Chinese; Classroom Techniques; Cognitive Development; *Cognitive Style; German; High School Students; High Schools; Japanese; *Learning Strategies; Learning Theories; Questionnaires; Russian; Second Language Instruction; *Second Language Learning; *Self Efficacy; Self Esteem; Spanish; *Student Attitudes; *Teaching Methods; Thinking Skills

This study investigated the relationship of language learning strategies use and self-efficacy of high school students learning Chinese, German, Russian, Japanese, and Spanish. Through two questionnaires, The Language Learning Strategies Questionnaire and The Self-Efficacy Questionnaire, researchers were able to collect and analyze data on students' reported use of strategies and self-confidence to address the research question: "Do students who show greater use of language learning strategies perceived themselves to be more effective language learners?" Results revealed that students who reported greater strategy use also perceive themselves as more confident learners. This information provides incentive for teachers to promote strategies use in the classroom as a way of increasing students' self-confidence. Specific conclusions and recommendations include the following: (1) learning strategies should be explicitly taught in a methodical, progressive fashion; (2) strategy use should be considered part of the assessment process; (3) teachers should consider using a framework that incorporates learning strategies into lesson design and instruction; (4) the issue of motivation should be addressed from the first day of class; (5) students themselves should be involved in the process of assessing their work. 3 tables and 5 references are included.

(Author/KFT)
High School Foreign Language Students' Perceptions of Language Learning Strategies Use and Self-Efficacy

Introduction

This study investigated the relationship of language learning strategies use and self-efficacy of high school Chinese, German, Japanese, Russian and Spanish foreign language students. Through two questionnaires, The Language Learning Strategies Questionnaire and The Self-Efficacy Questionnaire, researchers were able to collect and analyze data on students' reported use of strategies and self-confidence to address the research question: "Do students who show greater use of language learning strategies perceive themselves to be more effective language learners?" Results revealed that students who reported greater strategy use also perceived themselves as more confident learners. This information provides incentive for teachers to teach and promote strategies use in the classroom as a way of increasing students' self-confidence as learners who may then be more ready to take on challenging learning tasks.

Learning Strategies and Motivation: Theoretical Background

Motivation plays an important role in all types of learning, including language learning. Highly motivated students work hard, persevere in the face of difficulties, and find satisfaction in the successful accomplishment of a learning task. Strategies have been linked to motivation and particularly to a sense of self-efficacy leading to expectations of successful learning (Zimmerman & Pons, 1986). The development of an individual's self-efficacy, or level of confidence in successfully completing a task is closely associated with effective use of learning strategies (Zimmerman, 1990).
Self-efficacy is at the root of self-esteem, motivation, and self-regulation (Bandura, 1992). Self-efficacious learners feel confident about solving a problem because they have developed an approach to problem solving that has worked in the past. They attribute their success mainly to their own efforts and strategies, believe that their own abilities will improve as they learn more, and recognize that errors are a part of learning. Students with low self-efficacy, on the other hand, believe themselves to have inherent low ability, choose less demanding tasks on which they will make few errors, and do not try hard because they believe that any effort will reveal their own lack of ability (Bandura, 1992).

Having access to appropriate strategies should lead students to higher expectations of learning success, a crucial component of motivation. An important aspect in viewing oneself as a successful learner is self-control over strategy use. This type of self-control can be enhanced if strategy instruction is combined with metacognitive awareness of the relationship between strategy use and learning outcomes. Students with greater metacognitive awareness understand the similarity between a new learning task and previous tasks, know the strategies required for successful problem solving or learning, and anticipate that employing these strategies will lead to success (Paris & Winograd, 1990).

**Procedures**

**Identifying Subjects.** Subjects for the study were drawn from beginning level high school foreign language programs in the Washington DC/Virginia metropolitan area. Participation was voluntary by both teachers and students. Only students from whom parent permission was obtained were included in the results of the analysis. Table 1 shows the number of students for each language participating in the study.

Instruments. Questionnaires were developed to elicit students' perceptions of their strategies use and sense of self-confidence. Table 2 summarizes the instruments developed and administered.

