ABSTRACT

This Kids Count report examines statewide and county trends in the well-being of Colorado's children. The statistical portrait is based on 24 indicators of well-being: (1) children receiving AFDC (Aid to Families with Dependent children); (2) children receiving TANF; (3) children qualifying for free lunch; (4) children in out-of-home placements; (5) births to single women; (6) mothers receiving early prenatal care; (7) low birth weight births; (8) children ages 0-3 with disabilities; (9) children with asthma; (10) children eligible for Child Health Plan Plus (CHP+); (11) CHP+ enrollment; (12) deaths of infants under age 1; (13) deaths of children under age 18; (14) confirmed incidents of abuse/neglect; (15) abuse/neglect referrals; (16) abuse/neglect referrals investigated; (17) child care facility closures; (18) new applications for child care facilities; (19) Child Care Pilot Communities; (20) teen birth rate; (21) three-risk-factor births; (22) teen suicide rate, 5-year average; (23) juvenile crime arrest rate; and (24) committed youth. County-level trends for data are indicated where appropriate, based on 1991, 1994, and 1998 data. The report's findings indicate that significant progress was made toward six Decade of the Child goals: infant mortality rate, immunizations, early prenatal care, deaths from child abuse, teen birth rate, paternity establishment, and teen suicide rate. Numerous strategies are presented to "put data into action." The report also contains a special section on education, which presents information on Colorado's 176 school districts, including student achievement, school enrollment, and ethnicity of students. DEAR FRIENDS OF THE CHILDREN'S CAMPAIGN:

In 1990, twenty-five organizations worked with the Children's Campaign to create a ten-year work plan for improving the health and well being of Colorado's high-risk children and youth. To guide our work, we set twelve goals against which Colorado's progress could be measured. Those goals are listed on page 3 of this report. After ten years of collaborative effort by a large community of service providers, advocates, policy makers and philanthropists, we are pleased to report that significant statewide progress has been made toward six of the twelve goals:

- **infant mortality rate** improved 24%
- **immunizations** improved 35%
- **early prenatal care** improved 6%
- **deaths from child abuse** improved 10%
- **teen birth rate** improved 11%
- **paternity establishment** improved 645%
- **teen suicide rate** improved 13%

As the Children's Campaign prepares for another decade of work to improve the health and well being of children and youth, we are paying attention to the primary lesson we have learned: children's issues are inter-related. Home life, health, safety, and education are intimately related in the lives of children and youth.

Brad Butler, the former Chairman of Procter and Gamble, asked an essential question about children in need: what should be a community's response when parents can't – or won't – provide the basics for a good start in life? His answer, and our answer, is that all children deserve an opportunity to be nurtured, to receive basic health care, and to be educated. The data in *KidsCount* is intended to help Colorado assess the needs of children, track progress in creating solutions to their most pressing problems, and identify opportunities for supporting their growth into being educated, healthy, engaged members of our communities.

I continue to be amazed by the broad-based consensus across our state about the core values we hold for children. The objective information and analysis in *KidsCount* has been one tool in creating that consensus and will, I hope, aid in planning for the future. *KidsCount* helps us see where we've been, document where we are now, and shape a community's response when children need a little extra help getting started in life.

Sincerely,

Barbara O'Brien
PRESIDENT

Forward

Efforts of the Colorado Children's Campaign are aimed toward improving the lives of children. Currently, over one million children live in Colorado. We believe that each child deserves all the elements of a nurturing and safe environment in which to grow up healthy, well-educated, and with hope for the future. Since 1985, the Colorado Children's Campaign has worked to mobilize individuals and organizations to think and act on behalf of children. Information contained in *KidsCount in Colorado!* is used to support policy and program efforts throughout the state. By providing clear, concise, and accurate information, this report presents a snapshot of the status of child well-being in Colorado and its 63 counties.

The *2000 KidsCount in Colorado!* report contains state and county-level demographic, economic, health, education, and safety data. To offer a more comprehensive look at how children and youth are faring across the state, county indicators have

been added in the areas of health insurance, children with disabilities, child care, and youth incarceration. Featured in this report is a special section on education, which presents information on Colorado's 176 school districts including student achievement, school enrollment, and ethnicity of students.

As the devolution of government continues to give states and localities greater fiscal control and oversight of children and family-related programs, local data has become increasingly important. In order to focus resources effectively for vulnerable children, we must recognize who they are, where they live, what puts them at risk, and what helps to prevent and combat problems they face. Thus, the *KidsCount* report lends itself well to assessing the status of children at the state and local levels. We encourage you to use *KidsCount in Colorado!* information to better the lives of children in your community.

Decade of the Child

Throughout the 1990s, sweeping changes affecting children and families took place including welfare reform policies, brain development research, a focus on early care and education, and violence prevention initiatives. As we enter a new decade, additional issues concerning child well-being have gained the

public's attention including children's health insurance, student achievement, and school violence.

In 1990, the Colorado Children's Campaign developed the Decade of the Child goals in the critical areas of child health, education and safety. The Children's Campaign has since worked toward and tracked the

progress of these goals. Endorsed by over 1,200 organizations and community leaders, the majority of these goals have shown improvement. Policy changes, increased public awareness and involvement, and technological improvements have all played important roles in improving the lives of Colorado's children.

