These instructional materials are designed to improve the performance of paraeducators working in transitional services and supported employment for teenagers and young adults with disabilities. The competency-based program helps participants to learn skills they can apply immediately, to accept new practices, and to increase their understanding of education issues. The modules cover: (1) strengthening the instructional team, roles of paraeducators working in transitional and vocational services, and communication and problem solving; (2) human and legal rights of children with disabilities and their families; (3) principles of human development and factors that may impede typical human development; (4) the instructional process (individualized education and transition plans, assessment, data collection, goals and objectives, instructional interventions, and instructional methods for facilitating transition); (5) working with families; (6) appreciating diversity; and (7) emergency, health, and safety procedures. The format for the instructional modules includes: instructional objectives, equipment and resources required, suggested training activities and exercises, background information for the trainer, and handouts and transparencies. Training procedures involve small group discussions, brainstorming, problem solving, case studies, and role plays. (References accompany each module.) (CR)

The 1st edition of this core curriculum and training program was developed through a grant (H029K00037-92) from the Division of Personnel Preparation, Office of Special Education Programs and Rehabilitative Services, United States Department of Education. The content does not necessarily reflect the opinion of the Department and no official endorsement should be inferred.
As school systems and other provider agencies increase the availability of inclusive home and center based programs for young children, expand efforts to integrate general and special education, and prepare teenagers with disabilities to move into the adult world, employment of paraeducators is continuing to grow and their duties are becoming more complex. While paraeducators have become major contributors in the delivery of education services to children and youth who require individualized attention, opportunities for systematic, standardized training have not kept pace. The goal of these instructional materials is to provide personnel developers and trainers with resources they can use to improve the performance of the paraeducator workforce.

This instructional program is one of a series developed by The National Resource Center for Paraprofessionals in Education and Related Services to prepare paraeducators to work in the following areas: 1) center based and home visitor programs for young children from birth to age five, 2) inclusive classrooms serving school age students and, 3) transitional services and supported employment for teenagers and young adults, and 4) programs serving English language learners.

The content in the four sets of instructional programs is based on a core curriculum that recognizes the generic nature of the competencies paraeducators require to work in various education and related services programs. The individual training programs focus on the specific skills paraeducators must have to work with children and youth of different ages, who have different levels of disabilities and who have different education needs.

Anna Lou Pickett
OVERVIEW

Nationwide, policymakers and administrators increasingly are turning to paraeducators (teacher aides, instructional assistants, paraprofessionals, job coaches, education technicians, therapy aides/assistants) to assist with the delivery of education and related services to growing numbers of children and youth who can benefit from individualized education and support services. The roles and responsibilities of teacher aides have evolved and become more complex and demanding since they were introduced into classrooms and other learning environments more than 40 years ago, “in today’s schools they are technicians who are more accurately described as paraeducators, just as their counterparts in law and medicine are designated as paralegals and paramedics” (Pickett, P.1, 1989).

Paraeducators work in home and center (school) based early childhood programs and elementary, middle and high schools. They work alongside teachers and other school professionals in inclusive general and special education classrooms serving children and youth who have and do not have disabilities, who have limited English proficiency (LEP), who come from economically and educationally disadvantaged homes and other backgrounds that may place them at-risk of failure, or who come from diverse cultural and ethnic heritages. This training program contains a series of instructional modules designed to prepare paraeducators to work with children and youth of different ages, who have different ability levels and learning styles, and who come from different ethnic and cultural heritages.

The content in this introductory module is divided into two units. The purpose of Unit 1 is to provide paraeducators with an understanding of their programmatic, and ethical responsibilities no matter whether they work in inclusive classrooms serving children and youth with and without disabilities, or in bilingual and English as a second language programs (ESL), Title I or other compensatory education programs, early childhood programs or programs preparing youth to make the transition into the adult world. Unit 2 centers on communication and problem solving skills that will enhance the ability of paraeducators to work effectively with teachers and other school professionals, administrators, children, youth and their parents, and members of the community.

If you are a trainer who has used other instructional materials developed as part of the NRC Core Curriculum, you will notice similarities in the content in this unit. There are, however, new activities and information incorporated in both units that comprise the module.
UNIT I

PARAEDUCATOR ROLES & RESPONSIBILITIES

INSTRUCTIONAL OBJECTIVES

The paraeducator will:

1) Define the distinctions in the roles of teachers and other school professionals and paraeducators.

2) Describe the roles and responsibilities of paraeducators working in inclusive special and general education, ESL/bilingual, Title I and other programs serving children and youth with exceptional needs.

3) Describe the professional and ethical responsibilities of paraeducators.

TIME REQUIRED

The time required to teach this unit should be approximately 2 1/2 hours depending on the level of experience of the participants and the activities selected by the instructor.

EQUIPMENT & MATERIAL REQUIRED

☐ A flipchart and easel, and/or chalkboard.

☐ An overhead projector and screen, or if you prefer write the information contained in the Transparencies on the flipchart or chalkboard.

☐ Copies of the Information Handouts, Exercises and Transparencies from this unit.

☐ Copies of: 1) your district's job descriptions for teachers and paraeducators; 2) descriptions of your district's professional, ethical and legal responsibilities for school personnel; and 3) criteria, standards, and credentialing mechanisms for paraeducator employment, roles, and preparation of paraeducators developed by the department of education or other agencies in your state. NOTE: Across the country more and more states are revising or establishing new administrative guidelines or regulatory procedures for paraeducators. In some cases, they apply to all paraeducators, no matter which program they are assigned to. In other states, they may apply to paraeducators working in a specific program such as special or early childhood education. To obtain copies of state standards or credentialing systems contact the Office of Personnel or Human Resources in your district. If the information is not available in the district, ask the staff who you should contact in the State Department of Education.

☐ Demographic and other data available from your school district and/or state about the number of children and youth who come from language and cultural minority heritages.

NRC for Paraprofessionals
Information about the various programs in your district or agency that serve children and youth with special needs including disabilities, limited English, or who come from backgrounds that place them at risk.

BEFORE THE TRAINING BEGINS

1. Obtain the information described above about demographic data, policies and regulatory procedures, job descriptions and personnel practices from your district or state department of education.
2. Review the Background Materials, Information Handouts and Transparencies that are included in this unit and compare the information with the policies and practices established by your district and or state.
3. Review the activities and exercises provided in this unit; select those you feel are the most relevant to the needs of the paraeducators.
4. Prepare a series of brief lectures that describe: 1) the history of the paraprofessional movement, 2) reasons for increased employment of paraeducators and their expanding roles and responsibilities, 3) distinctions and similarities in teacher-paraeducator roles, 4) the contributions paraeducators make to the delivery of education and related services, 5) the professional and ethical responsibilities of paraeducators, and 6) the role of paraeducators in your district in maintaining effective linkages with the agencies.

DURING THE SESSION

1. Begin the session by delivering a lecture that includes: 1) an historical overview of paraeducator employment and contemporary reasons for increased reliance on paraeducators, 2) the emerging roles of teachers as classroom and program managers and supervisors of paraeducators, and 3) the evolution of the roles of teacher aides to paraeducators, 4) describe the contributions paraeducators make to the delivery of transitional and vocational services. Use Transparencies 1, 2, 3 & 4 as an outline.
2. Ask the class to brainstorm a list of the school professionals they assist in the delivery of education and related services. Record the answers on the chalkboard or flip chart.
3. Divide participants into groups of 5 or 6. If they work in different schools and/or programs, organize the groups so they include representatives from the different program areas and buildings. This exercise is divided into two parts. Ask the groups to work together to: 1) compile a list of daily, weekly and periodic tasks performed by paraeducators in different programs or settings, and 2) develop a list of duties performed by teachers and other school professionals not performed by paraeducators.
4. Ask for a volunteer from one of the groups to read the list of tasks performed by paraeducators and record them. Ask for other groups to contribute duties that were not mentioned by the 1st group.
Ask for a volunteer from another group to report on the roles and responsibilities performed by teachers or other school professionals that differ from those of paraeducators. Record them.

Distribute Exercise 1. Use this activity to supplement the previous activity. Divide the participants into new groups. Ask them to review the tasks and determine which activities are: 1) solely the responsibility of teachers, 2) solely the responsibility of paraeducators, or 3) shared responsibilities.

Again, ask groups to share their responses with the class. Clarify role distinctions that may not be fully understood. For example, point out that while it is the responsibility of teachers or other school professionals to diagnose the educational or related services needs of children, paraeducators may be asked to observe and document information the teacher can use in this process. Stress the fact that teachers are responsible for developing modifications of instructional strategies and curriculum content to meet the needs of individual students. Paraeducators may be asked to contribute ideas to the process and will also carry out teacher developed plans and strategies.

Distribute Exercise 2 and use it to further clarify appropriate roles of paraeducators. Ask the participants to work alone and read each situation and then to circle the letter that most accurately describes their feelings. Be sure participants understand that it is O.K. to be unsure and that their responses may differ from other participants because of their years of experience, the approach to supervision used by the teacher they work with, guidelines established by the program and other factors. Ask individuals to share the reasons for their responses. Again stress the fact that it is the responsibility of teachers to diagnose learner needs, plan lessons for a class, and modifications for individuals.

When all of these activities have been completed, lead a closing discussion that stresses the similarities and distinctions in the roles and responsibilities of teachers, other school professionals and paraeducators. Answer questions and concerns raised by the group and make sure the participants understand district and state policies that impact on their roles and responsibilities.

Use Transparency 5 as an outline and deliver the lecture on the ethical and professional responsibilities of paraeducators.

Divide the participants into groups of 4 or 5. Assign one of the role plays to each group. Ask the members of the group to discuss the situation and then develop a script that will enable them to role play the scenario. You might want to ask one group to prepare a positive approach to the situation and another group to violate confidentiality or another ethical/professional responsibility.

Ask the members of the class to watch the different role plays and think about what they would have done under the circumstances and to be prepared to share their ideas or reactions to the situations.
Close with a brief discussion of the contributions paraeducators make to improving the quality and availability of education and related services.

RESOURCES AND WORKS CONSULTED

Before the bell rings: what every paraeducator should know (1995). This video tape and facilitator’s guide are available from the Agency for Instructional Technology, Bloomington, Indiana 47402-0120.

Enhancing the skills of paraeducators: a video assisted program (1995). Available from the Department of Special Education & Rehabilitation Services, Utah State University, Logan, Utah 84322.

PARAEDUCATOR ROLES & RESPONSIBILITIES.

In today's schools several factors have converged that have led to even greater reliance on paraeducators in more complex and demanding roles. They include: 1) the changing demographics in our nation’s schools, 2) the growing awareness of the value of serving all children and youth in inclusive education programs and classrooms, 3) expanding efforts to increase the availability of individualized (personalized) instructional and support services to all students who can benefit from them, and 4) continuing efforts to redefine and restructure the traditionally recognized roles of teachers.

HISTORICAL PERSPECTIVE. It has been more than 40 years since teacher aides were introduced into classrooms to enable teachers to spend more time planning and implementing instructional activities. In the 1950s, a post-World War II shortage of teachers forced local school boards to find alternative personnel and methods for providing education services. As a result of a project sponsored by the Ford Foundation in Bay City, Michigan and research efforts at Syracuse University the value of employing teacher aides was demonstrated. Initially the duties assigned to teacher aides were routine and included record keeping, housekeeping tasks, monitoring students on playgrounds and in study halls and lunch rooms, and preparing materials. The introduction of Title I and Head Start programs in the late 1960s and the passage of P.L. 94-142 in the mid 1970s provided momentum for the employment of paraprofessionals. At the same time greater emphasis began to be placed on their roles in providing direct education and support services to children, youth and their parents.

Indeed, the 1997 reauthorization of the Individuals with Disabilities Education Act (I.D.E.A.) recognized this increased reliance on paraprofessionals in more complex and demanding roles. State and local education agencies are now required to develop policies and infrastructures that will insure that paraprofessionals are appropriately prepared and supervised in order to carry out their assigned tasks. Title I of the Elementary and Secondary Education Act also acknowledges the need for systematic paraprofessional training and supervision.

The need for skilled, committed personnel at all levels, to provide instructional and other direct services to children and youth who have limited English and their families has led to another surge in paraeducator employment. The number of adults and children in the United States whose primary language is other than English is at an all time high. Children and youth served by our nation’s schools speak virtually all of the world’s languages and dialects as well as the more than 100 languages that are indigenous to Native Americans. As a result teachers and other school professionals require the assistance of paraeducators who have a knowledge of and understand the heritages of children and youth who come from diverse cultures and who speak many different languages.

PARAEDUCATORS IN TRANSITION SERVICES. Until the early 1980s, the majority of young people with disabilities were labeled as unemployable and enrolled in "day care programs for adults" when they left school. Sometimes, they found "employment" in sheltered workshops where they usually earned less than the minimum wage. And although they were no longer placed in large institutions many lived in mini-institutions i.e. nursing homes designed primarily

NRC for Paraprofessionals

6 11
to meet the needs of people who were elderly, or multi-bed intermediate care facilities, or group homes where all residents had disabilities. Over the last decade, the efforts of people who have disabilities, their parents and other advocates have paid off. Schools and other agencies are providing training and support to young people that enable them to work in real jobs, to live alone or with friends, or to remain at home with their parents based on personal preference, and to participate in social and recreation activities available to their peers who do not have disabilities. Paraeducators are actively engaged in training and facilitating successful transitions from school to employment, post-secondary education, and supported or independent living. They provide opportunities for students to practice social, problem solving and communication skills in community environments. They support youth with disabilities at work sites and help them learn skills required to be effective workers. They also participate in all phases of the instructional process including: conducting functional assessments, gathering and maintaining data, implementing behavior management programs and using appropriate instructional techniques. And in a few school systems they develop new work study or supported employment placement opportunities for students.

While the roles of paraeducators employed in transition and vocational education programs are similar to their counterparts who work in more traditional classroom settings there are major differences. Because much of their time is spent off campus in community learning or vocational training activities, they have more autonomy with regard to adapting instructional strategies and methods to meet the needs of individual students. They also participate as active members of IEP/ITP team meetings. They are frequently called upon to communicate information and provide assistance to parents. And they serve as liaisons between the school, employers, and personnel in other provider agencies.

DIFFERENCES IN TEACHER AND PARAEDUCATOR RESPONSIBILITIES. The term "classroom teacher" no longer adequately defines the roles and responsibilities of teachers in today’s schools. Teachers manage learning environments and programs. They participate in the development of standards for learner performance. They assist with curriculum development to meet these standards. And as members of school based management teams they help to establish program priorities to meet the needs of learners who have a multitude of learning styles and preferences and education needs. While many tasks performed in learning environments may be shared, there are some functions in the instructional process and the delivery of other direct services that are the responsibility of teachers and other school professionals. Distinctions in the roles of teachers and paraeducators must be clear and must be understood by all team members in order for them to work together as an effective unit. Teachers, no matter whether they work in general, special, bilingual compensatory education or early childhood programs are responsible for diagnosing education and support needs of learners and prescribing the programs to meet these needs. This includes preparing lesson plans for an entire class and modifying strategies and curriculum content to meet the instructional objectives established for individual students. Teacher responsibilities do not end with implementing the plans. They must also evaluate program effectiveness and assess learner performance and mastery of skills and knowledge.
As school districts move to serve all children and youth in inclusive classrooms and programs, the roles of teachers are continuing to evolve. To effectively provide services to students with diverse learning styles, ability levels and other special needs differentiated staffing arrangements are emerging. Teachers in general, special and compensatory education must consult with each other as well as parents and school professionals representing other disciplines. They must also meet regularly with paraeducators to: 1) share information about the goals and objectives for the class and individual students; 2) discuss how curriculum content and instructional strategies will be appropriately modified to meet the needs of individuals; 3) assign tasks to paraeducators; and 4) provide on-the-job training for paraeducators.

PARAEDUCATOR ROLES. Changes in the roles of teachers and other school professionals have had a profound impact on the nature of paraeducator roles and responsibilities. While they still perform clerical tasks, prepare and duplicate materials, and monitor students in non-academic settings, paraeducators are integral members of education and related services teams.

Under the supervision of teachers or other licensed personnel, paraeducators instruct individual and small groups of students, assist with observation and other functional assessment activities, assist students with independent study and other projects, administer standardized tests (teachers analyze and interpret test results), implement behavior management programs and discipline strategies developed by the teacher, and provide opportunities for students to practice and master skills in the community and other learning environments.

Paraeducators who are bilingual, translate between school professionals and students and in some cases their parents. Frequently they help teachers and other school staff to more fully understand how traditions, beliefs and value systems may influence the learning styles of children and youth who come from diverse language, cultural and ethnic minorities. There is also a rapidly emerging trend of asking paraeducators assigned to facilitate the inclusion of children and youth with disabilities into general education to participate in meetings to develop individual education plans (IEPs) and individual transition plans (ITPs).

While this instructional program does not focus on the growing demands for therapy and other related services to serve children and youth with physical and sensory disabilities and communication disorders it is important for paraeducators to have an understanding of the roles of speech-language pathologists and physical and occupational therapists and nurses. The supervisory relationship between paraeducators and related services personnel is similar to that of teacher-paraeducator teams.

SPEECH-LANGUAGE PATHOLOGISTS (SLPs). Changes in education service delivery systems, increasing numbers of children and youth who need services for various communication disorders, and technological advances have resulted in an expanding scope of practice for the profession of speech-language pathology. SLPs are integral to the rehabilitation of students with traumatic brain injury and for students developing communication skills through augmentive/alternative communication systems. They work with students who are deaf or have hearing impairments, students with learning disabilities and
language impairment as well as students with articulation problems. Students who receive SLP services are assigned to various programs including elementary, middle and secondary classrooms, special, bilingual and compensatory education, early childhood programs and transition services.

PHYSICAL THERAPISTS (PTs) teach skills in safely lifting and transferring students. They are experts in the use of assistive and supportive devices that improve mobility of students as well as using exercises with and without equipment that improve muscle strength and the range of motion in joints that can assist in walking, sitting, feeding, writing, using a keyboard and other activities of daily living. In many cases, the students they work with are placed in general education classrooms and do not require assistance in academic programs. The work of PTs often precedes that of OTs and SLPs.

OCCUPATIONAL THERAPISTS (OTs) are skilled in using the muscle strength and range of motion developed by physical therapists to adapt and teach activities of daily living. They determine adaptive equipment needs for individual students and identify classroom modifications that will facilitate inclusion of children and youth with physical and sensory disabilities into general education programs. It helps to improve the understanding of the roles of OTs by saying that people of different ages have different occupations. For example, the work of young children is play and the occupation of school age students is learning and acquiring other skills that will enable them to be active participants in the life of their school and community when they make the transition from school to work or post-secondary education (Longhurst, in Pickett & Gerlock 1997).

NURSES. School nurses provide specialized health/medical procedures that enable children and youth who are medically fragile, and who have physical and sensory disabilities who might otherwise be excluded from education programs, to attend and participate in learning activities. Some of the health/medical procedures performed by or supervised by nurses include, but are not limited to, gastronomy and other feeding mechanisms, nebulizer treatments, catherization, administering medications, training agency/school staff to follow universal precautions and more.

PROFESSIONAL/ETHICAL DUTIES OF PARAEDUCATORS. As members of the education team, paraeducators have special relationships with teachers and other colleagues, students, parents, and members of the community. The effectiveness of these relationships depends not only on the quality of their work performance, but also on the professional and ethical conduct demonstrated on the job. Respecting the human rights of children and youth, their parents and colleagues; maintaining confidentiality about all information connected with students and their families; following district policies and procedures; being dependable and cooperative; and demonstrating a willingness to participate in opportunities for professional development are just a few of the professional responsibilities of paraeducators.

Professional responsibilities do not end at the close of the school day. Paraeducators like all school personnel are representatives of the school district or agency in the community. And as states and communities expand the availability of opportunities for all students to strengthen
skills in community based learning environments, growing numbers of paraeducators are in daily contact with broad segments of the public. In urban, suburban and rural areas everywhere, paraeducators usually live in the local community. And, because their roots are there, they serve as valuable resources for sharing personal knowledge and an understanding of cultural heritages, traditions and values of the community with colleagues. Further, they can be effective liaisons between the school and community if they are familiar with the purpose, philosophy and importance of various school programs. This will enable them to promote community involvement and increase understanding by interpreting goals and activities of the school to friends, relatives and neighbors.

MAINTAINING CONFIDENTIALITY. As part of their jobs, paraeducators have access to personal information about children and youth and their families including: 1) the results of formal and informal tests, 2) behavior in classrooms and other education settings, 3) performance, and ability levels, 4) family relationships, 5) family income or economic status, and much more. The information may be contained in school records, learned from a student or family members, observed in class or in a student's home, or be related by other school personnel. Both the student and the family have an absolute right to expect that all information will be kept confidential, and made available only to personnel in the school or another agency who require it to ensure that rights, health and physical well being of the child or youth are safeguarded. All state and local education agencies have procedures for protecting privacy. Paraeducators need to know these regulations and be prepared to follow them. In general, paraeducators should share concerns about the well-being and safety of a child or youth with the teacher or another staff member who is designated to play a role in the protection and welfare of the student—and no one else.

CONTRIBUTIONS OF PARAEDUCATORS. In sum, there are several ways paraeducators help to improve the quality of educational programs and instructional activities. Probably the most important contributions they make are tied to meeting the instructional objectives for individual and small groups of students. Paraeducators enhance the quality of education and related services in the following ways: 1) programs become more student oriented; 2) personalized instructional support for individual students can be increased; 3) teachers have more time to: a) study and assess the needs of each student, b) confer with colleagues and parents, c) diagnose problems, d) prepare and plan for individualized instruction, and e) test and assess a broader range of teaching techniques and strategies.
REASONS FOR INCREASED EMPLOYMENT OF PARAEDUCATORS

✓ FEDERAL AND STATE LEGISLATIVE MANDATES

✓ CHANGING DEMOGRAPHICS NATIONWIDE

✓ EXPANDING NEED FOR COMPENSATORY (REMEDIAL) EDUCATION

✓ INITIATIVES TO RESTRUCTURE EDUCATION SYSTEMS AND REDEFINE TEACHER ROLES

ERIC for Paraprofessionals
ROLES OF TEACHERS IN TRANSITION PROGRAMS

THEY ARE RESPONSIBLE FOR:

✔ ASSESSING STUDENT PERFORMANCE LEVELS AND DIAGNOSING THEIR EDUCATION NEEDS

✔ CONSULTING WITH COLLEAGUES AND PARTICIPATING IN THE PREPARATION OF EDUCATION PLANS

✔ DEVELOPING INSTRUCTIONAL OBJECTIVES AND PREPARING LESSON PLANS

✔ MODIFYING INSTRUCTIONAL METHODS AND CURRICULUM FOR INDIVIDUAL STUDENTS

✔ IMPLEMENTING INSTRUCTIONAL PROGRAMS ALONG WITH PARAEDUCATORS

✔ EVALUATING THE EFFECTIVENESS OF PROGRAMS AND STUDENT PERFORMANCE

✔ INVOLVING PARENTS IN ALL ASPECTS OF THEIR CHILD'S EDUCATION

✔ COORDINATING THE DEVELOPMENT OF NEW WORKSITES & MAINTAINING LIAISONS WITH REHABILITATION AND OTHER PROVIDER AGENCIES

✔ SUPERVISING THE WORK OF PARAEDUCATORS AND OTHER SUPPORT STAFF
PARAEDUCATORS ARE SCHOOL EMPLOYEES

1. WHOSE POSITIONS ARE EITHER INSTRUCTIONAL IN NATURE OR WHO DELIVER OTHER DIRECT SERVICES TO LEARNERS AND/OR THEIR PARENTS;

AND

2. WHO WORK UNDER THE SUPERVISION OF TEACHERS OR OTHER PROFESSIONAL STAFF WHO HAVE RESPONSIBILITY FOR THE DESIGN, IMPLEMENTATION, AND EVALUATION OF EDUCATION AND RELATED SERVICES PROGRAMS AND LEARNER PROGRESS.
PARAEDUCATORS WORK IN

- INCLUSIVE GENERAL & SPECIAL EDUCATION CLASSROOMS
- PROGRAMS SERVING CHILDREN AND YOUTH WHO HAVE LIMITED ENGLISH
- TITLE I AND OTHER COMPENSATORY (REMEDIAL) PROGRAMS
- EARLY INTERVENTION & PRE-SCHOOL PROGRAMS
- DROPOUT PREVENTION PROGRAMS
- TRANSITIONAL TRAINING, SUPPORTED EMPLOYMENT & OTHER COMMUNITY BASED INSTRUCTIONAL PROGRAMS
- PHYSICAL, OCCUPATIONAL & SPEECH-LANGUAGE THERAPY PROGRAMS
- HEALTH SERVICES
- LIBRARIES & COMPUTER LABS
DUTIES OF PARAEDUCATORS IN TRANSITIONAL/VOCATIONAL PROGRAMS

PARAEDUCATORS ARE ACTIVE TEAM MEMBERS WHO:

✓ CONSULT REGULARLY WITH TEACHERS

✓ OBSERVE AND RECORD INFORMATION ABOUT STUDENT PERFORMANCE AND BEHAVIOR

✓ PARTICIPATE IN IEP/ITP MEETINGS

✓ INSTRUCT AND SUPERVISE INDIVIDUAL AND GROUPS OF STUDENTS IN WORK SITES AND OTHER COMMUNITY BASED LEARNING ENVIRONMENTS

✓ SHARE INFORMATION WITH PARENTS/CAREGIVERS/STUDENTS ABOUT COMMUNITY RESOURCES

✓ SERVE AS A LINK BETWEEN SCHOOLS AND WORKSITES
PARAEDUCATOR PROFESSIONAL AND ETHICAL RESPONSIBILITIES

➢ Respect rights of students and parents/caregivers

➢ Protect health and safety of students

➢ Maintain confidentiality

➢ Demonstrate knowledge in role distinctions of education personnel

➢ Follow directions of supervisory professionals

➢ Demonstrate integrity, respect for diversity and other standards of ethical conduct

➢ Demonstrate willingness to participate in staff development opportunities
**TEACHER/PARAEDUCATOR ROLES***

**DIRECTIONS:** Review the tasks in the following list with your group. Determine which activities are: 1) the teacher’s responsibility, 2) the paraeducator’s responsibility, or 3) can be shared by the teacher and paraeducator. Put an X in the appropriate column.

Below are descriptions of some situations an instructional team might encounter in their day to day work no matter whether they are assigned to work in general, special, ESL/bilingual education or Title I programs. **DIRECTIONS:** circle A if you think the activity/function is an appropriate duty/role for a paraeducator, I if you think it is inappropriate, or U if you are unsure. Briefly describe why you responded the way you did and be prepared to discuss your reasons with other participants.

**A**  **I**  **U**  The paraeducator has been employed by the district because the number of Korean students enrolled in the school system is increasing. She was selected because she speaks Korean, lives in the community and understands the cultural heritage of the students. She is assigned to several teachers. Two of the teachers have asked her to participate in meetings with parents. The district's job description for paraeducators does not mention the role of paraeducators in working with or communicating with parents.

Reason:

**A**  **I**  **U**  Peggy, a student with physical and developmental disabilities, has been integrated into general math and social studies classes. Her IEP calls for the paraeducator to accompany and stay with her in case she needs assistance. The math teacher asks the paraeducator to run off worksheets for the entire class.

Reason:

**A**  **I**  **U**  It is 1:00 in the afternoon and the teacher has become ill. Both the paraeducator and the principal know she needs to go home immediately. The principal asks the paraeducator to take charge of the class for the rest of the afternoon.

Reason:

---

*The concept for this activity was originated by Lowell Alexander, an administrator in the Wyandotte County Special Education Cooperative, Kansas.*
ROLES OF THE PARAEDUCATOR, cont.

A I U It is the end of the year, the teacher has scored the final exams and completed the annual reviews of student performance. She asks the paraeducator to enter them into the individual student's master files.

Reason:

A I U There are several students in the class who have different learning styles and preferences. The teacher asks the paraeducator to work with them individually and in small groups. He describes the teaching strategies and the instructional materials he wants the paraeducator to use with the individual students. As the paraeducator begins to work with the students, she discovers that the instructional strategies suggested by the teacher are not effective methods for working with some of the students. So she uses some ideas and suggestions she has heard about from other paraeducators. She also brings in books and other resources she has used with her own children.

Reason:

A I U The teacher and paraeducator have worked together for several years. The teacher knows that the paraeducator has extraordinary musical talents. She asks the paraeducator to decide what the class should do for the Spring Music Festival and then to rehearse them.

Reason:
SITUATION 1

The Background

Lurleen Thomas is a paraeducator who works in a middle school. Stanley Parsons, one of the students in the class Lurleen is assigned to, attends the same church she does.

Timothy Smith is the new, young minister at the church who has made counseling youth and their parents an important part of his ministry. This is a new program for the church because the last minister was quite elderly and did not see this as part of his role. One evening after a church dinner, Reverend Smith asks Lurleen if she can provide him with some information about how she thinks Stanley is doing in school—he understands from Stanley's parents that he has not been doing well academically, frequently plays hooky, and has been caught smoking on school grounds on several occasions. Reverend Smith is obviously concerned about assisting Stanley and his family. He is also very charming and persistent. Lurleen has a great deal of respect for him and thinks this is an important service for the church to provide. Role play the situation.

SITUATION 2

The Background

The school board has completed work on this year’s budget and it will be voted on at the next election. The state has reduced its contribution to the district and local property taxes are going up. Justine Smith is a paraeducator. Every time she runs into her neighbors, the Formaneks, they start to complain about their increased taxes. They have a long list of what is wrong with the schools. They are particularly upset about the raises that are proposed for all school employees including the superintendent, teachers, paraeducators and other support staff. It is the strongly held view of the Formaneks that no one deserves an increase in pay since the schools are so poorly run, kids can’t read nor are they properly prepared to find or hold jobs after they graduate. In addition, they can see no earthly reason to spend their hard earned income on kids who have disabilities. These services are just too expensive. Role play a conversation between Justine and the Formaneks.
SITUATION 3

The Background

Jerome Liu is a new paraeducator who is assigned to a third grade class. Before he started to work he was told by the principal that he was required to maintain confidentiality about the lives and records of the students he works with. He has just walked into the teacher’s lounge where he encounters Mrs. Jones, a fourth grade teacher who has been at the school for more than 35 years. She knows most of the families and frequently has something to say about their life styles and the way they raise their children. She also believes that if some students are “trouble makers” their brothers and sisters will be as well. This year she has Oscar Patterson in her class and he is behaving exactly like his brother Billy did two years before. She knows that Rachel, their younger sister, is in Jerome’s class. She starts the conversation by reporting on the things Oscar did today to “make her crazy.” She pushes Jerome to talk about Rachel. Jerome is very fond of Rachel and thinks she is wonderful. He is taken aback that Mrs. Jones talks so openly about her students, asks him so many personal questions about Rachel and does not seem to believe him when he says Rachel is very bright. He is also acutely aware that Mrs. Jones is admired and respected by the principal and parents. Role play this situation.

SITUATION 4

The Background

Eva Hernandez is a paraeducator assigned to a transitional training program for teenagers. At the present time she is preparing Keith Beeman to work in the housekeeping department of a local hotel. Two of the employees start to ask her questions. At first they are about the program and easy for her to handle. But then they start to ask personal questions about Keith and why he acts the way he does. One of them thinks she even has some information that will help Eva because she lives next door to the Beemans and has a pretty good idea about what is wrong with Keith, and why he behaves the way he does. She is also upset because the Beemans don’t control their children, let them “run wild” through the neighborhood, and never mow their yard. Role play the situation.
PARAEDUCATORS: A DEFINITION

Paraeducators are employees:

1) whose positions are either instructional in nature or who deliver other direct services to learners and/or their parents; and

2) who work under the supervision of teachers or other professional staff are responsible for the design, implementation and evaluation of instructional programs and the assessment of learner progress.

Paraeducators provide services in the following programmatic areas:

- educational programs
- physical therapy
- occupational therapy
- speech language pathology
- early intervention and preschool programs
- social work/case management
- parent training
- transition training
- supported employment or other vocational education programs
- libraries & computer labs
- health services.

ROLES OF TEACHERS

Teachers are responsible for:

✓ Assessing performance levels and diagnosing education needs of students.

✓ Consulting with colleagues and parents participating in the preparation of individualized education plans (IEPs).

✓ Developing instructional objectives and preparing lesson plans.

✓ Modifying instructional strategies and curriculum content for all learners who can benefit from personalized attention and programs.

✓ Implementing instructional programs along with paraeducators and other support staff.

✓ Evaluating the effectiveness of programs and learner performance.

✓ Involving parents in all aspects of their child's education.

✓ Coordinating and supervising the work of paraeducators and other support staff.
DUTIES OF PARAAEDUCATORS IN TRANSITION/VOCATIONAL PROGRAMS

Paraeducators participate as active team members by:

✓ Consulting regularly with teachers about student performance during community based and vocational training.

✓ Participating in IEP/ITP meetings for individual students.

✓ Instructing and supervising individual and small groups of students in:
  • classrooms
  • community based learning environments
  • worksites

✓ Demonstrating effective social, communication and problem solving skills to help students learn self-confidence, self-reliance and achieve as much autonomy as possible.

✓ Using appropriate instructional strategies to help students learn skills required to live and work in the community.

✓ Analyzing tasks and developing teaching sequences.

✓ Using functional assessment instruments (checklists, duration/frequency charts, etc.)

✓ Collecting and recording data about student performance.

✓ Maintaining records required by the district or employers.

✓ Implementing behavior management strategies established for individual students.

✓ Providing parents and other caregivers with information and assistance they can use to gain access to resources and support services for their child.

✓ Serving as a link between the school and worksites or other community settings.
PROFESSIONAL AND ETHICAL RESPONSIBILITIES FOR ALL PARAEDUCATORS

A paraeducator must:

✓ Respect the human and legal rights of children, youth and their families.
✓ Respect the individuality of all children and youth.
✓ Follow district policies for protecting the health, safety and well-being of children and youth.
✓ Maintain confidentiality about all personal information and educational records concerning children, youth and their families.
✓ Demonstrate an understanding of the distinctions in the roles of various education personnel.
✓ Follow the directions of teachers and other supervisors.
✓ Maintain a record of regular attendance, arrive and depart at specified times, and notify appropriate personnel when they must be absent.
✓ Demonstrate dependability, integrity and other standards of ethical conduct.
✓ Follow the chain of command for various administrative procedures.
✓ Demonstrate a willingness to participate in opportunities for continuing education provided by the district.

MAINTAINING CONFIDENTIALITY

Why must confidentiality be maintained?

✓ Federal laws, state regulations, and local policies require it.

Who may have access to written or oral information about children and youth or their families?

✓ Only teachers or other personnel responsible for the design, preparation, and delivery of education and related services; and/or personnel with responsibility for protecting the health, safety and welfare of a student.
Who should not have access to information about the performance level, behavior, program goals and objectives or progress of a student?

✓ Teachers, therapists or other personnel, relatives or people in the community not responsible for planning and providing services or maintaining the safety, health and well being of students.

What information do children/youth and their families have the right to expect will be kept confidential?

✓ The results of formal and informal assessments
✓ Social and behavioral actions
✓ Performance levels and progress
✓ Program goals and objectives
✓ All information about family relationships and other personal matters
UNIT 2

COMMUNICATION AND PROBLEM SOLVING

OVERVIEW

As the roles of paraeducators have expanded and become more complex and challenging, their need for effective communication and problem solving skills has also increased. Their duties as members of the education team bring them into direct contact with a multitude of people with different roles and levels of responsibility for planning, providing and evaluating education services for children and youth and their families.

The activities and content in this unit stress the value and importance of establishing and maintaining open lines of communication and building consensus, mutual trust, and respect between members of instructional teams. Achieving these goals can help reduce misunderstandings when teachers must make decisions that paraeducators may not fully appreciate or agree with.

Paraeducators assist and work alongside their professional colleagues in schools and other agencies delivering education and related human services. They are frontline representatives of the school as they train students in a broad range of community based learning environments. And finally, but of the utmost importance, are the relationships they have with the children and youth they come into contact with daily.

One of the most important keys to being a successful team member is effective communication. The communication skills required by all participants in the education team are the same and are intertwined with social skills, coping skills, helping skills, listening skills and problem solving skills. These skills do not necessarily develop automatically as part of the aging process. They must be learned, practiced and nurtured.

The various activities in this module are designed to provide paraeducators with skills that will enable them to communicate effectively—no matter where they work, what their job is, or who they interact with. They will have an opportunity to assess their own individual strengths in the area of communication and problem solving and to identify areas they want to strengthen. Role plays, brainstorming, small group discussions, and other exercises will enhance their helping, listening, communication and problem solving skills.
INSTRUCTIONAL OBJECTIVES

Paraeducators will:

1) Assess their communication and social skills.

2) Develop skills to communicate more effectively with professional colleagues, children, parents and others they work with.

TIME REQUIRED

The time required to complete this module will depend on the number of activities selected by the trainer. The recommended time is a minimum of three hours.

EQUIPMENT AND MATERIALS REQUIRED

☐ Overhead and screen. Or, if you prefer write the content in the transparencies on the flipchart or chalkboard.

☐ Flipchart and easel or chalkboard.

☐ Copies of the handouts and exercises for all participants.

BEFORE THE TRAINING

☐ Review the Background Information, Handouts, Exercises and other suggested activities, as well as other resources you may know about that are designed to enhance communication, social and problem solving skills. The role plays contained in this unit are based on events that happen day in and day out to teachers, paraeducators, and other members of the instructional team. In addition, you may want to develop your own role plays that describe situations unique to your school or agency.

☐ Select the activities most appropriate to the needs of the participants.

