This paper examines the increased emphasis placed on multicultural diversity in the School Psychology Program at Indiana State University. Two assumptions were made about the prominent role diversity is assuming at the university. First, the program is one of several subsystems that is emphasizing diversity in the university community. Thus, this assumption is one of timing and is identified as subsystem concurrence. The second assumption is that change agents must assert themselves to initiate an increased emphasis on diversity, and this responsibility rests with faculty, staff, and students in the program. Neither subsystem concurrence nor the presence of change agents has been a sufficient condition alone to promote meaningful programmatic change. Rather, both have been necessary conditions to enhance diversity in the program. The faculty and staff were surveyed for their opinions on program improvements. Suggestions include: (1) remind program organizers that building a program requires dialogue; (2) attempt to practice diversity and inclusiveness in every venue of the university community; and (3) valuing diversity and modeling inclusiveness must originate with the faculty, staff, and students working together as change agents. School Psychology, Multiculturalism, and Graduate Training: A Student/Faculty Dialogue,

Ena Vazquez-Nuttall, Ed.D., Chair, at the annual meeting of the

The author extends sincere appreciation to faculty colleagues in the Department of Educational and School Psychology (EDPS) for their commitment to multicultural diversity and modeling of inclusive professional behavior. The following individuals deserve special thanks for their shared insight on this paper: Drs. Linda Sperry, Heather Pleasants, and Christy Coleman, all of whom are EDPS faculty members; Ms. Sue Davis, School Psychology Program Assistant; and Ms. Natasha Smith, Doctoral Student and SASP President.
Faculty Perspectives on Building a Diverse, Inclusive School Psychology Program

Abstract

This paper examines the increased emphasis that multicultural diversity has assumed in the School Psychology Program at Indiana State University. Two important assumptions form the premise for the prominent role diversity is assuming. First, the Program is one of several subsystems that is emphasizing diversity in the University community. This emphasis is demonstrated, in part, by the provision of resources to support initiatives throughout the various subsystems. Thus, the first key assumption is one of timing and is identified as subsystem concurrence. The second key assumption is that change agents must assert themselves to initiate an increased emphasis on diversity, and this responsibility rests with faculty, staff, and students in the program. Neither subsystem concurrence nor the presence of change agents has been a sufficient condition alone to promote meaningful programmatic change. Rather, both have been necessary, though insufficient, conditions to enhance diversity in the Program. In addition to discussing these issues, the paper provides faculty perspectives on current programmatic strengths and weaknesses related to diversity, and it provides recommendations from faculty for programs desiring to enhance their diversity and inclusiveness.
Faculty Perspectives on Building a Diverse, Inclusive School Psychology Program

Over the past two years, the School Psychology Program at Indiana State University has worked extensively on program revisions. A significant part of these revisions has included the emergence of multicultural diversity as a major programmatic theme. Obvious curricular revisions are occurring in the program. These include infusing content on multiculturalism across multiple places in the curriculum, adding a specific course on cultural diversity, and offering students greater exposure to diverse populations via field assignments. Clearly, these are positive developments. However, programs optimally focusing on cultural diversity are those based in learning communities which strive to be diverse and inclusive.

The premise for successful programmatic changes pertaining to diversity in the School Psychology Program rests on the combination of two key elements. First, the Program is part of several subsystems that, concurrently, are uniquely emphasizing diversity. Second, the primary reason this Program is elevating the importance of diversity is due to faculty, staff, and student initiative. Both of these elements—subsystem concurrence and faculty/staff/student initiative—are necessary, though insufficient conditions for promoting promising change; thus, by themselves, they are limited. Together, however, they are a powerful combination that has the ability to create meaningful and enduring change in sustaining a diverse and inclusive School Psychology Program. Each of these is discussed in more detail.

Subsystem Concurrence on Diversity Initiatives

The School Psychology Program is itself a dynamic system. Similar to other professional programs, the Program has a reputable faculty, an espoused philosophy, a defined curriculum, an outstanding group of students, and multiple accreditations (APA, NASP, and the
State of Indiana). This system, however, does not function in isolation, and it is more clearly understood relative to other systems within the University community. The Program is based in the Department of Educational and School Psychology. Three of 11 full-time faculty are trained as school psychologists. These 3 faculty, along with 5 other department faculty (with interests related to school psychology) and 2 student representatives, form the School Psychology Committee, which is responsible for the governance of the Program. Thus, the Program has broad representation within the department. The department, though, is based in yet another subsystem, the School of Education, which constitutes one of the largest subsystems within the University system.

Diversity initiatives are currently underway at each of these systemic levels—program, department, school, and university. Because they are supported by resources (i.e., personnel, fiscal allocations, faculty/administrative endorsement, planned activities), the initiatives possess legitimate potential to influence various subsystems. The relationship of these subsystems and resources are depicted in Figure 1. Additionally, brief descriptions of resources for each subsystem are listed in Table 1. See Smith (2000) for a detailed discussion of these resources.

Borrowing from Bronfenbrenner’s (1979) ecological theory, the Program as a subsystem can be viewed relative to other subsystems, each of which is nested within a larger one. Faculty and students will have the most direct interaction with one another in the Program subsystem, and over time, Program resources (see Table 1) will have the most influence on faculty and students and their work on promoting diversity. However, faculty and student interactions are inevitably influenced by forces in a concentric subsystem, namely, the department. A typical example is that some students engage in research with an educational psychology faculty member whose research agenda focuses on an aspect of multicultural diversity. Consequently, students acquire knowledge and skills that intertwine positively with
their preparation as school psychologists, although they are not working with a school psychology trainer. This pattern of influence is repeated in other concentric subsystems in which faculty and students reside (see Figure 1). Although the potential for multiple sources of influence on promoting diversity exists, the subsystems and their rich resources will not produce meaningful change without the investment of change agents.

