This study examines patron preference for abridged versus unabridged audiobooks, looking at patron usage over time and noting any changes in preference and why they occurred. A survey was conducted at the four branches of the Geauga County Public Library System (Geauga County, Ohio) with a random sample of adult patrons. Of the 274 surveys distributed to patrons who were checking out audiobooks during the designated two-week period, 225 (82%) were completed and returned. Findings indicated that the unabridged format was favored by over half of the participants, while the abridged format was favored by only 13%. In addition, over 75% of the patrons said that they would like to see more unabridged audiobooks in the library collection. Thirty-five percent favored more abridged selections. Of the 225 participants, 65% were female and 32% were male. The majority of respondents fell inside the age range of 36 to 54 years old. The genre that was most favored was mysteries, and the mystery genre was the most popular choice when patrons were asked what categories of audiobooks they would like to see more of in the library. Also popular were best sellers, biographies, history, and general/current fiction. There is some evidence that suggests that patrons who have been using audiobooks longer have a preference for the unabridged format, and that patrons who initially preferred abridged formats or who didn't have a preference, tended to change their preference to unabridged over time. Appendices include the survey, cover letter and responses from the 225 participants to the open-ended question "What categories of audiobooks would [you] like to see more of in the library?" (Contains 29 references.) (AEF)
AUDIOBOOK FORMAT: A PATRON'S CHOICE

CHAPTER 1
INTRODUCTION

In the last decade of the 20th century, audiobooks have become a common staple in almost all public libraries. The growth of the audiobook industry has spurred a great variety of genre including both fiction and non-fiction offerings. One of the ways in which patrons select audiobooks is by format. In 1990, Library Journal conducted a survey to indicate patron preference. It was noted, "that audio users are sharply divided, as a whole, in their preference for abridged vs. unabridged programs" (Annichiarico 1991, 37). The hectic lifestyles and longer commutes of many people play a role in their use of audiobooks for both pleasure and self-improvement.

Public libraries have limited audio/visual (AV) budgets. One decision that must be made is how to allocate funds for audiobooks. How much money should be earmarked for abridged formats and how much for unabridged formats? Patron preferences are an important component in these decisions.

This study will attempt to study patron preference for abridged vs. unabridged audiobooks. It will look at patron usage over time and note any changes in preference and why they occurred.

Purpose of the Study

The purpose of this study is to determine how audiobook format choice (abridged vs. unabridged) changes over time. A patron survey was conducted at Geauga County Public Library in Geauga County, Ohio. The study gathered data about patron use of audiobooks and preferences for a particular format. Although many factors may influence the patron preference (abridged vs. unabridged), it was predicted that long term...
(one year or longer), users of audiobooks would show a greater preference for the unabridged format. The results from this study were gathered from a random sample of adults who use the Geauga County Public Library system. Adults were defined as 18 years of age or older who currently have a library card. The questionnaire was self-administered and obviously limited to patrons who chose to participate.

Definition of Terms

Audiobook - defined as an electronically recorded book on audiocassette. It can either be of a fiction or a non-fiction nature using a reader/readers with the possible addition of sound effects and background music. A cassette player either in the car, home or portable would be used in the playback of an audiobook. No compact disc usage will be studied.

Unabridgement or unabridged - defined as the "complete" text of a book recorded on to audiotape for actual audiobook.

Abridgement or abridged - defined as the "edited" version or cut version of the text of a book recorded on to audiotape for actual audiobook.
CHAPTER 2

REVIEW OF THE LITERATURE

The literature review for this proposal was completed by searching various databases, professional periodicals and online catalogs. The key topics covered were audiobook usage and the abridged vs. unabridged format. Although format and usage have been discussed during the past 15 years, no studies have been found concerning patron preference changes involving the abridged vs. unabridged format.

In 1985, Library Journal conducted a mini-survey about library use of audiobooks. The survey found that users of audiobooks are commuters and vacationers, or people who "drive a lot". "Library collections of audiocassettes of books range widely over subject and genre. Most include both fiction and nonfiction, and most prefer readings of the entire, unabridged text." One librarian from the study commented that "patrons listen to recorded books either because they are physically unable to read, or because they don't have the time to read, or prefer to do something else while listening (garden, paint, etc.)" (Burns 1985, 38).