☐ Prepare a series of brief lectures. Stress the value and importance of using positive communication and social skills as one means for participants to: 1) increase their own self-esteem, cope with stress, control emotions and stand up for their human and legal rights; 2) reduce barriers to becoming an effective team member; and 3) assist children to learn and use the same skills in order to avoid isolation in classrooms or in the community when they leave school, build self-esteem, increase self determination.

DURING THE SESSION

☐ Begin the session by asking participants to work together for five minutes in groups of 3 or 4 and make lists of various ways people communicate with each other. Record the responses. Lead a discussion of how these various forms of communication are used in education environments and how they impact on relationships among staff, students, and
Distribute Information Handouts 1, 2 and 3; “Basic Strategies for Clear Communication Between Teachers and Paraeducators,” “Tips Paraeducators Can Use to Build Effective Relationships With Children and Youth” and “What Paraeducators Need to Know About Teachers.”

Briefly discuss and elicit responses from participants about barriers to effective communication and interaction among paraeducators, students and teachers. (Use Transparencies 1, 2 & 3 as a guide for the discussion.)

Introduce and distribute Exercise #1, “The Social Skills Inventory.” Stress that this is not a test and is designed to enable participants to identify social/communication skills they would like to improve. Then ask the participants to work alone and identify which of these skills are most important to the children they work with in order to help them develop effective relationships with their peers and adults and to achieve greater independence. This activity usually generates a great deal of discussion, so allow plenty of time to respond to questions and concerns.

Distribute Information Handouts 4 & 5. Encourage participants to contribute to the discussion by describing why and how some social and learning skills are more complex and demanding and how this influences the behaviors of children who are in different stages of development.

When the exercise is completed, ask participants to review the items and identify the skills that will be most critical for students when they leave school and move into the adult world.

Deliver the lecture on the value of practicing active listening and positive/assertive communication skills. (Use Transparency #4 as a guide for the discussion.)

Introduce the importance for each of us, no matter whether we are adults or children, to learn to monitor and maintain control of our emotions, and to be able to share our feelings with others.

Divide participants into groups of 4. Ask the individuals in the groups to think about and discuss what happens to them when they try to make decisions or choices when they are feeling strong emotions (fear, anger, excitement, joy, sadness.) You may want to ask participants to think about these issues in terms of the following scenario: How do you feel when you are left out of a social event, or are excluded from a meeting or decision making, at work or somewhere else? How do you feel when you are included? How do you react in these different situations? Then ask the groups to think about the implications of their responses in connection with working with students who experience similar feelings but do not have skills they need to control their emotions or share their feelings. Ask the groups to share their responses.

Now, ask the individuals in the same groups to think about and discuss strategies they use...
to remain calm when they feel strong emotions. After they complete the first part of this activity, ask them to brainstorm a list of ideas they could share with students that might enable them to stay calm, relieve tension, "cool down," "chill-out." Ask them to classify their ideas in terms of age and site appropriateness. (Would you use this strategy with preschool, elementary, middle or high school children and youth? Would you use this strategy in the classroom, lunchroom, community learning environment, or home?) Ask the groups to share their suggestions with the class. List them on the chalkboard so participants can take notes about idea they may want to discuss with the teacher in their classroom.

- Briefly describe the value of "I Messages" in helping both children and adults to share their feelings about issues or circumstances that bother them. Be sure that the participants understand the three components of "I Messages." See Information Handout #6.

- Ask the entire class to brainstorm a list of "feeling words," that describe a wide range of emotions.

- Distribute Exercise #2. Ask individual participants to write "I messages" that respond to the scenarios. Stress the need to incorporate the three components: 1) the feeling, 2) the situation, and 3) the reason. Then ask the participants to share examples of their "I messages" and discuss their responses.

- Divide the class into pairs. Ask them to describe information about a student they work with who has disruptive behaviors. Then ask them to discuss which techniques and skills discussed during the lesson could help the student control their emotions, or become more confident or self-reliant.

- Distribute Information Handout #8, "Interpersonal Problem Solving." Briefly discuss the approach to problem solving.

- Divide the participants into groups of 4 or 5. Distribute Exercise 3 and the Worksheet to each group. Assign one of the role plays to each group. Ask the groups to use the five step method for problem solving to identify problems and develop solutions. When they have completed the first part of the activity ask them to prepare a script that incorporates the problems and solutions and be prepared to role play it for the class. (The Worksheet will serve as a guide for identifying the problems confronting the people in the situation and preparing a script.) Suggest that participants who play the different characters use passive, aggressive or assertive methods of communication, depending on how they think the character would react in this situation.

- After each group has presented its role play, lead a discussion with all participants about their reactions to the communication methods used by the participants and the solutions.

- Close the session by responding to concerns and issues shared by the participants with regard to specific problems.

COMMUNICATION AND PROBLEM SOLVING

INTRODUCTION. The purpose of this unit is to strengthen communication and problem solving skills that will enhance the ability of paraeducators to effectively work with other team members, children and youth and their parents/caregivers.

REMOVING BARRIERS TO DEVELOPING EFFECTIVE TEACHER AND PARAAEDUCATOR PARTNERSHIPS. All too often administrators, practitioners, parents and other stakeholders assume that all schools, classrooms or other education settings are pretty much alike. Nothing is further from the truth. The management and environment of individual schools and programs reflect the styles and philosophies of administrators and staff, the education needs of the children, community values and cultural heritages. To begin the process of developing effective teams, it is important for administrators to provide an orientation to paraeducators about the education philosophy and goals of the programs offered by the agency and professional and ethical practices that all staff are expected to follow no matter who they are and their relationship to children and their families.

Of more direct consequence for the instructional teams is the need for teachers or other supervisors to clarify for paraeducators the structure, the methods, and techniques they prefer to use in all phases of the instructional process and classroom management. Paraeducators frequently work with more than one teacher or supervisor and may be expected to perform different tasks with different degrees of responsibility in similar programs. All teachers have different approaches to integrating paraeducators into the learning process and other classroom activities. One teacher may prefer to be solely responsible for determining instructional goals and then modifying them to meet the needs of individual learners; and then to provide specific directions to the paraeducator about what is to be done, how it will be done, and how the paraeducator will be monitored. Another teacher may ask the paraeducator to share ideas and participate in the decision making/planning process. Still a third teacher may tend to be non-directive and prefer the paraeducator to observe and ask questions about what the teacher does and then to model the strategies. Without mutual awareness and understanding of individual teacher’s idiosyncrasies it is very possible that the effectiveness of the team will be limited. Content in the following sections along with the Information Handouts contain information about communication skills and a problem solving process paraeducators can build on to become more effective team members.

COMMUNICATION SKILLS.* Each of us has our own unique style of communicating and interacting with others. We convey ideas and information, demonstrate competence and provide support orally, in writing and through sign language. We communicate respect or lack of it ________________

*Some of the material in this section has been adapted from: *A core curriculum and a training program to prepare paraeducators to work in center and home based programs for young children with disabilities from birth to five*, (1993). NRC for Paraprofessionals, CASE/CUNY.

NRC for Paraprofessionals
through body language and facial expressions. Effective communication is an integral part of the social skills we require to make and keep friends, cope with stress, share feelings and maintain control over our environment.

To effectively convey the messages we want others to receive and act on requires different types of interactive skills. Interactive skills are the skills that enable us to be comfortable with other people, to let other people know that we are interested in them, respect their ideas, and care about them. In short, these skills ensure that we can avoid living in isolation.

A review of the literature indicates that perhaps the most important element for developing effective interactive skills is to become an active listener.

ACTIVE LISTENING. For most of us active listening is an under-recognized and under-developed skill. It is the skill that allows us to hear facts and understand the feelings, the needs, and the requests for help from other people. There are many factors that may affect our ability to receive the messages others want to share with us. They include our personal biases/prejudices about the other person(s); preconceived notions about the situation or the circumstances; our individual value systems; our emotional state; environmental factors (uncomfortable seats, extreme temperatures, noise, poor lighting); short attention spans and more.

In order to engage in active listening we need to try to prevent prejudices and strong emotions such as anger or frustration from distorting reception, block out distractions, ask questions to clarify what is being said, become involved by paraphrasing what is being said. (See Information Handout #4 for supplemental material.)

PROVIDING FEEDBACK AND EXPRESSING FEELINGS. Interpersonal skills enable us to share our emotions and ideas honestly and fully with others and to demonstrate respect for the feelings, values and cultural heritages of others. They also allow us to relate effectively and avoid miscommunications that may lead to disagreements with our families, friends, the children and youth we work with, our colleagues and other people we come into contact daily. Typically communications skills used by most people fall into three basic categories including:

NON-ASSERTIVE (PASSIVE) BEHAVIOR. Acting non-assertively is an ineffective way of communicating. Individuals who are generally non-assertive have difficulty expressing opinions, beliefs and feelings. They do not stand up for their legitimate rights and may feel as though they are being taken advantage of by others. People who do not share their insights, feelings and thoughts frequently withhold valuable information from others, thus preventing change and hindering the growth of relationships.

AGGRESSIVE BEHAVIOR. Acting aggressively is another ineffective way of communicating. People who respond aggressively violate the rights of others. Moreover they do not respect the
feelings and contributions of others. They frequently try to “score points” by yelling, being sarcastic, using the put down and humiliating others. People who demonstrate aggressive behaviors also try to impose their attitudes and values on others and in many cases criticize a person rather than actions. Many people confuse assertion and aggression. It is important to recognize the differences and learn to be assertive rather than aggressive.

**POSITIVE/ASSERTIVE COMMUNICATION.** Assertive behavior allows individuals to stand up for their legitimate rights. It involves the ability to express thoughts and feelings in an honest, straight-forward fashion that shows respect for others. Being assertive does not mean using the same style all the time. At times assertive individuals may use “I messages,” e.g., I believe, I feel, I think. At other times assertive people may use humor, or sometimes they may use special knowledge and serve as an expert. People who have assertive skills are able to monitor and choose the behaviors they will be able to use comfortably in a particular situation. (See Information Handout #6 for a description of “I Messages.”)

Before moving on to a discussion of how paraeducators can support teachers in their efforts to strengthen the communication, social and problem solving skills of children and youth, there are two other points that need to be made about strategies for eliminating communication problems that impact on a team’s performance. They are:

**ELIMINATING JARGON.** A major problem that may impede the development of a strong team effort is a lack of a common base of reference and understanding. Education professionals tend to know and use the same jargon in connection with student performance, assessment techniques, program planning and educational methods. Frequently the jargon becomes a form of shorthand and “educationalese” that allows professionals to communicate comfortably with each other while excluding others from participating in the educational process (e.g. parents, students, paraeducators).

**DEVELOPING NON-VERBAL COMMUNICATION SKILLS.** In addition to the need for instructional team members to develop and strengthen verbal communication skills, they also need to develop a set of non-verbal cues that will enable them to reduce disruptions in all phases of the daily routine. By systematically using silent cues that do not require oral directions and responses to problems in the midst of instructional activities, the team will be able to increase productivity, operate more efficiently in a crisis-situation, and establish a positive approach to communication. They may be preplanned, or as the team becomes better acquainted and more sensitive to each others mode of operation and student behaviors they may become spontaneous.

**PROBLEM SOLVING AND DECISION MAKING.** The following sections address problem solving and decision making from two perspectives. The first looks at skills that influence the ability of teacher-paraeducator teams to work together. The second will provide paraeducators with skills and information they can use to help children and youth learn how to monitor and control their behaviors and emotions.
STRENGTHENING TEACHER AND PARAEDUCATOR TEAMS. Many times, because of the pressures of other duties education teams may ignore or postpone dealing with a problem that involves disagreements or conflicts with the other adults with whom they work. In many cases this may accentuate differences among individuals involved in planning and implementing education and related services. It is necessary for the people involved to decide on a course of action. Finding mutually acceptable solutions is not always easy, and the responsibility for developing effective procedures for alleviating problems are likely to be left to the teachers and paraeducators with little outside assistance or support.

A PROBLEM SOLVING TECHNIQUE.

The following are a series of steps that can be used by teachers and paraeducators to improve their ability to work together. While this approach to problem solving is based on people working together to achieve consensus, there are in fact times when it is necessary for teachers and other supervisors to make decisions that paraeducators may not always fully appreciate, or agree with. However, by maintaining open lines of communication and mutual trust these problems should be few and far between.

STEP ONE: IDENTIFYING AND DESCRIPTING THE PROBLEM. A situation must be clearly understood. If concerns and issues cannot be stated clearly, it is impossible to choose a course of action that will lead to a satisfactory solution. Everyone involved in a situation should describe the problem in their own words and from their own point of view. This may be done by asking and answering these questions: “What is the problem?” “Who is involved?” “Who is affected?” “How are they affected?”

STEP TWO: DEFINING AND DETERMINING THE CAUSES OF THE PROBLEM. It is not enough to identify the problem. It is essential to determine what has created the problem and causes it to persist. For example, the problem may be caused by “outside conditions” (contractual agreements, a lack of financial resources) that an instructional team may have little ability to change, or it may have its roots in a lack of understanding of the distinction between the roles and duties of teachers, other professional personnel and paraeducators. Other factors that may influence how a problem is defined may include differences in values and attitudes, age, work experience and education, cultural heritage or religious beliefs. Still other concerns may be connected with the move to restructure education systems and procedures, efforts to provide education services in community based and learning environments, and the need to involve parents and other caregivers in all aspects of their child’s education. It is important that the real problem be separated from surface events and that areas of agreement and disagreement be identified.
STEP THREE: DECIDING ON A GOAL AND IDENTIFYING ALTERNATIVE SOLUTIONS. Once the problem has been identified, then strategies can be developed. The primary question that needs to be asked and answered is, “What do we want to achieve and how can we go about achieving it?” By working together and brainstorming a list of alternative solutions to the problem the team members will have several options that will enable them to choose a course of action with which they all can live. It will also enable them to determine what additional information, physical or human resources, skills or knowledge they will need to carry out the solution and whether or not these resources are essential to achieving the goal.

STEP FOUR: SELECTING AND IMPLEMENTING A COURSE OF ACTION. To make a decision about which course of action will be tried, the participants should decide which solution is most likely to get the desired results. Agreeing on a solution is not enough. The participants must try it out and test it to see if it will work. They must also give it enough time to see if the solution will work since behaviors and new skills cannot be changed over night.

STEP FIVE: EVALUATING THE RESULTS. Has the problem been resolved? Is there progress? If not, why not? Should we try another one of the alternatives? Should we ask for assistance from other sources? All of these are questions that will need to be addressed in order to assess the effectiveness of the process.

HELPING LEARNERS STRENGTHEN COMMUNICATION, SOCIAL, AND PROBLEM SOLVING & DECISION MAKING SKILLS. Over the last decade and a half, researchers and education practitioners have identified social skills and problem solving skills as critical methods for enabling children and youth to succeed while they are growing and developing, and to successfully make the transition from school to work, post-secondary education, and to live independently or with support in the adult world.

Teachers, paraeducators, and other members of the education workforce increasingly are working with children and youth who are labeled as having “challenging,” “inappropriate,” “disruptive,” “aggressive,” and “problem” behaviors. While these terms may be used to describe children who are withdrawn (or who do not eagerly participate in learning activities for other reasons) they are more likely to be used to describe children who are physically aggressive, do not stay on task or actively demand attention in a myriad of other ways.

There are many reasons for helping children and youth learn more effective social skills, communications skills and problem solving skills while they are in school. First, in order for children with challenging behaviors to learn new, more appropriate behaviors, they need to gain an appreciation of how/why specific behaviors lead to specific consequences. Second,
take responsibility for their actions. Moreover, as children become better able to control their challenging behaviors, more time will be available to the instructional team for teaching new, more advanced academic, social and self-help skills.

Achieving these goals for individual children, requires teachers and paraeducators to find different ways to assist children develop self-respect, self-reliance (confidence), and social skills that will help them communicate and interact effectively with parents, peers, school staff, employers and others. These strategies may include helping children learn to define problems, develop systems for making choices, develop coping skills, and develop mechanisms for controlling behaviors.

In addition, team members need to serve as effective role models for children. This includes remaining calm when confronted with challenging behaviors and/or threatening situations. It also means establishing rules of conduct for the learning environments and making sure they are followed. They must let children know they believe in them and care about them, and they must demonstrate the power of humor as opposed to sarcasm.
STRATEGIES FOR EFFECTIVE COMMUNICATION BETWEEN TEACHERS AND PARAEDUCATORS

☑ Be receptive to each other's ideas and concerns

☑ Ask for clarification of information, ideas and instructions, and assistance when needed

☑ Respect individuality and differences in backgrounds, values, and experiences

☑ Develop a shared vocabulary and systems of non-verbal cues

☑ Work together to create a climate of cooperation, trust, and loyalty
BUILDING EFFECTIVE RELATIONSHIPS WITH CHILDREN AND YOUTH

➤ Respect Rights and Individuality of All Children and Youth

➤ Reach Out to Learners/Show Them You Care

➤ Use Positive Communication and Listen Carefully (Use Humor, Not Sarcasm)

➤ Encourage the Development of Independence

➤ Reinforce the Use of Appropriate Social Skills

➤ Be Patient

➤ Promote the Legal and Human Rights of Students
TEACHER CHARACTERISTICS AND PREFERENCES PARAEDUCATORS NEED TO KNOW

☑ Instructional Techniques and Methods

☑ Supervisory Style

☑ Discipline/Behavior Management Strategies

☑ How to Use Teaching Materials

☑ Classroom Organization and Rules
INTERACTIVE SKILLS

- BEING RECEPTIVE
- CONCENTRATING
- ASKING QUESTIONS
- REMAINING CALM
INTER-PERSONAL PROBLEM SOLVING

I. DEFINE:

- The problem as one person/team member sees it
- The problem as the other person/team member sees it
- Develop a common or shared definition

II. ASK:

- Who is involved?
- How are they involved?
- What behaviors/attitudes of the different individuals need to be changed?
III. LIST:

- Areas of mutual agreement concerning the problem
- Areas of disagreement
- The barriers to finding a solution

IV. DEVELOP:

- A desired goal(s)
- A solution(s) by brainstorming various ideas
- A list of resources, information or assistance that will help you achieve the goal

V. IMPLEMENT:

- The solution for a specific time period and evaluate the effectiveness of the solution
- If necessary select and implement another alternative solution
WHAT PARAEDUCATORS NEED TO KNOW ABOUT TEACHERS*

TEACHING STYLES. Teachers, like everyone else have unique characteristics and ways of doing things. In many cases, these characteristics are rarely given much thought by the teacher because they are such an integral part of the individual’s teaching style; but for paraeducators who are in support roles it is imperative that they know as much about these characteristics as possible. This is particularly true in school systems where increasingly paraeducators work with two or more teachers. Without mutual awareness and understanding of how the teacher prefers to teach, the effectiveness of the team can be undermined. Every teacher has a style of his or her own. The style may be flexible, controlling, permissive and/or a combination of all of these and more. Most teachers have an array of teaching strategies they like to use in a specific situation or with a specific student. They may be topic related, skill related or concept related. For other teachers structured behavior management methods may serve as the basic approach for teaching both academic skills and helping students learn to monitor and maintain effective behavior. Some teachers may rely on skill mastery whereas others will rely on incidental types of learning centers or various types of cooperative learning, peer tutoring or individual projects. No matter what method a teacher uses, it is important for paraeducators to know what teaching repertoires the teacher has chosen and the reasons why they are used with a specific group or an individual student.

SUPERVISORY STYLES. Just as teachers have unique teaching styles, they also have distinct supervisory styles. One person may be very structured and provide specific directions based on classroom rules, procedures, program content and instructional strategies developed by the teacher. Another person may ask the paraeducator to share ideas and information and participate in the decision making/planning process. Still a third person may tend to be non-directive and prefer the paraeducator to learn by observing what the teacher does and then to model the behavior.

DISCIPLINE STRATEGIES. Discipline is for most teachers something that they hold very close and very dear to themselves. How they discipline and why they discipline is known many times only to them. It is important for the paraeducator to understand why one student requires one disciplinary strategy and another with similar behaviors does not.

USE OF TEACHING MATERIALS. Teachers, almost like good mechanics, have their favorite tools. In the selection and use of instructional materials and activities, teachers very often

---

will rely more on one type of material or strategy than on others, even though either one might work in the particular learning situation. Like discipline, it is important for the paraeducator to know why that particular material was selected and is of value in a particular learning situation.

ORGANIZING LEARNING ENVIRONMENTS AND ESTABLISHING RULES. Both structure and rules are integral to the system of discipline and behavior management used in learning environments. For example, an open setting places considerably more responsibility on learners to determine the course of their behavior than a very structured setting does. The paraeducator needs to know why a particular structure and rules have been chosen by the teacher, and why and how they complement the learning process.

The old adage that rules are made to be broken is not a procedure that is going to produce positive results in a learning environment. The difficulty with rules is that some are formalized and written, other are informal and unwritten. It is the unwritten rule or unspoken rule that causes the most difficulty. Often times it is difficult for both paraeducators and children to comprehend fully what these rules are and how they are being applied.
BASIC STRATEGIES FOR CLEAR COMMUNICATION BETWEEN TEACHERS AND PARAEDUCATORS*

There are a number of elements that must be present in any situation to insure clear channels of communication. If the members of the team are not careful and do not pay attention, ordinary day to day occurrences may get in the way of developing positive communication and building mutual trust and respect. For example:

- The attitudes and feelings of both teachers and paraeducators need to be known, respected and understood. They need to deal openly with their attitudes and feelings toward their roles and duties, their attitudes toward the students they work with, their attitudes toward instructional styles and management, and their attitudes toward the value of the other person's contributions. When feelings are not shared and openly communicated the nature of the relationship will not grow and the team will be less effective.

- An understanding of the similarities and differences among the people involved in the team must be recognized and understood, including different points of view about educational strategies, different values, different cultural and religious heritages, different levels of education, experience, and other factors that can affect the working relationship.

- Teachers, paraeducators, and other education personnel should actively seek to develop and share a common vocabulary. (Jargon that may exclude parents or other caregivers should be avoided.)

- Teachers must make sure that directions and expectations are clearly understood and that paraeducators have the information and skills they require to perform their assigned tasks.

- Paraeducators must be willing to ask for clarification or assistance if the assignment is not understood.

- Teachers should determine what special interests, talents, and training the paraeducators have that will complement and enhance their own skills and improve the delivery of education services to children and youth.

- The team must actively work to create a climate of cooperation, trust, respect and loyalty by meeting regularly to discuss procedures and techniques that will establish and maintain open channels of communication.

TIPS PARAEDUCATORS CAN USE TO BUILD EFFECTIVE RELATIONSHIPS WITH CHILDREN

As members of the education team paraeducators play important roles in the lives of the children and youth they work with. There are many ways they can help students practice effective communication, social, and problem solving skills, learn how to stand up for their own rights, build self-esteem, develop and maintain friendships and cope with peer pressure. A few are presented here. Paraeducators should:

➢ Respect the human rights and individuality of all children and youth.

➢ Reach out to children. Learn what they like and dislike, how they prefer to spend free time. Share information about sports, music, recreation activities and special events individual child enjoy. Look for information about the cultural heritages of children from different countries and ethnic backgrounds.

➢ Use positive communication. Listen carefully, ask questions, respond to the ideas, concerns and needs children share with you.

➢ Treat children in the ways you want them to treat other children and adults. Be fair, kind and polite. Do not yell or use abusive language. Use humor but do not use sarcasm or make fun of others.

➢ Encourage the development of independence, autonomy and individuality by providing opportunities for children to make choices.

➢ Encourage children to assist each other when help is needed.

➢ Reinforce the use of appropriate social skills. Model and teach methods children can use to strengthen their ability to monitor and control their behavior, share emotions/feelings, make and maintain friendships, and cope with peer pressure.

➢ Promote the legal and human rights of children. Maintain confidentiality, and report signs of abuse to teachers.

INTERACTIVE SKILLS

The following are suggestions that may help make an individual a more effective communicator:

1. **Be Receptive.**
   Try to prevent bias, prejudice or anger from distorting what you hear. Be willing to listen to new ideas, to pay attention, to look for the speaker’s meaning, and to encourage the speaker by looking at him or her.

2. **Concentrate.**
   Try to blot out distractions such as noise, temperature or other environmental factors. Follow the thread of ideas, be alert for transitions from one thought to another.

3. **Become Involved.**
   Listen for personal pronouns, add information to what the speaker says, fill in gaps in his/her message, and maintain a mental running summary of the message.

4. **Ask Questions.**
   Clarify points by repeating or paraphrasing the speaker’s ideas and invite him/her to clarify missed meanings.
HIERARCHY OF SOCIAL SKILLS

Group 1.
BEGINNING SOCIAL SKILLS

listening
saying thank you
asking a question
introducing others
starting a conversation
having a conversation
introducing yourself
giving a compliment

Group 2.
ADVANCED SOCIAL SKILLS

asking for help
giving instructions
apologizing
joining in
following instructions
convincing others

Group 3.
SKILLS FOR DEALING WITH FEELINGS

knowing your feelings
understanding the feeling of others
dealing with someone else’s anger
expressing affection
rewarding yourself
expressing your feelings
dealing with fear

Group 4.
SKILL ALTERNATIVES TO AGGRESSION

asking permission
helping others
using self-control
responding to teasing
avoiding trouble from others
sharing something
negotiation
keeping out of fights
standing up for your rights

Group 5.
SKILLS FOR DEALING WITH STRESS

making a complaint
sportsmanship after a game
dealing with embarrassment
dealing with being left out
dealing with contradictory messages
dealing with an accusation
answering a complaint
responding to failure
responding to persuasion
standing up for a friend
dealing with group pressure
getting ready with a difficult conversation

Group 6.
PLANNING SKILLS

deciding what to do
setting a goal
gathering information
making a decision
deciding what caused a problem
deciding on your abilities
arranging problems by importance
concentrating on a task
"I MESSAGES"

"I Messages" are effective tools children, youth and adults can use to express feelings appropriately. They can also be used to discuss controversial issues. Often when we want to let another person know what we are feeling and thinking we let our emotions get in the way and attack the other person. Hartwig and Meredith in *Seven Steps for Teaching Students to Get on Top of Their Problems*, have identified three negative side effects when we start a conversation with "you make me so angry when _____," or "you are not being fair when ______." They are:

1) the speaker is denying responsibility for the feeling;

2) the speaker is giving control of his/her feelings to someone else; and

3) "You make" statements that express negative emotions can elicit anger, resistance or other negative responses from the other person.

"I Messages" promote ownership and control of our emotions/behaviors, they can be used to express all emotions, and, finally in most circumstances they can be used to express our feelings and attitudes without seeming to threaten the other person.

"I Messages" contain three parts: 1) A feeling; 2) A situation, and 3) A reason

An "I Message" is stated like this:

"I feel (state the feeling – happy, angry, sad, embarrassed) when (what has happened/the situation) because (the reason)."
COMMUNICATION AND PROBLEM SOLVING SKILLS
FOR CHILDREN AND YOUTH

All members of the instructional team are responsible for assisting children to develop skills and techniques that will help them become more self-reliant, more confident in their ability to relate to and work with others, gain control of their emotions (actions/behaviors), and increase self-respect.

Team members carry out their responsibilities in several ways. First and foremost they must demonstrate respect for the individual cultures and values of their children. Second they must serve as role models for children and demonstrate ways children can increase their abilities to "work and play well with others," follow rules, and take responsibility for their actions. Third they must provide children with strategies/methods they can build upon and use throughout their lives after they leave school, in social, work and learning environments. Some of the most important coping and communication, problem solving skills we all need are described below.

STAYING CALM. Strong emotions (anger, fear, excitement, tension, joy, loneliness, embarrassment, frustration) can influence how we react to a situation. For the most part, neither adults nor children and youth make good/rational decisions when they react to their emotions rather than calming down and gaining control of their emotions. Children will benefit from learning different methods for remaining calm. Indeed, different approaches are useful for dealing with different problems. Deep breathing is helpful. Other strategies that may help are defined as "self-talk" relating thoughts and feelings to actions can help reduce anxiety, improve our moods and give us time to make better choices. In addition, there are other methods children can use to reduce tension and in the vernacular of kids "cool down" and "chill out." They include but most certainly are not limited to taking a bike ride, reading a book, or screaming in the bathroom.

EXPRESSING EMOTIONS. Actions/behaviors are usually based on feelings/emotions. Yet most of us (adults and children alike) find it difficult to recognize how our feelings affect our actions/behaviors. And in many situations it is difficult for us to put our feelings into words that will help us and others understand our actions. People also have different reactions to feelings, at different times. For example, we may cry when we are sad or lonely. But sometimes we cry when we are happy. We may yell or scream when we are angry, but we may also yell or scream when we are having fun. Some of us may become withdrawn and quiet when we are sad or lonely, and still others may become aggressive in order to get attention. It is important for children to understand that they may react differently in different situations. It is of equal importance that they understand that some reactions/actions are inappropriate because they may physically hurt others or infringe on the rights of.
MAKING CHOICES. Convincing children there is more than one way to act in a situation (they can follow rules, they can share toys, they can raise their hand, they can ask for help) is not always easy. Disruptive behaviors that are used over and over to achieve an objective, to get attention, get even, react to an emotion, become habitual. To change inappropriate behaviors requires patience and hard work on the part of both the instructional team and the learner. Consistency, support, positive reinforcement, patience, and humor are all important factors in strengthening the ability of children to make appropriate choices in a specific situation.

Basically all people are consequence seekers. We constantly test to see: “What will happen if I comply? What will happen if I don’t?” Children in particular like to push the limits. Children must learn to accept the fact that whatever they choose to do has a consequence and that others will hold them responsible for their actions. Some consequences are positive: “If I follow the rules, more kids will play with me”. Other consequences can be negative and in many cases create more problems: “If I am physically abusive, I will lose friends.”
INTER-PERSONAL PROBLEM SOLVING

I. DEFINE:

➢ The problem as one person sees it?
➢ The problem as the other person sees it?
➢ Develop a common or shared definition?

II. ASK:

➢ Who is involved?
➢ How are they involved?
➢ What behaviors/attitudes of the different individuals need to be changed?

III. LIST:

➢ Areas of mutual agreement concerning problems?
➢ Areas of disagreement?
➢ The barriers to finding a solution?

IV. DEVELOP:

➢ A desired goal(s)?
➢ A solution(s) by brainstorming various ideas?
➢ A list of resources, information or assistance that will help you achieve the goal?

V. IMPLEMENT:

➢ The solution for a specific time period and evaluate the effectiveness of the solution?
➢ If necessary select and implement another alternative?
PARAEDUCATOR COMMUNICATION AND SOCIAL SKILLS INVENTORY*

This is not a test. This is a tool you can use to rate your ability to communicate/interact with co-workers, children, parents, and other people you come into contact with on-the-job. It is designed to help you assess your social skills, your ability to express your feelings, and to help you identify skills you would like to improve. Circle the number to the right of each item which best describes how well you use a specific skill. When you have completed the inventory, review the various skills and think about those you feel are important to the way you perform your job. Choose three that you would like to improve and make a list of ways you can change these behaviors.

Exercise #2

USING "I MESSAGES"

INSTRUCTIONS: Read each of the scenarios described below and write an "I Message" you think would be an appropriate way for a child or an adult to react to the situation. Be sure to include 1) the feeling ("I feel...") , 2) the situation ("when...") and 3) the reason ("because...").

1. Joey was punished for talking out loud. He feels strongly that he was unfairly singled out and that the other children who were talking were not punished.

2. Gloria pinches and hurts Leah when the teacher and paraeducator are not aware of it. When Leah responds by hitting Gloria and has to stay after school, she throws a tantrum.

3. To Javier, it seems like Ms. Chavez, the paraeducator, pays more attention to his best friend Jerome than she does to him.

4. Kay has learned that her best friend Juanita talks about her behind her back.

5. Your spouse likes action movies; you like romantic comedies. You go to see "his" movies, but he says yours are silly.

6. Ali knows that Melinda uses a "crib sheet" when they take tests. They nearly always get the same grades.

7. Joe Pat's friend Chan has been asked to a party and he has not.

8. Carrie's parents have grounded her for a month because she did not complete her assigned chores. This means she cannot go to the prom. She feels this is grossly unfair.

9. Claudia refuses to follow directions from the paraeducator.

10. John frequently borrows money from Teresa, but will not loan her money when she needs it.

11. Pico has missed three weeks of school. She is upset because neither the instructional team nor children recognize that she is back or ask where she has been.

12. The teacher never does any of the housekeeping chores in the classroom.
SITUATION 1

Mr. Franklin, the principal of a school where Sally Warren is an instructional paraeducator, believes that he has put together a terrific staff who know each other, are interested in one another, and like one another. To enhance the esprit de corps he uses the loud speaker system to communicate to the staff all the latest news about them: who is going to take another job, who has received a new degree, who has contributed a good idea about improving the school. He begins this process by welcoming and introducing the new professional staff to the school at the beginning of the year so that a feeling of “togetherness” can be initiated and maintained. However, Mr. Franklin never acknowledges anyone other than teachers; not the custodians, not the cafeteria workers and not the instructional paraeducators. Nor are the paraeducators or other support staff asked to participate in the school based management meetings—even though decisions are made that impact on their work. To make matters worse, the paraeducators do not have assigned mail boxes. Therefore they never receive announcements from the district about training or other resources available to paraeducators.

Sally has been at the school for six years. She is discussing Mr. Franklin’s concept of communication with Joan Mitchell, the teacher she has been working with for the last three years. Joan is surprised to learn how upset Sally is and that she is thinking about marching into Mr. Franklin’s office to let him have it. Role play the situation.

SITUATION 2

Felix is seven years old. He has seizures at least twice every day in the classroom. Gene Wong, the teacher, notices that Arlene Thompson, the paraeducator, seems reluctant to assist Felix when the seizures occur. In fact, Ms. Thompson ignores him most of the time.

Mr. Wong decides he needs to discuss the situation with Ms. Thompson. At the beginning of the meeting, Ms. Thompson announces that she likes most of the children but for some reason she just does not like Felix and finds it difficult to work with him. Role play the meeting.
SITUATION 3

Joan Curry has worked as a paraeducator for 22 years. She started out working as a playground and lunchroom monitor and for the last 15 years has worked as an instructional assistant in special education programs. She has seen teachers come and go. She is well liked by the children, teachers and other staff members.

This year she has been assigned to work with Gale Brewer, a new teacher. Things have not gone well between the two of them. The tasks Gale has assigned to Joan include supervising recess, setting up learning centers, and making bulletin boards. Joan feels that she is not appreciated and has started to complain to the rest of the staff about Gale.

This is Gale’s first job. While she was in college she was not prepared to supervise or work with another adult in the class, let alone someone who is old enough to be her mother with more than 20 years experience. She really feels that as the teacher she is responsible for and will be held accountable for everything that goes on in the class—the good and the bad. That is why after thinking it over, she has decided that it is important to establish herself as the person who is in charge of the class. It is not always easy because Joan is always making suggestions and telling her how other teachers do things. In fact, Joan can be a little intimidating. Now other teachers have started to tell her how lucky she is to have Joan work with her. Role play a meeting between the two of them.

SITUATION 4

Clara Martinez is a paraeducator in a preschool class that serves young children ages 3-5 with and without disabilities. She has worked in Head Start programs for several years, is the mother of a son who has mental retardation, and speaks Spanish fluently. She was recruited by the principal to work in the class because of her understanding of the needs of children with disabilities and because several Hispanic children with special needs are enrolled in the class. In addition to the teacher there are two other paraeducators assigned to the class.

The teacher, Trudy Baker, has a Master’s in Early Childhood Education but has never taught children who have disabilities. Despite Clara’s understanding of the needs of children with special needs, Ms. Baker seems to rely on Josie and Caroline and ignore Clara’s skills. The three of them have worked as a team for four years and are very close. In fact, it seems they can almost read each other’s minds. The two other paraeducators take their lunch breaks together and frequently come back late. Role play a meeting among the team.
SITUATION 5

Georgette Brown is a new paraeducator. She has been a Girl Scout leader. When she started her job, the center director told her about the full inclusion program for children with disabilities they were starting in the school. When Georgette expressed concern about her ability to work with children with disabilities, she was told not to worry, that Mr. Dobson, the teacher she would be working with, would explain what he wanted her to do. This has never happened. In fact, most of the communication between them takes place in the class in front of the children, and Georgette feels this is undermining her ability to work with the children and maintain control of the class when Mr. Dobson must leave the room.

Ken Dobson is the teacher. This year for the first time since he started teaching 12 years ago he has been assigned a paraeducator to assist him. This was done because of the agency's decision to fully integrate children with disabilities into its pre-school programs. Ken likes the challenge of working with children with disabilities, but he is not so sure that he likes working with another adult. Indeed, because he is very busy with extra curricular duties and working on a graduate degree, he does not have time to meet with her. He is a loner who has his own ways of doing things, and feels Georgette does not always follow his lead. Things are not going well in the class, and Georgette seems to be having trouble with some of the children with challenging behavior. Role play a meeting between Ken and Georgette.

SITUATION 6

Barbara Sturm, has been working as a paraeducator for three years. For the first two years she worked with the same teacher in a class serving children with severe disabilities. This year she has been assigned to facilitate the inclusion of Liza McNees into a general education 1st grade class. She is now working with three teachers: Mildred McNair, the special education teacher she has worked with for the last two years; Jim O'Connor, a physical education teacher; and Virginia Thompson, the first grade teacher.

Each of the teachers has a different teaching style and attitude about discipline, behavior management, and classroom management. Things are going fairly well in the P.E. class. Mr. O'Connor has assigned a buddy to assist Liza with warm-up activities and make sure she follows the rules when they are playing games. Barbara is worried because she thinks Mr. O'Connor may be encouraging Liza to do more than she is capable of, especially in gymnastics. Barbara is concerned about it because as she thinks she is responsible for Liza's safety. When she tries to discuss it with Mr. O'Connor, he laughs and tells her she is too serious and not to be a "Nervous Nelly."

