The process of principal evaluation was studied in 17 elementary, unified, high school, and county school districts in California through various methodologies. The information analysis revealed that the three standard formats identified by L. Webb (1987) (free form, check list, and management by objectives) were used. In most cases, the evaluation systems included some aspects of each as part of the process. Most districts have clearly communicated criteria in the form of checklists and complemented them with some specific goals and objectives. The districts used a variety of criteria in different combinations, often accompanied by a specific set of program objectives but often lacking any professional improvement plan for the principal. Nine examples from these districts are included to give a range of the approaches used. Fifteen exhibits include the Association of California School Administrators Bill of Rights, the nine examples of evaluation systems, and supplemental information. (Contains 18 references.) (SLD)
DEVELOPING AN EVALUATION SYSTEM TO IMPROVE PRINCIPAL PERFORMANCE AND ACCOUNTABILITY

Dr. David O. Stine, Professor
California State University
San Bernardino

Presented at the Annual Meeting of the American Educational Research Association

April 10-14, 2001
Seattle, Washington

Having to discipline, reassign, demote, or terminate a site administrator is a difficult management task and one that has multiple effects on numerous constituent groups. When the individual administrator fails, the school is in trouble. There are often strong feelings both in support of the decision and contrary to it. The process of replacement then becomes a critical issue in the carousel of activities which begins again with the announcement, recruitment, screening, selection, assignment, and orientation for the replacement as a new cycle begins again. To avoid this disruptive sequence of events, an evaluation process needs to be in place which will promote the priorities and the district and will model collaborative school improvement.

Jones (1994) suggests that, "Two major purposes for personnel appraisal, are, first, to facilitate administrative decisions about personnel, and second, to guide personnel in performing their duties." p. 150. The superintendent needs a system in order to make the appropriate decisions of continued employment, promotion, re-assignment, or termination. These critical alternatives mandate a process that is clearly understood by both superintendent and principal. Secondly, the same system can be a diagnostic tool to identify strengths or areas for improvement in the employee. Jones elaborates by saying that the appraisal can determine how administrators use their time and balance their responsibilities. This dimension is critical in the assessment of the
individual and usually has a direct impact on the school improvement process. Key questions which should be asked, 1) Is the principal's time being spent productively and are the activities being done support the mission of the district?

Weiss (1989) suggests that the key benefits of principal evaluation are the establishment of communication and the facilitation of mutual goal-setting by principals and superintendents. These notions suggest a developed time line for the process that would include joint pre-planning and goal-setting, mid-term monitoring, and collaborative, summative evaluation. Dates should be established in advance and the format needs to be clear to both parties. Some experts recommend regular periodic conferences too. Communication is the cornerstone of collaborative efforts. There should be no surprises.

In order to enhance evaluation, Lindahl (1986) suggests that the whole process must begin with precise job descriptions which would provide structure to the summative evaluation instrument; however, the job description alone is insufficient. The “Bill of Rights” of the Association of California School Administrators (ACSA), Exhibit A, begins with the premise that every administrator is entitled “... to a written description of the professional duties and responsibilities expected to be fulfilled.” p.89. Thomas (1979) advocates that evaluations are both subjective and objective and that individuals need to be evaluated for their personal contributions as well as on the
program outcomes. He goes on to say that evaluation is most effective when it, "motivates people as well as validates human performance." p. 55. Townley (1998) concurs with the motivation dimension and adds the component of professional growth recommendations as an outcome of the process. The evaluation process can rate the individual and also assess the productivity of programs and activities in the school. If used correctly, the evaluation process can command the principal as well as provide direction for future growth. Problems and concerns should be identified and communicated as soon as possible to the principal to allow them to be remedied. The "Bill of Rights" of ACSA again calls for full and impartial evaluation as well as constructive counseling.

Webb (1987) finds there are three standard formats for evaluations - Free Form, Check List, and Management by Objectives. A recent information analysis of 17 school districts in California revealed that all three of these formats were used and in most cases, the evaluation systems included each as a part of the process; however, the checklist seemed to be the primary component to reflect the overall expectations for principal performance. Selected examples of check lists are provided in exhibits B through K. One district utilized the free form format only where the evaluator was asked to comment on strengths, needs, and other comments (Exhibit K). It is interesting that district has used the form successfully for over 15 years and it seems to meet the needs of that district. Most districts have clearly communicated criteria in
the form of checklists, and complemented them with some specific goals and objectives. Most included an addendum for other comments.