Learning Strategy Questionnaire (LSQ)

The Learning Strategy Questionnaire was used to collect data on the types of strategies students report using and the frequency with which they use them. The format of the questionnaire was modeled on measures previously developed by the researchers to identify students' use of learning
strategies reflecting strategies use for each of the four modalities: reading, listening, writing, and speaking as well as learning vocabulary. Questionnaires were identical across languages and administered by the classroom teacher with a maximum time of 25 minutes for completion. A set of focal strategies was determined based on student interviews and teacher input with the most frequently mentioned and taught strategies included. Learning strategies were selected to represent the process of planning, monitoring, problem-solving and evaluating for each modality. Students responded to the questionnaire by marking whether they used a strategy often, occasionally, rarely, or never. Student responses were given numeric values and entered into the computer spreadsheet program Quattro Pro and analyzed using SPSS. Entries were verified by a second researcher for the statistical analysis. (See Appendix A for a copy of the Learning Strategies Questionnaire.)

Self-Efficacy Questionnaire (SEQ)

The SEQ asks students to indicate on a Likert-type scale their level of self confidence in performing language learning tasks in the four modalities (reading, listening, speaking, writing) as well as in learning and remembering vocabulary. For each item students were asked to indicate how sure they were that they could do the task. A sample item for reading is: “Circle the number on the line below that shows how sure you are that could read a text in language and figure out the main topic or gist.” Response choices were on a scale from 0 to 100 with 0 meaning not sure and 100 meaning completely sure. This instrument is modeled on a similar questionnaire developed by the researchers in the previous study. (See Appendix B for a copy of the Self-Efficacy Questionnaire.)

Questionnaires were identical across languages and administered by the classroom teacher with a maximum time of 25 minutes for completion. A set of focal tasks was determined so that they
ranged from general (e.g., main idea) to more specific (e.g., details). The last item under a modality asked students how sure they were they could do the task in a real life situation. Student responses were given numeric values and entered into a computer spreadsheet program. Entries were verified by a second person for the statistical analysis.

Results. Analysis of the questionnaires revealed that across the languages studied a positive correlation exists between strategies use and self-efficacy. Students who reported a greater frequency of strategies use also perceived themselves as more confident in their language learning abilities. The data was then analyzed for each language. This analysis showed that the LSQ/SEQ correlations were positive for each language with the exception of Spanish level 1. Table 3 reports the coefficients for correlations.

Discussion/Implications.

The study has the following implications for the use of learning strategies in the foreign language classroom. First and most obviously, learning strategies should be explicitly taught in a methodical, progressive fashion. Some students will enter the classroom using appropriate learning strategies, but many will not; strategy use should not be left to chance any more than any other type
of basic knowledge. Even those students who know how and when to apply learning strategies can benefit from thinking about strategies use and learning new strategies. Learning strategies should be integrated into the curriculum, not taught in the abstract. Teachers should explicitly teach strategies and explicitly link them to specific language learning tasks. Teaching strategies explicitly requires that the teacher name, define, model each strategy and explain why and when it is effective. Explicit strategy teaching also requires that the teacher prompts students to think about, talk about, and use appropriate strategies while learning.

Secondly, strategy use should be considered part of the assessment process. Students themselves should be assessed and assess themselves on their use of strategies. The purpose of this is to explicitly link difficulties and successes in foreign language learning to strategies use. Students should not be penalized for using a “wrong strategy,” but they must be aware that their use of strategies greatly impacts their language learning.

Third, teachers should consider using a framework which incorporates learning strategies such as previewing, recalling past knowledge, predicting, reviewing, scaffolding, and establishing relevance as a structure for lesson design and instruction.