Virginia Thompson is very pleasant, but never asks Barbara to share ideas about how best to work with Liza. In addition, she does not always follow Liza's instructional program the way it was designed by Mildred, and seems to resent it if Barbara makes suggestions. She has started to ask Barbara to work with some of the other children, and Barbara is not sure that is proper since Liza's IEP plainly states that Barbara is supposed to assist her and does not mention any other children.
Mildred has always been very supportive of Barbara. Now when Barbara tries to share her concerns with her about how things are going in the P.E. program and the 1st grade class, she becomes very impatient and says there is nothing she can do since it is up to the other teachers to decide what happens in their class.

Barbara has become very frustrated because no one listens to her. She has asked for a meeting to see if she can clarify things. Role play the meeting.

SITUATION 7

Jonelle Smith has been teaching for six years. During that increasing numbers of Cambodian immigrants have moved into the community. As a result, Leah Pran has been employed to assist Jonelle. Leah is not only fluent in two Cambodian dialects, she is also a leader in the growing Cambodian community.

At the beginning of the year Jonelle and Leah met together to discuss the goals for the entire class and the objectives for individual children. Jonelle encouraged Leah to share information about Cambodian culture and values they could then build on to develop activities and curriculum content for children who were learning English. As a team, they also decided that it would be helpful if Jonelle incorporated notes in her lesson plans for Leah to indicate how methods and content could be modified to accommodate needs of individual learners. They also agreed that while no time seemed to be available for them to meet regularly, they could find time for informal chats and they would keep a joint log book with specific questions and requests for information and insight. Jonelle emphasized that she wanted Leah to discuss ideas she had for working with the children and their parents.

They seemed to be off to a good start. They spoke to each other when they could and communicated regularly through the log book.

Lately however, Jonelle has begun to notice that the parents of the Cambodian children seem to feel more comfortable speaking with Leah than with her. And while Jonelle has no problem sharing many activities and tasks with Leah, she believes that communicating with parents is the responsibility of the teacher and no one else.

Jonelle is really concerned about how to deal with her concerns. First, she is aware of Leah's position as a community leader. Second and of even greater importance, she is afraid she will hurt Leah's feelings if she asks her not to speak to the parents about their children or what goes on in the classroom unless she is present. And third, while agency policy says that it is the responsibility of the teacher to involve parents in all aspects of their child's education, she is not sure Leah is aware of this.

Leah is also becoming concerned because her relationship with Jonelle seems to be changing. Until now Jonelle has always been warm and friendly and eager to share ideas and information with Leah. Now there are times when she is stand-offish or she snaps at Leah for no good reason.

Role play the situation.
SITUATION 8

Betty Smithers works in an inclusive classroom serving children with and without disabilities. Some of the children are not toilet-trained and wear diapers. Betty has been told by the teacher, Susan Lerman, that it is the responsibility of the paraeducators to change the diapers. Betty's friend Ruth works in another classroom where the children have similar needs. However, the teacher in that classroom takes turns with Ruth and other paraeducators in changing diapers. Betty has tried speaking to Ms. Lerman about how she feels about always having to do the "dirty work" and has pointed out how another teacher deals with the problem. Susan's response is, "She has her way of doing things and I have my way." Betty is becoming frustrated and angry and has started to complain to other paraeducators. Susan is also becoming upset because she feels Betty is going behind her back and complaining to other people. The principal has called Betty and Susan to her office to discuss the problem. Role play the situation.
Worksheet for Exercise #3

A PROBLEM SOLVING EXERCISE

1. Describe the problem from the paraeducator’s point of view.

2. Describe the problem from the teacher’s (or the other person’s) point of view.

3. What behavior or attitude does the teacher or other person need to change?

4. What behavior or attitude does the paraeducator need to change?

5. Discuss and list ways they can work together to change the situation.
MODULE II

HUMAN AND LEGAL RIGHTS OF CHILDREN WITH DISABILITIES AND THEIR FAMILIES

OVERVIEW

The mid point of the 20th Century saw the beginning of an era of social, political and institutional changes. These changes were brought about through efforts of advocacy organizations concerned with ensuring and protecting the civil and human rights of all Americans including individuals from racial, ethnic and language minorities, women, senior citizens and children and adults with disabilities.

In the 1950s initiatives led by civil rights organizations and parents were directed at ending policies and systems that maintained separate public schools for African-American students. In response to Brown v. Board of Education, Topeka (1954), the United States Supreme Court ruled that segregation in public schools at all levels was illegal. The Court ruled that to separate African-American school children by race "induces a sense of inferiority that retards educational and mental development". Moreover, the Court determined that "separate education facilities are inherently unequal." Other decisions during this period supported the view that segregation by race was illegal in other public facilities. In the 1960s, Federal legislation (including the voting Rights Act) was enacted to protect other civil and human rights of people from racial and language minority heritages. Congressional actions also established and supported compensatory programs for children and youth who came from educationally and economically disadvantaged backgrounds (Title I, Head Start).

At the same time, parents and other advocates for the rights of children, youth and adults with disabilities began efforts that brought about the passage of the Rehabilitation Act of 1973 and P.L. 94-142 (the landmark Education for all Handicapped Children Act). Reauthorized in 1990, P.L. 94-142, is now titled the Individuals with Disabilities Act (IDEA).

The purpose of this module is to provide paraeducators with an understanding of the rights of all children and youth to a free, non-segregated education of the highest quality.

INSTRUCTIONAL OBJECTIVES

The paraeducator will be able to:

1) Identify and describe the human rights inherent in the principles of:
   a) The Developmental Assumption;
   b) Normalization;
   c) The right of individuals to make choices in events that influence their lives;
   d) The right of individuals to participate in their own individual planning teams;
   e) The right of individuals to be respected by others for their status as people; and
   f) The right of individuals to assume the Dignity of Risk and to "fail" as well as succeed in their educational and other endeavors.
2) Identify and describe at least three provisions of each of the following sources of legal rights:
   a) The Bill of Rights and subsequent amendments to the United States Constitution;
   b) The Americans with Disabilities Act (ADA) of 1990;
   c) The Rehabilitation Act of 1973 (as revised);
   d) The Individuals with Disabilities Education Act (IDEA).

TIME REQUIRED TO PRESENT MATERIALS

This module will require approximately three hours to teach.

EQUIPMENT REQUIRED

☐ A flipchart and easel, or a chalkboard; Write the definitions of The Developmental Assumption and Normalization, on the chalkboard or flipchart. (See the Background Material.)
☐ Copies of the Background Material and Exercises
☐ Copies of the 1997 Reauthorization of IDEA and laws in your state will also be helpful

BEFORE THE TRAINING SESSION

Read the material in this module thoroughly. Compare the information with other resources, state and local policies or regulations that might apply, and the Bill of Rights and Federal legislation.

Prepare a short lecture on the material which includes references to any local policies or procedures that are relevant. It is a good idea to include in your lecture your own experiences; these anecdotes make the lesson come alive for those who are listening.

☐ Make copies of the information Handouts and exercises.
☐ Write the definitions of The developmental Assumption and Normalization, on the chalkboard or flipchart. (See the Background Material.)

DURING THE TRAINING

☐ There are more instructional activities suggested for this unit than you will have time for - so select the ones that most appropriately meet the needs of the trainees.

☐ Begin the class by talking about distinctions in the legal and human rights. Stress the fact that legal (civil) rights are legislated or mandated by Court orders. Human rights are those rights we deserve because we are human. They include but are not limited to respect for our opinions, the right to make choices about our lives based on personal preferences and life goals, to participate actively in our community, freedom from hunger, and freedom from discrimination. Inclusion is a basic human right. Even though the word inclusion is not mentioned in IDEA, the concept is recognized in the legislation and the regulatory policies established to meet the goals of IDEA.

☐ Continue the discussion by talking briefly about the history of people with disabilities and the ways in which their rights were abused over the centuries.
Once you have concluded the lecture, initiate discussion with the class by asking, "Have any of you had personal experiences or do you know of times when human or legal rights were denied to an individual because s/he had disabilities?" Another discussion question might be, "Why do you think people with disabilities were so abused?"

Hand out Exercise #1, "Protecting the Human Rights of People with Disabilities." Ask trainees to respond in writing to the statement at the top. Indicate that they are to write down all their responses; they should then be prepared to participate in a class discussion of the statement.

Distribute Information Handout #1. Ask the participants to review it. Then lead a discussion of the right of all people to be respected. As you discuss the right to respect, a question to the class would be in order about ways in which we convey respect to other people. Again, examples from your own experience will help to clarify this right. Ensure that trainees understand that an individual's demeanor, use of language, and attitudes are major factors in giving respect.

Distribute Exercise #2, "Personal Goals". Ask the trainees to complete it, and to be prepared to discuss their reactions to the "quiz."

When you talk about the principles of The Developmental Assumption and Normalization, stress that these govern the delivery of services for children and youth with disabilities and, in many situations, the nature of the services is based on these principles.

When you have completed the discussion, distribute Exercise #3, "The Developmental Assumption and the Principal of Normalization". After the participants respond to the question about the Developmental Assumption, draw them into general class discussion. When they have completed the lesson plan under the Normalization principle, ask several people to share their plans with the group.

Present a short lecture on legislated and court ordered rights. You should have available school policy and regulations that are reflective of IDEA (Individuals with Disabilities Act, 1997) and other legislative acts. Discuss how these laws and court ordered rights guarantee civil rights for children and youth with disabilities and their families.

Distribute Exercise #4 and 4A - the Case Studies of Carrie Sue and Rowena. Ask the individuals to complete the worksheet and be prepared to discuss their responses.
RESOURCES AND MATERIALS

Pace Setter (September, 1989). It's the Person First - Then the Disability. Minneapolis: PACER Center.

HUMAN AND LEGAL RIGHTS OF CHILDREN AND YOUTH
WITH DISABILITIES AND THEIR FAMILIES

RELEVANT HISTORY. There is ample evidence that people with disabilities have been a part of all racial and ethnic heritages throughout history. Early cave drawings, for example, picture people whose arms or legs are missing; probably they had been injured while trying to hunt down food or contend with wild animals. As such they may have been valued members of their society because they contributed to it.

In other cases, however, it is clear from the records that are available that individuals with disabilities were not valued members of the community. (During the "dark ages", court jesters were usually people who had physical or other disabilities.) Sometimes, special asylums were built for people with psychiatric disabilities. For the most part the conditions in these institutions were dehumanizing, filthy and crowded and there is no evidence that any time was spent to help people better cope with the world and themselves. The growth of institutions in the United States for people with developmental disabilities and psychiatric disorders followed these patterns. They were characterized by crowding, lack of educational opportunities, and inhumane settings. Often, people were involuntarily sterilized because of the fear that they would reproduce infants who, too, had developmental disabilities. Although a complete history of special schools, asylums, and institutions reveals that the people who started them often did so with good intentions, the crowding that usually occurred and the segregation from other people seemed always to bring the same harsh results.

Much of the treatment of people, particularly those with developmental disabilities, occurred because it was believed that they were not able to learn like other people and that it would be a waste of time to devote much effort to trying to help them do so. The treatment of children with severe emotional disabilities and of adults with long-term psychiatric disabilities was equally terrible. Families and the medical profession believed that there was no cure for psychiatric disability and the only solution was long-term institutionalization.

A NEW ERA BEGINS. The growth of community-based programs which began in the late 1960's evolved from the shock and horror that many people felt when they visited or worked in large, congregate care facilities. There was also a strong impetus provided by the families of individuals with disabilities. Many parents wanted their children at home. They did not want to have to send a child who just happened to have a disability to a place where they would have little opportunity to watch him/her grow and develop. They were convinced that education could be provided locally and that people with developmental disabilities could learn skills and become a part of the community. As a result, parents began to open community "developmental centers" where they taught their sons and daughters needed skills and "sheltered workshops" where their
children could participate in work-like activities. These centers often provided the foundation on which current community-based programs were built. It is interesting to note that even the first community based schools and programs moved from segregation to integration into the community.

INCLUSION. The continued segregation of children and youth with disabilities brought about unsurprising as well as unexpected. Although most people know that children and adults tend to learn most things from their peers, the professional world did not recognize that people in segregated settings also learned from their peers. In other words, if several people with "violent" behaviors were put into a segregated school, the likelihood was they would learn from one another - each person learning the "violent" behaviors of other people in the same place. On the other hand, if an individual with "unusual" behaviors was put into an environment with people whose behavior was not unusual, the likelihood was that the person would learn more usual behaviors.

In the same vein, people who do not communicate verbally are more likely to learn verbal communication if they go to school or live with people who talk; a child who is not toilet trained is more likely to learn appropriate toileting behavior if s/he is in a setting where other people are toilet trained.

There is a flip side to the desirability of placing children, youth and adults with disabilities into settings with people who do not have disabilities. When children and young people who do not have disabilities are in classrooms, work places or other settings alongside individuals who do have disabilities, they have the opportunity to become friends of people with disabilities. Once acquaintanceships or friendships are formed, fear of something unknown (like sensory impairments, physical disabilities or mental retardation) tends to leave and the people with disabilities have an easier time becoming full participants in the community.

DEVIANCY. For many people with disabilities, the greatest obstacle to their becoming a part of the community and receiving services there has been the perception of "deviancy." Most individuals with disabilities are perceived by the general population as "deviant" — different from other people in a way that is negatively valued.

Consider, for example, the impact that a person who uses a wheelchair may have on others. S/he is seen as "unable" to participate in activities in the same way as other people. For some individuals, just the sight of a person in a wheelchair is frightening. We tend to reject what we do not know or understand, and the wheelchair, itself, brings on images of a person who is ill and who cannot manage things for him/herself.

Public reaction to persons seen as deviant is often to ignore, to jeer, to be frightened of or to wish that they would go away (and stay away). Thus, the segregated congregate care facilities became an answer to the responses of the general public.
THE DEVELOPMENTAL ASSUMPTION. There are two basic principles that underlie the growth of community programs and the expansion of opportunities for people with disabilities to participate fully in the community. The first of these is the "developmental assumption" which simply states, "All people are capable of growth and development." This seemingly simple statement contains a volume of truth and precipitated the movement toward building educational and work-related programs for all people with disabilities. It refutes the old precept that hung on for so long: some people can learn and some people can't. So long as that loomed large in the thinking of families and professionals, it prevented the growth of helpful programs. It allowed for a selection; we can work with Joe; but not with Rosalie. And it perpetuated the segregated facilities. The developmental assumption is that all of us can profit from educational opportunities. It leads to our understanding that when people do not seem to be learning, it may be that we don't know how to teach. It leads to the development of new techniques for teaching, assistive technological devices to help people learn more easily and inclusion in community environments.

NORMALIZATION. The second basic principle for development of appropriate educational and work programs for individuals with disabilities is the principle of "Normalization." It governs the way in which people with disabilities are taught by stating that we should "use means that are as normative as possible in order to establish, elicit and/or maintain behaviors that are as normative as possible."

Although it may sound complex, it simply means that people learn better when they are taught in the same environments as other people and when they learn tasks within the setting in which the skill will be used. It means that we learn from the environments where we live, learn, play and work; that, if people are placed in an institution, we probably will learn those skills necessary to live within an institution. If we are taught in the community, we will learn the skills necessary to participate in the community. We learn from other people and all of us acquire the skills of those around us.

MAKING CHOICES. We should all remember how we felt when our parents, teachers or friends made decisions for us even though we were ready to make or participate in making decisions about our lives. "We'll go on a picnic today." "The best university for John is the University of Maine." "You should marry Kathleen; Karen is no good for you." This obviously paternalistic approach usually disappears from our lives when we become old enough to protest. But, for people with disabilities, paternalism has often been a major stumbling block. Professionals and family members have often assumed that, because they did not have disabilities, they knew exactly what the course of life should be for the person with the disability. In order for people to fully participate in the community, they must have the opportunity to make their own choices, based on accurate information. This means that the role of the teacher or parapractitioner is to assist children and youth with disabilities and their families to acquire information about alternatives along the way. It is impossible to make good choices without
good information. For example, how does one decide whether to have a caramel or a chocolate sundae unless we have tasted both? How do we decide which job we want unless we have experienced some parts of each -- or have reliable information on what each entails? How do we know where we want to live unless we have some idea of what various places are like? How do we decide which college to attend unless we know what our alternatives are?

This human right, to make one's own choices, is an important one. Its availability depends to some extent on the willingness of educational and other personnel to help explore alternatives.

PARTICIPATION IN PLANNING TEAMS. IDEA mandates the participation of families in the educational planning team that makes plans for each year of educational experience. It also mandates the creation of an individual family service plan for young children with disabilities and their families. While the law does not specifically states that the person with the disability should be present at his/her planning session, clearly it is a human right that it should be possible for him/her to be a part of planning events that will shape his/her life. The idea that such planning should take place without verbal and/or written input from the person involved is antithetical to the belief that people with disabilities have the same human rights as the rest of the population.

RESPECT AS A PERSON. Each individual on this earth is entitled to respect, as an individual human. It is accorded through courtesy, listening and noting the likes and dislikes of the other person. Greeting a man in his fifties, for example, as "Billy" is one good way to take away respect. The simple fact that the gentleman has lived more than half a century earns him the right to be addressed by his last name and a title: "Hello, Mr. Abruzzo." If he chooses to give others the right to call him, "Billy," that, of course, is his decision. Until he does so, however, the title is desirable.

Listening to people is another way to pay respect. If an individual is talking to you, it is important that you take the time to stop and hear what is being said. If you are really busy and can't do that, then say, "I need to get on with my work right now. Can I come back in ten minutes, and we'll talk?"

As teachers and paraeducators plan together for activities in and out of the classroom, they also pay respect to the children or youth whom they are serving by paying attention to individual likes and dislikes. Planning a class picnic in a wooded area, for example, when the news is full of warnings about ticks and Lyme Disease, is one way to say, "We have no respect for this group of people!" Acknowledging that other people's feelings and ideas are valid by considering them as part of planning is a way of saying, "I have respect for you as a person." When we consider ways in which to respect others, it is important to acknowledge how we want to be treated, and what makes us feel respected as an individual.
THE DIGNITY OF RISK. This principle is another important part of sound educational planning for children and youth with disabilities. It is based on observations about how and when people learn, and how and what enhances self-esteem.

In order for a child to learn to ride a bicycle, there comes a moment when the training wheels come off, dad quits running alongside providing support and the youngster wobbles off on two wheels. This initial ride may end in a spill and a skinned knee or it may end gloriously with a pickup in momentum and the child confidently riding away. There are risks entailed: when the training wheels come off and when dad lets go. The father probably understands those risks well, but he knows that his child will only learn to balance and peddle when the supports are gone. The child probably understands the risks, too, and it may be with a bit of fright that s/he feels the supports leaving. But, when they are gone, the opportunity is there to make it on his/her own. Part of the thrill is overcoming the risk.

And, so we learn many things. We risk and try -- sometimes, we fail; sometimes we succeed. And success is usually worth the risk.

It is tempting, when working with children and youth with disabilities, to be so protective that there is no opportunity to fail. Sometimes, teachers and paraeducators work hard at making learning risk-free, thinking they will bolster students by doing so. It is good to remember, however, that learning for all of us often entails risks. Because it does, we value it more. Opportunities to risk are a part of life and, as such, should be considered as part of the life of an individual with a disability. Over protectiveness is usually a deterrent to assisting children and youth toward full community participation.

LEGISLATIVE GUARANTEE OF RIGHTS. The rights and principles discussed above are, for the most part, human rights that are accorded to individuals -- and agreed upon by most people as part of the entitlements we earn because of our status as human beings.

Legislatures, State and Federal, however, have contributed to the guarantee of rights; there are those on which our country is founded and there are others which have evolved in the two hundred plus years since the Constitution was drafted.

THE BILL OF RIGHTS. is the first ten amendments to the Constitution of the United States. Those basic rights statements were drafted by the writers of the Constitution and were ratified by the First Congress. They include the right to work where one chooses, the right to speak out in public, the right of the press to print all the news, the right to assemble (gather together) as we choose, the right to bear arms, and the right not to have to testify against oneself. The drafters of these amendments were determined that people in America would be freer than their counterparts in Europe. It is a good start toward establishment of rights, although such freedoms as the right to vote were not included in the Bill of Rights. To be sure, it was given to white men, but men who were Afro-American and women of all colors had to wait many years before the right to vote was accorded to them. Subsequent amendments to the Constitution and various decisions made by the Supreme Court have addressed these and other civil and legal rights.
THE REHABILITATION ACT OF 1973 came to be known as the civil rights act for people with disabilities. During the 1960's when there were many demonstrations and attempts to achieve full and equal civil rights for all people, individuals with disabilities were considered as one group who had been disenfranchised. It was decided, however, that it would be too difficult to pass the Civil Rights legislation if people with disabilities were included in it, so they were left out. The 1973 Act began to make up for that setback.

The Rehabilitation Act, in Sections 502, 503 and 504, guarantees access to buildings on which Federal dollars have been spent and it protects the rights of individuals not to be discriminated against in jobs where Federal dollars are being used. The legislation was enough to begin to clean up the landscape as far as accessibility to parks, monuments, museums, schools, universities and other public buildings was concerned. It also provided the base for a number of cases of alleged job discrimination.

The Rehabilitation Act was a forerunner of other legislation that would go farther toward the protection of rights for people with disabilities. It is highly regarded, however, for the rights issues covered in it; in addition, it was renewed and strengthened in 1984. It is important to be familiar with it.

PUBLIC LAW 94-142. This landmark Federal legislation enacted in 1975 required public schools to provide an education for all children, regardless of disability. Up to that time, many schools had been selective about whom they would serve and children and youth with multiple medical needs, severe or profound retardation, severe emotional disabilities or other behaviors deemed to be not suitable, had been excluded.

In addition to guaranteeing a free, appropriate public education for children and youth, this law mandated that each person being educated should have an individual educational plan (IEP) -- one designed to meet the specific needs of the person. It also mandated that parents should be a part of the planning team. An appeals mechanism called "due process" was created by the law so that parents who disagree with the plan have a way to object. P.L. 94-142 also addressed the issue of children and their families for whom English is not the primary language. It required evaluations to be carried out in the language that the child or youth understands. It further stated that interpreters must be available if needed when the educational planning team meets and that decisions about appropriate placement are to be made based on non-discriminatory evaluations.

The intent of P.L. 94-142 was to establish services that would support children and youth in the regular classroom. If that was not possible, they were to be educated in the "least restrictive environment" appropriate for the individual, thus opening the doors to integrated educational opportunities for people with disabilities. In 1990 and 1997, the law was re-authorized and the impetus toward education in the regular classroom was strengthened. The new law called IDEA, Individuals with Disabilities Education Act, reaffirms and strengthens the rights of families to be an integral part of the educational team and furthers the movement toward inclusion. New components of IDEA stress the need to provide services to children and youth with special health care needs that place them at risk. And finally, IDEA places even greater stress on the right of children and youth to culturally and linguistically appropriate assessment.
P.L. 99-457, passed in 1985, addressed the rights of children from birth to the age of five and their families to receive appropriate therapy, medical and education services. It established two new programs. The first is designed to meet the needs of young children ages three through the age of five with disabilities; the second encourages states to provide services for infants and toddlers from birth through the age of two who have disabilities or are at risk for other reasons.

These two programs are now fully incorporated into IDEA. In general the first program requires state and local education agencies to extend all of the rights mandated by IDEA to all children with disabilities beginning at age three. To achieve this goal and ensure that young children are served in inclusive settings, school districts are using a variety of strategies. Some districts have established new pre-school programs for all children or they have placed young children with disabilities in existing early childhood classes. Others have joined forces with Head Start or private non-profit education provider agencies in their community. The second part of IDEA encourages states to provide coordinated multi-disciplinary education, medical and other related services to children from birth through the age of two, and to provide services and support to their families. Individual Family Service Plans (IFSP) like IEPs are the corner stone for identifying the strengths and service needs of the children and their families, no matter whether they attend center/school based programs or receive services from home visitors.

Recognizing the value of providing opportunities for children and youth who have and do not have disabilities to become friends and learn from one another, the authors of IDEA initiated the movement to include children and youth in general education. It is important to note that the term "inclusion" does not appear in IDEA. The concept, however, is part of the basic philosophy of the procedures and strategies established to provide effective education and related services in the least restrictive environment for children and youth with disabilities. Indeed the 1997 reauthorization of IDEA emphasizes using the IEP as a meaningful instructional and planning tool by focusing on student's participation in general education curriculum and standards.

THE AMERICANS WITH DISABILITIES ACT (ADA) was passed in 1990. This broad Act has been hailed as the ultimate civil rights bill for people with disabilities. It speaks especially to the work place and the rights of individuals with disabilities to access business, industry, educational settings and a host of other buildings generally used by the public. It addresses accommodation, that is, the alteration of job settings so that the work can be done by people with disabilities. It also mandates accessibility on public transportation.

The passage of the ADA was managed by a massive, joint effort among people with disabilities all across the United States. When the President signed it into law, there was considerable rejoicing among groups representing people with disabilities. While it is possible to mandate accessibility so that those with disabilities can, in a physical way, have opportunities to take part in the same education, work, living and play activities as other people, we will have to rely on the essential good-will of people to people to achieve integration in all aspects of the lives of people with disabilities.
DUE PROCESS was mentioned in the earlier discussion of P.L. 94-142. In that case, it simply means that there is an established mechanisms for protesting when a student or family disagree with an individual educational plan. Used more generically, it always indicates that there is a way to disagree formally and to work, through channels, to resolve disagreements. Formulation of each of the laws listed above means that it is possible to disagree with an action or a setback in a formal way.

It would be nice to think that all advancements for people with disabilities were made because of the essential good-will of people without disabilities. This, unfortunately, is not true, and many of the moves toward full participation in the community have been made possible because of the settlement of lawsuits.

RIGHT TO PRIVACY. There is no mention in the Bill of Rights specifically about the right to privacy. It was determined by the Supreme Court in a decision handed down in 1927. Their decision stated that each individual has a fundamental right to privacy, guaranteed through interpretation of the Constitution. This right has an impact in different ways on the delivery of education services: 1) There are some activities, such as using the toilet, that are deemed to be "private" acts. It may be that a student with whom a paraeducator works needs assistance in the toileting process. If so, the person should give the person the most privacy possible; no open bathroom doors or forays by female staff into male bathrooms should be allowed. 2) The privacy as to physical acts is important, but perhaps even more so, is the fundamental right to be sure that one's activities and behaviors are not discussed with other people. Logs, observational data, test results and all other material pertinent to one person should only be seen or discussed by people who have a need to know. It is wrong to talk about the person to other people who do not work with a child or youth or their families.

SUMMARY. The human and legal rights discussed here are only an introduction to the massive amount of law and social custom that relates to children and youth with disabilities. Perhaps the best guideline that can be used to protect the rights of people is to consider what each of us want for ourselves in terms of rights.
IT'S THE 'PERSON FIRST' - THEN THE DISABILITY*

What do you see first?

When you see a person in a wheelchair unable to get up the stairs into a building, do you say "there is a handicapped person unable to find a ramp"? Or do you say "there is a person with a disability who is handicapped because the building is not accessible"?

What is the proper way to speak to or about someone who has a disability?

Consider how you would introduce Jane Smith who doesn't have a disability. You would give her name, where she lives, what she does or what she is interested in - she likes swimming, or eating Mexican food, or watching Robert Redford movies. Why should you do it any differently for a person with disabilities?

In speaking or writing, remember that children or adults with disabilities are like everyone else - except they happen to have a disability. The following are tips for changing the way you think about and refer to people who have disabilities:

- Speak of the person first, do not use words that label or stereotype a person (e.g. say "she has cerebral palsy" do not use terms like C.P./spastic, "he is deaf and communicates in sign language" not "he is deaf and dumb"; "she uses a wheelchair" not "she is confined to a wheelchair"; "he has seizures" not "he has fits", "he has a learning disability" not "is learning disabled," "he has autism" not "he is autistic").

- Emphasize abilities, not limitations.

- Don't give excessive praise or attention to a person with a disability; don't patronize him/her.

- Choice and independence are important; allow the person to do or speak for him/herself as much as possible.

- And remember a disability is a functional limitation that interferes with a person's ability to walk, hear, talk, and learn.

- Handicap is a word used to describe a situation or barrier imposed by society, the environment or oneself.

Exercise #1

PROTECTING THE HUMAN RIGHTS OF PEOPLE WITH DISABILITIES

DIRECTIONS: Write down your responses to the following statement. Record all your responses; then, organize them so that you can contribute to classroom discussion.

"What difference does it make if I try to honor Melvin's rights? He's in a wheelchair and he's pretty retarded. I don't think he would even know if he didn't have all his rights. I have a friend who says that people like him ought to be put away someplace. She says it would be better for Melvin. If he were with other people like him, people wouldn't make fun of him and he wouldn't have to go around failing all the time. The very idea of putting him in a general education classroom or thinking he can work in a real job is crazy!"
PERSONAL GOALS*

DIRECTIONS: In the following activity answer yes or no to the following questions and be ready to discuss your responses.

1) Do you want a job that you can go to every day?

2) Do you want good health care for yourself?

3) Do you want security from poverty and loneliness?

4) Do you want recreational opportunities?

5) Do you want social opportunities?

6) Do you want to be part of the community?

7) Do you want to feel good about who you are and what you can accomplish in your life?

8) Do you want companionship and affection in your life?

9) Do you want to learn and grow?

DISCUSSION:

10) Do you think everyone including people with disabilities feels the same way?"

NRC for Paraprofessionals
THE DEVELOPMENTAL ASSUMPTION AND PRINCIPLE OF NORMALIZATION

DIRECTIONS: The Developmental Assumption states that, "All people can learn and develop." This sounds like a pretty simple statement. Why do you think it makes such a difference to people with disabilities?

DIRECTIONS: "People learn best from their peers." Record your responses to this statement as you prepare for a class discussion on inclusion.
Case Study/Exercise #4A

CARRIE SUE'S STORY

Carrie Sue Osborne is three years old. She is the daughter of Rodney and Tricia Osborne. She has three sisters, Ross, 9, Jean, 12, and Felice, 14. Carrie Sue was born with several impediments to "Well-Baby" status. She had hydrocephalus and has been shunted for that. In addition, she has been diagnosed as having spina bifida. Although her control of her lower body is not all that it might be, Carrie Sue is learning to walk with long leg braces. She sits comfortably in a wheelchair which has a safety belt. Carrie Sue also has on-going upper respiratory infections that sometimes seem to sap her energy.

Carrie Sue's family absolutely dote on her. Coming, as she did, six years after Ross, she was seen as "a small miracle." Her sisters vie for the opportunity to do things for her. Both Rodney and Tricia say that she is an "easy" child. In spite of the various physical disabilities, she has never been fretful or whiny. She greets each day with laughter and bubbles over when she is picked up and/or talked to. Her communication skills are great; she attempts to pronounce any new words she hears and makes very good use of those already in her vocabulary.

Carrie Sue has received services for three years from a teacher and paraeducator in the public school system. They have concentrated on working in the home, finding ways to support and enhance the family's strengths. They have designed a number of community activities in which the family and Carrie Sue have taken part. They are now assisting the parents to enroll Carrie Sue in the Daybreak Integrated Preschool for five half-days per week.

On the next page are reasons why integrated settings are effective. Under each statement, list the ways in which you think Carrie Sue or her peers and her family and the community have profited.
Exercise #4A Worksheet

There will be opportunities for Carrie Sue to learn from other children who do not have disabilities.

There will be opportunities for Carrie Sue to learn from an integrated environment.

There will be opportunities for other children who do not have disabilities to learn from Carrie Sue.
ROWENA'S STORY

Rowena Madison is the only child of Mattie and Luther Madison. She is now 18 years old. Rowena was born to the Madisons when Mattie was 42 and Luther was 52. They had been married for twenty years when the pregnancy occurred and they were ecstatic about it. It had seemed to them that they would never have children and, now, here she was! In many ways, Rowena met all their expectations. She was a friendly, happy baby and, as a small child, "never met a stranger". She liked people a lot and also seemed to enjoy the company of her mother and dad when just the three of them were at home.

The Madisons live on a large farm about fifteen miles from Gaston, a community of 2,232 people. Rowena attended a small rural elementary middle school in her early years. The teachers there worked with her very effectively, but did tell her parents that she was "slow" to catch on to new ideas and that she might have some difficulty with school when she moved on to Consolidated high school. The Madisons had really not noticed the "slowness" a lot since they had no other children with whom to compare Rowena. They were concerned, however, at Rowena's "general clumsiness" and the fact that she did not seem to be able to pay attention to any one thing for more than a minute or so. When consulted, the family physician said she had "a little cerebral palsy" and some "hyperactivity". He gave her Ritalin until she was fourteen or fifteen years old, and then discontinued it.

When Rowena was fourteen, it was determined that she should "go into town for school". Even though she had not completed all the learning requirements for the eighth grade, her teacher told the Madisons she was getting bigger than the other children and she would benefit from the "special education" activities offered in the town school. When she moved to the new school she took beginning typing and home economics in general education and has done fairly well. The staff involved with Rowena liked her a lot. She is friendly and easy to get along with. The other students elected her May Queen at the prom and she is a favorite of all. It has now been determined that she is ready to find employment in the community, with the support of a job coach.

The following page contains reasons why integrated settings are effective. Under each statement, list the ways in which you think Rowena or her peers and her family and the community have profited.
There will be opportunities for Rowena to learn from other youth who do not have disabilities.

There will be opportunities for Rowena to learn from an integrated environment.

There will be opportunities for other youth who do not have disabilities to learn from Rowena.
OVERVIEW

How children, youth and adults develop and move from one stage of life to others has fascinated humankind since recorded time began. How do infants unable to speak become teenagers who spend most of their waking hours on the phone with their friends? How do babies unable to crawl or walk become adults who jog and run marathons? Myths and folklore exist in all cultures to explain physical, cognitive, social and emotional development, and in most, rituals mark the rites of passage from childhood to adulthood.

Over the years, several theories about development have evolved. Jean Piaget focused on how children develop cognitively. Erik Erikson centered on the stages of social and emotional development in children and adults. Arnold Gesell looked at patterns and phases of physical development in children. Lawrence Kohlburg was concerned with stages of moral development and how children and youth move from one level to another. Leo Vygotsky pursued research that resulted in a theory of language and cognitive development. More recently Howard Gardner has explored a concept of multi-intelligences based on connections between heredity, environment and culture. In this unit, the content and activities focus primarily on the work of Piaget and Gardner.

The emphasis in this module is to provide paraeducators with an understanding of the flow and patterns of development in infants, toddlers, children, adolescents and adults. It is divided into two units. The first unit provides paraeducators with an overview of human development and typical sequences of development in infants, children and youth. In the second unit trainees learn about risk factors that may cause or impede typical development.

UNIT 1

PRINCIPLES OF HUMAN DEVELOPMENT

INSTRUCTIONAL OBJECTIVES

Paraeducators will:

1) Explain why typical development in all children and youth follows predictable patterns.

2) Explain what is meant by typical development in terms of: a) cognitive growth, b) physical/sensory growth, c) social/emotional growth, and d) language/communication development.

3) Discuss the typical physical, cognitive, emotional, and social changes which occur at different ages and stages of development.

4) Describe Piaget's theory of intellectual development.
5) Describe Gardner’s seven intelligences.

TIME REQUIRED

The time needed to teach the material contained in this entire module will range from a minimum of two hours to six hours depending on the number of training activities you include in the session.

MATERIALS AND EQUIPMENT REQUIRED

☐ A flipchart and easel, chalkboard and/or an overhead projector.

☐ The Information Handouts and Exercises included after each unit.

☐ Items that will enable you to demonstrate Piaget’s concept of concrete operations (e.g. bottles/containers of different shapes, blindfolds, candy bars of different sizes).

BEFORE THE TRAINING

☐ Review the Background Material and the content in the information handouts, and other resources available to you. The References and Resources section contains information about other resources you may want to consult. Develop a series of brief lectures for the various topics you will cover in this training session(s). Stress the importance of gaining an understanding of the principles and patterns of typical human development before learning about the factors that cause or impede “normal” development. Two of the lectures should focus on Piaget’s and Gardner’s theories of cognition. Based on your personal experiences and the content in the Background Information, Information Handouts and other resources, develop examples that demonstrate Piaget’s stages of intellectual development and Gardner’s seven intelligences.

☐ Make copies of the Informational Handouts, and Exercises you plan to use during the session.

☐ Write the terms “Cognitive Development,” “Physical Development,” “Social/Emotional Development,” and “Language Development” on the flipchart/chalkboard to refer to during the session.

DURING THE TRAINING

☐ Begin the session by discussing the major principles of human development. Use Information Handouts 1 & 2, “Principles of Human Development” and “Terms Used in the Study of Human Development,” as a guide for the discussion.

☐ If there is time during the training program, you may want to make a homework assignment asking participants to use Exercise #1 and: 1) observe two children of the same age between the ages of birth and five years, 2) record their observations on the Observation Form, 3) be prepared to discuss the results during the next class, or 4) prepare a written report for you to review.
Divide the participants into small groups. Ask the individual groups to brainstorm (based on their personal experiences) and list typical characteristics of children and youth of different ages. Group 1 should be asked to discuss babies between the ages of 10 days and six months. Assign the following age spans to the remaining groups in the following order: 1) one to two years, 2) three to five years, 3) six to ten years, 4) eleven to twelve years, 5) thirteen to eighteen years, and 6) different phases of adulthood. Allow 15 to 20 minutes for the groups to complete their discussions. Ask for volunteers to read the lists and record the responses on the flipchart or chalkboard. (Participants enjoy this exercise because it enables them to demonstrate their knowledge of human development. Perhaps one of the most striking results of this activity for most participants is how “achieving independence” is the major theme throughout all stages of development beginning at birth and continuing throughout our lives.)