DECADE OF THE CHILD GOALS				
INDICATOR	WHERE WE WERE (1990)	WHERE WE ARE (1998)	% CHANGE	OUR GOAL (2000)
Infant Mortality Rate	8.8 per 1,000	6.7 per 1,000	-23.9%	7 per 1,000
Low Birth Weight Births	8.0%	8.7%	+8.8%	5%
Children Fully Immunized	58% (1991)	78.2%	+34.8%	90%
Moms Receiving Early Prenatal Care	77.8%	82.2%	+5.7%	90%
Number of Children Dying From Child Abuse	31	28	-9.7%	12
Cases in Which Paternity Established for Births to Unmarried Women	8.6%	64.1%	+645.3%	70%
Teen Birth Rate	54.3 per 1,000	48.4 per 1,000	-10.9%	25 per 1,000
Teen Suicide Rate	9.7 per 100,000	8.4 per 1,000	-13.4%	3.5 per 100,000
High School Graduation Rate	80%	80.1%	+0.1%	90%

Data for the following will be available after the 2000 Census: Children Living in Poverty, Children with Health Insurance, Youth Unemployment Rate.

BEHIND EVERY NUMBER IS A CHILD'S LIFE...

The theme of this edition of KidsCount is "Put Data Into Action." When you see this symbol, read our suggestions and become personally involved in improving the lives of children throughout Colorado.

With a new decade upon us, there are unprecedented opportunities to improve the quality of life for children. We encourage public

officials, community leaders, and parents to use new research, communications, and data to act on behalf of children. Remember, **behind every number there is a child** with a story. Help make it a happy one...**Put Data Into Action!**

"Change only takes place through action. New ideas and vision will be useless in the coming millennium if they do not lead to change." Dalai Lama

Early Brain Development

Research on early brain development increased dramatically in the 1990s. As we learn more about how a baby's brain develops, it is imperative to put this information to use by continuing to raise public awareness, support outreach programs to parents and caregivers, and encourage ongoing research.

WHAT THE LATEST RESEARCH SUGGESTS... USE IT OR LOSE IT!

New technologies and recent research have discovered that the development of a baby's brain is greatest between birth and age three.

The environment children experience controls the way brain cells are connected and to a great extent, determines how the brain will function for life. Within these years, the foundation is being laid for future capacity for language, intelligence, thoughts, consciousness, habits, and responses to the environment.

Unlike any other organ, the brain is known to build itself. Completion of the brain's development is dependent on stimulation from the external environment. Synapses, the connections between brain cells, are made depending on the signals or stimuli the brain receives from the environment. With appropriate and consistent stimulation, synapses become stronger. In contrast, connections that

are rarely or never used will eventually be eliminated creating "black holes" within the brain. How the brain is organized and how it will function for life is largely determined by connections used repeatedly during these critical years.

At birth the human brain is at approximately 25% of its adult weight; by the age of 3 it is at 90%. Like no other phase in life, these early years present extraordinary opportunities for optimal emotional, social, neurological and physical development. For example, an eight-month-old baby will most likely have twice as many synapses as an adult. Trauma or lack of stimulation can interrupt this early brain development growth spurt, putting a child's development in jeopardy.

"Consistent, nurturing relationships with the same caregivers early in life are the cornerstones of emotional and intellectual competence."
Stanley Greenspan, M.D.

BEHIND EVERY NUMBER IS A CHILD'S LIFE...

By photocopying and distributing the "Prescription Pad" below you'll be helping parents and caregivers provide infants and toddlers with a variety of developmental opportunities.

"Consistent, nurturing relationships with the same caregivers early in life are the cornerstones of emotional and intellectual competence."

Stanley Greenspan, M.D.

THE BRAIN DEVELOPMENT TOP 10 LIST A Prescription for a Healthy, Happy Child

1. Tune in to signals, sounds, movements and expressions.
2. Talk and read to your children often, speak foreign languages.
3. Get involved with your child care, be a partner with your child's teacher.
4. Set consistent limits; it makes children feel secure.
5. Develop self-worth by praising small successes.
6. Hug often and regularly, it makes them feel safe and calm.
7. Sing and play a variety of music; it can help future math abilities.
8. Make sure they have regular check-ups and immunizations.
9. Explore and learn through play; make learning an adventure.
10. Loving interaction is important from the moment of birth.

Follow the above instructions daily!

Families in Need

Despite Colorado's booming economy of the 1990s, some families continue to struggle to find affordable housing, child care, and health care. This section provides quick facts to help understand why cycles of poverty can be difficult to break.

Though Colorado is flourishing economically, 11% of Colorado's children experience poverty daily. Children born to economically disadvantaged mothers and fathers are at an increased risk of being malnourished, lacking health care, experiencing juvenile delinquency, dropping out of school, abusing substances and becoming teen parents.

Source: CO Department of Public Health & Environment

FAMILY STRUCTURE

The majority of families in poverty are among households headed by single mothers. Since 1992, births to single mothers have increased in Colorado. According to the Census Bureau's Current Population Survey (1996-1998), 58% of working poor families in Colorado were headed by single females compared to 5% headed by single males.

**TYPE OF WORKING POOR FAMILY
WITH CHILDREN UNDER 18
COLORADO 1995-1997**

Source: Center on Budget and Policy Priorities
The Poverty Despite Work Handbook

DEMOGRAPHICS

Ethnicity and the location of a child's residence both play a role in the vulnerability of children. According to the Annie E. Casey Foundation, nearly 30% of all black children and 25% of all Hispanic children are in high-risk situations compared to 6% of all white children. This means black children are almost 5 times as likely and Hispanic children are 4 times as likely as white children to be growing up in families with high-risk profiles.

Nationally, 20% of kids living in central cities are at high risk compared to 8% of those living in suburbs and 14% of those living outside metropolitan areas.

In Colorado, 75% of working poor families with children lived in metropolitan areas between 1995 and 1997.

1997 NATIONAL % DISTRIBUTION OF POOR CHILDREN BY EDUCATIONAL ATTAINMENT OF MORE-EDUCATED PARENT

Source: National Center for Children in Poverty
Young Children in Poverty, June 1999

EDUCATION

Poverty rates have been consistently associated with an individual's level of educational attainment. Children whose parents lack a high school degree are more likely to be poor. Because a high percentage of poor children have parents with limited education, it is critical for parents to have the opportunity to enter education and training programs and to learn to support the education process for their children.