The late 1980's were a time of growth for this new medium. Format choices were often debated. In a 1989 Library Journal article, Kimberly Olson Fakih discusses the abridged vs. unabridged format. Fakih contends that the term "commuter" and the exploding usage of audiobooks began to come to the forefront of the profession. Usage of audiobooks was at an all time high. The preference seemed to be to have any materials on the shelf. Patrons wanted both the abridged and unabridged format. Fakih argues that commuters have found this medium and were taking out audiobooks at record numbers. As one librarian in the article noted, "Audiotapes soothe the jangled nerves and it sure
beats pulling out a gun!" Another librarian noted, "people are clamoring for the abridged, because the world is in a hurry." The storyline and number of listening hours are important. When a tape runs 20-25 hours, keeping track of plot can be a challenge. (Fakih 1989, 39)

Mark Annichiarico from Library Journal discussed abridged vs. unabridged in his 1991 article on spoken word audio. He noted the 1990 Library Journal survey, which included 372 participants. Three hundred and fourteen libraries responded to a questionnaire about patron preference and format. Annichiarico found that 37.6 percent claimed their patrons preferred unabridged audiobooks, while 32.2 percent reported a preference for abridged audiobooks. Packaging and pricing were factors in the library's decision to purchase either abridged or unabridged formats. Of the 314 respondents, 157 said that higher price was the biggest drawback to unabridged audiobooks. "They just don't generate circulation to justify the expense" (Annichiarico 1991, 38).

In 1992, Helen Aron obtained permission from Books-On-Tape, Inc., to conduct a random survey of approximately 1,000 subscribers. The survey results found that best selling fiction was the most popular genre, followed by the classics, mysteries, adventure, war and history, and biography. About half of the respondents borrowed audiobooks from their public library. Aron noted, "About 80% or the respondents usually listened to audiocassette books while they were driving a car" (Aron 1992, 209).
Preston Hoffman's 1991 *Library Journal* article mentioned demographics. He noted that:

> Audiobooks are often thought to be almost exclusively a habit of yuppies with a car tape player and long commutes, and it is true that this tends to be a thinking person's medium, but many of our audiobook patrons are truck drivers. To a great extent it seems that awareness of the availability of (especially) unabridged audiobooks, like many library services, is the key to a broad patron base (Hoffman 1991, 43).

By the early 1990's, audiobooks were a common item in American libraries. Tangorra notes that, although format issues were still discussed, it was believed that patrons should have the choice. Librarians still tended to lean toward the unabridged format. The biggest selection factor against this format was cost. *Publishers Weekly* noted that "patron preference for unabridged was at an all time high and selection justification was becoming more pronounced" (Tangorra, 1992, 66). A profile of the audiobook user suggested a person who is well educated and has disposable income. These people are readers but utilize audiobooks for their daily commute or while exercising. Seth Gershel, vice-president Simon & Schuster Audio noted, "that while in many segments of the book business experienced a downturn in sales, the audiobook business was up by about 14% over the previous year 1991" (Gershel 1992, 64).

Unabridged audiobooks continued to expand. Longer formats were gaining in popularity (Tangorra 1992, 66). As Annichiarico notes, "All the rhetoric aside, both abridged and unabridged audiobooks have a place in public libraries. The key for materials selectors is to determine a proper balance. Public libraries concerned with circulation figures would do well to survey their audio users on tastes and preferences regarding genres and whether they favor abridged or full-length audiobooks" (Annichiarico 1992, 44).
Sheldon Kaye, in a 1994 *Library Journal* article, notes that "a 1993 study by the Audio Publishers Association (APA) showed that the percentage of households that used or purchased spoken word audio during the previous year had grown to 17 percent - a figure that is double that of six years ago" (Kaye 1994, 34). As the audio industry continued to see such startling growth, the patron profile became very important. Public library audio/visual budgets continued to expand following the increase of circulation statistics and patron demand. Understanding audiobook user preference is the key to collection development and better service. According to Kaye, "The following arguments are among the most popular in favor of abridgement; low initial cost; patron demand; simultaneous release with hardcover publication; shorter length supports commuting time. Unabridged recordings have these advantages: patron demand; integrity of author's text; sturdier packaging; longer shelf life, which translates into lower cost per circulation" (Kaye 1994, 35). Another sure sign of growth was the announcement that Baker & Taylor (the biggest distributor of audiobooks to libraries) were increasing audiobook business 40-45% with retailers (Kopka 1994, 32).