Fourth, the issue of motivation should be addressed from the first day of class; it is unreasonable to expect that all students in foreign language classrooms actually want to be there, or really know why they are there. The instructor should consider an activity to let students express honestly (if necessary anonymously) why they are in the class and work from there trying to establish relevance and motivating reasons. Instruction, materials, and topics should all be viewed by the teacher not only from the standpoint of what students should know, but how to get them interested in, involved in, and responsible for learning. This might require considering different ways to “skin
the cat.” For example, if the teacher wants the students to learn about French culture, s/he might consider getting students involved in determining which aspect of French culture they would like to learn about and the most “fun” ways of doing so. All of this will require careful teacher guidance and support, but can result in far more satisfying lessons.

Finally, in assessing student work, the students themselves should be involved in the process, not simply given a letter grade with little or no feedback. While forcing students to grade themselves is of questionable validity, it is useful to let students report/reflect on how they feel about a piece of work, detailing why they feel the work was or wasn’t successful or reflective of effort or ability. This process of evaluation should also include reflection on what the student would do differently on the next similar project. Again, this form of evaluation requires careful teacher planning and guidance and student involvement in assessment from the beginning. However, the benefits of increased student responsibility, involvement, metacognition, and motivation are a manifold return on this investment, both for student and for teacher.

LEARNING STRATEGIES QUESTIONNAIRE FOR GERMAN

Name in English:

Last:

First:

Date: __________________________

Teacher's name: __________________________

Your level of study in German (Circle one) 1 2 3 4 5

Directions: As part of a research project on language learning, we would like you to complete this questionnaire about what you actually do when performing certain kinds of tasks in German.

The questionnaire describes different kinds of tasks you might encounter in your German class. Below each task are statements describing learning techniques, practices, tools, or strategies you might use to help you perform the task.

For each kind of task, read the description. Then read each statement describing possible approaches. Circle one of the options (Never, Rarely, Occasionally, Often) to show how often you use the approach described.

The list is not complete, so if you do anything else, please jot it down on the lines provided at the end of each section.

There are no right or wrong answers. There are only answers that tell what you actually do.
Reading German

Reading is a frequent activity you use for learning and using German. You may often read texts such as dialogues, stories, advertisements, and articles in German as part of classwork or on your own.

How often do you do each of the following to help you understand German reading material that is challenging?

R1. I decide in advance what my reading purpose is, and then I read with that goal in mind.

Never  Rarely  Occasionally  Often

R2. I decide in advance specific aspects of information to look for, and I focus on that information when I read.

Never  Rarely  Occasionally  Often

Never  Rarely  Occasionally  Often

R4. Before reading, I try to predict what the text will be about.

Never  Rarely  Occasionally  Often

R5. While I read, I periodically check whether the material is making sense to me.

Never  Rarely  Occasionally  Often

R6. While reading, I decide whether the information makes sense based on what I already know about the topic.

Never  Rarely  Occasionally  Often

R7. I imagine scenes or draw pictures of what I am reading.

Never  Rarely  Occasionally  Often

R8. I act out the situation described in the reading (for example, using real objects to illustrate and put into context what I am reading).

Never  Rarely  Occasionally  Often

R9. I encourage myself as I read by saying positive statements such as "You can do it."

Never  Rarely  Occasionally  Often

R10. I work with classmates to complete assignments or solve reading comprehension problems.

Never  Rarely  Occasionally  Often
problems.

Never    Rarely  Occasionally  Often

R11. I use the context, like familiar words, pictures, and the content, to help me guess the meanings of unfamiliar words I read.

Never    Rarely  Occasionally  Often

R12. I identify what I don't understand in the reading, and I ask a precise question to solve the problem.

Never    Rarely  Occasionally  Often

R13. I use reference materials (dictionary, textbook, computer program, etc.) to help solve reading comprehension problems.

Never    Rarely  Occasionally  Often

R14. After reading, I check to see if my predictions were correct.

Never    Rarely  Occasionally  Often

R15. I summarize (in my head or in writing) important information that I read.

Never    Rarely  Occasionally  Often

R16. I rate my comprehension by reflecting on how much I understood what I read.

Never    Rarely  Occasionally  Often

R17. After reading, I decide whether the strategies or techniques I used helped me understand, and I think of other strategies that could have helped.