1997 NATIONAL POVERTY RATES OF CHILDREN UNDER AGE SIX BY EDUCATIONAL LEVEL OF MORE EDUCATED PARENT

Source: National Center for Children in Poverty
Young Children in Poverty, June 1999

Though Colorado is flourishing economically, 11% of Colorado's children experience poverty daily. Children born to economically disadvantaged mothers and fathers are at an increased risk of being malnourished, lacking health care, experiencing juvenile delinquency, dropping out of school, abusing substances and becoming teen parents.

HOUSING

There is a significant need for affordable housing throughout Colorado. As a result of Colorado's strong economy, housing prices have increased much faster than wages throughout the state:

- Rent increased 61% from 1992-1995, while renters' incomes increased only 13%. As a result, over 88,000 families spend more than 50% of their income on rent.
- In Denver, the average price of a single-family home in February 1999 was \$200,000. Statewide, the average price of a single-family home was \$148,950.
- A Housing and Urban Development study found that while average wages in the Front Range of Colorado grew by 47% from 1989 to 1999, the average rent for an apartment unit grew 75%, and the average price of a single-family home grew 79%.

The Colorado Division of Housing created a "mismatch matrix" to determine the number of rental units that are available and affordable for certain income levels. For instance, for families earning 0-30% of median income (\$0-\$11,170), there are 46.4 affordable rental units per 100 renter households.

Children born to poor mothers and fathers are at an increased risk of being malnourished, lacking health care, experiencing juvenile delinquency, dropping out of school, abusing substances and becoming teen parents.

Child Health

It is estimated that one percent of deaths of children result from a lack of medical care. As we enter a new decade in a time of unparalleled prosperity for the United States and Colorado, many children are still without health insurance. We know that children born to parents without health insurance are more likely to be sick when born, less likely to receive immunizations, less likely to be treated when injured, and less likely to see a doctor when ill.

A greater commitment to provide adequate resources for children's health is needed.

Expanding and funding the Child Health Plan Plus (CHP+) has been a top policy priority for the Colorado Children's Campaign since 1993. The Child Health Plan Plus (CHP+) provides health insurance for children under 18 in families with incomes at or below 185% of the federal poverty level. Modeled after basic commercial programs, children enrolled in CHP+ receive necessary health care services such as check-ups and immunizations, prescriptions, hospital services, glasses and hearing aids, mental health care and medical office visits. Currently, dental care is not covered with CHP+. Colorado is the only state that does not have a dental plan for CHP+ kids.

WHO'S ELIGIBLE FOR CHP+	
FAMILY SIZE	MAXIMUM ANNUAL INCOME
2	\$20,461
3	\$25,687
4	\$30,895
5	\$36,112
6	\$41,329
7	\$46,546
8	\$51,763

Most families enrolled in CHP+ pay monthly premium payments and co-payments for each doctor visit. These payments are based upon family size and income.

PREMIUMS & CO-PAYMENTS:
Family of 4 earning \$16,701-\$25,050 pays \$15/month and \$2/visit
Family of 4 earning \$28,931-\$30,895 pays \$30/month and \$5/visit

WHAT CAN HAPPEN TO KIDS WHO LACK HEALTH INSURANCE? THEY ...

- Get illnesses that could have been prevented with immunizations;
- Go without early well child check-ups;
- Develop serious illnesses due to untreated minor infections or injuries;
- Resort to costly emergency room care;
- Do poorly in school because of ear infections leading to hearing loss and vision problems that go uncorrected.

Programs dedicated to providing prenatal care for mothers and nurse home visits have already been shown to be cost effective. Continued support and expansion of programs like these ensure that children throughout Colorado are having their medical needs met today so they can thrive and become productive citizens tomorrow.

Put Data
Into
Action!

HELP KIDS IN YOUR COMMUNITY GET GOOD HEALTH CARE...

Whether you want to do a little or a lot, the CHP+ program has great ways for you to get involved and see that more children have health insurance.

- ✧ *Spread the word. Talk to PTAs, churches, businesses, and child care providers and distribute CHP+ materials. By calling CHP+ at 1-800-359-1991 you can request brochures, applications, counter-top displays, a 5 minute video, and posters. Some of these materials are also available in Spanish.*
- ✧ *Provide your local schools with the school enrollment kit - this includes a letter to the principal, flyers to distribute to students, posters, applications and more.*
- ✧ *Provide places like community centers and low-rent housing units with CHP+ applications, brochures and posters.*
- ✧ *Host a meeting or training session. Call CHP+ and request speakers or training personnel to speak to your group.*
- ✧ *Write a letter to the editor. CHP+ can provide you with fact sheets, a summary of benefits and more.*

In 1999, enrollment in CHP+ has more than doubled. As of December 1999, 22,577 kids in Colorado were receiving health care benefits through CHP+. An estimated 69,000 Colorado children are eligible for CHP+.

CHILDREN AND ASTHMA

The incidence of and mortality due to asthma have been increasing at alarmingly high rates. The number of children with asthma has more than doubled in the past 15 years. Nationally, in 1980, 2.3 million children had asthma. By 1995 the number had risen to 5.5 million. In Colorado, more than 67,000 children have asthma and of these, an estimated 4,400 cases are attributed to adult smoking in the household.

WHAT WE KNOW ABOUT ASTHMA...

- One third of the nation's 14.6 million asthmatics are children under 18.
- Nationally, child deaths due to asthma have nearly tripled over the last 15 years.
- Nationally, asthma is the leading cause for school absenteeism and accounts for 10 million lost school days annually. Parents' lost time from work to stay home with asthmatic children totals \$726 million annually.
- Asthma is the third-ranking cause of hospitalization among children under 15.
- In Colorado, asthmatic children use significantly more health services and incur 88% more in health care costs than the general population of children.
- Air pollution, old and run-down housing, and other environmental factors make asthma a growing health issue for low income children.