In the January 1995 issue of *Wilson Library Bulletin*, Preston Hoffman noted, "I remain convinced the abridged book is a transitional form, destined to join the junk heap of publishing history like condensed texts, once very popular" (Hoffman 1995, 45). While this notion has been popular with many librarians preferring unabridgement, the findings suggest that both abridged and unabridged have a place on the library shelves.

As the demand for audiobooks increased more and more librarians were addressing the patron preference question. In 1996, the Allen County Public Library in Fort Wayne, Indiana noted that the format question was split about 50/50. "Each year the
same survey is distributed with little change in interest, but more customers ask for unabridged tapes. People new to audiobooks do not seem to know the difference, but once they become 'audiophiles', most opt for the unabridged". "The demand was for fiction, primarily suspense and mystery" (Jones 1996, 114).

Another consideration is the cost of audiobooks. As Veldhuis notes, "As library materials budgets continue to tighten, it is useful to know that the cost of audiobooks has actually declined during the past decade.... The 1995 edition of the Bowker Annual reported the average price of an audiocassette was $9.34 in 1980, compared to $8.82 in 1994" (Veldhuis 1996, 117).

In a 1996 article about abridged audiobooks, Mark Annichiarico noted the debate still rages over abridged vs. unabridged and what that means to selection criteria. Some libraries refuse to buy abridged audiobooks. "One of the problems with abridgements is that they're like fresh fruit: they have a very limited shelf life...some books lend themselves to abridgement. You're not going to lose the literary merits of Judith Krantz if you abridge her novels" (Annichiarico 1996, 33). Again the issue of patron preference is important. The use of individual patron surveys concerning this issue may prove to help librarians in selection policy.

In the May 1997 issue of Library Journal, it was noted that audiobooks had gained a shelf in the library and had become a very popular format. The debate over abridged vs. unabridged was cooling and librarians were responding to community tastes and preferences. "For many, that means they buy only one format or the other; for some they buy both" (Fialkoff 1997, 62).
The 1998 Library Journal/Cahners Research survey of 486 libraries, showed that AV budgets are growing and that the average growth is about 53%. When genre was examined the survey showed that, "The audiobook collections at libraries are about three-quarters fiction and one quarter nonfiction. Men often resist fiction, so they seek self-help and business books while they drive." Popular authors include John Grisham, Danielle Steel, Sue Grafton, Tom Clancy and Patricia Cornwell. When format was explored, the survey found that "Most libraries couldn't provide specific figures a sign that they are increasingly less devoted to one format. Patrons are divided, some want every word, while others want a book they can finish in one stretch" (Oder 1998, 30).

According to Rosenblum, in 1999 about 21% of American households listen to audiobooks. "From 1990 to 1998, the cumulative sales growth of audiobooks was 360%." The growth of companies offering unabridged audiobooks has certainly helped its positive position in terms of patron preference. The more audiobooks you have on the shelves, the more chance a patron can sample the product. Rosenblum argues that, "the continuing strength and growth in unabridged is remarkable, we're seeing an almost month-by-month increase in what we release in unabridged productions, and that is helping offset flatter areas of the business, such as the backlist." Abridged remains the most popular format. "The major publishers are now generally releasing 20% to 30% of their new titles in both abridged and unabridged formats" (Rosenblum 1999, 42).
CHAPTER 3

METHODOLOGY

A self-administered questionnaire was used to conduct the survey. The survey took place during a two-week period at the Geauga County Public Libraries in Geauga County, Ohio. A total of 400 surveys were distributed to the four library branches and each branch received 100 color-coded surveys. Surveys were color-coded to identify each participating library branch. Surveys were distributed by circulation clerks to adult patrons who were checking out audiobooks. A cover letter explaining the survey was attached to each (See Appendix B). A collection box for completed surveys was placed at each circulation desk and participating patrons were asked to place their completed surveys in the box. Only the researcher had access to the completed surveys. Signage and directions were identical for each library branch. Surveys were numbered after collection for accurate data count and to identify open-ended questions.

The survey consisted of 12 questions and was drafted by the researcher. It included questions on patron format preference, length of time as audiobook user, demographics and some open-ended questions. A comments/suggestions question was added, to allow patron personal comments concerning audiobooks at the Geauga County Public Libraries (See Appendix A).

The key research question in this survey is whether patron preference for abridged or unabridged audiobook format changes over time. Do audiobook users who have listened longer, prefer one format over the other? Another research question is which format is currently preferred by patrons, abridged or unabridged.
CHAPTER 4

ANALYSIS OF DATA

Four hundred surveys were distributed to the participating libraries. Of the 400 surveys, 274 (68%) were distributed to audiobook adult patrons who were checking out audiobooks during that two-week period. The number of returned completed surveys was 225, making that a return of 82%.

