles Titus is a member of the History Department, Eastern Illinois University, Charleston, Illinois, where he directs the department's teacher education program and is Chair, Social Science Studies.
commitment to a "global civic culture" if they are to be solved (Boulding 1988). Also included among this second group of goals is a better understanding of this nation's changing international role in a post-Cold War world and knowledge of the expanding network of international connections which continues to tie nations ever more closely to each other. Meeting this set of goals will contribute to an enlightened recognition among Americans of the full range of this country's global connections and involvement.

How Is Citizenship Education for Global Understanding To Be Implemented? Implementation of a meaningful and effective civic education for global understanding requires changes from the way much civic education has traditionally been carried out. One change involves how we teach. As William T. Callahan (1990, 338) has commented, "[G]ood citizens are made not born. The repertoire of intellectual and interpersonal skills needed for effective civic participation must be learned, and to be learned well they must be practiced." The skills, which include the ability to help shape public judgment, are created by meeting, talking, and thinking with other members of the student's community inside and outside of the school.

Benjamin Barber (1992, 245-261) has outlined a model program of civic education at Rutgers University which teaches citizenship through a combination of schooling and community service. A similar program, with some modification, could be applied to secondary schools as well. Such efforts can help us renew our commitment to the national community through service to the local community.

Elise Boulding has described how much progress toward what she has called "a global civic culture" can be made through our individual participation in one or more "INGOs"—international non-governmental organizations, such as sister-city programs, Girl Scouts and Boy Scouts, sports associations, and other groups. Such participation can help to shatter our narrow, national encapsulation and expand our global understanding.

Implementation of civic education for global understanding calls for changes in the traditional approach to social studies subject matter as well. A revitalized history curriculum, which focuses on global connections in United States history (and there are many of these) can illuminate both our own past and our nation's continuing place in the world.

The study of geography is of paramount importance for it reveals where the resources of the world—human and non-human—are located and how they are related. It focuses on those geo-political factors which plainly will help shape our own history and the history of others; and it expands our knowledge of cultures beyond our own national boundary lines (Jarolimek 1990).

Economics too assumes a significant role in this new approach to civic education. Improved understanding of economics, particularly in terms of international trade and how such trade has been shaped by the development of manufacturing processes and wage and labor considerations in many countries, is of cardinal importance (Jarolimek 1990).

Achieving a new civic education for global understanding will be difficult. Many factors mitigate against it. These include the inertia induced by what has been called the "deep structure of American schools" (Tye 1992, 10) and resistance by some who, alarmed by the term "global," may see such efforts as a threat to national unity. Yet the future of American democracy depends in large part on how well the citizens of our nation gain the competence of citizenship needed to carry out their civic responsibilities, both here at home and in the world.

"REMEMBER OUR FACES"—TEACHING ABOUT THE HOLOCAUST

by Evelyn R. Holt

A Holocaust survivor recently implored social studies teachers to "remember our faces." This becomes an especially poignant plea when one considers the ages of the Holocaust survivors, rescuers, and liberators. This generation will soon be gone. Who remains to tell their stories? As the 50th anniversary remembrance of World War II continues, the significance of the European Holocaust and its implications for teaching social studies at the middle school and high school must be considered. Too often the Holocaust is forgotten in the recitation of dates and battles, commanders and campaigns. The annihilation of more than six million Jews cannot be described in the one or two paragraphs devoted to the Holocaust in the average social studies text. Though Auschwitz, Dachau, Bergen-Belsen, and other Nazi death camps are synonymous with horror, what of the identities of the victims of those camps? How do we teach about those individuals who died in the camps, of those survivors who left the camps forever changed, or of those rescuers who risked their lives to help others?

The intents of this ERIC Digest are to (1) present a rationale for Holocaust education; (2) discuss curriculum placement for inclusion of the topic; (3) list organizations and resources available to help teachers in teaching about the Holocaust; and (4) provide a bibliography of relevant materials in the ERIC database.

Why Teach about the Holocaust. Educators in schools, museums, and archives must accept the responsibility to teach these stories of the Holocaust to future generations. The Holocaust, a significant event in 20th-century world history, has had a profound effect on the state of the world today. For example, to understand complex issues about the conflicts in the Middle East, we must trace certain events from the Holocaust. We must include Holocaust education in the curriculum to understand important contemporary events.

The best way to teach about the Holocaust is by including the stories. This approach would also coincide with the Bradley Commission on History in Schools report (1988, 25) which encourages the use of narrative and case studies as a way to "test and illustrate concepts drawn from other disciplines, which in their turn give added meaning to the historical record."

What educators must do is to tell these stories realistically, to "remember the faces" of those people who were affected and are still affected today. The stories of the Holocaust are accounts of courage, hope, selflessness, and determination, combined with evil, degradation, selfishness, and pathos. Such a study in contrasts presents opportunities for students to develop empathy and skills in research and evaluation.

Study of the Holocaust often leads to prejudice reduction as students learn how intolerance can result in unjust discrimination and even destruction. Research into these complex events develops a sense of empowerment as there is an intellectual sophistication of dealing with these "tough" issues. Galborno (1988, 52) sees this "cognitive sophistication" leading to students' increased self-esteem, decreased frustration in the schooling experience, and more pro-active behavior. Similar conclusions have been drawn by others. If we lead students through the exploration of this event of recent history, perhaps we can reduce the likelihood of a future Holocaust.

Our overriding educational goal must be to enhance students' knowledge and understanding of our world as a prerequisite for judgments and actions to improve it. We must teach accurately about the ugly realities of the Holocaust and its far-reaching consequences, so that students develop commitments, based on knowledge and reason, to the worth and dignity of all persons.

Curriculum Placement and Teaching Strategies. How do we tell the stories of the Holocaust? Where can teaching about the Holocaust occur in the curriculum? Without dwelling only on the depression of death and destruction of the Holocaust, the social studies teacher must incorporate many different strategies in the courses, depending upon the subject being taught. A brief discussion of placement and strategies follows.

Several oral history projects have captured the eloquent testimonies of survivors, rescuers, and liberators. These oral histories are intriguing for students as a way to make history "real," a way to personalize history so that the events are not just facts and statistics. Oral histories can also be used in an interdisciplinary approach with literature. Much Holocaust literature exists, appropriate for all reading levels.

In geography, students can create maps of Europe and explore the reasons for the locations of the concentration camps. Why did the camps tend to be located in Eastern Europe, many in Poland? What were significant environmental factors which affected the camps? Students should explore physical factors, landforms, etc., which were important in camp location.

In history (world and US) students could explore these questions: How much did the world really know about what was happening in the concentration camps? What were the reactions of the world powers when the exterminations were discovered? How much resistance actually occurred? Too often the Jews have been portrayed as being meekly led to slaughter, with the world standing idly by. Students should be exposed to the story of the Warsaw Ghetto Uprising in 1943, when the complete enclosed ghetto area was leveled by the Nazis after 28 days of fierce resistance by the ghetto fighters and many deaths on both sides. The courageous acts of the Danes should be cited, when they rescued the great majority of Danish Jews with a friotilla to Sweden after the Nazis...
ordered deportation. The story of Danish King Christian, who wore the Jewish star when the Nazis ordered the emblem to be worn as a sign of Jewry, is an especially engaging example of morality and bravery. Such stories are often overlooked in the rush to "cover the course," but these are the cases of courage which interest the students and provide models of moral behavior for their analysis and evaluation. In addition, the modern state of Israel can be studied for its historical roots in the ashes of the Jewish Holocaust in Europe as well as its modern influence in world affairs. Sociology and psychology also provide opportunities to study the Holocaust. Primary documents exist which specifically delineate Hitler's plans for the Jews and other Europeans he excluded from his "Master Race." Teachers can use studies of the influence of group behavior to explain the rise of Nazism. Yet this is also an excellent chance to incorporate the personalities of the rescuer, the resistance fighter, the victims, and those who collaborated. An under-studied topic is the role of the rescuers and the impact they had upon this era's events. Much material is available in the behavioral science areas to study about the Holocaust.

The Holocaust can be effectively used in the study of economics. One needs to look at the costs of the Holocaust, not only in human lives. Jewish properties were confiscated for the Third Reich, as well as all of their personal belongings upon deportation to the camps. Another economic consideration is the cost of camp construction and maintenance. Documents exist which deal with the monetary considerations of the persecutions, the costs of transportation to the camps, and even the very locations of the camps themselves on the railroad. What could have happened if the Allies had bombed the railroads leading into the camps?

Political science and civics students have many topics for consideration with their study of the Holocaust. Such opportunities could include the rights of the individual versus the state, the issue of unjust laws and the duties of citizens to obey laws, civil liberties and the rule of law, as well as many other related questions that these topics could generate. Citizenship education takes on a whole new perspective when one views the creation of the Nazi state and the Third Reich. Couple those questions of citizenship education with the sequential denial of rights to the Jews, which eventually led to the planned annihilation of the whole race by the state, and the teacher has a perplexing but challenging course of study.

Organizations and Resources for Teaching of Holocaust Topics. At the community level, consult area Jewish societies. Often these groups provide resource speakers or materials for classrooms. Survivors of the concentration camps will be available to speak to classes in some instances. Veterans' organizations will often provide speakers who were liberators of the concentration camps. State offices of Jewish societies may also be contacted by consulting the telephone directory, directory assistance, or the local library reference section.

At the national level, the Anti-Defamation League of B'nai B'rith (ADL), 823 United Nations Plaza, New York, NY 10017, (212) 490-2525, works for civil rights and fair treatment for all citizens. The ADL maintains a speakers' bureau and 30 regional offices, and it publishes materials for teachers and students on the Holocaust.

The United States Holocaust Memorial Museum, 2000 L Street, NW, Suite 588, Washington, DC 20036-4907, (202) 653-9220, commissioned by Congress in 1980, offers a variety of educational programs on the subject and will expand those offerings with the opening of the Holocaust Memorial Museum in 1993. Regular programs include workshops and presentations, a poster series, an essay contest, and curriculum projects.

The Anne Frank Institute of Philadelphia, Lafayette Building 608, P.O. Box 40119, Philadelphia PA 19103, (215) 238-5376, is devoted to the study of genocide and the Holocaust, maintains a speakers' bureau, and conducts programs for teachers and other community groups.

The American Gathering of Jewish Holocaust Survivors, 122 W. 30th St., Suite 205, New York, NY 10001, (212) 239-4230, seeks to commemorate the Holocaust and combat anti-Semitism through programs, articles, assemblies, teacher education, and a speakers' bureau.