HELP ASTHMATIC KIDS IN YOUR COMMUNITY ...

Building public awareness and understanding about asthma increases the likelihood that more children will receive the proper care needed. Because many asthmatic children lack the support system necessary to manage their own condition, it is important that parents, teachers and neighbors understand the challenges these children face such as taking daily medications and reducing their exposure to elements that aggravate their conditions. Here's what you can do today to help asthmatic children in your community and prevent more children from developing asthma:

- ✧ *Support educational programs focused on asthma for health care providers and other community members, child care providers and school nurses.*
- ✧ *Are there asthma education programs in your community? Find out by calling the American Lung Association of Colorado at 1-800-LUNG-USA. They direct asthma education programs across Colorado and need statewide volunteers to help implement these programs. Even if your knowledge about asthma is limited, the American Lung Association of Colorado welcomes your support and trains volunteers!*
- ✧ *Promote public awareness about the symptoms, causes and management of asthma.*

Nationally, asthma is the leading cause for school absenteeism and accounts for 10 million lost school days annually. Parents' lost time from work to stay home with asthmatic children totals \$726 million annually.

Early Care & Education

With 62% of all mothers with children ages six and younger in the workforce, quality early care and education programs are critical to the development, health and safety of infants and children. Quality early childhood care and education (ECCE) for high-risk children provides them with a good start in life by preparing them for kindergarten and capitalizing on the developmental window of opportunity present during the first five years of life. Policy makers, civic leaders and foundations are beginning to recognize the value of quality ECCE programs.

Recent longitudinal studies have found that low-income children participating in quality ECCE programs demonstrate increased emotional and cognitive development and are more successful later in life. For example, they exhibit higher graduation rates, higher incomes, lower arrest rates, lower teenage pregnancy rates and are less likely to be welfare recipients as adults. Quality child care can also help to reduce the social, emotional and health problems faced by abused and neglected children.

Studies indicate that children from low-income families are read to

less by adults than kids from higher income families. A RAND study estimated that for every \$1 invested in high-quality ECCE, the public will save \$7 in costs like remedial education, welfare and incarceration.

In Colorado, during the 1997 legislative session, child care quality was addressed with the creation of the Consolidated Child Care Pilots, a concept created by the Colorado Children's Campaign. Established to help local communities address full-day, full-year child care needs for families moving off welfare, twelve pilot communities have maximized their resources and designed consolidated ECCE programs aimed at serving children in low-income families.

The 1997 pilot sites were: Arapahoe, Denver, El Paso, Fremont, La Plata, Larimer, Logan, Morgan, Prowers, Routt and the Triad (Clear Creek, Jefferson and Gilpin). In 1999, six Pilots were added in the following counties: Alamosa, Conejos, Boulder, Grand Junction, Norwood, and the 5-county resort area of Summit, Lake, Pitkin, Eagle and Garfield. In an effort to improve services to children and families, each pilot community must consolidate funding streams and services, develop councils, and increase

public-private partnerships. Through the pilot program more than 7,800 high-risk young children in Colorado will be served, considerably more than the 2,000 originally anticipated.

STUDENT ASSESSMENT

Colorado is well above the national average for student performance on assessment tests. However, the state has high expectations for the public school system, and particularly for the improvement of low-performing schools. According to results from the Colorado Statewide Assessment Program (CSAP), some districts and schools are making commendable progress while many others remain stagnant. The following graphs illustrate the performance and progress of Colorado's students based on CSAP scores.

CHILDREN SCORING PROFICIENT OR BETTER ON 3RD GRADE READING ASSESSMENT BY ETHNICITY COLORADO CSAP 1999

Source: CO Department of Education, CSAP Results

CHILDREN SCORING PROFICIENT OR BETTER ON 4TH GRADE WRITING ASSESSMENT COLORADO CSAP 1997-1999

Source: CO Department of Education, CSAP Results

3RD GRADE READING SCORES COLORADO CSAP 1999

Source: CO Department of Education, CSAP Results

With 62% of all mothers with children ages six and younger in the workforce, quality early care and education programs are critical to the development, health and safety of infants and children.

Many experts suggest a clear correlation between quality teaching and student performance. The Rose Community Foundation funded a Colorado study by the National Conference of State Legislatures which found the following:

- Only 9% of reporting districts allocate time for professional development as part of each teacher's daily or weekly schedule.
- School district expenditures for the professional development of teachers range between .001% of the district budget to a high of 7%.
- Only 15% of reporting districts spend more than 1% of their budget on professional development.

Based on these studies and standardized test results, a greater emphasis from the state level to communities needs to be made on the education and professional development for teachers.

See pages 18-23 for statistics on Colorado's 176 school districts.

INVEST IN THE EARLY CARE AND EDUCATION FOR KIDS IN YOUR COMMUNITY!

- ✧ *When filling out your state tax form, make a \$10 donation to the Quality Child Care Check-Off. Spread the Word!*
- ✧ *Ask child care providers in your community what they need, for example books, clothes, cleaning supplies, volunteers — and follow through with donations.*
- ✧ *Support child care initiatives in the state legislature by calling or writing to legislators representing your district. Find out who your legislators are by visiting www.vote-smart.org.*
- ✧ *Donate school supplies, including school bags, backpacks, paper and writing supplies, year-round to local schools. Teachers, social workers, and administrators will get them to the right children.*
- ✧ *Volunteer at your local schools and for organizations that serve children and families in need.*
- ✧ *Tutor a child weekly at no charge.*

SCHOOL-BASED HEALTH CENTERS

School-Based Health Centers (SBHC) are important assets to communities. SBHCs provide high-quality, low-cost, health services to children and adolescents throughout Colorado. Located in school settings, SBHCs offer medical and mental health care, preventive dental care, disease prevention services and specialize in addressing high-risk behaviors.