Refer to these lists throughout the discussions that follow of the various developmental stages. If necessary correct any misconceptions.

Distribute Information Handout 3. Use them as a resource for discussing and reinforcing the developmental stages and patterns of behavior at various stages of life from birth through adulthood.

Distribute Jean Piaget’s theories of intellectual development and Howard Gardner’s concept of multiple intelligences. Discuss and use examples to demonstrate Piaget’s four stages of intellectual development. Describe Gardner’s theories of multiple intelligences. Give examples of instructional activities and curriculum modifications that will build on student strengths and cultural backgrounds.

Distribute Exercise #2, “The MI Personal Inventory for Adults.” The purpose of this inventory is to provide participants with a better understanding of Gardner’s theory of multiple intelligences. It will also help them recognize differences in intelligence among children and youth, and it will help them to assess which of the intelligences they use in their daily lives, and to identify intelligence areas they may want to more fully develop.

**DIRECTIONS FOR COMPLETING THE MI PERSONAL INVENTORY:** Ask the participants to assign a 3 to any intelligence they use extensively, a 2 for moderate use, a 1 for infrequent use and a 0 if it is never used. The total for each intelligence can range from a high of 6 to a low of 0. Point out that there are 2 columns. The first addresses personal use, and the second column is for professional use.

After they complete the exercise ask the participants to reflect on the impact of their heritage, their culture, their environment, their physical abilities on the development of their intelligences and how their intelligences were nurtured as a child, as an adult. Ask the participants to share the results with other members of the class.

Divide the class into pairs. Ask some of the pairs to work together to brainstorm instructional strategies and curriculum activities the team might use to meet the needs of children and youth in different stages of Piaget’s theory of intellectual development. Ask the remaining groups to develop different activities the team could utilize to strengthen one or more of Gardner’s different intelligences.
REFERENCES AND RESOURCES

The material in this module provides an overview of typical child development and factors that may cause or delay development. The items in this section of the bibliography include the references mentioned in the Information Handouts in Unit 1 and other resources trainers can draw on to prepare paraeducators to work with infants and young children, elementary school age children and adolescents.

PRINCIPLES OF TYPICAL HUMAN DEVELOPMENT

INTRODUCTION. All infants, toddlers, young children, teenagers, and adults are individuals whose traits and characteristics make them unique. The question invariably arises, if children and youth are so distinct how can there be patterns of “normal” development? The answer is that although each of us develops in our own unique ways at our own pace we also pass through certain predictable stages.

STAGES OF DEVELOPMENT. Observations of infants, young children and youth forcefully demonstrate that everyone passes through predictable stages of cognitive, physical/sensory, social/emotional and language development. Because development is regular, patterned and predictable it is referred to as “normal” or typical. When children deviate from these “norms” they may require special services and individualized education programs.

Development is a step by step process. For example, learning to walk may involve as many as fifteen steps, beginning with pulling to a standing position and ending with walking without holding on. Most children progress through each step rather than skipping from Step 1 to Step 15. Because of these sequential patterns, determining a child’s or youth’s level of development is important so the child or youth can be assisted to reach the next step.

The terms “stages of development” and “characteristics of certain ages” are general. But to say the “average” four year old does certain things does not mean that every four year old acts in that manner. Individual development in physical, cognitive and social/emotional areas does not necessarily proceed evenly.

One child (or adult) may be at a different chronological age for each area. It is likely, however, that the child (or youth) who is accelerated in one area will be advanced in other areas. Also the child who is delayed in one area often is delayed in other areas as well. (An obvious exception is a person who has a physical disability who might, therefore, be delayed in acquiring physical skills but is not delayed in social, cognitive or language development.)

A second important concept is that development generally proceeds from the concrete and simple to the abstract and complex. For example in cognitive development children first become aware of people, objects, or events. From there they progress to logical thinking and are able to sort things into categories, classes, order. The next step in the sequence is problem solving and developing rules and guidelines for coping with the environment and society in general.

Finally, the acquisition of language is unique to humans. Language fills important functions for us: it provides us with a means to communicate and socialize; it enables us to transmit culture from generation to generation and it becomes a vehicle for expressing thought. Babies, regardless of where they are born, are capable of producing every sound used in all languages used on the earth. Infants’ babbling encourages older persons to talk to them, thereby teaching infants the sounds used in their home environment. By six months
of age, the sounds children make will be only those they hear, and all other sounds are not made or practiced. In this way, all humans learn to speak the language and the dialect that is spoken where they are raised. It is also important to note that children will understand language before they speak it.

MULTIPLE INTELLIGENCES. Howard Gardner’s theory of multiple intelligences has gained increased attention from educators who work with children and youth who come from multicultural heritages as well as those who have diverse learning styles and/or ability levels. He based his concept of multiple intelligence on his own research and a broad range of other research initiatives including those concerned with heredity, cultural and environmental factors that influence development. Gardner believes that our society has defined intelligence too narrowly. Indeed he has broadened the definition of intelligence based on the traditionally recognized IQ scores. Gardner has identified at least seven intelligences. Moreover, he believes that all of us have demonstrated each of these intelligences to one degree or another. They include: logical-mathematical, linguistic, spatial, body/kinesthetic, musical/rhythmic, interpersonal, and intrapersonal.

For additional information see the Information Handouts for this unit that follow. They include: 1) Basic principles of human development, 2) Terms used in the study of human development, 3) Developmental stages and patterns of human development, 4) Piaget’s theory of stages of development, and 5) Gardner’s theory of multiple intelligences.
BASIC PRINCIPLES OF HUMAN DEVELOPMENT*

> Development in all people is similar. While every person is unique, development occurs in sequences that are predictable. For example, all babies sit alone before they walk.

> Development is an orderly process with stages (patterns) that can be predicted. Knowing the predictable sequences of behavior helps in recognizing typical ("normal"), delayed or accelerated patterns of behavioral change and growth enables educators to develop individualized programs.

> Development proceeds from the general to the specific. For example infants move their entire arm in a random manner before they can control their hands and fingers to pick up a toy.

> Development proceeds from the upper portions of the body toward the lower portions—from head to toe. This "cephalocaudal" development means that children gain control of their head and neck movements before they are ready to sit alone, or walk.

> Development proceeds from the center of the body to the outer body parts. This "proximal-distal" development means that children can hold a ball before they can tie their shoes.

> Development proceeds at different rates. In a person's developmental sequence, there are periods of accelerated growth and gradual growth. From birth to age five, a child's development is characterized by rapid physical growth; from 5 to 11, physical development slows down; during adolescence, there is rapid physical growth again.

> Development can proceed at different rates within an individual person. For example, a person may have delayed cognitive and language development and typical physical development.

> Physical, cognitive, social and emotional development are interrelated and affected by the interaction of heredity, culture, and environment. For example, a person with mental retardation may develop at different rates depending on whether or not s/he is reared in an institution or at home with access to early family intervention and education services.

*The information in this Handout was adapted from the various sources identified in the references and resources included in the bibliography for this unit.*

NRC for Paraprofessionals
TERMS USED IN THE STUDY OF HUMAN DEVELOPMENT*

COGNITIVE DEVELOPMENT. The process of acquiring knowledge and information as a person interacts with the environment and culture. Cognitive development depends on growth inside the person (such as the development of curiosity and the desire to learn) as well as the impact of the outside environment.

COMMUNICATION. The transmission of messages from one person to another. It may be accomplished in myriad ways including eye contact, posture, facial expressions, gestures, writing, speech, and technological equipment.

DEVELOPMENT. The growth of the person in predictable patterns.

DEVELOPMENTAL DELAY. A term used to describe an observed difference in a person's actual growth and behavior and the typical growth and behavior expected of people of the same age.

EMOTIONAL DEVELOPMENT. The process in which the person acquires feelings about him/herself.

HUMAN DEVELOPMENT. A term used to refer to the study of a series of patterned and predictable changes that occur as a person grows and learns how to interact with the environment.

LANGUAGE. The organized system of symbols people in various societies use to communicate with one another. Language enables people to communicate and socialize, it enables us to transmit culture from generation to generation, and it is a vehicle for expressing thought and emotions. These symbols may be spoken, written, or signed.

LEARNING. The acquisition of knowledge and skills as children and youths interact with their environments, teachers and caregivers. Learning is both receptive and expressive. Receptive learning is under the control of the learners who "take in" or assimilate information about their environments and experiences. Expressive language is strongly tied to reinforcement provided by the learner's environment. For example, a person may know the concept—but not use the word unless his/her environment encourages the use.

MATURATION. The growth of a person from within; the process of acquiring cognitive, social, emotional and language skills that increase with age.
NORMAL/TYPICAL. Averages or standards against which the behavior or development of a person is compared.

PHYSICAL/MOTOR DEVELOPMENT. The sequence or rate at which a person acquires motor skills and learns to control his or her body. It is characterized by changes seen in the external body and by unseen internal changes in the organs, muscles, blood, bones and nervous system.

SOCIAL DEVELOPMENT. The general process by which a person acquires the beliefs, skills, values, behavior patterns and other characteristics considered necessary for interacting with other humans in a particular society/culture.

SPEECH. The organized production of sounds to form words and word groups.

*The definitions in this list have been assembled from various sources that are identified in the references and resources included in the bibliography for this unit.
DEVELOPMENTAL STAGES AND PATTERNS OF BEHAVIOR*

The Age of Dependence - Birth to 24 Months*

This is the time of greatest growth in children. They go from being dependent on parents for food, movement and stimulation to being able to control these things themselves. By the end of this age, they can walk and climb alone, tell caregivers what they want, feed themselves, and entertain themselves for short periods of time. This is a time of self-centeredness and increasing independence. Children of this age are not selfish, rather they can only see the world from their own viewpoint and what they can do to manipulate it. The skills developed during this time are the foundation for all later development. The skills learned can be divided into three broad categories: interactions, communication and self-help.

INTERACTIONS. Interactions include all the skills children need in order to know how to act with family, friends and other people. Included are skills related to how to use toys and other objects in the environment. If children learn these skills, they can play appropriately alone as well as with others. Children need to use them at home, in school and in a wide variety of other places, e.g., grandma's house, the playground, the grocery store and the baby-sitter's house. The skills that help determine how children are able to interact are fine motor, gross motor, communication, cognitive and social skills.

COMMUNICATIONS. Communication includes all the skills necessary for children to understand the language used by the people around them as well as the skills necessary for children to use language themselves. Included are skills which are needed for talking and also for signing or using a picture communication system. Other skills involved in the area of communication are cognitive, interaction and motor areas of development. Sometimes a child will talk more in some situations than others. For example, many children will use more language at home than they will when they first start in a classroom. Often children will "clam up" around strangers or when requested to show that they know a word or phrase. Children need to have opportunities to use their language skills in new environments.

SELF-HELP. Self-help includes the skills necessary for children to feed, dress and bathe themselves. They are the skills that decrease a child's dependence on parents and caregivers and decrease the amount of time required for physical care giving. Skills from gross motor, fine motor and cognitive are all involved in performing self-help activities.

Age of Exploring - 24 to 36 Months

This age is one of many changes for a child. Children at the beginning (24 months) are very different when compared to the end of this age (36 months). It is a time for practicing skills that a child has learned earlier and to become more "grown-up." They are now learning when and where to use these skills. Children continue to need help from their family, neighbors and environment to learn how to use these new skills to

*Information in this handout was compiled from several sources, all identified in the references and resources in the bibliography for this module.

NRC for Paraprofessionals
interact and communicate in more complex ways. They may seem like babies at times and more like independent children at other times. For example, they may want help from others to wash their hands or play a game and twenty minutes later they want no help to do these same tasks. Sometimes this makes understanding what a child wants very difficult for caregivers. By the end of this age, however, the child has mastered many more skills and language, so that s/he becomes a talker and explainer as well as a doer. Children accomplish these skills through interaction, communication and self-help experiences.

INTERACTIONS. Interactions include skills needed for a child to know how to act with other children, family and other familiar and unfamiliar adults. Children also learn how to use objects, materials, and toys in their environment. This includes a child knowing what to do when s/he is alone, so that s/he can play by him/herself. Children learn how to begin interactions and how to respond to others once the interactions begin. There will be times when these interactions are quiet activities such as reading a book, playing with trucks and cars, or drawing a picture with crayons. There will be times when these interactions are very active, like running and screaming, climbing on the furniture and jumping off or riding a bike. Children will spend more time in active play at the beginning of this age (24 months) and more time in quiet play at the end of this age (36 months.)

COMMUNICATIONS. The skills in this area include those involved in talking, signing, using a picture communication system, and understanding what is meant when adults and peers talk with the child. The skills in these systems include the cognitive, interaction and motor areas of development. During the 2 to 3 year age range, children may not be learning a lot of new words, but they are putting together the words they know and making longer and more complicated sentences. They are longer and more complicated from the perspective of what they say, and children understand longer and more complicated sentences said to them. Children of this age are beginning to use their communication system to be as independent as their motor system allows them to be. For example, they will sometimes ask others to get objects for them or to perform specific actions, rather than do them for themselves. This does not always happen, as they sometimes ask for an object while they are getting it for themselves.

SELF-HELP. The skills in this area include feeding, dressing, bathrooming, and bathing. These routines include component skills of gross motor, fine motor, communication, cognition, and interaction. Two to three year old children are learning how to use these skills to finish each routine, but sometimes they want to play during these routines. They want to do them at their own pace and they want to make the choice of when and how to do each routine. Many times they use their skills during these routines to be independent from what others around them want them to do. They want to experiment and try combinations of new skills during these routines, such as drinking their juice by dipping from their glass with a spoon.

Pre-School Children Ages 3-5

PHYSICAL DEVELOPMENT. During this period the rate of physical growth begins to slow down. Children begin to play with toys that can be manipulated; for example, they enjoy playing with clay, driving nails and pegs, building towers using small blocks. They can walk on a line and hop on one foot, ride and steer a tricycle.
SOCIAL, EMOTIONAL AND COGNITIVE DEVELOPMENT. Children between the ages of 3 and 5 learn by observing adults and their peers. While they are self-centered, they also need companionship and to be able to play with children the same age. They begin to learn to take turns and share, and they move from parallel play to cooperative play. They are interested in talking to new people and visiting new places. And they begin to expand skills through the increasing use of imaginative play and the use of other methods for satisfying their curiosity.

In Piagetian terms children in this age range are “preoperational.” They always seem to be on the go, exploring and learning about their world. At the same time they are seeking independence, they are also forming strong attachments with caregivers and require a great deal of attention and support from adults. Their attention spans are short and they can be easily diverted.

Early Elementary Children Ages 5-8

PHYSICAL DEVELOPMENT. The rate of growth continues to be relatively slow, providing children with an opportunity to develop greater coordination in both gross and fine motor areas. They learn to skip, skate, ride two-wheel bikes, walk balance beams, grasp a pencil in an adult manner, move beyond cutting straight lines to cutting out simple shapes and the predominant hand is established.

SOCIAL, EMOTIONAL DEVELOPMENT. Children are learning to get along well with their peers, they are also sensitive to being left out, ridicule and criticism. Developing, following and playing by rules becomes very important. They begin to understand the values of their culture/environment. And they like to try out the skills they are learning in many settings. Children in this age group identify strongly with their teachers and other adults: encouragement, recognition, praise and adult support are very important. They also need time to adjust to new experiences and situations.

COGNITIVE DEVELOPMENT. In school, children ages 5 to eight are learning basic academic skills—reading, writing and arithmetic. They are interested in learning how and why things move or work. Their attention spans remain short. And they need time to practice what they are learning.

Late Childhood/Pre-Adolescence - Ages 8-11

PHYSICAL DEVELOPMENT. This stage of development is sometimes referred to as Pubescence. It is an overlapping period because it includes the closing years of childhood and the beginning years of adolescence. Pubescence is climaxed by puberty when girls begin to menstruate and boys show the presence of live sperm in their urine. It is marked by slow and steady growth. Both girls and boys need opportunities to improve the coordination of their large and small muscles and they require plenty of sleep and well balanced meals.

SOCIAL, EMOTIONAL DEVELOPMENT. Children in this age range are enthusiastic about almost everything. They are imaginative and like to explore. Peer group approval becomes increasingly important. They are interested in organized games and competitive activities. They are frequently socially insecure, and they value secure, supportive relationships with adults.
COGNITIVE DEVELOPMENT. At this stage of their development children enjoy talking and expressing abstract ideas. They like to experiment and solve problems and are eager to acquire new skills. Language usage is influenced by their peers and oriented to shared interests among peers.

Adolescence

PHYSICAL DEVELOPMENT. “Adolescence” is derived from the Latin verb that means to grow into maturity. It is the period of change in a person’s life that signifies transition from childhood to adulthood. It is characterized by rapid growth and marked changes in body proportions. Changes may begin and end any time between 6 and 19. Primary sex characteristics develop and in girls reproductive organs mature. Secondary sex characteristics including marked changes in the voice, development of underarm, facial and pubic hair begins in early adolescence; chest hair does not appear until late adolescence. Breast development begins in girls and menstruation occurs.

Rapid growth and bodily changes are likely to be accompanied by periods of fatigue; acne may develop, and both girls and boys may experience periodic headaches and back-aches. In addition, girls may experience cramps, swelling of legs and ankles.

EMOTIONAL AND SOCIAL DEVELOPMENT. There is a definite relationship between physical development and the ways adolescents perceive themselves. It is not uncommon for many adolescents to experience feelings of self-conscious-ness, shyness and insecurity because of the sexual changes taking place. Adolescent emotions are often intense, uncontrolled and seemingly irrational. Throughout adolescence emotional maturity grows as individuals develop more self control over their emotional responses. During this period the peer group influences young people more than any other factor. They become less dependent on their family and try to achieve independence and autonomy.

As the dependence on the home lessens security is found among friends who share the same values and attitudes.

COGNITIVE DEVELOPMENT. Cognitively, adolescents are able to shift from concrete to abstract thinking. They develop the ability to test tentative hypotheses against available evidence. Moral development matures during adolescence and young people begin to define their own moral principles rather than adapting those of their parents without question. Adolescents begin to develop specific skills and talents and start to set goals for themselves.

Adulthood and Aging

Physical and mental changes occur throughout a person’s life. Following adolescence, a period of tremendous change, the adult years seem to be relatively calm. Aging is a slow process that is often difficult to recognize until certain milestones occur. There is wide variation in the attainment of these milestones. “Old age” has many definitions. Our mores reflect this, as evidenced by the “senior citizens’ discounts” available at varying ages. However, retirement usually occurs between ages 62 and 65, the time when Social Security benefits are available.
ASPECTS OF AGING. Some may be considered positive and include:

- decreased family responsibilities
- more free time to pursue hobbies
- freedom from jobs that may have been anxiety producing

Some may be considered challenging and include:

- loss of loved ones or same-aged friends
- medical difficulties
- sensory loss

Each of us know people who are elderly. We also have a lot of ideas about what it means to be “old,” many of which are negative. Aging does not have to be sad or bad. The perceptions of others often define it and older adults respond to these social cues. Not all things about the later years of life are disheartening. For many older Americans, it is the first time in their lives that the responsibilities placed upon them by society and family diminish, and they can look forward to enjoying life for themselves. This, of course, may not be true for everyone. There are people who retire “well,” and those who don’t make it after the first couple of months. A healthy, rewarding retirement is related to the individual’s expectations and values as well as to the people and the environment surrounding the person.

This transition from a working, responsible individual to a person whose life is unstructured affects each person differently. If the person has hobbies, friends, plans, and considers him/herself financially stable, the transition may be smooth. In other cases, the transition may be more difficult.
Piaget's theory is mainly concerned with matters of intelligence, thinking, logic, language and competence or efficiency. His approach views people as naturally active, seeking, adapting beings who learn through continual actions, which they initiate within their environment. According to Piaget, children are born with a set of sensorimotor operations/movements to perform upon their environment in order to “know” it and themselves. As a result of these transactions and physiological maturation, the original sensorimotor operations are: 1) built into increasingly more complex patterns, 2) internalized so they can be carried out mentally, and 3) tied to language symbols. For Piaget, mature behavior is the ability to reason and think critically, in objective, abstract, and hypothetical terms. When youths or adults reach this level, Piaget regards them as being at the peak of a developmental pyramid. Piaget hypothesized that each person progresses through four distinct stages of intellectual development. They are:

SENSORIMOTOR. During the first two years of life, children receive information from their environment primarily through the senses and a multitude of physical motor explorations. The explorations provide information about ways to cope with different situations and the effect of behavior on the environment. For example, an infant learns if s/he cries when s/he’s hungry, s/he will be fed; s/he learns if s/he smiles, s/he gets a response from another person. During this time the infant attains a) object permanence: things continue to exist even when they are out of sight, b) invariance despite change: the identities of objects and people remain the same even in different contexts or circumstances, and c) means-end: certain acts result in reliable effects on the environment.

PREOPERATIONAL. From three to seven years of age children begin to expand their ability think. This stage is divided into two sub-stages, a) preconceptual: during the third and fourth years of life, children are constantly investigating their environment. Children in this period usually see themselves as the center of their environment. Children who have learned the label, “dog,” may initially label all four-legged animals “dog”; they gradually learn other appropriate labels for the animals, e.g., cat, cow, etc; and b) intuitive: during the ages four to seven, children begin to develop increased interest in their social world and demonstrate an ability to give reasons for their beliefs and actions. Their broader social interactions and their growing ability to use words effectively are important factors in contributing to their growth. For example, it is difficult for children under four years of age to take turns; they need to learn to experience “it’s mine” before they can say “I want to share it with you.” As children move into the intuitive period, they are able to share and take turns with others. They also learn to play cooperatively with other children; for example, two children, after listening to a story about firemen, may decide to build a fire station in the block corner. During this period of development thought is dominated by what is seen. The child is not able to attend to more than one thing at a time where space, time, volume, shape, and weight are concerned. And language development is very rapid.
CONCRETE OPERATIONS. From the ages of seven to eleven, children become capable of mentally seeing an object or event in a total system of interrelated parts; they understand that a piece of clay contains about the same amount of clay regardless if it's a circle or a rectangle. They are also able to think about what happens to concrete objects without having to experiment with the object. For example, they recognize that water in a tall, thin glass can be the same amount of water in a short, fat glass, even though the containers have different shapes. During this stage of development logic and objectivity progressively characterize thought. The child can reason, but only when using concrete objects.

FORMAL OPERATIONS. By the time children reach the age of twelve, their cognitive development is characterized by thinking and reasoning. They can think about issues and ideas, they can form opinions about abstract concepts like love, right and wrong; they can understand the term “a million dollars,” which must be thought of in abstract terms. Mental development is usually complete by the end of this period, around fifteen years of age. During this stage of development young people are able to formulate and execute symbolic plans of action based on hypothetical events, and can consider simultaneously more than one variable in the solution of a problem. And they are able to imagine potential relations among objects or events.
HOWARD GARDNER'S THEORY OF MULTIPLE INTELLIGENCES*

The concept of multiple intelligences (MI) has gained increased attention among general and special educators as one way to develop curricular and instructional activities that build on student strengths and expand student learning. Gardner’s MI theory stresses a cross-cultural view of intelligence that allows children and youth to solve problems in culturally meaningful ways and create products that reflect their cultural perspectives. According to Gardner the development/strengthening of a particular intelligence requires three conditions: 1) the individual must have an opportunity to learn, 2) the culture must place a value on the intelligence’s development, and 3) the individual must place value on developing the intelligence. A brief description of his seven intelligences follows.

LINGUISTIC INTELLIGENCE. The capacity to use words effectively, whether orally (e.g., as a storyteller, orator, newscaster, politician) or in writing (e.g., as a poet, playwright, editor, journalist). This intelligence includes the ability to manipulate the structure of language, and the practical uses of language. Some of these uses include rhetoric (using language to convince others to take a specific course of action) mnemonics (using language to remember information), explanation (using language to inform), and metalanguage (using language to talk about itself).

LOGICAL-MATHEMATICAL INTELLIGENCE. The capacity to use numbers effectively (e.g., as a mathematician, tax accountant, or statistician) and to reason well (e.g., as a scientist, computer programmer, or logician). This intelligence includes sensitivity to logical patterns and relationships, statements and propositions (if-then, cause-effect), functions, and other related abstractions.

SPATIAL INTELLIGENCE. The ability to perceive the visual-spatial world accurately (e.g., as an interior decorator, architect, artist, or inventor). This intelligence involves sensitivity to color, line, shape, form, space, and the relationships that exist between these elements. It includes the capacity to visualize, to graphically represent visual or spatial ideas, and to orient oneself appropriately in a spatial matrix.

BODILY-KINESTHETIC INTELLIGENCE. Expertise in using one’s whole body to express ideas and feelings (e.g., as an actor, a mime, an athlete, or a dancer) and facility in using one’s hands to produce or transform things (e.g., as a crafts person, sculptor, mechanic, or surgeon). This intelligence includes specific physical skills such as coordination, balance, dexterity, strength, flexibility, and speed.

MUSICAL INTELLIGENCE. The capacity to perceive (e.g., as a music lover), discriminate (e.g., as a music critic), transform (e.g., as a composer), and express (e.g., as a performer) musical forms. This intelligence includes sensitivity to the rhythm, pitch or melody, and timbre or tone color of a musical piece. One can have a global, intuitive understanding of music, a technical understanding, or both.

INTERPERSONAL INTELLIGENCE. The ability to perceive and make distinctions in the moods, intentions, motivations, and feelings of other people. This can include sensitivity to facial expressions, voice,

and gestures; the capacity for discriminating among many different kinds of interpersonal cues; and the ability to respond effectively to those cues in some pragmatic, appropriate way (e.g., to influence a group of people to follow a certain line of action, help others learn new ideas).

**INTRAPERSONAL INTELLIGENCE.** Self-knowledge and the ability to act on the basis of that knowledge. This intelligence includes having an accurate picture of oneself (one’s strengths and limitations); awareness of inner moods, intentions, motivations, temperaments, and desires; and the capacity for self-discipline, self-understanding, and self-esteem.

Gardner is careful to explain that intelligence should not be limited to the ones he has identified. He believes that the seven, however, provide a far more accurate picture of human capacities than do previous theories. Contrary to the small range of abilities that many standard IQ tests measure, Gardner’s theory offers an expanded image of what it means to be human. He also notes that each intelligence contains several sub-intelligences. For example, the domain of music includes playing music, singing, writing musical scores, conducting, critiquing, and appreciating music. Each of the six other intelligences also encompass numerous components.

Another aspect of the Multiple Intelligences is that they may be conceptualized in three broad categories. Three of the seven—spatial, logical-mathematical, and bodily-kinesthetic—may be viewed as “object-related” forms of intelligence. These capacities are controlled and shaped by the objects which individuals encounter in their environments. On the other hand, the “object-free” intelligences, consisting of verbal-linguistic and musical, are not shaped by the physical world but are dependent upon language and musical systems. The third category consists of the “person-related” intelligences with interpersonal and intrapersonal intelligences reflecting a powerful set of counterbalances. Beyond the descriptions of the seven intelligences and their theoretical underpinnings, certain points of the Gardner theory are important to be aware of. Intelligences usually work together in complex ways. Gardner points out that each intelligence as described above is actually a “fiction.” That is, no intelligence exists by itself in life (except perhaps in very rare instances in savants and brain-injured individuals). Intelligences are always interacting with each other. To cook a meal, one must read the recipe (linguistic), possibly divide the recipe in half (logical-mathematical), develop a menu that satisfies all members of a family (interpersonal), and placate one’s own appetite as well (intrapersonal). Similarly, when a child plays a game of kickball, he needs bodily-kinesthetic intelligence (to run, kick, and catch), spatial intelligence (to orient himself to the playing field and to anticipate the trajectories of flying balls), and linguistic and interpersonal intelligences (to successfully argue a point during a dispute in the game). The intelligences have been taken out of context in MI theory only for the purpose of examining their essential features and learning how to use them effectively. We must always remember to put them back into their specific culturally valued contexts when we are finished with their formal study.

There are many ways to be intelligent within each category. There is no standard set of attributes that one must have to be considered intelligent in a specific area. Consequently, a person may not be able to read, yet be highly linguistic because he can tell a terrific story or has a large verbal vocabulary. Similarly, a person
may be quite awkward on the playing field, yet possess superior bodily-kinesthetic intelligence when she
weaves a carpet or creates an inlaid chess table. MI theory emphasizes the rich diversity of ways in which
people show their gifts within intelligences as well as between intelligences.

Each intelligence appears to have its own developmental sequence, emerging and blossoming at different
times in life. Musical intelligence is the earliest form of human giftedness to emerge; it is a mystery as to
why this is. Gardner suggests that excelling at music as a child may be conditioned by the fact that this
intelligence is not contingent upon accruing life experience. On the other hand, the personal intelligences
require extensive interaction with and feedback from others before becoming well-developed.

It is evident that creativity can be expressed through all the intelligences. Gardner notes, however, that most
people are creative within a specific domain. For example, although Einstein was gifted mathematically and
scientifically he did not exhibit equal genius linguistically, kinesthetically, or interpersonally.
Exercise #1

OBSERVATION ACTIVITY

Directions: Identify 2 children who are the same age (between birth and 5 years of age). Observe them prior to the next class. Write below your observations of their physical, social and language skills. Be prepared to share the results of your efforts with the class during the next session.

Child #1
First Name: __________________________
Age: ________
Physical Skills: ______________________

Child #2
First Name: __________________________
Age: ________
Physical Skills: ______________________

Social Skills: ______________________

Language Skills: ______________________

UNIT 2

FACTORS THAT MAY IMPEDE TYPICAL HUMAN DEVELOPMENT

INSTRUCTIONAL OBJECTIVES

The paraeducator will be able to:

1) Discuss various disabilities and their impact on education needs of children and youth.

2) Experience (through simulations) and discuss the effects of several categories of disabilities on the learner.

3) Practice and use basic signing skills.

4) Recognize and use adaptive equipment and devices.

TRAINING TIME

Two or more hours are required to teach this unit depending on the number of activities you select.

MATERIALS AND EQUIPMENT REQUIRED

☐ Copies of all handouts.

☐ A chalkboard or easel and flip chart.

☐ The various equipment, materials, and handouts required to carry out the simulations that are part of this unit.

☐ The definitions of disabilities used by your state education agency or school district.

☐ Examples of adaptive equipment available to assist children and youth to communicate and achieve independence.

BEFORE THE TRAINING SESSION

☐ Review the Background Materials and Information Handouts on disabilities and compare the information with the definitions used by your state/district. Prepare a series of lectures incorporating information from your district stressing the following: 1) the major causes of disabilities, 2) the major categories of disabilities, and 3) an introduction to the simulations.

☐ Make copies of the handouts and obtain the other equipment you will need for the simulations—blindfolds, ear plugs, a cassette recorder, mirrors, canes, crutches and wheel-chairs.

☐ Invite an interpreter or person with expertise in signing to the class to teach the participants a few emergency or basic signs.
Assemble examples of adaptive equipment and devices to demonstrate during the session.

Ask an occupational or physical therapist to share information about adaptive equipment and devices available to help children and youth with disabilities become independent, to live and work in the community and to communicate.

DURING THE TRAINING SESSION

- Describe the purpose of Exercise #1, the simulation activities. Encourage trainees to try as many simulations as they can in the allotted time. Ask them to keep track of their feelings and reactions during the simulations.

- Reconvene the group. Ask the participants to share the feelings they experienced and insights they gained during the simulation activities and to describe challenges they encountered during the simulations.

- Begin the discussion of genetic, environmental and other factors that may cause disabilities. Answer all questions and concerns.

- Talk with the class about various disabilities. Discuss problems/challenges for the child or youth and the family when typical development does not take place.

- Introduce the resource people you may have invited to the class.

- Allow plenty of time for participants to practice using adaptive equipment or signing and to discuss issues.

BIBLIOGRAPHY AND RESOURCES

FACTORS THAT MAY IMPEDE HUMAN DEVELOPMENT

The previous unit in this module dealt with the stages of human growth that are typical for most people. This unit focuses on causes and categories of disabilities. Since no two states use the same definitions for various types and levels of disabilities, this background information is very general. It should be used to supplement the definitions and regulations connected with service delivery in your state and community, and to develop an outline for the training session.

CAUSES OF DISABILITIES. There are several factors that may lead to a child having developmental and other disabilities. They may be genetic or they may be environmental, and they may occur during the prenatal, natal or postnatal periods.

GENETIC FACTORS. Physical and other characteristics for all people are shaped by our genes. They determine whether we are tall or short, bald or have brown or red hair, the color of our eyes and more. Sometimes disabilities and other conditions are inherited as a result of the genes that exist in our parents. Many times a child's parents do not have the disability; they carry the genes from earlier generations. Genetic factors may cause mild or severe disabilities that may or may not be life threatening. Examples of genetically caused disorders are Down Syndrome, Hemophilia, P.K.U., Rett's Syndrome, Sickle Cell Anemia and more.

ENVIRONMENTAL FACTORS. Sometimes circumstances in a child's environment may cause the child to have a disability. Toxins in the air, water pollution, lead poisoning are other factors that may have an impact on a child's environment and lead to a disability. In addition, a child's family may have economical or other disadvantages that make it difficult to provide experiences that stimulate or encourage learning.

PRENATAL. This term means before birth. Many disabilities are the result of something happening to the fetus while it is still in the mother's womb. If the mother has poor nutrition, has hepatitis or measles, uses drugs, alcohol, or smokes, her child may be born with a disability. Other factors that have been linked to these conditions are: medicine taken during pregnancy and food additives.

NATAL. This term means at the time of birth. Some disabilities result from conditions present at the time of birth. Being born prematurely, a lack of oxygen, long labor, excessive hemorrhaging or loss of blood for the mother, early separation of the placenta (the part of the tissue that is attached to the womb) and direct injury to the head if instruments are used are some events during the birth process that may cause disabilities.

POSTNATAL. This term means after birth. In some cases children or youth become disabled after birth. Injury to the central nervous system may happen in many ways including severe blows to the head as a result of an accident or child abuse, the inability to breathe, poisoning, tumors, and infectious diseases such as meningitis or encephalitis.
MENTAL RETARDATION. Children or adolescents with mental retardation tend to learn more slowly than their peers in the areas of social interactions, cognitive growth and motor development. They may also have difficulties learning things other people take for granted, like knowing their age, their address, dressing themselves, and carrying out other activities of daily living.

Gold (1980) developed a definition of mental retardation that avoided reliance on IQ. His approach was much more comprehensive and stressed the strengths rather than the weaknesses of individuals. He suggested that the level of mental retardation is defined by the amount of power necessary for the teacher to use to teach that person. In other words, Gold’s definition indicates that the teacher is as important as the learner. If the teacher does not have the skills to assist a person in learning, then that individual is usually considered to be mentally retarded.

Gold’s definition is important because all the tools and strategies for teaching people labeled as mentally retarded have not yet been developed. As new and improved techniques and adaptive devices are developed for teaching children or adolescents who have been perceived as difficult to teach, teaching may seem to be easier and produce unexpected results.

Thirty years ago for example, many persons with mental retardation were thought to be unteachable or capable of learning only minimal self-help skills. Today, the same persons are performing academic skills to a greater or lesser degree and are participating in community activities. This is due primarily to the fact that the teaching strategies and tools available to professionals and paraeducators who work with children and youth with mental retardation have become more sophisticated and effective.

PHYSICAL AND SENSORY DISABILITIES. A few of the more common physical and sensory disabilities include: 1) Cerebral palsy, a disability present at or before birth that impairs the motor system. The impact on a child’s ability to be independent can be minimal or it may be so severe that the person may have little muscular control and may need assistance with eating and dressing and to use a wheelchair or other adaptive equipment. 2) Epilepsy, a condition where the person has involuntary lapses of consciousness which may last for a few seconds or may result in a major convulsion with motor movements. 3) Spinal cord injuries resulting in paralysis of one or more limbs and the trunk of the body. These injuries may be present at birth as in the case of spina bifida or occur as the results of an accident.

There are other disabilities that may tend to restrict physical activity such as skeletal deformities or amputations, rheumatoid arthritis, muscular dystrophy, and heart disease. Some children and youth with physical and sensory/motor disabilities may also have mental retardation, learning disabilities, speech limitations or vision and hearing loss. Most do not. The biggest educational challenge for them, their parents and the education workforce is developing methods and adaptive equipment that will enable them to actively explore their environment and participate in activities in and out of school.
LEARNING DISABILITIES. Students with learning disabilities may have many labels: neurological impairment, minimal brain dysfunction, brain damage, dyslexia, attention deficit disorder. A person who has a learning disability may have difficulty in visual perception but not be blind (may not see a circle as perfectly round) or is unable to see specific parts of a figure or word, difficulty in auditory perception (hearing things as others hear them) but not be deaf, difficulty in motor movements (walking, moving arms and fingers) but not be physically disabled, and difficulty with cognitive learning (classifying things, ordering things and ideas) but not have mental retardation. Students with learning disabilities may have average or above average intelligence. They may display a wide range of behaviors that may include difficulty in monitoring and maintaining control of their behavior—hyperactivity, distractibility, impulsiveness, and perseveration.

SEVERE EMOTIONAL DISABILITIES. Children and youth with challenging behaviors demonstrate a wide range of ways of dealing with the world, including “withdrawing” from it and “acting out” upon it. Many develop methods for coping with everyday living that are self-defeating and non-productive. The primary difference between children and youth with severe emotional disturbance and their peers is in the degree to which they are able to monitor, control or change their patterns of behavior.

Students who are withdrawn may find security by building walls around themselves. They may have had experiences early in life that cause them to believe that it is not safe to express their real feelings to other people.