On the international level, the Holocaust Martyrs' and Heroes' Remembrance Authority, located at Yad Vashem in Jerusalem, Israel, is dedicated to researching the stories of the Holocaust and commemorating its victims.

The International Alert Against Genocide, 1015 Gayley Avenue, Box 259, Los Angeles, CA 90024, seeks to increase awareness and prevention through research, teaching, and focusing on violations of human rights. Also, the United Nations maintains an active interest in human rights in the world.

Several excellent books on the topic of the Holocaust are available for teachers and their most able students. One such source is THE HOLOCAUST: THE FATE OF EUROPEAN JEWRY by Leni Yahil. Reviewers have hailed this book as the finest and most authoritative study of the Holocaust ever published. This book, widely available in bookstores and libraries, was published in 1990 by the Oxford University Press.

References and ERIC Resources

The following list of resources includes references used to prepare this Digest. The items followed by an ED number are in the ERIC system. They are available in microfiche and paper copies from the ERIC Document Reproduction Service (EDRS). For information about prices, contact EDRS, 7250 Fulkerson Road, Suite 110, Springfield, Virginia 22153-2632; telephone numbers are (703) 440-1400 and (800) 443-3742. Entries followed by an ED number are annotated monthly in CURRENT INDEX TO JOURNALS IN EDUCATION (CIJE), which is available in most larger public and university libraries. ED documents are not available through EDRS. However, they can be located in the journal section of many libraries by using the bibliographic information provided below, or ordered through Interlibrary Loan.

This publication was prepared with funding from the Office of Educational Research and Improvement, U.S. Department of Education, under contract no. R88962009. The opinions expressed do not necessarily reflect the positions or policies of OERI or ED.

Teen Courts and Law-Related Education
By Paula A. Nessel

Teen courts, a term used here to include youth courts, peer juries, peer courts, student courts, and other courts using juveniles in determining the sentences of juvenile offenders, have rapidly gained popularity in the 1990s. In 1991 there were over 30 teen courts in 14 states; by 1999, the number of teen courts had grown to more than 500 in 45 states and Washington, DC. The growing popularity of teen courts is compelling evidence that they are fulfilling a recognized need.

Types and Functions of Teen Courts. Teen courts involve juveniles in the sentencing of other juveniles, in either a school or a community setting. Young people usually serve as jurors and may also fill the roles of prosecuting attorney, defense attorney, judge, bailiff, or other officers of the court. Young offenders usually are referred to a teen court for sentencing, not for a judgment of guilt or innocence. And many teen courts accept only first-time offenders who have committed relatively minor offenses, such as theft, alcohol/drug offenses, vandalism, and disorderly conduct (Godwin 1996). There are, however, many different models of teen courts (see below), including some that determine guilt or innocence.

Young offenders voluntarily choose teen court, with parental approval, as an alternative to an existing sentencing agency or disciplinary office. Offenders who prefer legal representation and/or the regular court or disciplinary system can decline referral to teen courts.

Teen court sentences commonly include community service (1-200 hours), jury duty (up to 12 times), restitution, and apologies. Additional sentencing options include counseling, educational workshops on substance abuse or safe driving, essay writing, victim-awareness classes, curfews, drug testing, school attendance, and peer discussion groups.

Most teen courts are based in the juvenile justice system or in a community setting. The agencies most commonly operating or administering teen court programs are juvenile courts and private nonprofit organizations. Next are law enforcement agencies and juvenile probation departments. Schools operate about ten percent of teen courts, while a variety of other agencies (e.g., city government, the administrative office of the court) operate the remainder of teen courts (Godwin 1996).

The 1994 survey of teen courts by the American Probation and Parole Association (Godwin 1996) identified four distinct models: a peer jury model and three trial models. The Peer Jury Model employs a panel of teen jurors who question the offender directly. No defense or prosecuting attorney is employed. The judge is usually an adult volunteer.

The most common of the teen court models is the Adult Judge Model, which employs an adult judge to rule on courtroom procedure and clarify legal terminology, and youth volunteers as defense and prosecuting attorneys and jurors. Young people may also serve as bailiff and clerk.

The Youth Judge Model is similar to the Adult Judge Model, except that a juvenile serves as judge, usually after service as a teen court attorney. Finally, the Tribunal Model has no peer jury. Instead, the prosecuting and defense attorneys present cases to a juvenile judge(s), who determines the sentence.

Relationship to Law-Related Education (LRE) and Community Service. Teen courts and law-related education share many goals. The Law-Related Education Act of 1978 defined LRE as “Education to equip nonlawyers with knowledge and skills pertaining to the law, the legal process, and the legal system, and the fundamental principles and values on which these are based.” Teen courts do the same. Each teen court case teaches both the student volunteers from local secondary schools and the offenders about the rules or laws that were broken, the consequences of the offenses, and how due process is observed by court procedure. In addition, the volunteers and offenders learn about key LRE concepts of justice, power, equality, property, and liberty.

Teen courts also help to foster important values, attitudes, and beliefs similar to those of LRE generally. Participants voluntarily commit their time to teen courts in the pursuit of justice. Student volunteers demonstrate a belief in active and responsible participation in civic life, a respect for the rights of the offender and victim, and an appreciation for a legitimate response to societal conflicts through assigning appropriate responses to the offenses in question.

Teen courts also offer a uniquely experiential approach to LRE. Participants are real offenders in real situations, and volunteers must therefore learn the discipline of confidentiality. Teen court participants must weigh conflicting points of view and decide a just and appropriate sentence. They see first-hand the consequences of delinquent behavior. Teen court offenders learn through their own sentences the importance of community service.

Student Courts in Schools. Teen courts that handle only school referrals are receiving increasing attention from educators who are looking for ways to improve students’ citizenship skills and decrease problematic behavior. Some teen courts meet in schools, but accept referrals from organizations in the community such as the county probation department, juvenile court, police department or sheriff’s office. More often, student courts accept referrals only from within the school. Of course, student courts pose special challenges because of the complexity of creating new programs in schools.

Student courts are sometimes established to handle very limited types of offenses. One student court handles only traffic

Paula Nessel is a program manager for the School Programs of the American Bar Association Division for Public Education.
offenses on the school grounds, such as parking lot violations. Other student courts handle only truancy and smoking violations. Still others address a wide variety of offenses including insubordination, minor theft of student property, minor vandalism, fighting, cheating, and loitering.

Student courts' memberships vary greatly from school to school. For instance, members of the jury in a trial model may be drawn from applicants throughout the student population by random selection among students in study/hall, or from among trained student court members. Likewise, student courts employing students as judges or peer jurors may draw from applicants as diverse as the student body, or may use only the students specially trained as court officers, either as an extracurricular activity or as members of a law class meeting throughout the semester.

Evaluation. Teen court advocates generally agree that their most important goals are educating young participants about the judicial process, having a positive impact on participants' social competence, providing victims with apologies and/or restitution, and providing service to the community. Preventing repeat offenses (recidivism) and influencing young people to resist the temptation to become delinquent are also valid goals of teen courts. Since teen courts tend to function on minimal funding, finding the time and money to determine their success in meeting their goals has been difficult. However, a few notable evaluation studies have been conducted.

Rod Hissong's evaluation (1991) of a teen court program in Arlington, Texas matched offenders sentenced by teen court with non-teen court participants who had contemporaneously committed similar offenses. The study found a decrease in recidivism for teenagers who had participated in teen court.

The North Carolina Administrative Office of the Courts' Report on Teen Court Programs in North Carolina (1995) stated the two most important effects suggested by interviews with persons familiar with teen court: 1) juveniles were processed in a manner that demonstrated to them that there were consequences of their behavior and 2) teen court was a learning and behavior-modifying experience for both offenders and volunteers.

SRA Associates' evaluation (Jones 1995) of Routes For Youth—Teen Court in Santa Rosa, California reported that only 2.5% of 238 teen court referrals were reported by Juvenile Probation as re-arrests, while a median amount of $74.50 in restitution was collected and distributed to crime victims and a median of 25 hours of community service was provided by youth offenders in a wide variety of public and not-for-profit agencies.

The 1997 study by James B. Wells and Kevin I. Minor evaluated Kentucky's Teen Court Program and found gains in students' tests scores on knowledge of law and government, moderately high positive attitudes among students toward teen court, and perceptions by participants' parents that their children benefitted a great deal from the teen court experience.

Conclusion. Teen courts offer the active learning of law-related education through hands-on experience with the justice system. Young offenders and the juveniles who determine the offenders' sentences are practicing good citizenship through community service. Research shows that teen courts promote understanding of the legal system, reduce recidivism, and encourage participants to accept responsibility for their actions. They provide a positive alternative to traditional juvenile justice and school disciplinary procedures. The Division for Public Education of the American Bar Association has served as a national clearinghouse for information on teen courts since 1991. It has extensively promoted teen courts through its National Law-Related Education Resource Center, LRE conferences, and publications.

References and ERIC Resources. The following list of resources includes references used to prepare this Digest. The items followed by an ED number are available in microfiche and/or paper copies from the ERIC Document Reproduction Service (EDRS). Law Magnet Programs
by Paula A. Nessel

Interest in law magnet programs has grown substantially in the 1990s. In 1992, a survey of law magnets identified 69 programs in 15 states. This report summarizes information provided by 24 predominantly urban law magnet programs that responded to a 1994 survey. The schools in the sample represent the spectrum of sizes, organizational structures, and settings.

Definition and Origin. A law magnet program is a comprehensive program offering multiple classes concentrating on various aspects of the law and legal process. The law magnet program in Kansas City, Missouri, was modeled on the American Bar Association’s Conceptual Framework for Law Schools. The framework emphasizes legal studies throughout the curriculum. Programs usually include a sequence of elective and non-elective classes in grades 9-12. Some elementary and middle schools offer law magnet programs. While many law magnet programs originated as a means to desegregate schools, some were created because the community, the school administration, and local teachers wanted to offer students the unique enrichment that a law-related education curriculum could provide.

Law magnet programs conform to the stipulation by the United States Department of Education’s Office for Civil Rights that magnet schools offer innovative instructional approaches to attract students with varies racial, ethnic, and socio-economic backgrounds. Such approaches might include educational programs and services that comprise the mission of an entire school while others might serve as supplemental enrichment to a standard curriculum. The emphasis on attracting students of different backgrounds reflects the racial integration goal many magnet programs were created to fulfill.