During the 1998-99 school year, Colorado had 33 SBHCs, up from just 4 in 1988 and 13 in 1994. Located in 14 of Colorado's 176 school districts, SBHCs are in 15 high schools, 8 middle schools and junior highs, 8 elementary schools, one preschool, and one rural K-12 school. Most sites provide preventive and primary medical as well as mental health care for all children seeking services.

WHAT HAVE SBHC STUDIES FOUND?

Students spend less time away from school for health reasons. A recent study of three Colorado SBHCs concluded that the rate at which children complaining of a health problem were sent home decreased by 90% after a SBHC was implemented.

SBHC USERS:

- miss fewer school days,
- are more likely to stay in school and graduate,
- use less after-hours or emergency care,
- are less likely to engage in behaviors that place their health at risk,
- include males and other high-risk groups,
- participate in surveys and data collection that help improve health services for students.

To identify the school districts that have SBHCs, refer to pages 18-23.

SBHCs provide high-quality, low-cost, health services to children and adolescents throughout Colorado. Colorado had 33 SBHCs during the 1998-99 school year.

Child Safety

ABUSE & NEGLECT

Across the country more than three children die every day as a result of abuse or neglect. In 1998, 5,120 children throughout Colorado were confirmed to have been abused or neglected and 28 died as a result of abuse or neglect.

Public policy plays a role in reducing child abuse and neglect because it focuses attention and resources on both prevention and treatment and legal consequences. Currently, the major focus is on intervention once abuse or neglect has occurred. More community-based early intervention programs for children and parents are needed as well as high quality foster care for maltreated children.

CHILD MALTREATMENT IN COLORADO 1997

Source: Child Maltreatment 1997: Reports from the States to the National Abuse & Neglect Data System

INFANT MORTALITY

The Colorado Child Fatality Review Committee (CFRC) has been reviewing all child deaths in the state since 1989. Formed jointly by the Department of Public Health and Environment and the Department of Human Services, this task force of multi-disciplinary professionals tracks child deaths and evaluates system responses to children and families who are at high risk.

According to the CFRC, 57.3% of infants who died from 1990-1994 were male and 42.7% were female. The CFRC reports that three underlying causes of death account for 84% of all infant deaths. They are perinatal conditions such as low birth weight (36.4%), congenital anomalies including heart conditions and respiratory and nervous system problems (24%), and symptoms of Sudden Infant Death Syndrome (23%).

CONFIRMED INCIDENTS OF ABUSE AND NEGLECT COLORADO 1994-1998

Source: Division of Child Welfare Services
CO Department of Human Services

A national study found that the infant mortality rate for children born into poor families was more than 50% higher than for children born into families with incomes above the poverty line. According to the CFRC, infant mortality rates are higher for infants living in rural areas than for infants in metropolitan areas.

UNINTENTIONAL CHILD FATALITIES

The CFRC identifies preventable deaths, defined by the Committee as a death in which a reasonable intervention (medical, educational, legal, etc.) might have prevented the death. The CFRC determined that 25% of deaths of children under 17 from 1990-1994 were preventable. Another finding was that the older the child, the more preventable the incident. For example, only 6% of infant deaths were determined to be preventable while 78% of deaths of 15-16 year-olds were deemed preventable. Deaths among Hispanic children were more likely to be considered preventable (29.3%) than deaths among white children (25%). Deaths among black children were least likely to be considered preventable (22.8%).

MOTOR VEHICLE

Motor vehicle-related injuries are the leading cause of death among children ages 1-17. According to the Colorado Department of Public Health and Environment, motor-vehicle related injuries accounted for 65% of unintentional injury deaths for children ages 1-15 between 1994 and 1996. From 1995 to 1997 there were 297 child fatalities in Colorado that were the result of motor vehicle crashes.

KEEP KIDS SAFE...

There are plenty of actions we can each take to ensure the safety of children in Colorado:

- ✧ *Be a voice for a child in an abuse or neglect court proceeding by becoming a Court Appointed Special Advocate (CASA). To learn more about becoming a Colorado CASA volunteer call 303-623-5380.*
- ✧ *Become a full-time foster parent or emergency foster parent, or adopt a child. There is a shortage of nurturing homes for maltreated children in Colorado.*

Of the children killed in motor vehicle-related incidents in Colorado (1995-1997), only 17% were secured in safety restraints.

Youth at Risk

TEEN PREGNANCY

Teenage childbearing often diminishes opportunities for both the mother and the child. Teenage mothers have a low probability of receiving the emotional and financial resources needed to become independent and productive adults. Programs that offer child care to mothers and allow them to finish school are in high demand. Offering young moms and dads parent education and other life skills training will help prevent future problems including abuse and neglect of their children, and often deter them from having more children as teenagers.

Children born to single mothers are more likely to drop out of school, give birth out-of-wedlock, and to be dependent on public assistance. As a result, children of single moms must overcome high odds to thrive.

Research has repeatedly identified conditions associated with teen pregnancy. Teens most likely to have a child:

- are from economically disadvantaged families and communities,
- don't do well in school and have low educational aspirations,
- have substance abuse and behavioral problems.

Teen birth rates have been decreasing nationally since 1991. Colorado has been mirroring this trend as the birth rate for Colorado teens, ages 15-17, dropped 17 percent between 1992 and 1998.

We encourage communities to continue tailoring programs to prevent teen pregnancies and to support young families.