Demographics

Of the 225 total responses, 147 were female or 65%. The number of male respondents was 72 or 32%. (Table 1). The results from this study were similar to the results from a 1995 Audio Publishers Association, "with a 12% response rate it found that 69% of spoken-audio listeners are women" (Kopka 1995, 27).

</tbody>
</table>

The age group most heavily represented was from 46-55 (Table 2). This age group represented 29% of the total 225 participants. Another age group that had a larger participation ratio was the 56-65 category. Twenty-four percent were from this age group and 23% of the participants were from the 36-45 age group. Therefore, the majority of participants (76%) were 36-65 years of age. The smallest number of participants (5%) was from the 18-25 age group. Only 6% of the respondents were in the 26-35 age category.

#### Circulation

Respondents were asked to check off the number of audiobooks that they had taken out in the last 60 days (Table 3). The number of participants who took out more than 10 audiobooks was 95 or 42%. Twenty-one percent had only taken out 1-3 audiobooks in the past 60 days. This table suggests that almost half of the participants were heavy users during the last 60 days. Ninety-one participants (40%) were light users and only took out 1-6 audiobooks in the last 60 days.

#### Preferences for Genre

Participants were instructed to check up to three categories of fiction and non-fiction selections they prefer. The most popular category selected was mystery/suspense (Table 4). Sixty-eight percent of the total participants said that they preferred to listen to this category. The next popular category selected was best sellers, which was selected on 52% of the surveys. Biographies were also another popular category; forty-four percent
preferred this genre. The fourth most popular category was history at 43%, followed by general/current fiction, which was favored by 37%. One-fourth of the respondents selected general non-fiction and classics. Both action/adventure and romance were selected by 21% of the respondents. All of the remaining categories were selected by less than 20% of the participants.

Helen Aron's 1992 survey found that the most popular genre was best selling fiction followed by the classics, mysteries, adventure, war and history, and biography. The results of this survey are similar to Aron’s results with the exception of the classics genre. The classics were not as popular with the Geauga County Library participants.

Length of Audiobook Use

Users of more than 5 years made up 43% of the total number of participants (Table 5). Another 22% had been listening to audiobooks 3 to 5 years. Therefore, 65% of the surveyed participants had been listening to audiobooks for at least 3 years. Seventeen percent had listened to audiobooks for 1 year or less. Another 18% had listened for 1 to 2 years.

</tbody>
</table>

Format Preference

Participants were asked if they would like to see more abridged (edited version) or unabridged (complete version) audiobooks in the library collection (Table 6). Of the 225 total number of participants, 172 or 77% said they would like to see more unabridged audiobooks in the library. Seventy-eight or 35% would like to see more abridged audiobooks in the library. Over half of the 225 participants stated that they did not want to see more abridged audiobooks in the library. Only 12% said that they would not like to see more unabridged audiobooks in the library.

<table>
<thead>

</tbody>
</table>
Over half of the respondents or 54% currently favor the unabridged format; only 31% prefer the abridged format (Table 7). Another interesting finding shows that 32% of the participants do not have a format preference.

The results from this study are dramatically different from Annichiarico’s 1991 article discussing the 1990 Library Journal survey. That survey found that 37.6% of patrons preferred unabridged audiobooks while 32.2% preferred abridged. The Geauga County Public Library survey indicated a much higher preference for the unabridged format.

In 1996, the Allen County Public Library in Fort Wayne, Indiana found that the audiobook format question was split 50/50. Although the Geauga County survey showed a similar response for the unabridged format, the preference for the abridged format was lower.

<table>
<thead>
<tr>

</tr>
</tbody>
</table>

Participants were asked which format they preferred when they first started listening to audiobooks (Table 8). For their initial audiobook preference, 36% favored the unabridged format and only 17% favored the abridged format. Forty-three percent reported that they had no initial preference in audiobook format. A total of 8 participants or 4% did not respond to this question.

</tbody>
</table>

Table 9 compares initial format preference to current format preference. Ninety-seven participants initially had no format preference. While 57% of these users still have no preference, 33% now favor the unabridged format, and only 10% now favor the abridged format. Of the 38 participants who initially preferred the abridged format, 26% now like to listen to unabridged audiobooks. Another 21% now have no preference. None of the 82 respondents who initially favored unabridged changed their preference to abridged. Only 6% of the 82 respondents now have no preference. This seems to show that preference does change over time but only for those respondents who initially preferred the abridged format or who did not have a preference. In both cases, there was a tendency to shift to the unabridged format.