Numerous magnet schools throughout the nation were created in response to a Kansas City, Missouri, legal case in the late 1970s. At that time, Kalina Jenkins and several other African-American students successfully sued the school district for not moving “with all deliberate speed” to dismantle racial segregation in its system, as required by Brown v. Board of Education (1955). This case is known as Brown II because it came to the Supreme Court one year after the original Brown decision in order to resolve the issue of how to implement the ruling of Brown I. Kalina Jenkins’ case led to federal court supervision of the district’s desegregation plans. Magnet schools were among the remedies initiated to remove vestiges of racial segregation.

Relationship to the Field of Law-Related Education. Law magnet programs are a small but significant part of the broader field of law-related education (LRE). In 1978 the Law-Related Education Act defined LRE as “education to equip nonlawyers with knowledge and skills pertaining to the law, the legal process, and the legal system, and the fundamental principles and values on which these are based.”

There are national, state, and local LRE programs. The state of the institutionalization of LRE in the school or district varies greatly. Sometimes LRE is brought to classrooms through the initiative of innovative teachers who act without institutional support. But LRE can also be organized as a district-wide program, usually through infusion into the curriculum from kindergarten through high school. Law magnet programs are examples of LRE at the most comprehensive end of the continuum. In them, developing an understanding of the law and exploring careers in the legal professions permeate the formal and informal curriculum. Although many students choose magnet schools because they are interested in pursuing careers in law-related professions, the primary purpose of these schools is to prepare students for citizenship.

Student Profile. Whether or not court-ordered desegregation caused their creation, most law magnet programs have racially and ethnically diverse student populations. A percentage breakdown of student populations reveals the following averages: African American—51%, Asian American—3%, Caucasian—30%, Mexican American or Hispanic—15%, and Native American—12%. Only about 40% of the responding programs indicate that three-fourths or more of their student body is comprised of only one of the above groups. More often, the student populations include two or three ethnic or racial categories.

Another interesting aspect of the law magnet student population is the gender balance. Twenty-two out of 24 responding schools report a majority of female students. One inner city school reports that over 90% of the students are female. Only one school reports a male majority. Within the high school setting, the size of the law magnet program can be large, with an enrollment of 100-240 students. Smaller programs may have 25-100 students.

School Profile. More than half of the programs surveyed were created in the 1990s, while about 20% began in the late 1980s and another 20% began before 1985. Many programs combine the study of law with the study of a related field, such as public affairs/policy, business, criminal justice, finance, international studies, military science, law enforcement, public/community service, and government; the latter two are most common. Most law magnet programs are located in large metropolitan areas. In 1996, for example, the boroughs of New York City included 71 law magnet programs.

Funding. Most programs have county or local funds plus at least one other funding source. More than half indicate state or federal funds. A few report court-mandated funding. Community groups and businesses and corporations provide other sources of funding.

Harry Garvin, Legal Coordinator of a program in Savannah, Georgia, is one good example of an effective fundraiser. Garvin has received funding from various sources by seeking lists of educational grantors from the United States Department of Education, Department of Commerce, and state department of education. Mr. Garvin also contacts the Georgia state departments of industry and tourism to request an annual list of major industries moving to his state. He believes that a new company is more inclined than an established one to provide funds because it probably has not yet been approached by many local charitable organizations. Being new to a community provides a strong incentive to seek favorable publicity. Dr. Garvin has received in-kind donations from local

Paula Nessel is the project coordinator for the American Bar Association’s National Law-Related Education Resource Center (NLRC) in Chicago.
cable companies, television stations, telephone and cellular phone companies, computer/software companies, and military bases.

Community Support. LRE has always emphasized the use of community resources to make the learning process relevant, experiential, and interactive. Law magnet programs depend on their communities for support, most often using members of the law-enforcement community and the court system. Local bar associations, law schools, and undergraduate schools or community colleges with criminal justice courses can also offer assistance. State bar associations, state LRE projects, individual attorneys, and law firms provide additional support.

Course Offerings. The most common types of courses offered are United States history, civic education, global issues, world history, constitutional law, local/state government, and federal government. A wide variety of other courses are sometimes offered, such as business law, forensic science, international law, court interpreting, criminal justice, law enforcement, law and literature, mediation, and trial advocacy and tactics. Law magnet programs offer a spectrum of educational options ranging from vocational training to college preparation. While the programs include some form of career education, they share the underlying goal of instilling in their students an interest in and understanding of the law.

Law magnet programs emphasize active learning opportunities. Most programs include mock trials, community service, and internships. Survey respondents indicate that mediation is a component of more than 80% of the programs. Mentor programs are used by almost 75%. Many programs include trips to law-related settings, especially the courts.

Getting Started. Immediately after the decision is made to create a law magnet program, an advisory board should be formed. The members should number 10-20 and include representatives from the police, the judiciary, law schools, the state legislature, community colleges, local law firms, local and state bar associations, the district attorney's office, and legal secretaries. Recognizable names help the image of the program, and a list of the advisory board members should appear on the program's letterhead stationery. The most intensive work of the advisory board occurs in the formative stage of the law magnet program, but continued participation is vital to the maintenance and development of each program. Board members provide advice and resources through their connections to the community. They open doors to financial and in-kind support and recruit law-related professionals to serve as consultants, mentors to students, and teachers for law magnet programs.

Inservice training for teachers is widely available. Many national and state LRE centers and projects schedule professional development conferences and annual summer institutes for teachers. They also develop curricula and instructional materials, including videotapes and software. For more information about teacher training, contact the National Law-Related Education Resource Center of the American Bar Association.

Finally, contacting existing magnet programs can assist groups in shaping the direction of their own new programs. Site visits provide concrete examples of how programs can be structured as well as personal opportunities for answering questions.

Conclusion. By early 1996, the number of known law magnet programs had grown to more than 100 in 17 states. These programs provide interesting and practical courses for their students. While exploration of law-related careers may be a focus, the opportunities offered in these programs equip students to be informed, engaged citizens. The success of these programs warrants wide replication to ensure that more young people learn the importance of understanding and participating in our constitutional democracy.

We the People... The Citizen and the Constitution
by Robert S. Leming

"We the People... The Citizen and the Constitution" is a national civic education program that helps elementary and secondary students understand the history and principles of our constitutional government. In addition, the program helps students develop a reasoned commitment to values that are integral to sustaining a democratic society. The program focuses on the U.S. Constitution and Bill of Rights and fosters civic competence and responsibility among students in public and private schools. The program is administered nationally by the Center for Civic Education through a network of 435 congressional district coordinators and 50 state coordinators. The program also includes the District of Columbia, American Samoa, Guam, Puerto Rico, and the Virgin Islands. More than 20 million students and 70,000 teachers have been involved in the "We the People..." program.

The "We the People..." Curriculum. The "We the People..." curriculum was developed by the Center for Civic Education and is presently funded by the U.S. Department of Education through an act of Congress. The program began in 1987 under the auspices of the Commission on the Bicentennial of the United States Constitution and Bill of Rights. The curriculum was written in consultation with leading scholars and educators from throughout the United States.

The upper elementary, middle, and high school textbooks examine the history and principles found in our Constitution and Bill of Rights through lessons that correspond to the essential questions guiding the National Standards for Civics and Government. The following are unit titles for the high school textbook: What are the philosophical and historical foundations of the American political system? How did the framers create the Constitution? How did the values and principles embodied in the Constitution shape American institutions and practices? How have the protections of the Bill of Rights been developed and expanded? What rights does the Bill of Rights protect? What are the roles of the citizen in American society? The unit questions in the upper elementary and middle school textbooks are similar in content. The "We the People..." curriculum complements the regular school curriculum and enhances the study of history and government. Students are encouraged to use critical thinking skills in a cooperative effort to master the content of the course and then demonstrate their knowledge through written and verbal assessments.

The Simulated Congressional Hearing. In addition to a comprehensive written test, the Center for Civic Education has also developed a culminating activity that simulates a congressional hearing. The hearing enables students to demonstrate through written speeches and oral communication what they have learned during the study of the textbook. Groups of three to six students participate as expert witnesses appearing before a panel of community members acting as congressional committee members. The hearings involve the whole class; students are responsible for the entire curriculum and specialize in one of the six units of the "We the People..." textbook (five units in the upper elementary textbook). Teachers are encouraged to involve community member experts as resources in their classrooms during preparation for the hearings.

The congressional hearing involves two parts. First, students present their prepared four-minute statements that answer unit questions designed by the Center for Civic Education. During the second part (six minutes), judges ask follow-up questions to probe the extent of students' understanding of the Constitution and constitutional issues. A panel of judges evaluates student responses using the criteria of understanding, constitutional application, reasoning, supporting evidence, responsiveness, and participation. Both the prepared questions developed by the Center and the follow-up questions asked by the judges are designed to help students reach higher levels of thinking.

At elementary and middle school levels, hearings are noncompetitive and can be conducted any time during the school year in the classroom or in more elaborate settings that encourage parents and community members to be involved as judges or observers. High school classes may conduct the hearings as a single class event or may choose to participate in congressional district, state, and national level competitions. Each year in the fall and early winter, classes throughout the nation participate in congressional district hearings. The winning class from each congressional district attends a state final held in the winter. The winning class at the state level represents the state at the national finals held in Washington, DC in late April.

Research Studies Confirm Effects of the Program. The Program Effectiveness Panel of the U.S. Department of Education's National Diffusion Network examined the reports of various research studies on the "We the People..." program and validated the powerful educational effects of the program on students' civic knowledge and attitudes. Several studies by the Educational Testing Service (ETS) in 1988, 1990, and 1991 concluded that students enrolled in the "We the People..." program at upper elementary, middle school, and high school levels "significantly outperformed comparison students on every topic of the tests taken."

In 1994, Stanford University Professor Richard Brody's study entitled, Secondary Education and Political Attitudes: Examining the Effects of Political Tolerance of the "We the People..." Curriculum, found that high school students taking part in the "We the People..." program develop a stronger attachment to political beliefs, attitudes, and values essential to living in a democracy than other students and most adults. The Brody study, based on 1,351 student responses, suggests that students involved in the "We the People..." program exhibit more political tolerance. They would place fewer restrictions on the speech, press, and the freedom of assembly of groups with diverse opinions, and they would place fewer restrictions on due process. In addition, the study revealed that students involved in the competitive format are more interested in politics, feel more politically effective, and perceive fewer limits on their own political freedom.

In 1994, the Council for Basic Education (CBE) conducted

Robert S. Leming is the Director of the Indiana Program for Law-Related Education at the Social Studies Development Center of Indiana University.
ethnographic case studies on the effects of the "We the People..." program in an effort to assess attributes that are not amenable to quantification. The Council's research indicates that "teachers feel excited and renewed... Students are enthusiastic about what they have been able to accomplish, especially in terms of their ability to carry out a reasoned argument. They have become energized about their place as citizens of the United States" (Council for Basic Education 1994). The case studies also reveal that "without exception, teachers asserted that the [simulated congressional hearing] competition had a significant effect on student learning" (Council for Basic Education 1994).