Source: CO Department of Public Health & Environment

TEENAGE DROPOUTS

While many students stay in school, graduate on time, and receive a good education, far too many drop out. Teens who drop out of high school dramatically increase their chances of living in poverty. They are

three times more likely to be poor than high school graduates. As the workforce continues to advance technologically, more and more jobs will require advanced skills and technical knowledge, making it even more difficult for high school dropouts to find meaningful jobs and be financially successful.

We know that youth involved in high-risk behaviors, including substance abuse, are more likely to drop out of school. Substance abuse among teens is a problem nationally. The number of Colorado teens in treatment for substance abuse has increased nearly every year since 1990.

YOUTH VIOLENCE

In Colorado, we renewed our focus on youth crime prevention following the "1993 summer of violence" when multiple, mostly urban, violent crimes were committed by youth. A number of programs were instituted and legislation was passed directed at reducing youth crime. The Colorado Children's Campaign was instrumental in creating the Youth Crime Prevention Intervention Fund in 1994. Last year's Columbine High School tragedy shattered many of our preconceptions about juvenile crime. Now we must learn from it and do our best to assure that it never happens again.

Children born to single mothers are more likely to drop out of school, give birth out of wedlock, and to be dependent on public assistance. As a result, their children must overcome high odds to thrive.

YOUTH AGES 12-18
IN TREATMENT FOR SUBSTANCE ABUSE
COLORADO 1990-1999

Source: Alcohol and Drug Abuse Division,
Colorado Department of Human Services

Findings from a study by the Center for the Study and Prevention of Violence (CSPV) at the University of Colorado, Boulder indicate:

- While the total number of murders committed in the U.S. is flat or has decreased over the past 20 years, murders by adolescents using handguns increased by 150% between 1985 and 1993.
- Overwhelmingly, males ages 15-18 are the perpetrators in murders involving young people, with handguns being the most common weapon used.
- For Colorado males 15-18, the number of handgun killings rose nearly fourfold in a five-year period from 1988-1993.

Youth violence across the U.S.:

- Children face a one in a million chance of being killed at school per year.
- More than 8 children die from gunfire every day.

HOMICIDES COMMITTED BY MALES 15-18 BY TYPE OF WEAPON COLORADO 1980-1996

Source: Supplementary Homicide Reports Center for the Study & Prevention of Violence

FIREARM DEATHS BY AGE GROUP COLORADO 1993-1997 (includes suicide, homicide, and legal interventions)

Source: CO Department of Public Health & Environment Health Statistics and Vital Records Section

- 3,024 children die from gunfire every year.
- There are 3.8 murdered juveniles per 100,000 juveniles — about 40 times the in-school death rate.
- 6,093 students were expelled during the 1996-97 school year for bringing firearms or explosives to school.

Fortunately, there is some evidence of what is effective in preventing youth violence. The CSPV along with other researchers have identified characteristics of programs and services that are effective in preventing youth violence including early child-

COUNT OF SCHOOL SHOOTING DEATHS IN THE U.S.

1992-93	55 deaths
1993-94	51 deaths
1994-95	20 deaths
1995-96	35 deaths
1996-97	25 deaths
1997-98	40 deaths

hood development, graduation incentives, and youth and parent training.

In 1994, the Colorado Youth Crime Prevention and Intervention

Fund (YCPI) was created to increase community programs aimed at reducing violent youth crime.

1999-2000 YCPI GRANTEES BY CATEGORY		
Academic/Education	58	\$2,703,600
Community Service	16	\$576,895
Counseling	6	\$140,000
Creative Arts	6	\$141,578

Dropout Prevention	5	\$218,050
Employment	3	\$130,000
Gang Intervention	4	\$120,000
Mentoring	29	\$984,054
Parenting & Abuse Prevention	22	\$1,184,776
Recreation	6	\$114,040
Information & Referral	0	\$0
Training	7	\$360,986
Other	27	\$1,287,269
Total All Programs	192	\$8,057,321

Researchers have identified the following characteristics of programs to be effective in preventing youth violence: early childhood development, graduation incentives, and youth and parent training.

SHOW YOUTH IN YOUR COMMUNITY YOU CARE...

- ✧ *Donate items to organizations that serve teen parents.*
- ✧ *Support responsible fatherhood initiatives and programs.*
- ✧ *Support and volunteer at local after-school programs for youth.*
- ✧ *Tutor a student living in your community – contact your local school to get involved.*
- ✧ *Be available to kids in your neighborhood. Talk to them, learn about their interests, share your wisdom with them.*

School District Indicator Definitions

Number of pupils fall 1998 (number)

Pupils in membership as of the October One Day Count.

1998 Pre K-12 public school students (number)

1998 Charter school students (number)

1998 K-12 home school students (number)

1998 K-12 independent school students (number)

Number of public school, Charter school, independent schools, and home school students provided by the Colorado Department of Education.

Students with access to school-based health centers (percent)

Percent of students in each district with access to school-based health centers provided by the Colorado Department of Public Health and Environment.

High school graduation rate (percent)

"The 1998 graduation rate is a four-year rate based on students reported by school districts who began 9th grade in the 1994-95 school year. The membership base used to calculate a high school's graduation rate includes students who transfer into the Class of 1998, and excludes students who transfer out of the Class of 1998. In addition, high schools can adjust their membership base for a student reported as a dropout during a previous school year if the high school has documentation that the student returned or transferred to another education program." *1997-98 Colorado Graduation Rates for Class of 1998, March 1999*. The 1998 graduation rate provided by the Colorado Department of Education.

High school dropout rate (percent)

"The dropout rate is an annual rate reflecting the percentage of all students enrolled in grades 7-12 who leave school during the reporting period and are not known to transfer to other public or private schools. In accordance with a 1993 legislative mandate, beginning with the 1993-94 school year, the dropout rate calculation excludes expelled students." – *1997-98 Annual Dropout Rates for Grades 7-12, March 1999*. The 1997-98 public school dropout rate provided by the Colorado Department of Education.