</tbody>
</table>

* Eight responses were blank for initial preference

Table 10 looks at the relationship between length of time as an audiobook user and the current audiobook format preference. For respondents who have been using audiobooks for less than 6 months, only 28% favored the unabridged format. The majority of this group, or 55%, had no preference. Seventeen percent of this group

15 21
favored the abridged format. This group had the lowest preference for the unabridged format. The groups who have been listening to audiobooks longer had a much stronger preference for unabridged audiobooks, ranging from 48% to 63%. These groups also had a smaller rate of no preference than the group that has been listening less than 6 months.

Table 10 does not show any evidence that preference for the unabridged format continues to increase after the first 6 months, but the period between 6 months to 1 year does seem to be critical. Sixty-three percent of those listening for 6 months to one year favored the unabridged format while only 28% of those listening less than 6 months preferred unabridged.

Preferred Genres  (Open-Ended Responses)

The Geauga County Public Library survey explored patron preferences regarding genres. Of the 225 total number of respondents, 184 (82%) responded. The top three categories of audiobooks that participants would like to see more of were mysteries, best sellers and romances. Forty-three percent or 79 participants said that they would like to see more mysteries in the library audiobook collection. Sixteen percent or 29 participants would like to see additional best sellers and 10% or 18 participants would like to see more romances. Other popular choices included the classics, self-help and science fiction.
About 9% of the respondents mentioned that they would like to see more of these in the library collection (See Appendix C.)

Helen Aron's 1992 survey conducted by Books-On-Tape, Inc., found that the most popular genre was best selling fiction, classics, mysteries, adventure, war and history and biography. In the 1996 Allen County Public Library in Fort Wayne, Indiana conducted an audiobook preference survey. The survey found that the most popular categories were fiction and suspense and mystery. Table 5 in this study notes that the top audiobook preferences were mystery/suspense, best seller, biography, history and current fiction. These data indicate that mysteries and best sellers are very popular and that the participants would like to see more of them in the collection. Also mentioned but not as popular were the classics, self-help and history.

Observations Concerning the Current GCPL Collection

Participants were asked to make any comments or suggestions that they may have on audiobooks at the Geauga County Public Library. Of the total 225 participants, 100 (44%) responded to this question. The responses were divided into three categories: compliments, complaints and comments/suggestions. Of the 100 responses, 31% had compliments for the library and its services. These ranged from "great job", "very pleased" to "exceptional selection". Fourteen percent had some complaints such as "the top shelf is too high for perusing titles" or "the theft strip got caught in my car tape player". Fifty-three percent had comments or suggestions and this area varied in responses such as "need more unabridged", "more non-fiction on people and events", and "we need a list showing titles available for abridged and unabridged" (See Appendix D.)
CHAPTER 5
SUMMARY AND CONCLUSIONS

A self-administered survey was conducted at the Geauga County Public Library in Geauga County, Ohio. The purpose of the survey was to determine patron audiobook format preference and to examine whether format preference changed over time. The unabridged format was favored by over half of the participants, while the abridged format was favored by only 13%. In addition, over 75% of the patrons said that they would like to see more unabridged audiobooks in the library collection. Only 35% favored more abridged selections. This would indicate that the library should consider adding more unabridged audiobooks to their collection.

Of the 225 participants, 65% were female and 32% were male. This may be because more women than men listen to audiobooks or that the male patrons are not as aware of the collection. Another explanation is that during the two-week period that the survey was conducted, more women than men utilized the library. The library should continue to serve the female audiobook users, while trying to increase the number of male users. This could be achieved by increasing awareness of the non-fiction collection, especially business and self-help titles. It has been found that male audiobook users tend to resist fiction and prefer these types of titles (Oder, 1998). The library could create fliers listing non-fiction audiobook collection and feature displays of these types of titles.