The findings of an earlier study by the Council for Basic Education supported by the Office of Technology Assessment of the U.S. Congress substantiated the effectiveness of the "We the People..." program in goal attainment and higher level student learning. In her 1992 Testing for Learning, based on the findings of that study, author and principal investigator Ruth Mitchell asserts: "The competition has enormous potential as a model for the evaluation of history/social studies and government classes. It is the most imaginative and well-organized social studies assessment I know of—more impressive than current ideas at the state level."

In 1993, the Social Studies Development Center conducted a study examining the understanding of the Bill of Rights by high school students. The study compared 477 students who attended traditional government classes with 375 students who attended classes involved in the "We the People..." program. The results of the study indicate that 79% of the students enrolled in the classes using the "We the People..." curriculum performed better than the students enrolled in the traditional government classes. This "suggests that students participating in the "We the People..." program gained knowledge and understanding of the Bill of Rights that is superior to students in government classes using traditional textbooks" (Leming 1993).

Information about the "We the People..." Program. For more information about the program, contact the Center for Civic Education, 5146 Douglas Fir Road, Calabasas, California 91302-1467. The telephone number is (800) 350-4223. The fax number is (818) 591-9330. The e-mail address is center4civ@acol.com.

"We the People... The Citizen and the Constitution" high school classroom sets include 30 student books, a teacher's guide, a program participation handbook, 30 multiple choice tests, materials for performance assessment, and 30 certificates of achievement. A classroom set costs $250 plus 10% for shipping and handling costs. The student book is $10 (over 10 copies - $9 each). The teacher's guide is $7.50.

The middle school and upper elementary classroom sets include 30 "We the People..." student books and teacher's guide, the supplementary student text With Liberty and Justice for All and teacher's handbook, an instructional packet, 30 multiple choice tests, materials for performance assessment, and 30 certificates of achievement. The middle school classroom set costs $160 plus 10% for shipping and handling costs and the upper elementary classroom set costs $150 plus 10% for shipping and handling costs.

A few sets are available to each United States congressional district FREE OF CHARGE. Contact the Center for Civic Education for additional information.

ESSENTIALS OF LAW-RELATED EDUCATION

Essentials of Law-Related Education: A Guide for Practitioners and Policymakers is a statement of the goals and content of law-related education (LRE). Developed by the American Bar Association’s Special Committee on Youth Education for Citizenship in 1995, Essentials of Law-Related Education concentrates on four areas: (1) subject matter and concepts; (2) instructional strategies and contexts; (3) skills; and (4) attitudes, beliefs, and values. Together, they provide K-12 students with active learning experiences that enhance their ability to explore rights and responsibilities under the law, confront and resolve disputes, and discuss and analyze public issues. This digest summarizes the original Essentials document.

LRE has been defined as “education to equip nonlawyers with knowledge and skills pertaining to the law, the legal process, and the legal system, and the fundamental principles and values on which these are based” (Law-Related Education Act of 1978). LRE is typically understood to foster the knowledge, skills, and values that students need to function effectively in our pluralistic, democratic society based on the rule of law. Law-related educators strive to develop the active citizens our society requires: those who can understand, live in, and contribute positively to the civic communities to which they belong.

Law saturates our lives irrespective of age or setting. Consequently, LRE focuses on real issues that affect real people in real situations. Through LRE, educators seek to elucidate essential concepts—including law, power, justice, liberty, and equality—fundamental to our constitutional democracy and to the structure and functioning of other societies. LRE enables educators to teach how the law and legal issues are essential to the functioning of politics, culture, and society. In so doing, it explores how the law affects students and how they, in turn, can affect the law. LRE strives to illuminate the substantive and procedural values underlying our legal system, fostering the formation of beliefs and attitudes that support such values.

What Subject Matter Is Essential? Concepts central to LRE include law, justice, power, equality, property, and liberty. Through LRE, teachers can teach what abstract concepts such as "liberty" actually mean through examination of specific contexts and practices. For example, they can help students understand "liberty" by giving them opportunities to learn about liberties guaranteed under the U.S. Constitution. With that knowledge, students can become aware that such liberties can still be the source for continuing controversies in contemporary society, such as when individual liberties conflict with majority values or public policy priorities.

The relationship between citizen and society is essential to LRE, which should illustrate significant connections between students and larger communities, such as town, nation, and world. Some law-related educators might focus primarily on law that affect the daily lives of all people, including criminal and civil law. Others might concentrate on fundamental legal concepts and principles, including their origins, evolution, and contemporary influence and impact. Still others might stress the application of LRE principles and skills in specific real-world situations, both personal and civic. LRE instruction should recognize that government use of power and authority can bring both order and the risk of abuse. Law-related educators might help students understand that the Constitution limits governmental power by separating, and sharing it. Educators might also ask students to ponder the relationship between power and law, considering such topics as civil disobedience, conscientious objection, capital punishment, and victimless crimes.

LRE emphasizes the role of due process of law as essential to justice in our system of governance. Teachers might focus on justice through civil, criminal, and juvenile law, or through such topics as mercy killing or cruel and unusual punishment. In dealing with equality, teachers might have students study issues of racial or gender discrimination, voting rights, or affirmative action. In so doing, students will be able to reflect on the difference between equal opportunity as a constitutional ideal and as a day-to-day reality.

How and Where Should LRE be Taught? Law-related educators should require students to participate actively in their own learning. For instance, by using role play in the classroom, teachers can encourage students to voice diverse opinions about legal issues. By having students compare and contrast several court decisions on one issue, teachers can encourage students to address judicial decisions in historical context, assess the role of precedent, and comprehend the nature of historical and social change. In helping students stage mock trials, teachers can enable students to experience the judicial process.

The classroom that best fosters LRE is student focused. The ideal LRE classroom acts as a forum where students can freely

Adapted by Robert S. Leming, Director of the Indiana Program for Law-Related Education of the Social Studies Development Center, Indiana University.

73
discuss conflicting ideas. In drawing such ideas from a cross-section of subjects, teachers give students a taste of the complexity of legal issues. LRE classrooms should have diverse, high-quality resources that provide students with the information they need while conveying the fact that different people can legitimately and reasonably have different opinions and perspectives on issues. Enlisting LRE professionals (lawyers, law-enforcement professionals, judges, scholars, for example) from the community as human resources for in-class and out-of-class instruction is an essential means by which LRE meets students' needs in these respects.

LRE does not need to be restricted to one class, course, or subject area. The constellation of values, knowledge, and skills that comprise LRE can be woven throughout the school curriculum beginning in the primary grades. Effective LRE programs should consist of carefully planned, integrated, sequenced, and cumulative instructional experiences. For instance, beginning with the early grades, LRE might emphasize fundamental concepts and values such as justice, liberty, and equality. In later grades, such concepts and values can be addressed through examination of more complex issues and dimensions of our shared constitutional ideals, and their national and global implications.

What Skills Should LRE Foster? Law-related educators should help students develop the skills needed to acquire information about the role of law in constitutional democracies and other societies and how it is connected to their lives; how they can communicate their ideas, beliefs, and opinions about the law and legal issues; and how they can actively and constructively participate in group or broader civic affairs. Thinking skills developed in LRE include analyzing and interpreting judicial opinions and other legal documents; developing a capacity for understanding when and how laws apply to specific fact situations; critically assessing laws and legal issues; and developing a capacity for understanding and evaluating controversies and conflicts arising from legal issues. LRE also develops students' communication and social participation skills, including persuading others regarding beliefs and actions related to the law; participating collectively in making rules and setting goals; building consensus through deliberation, negotiation, compromise, and conflict resolution; and working cooperatively to make decisions and take actions concerning hypothetical or actual legal and law-related social issues.

What Attitudes, Beliefs, and Values Should LRE Foster? LRE does more than provide students with information about the law and legal issues while developing essential skills. It also cultivates certain attitudes, beliefs, and values in students as both essential preconditions for, and outcomes of, students' understanding in LRE. These essential attitudes, beliefs, and values include a commitment to constitutional democracy; dedication to the ideal of justice in society; informed, active, and responsible participation in civic life; respect for the fundamental dignity and rights of humans; and appreciation for legitimately resolving societal conflicts and differences. LRE helps students understand both how law reflects and shapes collective values, beliefs, and dispositions and, in turn, how collective values, beliefs, and dispositions reflect and shape law. In so doing, LRE also helps students understand how law can and has promoted social cohesion and affected social change.

How Can You Obtain Essentials of Law-Related Education? Essentials of Law-Related Education can be obtained by writing to the ABA/YEFC, 541 North Fairbanks Court, Chicago, IL 60611-3314 or by calling 312/988-5735. The price per copy is $3.00 + $2.00 s/h; orders should be prepaid.

Linking Law-Related Education To Reducing Violence By and Against Youth

by Carolyn Pereira

The American Psychological Association (1993, 1) defines violence as "immediate or chronic situations that result in injury to the psychological, social, or physical well being of individuals or groups." Violence by and against youth has increased over the last two decades cutting across racial and socio-economic lines. Assaults are on the increase. Verbal abuse is more widespread. A lack of civility in relationships at school is a common complaint of educators across the country. Reports of violence fill the media daily. Most violence has traditionally occurred between people who know each other. Acts of random violence, however, appear to be on the increase. Motivating factors range from arguments that get out of hand to gang-related incidents. In a recent survey conducted by the National School Boards Association, school superintendents from urban, suburban, and rural districts ranked family problems and violence in the media as the most significant factors associated with an increase in violence (Elliott 1994).

What Personal Qualities Are Associated with Reduction of Violence? Children are less likely to become violent if they develop particular skills, attitudes, and patterns of behavior.

- Problem-solving and reasoning skills: Children who think that there are only two ways to solve problems—fight or give-up—are more likely to become either perpetrators or victims of violence. Children's ability to reason well can give them a wider variety of options than just fighting or running. Children who are more proficient at generating and evaluating options in academic and social settings are less likely to choose violent ways of solving conflicts.
- Social capacities: These skills, attitudes, and dispositions include development of empathy, effective communication, humor, and attachment to positive, non-violent individuals or groups. Understanding another person's point of view and having concern for other persons can help students generate a wider variety of options—some of which may be mutually acceptable. Students must be able both to listen with understanding and to be understood. The ability to laugh and create moments where others, too, feel more light-hearted can often become one of the most successful options to reducing violent responses. Humor can also enable someone not to immediately take things too personally. The ability to be a friend and have friends can create a stronger desire to find non-violent ways of solving conflicts.
- A productive sense of purpose, independence, and power: Children who are more likely to turn to violence have no hope in the future. Conversely, children who believe they can control their lives and want to direct their lives in positive and productive ways are more likely to seek non-violent means to resolve conflict.