Never    Rarely  Occasionally  Often

R18. I check whether I accomplished my goal for reading.

Never    Rarely  Occasionally  Often

Other approaches:
**Listening to German**

You may often listen to people speaking German—your teacher, classmates, and native speakers (in person, on videotapes, and on cassettes), and you want to make sure you understand them.

Date: ________________________________

Teacher's name: ________________________________

Your level of study in German (Circle one) 1  2  3  4  5

Directions: As part of a research project on language learning, we would like you to complete this questionnaire about what you actually do when you are studying German vocabulary.

The questionnaire lists statements describing learning techniques, tools, or strategies you might use to help you remember vocabulary.

Read each statement describing possible approaches, and circle one of the options (Never, Rarely, Occasionally, Often) to show how often you use the approach described.

This list is not complete, so if you do anything else to study and remember German vocabulary, please jot it down on the lines provided at the end.

There are no right or wrong answers. There are only answers that tell what you actually do.
Learning vocabulary in German

Learning new words is a major part of learning German. You have to learn vocabulary given to you by your teacher and in the textbook. You might also learn words that you want to know.

How often do you do each of the following to help you learn new words and phrases in German?

V1. As I think about a German word, I imagine or draw a picture of the object/idea the word represents.

Never Rarely Occasionally Often

V2. I think of something or someone in my life that the word reminds me of, and I remember that connection when I need to recall the word.

Never Rarely Occasionally Often

V3. I make a point of learning words that relate to my life.

Never Rarely Occasionally Often

V4. I group words that are similar or are related in some way.

Never Rarely Occasionally Often

V5. I hold or point to an object that the German word represents while thinking or saying the word.

Never Rarely Occasionally Often

V6. I think of an English word that looks or sounds like the German word, and I think about how the meanings are related.

Never Rarely Occasionally Often

V7. I look for structural rules (prefixes, suffixes, roots, etc.) that give clues to the word's meaning.

Never Rarely Occasionally Often

V8. I think of an English word that sounds like the German word, AND I get a picture in my mind to link the meanings of the English and German words. (Example: When studying "motorrad," you might think of the English words "motor" and "rod." To remember "motorrad" means "motorcycle," you might imagine a rod with a motor attached to it.)

Never Rarely Occasionally Often
V9. I review new words with a classmate.

Never Rarely Occasionally Often

V10. I test myself to see if I have learned the words.

Never Rarely Occasionally Often

APPENDIX B

RATING YOUR LANGUAGE LEARNING CAPABILITY FOR CHINESE

Name in English:
Last: ☐ ☐ ☐ ☐ ☐ ☐ ☐ ☐ ☐ ☐ ☐ ☐ ☐
First: ☐ ☐ ☐ ☐ ☐ ☐ ☐ ☐ ☐ ☐ ☐ ☐ ☐

Date: ________________________________

Teacher's name: ________________________________

Your level of study in Chinese (Circle one) 1 2 3 4 5

How confident are you about learning and using Chinese? Reading, listening, and speaking are activities you do to learn and use Chinese. This questionnaire describes different kinds of tasks you might do in Chinese. For each kind of task, you are going to rate how sure you are that you could work on a language task like the one described and do what you are supposed to do in a reasonable amount of time.

The rating scale goes from 0 to 100. Marking a higher number means you are more sure that you could do the activity, while marking a lower number means you are less sure that you could do it. Please mark how you really feel about your capability to do a language task like the one described.

There are no right or wrong answers. There are only answers that tell how you actually feel.
Reading Chinese
Reading is a frequent activity you use for learning and using Chinese. You may often read texts such as dialogues, stories, and advertisements in Chinese as part of classwork or on your own.

Learning Vocabulary

Learning new words is a major part of learning Chinese. You may have to learn vocabulary given to you by your teacher. You might also learn words that you want to know.

Circle the number on the line below that shows how sure you are that you could have a list of Chinese vocabulary words like you have in class and...

V1. ...learn what each word means.

0-----10-----20-----30-----40-----50-----60-----70-----80-----90-----100