The majority of the survey respondents falls into the baby boom category (36-54) and has not hit retirement age. Therefore, it could be concluded that many are still working and using audiobooks during their commute to and from work. There was less representation of younger and older participants. Only 11% who participated were age
18-35. This age group may be listening to music on the radio or CD's in their cars instead of listening to audiobooks. They may not be familiar with the audiobook collection and this could be remedied by creating fliers and displays to advertise the collection. About 10% of the respondents were 65 years of age or older. This age group may no longer drive their own cars. Transportation may have been an issue. Senior citizens may not have been in the library during the survey and therefore, were unable to fill it out. This age group who may have eyesight difficulties could benefit from learning more about the audiobook collection. Again, this could be achieved by displaying items and making sure that staff that do homebound visits are knowledgeable with the collection. One patron suggested that the library create an audiobook flier that contained titles, genres and format information (abridged or unabridged). This would be helpful to all patrons, especially the homebound or elderly who may not be able to visit the library.

The genre that was most favored was mysteries. Also popular were best sellers, biographies, history and general/current fiction. However, 10 other categories were fairly popular and mentioned on at least 12% of the surveys. The mystery genre was also the most popular preference when patrons were asked what categories of audiobooks they would like to see more of the library. These results indicate that the library should purchase more mystery titles while maintaining a wide variety of other categories. The library could utilize displays, creative fliers and press releases to promote the collection and any new titles it may have recently purchased. An audiobook discussion club could be formed that would be similar to a book discussion group. This could possibly generate interest in the audiobook collection, introduce the participants to different genre and increase the circulation.
There is some evidence that suggests that patrons who have been using audiobooks longer have a preference for the unabridged format. Patrons who had been listening longer than 6 months, had a much higher preference for the unabridged format. This may be because after six months of use, patrons have more knowledge of the audiobook collection. Or it may be that they have tried the abridged format and have decided that they prefer the unabridged format. The preference for unabridged did not seem to increase over time after that point. Patrons who have been listening for 1 year had almost the same preference for the unabridged format as those patrons who had listened for more than 5 years. It may be that after six months to one year of use, patrons have become committed to their preference.

The shift in preference over time seemed to apply primarily to those who initially preferred abridged audiobooks. The patrons who initially preferred unabridged, did not change their preference. Patrons who initially preferred abridged or didn’t have a preference, tended to change their preference to unabridged. This data seems to suggest that once the audiobook user has found the unabridged format, they tend to stay with it.

The patrons at the Geauga County Public Library clearly enjoy listening to audiobooks. They continue to expect a varied selection of both abridged and unabridged titles. They would like to see the library expand the collection by including more mysteries and other genre. Overall, they are pleased with the service that the library offers.

AUDIobook USER PREFERENCES SURVEY

Please fill out this survey to the best of your knowledge. The purpose of this survey is to determine audiobook patron preference. The results will be used to aid in audiobook selection. A copy of survey results will be available upon request at all Geauga County Public Libraries.

PLEASE CHECK ONE ANSWER:

1. How long have you been an audiobook user?
   - ___ Less than 6 months
   - ___ 6 months-1 year
   - ___ 1 to 2 years
   - ___ 3 to 5 years
   - ___ More than 5 years

2. In the last 60 days how many audiobooks have you checked out?
   - ___ 1 - 3
   - ___ 4 - 6
   - ___ 7 - 10
   - ___ More than 10

PLEASE CHECK UP TO THREE CHOICES PER QUESTION:

3. What categories of fiction audiobook do you prefer to listen to?
   - ___ Best seller
   - ___ General/current fiction
   - ___ Mystery/suspense
   - ___ Romance
   - ___ Other:

   - ___ Old radio shows
   - ___ Poetry
   - ___ Inspirational
   - ___ Science fiction
   - ___ Comedy

4. What categories of non-fiction audiobook do you prefer to listen to?
   - ___ General non-fiction
   - ___ How-to
   - ___ Self help
   - ___ Other:

   - ___ History
   - ___ Biography
   - ___ Other: ____________________________

   - ___ Travel
   - ___ Foreign language

PLEASE CHECK ONE ANSWER:

5. What type of audiobook do you prefer to listen to?
   - ___ Unabridged (full-length version)
   - ___ Abridged (edited version)
   - ___ Don't prefer one over the other

PLEASE TURN THIS SHEET OVER
6. When you first started listening to audiobooks, which type did you prefer?
   _____ Unabridged (full-length version)
   _____ Abridged (edited version)
   _____ Didn’t have a preference

7. Would you like to see more abridged (edited version) audiobooks in the library collection?
   _____ Yes
   _____ No

8. Would you like to see more unabridged (full-length version) audiobooks in the library collection?
   _____ Yes
   _____ No

PLEASE FILL IN THE BLANK:

9. What categories of audiobooks would you like to see more of in the library? (For example, mysteries, romance, self-help)
   _______________________________________________________________________
   _______________________________________________________________________

10. Please make any comments or suggestions that you may have about audiobooks at the Geauga County Public Library.
    _______________________________________________________________________
    _______________________________________________________________________
    _______________________________________________________________________

PLEASE CHECK ONE ANSWER:

11. Age:
    _____ 18-25
    _____ 26-35
    _____ 36-45
    _____ 46-55
    _____ 56-65
    _____ 66+

12. Gender:
    _____ Male
    _____ Female

Please place your completed survey in the box at the circulation desk. Thank you for your time in completing this survey.
Re: Audiobook format: A Patron's Choice

September 1999

Dear Audiobook User:

I am a graduate student in the School of Library and Information Science at Kent State University. As a part of the requirement for my master's degree I am conducting a study on patron audiobook use and format preference. I am conducting a patron survey, using a self-administered questionnaire at the Geauga County Public Libraries. The data obtained from this study will help me to determine whether patron use of audiobooks and preferences for a particular format changes over time. The results from this survey would be helpful for selection purposes and patron service needs.

Confidentiality and anonymity are guaranteed. No names will be used in this survey and I will be the only one to have access to the survey data. There is no penalty of any kind should you choose not to participate in or withdraw from this study. While your cooperation is necessary to the success of this study, it is voluntary. A copy of the results of this study will be made available to you. Copies will be made available upon request to anyone who participates in this study.

If you have any questions, please contact me at (440) 285-0856 or Dr. Richard Rubin, my research advisor at Kent State University (330) 672-2782. This project has been approved by Kent State University. If you have questions about Kent State University's rules for research, please call Dr. M. Thomas Jones, telephone (330) 672-2851.

Thank you for your time and cooperation.

Kelly Connors
305 Hilltop Drive
Chardon, Ohio 44024

Sincerely,

Kelly Connors
Graduate Student
APPENDIX C
OPEN-ENDED QUESTION 9: RESPONSES

“What categories of audiobooks would like to see more of in the library? (For example, mysteries, romance, self-help)”.

1. Mysteries, historical novels
2. Well written full length (unabridged) mysteries such as Ruth Rendel (B. Vine) English – E. George Colin Dexter etc. or similar types.
3. Best sellers
4. Westerns
5. Science Fiction
6. Romance
7. [blank]
8. Sci-fic, self-help
9. Mysteries, suspense
10. sci-fic and mystery suspense – more unabridged titles
11. Best sellers, mysteries
12. mysteries, classics, thrillers
13. selection & variety seem good
14. Additional Mystery books on tape
15. Mysteries, adventure
16. mysteries, adventure
17. true crime – mysteries
18. New & old radio theatre
19. Historical Fiction, mysteries and sci-fi, short stories anthologies
20. Mysteries
21. Romance – self help
22. Christian
23. [blank]
24. mysteries
25. mysteries
26. mysteries
27. current bestsellers
28. never used before so don’t know
29. Good selection
30. [blank]
31. Mystery, Best Seller Fiction- Classics- Current Fiction
32. historical novels
33. mysteries – best sellers
34. [blank]
35. New Editions
36. I would like to see more adventure & mystery, less horror
37. Old Time Radio – Comedy
38. Current Fiction – All Stephen King tapes
39. Fine as is
I don’t care what kind as long as you get more. I like books by Peretti, Thoene, LaHaye Price – Christian Publishers. I stop listening when I hear obscene-type comments or lots of taking God’s name as a swear word. Not worth wasting my X.

APPENDIX D
OPEN-ENDED QUESTION 10: RESPONSES

"Please make any comments or suggestions that you may have about audiobooks at the Geauga County Public Library".

1. need more unabridged
2. Really glad to see how during the past years the supply of audiobooks for the public has increased. Get more! - One type I have found to be an absolute waste of money are the audiobooks based on movies, they are poorly written and basically a rip off.
3. [blank]
4. The theft strip got caught in my car tape player. It took tweezers etc. to get it out. Fortunately the player is OK.
5. That they enforce people rewinding the tapes before they are brought back.
6. [blank]
7. [blank]
8. I would like to see more self-help and sci-fiction.
10. [blank]
11. [blank]
12. Please add more books on CD
13. Please buy more
14. [blank]
15. exceptional selection
16. Have to really watch when the cassette tapes get worn from continuous listening they need to be changed - if people had trouble with their cassette tapes need to make librarians aware. I have been in middle of audiobook and the tape was so worn I couldn't listen to the rest of the story.
17. true crime, mysteries
18. [blank]
19. Larger selection would be good
20. [blank]
21. [blank]
22. [blank]
23. Best sellers - Young Adult - Children Awards - Classics
24. [blank]
25. [blank]
26. [blank]
27. [blank]
28. reference system to find them more easily.
29. Very Pleased
30. [blank]
31. Want more unabridged tapes!
32. The top shelf is much too high if one is perusing titles and authors. Not the largest selection. Often must borrow from stock in other county libraries.
We use audiobooks when we take long car trips. It helps keep us calm and occupied. Personally listen to tapes while I do chores. The stories make the time go faster.