Seyfarth (1991) has listed 7 basic criteria for evaluating principals (Exhibit L). The seven seems to be clustered into 3 groups, 1) planning and instruction; 2) personnel, motivation and conflict management; and 3) outside contacts. The local study revealed a variety of criteria in different combinations and often these were accompanied by a specific set of program objectives. They often were void of any professional improvement plan for the individual principal.

Regardless of which format or combinations are used, there is merit in agreeing to certain objective indicators that can validate outcomes. Valentine (1987) recommends that data sources could take the form of student attendance records, test scores, committee reports, newsletters, clippings and time logs. He also suggests that shadowing the principal might be useful as well as using feedback surveys from teachers, support staff, students and parents. Other examples could include a portfolio of schedules, staff development activities, meeting agendas, school recognition or awards, external funding, budget reports, student discipline data, drop-out rates, innovative programs, parent participation, and articulation activities. The list could be extensive, but should be limited to those items most relevant to the particular school and it’s specific goals.
Rebore (1998) states that the superintendent should make the final decisions on principal evaluations, but that input should be solicited from all appropriate central office administrators.

Most evaluations seem to include both subjective and objective criteria as Thomas (1979) indicated. A list of subjective criteria taken from the samples illustrate 17 items that range from adaptability to attitude to decisiveness to loyalty, Exhibit M. One district had 18 criteria of which 11 were clearly subjective in nature and included items like initiative, creativeness, and perseverance, Exhibit J.

The districts which were studied included elementary, unified, high school, and county schools. They represented urban, suburban, and rural settings and the districts were coded for reference purposes, (Exhibit N); however, no attempt to determine common characteristics by district organization was made because of the small sample.

The 9 examples of evaluations have been included to give the reader a range of experience from a variety of districts. The exhibits illustrate the differences of criteria which are used in administrator evaluations and extend in a range from personal characteristics to leadership styles, to management skills, to content
expertise. It is hoped that these examples will be useful to those who supervise and will provide an improved basis for evaluation. The goal is to develop a system which is fair and provides for accountability.

The content of evaluation form is critical. But is only one dimension. The process is even more significant. The evaluation processes that are most effective are those which are collaborative in nature and include a combination of check-list, free form, and management by objectives. The checklist provides the advantage of a large number of specific criteria, while the free form allows for a subjective narrative. The MBO portion exists to focus on particular issues or problems.

Exhibit O is a recommendation for the process and includes a time-line and lists of whom should be involved in each step. The sample includes the board of education, the superintendent, the principal, faculty and the School Site Council. Each play a unique roll in establishing the foundation for the process.

Summary

Principal performance and accountability are “buzz” words in our profession today. There are some who say that the evaluation process is taken too lightly and it’s just some meaningless process that is required. Others indicate it makes no difference in
the personnel decisions that are made. If the superintendent wants to fire you, he can find a reason.

All of these comments justify a collaborative system which includes clear expectation and appropriate goals and evaluation. It is hoped that the 15 exhibits in this paper will generate thoughtfulness to revisit your existing system and improve it.

School Administrators

Bill of Rights

ACSA encourages that each member be afforded:

1. The right to a written description of the professional duties and responsibilities expected to be fulfilled.

2. The right to a full and impartial evaluation of professional performance including constructive counseling on a regular and continuing basis.

3. The right to participate in staff “in-service” training program(s) to improve professional performance.

4. The right to be furnished the reason(s) when recommended for probation, demotion, non-renewal of contract, or termination.

5. The right to due process procedures including the right to be heard by the Board of Education prior to probation, demotion, non-renewal of contract, or termination.

6. The right to professional assistance from professional associations.

7. The right to adequate compensation for providing important, complex, and learned professional services.

8. The right to input in district policy and procedure development consistent with the individual’s position on the management team and the individual’s unique experience and expertise.

9. The right to be accorded the respect and dignity due a member of an honorable and learned profession and an individual, sensitive, human being.