Suspension rate (percent) and Expulsion rate (percent)

The 1997-98 public school suspension and expulsion rates provided by the Colorado Department of Education. A student suspended more than once is counted for each occurrence in the suspension rate.

4th grade students proficient in Reading on CSAP (percent)

4th grade students proficient in Writing on CSAP (percent)

Percent of students rating proficient or better on CSAP reading and writing tests provided by the Colorado Department of Education. A student proficient in reading demonstrates comprehension of a variety of reading selections by using multiple strategies. A student proficient in writing demonstrates a variety of skills including logic, age-appropriate vocabulary, spelling and simple sentence patterns.

Student: teacher ratio

The number of students in membership per the October One Day Count divided by the full time equivalency of teaching assignments serving these students. Colorado Department of Education data compiled by the National Conference of State Legislatures in *Teaching in Colorado: An Inventory of Policies and Practices, February 2000*. The mean student to teacher ratio is 14.4:1. The median student to teacher ratio is 14.7:1. The range of student to teacher ratios is 5.1:1 – 21.1:1.

Teachers with at least a Master's degree (percent)

Percent of teachers achieving a Master's degree or higher as of Fall 1997. Colorado Department of Education data compiled by the National Conference of State Legislatures in *Teaching in Colorado: An Inventory of Policies and Practices, February 2000*. The mean % of teachers with at least a Master's degree is 31.6%. The median % of teachers with at least a Master's degree is 31.1%. The range of teachers with at least a Master's degree is 0 – 72.7%.

n/r indicates that a school district did not report information.

County Indicator Definitions

Children receiving AFDC (rate per 1,000)

Number of children receiving Aid to Families with Dependent Children provided by the Colorado Department of Human Services. Population estimates prepared by the Demography Section, Colorado Department of Local Affairs. The rate is the monthly average number of children receiving AFDC per 1,000 children. Calculations by the Colorado Children's Campaign. Final year of data is for January - June 1997. AFDC ended June 1997.

Children receiving TANF (rate per 1,000)

Number of children receiving Temporary Assistance to Needy Families provided by the Colorado Department of Human Services. Population estimates prepared by the Demography Section, Colorado Department of Local Affairs. The rate is the monthly average number of children receiving TANF per 1,000 children. Calculations by the Colorado Children's Campaign. First year of data is for July-December 1997. TANF began July 1997.

Children qualifying for free lunch (percent)

Percent of children in public school who qualify for free school lunches provided by the Colorado Department of Education. Public school children qualify for free lunches if their family income is less than 130% of the official poverty level. Comparable 1991 data not available due to significant change in reporting practices.

Children in out-of-home placements (rate per 1,000)

Out-of-home placements include family foster care, specialized group homes, residential childcare facilities, independent living situations, foster care with relatives, residential treatment centers, detention, legal risk adoptions, medical care, and both emergency and non-emergency placements in receiving or shelters. Rate of emergency and non-emergency out-of-home placements by the Department of Human Services per 1,000 children provided by the Child Welfare Services Division, Colorado Department of Human Services.

Births to single moms (percent)

Births to single moms per 100 live births provided by the Health Statistics Section, Colorado Department of Public Health & Environment.

Moms receiving early prenatal care (percent)

Births for which prenatal care was initiated in the first trimester of pregnancy per 100 live births with known start of prenatal care provided by the Health Statistics Section, Colorado Department of Public Health & Environment.

Low birth weight births (percent)

Babies born weighing 5.5 pounds or less (less than 2.5 kilograms) per 100 live births provided by the Health Statistics Section, Colorado Department of Public Health & Environment.

Children 0-3 with disabilities (number)

Number of children birth-3 with developmental disabilities provided by the Early Childhood Initiatives, Colorado Department of Education. Includes children with significant developmental delays or medical conditions associated with significant developmental delays.

Children with asthma (number)

The prevalence estimate for the number of children 0-17 with asthma provided by the American Lung Association in American Lung Association Lung Disease Data Book 1999.

Children eligible for CHP+ (number)

Estimated number of children eligible for the Child Health Plan Plus as of December 31, 1999 provided by the Colorado Child Health Plan Plus.

CHP+ Enrollment (number)

Number of children enrolled in the Child Health Plan Plus provided by the Colorado Child Health Plan Plus. This number reflects children documented by CHP+ as of January 6, 2000 for December 1999 and is subject to increase.

Deaths of infants under age 1 (rate per 1,000)

Deaths during the first year of life per 1,000 live births provided by the Health Statistics Section, Colorado Department of Public Health & Environment.

Deaths of children under age 18 (rate per 100,000)

Deaths per 100,000 children under 18 provided by the Health Statistics Section, Colorado Department of Public Health & Environment, includes deaths from natural causes (such as illness or congenital defects) and injury (including motor vehicle deaths, homicides and suicides).

Confirmed incidents of abuse/neglect (number)

Number of confirmed incidents of child abuse or neglect provided by the Central Registry of Child Protection, Division of Child Welfare Services, Colorado Department of Human Services. An incident may involve more than one child, and includes physical abuse, neglect, medical neglect, sexual abuse and psychological or emotional abuse or neglect.

Abuse/neglect referrals (number)

Number of child abuse and neglect referrals provided by the Central Registry of Child Protection, Division of Child Welfare Services, Colorado Department of Human Services.

Abuse/neglect referrals investigated (percent)

Percent of child abuse and neglect referrals which were investigated provided by the Central Registry of Child Protection, Division of Child Welfare Services, Colorado Department of Human Services.

Child care facility closures (number)

Number of closures of child care facilities provided by the Division of Child Care, Colorado Department of Human Services.