Would like to see an increase in both Fiction and NF

My experience have all been positive w/Geauga County.

Would like more Agatha Christie mysteries - If there are anymore!

Keep rotating books

Good collection. Some older ones are not in good condition.

great selection - thanks

they are great - Wish more authors represented. Not trashy ones.

Complete works by an author are helpful. I like to continue on with series.

Books I don't always have patience to read - I can listen to. I'm an emp. at GW & need to keep up w/newer Bks.- I'll listen to romance & some other fiction!

Clean up the sex & the bad language. It is very disgusting

They have a very nice selection but have too many abridged. I always pass them up if I can.

I would like to see the collection growing

I find that the reader makes a great deal of difference. Sometimes it seems more important than the material.

More opera on tape!
I enjoy what you have

I really enjoy listening to the books on tape!

More Books on CD's

All OK

I would like to see more unabridged audiobooks

Not enough new mysteries. Don't always have them on tape

Not always the most recent books out are on audiotape

They're doing a great job expanding the audiobook section

excellent selection

I am so thankful for the variety and additions of new selections. Keep up the good work!

Good Selection - Enjoy Books on Tape on a daily basis.

Satisfactory

More top sellers e.g. Danielle Steel, Stephen King

I like a display of new arrivals (see W. Geauga Branch). Books on tape purchased in the last 2-3 months

Too many abridged books in collection - need more unabridged & more total number of books in collection

More non-fiction books and People and events

More would be nice

I love them & use them constantly & couldn't live without them - so any expansion of this section has my approval

A huge improvement from years ago!

There is not a very big selection at all
Your doing a good job! As it. Thank you

Okay

Very helpful - need to expand inventory

Would like more best sellers on cassette or CD

They have a good variety. They might have a flyer for purchasing some of the cassettes.

As an artist myself, I feel that abridging a book is like turning the Mona Lisa into a stick drawing.

It would be nice to have more than one copy of the item

None. They do a great job

More unabridged!

Do not have enough best sellers

If they don't do it yet, the library should rotate the audiobook inventory through the different branches (the way they currently do with videos)

The more the merrier

It would be wonderful if there were greater availability of books on CD through the library system. There would be less wear and tear problems with the recordings and the sound quality would be better. They also take less space on the shelves.
check tapes every so often - often find defective one. I think is a great thing. Great Selection! Need more Young Adult on Audiobooks. I have really enjoyed the selection since I started coming here two years ago but I'm running out of selections. Just keep supplying a wide array of audio books. Makes for good listening for very long drive time. More L. Block and History. The collection should be enlarged & rotated between branches! I think the selection at Bainbridge is the best & biggest of any county libraries both Geauga and Cuyahoga. We need a list showing the titles available & if abridged or non abridged. Need the audiobooks in a better access- two rows too close to floor. Difficult for a person with low vision to access. They have a wonderful selection & I use the audio books in preference to the book itself. Hard time sorting through on shelf. I use these when I travel by car - also check out books for my 87 year old mom - it's a great service. Good Job, folks! A great way to get to work & home where I control what I listen to, not whatever the DJ decides. More, more, more! Better education on how to browse. Love to see many more unabridged. I'm so pleased that we have such a nice collection. I wish that they could be inspected frequently to insure that they are in good condition before we check them out.
192 Please! Ensure the labels on the cassettes don't come loose - they can really mess up a cassette deck!
193 I am grateful to have access to audiobooks. It's more difficult now to find interesting new audiobooks. Please get more.
194 [blank]
195 [blank]
196 I like variety
197 [blank]
198 [blank]
199 [blank]
200 [blank]
201 Please get more tapes of any kind. Thanks!
202 [blank]
203 I love the way they rotate in the system and they have so many!
204 Unabridged
205 Good Selection