Children or adolescents who act out may appear to have more control over their behavior than they actually do. As a result, others interpret their actions as being deliberately vengeful, or deliberately provocative; that is, doing something just to get even or setting up a situation that will lead to conflict. Most people look upon these behaviors as “disturbing.” People who act out their emotions, unlike those who are withdrawn, defend themselves by acting out their feelings with impulsive, and often explosive immediate reactions. They may find it difficult to deal with frustration or to postpone immediate gratification of needs: “I want it, and I want it now.”

The term severe emotional disability is most often used to describe the behaviors of children and youth who have been diagnosed as having schizophrenia, autism, or other forms of emotional disabilities that interfere with their ability to learn, to interact and maintain friendships with their peers.

SPEECH AND LANGUAGE LIMITATIONS. People who are diagnosed as having speech or language limitations demonstrate a variety of symptoms which represent many causes that may be physiological or environmental. Speech and language skills are automatically acquired by most children. When the ability to communicate is impaired, there is a need to teach a child these skills. Language may be delayed. Other problems may stem from “misarticulations,” where sounds are substituted for others, left out or distorted, the child may stutter or lisp. Language disabilities may also include difficulty in communication because of a lack of vocabulary or improper grammatical structures.
BLINDNESS AND LOW VISION. Students who have a visual disability usually have some degree of useful sight. Only a small percentage are blind. Even many legally blind students (20/200 or worse) have useful vision. Most school districts categorize students who must read and write in Braille as blind. While students who are partially sighted or have low vision are those with enough useful sight to enable them to read either standard or enlarged print. More severe degrees of visual disabilities may result in problems with physical mobility or motor development. Students with various degrees of visual disabilities are able to take care of themselves and live and work independently.

DEAFNESS AND HEARING LOSS. The two dimensions to the sense of hearing are the intensity or loudness of sound (decibels) and the clarity with which sound is received (frequencies). Students with hearing loss may have problems with the loudness of sound or the distortion/clarity of sound or a combination of both.

Language development and communication are the biggest challenges confronting students with hearing impairments. Depending on the degree and type of hearing loss, there are a variety of techniques currently available to assist the students to develop skills in these sound amplification areas. They are: auditory training (listening skills), speech reading (lip reading), finger spelling and sign language, and written and visual presentations. Using a combination of all methods is referred to as “total communication.”

MEDICAL AND HEALTH RELATED PROBLEMS. As early intervention/childhood pro-grams and school districts implement programs for all children and youth with disabilities without regard to the nature or severity of the disabilities, they are increasingly providing services to children who are at-risk because they are medically fragile. Many of these students require specialized health care while they attend classes that are addressed more fully in the unit on Emergency, Safety, and Health Procedures.

The level of academic achievement and participation in school and community events can be affected because a student has limited strength, vitality, or alertness caused by a chronic or acute health problem (heart conditions, tuberculosis, rheumatic fever, nephritis, asthma, AIDS, hemophilia, sickle cell anemia, leukemia, diabetes, and arthritis).

See Information Handout #1 for a more complete description of specific disabilities.
THE SIMULATIONS

Although we can never completely duplicate what it is like to have a disability, through simulations we can provide some understanding of what it might be like. The activities on the following pages are designed to allow the trainees to experience some of the difficulties created by various disabilities and to examine their reactions and emotions as a result of participating in these activities.

LEARNING DISABILITIES

Goal: To enable participants to develop an awareness of reading and visual motor disabilities.

Activity #1  Reading Exercise. Distribute Exercise Handout #1. When the group has completed this exercise, ask for a volunteer to read the translation. (The answer to this exercise is on Exercise Handout #1A.)

Activity #2  Tracing Exercise. Provide the participants with Exercise Handout #2 and stand-up cosmetic mirrors. Ask them to place the mirror on the line on the exercise, look into the mirror, and using their non-dominant hand draw a line inside the double lines.

Activity #3  Spelling Test. Ask the participants to use their non-dominant hand when they take the spelling test. Start to read the words that follow whenever you are ready, even though the participants are not settled down and ready to begin. Rapidly repeat each word twice. Do not stop or slow down, even though you are asked to. The words are: Harassed, Beggar, Embarrassed, Peddler or Pedler, Gauging, Symmetry, Vocabulary, Simulations, Development, Participate, and Dominant.

DEAFNESS AND HEARING LOSS

Goal: To acquaint participants with what it is like to have a hearing loss.

Materials: Cassette recorder and ear plugs.

Activity #4. Ask the participants to work in pairs and to carry on a conversation about any subject they choose. (One person should wear the ear plugs.)

Activity #5. Use the cassette recorder to record the following words: wish, three, pill, station, snow, watched, splinters, tick, mice and jump. The first time you record the words: 1) speak into a can or container and muffle your voice with a cloth around the container and 2) re-record the words on a lower volume, muffled through the cloth. The third time, repeat the words with normal volume and without any distortion. Have participants number a paper to 10 in three columns to be used during each segment of the test. The test can be administered to the entire class or individuals can take the test while others are taking part in the other activities.
BLINDNESS AND LOW VISION

Goal: To enable participants to develop an awareness of what it is like to have different degrees of low vision.

Materials: Blindfolds and/or sleep masks and old glasses smeared thickly with Vaseline to simulate different vision impairments.

Activity #6. 1) Place several easily identifiable objects into a bag, ask the participants to put on a blindfold and to identify them by touch; 2) have the participants try to read small print, and 3) navigate through the halls with a buddy.

PHYSICAL DISABILITIES

Goal: To help participants understand the difficulty of performing tasks without the use of their fingers and hands and to help them understand the impact of restricted mobility.

Materials: Adhesive tape (and other items listed in Activity #7 below), wheelchairs and crutches.

Activity #7. Have participants tape both thumbs to the palm of their hands. Give them tasks to perform such as writing their names, picking up small objects (pennies or paper clips) buttoning a shirt or blouse, using forks, spoons and knives, drinking from a glass.

Activity #8. Have the participants practice using the wheelchair and/or crutches before leaving the room. Encourage them to move about the building, use a water fountain, a pay phone, the restroom, and if practical, to go out of the building to shops.
This is a story to help you understand what it might be like to have a reading/learning disability.

The Friembly Bog*

Once ubom a tmie there was a friembl dobl. His name was jake. Jake belombeb to Bavig and Bhte. Davib and Beth aar tins. They ar nime yeras dol.

On e tome Jak went down to the cellra. H was a ducket of soab. The tins wer doing to wash the car. He liked some soap buddies out fo the ducket. When he darked, dig dubbles ca me out of hi s muth!

Last sum mre Jak founb a frenb. His frien sqw a tac named Freb. They blayde all bay. They nar aroumb and aruommb tye yarb. Jake chased the tac ub te tre. Freb climbed up easily. Jake trieb t and trieb dut ehe slib back bown!

*Source unknown.
Once upon a time there was a friendly dog. His name was Jake. Jake belonged to David and Beth. David and Beth are twins. They are nine years old.

One time Jake went down to the cellar. He saw a bucket of soap. The twins were going to wash the car. He licked some soap bubbles out of the bucket. When he barked, big bubbles came out of his mouth.

Last summer Jake found a friend. His friend was a cat named Fred. They played all day. They ran around the yard. Jake chased the cat up the tree. Fred climbed up easily. Jake tried and tried but he slid back down.
MENTAL RETARDATION*

OVERVIEW

Students who have mental retardation learn more slowly than their peers in the areas of social interaction, cognitive growth and motor development. The disability may be present at birth or may take place during the early stages of development.

For educational purposes, mental retardation is usually classified by degree of impairment in intellectual/cognitive functioning. The most frequently used terms to describe levels of mental retardation are: 1) mild, 2) moderate, 3) severe, and 4) profound.

COMMON CHARACTERISTICS:

Children and youth with mental retardation may:

- have lower academic achievement than peers in all academic subjects;
- require more time to learn a task;
- mature more physically, emotionally, and socially slower than their peers.

Students with milder mental retardation will acquire many of the skills as those of the peers who do not have a mental disability.

Students with very significant mental disabilities may require support and supervision in all aspects of functioning, such as feeding, toileting, grooming, moving throughout the environment, being able to live and work independently.

SUGGESTED STRATEGIES

✓ Paraeducators should use curriculum content and instructional activities developed by the teacher to meet the needs of individual students.

✓ Support and encourage students to develop a social network (e.g., peer buddies, peer tutors, joining school clubs, joining community organizations).

✓ Provide teachers with information they can use to make modifications and adaptations needed for the student to participate in activities with peers whose development follows more typical developmental patterns.

✓ Be aware of long term outcomes such as employment (competitive or supported) and adult living (e.g., living in one’s own home either independently or with support).

*Information contained in this handout was adapted from the Reference handbook for paraeducators (1997) developed by the Louisiana Department of Education, Bureau of Program Development.
Encourage students to master skills that will enable them to be as independent as possible.

**LEARNING DISABILITIES**

Learning disabilities are disorders in one or more of the basic psychological processes involved in understanding or using language, spoken or written. It may manifest itself in an imperfect ability to listen, think, speak, read, write, spell or do mathematical calculations. Students' poor achievement is in no way attributed to such things as vision, hearing, language, behavior or physical problems. Since a learning disability is often a hidden disability, it cannot be easily seen. Identifying a student's preferred learning style and developing strategies that build on these strengths is important.

**COMMON CHARACTERISTICS:**

Students who are diagnosed as having learning disabilities are often assumed to be lazy or uncooperative when, actually they learn things in a different way or at a different pace. Related issues may include:

- Poor academics
- Poor self-esteem
- Weak work habits
  - a) organizational skills
  - b) study skills
  - c) problem solving skills
- Language deficits
  - a) understanding others and expressing oneself
  - b) social interaction skills
- Difficulty understanding and following directions
- Inconsistent performance on day to day activities

**SUGGESTED STRATEGIES:**

Paraeducators should:

- Use multi-sensory teaching techniques developed by the teacher.
- Provide teachers with information they can use to modify classwork and activities to meet the students learning needs.
- Assist the student to learn and maintain compensatory skills.
- Reduce distractions in the learning environment.
- Use positive reinforcement strategies and reward success regularly.
- Provide technological devices (tape recorder, computer, calculator, read-along tapes, etc.) if needed.
ATTENTION DEFICIT/HYPERACTIVITY DISORDERS (AD/HD)

Many students who are medically diagnosed as having AD/HD may qualify for special education services under the category of learning disabled or other health impaired. Since these disorders are currently receiving a great deal of attention in the media as well as in the schools, characteristics and classroom suggestions have been included.

COMMON CHARACTERISTICS:

The student may be:

- **Inattentive** - makes careless mistakes, doesn’t seem to listen, doesn’t follow through, has organizational problems, is easily distracted, is forgetful, often loses things, or dislikes activities requiring sustained effort

- **Impulsive** - acts before thinking, blurts out answers, has difficulty waiting in lines or waiting turns, often interrupts others

- **Hyperactive** - fidgets, has trouble staying seated or still, or talks excessively

SUGGESTED STRATEGIES:

Paraeducator should:

- Provide structure and routine for the student.

- Follow plans developed by the teacher to help the student develop self-control through self-monitoring, self-evaluation, self-rewarding and self-instruction.

- Keep verbal directions simple.

- Help the student keep an assignment notebook.

- Provide frequent feedback on behavior and assignments.

- Prepare the student for transitions and changes (moving to another room, another activity, another seat, etc.).

- Use more positive reinforcement.
Follow instructions of the Individualized Health Services Plan when medications or procedures are prescribed.

EMOTIONAL/BEHAVIOR DISORDERS

An emotional/behavior disorder is characterized by behavioral or emotional responses so different from appropriate age, cultural, or ethical norms that they adversely affect performance. Performance includes academic, social, vocational or personal skills. This disability implies more than a temporary, expected response to stressful events in the environment. It is consistently exhibited in two different settings and persists despite special intervention. A student may have other disabilities along with the emotional/behavioral disorder.

COMMON CHARACTERISTICS:

Students with Emotional/Behavior Disorders have behavior(s) that interfere(s) with the learning process over a long period of time.

These students may have:

- Difficulties in building or maintaining relationships with peers, parents and teachers
- A general mood of unhappiness or depression
- A tendency to develop physical symptoms, pains, fears, or self-injurious behaviors associated with personal or social problems

SUGGESTED STRATEGIES:

Paraeducators should follow an individualized behavioral management plan which has clear expectations and consequences.

- Assist the student to learn and maintain self-monitoring techniques for his/her own behaviors to improve.
- Provide information to teachers that will help them modify a students academic plan/academic schedule/classroom arrangement to meet student’s needs.
- Use humor—laugh with not at the child.
- NEVER HOLD A GRUDGE!
- Observe the student for changes in self-care which may lead to health problems, i.e., poor oral hygiene, eating too much or too little, lack of sleep and others.
- Provide medications when instructed by the school nurse.
AUTISM

Autism is a developmental disability which usually appears during the first three years of life. It is the result of a neurological disorder that affects functioning of the brain. Autism is a combination of developmental challenges. The following areas may be affected:

Communication: language develops slowly or not at all; use of words without attaching the usual meaning to them; gestures used instead of words; short attention span.

Social interaction: individual may spend time alone rather than with others; show little interest in making friends; less responsive to social cues such as eye contact or smiles.

Sensory impairment: unusual reactions to physical sensations such as being overly sensitive to touch or under responsive to pain. Sight, hearing, touch, smell, and taste may be affected to a lesser or greater degree.

Play: lack of spontaneous or imaginative play; does not imitate others’ actions; does not initiate pretend games.

Behaviors: may be overactive or very passive; may perseverate on a single item, idea, or person; apparent lack of common sense; may show aggressive injurious behavior.

COMMON CHARACTERISTICS:

The characteristics of autism can be exhibited in any combination and any degree from mild to severe. Individuals with autism usually exhibit at least half of the traits listed below. The symptoms may range from mild to severe and vary in intensity from symptom to symptom.

- Difficulty mixing with other children
- Insistence on sameness; resists changes in routine
- Unresponsive to traditional teaching methods
- Sustained odd play
- Apparent insensitivity to pain
- Echolalia (repeating words and phrases in place of normal language)
- Prefers to be alone; aloof manner
- May not want cuddling or act cuddly
- Inappropriate laughing and giggling
- No real fears of dangers
- Little or no eye contact
- Spins objects
- Noticeable physical over-activity or extreme under-activity
- Display extreme distress for no apparent reason
- Not responsive to verbal cues; acts as if deaf
- Inappropriate attachment to objects
Uneven gross/fine motor skills (may not want to kick ball but can stack blocks) ➢ Difficulty in expressing needs; uses gestures or pointing instead of words.

SUGGESTED STRATEGIES:

Paraeducators should:

✓ Follow plans that help the student to develop communication skills. Providing visual supports, prompts, and cues with oral directions (e.g., objects, pictures, written word, sign, gestures, modeling, etc.) usually enhances communication.

✓ Provide structured environment with visual cues, e.g., daily schedule.

✓ Break activities into smaller steps if necessary.

✓ Use repetition, rephrase, restate.

✓ Facilitate interactions with other children.

✓ Do not take behaviors personally. Become a good detective; figure out the reason for the behavior; and then, teach the student the skills necessary to communicate that need.

✓ Make changes in the environment to accommodate the student’s sensory needs, e.g., adjust lighting, remove visual distractions, smells, noises.

✓ Provide a “calming” place where the student can escape/regroup and calm down when over stimulated.

SPEECH IMPAIRMENTS

A student who has a speech impairment has difficulty with the mechanics of speech production. Speech disorders may be observed in voice, articulation (making sounds), or a language delay which affects a student’s educational performance.

COMMON CHARACTERISTICS:

Students may exhibit:

➢ Mispronunciation of syllables or whole words;

➢ abnormal pitch, loudness or quality;

➢ pauses, hesitations or repetitions; and

➢ stuttering

NRC for Paraprofessionals 120
SUGGESTED STRATEGIES:

Encourage students to interact verbally with adults and other students.

✓ Make sure that verbalization, directions, instructions and conversations are presented at the student's level of understanding.

✓ If a student stutters, avoid finishing sentences for him/her. Use non-verbal listening skills such as eye contact and facial expressions and let the student finish talking.

✓ Lessen the pressure for the student to perform verbally. This will help reduce the student’s anxiety.

SEVERE LANGUAGE DISORDERS

A severe language disorder is the reduced ability, whether developmental or acquired, to comprehend or express ideas through spoken or written language or through the use of gestures. This disability may involve problems in normal language development at any age.

COMMON CHARACTERISTICS:

➢ May be unable to understand the meanings of symbols, letters and gestures and many are not verbal or only echo the speech they hear.

➢ May understand what is said but cannot recall the words needed to speak.

➢ May organize their words into meaningful phrases or sentences, or cannot produce intelligent speech.

➢ In addition to impaired speaking, reading and writing, the student with a severe language disorder may exhibit impaired social and emotional growth.

SUGGESTED STRATEGIES:

✓ Be aware that speech and language problems will affect almost all other areas of classroom instruction and student achievement.

✓ See that the student is involved within the classroom setting and not excluded from peer interaction within the classroom.
MULTIPLE DISABILITIES

Multiple disabilities refers to combinations of two or more impairments that may include mental retardation and/or social/emotional, physical, sensory or other disabilities. The term usually does not include individuals with deafblindness. Students with multiple disabilities require specific special educational services to meet the needs which result from both/all impairments. They are likely to need substantial and sustained support to help them meet success in their educational program, live independently, and maintain social relationships.

COMMON CHARACTERISTICS:

Since the term multiple disabilities implies the presence of at least two impairments, students with multiple disabilities are actually a diverse group. Perhaps the most likely common characteristic is the need for a wide range of modifications and adaptations to support these students.

SUGGESTED STRATEGIES:

Paraeducators should:

- Be aware of the impact of the multiple impairments on the student’s ability to access school, home, community, and work environments, and provide support to accommodate the student’s unique needs.

- Follow the curriculum developed by the teacher to meet the student’s individual needs (e.g., academic, self-management, community, social, vocational, recreation/leisure, communication).

- Encourage and assist the student to develop a social network (e.g., peer buddies, peer tutors, joining school clubs, joining community organizations); pay particular attention to communication and social skills needs of the student.

- Be aware of long term goals for the student such as competitive or supported employment, and adult living (e.g., living in one’s own home, either independently or with support).

- Encourage the student to be as independent as possible.

- Assist related service personnel (registered nurse, occupational therapist, physical therapist, speech therapist) to meet the goals and objectives of the Individualized Health Plan, when applicable.

ORTHOPEDIC DISABILITIES

A child may be born with an orthopedic (physical) impairment or the impairment may be acquired later. Some impairments are permanent while others may only be temporary. The most common physical or orthopedic impairments include, but are not limited to: cerebral palsy, muscular dystrophy, spina bifida, amputations or anomalies, and fractures or burns that cause contractures.
COMMON CHARACTERISTICS:

- **Muscular or neuromuscular disabilities** that significantly limit the ability to move, sit, or manipulate the materials required for learning or
- **Skeletal deformities or abnormalities** that affect walking, posture, and body use
- May require the additional services of an adaptive physical education teacher, physical or occupational therapist, or speech therapist
- May require extensive assistance in learning self help skills
- May have associated disabilities (speech deficits, seizures, perceptual disorders)

SUGGESTED STRATEGIES:

Paraeducators should:

- ✓ Provide physical assistance and support.
- ✓ Be aware of long and short term goals (independent toileting, mobility skills, etc.).
- ✓ Monitor safety and health, follow instructions from the RN and other health professionals.
- ✓ Know how to use/operate technology options (computers, communication devices, adapted switches, etc.).
- ✓ Allow extra time for mobility and transitions.
- ✓ Maximize movement opportunities.
- ✓ Eliminate activities where falling is more of a risk.
- ✓ Document performance of activities identified on the Individualized Health Services Plan.

HEALTH IMPAIRMENTS

Health impairments include a variety of disabilities that can adversely affect a student’s educational achievement. The student may have limited strength, vitality or alertness because of chronic or acute health problems such as congenital heart problems, juvenile rheumatoid arthritis, asthma, diabetes, epilepsy, cancer, cystic fibrosis, sickle-cell anemia, hemophilia, leukemia or attention deficit disorders.
COMMON CHARACTERISTICS:

- Intelligence is probably very similar to peers who follow typical development patterns;
- Reduced efficiency in school work;
- Limitations in one or more of major life activities (self-help skills, performing manual tasks, walking, seeing, hearing, speaking, breathing, learning, and working);
- Frequent absences (may require homebound services);
- Increased fatigue;
- Achievement may fluctuate with severity of condition;
- Coping skills are not always positive.

SUGGESTED STRATEGIES:

Paraeducators should:

✓ Provide frequent rest periods.
✓ Learn to recognize medical alerts or signals and report to the teacher and the school nurse.

HEARING IMPAIRMENT

The area of Hearing Impairment covers a wide range of student disabilities. Hearing Impairments impact the ability to hear sounds and to discern clarity, ranging from a slight hearing loss to deafness. Hearing impairments usually result in communication problems in the classroom. Each student who is hearing impaired is unique in his/her needs.

COMMON CHARACTERISTICS:

- The student’s language and speech will be affected, depending on the onset and severity of the hearing impairment.
- A student with a hearing impairment may use sign language, cues or rely on speech reading (understanding another person by watching the lips and face) to communicate with others.
- Reading and writing skills may be below expected ability. Individualized intervention might be needed.
- Because of communication difficulties, social interaction with hearing peers may be an area of concern.
Some students who are hearing impaired talk too loudly or too softly, or make unintentional noises.

**SUGGESTED STRATEGIES:**

Paraeducators should:

- Try to reduce background noises.
- If a hearing aid has been prescribed, make sure the student wears it at all times, unless otherwise instructed.
- Help the student learn to care for specialized equipment such as hearing aids and auditory trainers (teacher/paraeducator wears a portable microphone which transmits what is said directly to the student’s hearing aid). Check the batteries daily.

Provide previews of vocabulary words or concepts that will be presented during class instruction. Ask the teacher to write these key words or ideas on the board during instruction to help cue the student.

**VISUAL IMPAIRMENT**

An individual is considered to have a visual impairment when, even with correction (glasses, contact lenses, surgery, etc.), the individual’s educational performance continues to be adversely affected. The area of visual impairments covers a wide and varied range of conditions, including blindness, legal blindness, partially seeing, and visual conditions (e.g., nystagmus, astigmatism). It is important to remember that individuals who are considered to be blind or visually impaired are not identical and each person has his/her own unique set of needs.

**COMMON CHARACTERISTICS:**

Individuals with visual impairments may:

- Rub their eyes, shut or cover one eye when reading, tilt their heads to one side
- Lose their place while reading
- Have unusual difficulty reading
- Hold objects very close to eyes (especially printed material)
- Complain of pain in eyes or head, or of dizziness or nausea
- Complain of fuzzy or double vision
- Reverse/confuse numbers and letters
- Use poor spacing when writing.
SUGGESTED STRATEGIES:

Paraeducator should:

✓ Encourage the student to be as independent as possible.

✓ Know the purpose of and how to use special aids such as magnifiers, lighting and large type in classroom instruction.

✓ Be conscious of contrasts in the environment. Finding a dark blue object on a dark floor may prove more difficult than finding a white or light colored object on the same floor.

✓ Be conscious of contrast in printed material. Black letters on a red background may be more difficult to read than black letters on a lighter background (yellow or white).

✓ Be careful to eliminate or decrease glare in the class, especially on the blackboards.

✓ Provide for preferential seating in the classroom and extra desk/storage space for enlarged materials and special aids.

✓ Use concrete materials and tactile aids. Use the “real” object whenever possible (real fruit as opposed to plastic fruit, real coins rather than play money).

✓ Be specific and clear when giving directions. Add details such as which desk, which side, etc. Avoid pointing and saying “over there.”

✓ If assistance with mobility (moving from one location to another) is needed, never lead, push or pull the student. Allow the student to hold your elbow, or in the case of a small child, your wrist. Do not hold hands.

✓ Protect the student’s hands (and your own) if (s)he rubs the eyes or if the eye tears or has frequent infections.

DEAF/BLIND

Deaf/blindness is a condition in which combined visual and hearing impairments cause severe communication and learning needs. Individuals with deaf/blindness have a unique and different view of their environment.

COMMON CHARACTERISTICS:

For the child who is deaf/blind, the world can be a narrow place. If the person is profoundly deaf and totally blind, the world would extend only as far as his/her fingertips could reach. These children are effectively alone if no one is touching them. Their concepts of their environment and the world depend upon what or whom they have had the opportunity to physically contact. If a child who is deaf/blind has some usable vision and/or hearing, as many do, their environment...
will be enlarged. Many students labeled deaf/blind have enough useable vision to move around in their environment, recognize familiar people, see sign language at close distances, and may be able to read large print. Other students have sufficient hearing to recognize environmental sounds, understand some speech, or develop speech themselves. The range of sensory impairments included in the term "deaf/blind" is vast.

SUGGESTED STRATEGIES:

Paraeducator should:

✓ Use any identified strengths.

✓ Follow the developmentally functional program developed by the teacher to meet the individual’s needs.

✓ Use age-appropriate activities.

✓ Respect the individual’s communication mode.

✓ Communicate to the individual when an activity or event is to begin or end.

✓ Never push/pull and individual from place to place. Provide information about a change in activity before it happens.

✓ Keep the eyes with tears or any drainage clean; wash hands frequently.
MODULE IV

THE INSTRUCTIONAL PROCESS

OVERVIEW

The aim of instruction is to present learners at every age with information that will be useful to them in a setting which will enhance the instructional process and enable them to learn most easily. In early childhood programs learning occurs as children interact with adults and each other in brief, natural fun exchanges. Although such interaction with children may sound easy, application is often difficult.

This module describes components of the instructional process including assessment, gathering and maintaining accurate data about the performance of each child, setting goals and objectives, behavioral interventions, and task analysis. The last unit describes developmentally appropriate approaches education teams can use with children from birth to five who have disabilities in home and center based programs to facilitate inclusion.

INSTRUCTIONAL OBJECTIVES

The paraeducators will be able to:

1) Describe the importance and use of the Individual Educational Plan (IEP), and the Individual Family Service Plan (IFSP).

2) Describe the importance of on-going assessment of a child's progress toward educational goals.

3) Describe the importance of keeping accurate, relevant, on-going data on the progress of a child.

4) Describe the importance of developing appropriate goals and objectives for each child in the educational setting.

5) Describe the importance of using appropriate instructional interventions when working with children and their families in an instructional process. These will include:

   a) Characteristics and patterns of behavior common to all people;

   b) Techniques of appropriate reinforcement to encourage a child to learn and maintain behaviors;

   c) Techniques of modeling appropriate behavior;

   d) Techniques of shaping appropriate behavior;
e) Techniques of extinction for eliminating behavior that may be counter-productive to the educational goals and objectives; and

f) Techniques of task analysis to break down learning activities into sequenced, small steps so that the child can learn more easily.

6) Describe and use developmentally appropriate curriculum activities and interactive teaching methods that promote inclusion of young children with disabilities in center based early childhood programs. These include:

   a) Developmentally appropriate practices;
   b) Techniques for maintaining effective classroom environments;
   c) Providing opportunities for structured and spontaneous play;
   d) Strengthening communication and social skills;
   e) Preparing materials for teaching functional language, cognitive, motor and self-help skills.

**TIME REQUIRED TO PRESENT MATERIAL**

- **Unit I - The Importance of the Individual Educational Plan (IEP) and the Individual Family Services Plan (IFSP)** - 1 hour, 15 minutes
- **Unit II - The Importance of On-Going Assessment** - 1 hour, 30 minutes
- **Unit III - The Importance of Observing and Keeping Good Data** - 1 hour, 45 minutes
- **Unit IV - The Importance of Developing Appropriate Goals and Objectives** - 2 hours, 45 minutes
- **Unit V - Part 1 - The Importance of Using Appropriate Instructional Interventions** - 4 hours
- **Unit V - Part 2 - Facilitating Inclusion by Using Developmentally Appropriate Activities** - 6 to 14 hours depending on the activities selected
RESOURCES AND REFERENCES

NRC for Paraprofessionals
UNIT 1

THE IFSP AND THE IEP PROCESS

EQUIPMENT AND MATERIAL REQUIRED:

- A flipchart and easel or chalkboard
- An overhead projector and screen
- Copies of the information handouts for trainees
- A transparency of the IFSP/IEP Components
- Copies of the procedures and instruments used in your district/agency for developing IFSPs/IEPs.

BEFORE THE TRAINING SESSION

- Review the Background Material and the material from the district/agency regarding the IFSP/IEP process and develop a brief lecture about the IFSP/IEP procedures used in your district or agency.

- Make a transparency of the IFSP/IEP Components, or write them on the flipchart or chalkboard.

- Make copies for each trainee of, 1) The Background Information for this unit and 2) Your school district’s IFSP/IEP forms.

DURING THE TRAINING SESSION

- Begin the session by discussing the individual educational and family service plans with the class. This discussion should be fairly short but it will profit from your personal experiences with IFSP/IEP planning and any anecdotal material that you feel is appropriate to share with the class. Encourage class discussion by asking: 1) Why is it important for parents or other primary caregivers to be included in planning meetings? 2) Who are the other people who should be involved?

- Distribute copies of your school district’s/agency IFSP/IEP forms to each trainee. Use the transparency as a guide and go through the components with the class. Ask them to determine if each is included in the district form.

- Discuss your district’s/agency’s policy regarding the role of paraeducators in the IFSP/IEP process, including attendance at the meetings.
THE INDIVIDUAL FAMILY SERVICE PLAN (IFSP) AND THE INDIVIDUAL EDUCATIONAL PLAN (IEP)

INTRODUCTION. Twenty years ago, Congress passed Public Law 94-142, a law which made sweeping changes in special education in the public schools. The law mandated that a free, appropriate public school education, in the least restrictive environment, should be made available to all students. Among other major challenges to the schools was the mandate that each student in special education should have an individual educational plan. The law requires that the plan be written and be developed in a meeting which includes the teaching personnel of the school and the parents. When appropriate, it should also include the student with disabilities. The law further protects the rights of parents to share in all the decisions made about their family member with disabilities and it mandates that there must be a due process procedure that will enable the student or the family to protest if either does not agree with the plan which is developed.

P.L. 99-457, passed in 1985, extended all of the rights guaranteed to school age children and youth with disabilities to young children ages three to five, including the right to an education in the least restrictive environment and an individualized education plan (IEP). Another chapter in P.L. 99-457 encouraged but did not require states to provide coordinated education, medical and other related services to children from birth to two years of age who have disabilities or who are at risk for other reasons; and to provide services to their families. The education, medical, and related services programs/ interventions for the children and their families are developed by an interdisciplinary team and contained in an Individual Family Service Plan (IFSP). In some states the school districts are the lead agency responsible for the early intervention programs. In other states it may be health department or other agency. Both of these rights are now fully integrated into IDEA.

THE IFSP. The procedures for developing an IFSP are rooted in the concept that families have the right and ability to decide such issues as the services they want their children to have, the location of these services and the staff who will carry out the activities of the IFSP. The process assumes that district/agency staff will take on various roles that enable the family to participate actively both in planning and in implementing the objectives. The IFSP is reviewed at least annually by the team preparing it, and a report to the parents on the progress of the IFSP is to be prepared every six months. One individual is designated to serve as the case manager with responsibility for coordinating the services decided on by parents and other team members. (See Transparency #1 for components of an IFSP.)
THE IEP. The intent of the IEP is to ensure that each child with disabilities is able to take part in an educational program that will assist and support him/her as s/he learns to live, work, play, and make friends in the community. An essential part of this plan must be to assist the child to participate fully in community settings which the individual and/or their family select. Therefore, planned activities should take place in the same settings as are used by other children of the same chronological age. This means that educational activities should occur in the so-called "least restrictive environment," i.e., the regular classroom in which children of the same age are receiving instruction. At the same time, the child with disabilities may need special assistance and modified activities. Therefore, planned support for educational activities should be provided so that the child may have a successful experience in the integrated setting. (See Transparency #2 for the components of an IEP.)

IEP TEAM MEMBERS. Primary team members are the teaching personnel involved with the child and family members important in the life of the child. For example, in some families, important members may be the parents; in other families, brothers and/or sisters, grandparents or other relatives or significant others in the person's life may be the person(s) who should attend the meeting. When appropriate, the individual with disabilities should also be a part of the meeting. In addition, other specialists who play a role in the student's life should attend. These may include physical, occupational, and speech therapists, recreational personnel, the school nurse, the individual's physician, makers or designers of assistive technologic devices and other people who assist or support the person. Family members and other personnel must work together to establish a time that is acceptable to meet and to determine a meeting place that will accommodate the size of the meeting and that will be easily accessible to all. In some cases, IEP meetings have been carried out by telephone conference call, although this solution should only be used as a last resort. If the primary language of the family is not English and they communicate most easily in a second language, the school district is required to have an interpreter present. This would include an interpreter for family members or school personnel who are deaf.
COMPONENTS OF AN IFSP

AN IFSP SHOULD CONTAIN THE FOLLOWING INFORMATION:

✓ GENERAL INFORMATION ABOUT THE CHILD INCLUDING NAME, ADDRESS, PARENTS OR PRIMARY CAREGivers, PRIMARY LANGUAGE

✓ A STATEMENT OF THE CHILD'S CURRENT LEVEL OF COGNITIVE, SPEECH/LANGUAGE, SOCIAL AND PHYSICAL DEVELOPMENT

✓ THE CHILD'S STRENGTHS (WHAT S/HE CAN DO)

✓ A STATEMENT OF THE FAMILY'S STRENGTHS

✓ A STATEMENT OF THE OUTCOMES TO BE ACHIEVED WITH THE FAMILY AND CHILD AND THE CRITERIA, PROCEDURES, AND TIMELINES FOR DETERMINING PROGRESS

✓ THE SPECIFIC EARLY INTERVENTION SUPPORT SERVICES REQUIRED TO MEET THE UNIQUE NEEDS OF THE CHILD AND OFAMILY INCLUDING EDUCATION, HEALTH/MEDICAL AND OTHER HUMAN SERVICES

✓ THE PROJECTED DATES FOR STARTING, THE SERVICES AND EXPECTED DURATION

✓ THE NAME OF THE CASE MANAGER WITH RESPONSIBILITY FOR THE IMPLEMENTATION OF THE PLAN

✓ PROCEDURES FOR TRANSITION FROM HOME-BASED OR OTHER EARLY INTERVENTION PROGRAMS TO A PRE-SCHOOL PROGRAM
COMPONENTS OF AN IEP

✓ PERTINENT PERSONAL INFORMATION ABOUT THE STUDENT INCLUDING, NAME, ADDRESS, NAMES OF PARENTS OR LEGAL GUARDIANS, BIRTHDATE, AND PRIMARY LANGUAGE.

✓ STANDARDIZED TEST RESULTS AND DATE(S) OF TESTING.

✓ A CONCISE, BEHAVIORALLY DESCRIBED STATEMENT OF THE PRESENT LEVEL OF THE STUDENT'S EDUCATIONAL STATUS.

✓ A LIST OF THE STUDENT'S STRENGTHS.

✓ LONG-TERM AND ANNUAL GOALS INCLUDING PROJECTED DATES OF ACHIEVEMENT.

✓ THE SHORT-TERM OBJECTIVES FOR EACH LONG-TERM GOAL AND PROJECTED ACHIEVEMENT DATE.

✓ SPECIAL INSTRUCTIONAL RESOURCES AND MATERIALS WHICH ARE REQUIRED TO ACHIEVE EACH GOAL AND OBJECTIVE.

✓ ADAPTIVE AND OTHER ASSISTIVE EQUIPMENT REQUIRED TO ACHIEVE THE GOALS.

✓ SUPPORT SERVICES AND SPECIALIZED ASSISTANCE THAT WILL ENABLE THE INDIVIDUAL TO ACHIEVE GOALS AND OBJECTIVES.

✓ A LIST OF ANY SUPPORT THAT IS NECESSARY TO ENSURE THAT ALL OF THE INDIVIDUAL'S SCHOOL PROGRAM WILL TAKE PLACE IN FULLY INTEGRATED SETTINGS.

✓ HOW, WHEN AND BY WHOM THE INDIVIDUAL PLAN WILL BE EVALUATED.

✓ EVIDENCE OF PARENTAL PARTICIPATION AND APPROVAL OF THE IEP.
UNIT 2

ON-GOING ASSESSMENT

EQUIPMENT AND MATERIAL REQUIRED

- Flipchart and easel, or chalkboard
- Copies of the Background/Information Handouts and the Exercise

BEFORE THE TRAINING SESSION

- Review the material and resources that you may have available on assessment. Prepare two brief lectures. The first should address the different formal and informal assessment techniques used in the district and in classroom or other education/employment programs. It should also stress the important contributions paraeducators make in functional assessment. The second should describe the need to identify how best a student learns.

- Reproduce the copies of the Background Material, Transparencies, and the Exercise for every trainee.

DURING THE TRAINING SESSION

- Begin the session by discussing differences in formal (standardized) and informal (functional) assessments. (Use Transparency #1 as a guide.) The discussion should be fairly brief but it will profit from your personal experiences with assessment and anecdotal material that is relevant.

- Be sure to describe ways to standardized tests can be unfair to children and youth whose families may be educationally and economically disadvantaged, or who may come from culturally and language minority backgrounds. Encourage discussion by asking participants to describe ways standardized tests can be beneficial. Then ask them to describe the value of using behavioral checklists and functional assessment to gather information about the strengths and education needs of children and youth.

- Use transparency #2 as a guide to stress key principles of culturally effective assessment.