New applications for child care facilities (number)

Number of facilities that have applied for child care facility openings for fiscal year 1998-1999 provided by the Division of Child Care, Colorado Department of Human Services. At the printing of this report the applications were pending approval.

Child Care Pilot Community

Consolidated Child Care Pilot sites established by the Colorado State Legislature in 1997. See page 14 for more detailed information.

Teen birth rate (per 1,000)

Live births to girls, ages 15-17, per 1,000 female teens of that age provided by the Health Statistics Section, Colorado Department of Public Health & Environment.

Three risk factor births (percent)

Births that are to single mothers under 25 years of age with less than a high school education per 100 live births provided by the Health Statistics Section, Colorado Department of Public Health & Environment.

Teen suicide rate 5-year average (rate per 100,000)

Average annual suicides per 100,000 children ages 10-17 provided by the Health Statistics Section, Colorado Department of Public Health & Environment.

Juvenile crime arrest rate (per 1,000) Juvenile violent crime arrest rate (per 100,000)

Numbers of juvenile arrests provided by the Colorado Bureau of Investigation, Crime Information Center in Crime in Colorado, the Annual Report of the Department of Public Safety. Population estimates provided by the Demography section, Colorado Department of Local Affairs. Calculations by the Colorado Children's Campaign. The arrest rate is the number of all juvenile arrests (ages 5-17) per 1,000 youth ages 10-17. The violent crime arrest rate is the number of arrests of juveniles ages 5-17 for violent crimes (homicide, forcible rape, aggravated assault, and robbery) per 10,000 youth ages 10-17. All agencies may not have reported 12 months of juvenile arrest data; the rates are subject to change. The annual figures include all arrests of youth during the year reported by law enforcement agencies. An individual is counted once for each time s/he is arrested. If the arrest is for multiple offenses, the arrest is counted only for the most serious offense. Statewide rates include arrests made by the Colorado State Patrol, but county rates do not. Note that 11 cities in Colorado are located in two or more counties but their arrest figures are attributed to one county. (Arvada/ Jefferson, Aurora/Adams, Basalt/Eagle, Bow Mar/Arapahoe, Brighton/Adams, Broomfield/Boulder, Center/Saguache, Erie/Weld, Green Mountain Falls/ El Paso, Littleton/ Arapahoe, and Westminster/Adams.)

Committed youth (number)

The number of youth on average per day in residential programs for committed youth provided by the Division of Youth Corrections, Colorado Department of Human Services. Total for the state also includes youth from other states and countries in programs in Colorado.

The Colorado Children's Campaign relies on data from federal, state and local agencies. These agencies are the final authority relating to the quality of any data.

Population estimates provided by the Demography Section, Department of Local Affairs, Colorado Division of Local Government. Number of live births provided by the Health Statistics Section, Colorado Department of Public Health & Environment.

**CHP+ refers to Child Health Plan Plus

Because AFDC ended in June 1997, the AFDC rate reported in the 1998 column is the rate for 1997.

Because TANF began in July 1997, the TANF rate reported in the 1994 column is the rate for 1997.

Teen suicide rate - average 1992-1996 and 1994-1998.

The percent change represents the difference between the rates for 1991 and 1998 but does not reflect rates for the intervening years.

Because AFDC ended in June 1997, the AFDC rate reported in the 1998 column is the rate for 1997.

Because TANF began in July 1997, the TANF rate reported in the 1994 column is the rate for 1997.

Teen suicide rate - average 1992-1996 and 1994-1998.

The percent change represents the difference between the rates for 1991 and 1998 but does not reflect rates for the intervening years.

** CHP+ refers to Child Health Plan Plus

Because AFDC ended in June 1997, the AFDC rate reported in the 1998 column is the rate for 1997.

Because TANF began in July 1997, the TANF rate reported in the 1994 column is the rate for 1997.

Teen suicide rate - average 1992-1996 and 1994-1998.

The percent change represents the difference between the rates for 1991 and 1998 but does not reflect rates for the intervening years.

** CHP+ refers to Child Health Plan Plus

Because AFDC ended in June 1997, the AFDC rate reported in the 1998 column is the rate for 1997.

Because TANF began in July 1997, the TANF rate reported in the 1994 column is the rate for 1997.

Teen suicide rate - average 1992-1996 and 1994-1998.

The percent change represents the difference between the rates for 1991 and 1998 but does not reflect rates for the intervening years.

Washington County

MISSION STATEMENT

Since 1985, the Colorado Children's Campaign has worked to mobilize individuals and organizations to think and act on behalf of children, with particular attention to the health, education and safety of those most at risk.

KIDSCOUNT IN COLORADO!

KidsCount in Colorado! is the Campaign's annual report on the status of children. It documents the health, education, safety,

and economic trends in each of Colorado's 63 counties. This report helps local groups and public policy makers identify new issues, evaluate the effectiveness of programs, and set priorities for the coming years. *KidsCount in Colorado!* is the most widely quoted and used report about children in Colorado.

KIDS' CAUCUS

Kids' Caucus

Public policy decisions shape

the world our children will inherit.

In 1996, the Colorado Children's Campaign created the Kids' Caucus to coordinate major initiatives that would improve the health, education, and safety of children. Our goals are to be above politics and to focus state resources on early prevention of the problems in the lives of children and their families. The Kids' Caucus has created tax breaks for parents, expanded The Child Health Plan, created a tax check off fund for quality child care, streamlined child care, and funded the Youth Crime Prevention and Intervention Fund with the support of 250 phone tree volunteers.

IT'S ABOUT KIDS

It's About Kids is a long-term statewide effort aimed at raising public awareness

about important children's issues such as health care, school readiness, education and prevention. Based upon the premise that we all want the best for our children, It's About Kids helps to educate parents, communities and elected officials about how we can all work to improve the lives of Colorado's children.