What Can Teachers and Parents Do To Foster Non-Violent Conflict Resolution? Teachers and parents can act positively to reduce violent behavior among children.

- Expect children to achieve high standards: If teachers, family, and others expect children to do their best both academically and socially, children, more often than not, rise to the challenge. If key people in the child's environment give clear and consistent signals that violence is not the norm, children will be more likely to develop non-violent patterns of behavior.
- Provide meaningful opportunities for participation: In order to develop the skills and predispositions for resolving conflict peacefully, children need to be given opportunities to practice these techniques. Opportunities need to be based on experiences which relate to their own lives and are viewed as important, not just busy work.
- Recognize positive accomplishments: Children need to know when they are on the "right" track. Feedback is important. Recognition, however, needs to fit the accomplishment. Too much or too little praise, or rewards which have little connection to the task, can be distracting.
- Provide positive role models for children: All children need at least one adult whom they recognize as caring about them. Knowing that respected adults support non-violence, and value being a member of groups that solve problems non-violently, further encourage children to seek non-violent solutions in conflict situations.

How Can LRE Address the Problems of Violence By and Against Youth? Law-related education (LRE) is designed to help young people develop into knowledgeable, skilled, and caring citizens. Young people with these qualities, who are given productive, responsible roles, are less likely to be involved in undesirable behavior, including violence. The outcome of a model LRE program is a class of students ready to assume their roles as constructive participants in our pluralistic democracy, not just problem-free young people. Law-related education can create a learning environment to nurture the skills, attitudes, and patterns of responsible behavior associated with the reduction of violence.

Law-related education helps children develop problem-solving and reasoning skills through challenging content and the methods used to study that content. The curriculum

Carolyn Pereira is Director of the Chicago Office of the Constitutional Rights Foundation; 407 South Dearborn Street, Suite 1700, Chicago, IL 60605; 312/663-9067.
provides rich opportunities for students to develop these skills by analyzing Supreme Court cases, playing roles of police officers on the job, and participating in mock trials, mediations, and legislative hearings. The complex questions generated in each of these contexts encourage a variety of answers, which involve careful examination and projection of possible consequences of the decisions.

Social skills developed through interactions with outside resource persons, as well as with other students through cooperative learning activities, can create positive attachments to prosocial individuals and groups.

LRE helps children develop a productive sense of purpose, independence, and power through participatory teaching strategies that demonstrate how people can and should make a difference in improving the system of justice. Studying key Supreme Court cases, such as Gideon v. Wainwright and Brown v. Board of Education, provides students with concrete examples of how people can work within the legal system to improve it.

Law-related education involves high expectations for all students, not just the academically gifted, and requires the use of complex skills. For example, successfully negotiating a dispute requires a high level of interpersonal and reasoning skills. In addition, LRE conveys a message that this country is based on the rule of law, which provides a variety of ways to resolve conflict without violence.

LRE provides opportunities for meaningful participation. Questions of public policy, such as "Should curfews be imposed on young people in order to curb crime?", offer opportunities for students to research, discuss, and act on important issues that affect them directly.

Recognition of positive accomplishments is part of law-related education. Further, LRE involves supportive adults or outside resource persons, such as caring police officers, judges, and attorneys, who are involved in the daily administration of justice. They are available to talk with young people, to acknowledge concerns young people have about the imperfections of the legal system, and to demonstrate how to work constructively within the system.

Careful research needs to be done on the relationship between LRE and violence prevention. However, the many links that LRE has to youth development and the risk factors related to violence provide optimism about LRE's potential as a part of a systematic, collaborative, and comprehensive violence reduction and youth development program.

Scope and Sequence
Scope and Sequence: Background

From Social Education

ERIC NUMBER: EJ440264
TITLE: Social Studies in the Middle School.
NCSS Position Statement and Guidelines.
JOURNAL CITATION: Social Education, v55 n5 p287-93 Sep 1991
ISSN: 0037-7724
ABSTRACT: Provides direction for developing appropriate, meaningful social studies instruction for the middle school. Identifies characteristics of early adolescents that have a direct relationship to curriculum design and the selection of appropriate social studies instruction strategies. Offers National Council for the Social Studies (NCSS) recommendations for curriculum scope, sequence options, instructional strategies, and principles. (SG)

ERIC NUMBER: EJ378172
TITLE: Development in Scope and Sequence: A Survey of School Districts.
AUTHOR: Herman, Wayne L., Jr.
JOURNAL CITATION: Social Education, v52 n5 p385-88 Sep 1988
ABSTRACT: Presents a study which examined school district scope and sequence patterns for the social studies between 1971-1980 and compared them with revisions being made by the same districts during 1981-1984. Summarizes the research methodology, highlights similarities of the original and revised programs, and suggests how school districts might use this report in their reform plans. (GEA)

Civic Writing in Education for Democratic Citizenship
By Sandra Stotsky

A major component of education for democratic citizenship is the teaching and learning of intellectual skills needed for effective and responsible participation in civil society and government, such as skills in civic writing. This Digest examines the concept of civic writing, identifies its purposes in democratic citizenship, and discusses how to teach it.

What Is Civic Writing? At first glance, civic literacy seems to refer only to a citizen's ability to read what is necessary for informed voting. But the ability to convey in writing one's ideas on matters relating to public life is equally critical for the proper functioning of democratic self-government.

Participatory writing—the unpaid writing that citizens do as part of the process of democratic self-government—is a necessary and inseparable component of democratic self-government. The writing that citizens do for civic or political purposes is also a far more salient aspect of our lives than most people realize. This writing includes such formal legal writing as speeches, petitions, and resolutions as well as such formal organizational writing as minutes of meetings, agendas, memos, and newsletters for political or civic groups. It also includes a great deal of informal and personal writing, such as letters to friends, relatives, or neighbors supporting or opposing candidates for public office.

Civic writing may be carefully planned in a legal or organizational framework, as reports by citizens' committees or voters' guides are, or it may emerge spontaneously, as letters to legislators and newspapers usually do. It may be extensively revised through multiple drafts, as a constitution usually is, or it may be sent off in first draft form, as many letters to public officials requesting help seem to be. It may be written by isolated individuals expressing unique perspectives, or it may be written by groups of individuals trying to achieve a common goal.

What Are the Purposes of Civic Writing? While some kinds of civic writing can be identified by their forms, many others can be identified only by their purposes and contexts. There are five major purposes for civic writing.

The first purpose is to personalize civic relationships with public officials and/or to express a civic identity with other citizens. For example, citizens who thank a public official for assistance, congratulate a successful candidate for public office, or console a defeated candidate are personalizing civic relationships with actual or potential public officials. On the other hand, when citizens wrote welcome-home letters to former Iranian hostages in 1980 or letters of sympathy to the Kennedy family after the assassinations of President Kennedy and his brother Robert, they were affirming the bonds of citizenship, motivated by the perception of a sense of shared membership in a national civic community.

The second purpose is to obtain information or assistance. Members of civic or political organizations often send out questionnaires to gather information for a voters' guide or to survey public opinion on an issue of concern to a particular community. In addition, citizens frequently write to public officials to request a service for themselves or they write on behalf of others.

The third purpose is to provide public information or to offer a public service. Citizens who are members of organized groups such as the League of Women Voters or Parent Teacher Associations frequently provide impartial information to other citizens on public issues. The written records of these groups, such as minutes, newsletters, and agendas, are vital for maintaining the continuity and democratic character of these civic organizations.

The fourth purpose is to evaluate public officials or services. Members of civic boards are often required to write regular evaluations of their public programs, services, or personnel. In addition to formal kinds of evaluations, citizens informally evaluate public services or officials as individuals or as groups by praising or criticizing services or individuals. Their writings may be sent directly to officials or public bodies, or they may be expressed indirectly through newspapers or other publications.

The fifth purpose is to advocate for people or causes. Advocacy writing is indispensable for the protection of political rights in a democracy and for the promotion of the common good. This kind of civic writing can be clustered around five distinct types of political activities:

- Soliciting support for a civic or political organization. Americans frequently form voluntary associations, and much of the writing done by their members focuses on recruiting new members or requesting funds from their members or the public at large.
- Supporting or opposing public officials or candidates. Citizens may write to support or oppose candidates for public office at all levels of government. They may also write to other citizens directly, to the media, or to other public officials to support or oppose a public official in a controversy. They may also seek removal of a public official by bringing their complaints to the voters through a recall petition (allowed in 31 states in some form) or by writing to higher officials.

Sandra Stotsky is a Research Associate at the Harvard University Graduate School of Education and Director of the Harvard Summer Institute on Writing, Reading, and Civic Education. She is also Deputy Commissioner of Education in the Commonwealth of Massachusetts.
• Supporting, opposing, or modifying existing or proposed laws or policies. The ability of citizens to make or influence the making of law, directly or indirectly, lies at the heart of the democratic form of government; they may do so through personal contacts, telephone calls, or in writing.

• Creating or removing laws. In some states, citizens can directly or indirectly create laws, through the initiative petition or through their representatives. In some states, they can also directly remove laws through referendums.

• Advocating new political structures or procedural rules. The most fundamental purpose for which citizens in a democratic form of government may write is to devise the very structures and procedures that shape their participation in the governance of their society, through constitutions or charters.

How Can Civic Writing Be Taught? Because participatory writing is an essential component of citizenship in a democracy, an important issue is how teachers may help students acquire the confidence and rhetorical skills they need in order to engage as writers in the civic process, while in school or later in adult life. When appropriate occasions present themselves, students can be asked to engage in participatory writing. Civic Writing in the Classroom (Stotsky 1987) describes a variety of suitable occasions and teaching methods.

The best way for teachers to prepare their students for civic writing is by asking students to read and analyze the participatory writing of the average citizen in their home community (not so much the public discourse of our most gifted orators or public figures). Such an examination might help them think carefully and clearly about basic questions of purpose and audience and appropriate ways to communicate in public. For example, students could be asked to analyze a group of communications on one topic in the letters to the editor section of their local newspaper, or a group of letters sent to a public official on a controversial topic. The students could then discuss who wrote the intended readers for each letter with respect to attitudes and values, how other kinds of readers might have reacted (or did react) to the letters, and how they themselves reacted to each letter’s content, tone, and explicit purpose.