- Distribute Exercise #1, "What's is your Learning Style?" Ask the participants to complete it. Then lead a discussion of what their answers mean to them about how they prefer to learn and why it is important to identify the learning style(s) of children and youth in order to design effective individualized instructional interventions. The items in Column I are indicative of a visual learning style/preference; Column II identifies an oral learning style/preference; and Column III identifies a preference for learning by doing (known as a Kinesthetic style). You may also want to use activities that will help participants to identify their learning styles or preferences.
ON-GOING ASSESSMENT

INTRODUCTION. Assessment is the process of collecting and interpreting information relating to a child or youth with disabilities for the purpose of determining the person's present skills to form a base on which new learning experiences can be planned. Usually, before a student is assigned to a particular program or classroom, a thorough assessment has been carried out. This will have included a comprehensive look at the student's physical, cognitive, social, emotional and language development and a determination of his/her strengths in each area. Traditionally, teachers and other professional staff have been responsible for conducting the assessment activities. Often, paraeducators are asked to help identify the individual's functional capabilities in each area -- to look at the person's skills in each of the above areas.

When it is done well, assessment is carried out in relationship to the goals of a particular student. For example, if the goal is for the student to communicate basic needs to an adult, the assessment would include examples of words and gestures that have successfully indicated a particular desire of the individual. In other words, you are looking for the strengths of the student in that area. Once we know that an individual does have a particular skill mastered, we can determine whether the skill is used successfully, at school, at home or work. In other words, does the person transfer it to other settings.

METHODS OF ASSESSMENT. Assessment can be done in a variety of ways. There are two that rely on special assessment instruments, standardized testing and the use of behavioral checklists. Each of these is discussed below. In addition, however, observations of the ways in which the students functionally use specific skills to manage their environment are an important part of the assessment process.

STANDARDIZED TESTING. Standardized tests are: 1) always given in the same way, using the same instructions, and the same material, 2) scored using the same method every time, one which is based on the scoring of tests administered to a broad range of people, and for which an "average" score or a "norm" has been established.

Standardized tests compare how well a person performs a given task in comparison to the way in which many other children or youths of the same age have performed the same task. In order for standardized tests to be useful and fair, the group of people to whom the individual is being compared must reflect the cultural and ethnic background of the child or youth being evaluated.

The most common standardized test given is the I.Q. test. Its major advantage is that it gives the examiner (who must be licensed) an opportunity to observe the child or youth for an hour or more in a relatively standardized setting. Experienced examiners are able to provide important input to the planning team because they are trained and able to relate the individual performance to those of many other people. The write-up from a standardized test will usually spell out the strengths of the student in cognitive, social, emotional, motor and language areas and will reveal the areas in which the person needs more assistance.
Standardized tests have long been the subject of intense discussion among educators and other professionals in the field. They can be useful when administered by an experienced examiner in assisting in the determination of appropriate educational and other goals. At other times, they may not reflect accurately the individual skills of the person being evaluated because the standardization group did not reflect the person's background and the items are, therefore, inappropriate. A classic example of this flaw is an old item in a well-known standardized test. It showed a picture of a teenaged boy delivering a piece of paper to a man standing in the door of a house. The question was, "What is this boy doing?" The intended, "correct" answer was, "Delivering a telegram." When this item was administered to children who lived in rural areas or to people who lived in poor urban areas, they usually did not have any idea of the correct answer. The item was taken out of the test because it was inappropriate for so many children, but not before it had been used for some time.

BEHAVIORAL CHECKLISTS. Behavioral checklists categorize and list specific behaviors, usually in specific developmental areas such as fine motor, cognitive, language, gross motor, etc. Usually, specific behaviors are listed in the sequence in which they occur in a "typical" developmental pattern. The person using the checklist simply checks off whether or not the child or youth is able to perform that specific behavior. The checklists can be helpful in formally evaluating specific skills in the classroom or other areas. They can also be used informally to indicate strengths and possible areas where assistance is needed.

FUNCTIONAL ASSESSMENT. While both standardized tests and behavioral checklists probably will remain as integral parts of the assessment data that is gathered for each child or youth with disabilities, the most important assessments are usually done informally and relate to the functional skills of the individual. Most of us would have a difficult time if it were necessary for us to meet the criterion of a specific test battery in order to get on with our lives. For example, what if scuba diving, glider flying, bowling with an average score of 200 and mountain climbing were set as the criteria for any of us to go to our next life goal? This is a silly question, of course, but it has some relevance when one thinks of all the assessments that may be carried out on children and youth with disabilities.

Assessment should be carried out that is directly useful in planning for the student. That means it should relate directly to the life and educational goals of that individual person. When we know what an individual wants to do, then it is possible to look at the steps leading up to that goal, and to determine whether or not each has been accomplished.

OTHER ASSESSMENT. One other form of informal assessment is useful to the educational team. People learn in all different kinds of ways. Some learn most easily when they read words, Others learn better when they are given information verbally. Still others learn best when they can do the task. Information that is gathered on the learning style of the students for whom you are planning will be very useful in all educational planning.
ASSESSMENT METHODS

Standardized Testing

Behavioral Checklists

Functional (Informal)
PRINCIPLES OF EFFECTIVE ASSESSMENT

Assessment Requires Time & Effort

Assessment is Part of the Educational Process

Assessment Should be Individualized, Developmentally, and Culturally Appropriate

UNIT 3

OBSERVING AND KEEPING GOOD DATA

EQUIPMENT AND MATERIAL REQUIRED

☐ A flipchart and easel, or chalkboard

☐ Copies of the Background Materials/Information Handouts and the Exercises.

BEFORE THE TRAINING SESSION

☐ Review the Background information and other resources that you may have on observation and data collection. Prepare a brief lecture stressing the role of paraeducators in observing and maintaining effective data.

☐ Reproduce the Background/Information Handouts and the four Exercises for the trainees.

☐ Write examples of several words or phrases on the Chart or Chalkboard that demonstrate whether a behavior is observable or measurable. You might include: cooperates, pleasure, cry, smile, frustration, holds a crayon/pencil, likes to sing, plays well with others, anger, happy, overwhelmed, feels left out, comprehends.

☐ Obtain copies of the forms used in your district or agency for recording and reporting child behavior.

DURING THE TRAINING SESSION

☐ Discuss different methods for keeping data, define objective observation. This is difficult material to teach because it often challenges the way the participants speak and describe events. Instead of lecturing, keep the discussion open and allow for questions and comments along the way. The class will profit enormously from your written examples of good and bad reporting and recordkeeping. Use Transparencies 1 and 2 as a guide for the discussion of objective observation.

☐ Review the words or phrases you have listed on the flipchart or chalkboard and ask participants to determine whether they describe a behavior that can be seen, heard, counted, or timed.

☐ Distribute Exercise #1. Ask trainees to work in pairs and to label the examples, "Yes" or "No". They will only require five to ten minutes to complete the activity. When they are finished, go over the examples, one by one, allowing for discussion on each if it is required.
Distribute Exercise #2. Again, ask the trainees to work in pairs (preferably different pairs this time). Ask them: 1) to circle the observable, measurable words; 2) to underline the descriptors that are not observable or measurable, and 3) to rewrite one of the anecdotes so that it reflects good observations and recording practices.

When the class is finished (15 to 25 minutes), ask for volunteers to go through each anecdote and point out the examples of good observation and the poor observation. Then, ask for volunteers to read their rewritten anecdotes. Allow plenty of time for discussion as it is likely that some of the rewritten material will need to be rewritten again.

Once again, divide the class into pairs. Ask them to interview each other and to precisely record the information they learn from the other person. The purpose of this activity is to provide participants with an opportunity to practice and strengthen interviewing skills. They should seek information from each other about special interests, dislikes, values. When the exercise is complete, ask for volunteers to share the information with the class. Discuss the value of interviewing students to identify information the team can use to individualize (personalize) instructional strategies for each student.

Review the forms used by your district or agency to gather and record information about the performance and behaviors of young children. Distribute Exercise #3, ask the participants to observe a child they work with using the forms and to bring them to the next class. Collect and review them and make suggestions for how the person could improve his/her efforts.
Acquiring and using objective skills of observation and keeping data are important to all paraeducators, no matter whether they work as home visitors, instructional assistants, transition trainers or job coaches. Much of the information required to let the team know whether or not children and youth are gaining new skills is acquired by careful observation and good recordkeeping. In addition, observation will keep the team posted on whether or not the individuals are learning and using the functional skills necessary to let them achieve the objectives and long-term goals that are outlined in the IEP. For bilingual paraeducators, the job of recordkeeping is even more critical since they have the language skills to conduct data collection and keep accurate records on English language learners. As mentioned above, reliable observation and recordkeeping contribute greatly to the educational progress of children.

The written information as to what has been observed is called "data." It serves as a more permanent record of what is seen or heard and, when done well, is an objective account of the individual's activities and skills. It is important to keep written data on all the observation activities. If this is not done, there is a risk of reporting inaccurately what has happened.

Carrying out observations and keeping data must be done from an objective point of view. Sometimes, members of the team may allow their biases or prejudices get in the way. It is very important to guard against these inclinations and to put down precisely what is seen or heard and to avoid anything that is stigmatized by personal perceptions of an individual or a specific behavior.

**Observation is** systematically watching what a person does and says and recording the behaviors in order to make instructional decisions. Observation should: 1) be done for a specific reason; 2) provide samples of a student's behavior over a period of time, in a variety of settings and 3) be objective. Objective observation means:

- watching events without being affected by personal biases/prejudices,
- watching what is happening without guessing at the reasons that cause the action,
- watching the activity without judging whether it is good or bad, and
- producing an objective record which states exactly what an observer sees and hears.

Through observation we can learn what the learner does, what s/he likes or dislikes, how s/he behaves under various circumstances, and how s/he interacts with people around him/her.

**Observing objectively** There are two points to remember when making observations:

- You must be able to see or hear a behavior, and
- You must be able to count the behavior.
For example, an observation that says, "Frank hit John on the arm twice within five minutes," fulfills both points above. You saw Frank hit John, and you counted the hits as they happened. An observation that says, "Annie was being her usual schizophrenic self this morning," fails both points. "Her usual schizophrenic self" really tells us nothing about Annie. It is, instead, a judgment call made by the observer and gives no information at all. It doesn't tell us what the observer saw and, since we don't have that information, there is nothing to count and therefore, nothing for teachers or teams to build on when planning personalized instructional interventions.

KEEPING DATA There are several ways to keep data. They include using a checklist; making anecdotal records; interviewing a child, parent, or other caregiver; watching a specific child and making notes; and keeping frequency and duration records.

**Checklists** - These may be in the form of standardized checklists which include specific skills and behaviors based on developmental levels, or a list of behaviors compiled by a teacher. When paraeducators work with a checklist, they simply watch the child or youth and record whether or not s/he is doing the behavior described.

**Anecdotal Records** - These usually consist of a sentence or two written in a notebook that describe what the child or youth is doing at a specific moment. When making an anecdotal record, only behaviors that can be *seen* or *heard* and behaviors that can be *counted* should be recorded.

**Interviewing** - This is a specific kind of recordkeeping, one in which the team is trying to determine what the child/student likes or dislikes, what his/her interests are, or other feelings or beliefs that cannot be observed. When interviewing, it is extremely important to record precisely what the child or youth says. There is no room for editorializing in this kind of record. (In some cases it may be necessary to interview parents to obtain this information.)

**Other Data Collection** - Paraeducators may be asked by their supervisors to keep a record of specific behaviors or demonstrations of skills for an individual learner. It is important for the paraeducator to understand exactly what information the teacher wants to know, why it is needed, and how it will be used.

**Frequency or Duration Notes** - Sometimes, the information that is to be collected refers to how often or how long a behavior is occurring. For example, the team may want to know how many times a child talked to or communicated with his/her playmates. For this kind of recordkeeping, paraeducators will count the frequency of the behavior occurring, to observe how long some behaviors last. For example, a home visitor or instructional paraeducator might watch to see how long a child plays alone or with other children. In this case the duration is being timed.

THE IMPORTANCE OF OBSERVATION. Being a good observer is a critical skill when working with children and youth in any kind of an educational setting. Learning to divorce personal perception or biases from what is seen and recording exactly what is happening takes time. When it is learned, it enables paraeducators to contribute effectively to all the discussions about the instructional program for any specific child or youth.
OBSERVATION SHOULD:

- Be done for a specific reason
- Provide examples of a person's behavior
- Take place over a period of time in a variety of settings
- Be objective
OBJECTIVE OBSERVATION MEANS:

- Watching events without being affected by personal biases/prejudices
- Watching what is happening without guessing at the reasons that cause the action
- Watching an activity without judging whether it is good or bad, and
- Producing a record which states exactly what an observer has seen and heard
Exercise #1

DIRECTIONS:
Read the list of words below. If a word describes something you can see, hear, or count, write "yes" in front of it. If it does not describe a behavior that is observable or measurable, write "no" in front of it.

Yes 1. Cry
Yes 2. Is anxious
Yes 3. Hit
Yes 4. Push
Yes 5. Is lazy
Yes 6. Loves ice cream
Yes 7. Plays alone
Yes 8. Colors inside lines
Yes 9. Stacks blocks
Yes 10. Takes two steps
Yes 11. Is Ida's best friend
Yes 12. Is a loner

No 13. Shares
No 14. Understands commands
No 15. Rides the tricycle
No 16. Loves elephants
No 17. Hit Art twice
No 18. Kicks grandma
No 19. Is naughty
No 20. Is nice
No 21. Had a good day
No 22. Points to a preferred snack
No 23. Does homework
No 24. Is a good reader

NRC for Paraprofessionals

155

148
Exercise #2

DIRECTIONS:
There are two anecdotes printed below. Read each carefully and circle the words used which describe a behavior that you can see, hear, or count. Underline the words which describe behaviors that are not observable or measurable.

Anecdote #1 -
Josephine was having a terrible day. She started off in the morning by spitting on Ms. Pickett, the paraeducator who met her bus. Then she kicked Thelma in the shins. She wet her pants on the floor and was so embarrassed that she had a tantrum. None of her friends liked her. Her aggressive behavior was annoying everyone. After her nap in the afternoon, however, she jumped off the cot, hugged Ms. Pickett and talked to Louie, Patricia and Jeff, and then behaved during snack time. When it was time to go home, she waved good-by to everybody.

Anecdote #2 -
I sure learned today why Pablo is an underachiever. He started the day off daydreaming during the morning calendar/weather routine. When the rest of the class got into their reading groups, Pablo was wandering around. He finally settled in with his group but had to be told several times what page they were on. Before lunch when the class finished their projects Pablo was only half-way done. He seemed more interested in the gardeners outside than the project. After lunch he simply put his head down during the social studies lesson and wrote one incoherent sentence as a summary of the topic. He only seemed excited when the teacher told everyone to clean up and go home.

Like many anecdotal records, the two above are an amalgamation of good observation and extremely poor observation. Choose one of the two, and rewrite it so that it is a good example of your observational skills.
Exercise #3

DIRECTIONS:

Take the form on the next page home with you and be prepared to turn it in at the next class session. Your assignment is to:

1. In cooperation with the teacher you work with, select one student to observe and decide what the objective of the observation will be.

2. At three different times, observe the student for ten minutes. Make an honest effort to objectively record the behaviors of the student.

3. Record your observations on the next page. Bring the worksheet to the next class.
UNIT 4

DEVELOPING APPROPRIATE GOALS AND OBJECTIVES

The material in this unit is divided into two parts. Part one describes how the team, including parents, their children, and education practitioners, work together to develop long term goals and annual objectives to achieve the goals. Part two is designed to help paraeducators understand and follow instructional objectives.

EQUIPMENT AND MATERIAL REQUIRED

- Flipchart and easel
- Overhead projector and screen
- Transparencies
- Copies of the Background/Information Handouts and Exercises.

BEFORE THE TRAINING SESSION

Review the Background material and other resources you may have on the importance of writing good goals and objectives. As you prepare for the class session(s) in which you will cover this material, it is a good idea to think through some of your own efforts as you acquired these skills. This material is a critical component of the training and it will take some time to present. Your personal anecdotes will enliven and enhance the discussion.

- Make copies of the Transparencies or, if you prefer, write the information on the flipchart or chalkboard.

- Reproduce copies of the Background Information and the Exercises for all trainees.

DURING THE TRAINING SESSION

Begin the class session by distributing the Background Information. Use Transparency #1 to guide the discussion. It may be useful to remind the trainees of earlier discussions on the rights of children and youth with disabilities. It is important to emphasize throughout that the development of appropriate goals is critical to the education plan and that the involvement of the student in integrated classes and the community may well depend on how the goals are spelled out. Emphasize that all people need options and the opportunity to make choices. It is up to the team and the family to ensure that options are available and that every effort is undertaken to ensure that the individual can select.

- Distribute Exercise #1 "The Case Study." Ask the group to work in pairs to develop the annual goals (and the five-year goals) requested. Allow about fifteen minutes for the activity. Then, ask one person in each pair to present the goals developed. Allow plenty of time for discussion.
Use Transparency #2 to guide the discussion of the writing of goals and objectives. Spend as much time as you think necessary in ensuring that the trainees are with you every step of the way.

Distribute Exercise #2 "The Behavior," to the trainees and ask them to complete it. Allow approximately ten minutes for the activity. Then, going around the room, ask each trainee to take one phrase and defend their decision as to whether it is a measurable, observable behavior.

Begin the discussion on the Criterion. This is always difficult at the beginning so be prepared with as many examples as you can. Be leisurely in your approach. This is not the topic to teach when you have little time.

Distribute Exercise #3 "Criterion," and ask the trainees to follow directions and identify CR-1 and CR-2 in each of the sentences. Allow approximately fifteen minutes for the completion of the task. Again, go around the room with each trainee supplying his/her response. Be prepared to answer and discuss each of the sentences.

Begin the discussion on the conditions. This will usually be easier than the criterion discussion, but it is well to be prepared for questions and comments.

Distribute Exercise #4 "Condition," and ask the trainees to identify the condition in each sentence. This activity should take only about five minutes. As they conclude their writing, ask for volunteers to contribute their responses.

Distribute Exercise #5 which is a review list of the components of an instructional objective. Ask the trainees to work alone on this one and to be prepared to discuss their answers with the rest of the class.
THE IMPORTANCE OF DEVELOPING APPROPRIATE GOALS AND OBJECTIVES

ESTABLISHING APPROPRIATE GOALS AND OBJECTIVES. All of us have long-term goals for which we strive and, with them, a series of short-term objectives which we understand will help us achieve the goals we have set. We may not sit down in a planning session with our families and friends to write everything down on paper, but as we look at our lives, we conceive of our aims and plan toward making them work. For example, young people plan toward attending college, getting married, finding a job, owning a home, traveling, going to Hollywood to be a movie star and hundreds of other dreams. Those who are serious about reaching their goals plan a series of shorter objectives, i.e., saving money for college, finding tuition or other grants-in-aid, finding a place to live in the university town, finding a part-time job to support themselves while taking classes, and so on and on.

For many years, people assumed that children and youth with disabilities did not have goals and objectives. The perception seemed to be that individuals with special needs would be lucky just to go along in place without achieving life goals like other people. That, of course, is untrue; individuals with disabilities are like everyone else and they, too, have dreams that can be met.

As the team meets to discuss and write the individual educational plan, they must know the goals and objectives of the learner for whom they are planning. In many cases, the child or youth with the disability can be an effective part of the planning team. In those cases, all the team has to do is ask the person the questions, "What do you want to do in the future?", and "Where would you like to (live, work, play)?" In other cases, it may be more difficult to determine the individual's choices.

Some learners with disabilities may not have the necessary communications skills to state clearly their dreams and objectives. If this is the case, the team needs to be on its toes to learn the communication style of the individual and to pay close attention to what s/he is transmitting. It is important that all children and youth have options so that they may make choices about preferred activities.

The team may explain the options to an individual who does not communicate in traditional ways and be alert to the responses it receives. Sometimes the responses are very clear, as in the case of Karen, who begins to cry when presented with things she does not want to do, or with Keith who responded positively to suggestions by patting the hand of the person presenting the options. At other times, the signals may be as ephemeral as eye movements, body positioning or slight head-shakes. Before initiating the planning process, however, members of the planning team must spend enough time with the person for whom they are planning so they have a good idea of the individual's preferences.

When answering the questions on long and short-term goals, it is important to remember that children with disabilities have the same rights as other people. They have a right to participate fully in the same community settings as children who do not have disabilities. This means

* Some material in this unit has been adapted from "A Training program for Paraprofessionals Working in Special Education and Related Services" (2nd edition, 1990). National Resource Center for Paraprofessionals, CASE/CUNY.
attending a preschool that serves children with and without disabilities, going to the circus, playing in public parks, participating in family activities, and generally doing all the things any other young child would do. Adolescents also have a right to participate fully in the same community settings as other teenage youth. For them, this means finding a job in the community, attending school with other youth who are not disabled, attending dances and other social activities in integrated settings and participating fully in family activities.

DEVELOPING ANNUAL GOALS AND INSTRUCTIONAL OBJECTIVES. When the individual, family, and education team develop the IEP for a person with disabilities, there are key questions to ask that will enable the establishment of goals and objectives that will facilitate the person’s integration and participation in community settings. The team should be sure that they can answer the questions before the members start planning. The questions include:

- What are the ultimate goals for this student?
- Will the skills that we propose to teach help this student achieve his/her goals?
- Are the skills to be taught practical and functional? If the student did not learn this skill, would s/he need someone else to perform the task or provide assistance?
- If the student learns the skill will it enhance his/her life and enable him/her to have more fun, to participate more fully in the community?
- Although we may want to teach many skills, time is a factor. Which of those proposed are of highest priority for the student?

GOALS AND OBJECTIVES. Long range goals are statements that describe desired and valued competencies or a general skill level. They are both observable and measurable and provide the direction for objectives which are short-range. Short range objectives are usually referred to as behavioral or instructional objectives. Both need to be written precisely and clearly as they describe the desired outcomes for the instructional process.

GOALS. Long-range goals need to be stated in a way that anyone who reads them knows exactly what is meant. For example, a long-range goal for an adolescent may be, “Juan will work 20 hours a week at a gardening job in Wyattstown with the assistance of a job coach.” The goal is clear and describes precisely where Juan wants to be in the future. A goal for a younger child might be, “Tara will be enrolled in an inclusive first grade when she is six.” Again, the outlook is perfectly clear. These goals set the direction for the instructional process.

OBJECTIVES. With each goal, there will be a series of objectives that need to be accomplished. Some of them may include skills that the child or youth needs to learn in order to attain the goal. Some of them may be activities that staff or family need to carry out.
out so that the individual may reach the goal. An example would be arranging transportation so that Juan or Tara can physically get to the desired places.

INSTRUCTIONAL OBJECTIVES. These statements identify a specific skill to be taught. They generally have three components:

THE BEHAVIOR. Once assessment and observation have been completed and the long-range goals established, it is time to write the instructional objectives. Each objective written should be a step toward attainment of the goal. It should be described precisely; i.e., Lorraine will feed herself mashed potatoes. There is no doubt when reading this objective of what the desired behavior should be. It is observable, and there is no doubt in the mind of the person watching just exactly what is desired of the youngster. Often when designing instructional objectives, people may want to use words such as “will understand.” This, by itself, is not observable. If this happens the team should think through what the child or youth would have to do in order to demonstrate that s/he “understands,” then design the instructional objective to reflect that behavior.

THE CRITERION. In addition to being observable, instructional objectives must also be measurable. In order that this can be accomplished, there are two criteria that must be assigned to the objective:

- the Part I criterion (CR-1) describes and measures one or more of the important characteristics of the behavior such as speed, accuracy, rate, quantity, or duration, and

- the Part 2 criterion (CR-2) tells whether the child does the behavior consistently and reliably. It may also include information about the context or setting where the behavior will occur. Some objectives may not need the CR-2 because they are not expected to occur frequently, i.e., “leaves the building when the fire alarm rings.” But, if it is expected that the behavior will happen often, it should be measured over a time period.

In the instructional objective above, “Lorraine will feed herself mashed potatoes,” the CR-1 may be, “getting them all in her mouth and swallowing them” (accuracy). You might further wish to add, "within ten minutes" (speed), which also describes how the behavior should be carried out. The CR-1 always tells you how well the behavior should be accomplished and how quickly or at what rate it should be carried out. The CR-1 is always measurable, and will help you evaluate whether or not the skill is being accomplished.
The CR-2 for the objective could be “eight out of ten times within a month.” This last phrase lets you know how reliable or consistent Lorraine is when eating mashed potatoes. If she is able to eat them successfully eighty percent (8 out of 10) of the time, it is likely that she will continue to feed herself mashed potatoes when they are presented to her. (If she is not tired of mashed potatoes by the time this objective is completed.) When a CR-2 criteria is designed, it is well to remember that most people do not accomplish skills with one hundred percent accuracy. We all give ourselves some leeway in measuring our skills. It is also important to keep in mind that some skills must be performed correctly 100% of the time. For example, waiting for the light to turn green before crossing the street 80% of the time is not good enough.

THE CONDITION. The third component to an instructional objective is the condition. This phrase states the circumstances under which the behavior will be performed. The condition lets the team know what help the student will need to perform the behavior and/or what materials will be needed. The condition for Lorraine’s objective might well be, “when presented with a dish of mashed potatoes.” This states precisely the circumstances under which the behavior takes place. These statements usually describe what will be provided to the person in order to accomplish the behavior or they may describe a contingency such as, “when asked.”

Lorraine’s complete objective, including the behavior, the criteria and the conditions might read, “When presented with a cupful of mashed potatoes (condition), Lorraine will eat them, getting all of them in her mouth (CR-1), eight out of ten times in the next month (CR-2).”
Developing Long-Term Goals and Instructional Objectives

When the team gathers to work out the individual education plan, there are some key questions that need to be asked and answered to enable them to establish annual goals and prepare instructional objectives for the student. They are:

- What are the ultimate goals for this student?
- Will the skills to be taught now help this student to achieve the goals?
Are the skills to be taught practical and functional? If the student does not learn a skill, will someone else need to perform the task or provide assistance?

Will attainment of the objectives enhance the life of the student? Will attainment mean the child can enjoy life more?

Although we may want to teach many skills, time is a factor. Which of those proposed skills are of highest priority for the student?
THE INSTRUCTIONAL OBJECTIVE

WRITTEN STATEMENT OF WHAT THE LEARNER WILL BE ABLE TO DO WHEN THE LEARNING EXPERIENCE IS COMPLETED SUCCESSFULLY. IT HAS THREE COMPONENTS:

THE BEHAVIOR OR THE DESCRIPTION OF THE SKILL THE STUDENT WILL BE ABLE TO DO WHEN INSTRUCTION IS COMPLETE;

THE CRITERIA OR A DESCRIPTION OF HOW THE BEHAVIOR WILL BE EVALUATED;

AND

THE CONDITION(S) OR A DESCRIPTION OF HOW THE ACTIVITY WILL BE TAUGHT
CASE STUDY

DIRECTIONS: Working with a partner, discuss Gloria's strengths and her needs and write two yearly (annual) goals and two five year goals for Gloria.

Gloria lives about twenty-five miles outside a small southwestern city that serves as a business hub and a major shopping center for a remote-rural area. She lives with her mother and two younger sisters.

Gloria is twelve years old and will enter the seventh grade in the fall. She has a moderate learning disability, cerebral palsy, and uses a wheelchair. She is able to take care of most of her personal needs; although she does have trouble dressing herself without some assistance with buttons. The junior/senior high school she will attend is located in the city and is completely accessible. She will get to school on a specially equipped bus.

While Gloria was in elementary school, all of her time was spent in self-contained classrooms and she had access to occupational and physical therapy services on an irregular basis, because of the high turnover rate in these positions. Her teachers and paraeducators did receive some training from OTs and PTs that enabled them to follow the program developed for her as a part of the IEP.

Formal reading tests indicate that Gloria reads at about the fourth grade level. She can add and subtract several columns of figures, but has trouble with multiplication and division. Because she has always attended school with many Hispanic students, she is fairly fluent in conversational Spanish. Gloria has a difficult time holding a pencil. Three years ago her teacher found a second hand typewriter and taught her to use "the hunt and peck" method. She does pretty well and when necessary uses the typewriter to do short written assignments.

Gloria has met with the IEP team and together they have decided that in the seventh grade she will take state history, arithmetic, typing, home economics, and a computer class. She will receive regular support services from physical and occupational therapists. She will also be tutored in reading and arithmetic by a paraeducator with several years experience in a Title I program. The paraeducator will also assist Gloria as she begins to learn skills that will allow her to travel in the community and to learn to shop in a mall.

Gloria is really looking forward to the computer class because she feels it will be easier to use than the typewriter. And she is especially excited about the home economics class. Her sisters help her mother with the cooking. But because it takes Gloria so long to chop and peel vegetables and do other chores, her mother and sisters have a tendency to take over.
Life for Gloria and her mother, until now, has always been fairly easy to cope with. The people in their small farming community have always accepted her and found ways to accommodate her needs. The deacons built a ramp for the church steps, other parents and children included her in group outings, almost everyone in town learned to assist her and manipulate her chair when needed. The school janitor adapted her desks and the tables in the lunchroom to accommodate her chair.

Gloria's mother is very concerned about how the people in town will accept her daughter. Gloria's mother unknowingly has communicated these fears to Gloria. While she is looking forward to going to the larger school and receiving the support services she needs from the physical and occupational therapists, she is worried about how the other kids will accept her. In addition, while she agreed to the community based training program, she's not so sure she is ready to take on the "big city", to learn to shop at the mall, or to use the public transportation system - even though the city council has purchased buses that are accessible to people using wheelchairs.
THE BEHAVIOR

You have learned that a good instructional objective must be observable. As such, it cannot be tainted with biases or judgments. It must also be measurable. In other words, you should be able to see and count the behavior as it occurs.

Following are a series of phrases. Put a “B” in front of the ones that describe a behavior that is observable and measurable.

___ 1. will touch toys
___ 2. will control her temper
___ 3. will point to his mother
___ 4. will roll a ball
___ 5. will play with another child
___ 6. will ride the bus alone
___ 7. will make a sandwich
___ 8. will behave himself
___ 9. will share
___ 10. will like math
___ 11. will respond to her name
___ 12. will take turns
___ 13. will follow directions
___ 14. will have fun

Exercises 2-5 were adapted from: A Training Program for Paraprofessionals Working in Special Education and Related Services (2nd edition, 1990). CASE: National Resource Center for Paraprofessionals in Education and Related Services, City University of New York.
THE CRITERION

Remember that the criteria tell you how the objective will be evaluated. The Part 1 criterion (CR-1) should describe important characteristics such as speed, accuracy, rate, quantity, or duration. The Part 2 criterion (CR-2) should tell you how reliably or consistently the behavior is performed. There are five sample objectives below, with the behavior underlined. In the designated blanks, write the Part 1 criterion and the Part 2 criterion for each objective.

1. When asked, Julio will follow the same two word direction in English in three settings on three different days.

   CR-1

   CR-2

2. Without being reminded, Regina will take off her coat every day for two weeks.

   CR-1

   CR-2

3. Before snack time, Lucille will put the juice glasses on the table five times on five consecutive days.

   CR-1

   CR-2

4. When asked in Korean, Darla will point to her friends Susan and Cindy when they come into the room.

   CR-1

   CR-2

   (Is there a Part 2 Criterion in this objective? If not, write an appropriate one.)

5. During play time, Kathy will manipulate 1 movable toy five out of six times.

   CR-1

   CR-2
THE CONDITION

Below are the five examples you worked with to determine criteria. This time, write the statement of condition. Remember that the condition describes the help a student might need or tells you what materials are needed.

1. When asked, Julio will follow the same two word direction in English in three different settings on three different days.
   
   Condition: ________________________________

2. Without being reminded, Regina will take off her coat every day for two weeks.
   
   Condition: ________________________________

3. Before snack time, Lucille will put the juice glasses on the table five times on five consecutive days.
   
   Condition: ________________________________

4. When asked in Korean, Darla will point to her friends Susan and Cindy when they come into the room.
   
   Condition: ________________________________

5. During play time, Kathy will manipulate 1 movable toy five out of six times.
   
   Condition: ________________________________

Please write appropriate conditions for the following instructional objectives:

6.
RECOGNIZING THE COMPONENTS OF INSTRUCTIONAL OBJECTIVES

Each of the following phrases could be a component of an instructional objective. In the blank in front of each phrase, write the initials for the proper component: B = BEHAVIOR, C = CONDITION, CR = CRITERION.

1. while sitting at the table
2. will pick up a spoon
3. will manipulate a pull toy
4. spontaneously
5. on the bus
6. 3 consecutive days
7. correctly
8. will reach for
9. without assistance
10. will connect two words
11. during music time
12. given crayons
13. when given a glass of milk
14. at home and at the center
15. will listen to a story
UNIT 5

INSTRUCTIONAL INTERVENTIONS

EQUIPMENT AND MATERIAL NEEDED

- Flipchart and easel or chalkboard
- Overhead projector, screen and transparencies
- Copies of the handouts and exercises for this unit
- Obtain copies of your school district’s/agency’s policies for managing challenging behaviors

BEFORE THE TRAINING SESSION

- Review the Background Material and the content in the transparencies and other resources available to you about instructional techniques and interventions that may be used effectively with young children. Prepare a series of short lectures on the various components of this unit.
- Make copies of the transparencies or write the information on the flipchart or chalkboard.
- Make copies of the Background Material and Exercises for the trainees.
- Gather material/equipment you will need during the Task Analysis Exercise.

DURING THE TRAINING SESSION

- Begin the class by discussing characteristics of behavior shared by all people no matter what their ethnic background, native language, religion, ages or whether they do or do not have disabilities. Use Transparencies 1-6 to emphasize the points you make. To stimulate discussion 1) ask the participants to brainstorm a list of activities or events that serve as personal reinforcers for them, and 2) ask them to describe programs they have participated in that supported their efforts to change a behavior (lose weight, stop smoking).
- Distribute Exercise 1. It asks the trainees to look at their own lives and to consider the impact of positive teaching techniques as opposed to punishment on their ability to learn.
- The introduction to the discussion of Universal Instructional Interventions is key to the integrity of this entire unit. Indeed, the techniques described in the first part of the unit are effective for students of all ages and are used to varying degrees in most educational programs.
- Exercise 2 asks the trainees to design a teaching sequence and indicate where and how they would use reinforcement. Their efforts at this point will be relatively unskilled but the task should enable them to begin to understand how and when reinforcement is used.
The discussion on Shaping should be relatively short. Again in Exercise 3 trainees are asked to design a teaching plan where shaping is the tool to be used.

Extinction is next on the agenda. The explanation of how it is done can be relatively short. This technique is best taught by demonstration. Exercise 4 indicates that you, the trainer—with the assistance of a volunteer—will demonstrate extinction. The exercise describes a role play for you to follow and a second one for two members of the class to enact. This can be a very effective tool for education personnel and parents to use when working with children who have challenging behaviors that interfere with their learning and ability to communicate and participate in classroom activities. So you should allow for adequate time to ensure it is understood.

The next activity covers Task Analysis. This too, is a technique better learned by doing rather than listening. Either distribute Exercise 5 and ask the participants to choose one of the three suggested activities or give them other tasks to choose from. Be sure to have the equipment they will need to carry out the Task Analysis. Divide the class into groups of 3 or 4 to work on the assignment. When it is completed ask for volunteers to teach the lesson to a volunteer from another group.
INSTRUCTIONAL INTERVENTIONS

CHARACTERISTICS OF BEHAVIOR SHARED BY ALL PEOPLE. People are people. Because individuals look different from one another or speak different languages or have disabilities does not mean they do not share many universal characteristics such as the desire for approval and acceptance, wanting to participate in activities, and being successful at what they do. We are alike, and there are characteristics and patterns of behavior common to all of us. Perhaps the most helpful way of thinking about ways to effectively teach learners of all types is to ask yourself “How would I respond in this situation?” “Would I like this?” “What do I do when I am angry, frustrated?” “How do I learn best?” When we begin to understand our individual responses to these questions, we are better able to develop and present learning opportunities that meet the needs of all the students we work with.

In educational jargon, learner’s attempts to communicate and their responses to events are called “behavior.” A behavior can be seen, heard and identified. It is measurable meaning that it can be counted and timed. This word is used to label activities. For example, a behavior would be “talking to Cathy,” “hitting the wall,” “patting Diego’s hand,” “playing alone” and “eating unassisted.” From this list, and many other examples, it is possible to see that observable, measurable parts of a child’s activities or responses can be labeled a behavior.

UNIVERSAL INSTRUCTIONAL INTERVENTIONS FOR ENHANCING LEARNING. There are a good many ways in which to help children, youth and adults learn more easily and effectively. Think for a moment of the best learning situation you have ever been in. Where did you learn the most? What did the teacher do to help you learn? Was the atmosphere in the learning environment a positive or a negative one?

There has been a great deal of research into the ways people learn best. These are considered “universal” because they have been shown to work well with people, regardless of their age or background. The techniques presented in this section are generally considered to be those which are most effective. You will note that punishment is not suggested as a teaching technique. There is a large body of evidence which suggests that people learn more easily and effectively when positive teaching techniques are used. Indeed, the punishment model is in the process of being discarded.

Many individuals new to education may be concerned about “maintaining discipline” in the classroom. They may feel as though they should monitor and punish rule infractions, lest students “get out of control.” Again, the evidence indicates strongly that teachers and paraeducators who build environments that reinforce and support learners engaged in activities that are meaningful to their lives generally do not have “discipline problems.” If a student has some behaviors that are unacceptable in a classroom setting, there are a variety of positive ways to help him/her learn more socially accepted behavior patterns.