Faculty, Staff, and Students as Change Agents

In preparation for this presentation, the author developed a brief survey (see Smith, 2000) and solicited input from faculty and staff in the Department of Educational and School Psychology. Why has diversity emerged as a major theme in revisions to the Program? Responses from faculty and staff identified several reasons including society’s heightened awareness of diversity, the lack of applicability of human service models based predominantly on Caucasian, middle class populations, the unique needs of children from diverse cultural backgrounds, and the presence of a significant number of faculty members with professional interest in diversity.

If diversity is a priority, what is the Program currently doing well? Diversity issues are being integrated into curricular areas that, heretofore, did not address such content or did so to a limited extent. In addition, the Program is placing practicum students more strategically in settings with diverse groups, and the Porter School Psychology Center, a university clinic, regularly staffs cases on clients/referrals with unique cultural characteristics. In terms of inclusiveness, students participate actively in the Program. They have representation on the School Psychology Committee, and they make excellent suggestions at Program retreats. Yet another strength is that the majority of faculty have diversity as a part of their research agenda, and several students are planning dissertation research around topics on diversity. Finally, the faculty is diverse in terms of race and gender, and the presence of a diverse group of faculty
bespeaks the importance of diversity in general.

What does the Program need to do better? Although the Program has made gains in infusing diversity into the curriculum, more could be accomplished with the long-term goal of having diversity represented extensively in every programmatic experience (courses, practicum, internship, dissertation). The Program must identify explicit goals toward which students will work in acquiring knowledge and building understanding of diversity. Also, the Program must continue to accept a broad definition of diversity that moves beyond a traditional emphasis on race and ethnicity and promotes a more inclusive mind set. Lastly, the Program must be sure to have support systems for our graduate students who are from underrepresented groups. Their comfort level and success in our community are a litmus test for achieving a truly diverse, inclusive Program.

Finally, what might we share with other school psychology programs about building a program that values and emphasizes diversity and inclusiveness? Responses from faculty and staff were clear on three points. First, remind programs that this requires dialogue. Constructive dialogue takes time and requires patience and understanding. Second, endeavor to practice diversity and inclusiveness in every venue of the University community and beyond. Third, and most important, valuing diversity and modeling inclusiveness must originate with the faculty, staff, and students working together. Herein lies the second key element to our potential success in the Indiana State University School Psychology Program. The Program, department, school, and University subsystems have exceptional resources to offer in building a diverse, inclusive Program, but they are unable to produce such an outcome without the commitment of faculty, staff, and students to work together as change agents.

REPRODUCTION RELEASE
(Specific Document)

I. DOCUMENT IDENTIFICATION:

Title: Faculty Perspectives on Building a Dynamic Inclusive School Psychology Program

Author(s): MICHAEL W. BAHN, PH.D.

Corporate Source: Indiana State University

II. REPRODUCTION RELEASE:

In order to disseminate as widely as possible timely and significant materials of interest to the educational community, documents announced in the monthly abstract journal of the ERIC system, Resources in Education (RIE), are usually made available to users in microfiche, reproduced paper copy, and electronic media, and sold through the ERIC Document Reproduction Service (EDRS). Credit is given to the source of each document, and, if reproduction release is granted, one of the following notices is affixed to the document.

If permission is granted to reproduce and disseminate the identified document, please CHECK ONE of the following three options and sign at the bottom of the page.

The sample sticker shown below will be affixed to all Level 1 documents

PERMISSION TO REPRODUCE AND DISSEMINATE THIS MATERIAL HAS BEEN GRANTED BY

TO THE EDUCATIONAL RESOURCES INFORMATION CENTER (ERIC)

Level 1

Check here for Level 1 release, permitting reproduction and dissemination in microfiche or other ERIC archival media (e.g., electronic) and paper copy.

The sample sticker shown below will be affixed to all Level 2A documents

PERMISSION TO REPRODUCE AND DISSEMINATE THIS MATERIAL IN MICROFICHE, AND IN ELECTRONIC MEDIA FOR ERIC COLLECTION SUBSCRIBERS ONLY, HAS BEEN GRANTED BY

TO THE EDUCATIONAL RESOURCES INFORMATION CENTER (ERIC)

Level 2A

Check here for Level 2A release, permitting reproduction and dissemination in microfiche and in electronic media for ERIC archival collection subscribers only.

The sample sticker shown below will be affixed to all Level 2B documents

PERMISSION TO REPRODUCE AND DISSEMINATE THIS MATERIAL IN MICROFICHE ONLY HAS BEEN GRANTED BY

TO THE EDUCATIONAL RESOURCES INFORMATION CENTER (ERIC)

Level 2B

Check here for Level 2B release, permitting reproduction and dissemination in microfiche only.

Documents will be processed as indicated provided reproduction quality permits. If permission to reproduce is granted, but no box is checked, documents will be processed at Level 1.

I hereby grant to the Educational Resources Information Center (ERIC) nonexclusive permission to reproduce and disseminate this document as indicated above. Reproduction from the ERIC microfiche or electronic media by persons other than ERIC employees and its system contractors requires permission from the copyright holder. Exception is made for non-profit reproduction by libraries and other service agencies to satisfy information needs of educators in response to discrete inquiries.