Students might also be asked to judge how well the writers of these communications displayed honesty; accuracy; fairness; consideration of all important, relevant information; courtesy to the writer’s actual or potential critics and to opposing views; logical reasoning; and a concern for the common good. There is no better preparation for our students’ own future participatory writing as adults than opportunities to critique the strengths and limitations of the communications written by members of their own civic community as judged by criteria developed in their classrooms (Stotsky 1996).

Issue-Centered Civic Education in Middle Schools
By Thomas S. Vontz and William A. Nixon

There is a broad consensus among social studies educators that the core mission of a social studies curriculum is education for democratic citizenship. Of course, there is an appropriate place for civic education at every level of learning. It is increasingly recognized, however, that the middle school years are an important time in the development of civic roles and responsibilities. Yet there's a general lack of institutionalized civic education aimed at promoting democratic citizenship during the middle school years (Policy Research Project 1998, xv & 16). Educators, policymakers, parents, and concerned members of the community need to recognize civic education in middle school as a prime concern, and issue-centered education as an effective way to respond to this concern.

Issue-Centered Education: The Pros and Cons. Even where there is a commitment to providing a foundation in civic education, the question remains: how should citizenship be taught to middle school students? On this point there has been considerable debate for several decades. James P. Shaver (1992, 95) has broken down the argument into two perennial questions: (1) is the teaching of content culled from history and the social sciences, appropriately tailored for young minds, adequate citizenship education in and of itself? and (2) should students first master a core body of information and concepts before being asked to consider the issues that face adult citizens, or will the learning of information and concepts take place more effectively in the context of confronting issues? Educators who answer “no” to the first question, and who support learning in the context of confronting problems, have turned to the issue- or problem-centered approach to civic education.

While several approaches to issue-centered civic education have been advanced, most proponents agree on some common principles. Broadly speaking, issue-centered education examines social questions. The method can be used within either discipline-based or interdisciplinary curricula. Further, it seeks to examine problems and dilemmas confronting citizens. At the core of issue-centered education are reflective questions that may be answered variously, and that emphasize thoughtfulness and depth. In the process of examining reflective questions and reaching a decision, there should be an assessment of evidence, competing values, and alternative outcomes. At its best, issue-centered civic education promises a high level of integrated learning and student involvement in the learning process.

Despite the efforts of its advocates, the issue-centered approach has failed to gain wide acceptance. There are many factors that account for this, but three pointed criticisms have been made that are worth considering. First, some teachers, parents, and community groups have expressed reservation about the emphasis on potentially controversial problems at the heart of the issue-centered approach. While examining issues of public policy is central to citizenship, there is concern that an unthinking “controversy-is-good-per-se” attitude can create an unnecessary adversarial climate (Shaver 1992, 99).

Another reservation about the issue-centered approach comes from proponents of a content-based civic education. Because an issue-centered approach requires a significant allocation of scarce classroom resources and extra effort by teachers, it effectively reduces the time that can be spent on content coverage. This factor can make the issue-centered approach unattractive to teachers who are committed to exposing students to a broad content curriculum. While most teachers are willing to trade breadth of knowledge for a greater depth of understanding, there is the concern that by adopting an issue-centered approach, content will be sacrificed to the extent that students will lack the knowledge base that is a prerequisite for an informed examination of policy problems.

Finally, some doubts have been raised about the methodology of issue-centered education. Many educators believe that the structure provided by the framework of an established discipline is crucial to teaching and learning. Here, the concern is that the issue-centered approach, with its emphasis on interdisciplinary subject matter and process over content, lacks the conceptual structure needed to facilitate achievement of content standards.

The criticisms of issue-centered civic education are valid. But if teachers want to prepare students for effective and responsible democratic citizenship, they must challenge students to confront issues of public policy in the classroom (Massialas 1989, 173). The challenge is how to take advantage of the benefits of issue-centered civic education without sacrificing student achievement of content standards in the teaching and learning of civics/government. We the People ... Project Citizen is a program that responds effectively to the challenges raised by critics of issue-centered education.

An Exemplary Issue-Centered Civic Education Program. Educators committed to issue-centered civic education in the middle schools need to become acquainted with We the People ... Project Citizen, developed and sponsored by the Center for Civic Education. Launched in California in 1992 and expanded to national usage in 1995, Project Citizen is a civic education program created specifically for middle school students which involves them in the civic life of their community. The program combines active learning in both classrooms and communities with a team-based project activity that builds a sense of community and a deep understanding of public policy.

Thomas S. Vontz is director of the Indiana Program for Law-Related Education at the Social Studies Development Center of Indiana University. William A. Nixon is a doctoral student in history at Indiana University and a project assistant at the Social Studies Development Center.
Since becoming a national program in 1995, Project Citizen has been implemented in 38 states and is likely to expand into all 50 states.

The focal points of the program are teaching students to monitor and influence public policy and to encourage civic participation among students, their parents, and other members of the community. Students are asked to step outside of the classroom and examine real problems in their schools or communities (e.g., drug abuse, pollution, and graffiti); analyze possible solutions; create an action plan; and finally, present their findings in a public forum. The project has three overall goals: (1) to provide the knowledge and skills for effective participation in civic and political life; (2) to provide practical experience designed to foster a sense of competence and efficacy; and (3) to develop an understanding of the importance of citizen participation. Overall, Project Citizen gives 10-to-15-year-olds the opportunity to participate in civil society and to practice critical thinking, dialogue and debate, negotiation, tolerance, decision-making, and civic action (Policy Research Project 1998, 2 & 17).

Project Citizen responds to many of the criticisms that educators have directed against issue-centered education. Instead of injecting problems into the classrooms merely for the sake of creating controversy, the program encourages students to examine important questions of policy that are relevant to them and their communities. The format of Project Citizen helps ensure that when difficult questions are raised, as they so often are in civic and political life, the students think through the issues while remaining respectful of differences of opinion and other points of view. Moreover, Project Citizen is particularly well-suited to effectively complement a well-structured, content-based civic education curriculum, giving students the opportunity to put the ideas they have learned in the classroom into practice. Finally, while Project Citizen is a flexible program, it is also an outstanding example of an issue-centered approach that fits within the larger framework of civic education for democracy, with all the benefits that working within that structural framework provides.

An Evaluation of We the People . . . Project Citizen. In September 1997, a research team led by Professor Kenneth Tolo conducted a comprehensive, eight-month study of Project Citizen at the Lyndon B. Johnson School of Public Affairs of the University of Texas at Austin. The research team published a report of its findings in 1998. The key findings of the report were:

- students using Project Citizen believe they can—and do—make a difference in their communities;
- students and teachers believe that Project Citizen helps students develop a greater understanding of public policy, helps students learn how their government works, develops student commitment to active citizenship and governance, involves students in their communities, and helps students learn about specific community problems;
- students and teachers believe Project Citizen teaches students important communication and research skills; and

Perhaps as important as these points is that Project Citizen, a flexible program, can fit into many classroom settings. It can be used successfully in classes covering diverse subject matter and in classes of varying academic ability, including those with gifted and talented students and students of mixed ability. Project Citizen is used primarily in sixth through eighth grades, but also with students as young as fifth grade and as old as twelfth grade (Policy Research Project 1998, xvii). For more information about Project Citizen, contact the Center for Civic Education, 5146 Douglas Fir Road, Calabasas, CA 91302-1467; telephone (800) 350-4223; FAX (818) 591-9330; World Wide Web <www.civiced.org>.

Teaching about Democratic Constitutionalism

by John J. Patrick

February 1997

There are more than 100 democracies in the world today (Diamond 1996, 20). All but three of them -- Great Britain, Israel, and New Zealand -- have written constitutions. And even the three democracies without written constitutions exemplify constitutionalism, which is a critical indicator of a modern democratic government.

Constitutions and Constitutionalism. A people’s constitution is the supreme law that legitimates, limits, and empowers the government, which, if democratic, is based on periodic and competitive election of representatives by virtually all the adult population. It articulates the structure of government, procedures for selection and replacement of government officials, and distribution and limitations of the powers of government.

Constitutionalism means limited government and the rule of law to prevent the arbitrary, abusive use of power, to protect human rights, to support democratic procedures in elections and public policy making, and to achieve a community’s shared purposes. Constitutionalism in a democracy, therefore, both limits and empowers government of, by, and for the people. Through the constitution, the people grant power to the government to act effectively for the public good. The people also set constitutional limits on the power of the democratic government in order to prevent tyranny and to protect human rights (Holmes 1995, 299). The rights of individuals to life, liberty, and property are at risk if the government is either too strong or too weak. Both tyranny and anarchy pose critical dangers to security for individual rights.

An effective democratic constitutional government is sufficiently empowered by people to secure their rights against foreign invaders or domestic predators. Its power is also sufficiently limited by people to secure their rights against the possibility of oppressive government officials. A continuing challenge of democratic constitutionalism is determining how to simultaneously empower and limit the government in order to secure the rights of all persons in the polity.

Not every government with a written constitution exemplifies democratic constitutionalism. Many constitutions have presented merely the appearance of democratic government with little or no correspondence to reality. Soviet-style constitutions of the recent past, for example, grandly proclaimed all kinds of rights while guaranteeing none of them. Only governments that usually, if not perfectly, function in terms of a constitution to which the people have consented may be considered examples of democratic constitutionalism.

Teaching the Concept of Constitutionalism. A democratic government will not endure without public understanding and support for the ideas that undergird it. And prominent among the principles of modern democracy is constitutionalism. So primary objectives of civic education for democratic citizenship are to enable students (1) to acquire knowledge of constitutionalism, (2) to use this knowledge to think and act effectively about issues of governance, and (3) to become committed to the maintenance and improvement of constitutionalism in their polity.

Students should be taught to identify and explain why particular political systems are constitutional democracies or why they are not. Through this kind of concept-learning activity, they will better understand what democratic constitutionalism is. Further, they should be challenged to apply their concept of constitutionalism to analyze and evaluate case studies about the procedures and policies of their government.

Analysis of United States Supreme Court cases is an especially effective method of teaching about democratic constitutionalism. Through its power of judicial review, the Supreme Court can invalidate acts of government that violate the United States Constitution. Teachers should use Supreme Court cases to stimulate critical thinking and inquiry among learners about constitutional issues of the past and present.

Using International Comparisons. Another effective method of teaching about democratic constitutions and constitutionalism is international comparison (Hall 1993). Learners in the United States, for example, should be challenged to compare their constitution and practices of democratic constitutionalism with those of other constitutional democracies of the contemporary world.