The need for paraeducators to understand and effectively implement instructional interventions and behavior management strategies is related to the multitude of differences in learning styles, ability levels, readiness to learn and other factors that influence student performance and behaviors in the classroom. It is of critical importance for paraeducators to be aware that aggressive behaviors are not necessarily the most challenging behaviors that may confront them as a member of the
instructional team. A child or youth who “sits quietly and does not make trouble” may also be demonstrating a behavior that requires individualized attention and support.

It is also important for paraeducators to understand that there are no “magical” or “instant” solutions to reducing problem/challenging behaviors. To successfully help students change these behaviors, requires hard work and team work. All team members must understand and consistently follow through on behavior management interventions developed for motivating and supporting the needs of individual students. All team members must understand the goals and objectives for individual students, recognize student growth or lack of growth and be able to share their observations with each other.

REINFORCEMENT. The ultimate goal for teachers and paraeducators is to teach, assist and support each individual as s/he learns the information and skills necessary to be successful academically and in their lives in the community. For students with disabilities or other special needs, the goal is to participate in the community either independently or with support. Teachers and paraeducators help students learn to make choices so that they can have the ability to elect how, when and where they will take part. As the objectives on the IEP are developed and taught, the student also learns appropriate social and communication skills for his/her age.

Effective utilization of reinforcement strategies is one of the most important skills required by all members of instructional teams. When used well, reinforcement strategies contribute to classroom environments that motivate learning of academic and curriculum skills. And perhaps of even greater significance, implementation of personalized, meaningful reinforcers for individual students helps to support and recognize positive social skill development.

The importance of reinforcement as a method for 1) supporting and increasing cognitive (academic) growth and 2) motivating students to develop and maintain effective social skills cannot be overstated. Educators are, however, becoming increasingly aware of the value of linking reinforcement techniques to enabling students to recognize the consequence(s) of a specific action or activity. Indeed helping students to accept and learn from the consequences of their behaviors can be an effective method for helping them to learn how to control their emotions and reactions to their environments.

In order to assist each student to learn these skills, teachers and paraeducators reinforce appropriate behaviors. When you reinforce a behavior, you let the learner know that s/he is doing well. You can reinforce a behavior by patting a student on the back, by saying, “Well done,” or, sometimes, by smiling and nodding. Reinforcement is defined as an action or event that is the result (consequence) of a behavior (action). The goal of the reinforcer is to increase the likelihood that the behavior will occur again.

PRIMARY REINFORCERS. There are many ways to reinforce behavior and no two learners respond to the same reinforcers. Some reinforcers are called “primary.” These usually include tangible items like food, drink, or toys. While such reinforcers are appropriate for young children, when their learning experiences are new, the primaries are often quite noticeable and may even be demeaning to the individual as they grow older. As soon as the person begins to respond to a primary reinforcer, it is wise to begin considering other, less noticeable, ways to reward a positive behavior.
SECONDARY REINFORCERS. Still other reinforcers are known as secondary. They include a smile, verbal praise, or letting the learner participate in an activity that s/he likes. We all remember our grandparents or parents who said, “As soon as you finish doing the dishes, you can go out and play.” They were defining what they wanted us to do and then giving us a reward (a reinforcer) for carrying out the task.

INTERNAL REINFORCERS. The instructional team does not always have to provide direct reinforcement. To help students grow and become more independent, the team does need to help a student recognize and value the results of an action or behavior that is internally reinforcing (e.g., pride in finishing a book, over-coming fear of participating in class, completing an assignment on time).

NEGATIVE REINFORCERS. Other reinforcers are described as negative. For example, the shrill of an alarm clock early in the morning is hardly pleasant, but it does do the job of getting you out of bed. The glare of the sun when you step outside in the heat of a summer day does make you put on sun glasses to protect your eyes. A traffic ticket will probably cause you to slow down and stay within the speed limit...for a while. These reinforcers may seem negative but they do produce positive behaviors. While they may achieve desired goals for older children and youth, they probably are not as meaningful for young children.

It is important to give the reinforcement as soon as the learner has started the task or demonstrated the positive behavior you desire. If you delay, the student may think that s/he is being rewarded for something else. For example, Mary was picking up her toys while her Mother was watching. She was doing a good job and her Mother was thinking, “I’ll give her an ice cream bar when she finishes. She is doing such a good job!” Just then, Mary pinched her sister. While her mother was surprised and startled, she took Mary to the kitchen where she gave her the ice cream bar and sent her out to play. What did Mary think? She was confused. She didn’t know which behavior she was being rewarded for, picking up toys or pinching her sister. What would you think?

Reinforcement is an invaluable tool for teaching. To recognize and reward the attainment of skills and behaviors that will help an individual gain autonomy and learn to make decisions is a powerful assist to the person.

SHAPING. Many educators use another tool, called shaping. The definition of shaping is to reward each successive approximation of the behavior desired. Sound pretty complicated? Not really. For example, suppose you are helping LiPo learn to use a spoon. The behavior has been analyzed and broken into short easy steps. The first step is for her to pick up the spoon, the second step is to put it into the cereal bowl, the third to pick up cereal, the fourth to lift it to her mouth, and the fifth to put the food into her mouth. Instead of waiting until the whole behavior of eating has been learned before you reward the individual for her work, you decided to reward her for each successive step as it is learned. You would, then, reward LiPo for picking up the spoon. As this is learned, then you would concentrate on the second step and reward its completion. If LiPo was having a lot of difficulty learning the skill, you might decide to reward even smaller steps within the sequence.
Shaping is a nice tool to use. It allows the teaching staff to recognize and reward a child who is moving toward an objective. It is a tool that many parents use unconsciously; for example, when teaching a child to pick up toys, a parent often will give a hug or a kiss the first time the little one puts any toy in the appropriate place.

**MODELING.** Another teaching tool is *modeling*. That simply means that you demonstrate by your actions the skill or behavior that you desire of another individual. This tool is often used when helping people learn to deal with their emotions in social situations. Where little children can, and often do, relieve their frustrations by dumping a truck-full of sand on their playmate’s head, such coping mechanisms are denied to adults. In order to teach the socially appropriate responses to frustration or anxiety, teachers and parents often model the behaviors desired. When the person responds by doing the same thing him/herself, a reinforcer is given. It is important to remember that children learn from the teaching techniques and behaviors that are modeled. Therefore, children and youth who are taught by people who model positive behavior learn positive ways to work and interact with other people. Children and youth who are taught using punishment as a technique learn how to punish.

**EXTINCTION.** This, too, is a powerful tool in the arsenal of teaching technology. When we speak of extinguishing a behavior, we mean that this specific behavior will be ignored—completely ignored—and other positive behaviors will be reinforced. It is used in a variety of ways. For example, when a young child, begins to use socially unacceptable words in front of the teacher and other children an almost automatic response is for other children to giggle and for adults to “lecture” the child, and therefore reward the behavior by attending to the child. The more effective way to deal with it often is to simply ignore the swearing when it occurs and to positively reinforce the child when s/he expresses him/herself in a more socially acceptable way.

Extinction can also be used in other situations. A student for example may be pulling the hair of the student sitting next to him/her at a reading table. You would disengage the hand from the hair and redirect the student back to reading the assigned lesson. While doing so, you would not acknowledge the incident or begin a series of questions. You would simply redirect the behavior. As soon as the student is paying attention, you would let him/her know that s/he is doing a good job.

Remember, though, no attention paid to the hair pulling. If necessary, of course, you would comfort the student whose hair was pulled but you would do so with your back to the hair-puller.

It is necessary to practice your reactions when you want to use extinction as a teaching tool. Its effectiveness depends on your ability to ignore and to reward positively. Most people, however, when their actions are completely ignored, seek to find other ways to interact with the environment; ones that will get a reaction from you and others. This may result in continuing the objectionable behavior at a higher rate. This should last only a short while the student is repeating a behavior that got attention before. As s/he realizes it isn’t working, then an effort will be made to find a new behavior that will be rewarded.
**TASK ANALYSIS.** This teaching tool was developed to its fullest by a man named Marc Gold. He was concerned with helping young people with mental retardation do work that was positively valued. He noted that if a task could be broken down into its component parts, it was much easier to teach than if an individual was asked to learn the whole thing at once. He demonstrated his ideas effectively by taking apart a bicycle brake into its separate parts. He then set up an assembly line where people, in 157 separate steps, could put the brake together. By so doing, he showed the world that people with severe retardation could perform difficult jobs well.

When teaching any task, it is important to ask yourself how it can be broken down. In the illustration above for example, when LiPo was learning to use the spoon, the task was divided into smaller steps. It was pointed out as well that even those steps could be subdivided, if necessary.

Many skills that you want to teach can be broken down into individual steps: teaching young children to line up, teaching subtraction with regrouping, finding the answer in a reading passage. Some students have difficulty when the whole task is presented at once, while other students do better when certain types of tasks are broken into steps. In these cases a task analysis approach is effective. However, the approach has been criticized when used with English language learners as the only instructional method, maintaining them at low levels. Reading, for example, becomes nothing more than learning the sounds of the letters. Used appropriately, task analysis can made learning more understandable for students.

As the teacher and paraeducator work together to design instruction they should keep task analysis in mind and use it whenever teaching the whole task seems like too much at once.
CHARACTERISTICS OF BEHAVIOR

BEHAVIOR IS LEARNED

ALL BEHAVIOR HAS MEANING
BEHAVIOR CAN BE CHANGED

When a behavior has been a part of an individual's repertoire for a long time, it may be difficult to change.

Some behaviors that are perceived as "difficult" or "challenging" may be used to communicate needs or to gain the attentions of others.

Each person learns in a different way and responds to different types of teaching strategies.

Encouragement and positive reinforcement are stronger teaching techniques than disapproval and punishment.
BEHAVIOR MUST BE OBSERVABLE

IT CAN BE SEEN

IT CAN BE HEARD

IT CAN BE IDENTIFIED
BEHAVIOR MUST BE MEASURABLE

IT CAN BE COUNTED

IT CAN BE TIMED
REINFORCEMENT STRATEGIES

PRIMARY REINFORCERS

SECONDARY REINFORCERS

INTERNAL REINFORCEMENT

EXTINCTION (PLANNED IGNORING)
EFFECTIVE REINFORCEMENT STRATEGIES...

HAVE MEANING FOR AN INDIVIDUAL STUDENT

PROVIDE NATURAL CONSEQUENCES FOR A SPECIFIC ACTION OR ACTIVITY

SUPPORT AND MOTIVATE ACADEMIC GROWTH

FACilitate DEVELOPMENT AND IMPROVEMENT OF SOCIAL SKILLS
**SELECTION OF TEACHING STRATEGIES**

**DIRECTIONS**

This exercise is designed to elicit from you examples and illustrations of different learning environments—those in which positive reactions and reinforcements were evident and those in which punishment may have been used. You are being asked to share a part of your life experience. Consider carefully those events that you would like to share with a partner or with the class.

Working with a partner, consider two types of learning situations that you have encountered in your life. They may have occurred at home, at school, or in social situations. Select one learning event in which you remember the instruction being delivered in a positive manner. Select another where punishment or the fear of punishment was the primary incentive for learning. Make notes below on both:

<table>
<thead>
<tr>
<th>Positive</th>
<th>Punishing</th>
</tr>
</thead>
</table>

Compare and contrast the two learning situations. From which do you feel you have derived the most good? Why?
REINFORCEMENT

In order to use reinforcement effectively, it is necessary to design a teaching plan ahead of time that indicates when and under what circumstances reinforcement should be given. For example, if you are teaching a child to tie his shoes, when would you give the reinforcer? At the completion of the entire maneuver? At the completion of each step? And, what kind of reinforcement would you use? That would depend on the child, of course, and what he liked, but you need to plan it ahead of time.

DIRECTIONS

Outline below a possible teaching sequence, designating what the reinforcer would be and when it would be given, for a student in the program where you are working.
Exercise #3

SHAPING

DIRECTIONS

Focusing on a student with whom you are now working, outline a teaching sequence using shaping as your technologic tool. Be prepared to discuss it with the rest of the class.
MODELING

DIRECTIONS

Outline a teaching sequence where modeling is the tool used. Focus on a sequence that would be appropriate for a student with whom you are working.
Exercise #5

EXTINCTION

DIRECTIONS

Role playing is one way to learn to use extinction appropriately. Your teacher will demonstrate the use of extinction in front of the whole class. Working with a volunteer, s/he will show how to extinguish a behavior when a child is alternately playing with a toy and then whining for an adult’s attention.

When the role playing has been completed, feel free to ask as many questions as you have about the technique. Then, four class members will be asked to demonstrate in a role play how to extinguish the behavior exhibited when a child is eating with her family, one elbow on the table, her head resting on her hand, pounding on her food with a fork, saying over and over I hate carrots.

Analyze each role play carefully. Decide why extinction is effective and take notes below on its value.
Exercise #6

TASK ANALYSIS

DIRECTIONS

Working with a partner, select one of the five tasks listed below and work out a step by step, of how they could be taught:

- adding two single digit numbers
- putting on and zipping up a jacket
- obeying traffic lights during community based training
- dialing a number on a push button phone
- putting on and lacing a shoe

Use as much time as you need. Try to make each step a separate task that could be taught individually and then merged with the rest. Use the back of this paper if you need more room.

After you have completed your task analysis, your teacher will ask three volunteers to demonstrate their analyses, using other trainees as learners.
UNIT VI

INSTRUCTIONAL METHODS FOR FACILITATING TRANSITION

OVERVIEW

The activities in this unit build on the more general instructional interventions presented in the previous sections. In this training session(s), paraeducators will learn additional skills they can use to assist students to make the transition from school to adulthood. Participants will learn and practice skills that will prepare them to assist students to achieve personal goals and maintain greater control over their destiny when they leave school.

The training activities contained in this unit address several topics and curriculum areas. This is necessary in order to provide the participants with: 1) a knowledge of challenges confronting all students when they leave school and most especially young people with disabilities and 2) an understanding of the skills paraeducators require to work in community learning environments and job sites, without immediate supervision, while keeping lines of communication open between themselves, teachers, students, parents, employers and the public, and to be aware of the limits of their authority.

The instructional objectives for this unit reflect the diversity and complexity in the skills and knowledge transition trainers and job coaches require to carry out their assigned tasks.

INSTRUCTIONAL OBJECTIVES

The paraeducator will be able to:

1) Demonstrate an ability to assist other members of the planning team to assess education and transition support services required by a student with learning or development disability.

2) Demonstrate an ability to use effective, age appropriate instructional interventions in community learning environments to prepare a student for independent or supported living.

3) Demonstrate an ability to use effective, age appropriate instructional interventions in work sites to prepare students to enter an occupation or to work in a supported employment program.

4) Demonstrate an ability to use effective, age appropriate instructional interventions to reinforce and strengthen social, language/communication, problem solving and advocacy/self-determination skills.

5) Demonstrate a knowledge of health systems, rehabilitation and vocational services, self-help and advocacy groups, regulatory agencies, religious and other community based organizations available to provide services, support and assistance to students with disabilities and their families.
EQUIPMENT AND MATERIALS REQUIRED

☐ A flipchart and easel or chalkboard.
☐ Copies of the handouts, exercises and worksheets for this unit.
☐ Copies of state and/or district guidelines for delivering transitional services in community learning environments.
☐ If they have been developed, obtain copies of forms used by your district for recording information about student performance in community learning experiences or at work sites.
☐ A glossary of terms used in vocation/transition services in your district or state.

TIME REQUIRED TO PRESENT MATERIAL

The time required for this session will depend on the nature and number of activities you select.

BEFORE THE SESSION BEGINS

☐ Review the Background Materials, Handouts, Exercises, district policies and job descriptions for transition trainers, and/or job coaches, and the suggested activities that are part of this unit as well as other material available to you about instructional strategies for preparing students to make the transition from school to the next phase of their lives. Select the activities that will meet the needs of the participants in this training session. The activities you choose will be based on job descriptions and personnel practices developed by your district or agency for providing community based learning opportunities for students.

☐ Develop a brief lecture that 1) reviews the roles and contributions of paraeducators in the transition process; 2) outlines the objectives for this unit; 3) describes the skills the paraeducators will learn, and 4) describes categories and complexities of skills and knowledge students and their parents require to insure a smooth transitional period.

☐ Develop a glossary of terms used in your district and state connected with the delivery of transitional, vocational and other support services. The list might include definitions of services, resources, and the agencies that provide them. For example: 1) Supported Employment; 2) Work Study; 3) Independent Living; 4) Supported Independent Living; 5) Transition Training; 6) Supplemental Security Income (SSI); 7) Social Security Disability Income (SSDI); 8) Employment ID Card; 9) Medicare and Medicaid; 10) Rehabilitation Services; 11) Job Development, and 12) Cueing, Prompting and Fading.

☐ Schedule and invite representatives from state and federal agencies with responsibilities for providing services or administering regulatory procedures connected with guaranteeing the rights and entitlements of youth and adults with disabilities. Ask them to share information about procedures for: 1) applying for social security and employment ID cards; 2) for gaining access to support services and resources available to adults with disabilities and their parents (e.g. rent supplements, SSI, SSDI, medical services and benefits, case work assistance, vocational planning and training.)

NRC for Paraprofessionals 197
Schedule and invite a second panel of representatives from local social and rehabilitation services provider systems, religious organizations and/or non-profit agencies, advocacy organizations and other groups that provide support or assistance to adults with disabilities and their families. Ask them to: 1) share information about services and resources available from their agency and how to gain access to them: (health care; vocational training, counseling, placement; community recreation programs available to all people; transportation services; post-secondary education; support personnel); and 2) offer suggestions and strategies paraeducators can use to maintain a close liaison with the agency or organizations.

On the flipchart or chalkboard list the questions paraeducators should ask and answer when preparing to conduct a training session in a community learning environment or worksite. (The questions are contained in the next section - "During the Sessions.")

Make copies of the Information Handouts, Background Materials, and Exercises.

DURING THE SESSION

Deliver the brief lecture stressing the diverse nature of the skills and knowledge young people require to enter the world of work, attend post-secondary education, and live independently or with support services.

Distribute the glossary of terms; review it with the participants. During this discussion, with the assistance of the participants, develop a list of questions they want representatives on the two panels to address.

Introduce the members of the panels representing the various provider agencies and support groups. Encourage the participants to make notes and be prepared to ask the questions developed by the class or new ones that may occur to them during the presentations. Or,

If time does not permit you to conduct the panel during the class, ask members of the class to make appointments to visit individual agencies and gather information about the services or assistance the agency can provide to young people and their parents. Encourage them to use the questions developed by the class to structure the meetings and to prepare a one page report about the agency they can copy and share with their classmates.

Divide the participants into groups of 4 or 5. Depending on the number of groups, ask members of one or more groups to work together to develop and record a list of functional, communication and social skills students may require to meet workplace expectations (e.g. learning job tasks/duties, staying on task, following instructions, observing routines and schedules set by the employer, asking for assistance, using self control). Ask members of one or more of the remaining groups to work together to develop and record a list of functional, communication and social skills students may require to live independently or with support/assistance (e.g. plan meals, shop, maintain a safe environment, develop friendships, participate in preferred leisure activities, obtain support services). NOTE: You may want to refer participants to the Communication and Social Skills Inventory they completed during Problem Solving and Communication sessions in the module on Strengthening the Instructional Team.
- Ask for volunteers to read the list developed by their groups; record the responses on the chalkboard/flipchart; comment on the similarities and distinctions in the skills required for the different areas.

- Distribute Exercise 1, "A Problem Solving Exercise." Review the goals of the activity and discuss the instructions. Ask the participants to work in pairs to develop strategies they would use if they were confronted with these situations. Ask them to be prepared to discuss their ideas with the rest of the class.

- Lead a discussion of prompts and cues paraeducators can use to establish and maintain attention, demonstrate the skills, model attitudes and behaviors. Stress the importance of fading as an instructional intervention.

- Lead a discussion of the following questions paraeducators need to ask and answer to successfully carry out training sessions in a community learning environment and to share the results of the training with their supervising teacher.

  1) Do I understand the purpose of this lesson? (Is the purpose to train the student to use public transportation, obey traffic lights and other safety rules when crossing the street, or to stay on task at a work site?)

  2) What is my role in presenting the lesson? (Is it to assist the student to gather personal information required to apply for an employment ID card, introduce the student to a new work site and co-workers, observe the student to determine if s/he is using correct procedures at a job site?)

  3) If the student is not responding well to the training and I change the instructional strategies developed by the teacher will it change the goal of the lesson? Do I need to discuss the changes I want to make with the teacher?

  4) What is the most important thing for me to do during this lesson? (Help the student to increase productivity, follow instructions, answer questions/concerns about the program from people we come into contact with during a community centered lesson?)

  5) Am I prepared to reinforce correct responses of on-task behavior? (What reinforcement will I use, when/how will I use it?)

  6) What cues, prompts, guidance will I use? Is it time to start to fade assistance? Do I need to discuss this with the teacher?

  7) How will I gather and record information about student performance? How will I share the information with the teacher?
Distribute Exercise 2 "Evelyn's Story." Divide the class into groups of 3 or 4. (It would be a good idea to reassign the participants to new groups). Ask them to read the case study and 1) identify Evelyn's strengths, likes and dislikes, and learning styles, 2) list barriers that may impede learning new skills, 3) discuss possible goals for Evelyn's last year in school, and 4) suggest methods transition trainers could use to help her achieve these goals.

Ask the individual groups to select one of the skills Evelyn needs to strengthen in order to make a successful transition to supported living and work. Distribute Exercise 3 "Worksheet for Individualizing A Lesson" for the groups to use as a guide when developing the lesson.

BIBLIOGRAPHY/RESOURCES

INSTRUCTIONAL METHODS FOR FACILITATING TRANSITION

INTRODUCTION: One of the most critical periods in the lives of all young people is the point when they leave the relative security of school and move into the world of work or post secondary education and continue the process of becoming adults. Identifying special interests, talents, and career preferences, determining whether to enter the job market immediately or to attend a technical school or university, deciding whether to remain in their parents' home or to move into another living arrangement, making new friends are just a few of the challenges confronting all youth during this transition stage.

All adolescents require support and encouragement from parents, caregivers, educators and friends to enable them to move on to the next phase of their lives. Most students who have learning, physical and sensory disabilities make smooth transitions to college or a job. They are able to live independently, participate in social and entertainment activities and find employment by relying on traditional support systems available to their peers without disabilities.

Still other young people with disabilities are able to make successful transitions when provided with specialized vocational and transitional training prior to leaving school, or short term services from adult services delivery systems. The training may include: 1) learning about supplemental financial programs and entitlements available to them and their families and how to gain access to the services; 2) vocational planning and education, and 3) opportunities to strengthen self-advocacy, social and problem solving skills in community centered learning environments.

Youth who have developmental and other more limiting disabilities are capable of working productively and living in homes of their own choosing when they have personalized assistance and structured services that may begin during their school years and continue as they proceed through life. There are many sources of support for young people with severe disabilities. Assistance may come from parents, spouses, friends, neighbors and co-workers. Or it may be available from religious organizations or mutual self-help/ advocacy groups.

These natural forms of support frequently need to be supplemented by personnel from education and other human services agencies. Indeed, staff in publically funded administrative and provider agencies play a critical part in defining the range, type and quality of interactions between people with disabilities and other members of their community. The primary role of all agency personnel should be to strengthen the con-nections between the community at large and people with disabilities.
TRANSITION PROGRAMS: The world is a complex place where situations, rules, attitudes and lifestyles are in a constant state of change. To prepare them to cope with the changing environments, students in transition programs require coaching in many curriculum areas. Some relate to the functional skills and information they require to meet workplace expectations, to live independently or with continuing support, to participate in preferred leisure activities. Others are connected with strengthening social and problem-solving skills that will enhance their capacity to achieve personal goals. Increasingly, school districts rely on ITPs to assist in planning for the future and preparing students to anticipate and deal with transition issues.

FUNCTIONAL SKILLS: To insure inclusion in all aspects of community living, young people with disabilities need opportunities to apply and practice functional skills that include: 1) using public transportation; 2) planning and preparing meals; 3) shopping; 4) maintaining safe environments; 5) staying on task; 6) completing tasks; 7) following work rules; 8) managing money alone or with assistance; 9) acquiring medical services; 10) gaining access to financial and personalized support systems and more.

SOCIAL AND PROBLEM SOLVING SKILLS: Because the world is so complex, it is impossible to prepare youth for every situation that will confront them once they leave school. Thus, while they are practicing functional skills of daily living and learning to perform duties at work sites, it is important for students to increase self-confidence by mastering social, problem-solving and communication skills that will help them avoid isolation and participate actively in community events, make new friends, and live independently or with support. These skills include but most certainly are not limited to preparing young people to: 1) organize and maintain control over their environments; 2) determine personal goals; 3) identify barriers to achieving their goals; 4) develop strategies to reduce the barriers, and 5) make choices based on available options.

Among the most critical social and communication skills required by students to avoid isolation and full participation in community events are: 1) learning to monitor and control their behaviors; 2) listening and asking questions; 3) requesting help or guidance; 4) communicating feelings and needs effectively; 5) sharing with others; 6) helping others; 7) dealing with peer pressure and 8) problem solving.
APPROACHES TO COMMUNITY CENTERED TRAINING:* Increasingly, paraeducators are being called upon to extend the availability of vocational and individualized community learning experiences. The following sections center on providing paraeducators with skills they can use/adapt to coach students participating in supported employment, work/study and other transition activities.

When the instructional team plans lessons for achieving the goals of the ITP they take into account many factors including the requirements of the transition curriculum, the learning styles, interests and functional level of each student in the class. They select interventions for: 1) increasing skills for learning more effectively (e.g. enhancing visual/perceptual, listening, communication skills, and extending time spent on task); 2) establishing instructional objectives with clearly defined steps/sequences for teaching a skill; 3) developing mechanisms for mastering skills through practice and applying them in other settings; 4) identifying reinforcement techniques and determining how they will be used, and 5) assessing the results of the instruction.

INSTRUCTIONAL STRATEGIES: Lesson plans are written descriptions for day to day activities that serve as a guide for the transitional team. They help the team stay on course and insure that teachers and paraeducators are working toward the same goals. This is particularly critical in a transitional program where paraeducators spend so much of their time away from the building and are not always able to consult daily with the teacher. The format of the lessons vary from teacher to teacher and school to school. In general, they include: 1) long range goals; 2) objectives for the lesson; 3) an outline of activities and instructional activities, and 4) procedures for data collection and recordkeeping about student performance.

KNOWING THE STUDENT: For paraeducators to work effectively with individual students they must have an understanding of their characteristics and interests. There are many factors that influence how people learn, and students with disabilities learn through a variety of modalities. Some need to have detailed lessons planned and presented in small sequential steps. Others thrive on setting their own learning goals and helping to plan their own instructional program. Some students will start a task and stay with it until it is completed. Others are easily distracted and need to be constantly motivated to completed. Others are easily distracted and need to be constantly motivated to move onto another activity. All students require feedback to know whether they have performed the task correctly. Some require immediate external rewards; others are motivated to learn by achieving the goals they have set for themselves.

Some students learn more easily by watching a skill being demonstrated. Some like to listen to the information or hear directions presented one step at a time and nearly all students learn by applying and practicing skills in community learning environments.

**ESTABLISHING AND MAINTAINING ATTENDING BEHAVIOR:** In transitional programs and vocational education programs, because the instruction is taking place in a community setting or worksite, it is almost impossible to find a place that is free of competing stimuli. There may be many people around involved in diverse activities, therefore, the paraeducator must rely on many strategies to keep the student involved and on task. They may include: auditory cues saying the students name, visual cues (eye contact, pointing to the item), tactile cues (touching the student's hand).

**PRESENTING INFORMATION AND ELICITING RESPONSES.** When lessons are initiated, it is essential for the student to understand what tasks s/he is expected to perform. (Is the purpose of the lesson to practice crossing the street following traffic lights? Is it to build speed on the job? Is it to plan a menu for lunch and then shop for the ingredients?) Is it to contact another agency for assistance?) Directions should be clear and precise. In some cases it may be necessary to provide different degrees of guidance to the student as s/he practice the skills. This is referred to as prompting and there are several methods that can be used including:

- demonstrating/modeling (showing how an activity should be performed)
- physical/guided prompts
- visual prompts
- verbal prompts
- fading assistance
An important characteristic of these prompts is that they move from providing direct assistance to gradually withdrawing all assistance. Responding to a request for help from the student when it is appropriate can reduce frustration, keep the student on task and enable the student to master the task. It is critical that paraeducators understand the difference between providing the student with answers and enabling him/her to use a process for determining a solution on his/her own; or in assisting the student to learn the assigned task at the work site and to actually perform it alone within the time scheduled versus doing the job for the student.

REINFORCING CORRECT RESPONSES AND ATTENDING BEHAVIOR. In Part 1 of this module the paraeducators learned several methods for increasing appropriate behavior, including reinforcement. When they conduct one to one training sessions in community environments there are several things paraeducators must keep in mind about reinforcement. The first is that it is a powerful tool that may unintentionally be used to reinforce challenging behaviors; therefore, the reinforcer should be used following a correct response, or immediately after a positive behavior. Reinforcers that are used with an individual student should be age and culturally appropriate, and a reinforcer should have meaning or value for the student.

RECORDING INFORMATION ABOUT STUDENT PERFORMANCE. Evaluation activities that focus on the student involve gathering information about progress, teaching methods that are effective and what rewards are most reinforcing. On-going evaluation is important to keep track of what is happening to the student and discover what needs to be changed for more successful learning. Final evaluation will be done for the cumulative file, to assess whether the objectives of the IEP/ITP are being achieved, and reports to parents using the data gathered during instructional activities. When evaluating students, these are some of the questions that might be asked:

- What distractions most frequently interfere with learning during transition or job training sessions?
- Which rewards work best for this student?
- What progress has the student made?
- Does the student ask relevant questions about a task or workplace expectations?
- Does the student listen to and follow instructions?
- Does the student ask for assistance if required?
- Is the student becoming more independent?
- Does the student make choices based on personal preference?
- Is the student using his/her learning in different settings and situations?
- Does the student work well with others?
- Does the student express feelings and opinions appropriately?
A PROBLEM SOLVING ACTIVITY

DIRECTIONS: During all phases of transitional and vocational training, paraeducators and the students they work with will come into contact with many people including: employers, co-workers, clerks in stores, bus drivers, members of the general public, representatives of human services agencies that provide many forms of support and assistance. Review the following scenarios and develop one or more strategies you might use to prepare the student to cope with the situation. Be prepared to discuss your ideas with the other members of the class.

1. You are training Jerry to recognize and follow traffic signals. A jay walker crosses the street against the light and Jerry tries to cross with her. When you take Jerry's arm, he begins to yell at you and then refuses to cross when the light changes. What will you do?

2. John works for a catering company serving a major airline. You trained him to set up the meal trays for the Coach Class and faded your assistance several weeks ago. Yesterday the teacher received a call from John's supervisor. John had been transferred to doing the trays for the First Class section which required him to fill small salt and pepper shakers and place them on each tray rather than wrap individual packets in a napkin. Filling the shakers was difficult for John - so he substituted the packets. The supervisor tried several ways to help John fill the shakers and do the job properly. Finally, John threw several shakers on the floor and stormed out. The supervisor says they need someone for the job who is flexible and can be assigned to different tasks at a moment's notice and John does not seem to be able to do this. What can you and the teacher do to assist John and the supervisor?

3. You are teaching Joanne to use an automatic teller machine (ATM). She keeps punching in the wrong access code and starts to pound on the machine when she does not receive the money. There are three or four people in line behind her. The bank manager approaches you, says Joanne is annoying the customers and asks you to use another branch. What strategies would you use to assist Joanne and to help other people understand the situation?
4. You are training Bob to wash dishes in a restaurant. A co-worker who Bob likes very much, begins to talk loudly and tell off color jokes in the dishwashing area. Bob stops work, laughs and applauds the performance. How would you handle this?

5. You are teaching Grace to use public transportation and she has been doing very well. The teacher and her parents agree it is time for her to solo. The first day she tries to travel from home to school she takes the wrong bus, becomes very confused and starts to cry. The driver comforts her; it is a while before she is able to tell him her home number and the number of the school. When he is unable to reach her parents he calls the school. By the time he reaches you he is very unhappy with you, the school, and her parents for not taking better care of Grace. How would you handle this situation?

6. Matthew is learning to be a janitor at the elementary school. He mops the floors in the main hall daily. The principal stops him in the hall to tell him that he must mop under the lockers as well and not to forget. At that point, Matthew becomes angry, throws down his mop, and walks off the job. How can you intervene to teach Matthew to respond properly to criticism?

7. While Joyce is a very shy, quiet student, she has made many good friends in school. Most of them are scattered around the small midwestern city where they live. Joyce is really worried about what will happen once they complete school and can no longer attend school dances, ball games and other activities where they can meet for leisure time activities. This is a particular concern since she finds it very difficult to start conversations and reach out to people she does not know. How can you help Joyce overcome her fears, help her strengthen her ability to interact with new people, and develop ways to stay in touch with her friends?
INTRODUCTION: Evelyn Durbin is 16 years old and lives in an old mill town near Boston. Her parents were killed in a car accident six years ago. Since that time she has lived in a foster home. Evelyn has become an important member of her foster family - the Bermans. Mr. and Mrs. Berman will be 65 shortly, and plan to retire in Florida after Evelyn completes school. Evelyn has a sister, Clare, who is twenty years older. Clare and her husband Fred have two sons about Evelyn’s age and they live in New York City. Evelyn, Clare, Fred and the boys have a warm loving relationship. Evelyn spends as many Jewish and public holidays with them as she can. She also visits them for a week or two every summer. (She says, however, that the "Big Apple" makes her nervous and that’s about all she can take at any one time.)

While it has been difficult, Clare has attended most of Evelyn’s IEP/ITP meetings since her parents died. She has encouraged Evelyn to be an active participant in these meetings as well as the talks she has with the Bermans about Evelyn’s future. For the last six months Evelyn, Clare and Mrs. Berman have been discussing the pros and cons about where Evelyn should live. Together they have decided that if they can put the pieces together they would like Evelyn to live in the city where she has grown up, has friends, and natural support systems including members of the synagogue she has attended since she was a child.

The first of a series of meetings has been scheduled to begin to plan Evelyn’s ITP. In addition to Clare, Evelyn, and Mrs. Berman, the other members of the team represent the school district and local agencies that provide social, rehabilitation and vocational services to adults with disabilities, a member of the synagogue and other agencies that may be able to provide personalized support or financial assistance to Evelyn.

To make the decisions about Evelyn’s long range transition goals and the strategies they will use to achieve them, the entire team needs to learn as much about Evelyn’s strengths, learning styles, likes, dislikes, education needs as they can. Evelyn’s principal teacher, a paraeducator who works with her in her work study program, a rehabilitation counselor, Clare and Evelyn have worked on different parts of the report the other members of the team will discuss.

EVELYN’S PROFILE: Evelyn has a learning disability described as severe. She does simple addition and subtraction problems, reads important safety words and knows symbols. She wears glasses and is considered legally blind. In addition to low vision she has trouble with depth perception. These problems influence her eye-hand coordination and make it difficult for her to do some tasks that require fine motor skills. They also create problems for her when she has to get on and off a "down" escalator, or go down-stairs when there is no hand rail. She loves to watch General Hospital (a soap opera),
listen to Country and Western music, and shop anytime - anywhere as long as she is with someone. She does not like to make decisions on her own. She loves Chinese food, likes to experiment with other food and likes to eat out as often as possible. When she goes to New York to visit Clare's family, she prefers to take the plane rather than the train. She says "trains are slow and boring." She has four very good friends at school and spends most of her time with them. When teachers and other adults encouraged her to take a pottery class, because she likes to make things, she refused saying "new kids will make fun of me and what I do." While crowds "make her nervous," she does look forward to going to the synagogue for Saturday services.

Evelyn dislikes going on escalators, riding buses, snow/ice, doing dishes, sitting still, scary movies and bowling. She also dislikes being alone for more than an hour. She is also afraid of new situations.

During the last year, she has participated in a work study program under the supervision of an instructional paraeducator. During this vocational training experience she has demonstrated the ability to carry out tasks that require up to three steps to complete. While Evelyn talks about how important it is to finish a job once she starts it, she is easily distracted by noises or other people and frequently gets up and wanders around when she becomes "nervous". Although she asks many questions and seems to want assistance, she does not follow instructions when they are presented orally. She seems to learn more effectively when she has a chance to watch a demonstration, feel the equipment or material and has a chance to practice the skill. Tactile cues and prompts are usually more beneficial than verbal or visual cues.

While living with the Bermans she has learned to use a washer and dryer and has come to appreciate no wrinkle clothing since she dislikes ironing. She uses a microwave oven and can prepare meals on a gas stove. She learned to use a rotary dial phone and finds it difficult to master a pushbutton phone. Indeed, she has been known to throw the receiver across the room and yell at it when she cannot complete her call as dialed. She takes daily showers and washes her hair unasked and without assistance. She knows how to walk to the synagogue but does not know the route to the post office, bank, or hospital.

She understands the value of saving money from her allowance to buy special things, but she has not yet learned to manage money or maintain a checking account with or without assistance. Because of her dislike for buses she prefers to take cabs and calls them to pick her up - even though she does not have the fare.

The ITP team has decided that Evelyn will benefit from living in a supported independent living arrangement. Initially, she and Tabatha a friend from school will live in a cooperative apartment with two other young women. A staff member employed by

209
one of the advocacy organizations will live with them and assist them to learn new skills or practice and maintain skills each person has. A search for an apartment is underway. (Evelyn will probably have to learn to use a laundromat because most buildings do not provide these appliances.) She is going to need to learn how to travel to and from work and home without calling a cab, manage her income when she starts to work full time and much, much more.

A job in a supported employment program operated by the school district and another agency has opened up. Currently she is working three afternoons a week and Saturday mornings. The team decided to take this approach in an effort to help Evelyn learn to stay on task, follow instructions, and increase her self-confidence while she is in school. She has a social security card but has not applied for an employee I.D. card and financial assistance she may be eligible for.
MODULE V

WORKING WITH FAMILIES

OVERVIEW

During the era when services were provided in institutions, children and youth with severe disabilities were often committed to large, congregate care settings, at birth, or when they became troublesome teenagers. Because there was little support in the community, this usually was the only viable alternative for families. Unfortunately, the institutions were residential in nature, so commitment meant that the person left his/her home and moved physically into another setting.

Almost everyone has experienced the move of a family member out of the home -- to college, to a job in another city, or when a marriage takes place. The phenomena that takes place is sometimes called, "closing the gap," as the family circle tends to become smaller in its daily activities. The person moving is not forgotten, but is no longer part of daily routines.

When a person with disabilities moved on a permanent basis to a large residential setting, the gap in the circle usually did close, and for all practical purposes, the person was no longer a part of family events.

Parents resented the fact that they had to obtain services for their children with disabilities through such a mechanism. In the 1950's and 1960's, they began to band together and to develop and promote local community services so that their sons and daughters could remain at home.

Even in those progressive days, however, the family was often excluded from planning and implementing services for their children. Many staff and parents remember planning sessions held for children with disabilities while the family waited in another room for the results of the meeting.

The Individuals with Disabilities Education Act (IDEA) has had a significant impact on meeting the needs of families. Today, there is an awareness of the importance of the family in the life of a child. It took a long time, but people now realize that, no matter what staff are in and out of the child's life, the family always remains. The family, good, bad, or indifferent, is and will remain a significant part of a child's life no matter whether s/he has a disability or not.

Since the above is true, it only makes sense for educators to work closely with family members as planning is developed and carried out for an infant or young child with disabilities. In this module, ways and means of cooperative planning and implementation of services are discussed.

INSTRUCTIONAL OBJECTIVES

The paraeducator will be able to:

1) Discuss the varying definitions of "family" in the 1990's, including broad extended families, single-parent families, families which include significant others who may not be related by blood or marriage, families in which the grandparents carry out the traditional "parental" role, and all the

NRC for Paraprofessionals
other configurations, and write a definition of "family" today;

2) Describe and discuss the role of the family in an individual's life span;

3) Describe why it is important that the family take part in conceptualization, implementation and evaluation of the family educational plan designed for their child;

4) Describe why it is important that the family maintain an active role in the instructional activities carried out by the paraeducator and the associated team members, and

5) Design activities in which family members assume the primary role in the instructional activities prepared for their child.

TIME REQUIRED TO PRESENT MATERIALS

This module will require approximately two hours to teach.

EQUIPMENT AND MATERIAL REQUIRED

In order to teach this module, you will need:

- A flipchart and easel, or a chalkboard.
- Copies of the Background Material, exercises and instructional objectives for every trainee.
- The policies and procedures of your district or agencies concerned with active parent involvement in developing the IEP and/or the ITP.

BEFORE THE TRAINING SESSION

- Read the material in this module thoroughly. Compare the information with other material you have read and with your own life experiences. If your school or agency has policies or regulations that apply to work with families, obtain copies.

- Prepare a short lecture on the material which includes references to any school or agency policies or procedures that apply. It is a good idea to include your own experiences in the lecture; these anecdotes make the lesson come alive for those who are listening.

- Make copies of the handouts, exercises, and instructional objectives. (In this module the Background Materials are designed to serve as the informational handouts for the trainees.)

- Write the definition of "family" from the text (See Page 1 of the Background Material) on the flipchart or chalkboard.
DURING THE SESSION

- Begin the session by reviewing the material included in the overview of the module. Remind trainees that it wasn't so long ago that children and adults with disabilities often spent their lives in institutions. Invite class discussion and questions as you proceed. Ask class members if they have personal anecdotes to relate about their family's experiences with family members with disabilities.

- Use the definition of "family" written on the flipchart or chalkboard to guide the discussion. Invite the class to participate actively in developing their own definition. The discussion should make the point that "family" is difficult to define because there are so many configurations.

- Continue with the discussion using the material from the section called, "Defining a Family." After you have briefly described the numbers and kinds of possibilities there are for "families," hand out Exercise #1. Explain that it is not meant to be a sensitivity exercise, so class members may describe another family than their own. Go over the instructions with them and allow 15 to 20 minutes for completion.

- Once the drawings are completed, suggest that each class member explain his/her drawings to other class members. People usually like this exercise and have a lot to say, so allow twenty minutes.

- Continue with the discussion, using the material from the section entitled, "Roles of the Family." It is important to emphasize that family roles change as children grow and develop, but that in most instances, the family remains a part of the individual support system.

- Distribute Exercise #2. It is possible for class members to have a little fun with this exercise as they write down all the roles parents may play; be sure that the lists are complete. In the second section, again be sure that the trainees are inclusive of all the possible roles. Allow 15 minutes for completion of the exercise. Then, invite trainees to share their lists with the whole class.

- Introduce the idea of total family involvement in the conceptualization, implementation and evaluation of the different individualized plans. Again, emphasize the critical part the family members play in a child or youth's development and the utmost importance of their being a part of all planning and evaluation.

- The last three exercises are designed to emphasize the importance of the components of conceptualization, implementation and evaluation. (The "Special Questions" are designed to stimulate further discussion. You may have them answered and discussed by the small groups or you may want to ask the whole group to respond.) You may use these exercises in either of two ways. 1) You may want to split the class into three groups and give each one an exercise to
complete. If you use this method, ask each group to be very thorough. Allow about thirty-five minutes for task completion and reportbacks; or 2) You may want to split the group into three-to-four-person work groups and ask each group to complete all three exercises. If you have the time, this second suggestion is preferable as it allows each class member to look at all three components. If you choose this method, allow forty-five to fifty minutes for task completion and report backs.

Ask the participants to work together as a team to gather information about 1) advocacy organizations concerned with increasing the skills of parents to serve as advocates for their children, and improving the availability and quality of services for children and adults with special needs; 2) mutual self-help support groups or parents and other caregivers who have children with a specific disability, and 3) social service health care, education and other provider systems that offer services for families. They may want to visit some of the agencies to interview staff and gather information or they may want to call or write to ask for information about the nature of the services the agency provides, who they serve, the cost of the services, etc. When the project is complete, ask the members of the class to share with one another the information they have accumulated and then make individual resource files to use on-the-job.

Invite a panel of parents who have children with disabilities to attend a class session to share their experiences and insights with the participants.
DEFINING A "FAMILY". Families come in many sizes and shapes. When an individual says the word, "family," the image for each listener assumes a different configuration. There was a time when everybody knew what a "family" was -- mother, father, sister, brother, with grandparents and aunts and uncles living close by. When any family member needed help there were people close enough to respond.

When the American West was settled, some of the images of families began to change. The pioneers who traveled west in covered wagons usually left their families behind. A small unit, consisting of a male and a female adult and possibly some children, gathered itself together and headed for the frontier where they lived alone and unsupported by the larger family. Even so, the definition of "family" remained relatively stable until the last thirty years during which considerable changes have occurred.

A high divorce rate in the United States has, of course, made a difference in family configuration. With marriage, divorce and remarriage, some children have full brothers and sisters, half brothers and sisters and step brothers and sisters. In other cases, the divorce means that children are being reared in a single-parent home.

Society no longer insists that parents must be married, so that the traditional value of husband and wife is changing and people are coming to see that loving parents need not be married. As society has become more mobile, grandparents, aunts and uncles often live far away. Instead of being an integral part of the family, their participation is limited to five or six days a year in a relatively restricted format.

For the purposes of this module, a working definition of "family" is presented.

- A family is two or more individuals who may or may not share blood ties or be related by marriage, who share similar values and attitudes. Adult members of this group take responsibility for the children living with them by providing for education, values training, clothing and food. The individuals in the group see themselves as united in their goals and aspirations.

(This definition includes adolescents, who may have times when they actively reject all of the above, but who usually remain a part of the family group.)
THE ROLES OF THE FAMILY. For many people, there is no more satisfying feeling than that of being part of a family. Taking part in activities with people who know one, "warts and all," is generally supportive and relaxing. Even though many families have moments of disagreement when crises occur, they pull together to cope with whichever of life's events is currently challenging.

The birth of a child who is identified as having disabilities presents a crisis for many families. Throughout a pregnancy, family members often envision a "perfect" child. The knowledge that the newborn has disabilities which may prevent him/her from participating fully in life is sobering and often frightening. In many cases, it is the first time that such a challenge has occurred to that particular family.

The family plays an important role in the early years of any child with disabilities. It is usually left to parents to discover community services, to find appropriate educational settings, and to discover ways and means to pay for requisite equipment and medical interventions. P.L. 99-457 mandates early services to youngsters with disabilities, but parents or other family members need to learn about its provisions and to make contact with school personnel.

As services are developed for young children, the family plays an important role. Although it may be possible for a school representative, teacher or paraeducator to provide regular visitations to the home, it is not possible for either to be there all the time. Therefore, it is necessary to assist family members in learning how to respond to the needs of the child and how to carry out interventions that will support the infant or toddler as s/he grows.

Through the years, the family will continue to be the mainstay for the child. When services falter, or additional crises manifest themselves, the family remains the primary resource. Indeed, in the adolescent years, as with other teenagers, the family may be the only group which remains firmly in the individual's corner.

The design of community services in America predicates a series of events that may not be well coordinated. The public school system has primary responsibility for an individual until s/he attains an age of majority. Then, the responsibility is usually shifted to a community agency which may have waiting lists. Throughout, most families must be assertive in their search for appropriate services and settings for their family member and they must continue to provide emotional and other support.

CONCEPTUALIZATION, IMPLEMENTATION AND EVALUATION OF THE INDIVIDUAL PROGRAM PLAN. Each of us think of ourselves as individuals, with individual rights and responsibilities. Most of us, however, are also part of a family system which, as was discussed above, plays an important role in the life of the person.
For many years, individual planning for children and youth was carried out by teachers, paraeducator and other education human services and medical personnel without much regard for the views of other family members. It was assumed that whatever plan was developed, the family would agree and would participate as directed. Such an assumption seems pretty silly but, for whatever reasons, it was made over a period of years.

In the 1990's teachers, paraeducators and other service providers are aware that the family must be a part of the whole planning process. That means that they must take part in the conceptualization, implementation and evaluation of the planning.

When the family participates in planning meetings, it will come with information about the child that cannot be obtained anywhere else. It can be blended with the educational information obtained by the schools and other provider agencies in order to form a complete picture of the child. For example, one paraeducator who was accustomed to helping four-year-old Susan eat by feeding her at each meal, was amazed to learn from her mother that Susan regularly fed herself at home and, according to her parent, was "only a little sloppy" in doing so. This example is fairly obvious but there often are activities that occur one place and not the other.

As the individual family service plan is developed, it is necessary that it fit with family priorities and plans. The most complex educational activities can be written but unless they meet the needs of the family and are supported by the family in the home, they often come to nothing. A family will support what it sees as important; if the activity seems pointless to family members, it will not be reinforced or carried out at home. Therefore, the family needs to be part of the conceptualization of the planning and they need to be given opportunities to state their priorities and needs before the plan is written.

As implementation of the plan occurs, it has a better chance of being effective if the family is involved. Any activities designed to help the child develop and attain new skills will be more effective if they are implemented at home as well as at school and if they are reinforced in both places. As was stated above, it is not possible for teacher or paraeducator to be in the home all the time, so when the family assists in implementation, the plan will be more successful.
The last component of the process, evaluation, should also be carried out by families. Successful teachers and paraeducators recognize that informal evaluation is taking place all the time. When asked, family members usually have a pretty good idea of what is going on in the educational program and they have decided opinions on its success or failure. Ensuring that the family is part of the formal evaluation process adds to the effectiveness of evaluation. Parents and brothers and sisters can be asked to note certain growth points and they can monitor skill acquisition. In addition, they can provide information that will let the educational staff know whether the planned activities are assisting the child or youth to participate more fully in community activities.

AN ACTIVE ROLE. The family is an integral part of the life of any child or youth. As the youngster grows, the family will change its support for him/her to reflect skill acquisition and maturity, but it remains as a primary source of encouragement, support, and assistance. Although it may be tempting to assume that a teacher or paraeducator has more information about the special needs of a child with disabilities, each should remember that the family probably has much of the most significant information and the family will be a part of the individual's support system for a long time. The family should be an active part of the planning, implementation and evaluation team as well.
EXERCISE #1

DIRECTIONS: Draw enough circles, in any pattern you choose, in the space below that will enable you to describe the members of your family.

Label the circles with the names of family members. Be sure to include all the people that were or are an integral part of your family unit. They may include but are not limited to: mother, father, brothers, sisters, children, grandparents and other significant individuals.

After you have labeled the circles, do the following:

• Draw a line that looks like this ________________
  to connect the circles where active communication takes or took place on a regular basis.

• Draw a line that looks like this - - - - - - -
  to connect the circles where love or affection was or is strong.

After you have completed your drawing, use it to describe your family to another class member.

**NOTE:** This is not a sensitivity exercise. If you prefer to describe another family that you know instead of your own, that is perfectly alright.
EXERCISE #2

There are many roles played by parents in family settings. Below, list as many as you can think of. These might include, nurturer, meal planner, bus driver, housekeeper, and so on and on.

<table>
<thead>
<tr>
<th>Roles Played by Mother</th>
<th>Roles Played by Father</th>
</tr>
</thead>
</table>

What other roles do you think are assumed by parents of a youth with a disability? List them below. What additional roles do you think would be assumed by brothers and sisters?

<table>
<thead>
<tr>
<th>Parent Roles</th>
<th>Sibling Roles</th>
</tr>
</thead>
</table>
EXERCISE #3

DIRECTIONS: This is a time for problem-solving. Working with a group of three or four people, build a list of suggestions for ways in which the paraeducator can work with a family to ensure that it is actively involved in conceptualizing a services plan for a student who is preparing to leave school. Be sure to include, 1) means of interaction, 2) places to meet, 3) strategies to include the family priorities and 4) tips on ways to ensure that the ideas of all family members are heard.

Special Question: If the parents of the teenager are divorced but both are actively involved with the teenager, what strategies would you use to ensure participation and input from both parents?
EXERCISE #4

DIRECTIONS: Working with the same group of people, list ways below to ensure that family members are involved in implementation of the individualized transition plan for the teenager. Include some specific activities as illustrations of your strategies.

Special Question: If the primary person in the life of a student is a family member other than the parents, how would you change strategies to ensure cooperative implementation of the plan? For example, the primary person may be a grandparent or an older brother or sister.
EXERCISE #5

DIRECTIONS: Working with your group again, outline below strategies for ensuring that family members are a part of the evaluation process. Remember that there is informal evaluation as well as formal evaluative methods.

Special Question: How can the paraeducator work with a family to be sure that the positive characteristics of the student with disabilities are highlighted? Sometimes, it is easy to focus on the needs of an individual rather than to emphasize the positive skills and characteristics.
APPRECIATING DIVERSITY

OVERVIEW

For a good many years, Americans liked to describe themselves as a "melting pot." It was assumed that each of us would lose our individual ethnic or social identities and that we would "melt" and all our neighbors would be like us. Pretty boring. Over the last decade people have begun to recognize that the United States is a "salad bowl." While each of us retains our own unique identity, we also contribute in our own way to the mosaic that makes up the United States. It is true that there are many kinds of us - we are:

- People of Asian descent,
- People of African descent,
- People who are Caucasian,
- People who are Native American,
- People whose primary language is English,
- People whose primary language is Spanish,
- People whose primary language is other than English or Spanish,
- People in one-parent families,
- People in two-parent families,
- People in extended families,
- People who are Jewish,
- People who are Catholic or Protestant,
- People who are Moslem,
- People who are men,
- People who are women,
- People who are young,
- People who are old,
- People with disabilities,
- People who have lived in one house all their lives,
- People who move yearly,
- People with many different lifestyles.

The list goes on and on. Each of us can probably identify with one or more of the categories listed above. We can also think of other descriptions that fit us more precisely.

We have the opportunity to appreciate one another or to demonstrate our prejudices toward one another. It is important to teach children and youth to appreciate diversity and to be aware of and proud of their own unique identities. To do this each of us must be aware of the personal biases and prejudices we bring to the workplace. Because these attitudes are so deeply ingrained in us, it is
very difficult for us to recognize them and to change the behaviors - whether subtle or overt - that are generated by them.

The goal of this module is to help participants to begin to explore their own value systems and attitudes toward people and to try to change the behaviors that may prevent students from appreciating differences in lifestyle, culture and value systems.

INSTRUCTIONAL OBJECTIVES

The paraeducator will be able to:

1) Describe and discuss differences in lifestyle, culture, values and distinctions in the abilities of children and youth in the classroom or program where they work.

2) Describe and discuss ways in which each child or youth makes positive contributions.

3) Develop strategies to increase self-esteem and autonomy in the children and youth they work with.

TIME REQUIRED TO PRESENT MATERIAL

This module will require approximately three hours to conduct.

EQUIPMENT AND MATERIALS REQUIRED

☐ A flipchart and easel, or a chalkboard.

BEFORE THE TRAINING SESSION

☐ Read the material in the module thoroughly. Compare the information with the other information you have read and with your own life experiences.

☐ Prepare a short lecture on the material which includes information about the cultural heritage, lifestyles and value systems of the families of the students represented in your community.

☐ Make copies of the Background Material, Information Handouts, and Exercises.

☐ Copy the three problems from the Individual Values section on Pages 2 and 3 in the Background Materials on to a flipchart or chalkboard.

☐ Invite representatives of different ethnic and religious groups in your community to speak to the class about their rituals and beliefs that may have an impact on how children and youth learn and are educated.
DURING THE TRAINING SESSION

- Begin the class session by talking briefly about differences in cultural heritage, life-styles and values. (If you have invited guests to speak to the class you may want to introduce them at this point).

- Talk with the class about the value and need to understand and appreciate the diversity in the cultural heritage, lifestyle, and value systems of the children, youth and families paraeducators work with. When you reach the values problems, take them one at a time. Read them aloud from the flipchart and encourage trainees to respond to each.

- Distribute Exercise #1 (allow 15-20 minutes for the participants to complete it.)

- There are four additional exercises included with this module. It is suggested that you use them all but you should decide when, and in what order you want to use them.

- Try to help each trainee understand that differences often are what make people interesting. Rather than being ignored, they usually should be highlighted.

- Discuss with trainees the strategy of honoring one student per day. By the end of the session, each trainee should have an idea of how children and youth can be reinforced for positive contributions.

- If you sense that trainees are resisting and falling into the trap of criticism of children and youth, start a discussion of positive contributions and suggest that there really is no way criticisms and lists of weaknesses are helpful.

APPRECIATING DIVERSITY

THE SALAD BOWL EFFECT. Cultural pluralism is a process of compromising, mutual appreciation, and respect between ethnic groups. Cultural pluralism affirms that there is no one model American. Instead, society draws its strength from the uniqueness of each of its ethnic groups and individuals. The idea of the "melting pot" in which all cultures are to be melted together to form one "American" culture that is superior to all others, is not consistent with the ideal of multiculturalism. The "melting pot" view supports assimilation, a process of "fitting in" to the dominant culture by eliminating cultural differences. The concept of the melting pot has never been a reality for ethnic minorities of color such as African, Hispanic, Native and Asian Americans, although many people believe it is true (McAdoo, 1993). Cultural pluralism, is a more realistic way to operate in an ethnically diverse society. Instead of a melting pot, a "salad bowl" or "stir fry" may be more appropriate metaphors for conveying how when different ethnic groups come together, the total group becomes richer, but the integrity of the original groups is maintained. A stained glass window, tapestry, or mosaic are other images that illustrate how people with many different customs, languages, and beliefs can live together in a rich and beautiful society. It is true that there are many kinds of us.

Today's public school classrooms may well include children or youth from several countries, children and youth of varying colors, cultural heritages, economic backgrounds, and children and youth who do or do not have disabilities. The challenge to instructional personnel is to encourage each individual to enjoy his/her unique difference and to help each person participate fully in all activities. To the busy paraeducator, this may sometimes seem a huge task but the overall educational goal for all children and youth is to achieve their visions, using their own capabilities. Instructional personnel strengthen capabilities through instruction and work toward increasing individuals self-esteem and autonomy so that individuals may work toward their goals.

In other words, it might be said that the instructional personnel provide the "salad dressing" of strategies, skills and techniques which provide a common understanding (and bonding) for children and youth and hold the "salad" together.

DIFFERENCES. When Larry's mother and father were divorced, Larry was actually glad because it meant that he wouldn't have to listen to them argue any more. But, when he wanted to join the Boy Scouts, he was embarrassed when he learned that he could not do so unless his father was prepared to carry out activities with him. Since his father had moved to another part of the city, this wasn't possible, and Larry had to miss out on the Scout experience.

Clarence's teacher indicated that she had signed up his entire class to take Cardio-Pulmonary Resuscitation instruction as part of the requirements of their Health Class. Clarence could not find a way to tell her that his family did not believe in providing CPR to people who might be dying. They believe that when it is time to die, it is time, and no one should intervene.
It is nearing the end of the school year, and decisions are being made about which student should receive a scholarship available in the district for the senior who has an outstanding record of achievement in academics, contribution to the school and community, and participation in sports. Two students are almost equal in terms of qualifying for the award, with one exception - Jonathan has a slightly lower grade point average than Lorraine. Several faculty members have decided that even so he should receive the scholarship, because Lorraine is pregnant and may not perform well in college - or may never even make it that far.

Parker overheard a discussion between two teachers. One of them said, "Poor Parker, it's too bad he has to live with his grandmother; she is so much older than the parents of the other children and just doesn't seem to fit in." Parker loves his grandmother and is proud of her, but this remark made him wonder if there was something wrong with him.

None of the above should have happened. Although they may seem to be examples of pure bigotry and prejudice, it may well be that, instead, they are just examples of people who don't think and who are not sensitive to the culture, the lifestyle and the values of the people around them.

But, still the incidents happen. And they occur because people are not sensitive to the cultural heritage, lifestyles, and value systems of others. This lack of sensitivity results in racism, sexism, handicapism that may stop children and youth who have even less reason than others to want to be a part of the mainstream from achieving full participation in the community.

When incidents like those above occur, they not only take away from the individual student, they take away from the class as a whole. Because one child and his/her unique characteristics are ignored or abused, none of the rest of the children or youth or staff have the opportunity to enjoy them either. And so, the whole group of individuals are the poorer.

INDIVIDUAL VALUES. Think about your values system. What are the characteristics of your family that are important? On which questions are there only one answer? Which points are debatable? For instance:

Your daughter has just had surgery. Both you and your spouse work and are covered by a family insurance plan. Do you 1) submit all bills to both plans for reimbursement; 2) submit the bills to one plan; 3) choose one policy to provide the primary coverage and the other plan to pay expenses not paid by the primary policy?

Your grandfather has just died. Your mother calls you at college to tell you. You are studying for a big exam. You tell your mother, 1) "I'll make arrangements and be right home." or 2) "I'm studying for an exam; I don't think I can make it before the day of the funeral." or 3) "I can't come home right now. There is too much studying to do here."

When your grandfather's will is read, you discover that he has left you $20,000. What do you do? 1) Immediately put the money into investments, thinking that you will need it at a later date for a down payment on a house or some other big purchase? 2) Immediately start planning for the trip of a lifetime? or 3) Settle up your present bills?
Although each of the above incidents may appear to have only one valid response, there are, in fact, the possibilities of at least three choices on each, and members of the class may feel strongly about their choice. Actually, individual responses represent the values that we hold.

Values are developed over the course of a lifetime and they come from a variety of different directions. We may learn them from parents, from religious affiliations, school, friends, reading materials or a host of other sources. However they are learned, they have become a part of us and are important to each of us in our own way.

Recognizing the values of others is an important piece of recognizing the individuality of each person. In order to do so, you must be aware that the values system of another person is uniquely that person's; attempts to ignore it or to make changes will probably meet with failure.

STRATEGIES AND TECHNIQUES. When the United States was viewed as a "melting pot," it seemed easy to work with individual students because the common understanding was that each was (or would become) very like the other. The language was English; curriculum content and teaching strategies could be seen as applying equally to all students. For example, the way to learn the multiplication tables was to stand in front of the class and repeat them until you got them right. Now, most instructional personnel feel it is important to learn multiplication in a functional way. How will it be helpful to an individual person? (Who can always use a calculator to find the "right" answers?)

When we begin to appreciate the diversity of students and strive to help all students appreciate themselves and their contributions a number of teaching strategies may be helpful. Instead of encouraging students to compete against one another (the "old" way - remember "spelling bees"), students should be encouraged to increase their own skills - for the pleasure and reward of doing so. The reward will nearly always be different for each learner.

One teacher assigned one school day for each person in her class. At the beginning of the day, she asked the specific child to lie down on a large sheet of butcher paper. She traced the outline of the child on the paper and hung it on the wall. She then asked the whole class to provide descriptions for the child: - "Nice," "Smart," "Spanish," "Cute," "Strong," and so on. Throughout the day, the child was honored by the teacher and other class members.

Other strategies are to assist a child or youth to learn skills using whatever adaptations or accommodations are necessary. For example, a small hand-held calculator assists those who have trouble with numbers; Braille books assist those who do not see to read; dictionaries assist those who do not speak English well; widened doorways assist those who use wheelchairs to gain access to every part of a building, or electric switches assist those who cannot manipulate things in their environment very well. Once instructional personnel understand that most people use some sort of accommodations (eye glasses, for example) and adaptations (easy-access cupboards), it becomes easier to develop them in the classroom. It is true that many children and youth with special needs profit enormously from accommodations and adaptations, but it is equally true that most people make them unconsciously - and all of us use them.
Other differences can be ignored - and usually were in the days of the "melting pot." The responsibility of personnel in today's schools is to recognize and appreciate the differences in all of us. There is no "right" or better cultural heritage, no "right" or better religion, no "right" or better ethnic background nor any "right" or better life-style. Often, people are devalued because of one or more person's beliefs in rightness or betterness. Once an individual ceases to believe in "rightness" and begins to believe that we are all different but equal as human beings, many opportunities emerge to celebrate the differences. As we do so, we assist each child or youth to grow in self-esteem and to increase his/her personal autonomy.

Perhaps two of the most oppressive forms of discriminatory behavior that confront us are stereotyping and labeling people.

**STEREOTYPING.** That is thinking in cliches and lumping people in groups. It is not true that "all Irishmen are the same" or "blondes have more fun," or "all fat people are have a great sense of humor," or "people with mental retardation cannot learn." In fact, any phrase that lumps people together probably is not true.

**LABELING.** It is probably unnecessary to remind people that labels are not good - but sometimes each of us can fall into labeling. It is important to use "People First Language." The way we say things may create prejudice toward other people. For example by referring to "the retarded," "the disabled," "handicapped access," rather than to people who have disabilities we create situations where people are seen only as members of a group where the color of a person's skin, their lifestyle or a disability is more important than other characteristics that recognize the contributions everyone makes to their family, school and community.

In sum, understanding and appreciating the diversity in the cultures, lifestyles and other characteristics of all people helps the instructional team to shape and refine, lessons and instructional methods in ways that will reinforce the value of the children and youth they work with. By avoiding the labeling of individuals the team will encourage the development of self-esteem in all children and youth. And by assisting - not doing for; encouraging - not requiring; demonstrating empathy - not sympathy; respecting -not being paternalistic; the team will foster the development of self-esteem and autonomy.
INCREASING SELF-ESTEEM AND AUTONOMY

The following guidelines are useful to instructional personnel committed to assisting children and youth to build self-esteem and increase self-reliance and autonomy.

✓ Every person is unique. There will never be another person exactly like this individual.

✓ While a disability itself may loom large in the life of an individual, it is not the major factor in the person's life. Much more important are the student's personality, talents, special interests.

✓ Every person makes positive contributions to his/her family and to significant others in his/her life. These should be recognized and rewarded on a daily basis.

✓ Good self-esteem is the result of the individual's understanding of his/her positive contributions and capabilities. On days when the person may find it difficult to recognize either, the paraeducator can help by pointing out positive characteristics.

✓ Autonomy, or the capability of directing one's own life, develops in early childhood and continues through adulthood. It is strengthened when individuals are encouraged to make choices and to act on the strength of their knowledge and convictions.

✓ The ability to achieve full participation in community life is the result of opportunities to try new things and to succeed or fail with the support of family and educational staff.
METHODS FOR ASSISTING CHILDREN AND YOUTH
ACHIEVE PERSONAL GOALS

The following strategies will enable instructional personal and family members to assist any child or youth to accomplish the tasks and acquire the skills to achieve his/her goals:

✓ Allow ample time for tasks to be completed so that the child or youth does not feel rushed and inadequate because time is short.

✓ Identify places where assistive technology can be used to make a task easier to accomplish. This category includes communication boards, switches, jigs and any other device that will simplify or shortcut the task.

✓ Recognize the successes of the child or youth in a concrete manner. This may be done verbally or by keeping lists or by encouraging the individual to self-identify when s/he has accomplished a goal.

✓ Organize the education environment so that it is not just barrier-free, but so that it enhances the capabilities of each child or youth using it. This includes the placement of books and materials so that they are reachable and usable, finding furniture that is sturdy and easily accessible, and providing educational materials appropriate to the individual.

✓ Encourage the child or youth to set goals and to dream of the future in terms of work opportunities, travel aims, and living expectations.

✓ Assist the child or youth to find models with whom s/he can identify. For example, Steven Hawking, the world's greatest astronomer, uses a wheelchair and speaks via a communication device; Einstein worked out the theory of relativity; the world's system of numbers was begun by Arabs; Barbara Mikulski is a United States Senator. Thurgood Marshall was on the Supreme Court of the United States, Sammy Sosa is a MVP.

✓ Let children and youth know that it is not necessary to be out-standing in order to be successful. Achieving full participation in the community while learning, living and playing can be accomplished by each person in his/her own way.
Exercise #1

VALUES CLARIFICATION

DIRECTIONS. Make a list of values that might include: beliefs, rituals/celebrations, academic/career and other life goals, lifestyles, ethics, relationships to others, civil/human rights, economic/social status that are most important to you. (Do not limit yourself to the areas on this list.)

Complete this activity by answering the following questions about each item:

a) Is this something I truly prize/cherish?

b) Am I willing to publicly affirm/defend my choice, preference, belief?

c) Have I acted on the belief or value? Is it an important part of the way I lead my life?

d) Does it have an impact on the way I view the worth of other people and my ability to work with students who come from totally different backgrounds?
Exercise #2

DIRECTIONS. Working with other members of a small group, answer one of the questions below:

1) Identify one aspect of an individual cultural heritage and tell how it could be incorporated into a learning experience for the class or program where you work. Example: Czechoslovakians traditionally celebrate May Day by holding a Maypole Dance. Why would it be effective to develop a teaching sequence around this cultural difference?

2) Identify one aspect of an individual lifestyle and tell how its recognition could make a difference to an individual learner. Example: The reading books which feature Dick, Jane, Mother and Father do not reflect the experiences of children or youth from one-parent families. Nor do typical pictures reflect different ethnic backgrounds. This reduces the incentive to learn to read about them.

3) Identify an aspect of an individual value or belief system and tell how its recognition could make a difference to an individual learner. Example: Because Joe's family do not believe in television, he must leave the room when the teacher plans to use a videotape.

Be prepared to share the findings of your group with the rest of the class.
Exercise #3

DIRECTIONS. Working with a partner, suggest at least six ways in which the children or youth in your classroom could be recognized for their positive contributions (thus increasing their self-esteem). For example, what if you gave a child a gold star for a completed assignment?
Exercise #4

**DIRECTIONS.** Working with a partner, suggest five ways you could change the environment to make tasks simpler for children or youth in your classroom. (Remember - Tee Ball is an accommodation for some children.)
Exercise #5

DIRECTIONS. Celebrate Diversity. List below 10 things you could learn from children and youth in your classroom. (For example, drive a wheelchair (not easy) or learn Spanish or eat gefilte fish).
EMERGENCY HEALTH AND SAFETY PROCEDURES

OVERVIEW

In the previous modules, the instructional objectives were designed to provide paraeducators with skills and knowledge they require to work alongside teachers and to assist with the delivery of instructional services. The suggested units in this module address issues and concerns that affect the health, safety and well being of children and adults in schools and other education settings. The topics include: 1) emergency procedures set by the district in the event of fire, accidents, and natural disasters; 2) precautions for reducing infectious and communicable diseases; 3) techniques for assisting children and youth with conditions that may a) affect their ability to eat or drink unaided, b) experience seizures, and c) have physical and health related problems; 4) good body mechanics to use when lifting children and youth or heavy objects; and 5) procedures for detecting and reporting child abuse and neglect.

Because the content covers such a broad range of subjects that are tied to state or local district/agency procedures and policies, it requires trainers who have specialized skills and knowledge. It is the responsibility of the training coordinator or personnel developer to recruit nurses, occupational or physical therapists, social workers or other related services personnel to provide the training required by all paraeducators or paraeducators assigned to work with a student with specific health related or physical disabilities. To facilitate the work of the coordinator, we have developed the instructional objectives for the paraeducators and some suggested activities for the different sections.

INSTRUCTIONAL OBJECTIVES

The paraeducator will:

1) Demonstrate an ability to use CPR methods appropriate for the age and size of the children or youth they work with by successfully completing an approved CPR course offered by the American Red Cross or another emergency services agency.

2) Demonstrate an ability to use emergency first aid procedures by successfully completing the multimedia Standard First Aid Course offered by the American Red Cross.

3) Demonstrate a knowledge of the emergency procedures established by the local school district in the event of fire, accidents or natural disasters.
4) Under the supervision of a physical therapist, demonstrate an ability to use proper body mechanics in order to avoid personal injury when transferring children and youth or moving heavy objects.

5) Describe signs of physical, sexual and emotional abuse or neglect in children and youth they work with and the procedures established by the local school district for reporting suspected cases.

6) Under the supervision of a physical therapist, demonstrate an ability to effectively use procedures for transferring children and youth with physical disabilities from a wheelchair to floor, floor to wheelchair, wheelchair to toilet/chair, and toilet/chair to wheelchair.

7) Under the supervision of a school nurse or public health nurse, demonstrate an ability to administer medications required by a child or youth.

8) Under the supervision of a physical or occupational therapist, demonstrate the ability to use adaptive equipment required by children and youth with physical and sensory disabilities.

9) Under the direction of a school or public health nurse, perform specialized health procedures, e.g., gastronomy feedings, nebulization treatments, or other procedures.

**TRAINING TIME REQUIRED**

The time required to teach the various components included in this module will depend on the identified training needs of the paraeducators. For example, all participants should participate in the sessions on the district's emergency procedures, reducing infectious diseases, assisting a person having a seizure, identifying and reporting suspected child abuse, and good body mechanics.

If paraeducators are assigned to work in educational settings/classrooms where children and youth who are medically fragile or who have physical disabilities and other health related needs are enrolled, they should receive training specific to the needs of the individuals they work with. This may include techniques for positioning, transferring and carrying, administering medications, and using other specialized health care needs and feeding procedures.

The American Red Cross First Aid and CPR Courses require 8 hours each. Therefore, the total time to teach the entire series of classes will require approximately 24 hours.

**EQUIPMENT AND MATERIALS REQUIRED**

- Copies of your district's emergency procedures.
- Copies of your district's policies and procedures for reducing infections and communicable diseases.
- Copies of your district's policies for detecting and reporting child abuse and neglect.
BEFORE AND DURING THE TRAINING

To accomplish the objectives of this module, the training coordinator will need to:

- Identify the general and specific training needs of the participants to determine what content areas will be required. You will also need to identify licensed/credentialed personnel representing different disciplines with expertise in the various procedures and policies.

- Contact the administrator(s) in your school district with responsibility for overseeing the health, safety and well being of students and staff. Ask a representative to attend a training session to review district policies and procedures connected with emergencies.

- Invite a social worker from your district or a representative of the local protection and advocacy or human services agency to speak to the class about signs paraeducators should be aware of that might indicate child abuse or neglect and the procedures/chain of command to follow when reporting suspected abuse.

- Invite a nurse to speak to the class: 1) to describe and demonstrate universal health precautions and you district's policies and procedures for controlling infections and communicable diseases (if the paraeducators are working in programs for infants and young children or other classes where toilet training is an instructional objective, the trainer should stress procedures to use when changing diapers or assisting a student with personal hygiene); and 2) demonstrate procedures paraeducators should use to assist children and youth having seizures.

- If a paraeducator is assigned to work with an individual child or in a program serving several children and youth who require medication(s) and/or specialized health care and/or feeding procedures, s/he must be trained by a school nurse or public health nurse. In addition to learning to perform the procedure(s), the paraeducator must also be prepared to keep required records and documentation required by the district or agency.

- Invite a physical therapist to speak to the class and train paraeducators 1) to use good body mechanics when lifting and carrying children and youth with physical disabilities or moving heavy objects; 2) to use proper techniques for positioning and transferring children and youth with sensory, orthopedic and multiple disabilities; and 3) to use various adaptive equipment and maneuver wheelchairs.

- Contact the American Red Cross or other locally recognized providers of CPR and First Aid Training. Make arrangements for the paraeducators to receive the training. Because local chapters of the American Red Cross have different policies, you will need to determine if there is a fee. If there is, you need to arrange for payment. (If a paraeducator has a valid certificate in CPR or First Aid, they should be excused from the training.)
BIBLIOGRAPHY AND RESOURCES

The materials and resources contained in this bibliography 1) include information about video and written materials that will support the efforts of the trainer or coordinator of paraeducator preparation, and, 2) addresses for advocacy organizations that can provide in depth information about the needs of children and youth with disabilities, medical and health care needs.