Teachers can use common attributes to help learners systematically compare the written constitutions and constitutionalism in different countries. Six common attributes, for example, are (1) structure of government, (2) distribution of powers among executive, legislative, and judicial branches of government, (3) limitations on powers of the branches of government, (4) guarantees of human rights, (5) procedures for electing, appointing, and replacing government officials, and (6) methods of constitutional amendment or change. These attributes, applicable to all democratic constitutions, are foundations for comparative analysis. Through this kind of international comparison, students can learn that common characteristics of modern constitutional democracies are practiced in similar and different ways throughout the world. An outcome of teaching and learning comparatively about democratic constitutionalism is broader and deeper knowledge of the concept. Students are likely to enhance comprehension.

John J. Patrick is Director of the ERIC Clearinghouse for Social Studies/Social Science Education, Director of the Social Studies Development Center, and Professor of Education, Indiana University.
of their own government while globally expanding their understanding of democratic principles, including constitutionalism. Further, ethnocentric tendencies are likely to diminish as students learn the variety of ways that common faces of democratic constitutionalism are practiced.

An excellent resource for comparative analysis of constitutions and constitutionalism is Constitutions of the World by Robert L. Maddex. This book was published in 1995 by Congressional Quarterly, Inc., 1414 22nd Street, N.W., Washington, D.C. 20037. The author of this volume uses several common categories systematically to present essential similarities and differences in constitutions of 80 countries.

Using Internet Resources. An abundance of useful data on constitutionalism can be obtained through the Internet. The World Wide Web rapidly is becoming a valuable source of information for civic educators and their students. For example, copies of the constitutions of many countries can be found at this URL site: http://www.uni-wuerzburg.de/law/index.html.

Copies of the constitutions of the 50 states of the United States of America can be located at this Web address: http://www.law.sc.edu/st_coms.htm.

The availability of many constitutions through the Internet makes feasible the regular use of comparative analysis in teaching and learning about democratic constitutionalism.

Another useful web site is http://www.the-spa.com/constitution/cs_found.htm, which offers links to various resources including the United States Constitution, Supreme Court decisions, and the Federalist Papers.

Leadership in Civic Education

by Robert B. Woyach

In recent years, social studies educators have given serious attention to the apparent crisis of citizenship and the improvement of civic education in the United States. Insufficient attention, however, has been given to the place of leadership in civic education. Yet, youth leadership development is big business in the United States. Each year, over half a million high school students, along with a smaller but growing number of middle school students, participate in programs intended to encourage civic leadership and to develop leadership skills.

How Is Leadership Related to Citizenship? Leadership is one of the most studied but least understood of all social phenomena (Bennis and Nanus 1985). Yet, for most people the concept of "leader" is not complex. It evokes images remarkably close to the Middle English origins of the term: a figure who holds a position of authority and directs the actions of others by force of personality, if not birthright. This image sets leaders apart. It encourages people to think about the role of leader as something distinct from, and partially in opposition to, the role of citizen.

Yet, this authority-based, charisma-driven image of the directive leader has questionable relevance to both the theory and practice of democracy. Decades of study on leadership have failed to uncover any meaningful set of physical or personality traits that make a person a leader. Indeed, in group settings the vast majority of people aspire to a leadership role regardless of their personality or interpersonal styles. In the United States, groups usually reject the leadership of people with highly directive (authoritarian) styles. We may hold feudal images of "leaders," but in practice, we prefer leadership that is non-elitist, decentralized, and participatory.

Our practice of leadership has enormous implications for the relationship between leadership and citizenship. In democracies, leadership is best understood as a dimension of citizenship itself, distinctive only in that it involves special competencies. In general terms, leadership involves the structuring and initiating activities that citizens must perform if groups (publics) are to organize themselves, establish goals and priorities, make decisions, settle conflicts, and in general accomplish their goals.

What Are the Essential Elements of Leadership? Debates abound regarding the best ways to develop leadership competence. At the same time, there exists considerable agreement regarding the essential elements of leadership development when it is viewed as a long-term process (Christensen and Woyach 1990). These elements include conceptual, motivation-al, ethical, and skill components, and clearly cannot all be achieved in a week-long or even a year-long program.

- **Motivation:** Awareness and Empowerment. One of the most basic goals of leadership development is to motivate young people to take personal responsibility for exercising leadership. For many programs this involves developing an awareness of social need on the one hand and self-esteem on the other. Young people need opportunities to connect to issues that concern them. They must see how individuals exercise leadership in these areas. Finally, they must be encouraged to see themselves in these leadership roles—to give themselves permission to lead.

- **Understanding Leadership:** Role and Authenticity. One of the most persistent inhibitors of leadership may be our elitist and directive images of leaders. Leadership development programs, therefore, must create new images of leadership. Young people need to learn what it is that leaders do. They need to understand what it means to structure and initiate group activity. They need to learn how to do these things in ways that reinforce democratic norms.

An important issue that has received increased attention in recent years is the ethical dimension of leadership. Many people who are attracted to positions of leadership are attracted primarily to the personal rewards. Democratic leaders, however, must learn to balance the interests of self, group, and other wider communities of which the group is a part. Only if these interests are balanced will the individual be able to exercise leadership in an effective and authentic way.

- **Experience with Leadership:** Skills and Competencies. Finally, leadership involves doing, not just thinking. Effective leadership requires interpersonal skills and competencies that must be learned through experience and practice and through the assessment of successes and failures. In the final analysis, young people can only learn the skills of leadership if they are allowed to exercise leadership in meaningful ways.

What Are the Competencies of Leadership? Groups and communities depend on leaders to help them establish goals and priorities, make decisions, settle conflicts, maintain commitment, and generally to accomplish the work of the group. A model of civic leadership developed at The Ohio State University's Mershon Center summarizes the leadership role in terms of eight leadership competencies (Woyach 1992).

- **Shaping Visions and Goals—Envisioning.** The foundation of any group or community is its sense of common purpose and identity—its vision. Bennis and Nanus (1985) identify envisioning—the shaping of visions and goals—as the most basic and important of the leadership competencies. Actually envisioning is a complex task that requires the ability to identify needs and opportunities, put a purpose or mission into words, derive concrete goals from that vision, and engage other people in the process of shaping these visions and goals so that they become committed to them.

Robert B. Woyach is a political scientist and Senior Faculty Associate of the Mershon Center, The Ohio State University.
quality of the decisions, but also the commitment of members. Typically the best way for small groups to make decisions is through consensus. Consensus decisions ensure the maximum use of the group's knowledge. They also promote the greatest group commitment, since everyone has a stake in the outcome. However, building consensus can be difficult, requiring real skill on the part of leaders.

- Resolving Conflicts—Negotiation. Not all decisions can be made through consensus. Conflicts over goals and priorities can paralyze a group, destroying group solidarity and member commitment. Yet conflict is unavoidable. Thus all groups need skillful negotiators. The ability to resolve conflict means that the parties feel their concern has been heard and the group needs are considered.

- Motivating Members—Creating Rewards. No one remains committed to a group for long simply because he believes in its goals. Member commitment needs to be rewarded to remain strong, even if that reward is something more than a sense of satisfaction for having done some good. Groups depend on leaders to make participation a rewarding experience—that is, to ensure that appropriate rewards go to members in appropriate ways and at appropriate times.

- Laying the Foundation for Outside Support—Creating an Image. To achieve their goals, most groups rely on other people and other groups to provide things like money, meeting space, and a variety of other resources. Attracting this support depends on having leaders who are effective at image creation—at getting the group recognized in the larger community. Image creation is a complex process that involves identifying images that capture the essence of the group and its vision, creatively communicating that image through various media, and even getting the attention of people who control access to media.

- Laying the Foundation for Group Power—Gaining Legitimacy. A critical part of any group's image is its credibility. Unless a group is seen as legitimate—-as being credible and having the right to work toward its vision—the group will neither be able to influence others or attract the resources it needs. Looking at the group's legitimacy requires leaders who understand the different sources of legitimacy, who know what makes the group legitimate with particular people, and who are skillful at creating and protecting the group's legitimacy.

- Attracting Outside Support and Defending the Group—Advocacy. Once groups are known to outsiders or begin to work in the wider community, they inevitably meet with resistance. Some people will disagree with the group's goals or challenge the group's actions. At that point the group needs skilful advocates. They need leaders who can persuade the doubters and hold the critics at bay.

- Getting Support from Other Groups—Coalition Building. Most groups find they must work with other groups at one time or another. Making groups of groups, or coalitions, succeed represents a major leadership challenge. Coalitions need leaders who know how to pick the right coalition partners and how to nurture the intergroup relationship. Finally, they must know how to get the most from the relationship without compromising their own group.

What is the Role of Schools in Leadership Development? Attention to leadership in the formal curriculum of American schools is rare. Few courses on leadership that do exist typically serve a narrow group of student leaders. In general, leadership development within the United States is largely an extra-curricular or co-curricular enterprise.

Nonetheless, American schools can and do play a significant role in leadership development. Studies of adult leaders clearly indicate that youth leadership experiences in school-based clubs and organizations play a significant role in encouraging and preparing youth for leadership as adults (Cox 1988). Moreover, while curricular programs on leadership are rare, the classroom experiences communicate a wide array of messages about leadership. How leaders are portrayed in history courses influences students’ understanding of the leadership role. The ways in which social issues are portrayed and the degree to which initiative is rewarded influence students’ motivation to exercise leadership.

The role that schools have in providing opportunities for leadership development and in building students’ image of leadership require schools to seriously consider how changes in schooling affect the development of the next generation of leaders. The decline of club programs in some schools, because of funding and scheduling problems, should be of concern to people interested in leadership development. On the other hand, trends toward site-based management offer intriguing new opportunities for involving students in the governance of the school community.

The Connections Between Language Education and Civic Education

by Sandra Stotsky

Civic education "means explicit and continuing study of the basic concepts and values underlying our democratic political community and constitutional order" (BuTs 1988, 184). It draws its content chiefly from four disciplines: political science, jurisprudence, history, and economics. Political science and jurisprudence provide an understanding of ideas, institutions, and procedures about law and government that protect individual rights and promote a government based on law, majority rule with minority rights, and the public good. The study of history gives us knowledge of our country's past, who we are as a people, and our successes and failures in realizing our country's political and legal ideals. And economics offers knowledge about how to use scarce resources to satisfy human needs and wants within a constitutional government based on the values of democracy and individual rights. However, language education, too, makes an important contribution to civic education.

How Can Literary Study Contribute to the Formation of Civic Identity and Character? Literary study can contribute to the formation of civic identity and civic character in several distinct ways (Stotsky 1991a).

Significant National Literature. First, it can expose students to historically significant works that illuminate our nation's cultural history and values (Stotsky 1989). Such works as Benjamin Franklin's autobiography, Ralph Waldo Emerson's essays, or Henry Thoreau's On Civil Disobedience and Walden Pond are among those literary works that contribute to an understanding of our political and social values and to our civic identity. Of course, students need to read not only what we can be proud of as Americans, but also what we have failed to do well and what we need to improve upon. A well-conceived literature program provides a balanced view of our country's social and political experiences. For example, teachers could use John Hershey's A Bell for Adano in tandem with Upton Sinclair's The Jungle. Or teachers might use James Comer's Maggie's American Dream, a story about a strong-minded black mother whose four children all became successful professionals despite racial discrimination, to balance Gloria Naylor's The Women of Brewster Place, a bleak story about mainly single mothers and their children in an urban housing project.

Characters as Intellectual and Moral Models. Literary study can also expose students to strong characters with clear moral and intellectual values. Students who identify with those characters may then internalize their values. Such works as Antigone, The Adventures of Huckleberry Finn, To Kill a Mockingbird, A Man for All Seasons, Jean Christophe, and The Fountainhead feature protagonists with strong intellectual or moral principles who choose to live by the dictates of their consciences, whether or not they suffer social disapproval, isolation, or even death. Because principled thinking, the expression of individual conscience, and the assumption of personal responsibility for one's actions are central values in the history of Western civilization and in a liberal constitutional democracy, literature programs can make a significant contribution to civic education by offering students such works to read (Jones 1966). A good literature program should also expose young students to characters who exhibit such traits as courage, hope, optimism, ambition, individual initiative, love of country, love of family, the ability to laugh at themselves, a concern for the environment, and outrage at social injustice.

Literature about Other Peoples. Finally, literature programs can expose students to works about people who live in countries or societies that differ markedly from their own. Such works can help students understand why human beings, despite often vast cultural differences, value both personal freedom and social justice, and want liberal constitutional democracies for their own countries. Chinua Achebe's When Things Fall Apart, Alexander Solzhenitsyn's Gulag Archipelago, and Ignazio Silone's Fontamara and Bread and Wine are among those works that can broaden students' knowledge of diverse ways of living and the different problems people in other societies have encountered at the same time that they learn how similar most people are in their basic human needs and wants.

How Can Writing Instruction Develop Intellectual and Moral Autonomy? Writing instruction can help develop the intellectual and moral autonomy desired in a democratic citizenry in several ways.

Independent Thinking Through the Research Process. Teachers who assign research projects help their students develop some of the most important skills citizens need: how to seek answers to their own questions; how to locate, on their own, sources of needed information; how to evaluate its relevance and quality; and how to organize information and ideas for their own purposes (Stotsky 1991b). Regular experience with the research process is probably the best means for developing the intellectual habits that are basic to informed and responsible public discourse: open-ended inquiry, the use of both primary and secondary sources, independent reading, and critical thinking.

Ethical Aspects of Academic Writing. Writing instruction can also help students develop a conscious appreciation and use of the ethics of academic writing, which should underlie public and academic discourse (Stotsky 1991c). For example, students should learn as part of their academic writing that...
responsible writers do not quote other writer's ideas out of context; seek information on all points of view about a question; do not assume their readers will agree with their point of view without being given reasonable evidence; and present the results of their inquiry in a way that does not insult many possible readers.

Desirable Qualities in Communications to Public Officials or Other Citizens. Finally, writing teachers can help students learn about the major purposes for which citizens write — whether to public officials or to other citizens (Stotsky 1991a). Citizens may write to thank a public official for a good law she may have helped to pass, or by expressing sympathy to her for losing a re-election campaign. Citizens also frequently write to request information or help from their public officials. In addition, some citizens regularly gather and offer the public useful information or services, as does the League of Women Voters. Finally, citizens may write whenever they wish to other citizens or their public officials to criticize a public service and/or to advocate a position on a public issue, political party, or public figure.

If teachers are careful to observe certain professional guidelines (spelled out in Stotsky 1992), they can design a variety of classroom-based activities that give their students opportunities to participate as writers in local or national affairs (see Stotsky 1987 and 1990 for descriptions of participatory writing activities that teachers have carried out in elementary and secondary schools across the country). Indeed, teachers can help all students learn how to write succinctly, clearly, and courteously to public officials or other citizens, and with appropriate information to support their purpose for writing.

How Can Teachers Help Enhance the Quality of Public Discourse? Students should learn to see reading and writing as vital support for the most direct way that citizens can express themselves and participate in public life — as public speakers. Public speaking was the primary medium for participation in public affairs at the birth of democracy in ancient Athens, and even today public dialogue or argument is for most citizens the chief means for participating in public life. But too often public dialogue is little more than polarized or polarizing debate, with neither side genuinely listening to and learning from the other, as Ede (1991) found in an analysis of a local controversy. Language teachers can help enhance the quality of public dialogue by teaching their students how to engage in class discussions that require them to paraphrase as well as to respond to the points made by others (Katula 1991). They can especially advance the cause of improving civic discourse in this country if they teach their students certain strategies for public debate that derive from classical rhetoric: to avoid logical fallacies in developing their arguments; to construct arguments that respect the truth and demonstrate an understanding of, if not sympathy with, alternative positions; and to seek common ground in debates on controversial issues (Ede 1991; Katula 1991). Perhaps a basic speaking skill to develop in all students is their ability to generate their own questions about a topic they are studying (Stotsky 1987). All students must become active learners who know how to pursue their own curiosity and who can engage in independent critical thinking.

Obtaining the Full Text of Materials Listed in the ERIC Database

The ERIC database provides the bibliographic citation—title, author, publisher, journal title, ISBN or ISSN, and year of publication—and an abstract for each journal article or document listed. Following is information on how to obtain the full text of the journal articles and documents listed in the ERIC database.

Journal Articles Journal articles listed in the ERIC database, denoted by a six-digit number preceded by the letters "EJ", such as EJ214839, are not available full text in the ERIC database or from any component of the ERIC system at this time. The text of journal articles listed in the ERIC database may be obtained from the following sources:

LIBRARIES Many journals listed in ERIC are available in university libraries and large public libraries and can be photocopied for a nominal fee.

INTERLIBRARY LOAN If no library near you carries the journal you need, you may be able to obtain a copy of the article from another library through interlibrary loan for little or no fee.

COMMERCIAL REPRINT SERVICES Copies of many journal articles can be purchased from commercial article reprint services such as:

UnCover Company
Toll-free: (800) 787-7979
E-mail: uncover@carl.org
World Wide Web: http://uncweb.carl.org/

Institute for Scientific Information (ISI)
Toll-free: (800) 336-4474
E-mail: tga@isinet.com
World Wide Web: http://www.isinet.com

THE PUBLISHER OF THE JOURNAL If a copy of the article you seek cannot be obtained from any of the above sources, contact the journal publisher.
Documents Documents listed in the ERIC database (books, conference papers, research reports, curriculum guides, and other non-journal materials) are denoted by a six-digit ERIC Accession Number preceded by the letters "ED," such as ED415690. The full text of documents listed in the ERIC database may be obtained from the following sources:

EDRS Contact ERIC Document Reproduction Service (EDRS). Approximately ninety percent of documents listed in the ERIC database are available for purchase in paper, microfiche, or electronic format. Journal articles listed in the ERIC database are not available from EDRS.

COLLECTIONS OF ERIC DOCUMENTS ON MICROFICHE You can view and/or copy the document from microfiche at an ERIC Resource Collection. More than 1,000 libraries and other organizations maintain collections of ERIC documents on microfiche as well as other ERIC resources and services. At most such collections, any ERIC document on microfiche may be photocopied for a nominal fee. To locate the ERIC Resource Collection nearest you, call ACCESS ERIC at 1-800-LET-ERIC or search the Directory of ERIC Resource Collections on the World Wide Web at: http://www.ed.gov/BASISDB/EROD/eric/SF

LIBRARIES Some documents listed in ERIC may be available in libraries.

Appendix B

Submitting Documents for Inclusion in the ERIC Database

ERIC/ChESS depends on voluntary contributors to achieve our goal of comprehensive bibliographic coverage of the literature of social studies/social science education, art education, and music education; ERIC/ChESS would like to receive new documents on topics in these subject areas. We are especially interested in documents not usually available through other information sources such as teaching guides, conference papers and speeches, state-of-the-art studies, project descriptions, bibliographies, instructional materials, and research reports.

Advantages of Having Your Document in the ERIC Database

**Dissemination** Documents accepted by ERIC are reproduced on microfiche and distributed to the more than 900 subscribers to the ERIC microfiche collection around the world.

**Retrievability** The bibliographic descriptions developed by ERIC can be retrieved by the thousands of subscribers to ERIC on-line, on CD-ROM, and on the Internet.

**Publicity** If you wish to sell your document, you can have its availability (together with a contact address and price), announced to users of Resources in Education (RIE), thus publicizing your document. After you have sold all of your copies, the document is still available through the ERIC Document Reproduction Service (EDRS), if permission to reproduce the document has been granted to ERIC.

**Always in Print** The presence of a master microfiche at EDRS, from which copies can be made on demand, means that ERIC documents are constantly available. You can always refer people requesting copies of the document to EDRS.

**ERIC/ChESS Document Selection Criteria**

**Quality** Quality is the single most important selection criterion. A document is reviewed based on its own merit and its relation to materials in the ERIC database. A document should:

- Be relevant, answering current problems, needs, and interests of users;
- Contribute to new knowledge; be creative or innovative; and be timely and reflective of current education trends.

**Reproducibility and Legibility** Papers should be typed originals or clear photocopies. Good contrast between ink and paper is important. Colored inks, dark colored papers, and very small type do not reproduce well.
The author must sign a Reproduction Release form for each document submitted granting the ERIC system to reproduce it. Use the form on the next page (Appendix C), call ERIC/ChESS at 800-266-3815 to request a copy, or print or download a copy of the form from the Web at <http://ericfac.piccard.csc.com/reprod.html>.

Send two (2) copies of your document, along with a signed ERIC Reproduction Release form, to:

ERIC/ChESS Acquisitions
Social Studies Development Center
Indiana University
2805 E. Tenth Street, Suite 120
Bloomington, Indiana 47408-2698

If your document is not within the ERIC/ChESS subject scope, or if you are not sure which ERIC clearinghouse scope your document fits, please submit your document, along with a completed, signed Reproduction Release form, to:

ERIC Processing and Reference Facility
Acquisitions Department
1100 West St., 2nd Floor
Laurel, Maryland, USA 20707-3598
